CORYNE, in *Zoology*, a genus of *Polypi denudati* of Lamarck; consisting of animals approaching very near in their affinities to the *Hydræ*, so well known under the name of Fresh-water Polypes, from which, however, they differ by the vesicular club by which the body is terminated.

CORYNOCARPUS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Berberides*. Generic character: calyx five-leaved, inferior; corolla, petals five; nectaries five, petal-formed, alternating with the petals; nut one-seeded.

One species, *C. lævigata*, native of New Zealand.

CORYPHA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Palmæ*. Generic character: calyx three-leaved; corolla, petals three; berry one-seeded; seeds globular, very large, of a bony substance.

Two species, natives of the East Indies.

C. umbraculifera is a magnificent plant, the leaves very large; the natives apply them to the uses of an umbrella.

CORYPHÆNA, from the Greek κορυφη, the top of the head, Lin. In *Zoology*, a genus of animals belonging to the family *Scomberoïdes*, order *Acanthopterygii*, class *Pisces*.

Generic character. Body lengthened, and covered with small scales; tail not carinated; forehead sharp, owing to the ridge on the skull; dorsal fin single, extending along the whole of the back, and partly spiny.

They are divided into subgenera, from the distinctness of the dorsal spines, and the softness or shortness of their ventral fins.

a True Coryphænes.

Dorsal fin extending through the whole length of the back; in some the forehead vertical, and in others more oblique; teeth in tufts in the jaws, palate, and vomer.

C. Hippurus, Lin.; *la Dorade*, Bl.; *Dolphin*. This fish measures nearly four feet and a half in length; its body is compressed as well as the head, which has the forehead vertical; the mouth very large, lips thick, and jaws furnished with four rows of teeth, pointed and curved backwards; the opercule formed of a single piece, covers a large branchial opening. Its colours are extremely brilliant, the back being of a bright golden colour, tinged with blue or green, and relieved with golden spots and lateral line; the belly silvery; pectoral and thoracic fins of a bright yellow, tinged with brown at their base, the caudal of the same colour, and edged with green; the anal golden, and the dorsal azure, with the spines golden. The Dolphin is very ravenous, and pursues with great severity the Gurnards and Flying-fish, which spring from the sea to avoid them, but soon wearied by their flight, drop down into the water, and immediately become the prey of their remorseless enemy. Nothing which it can swallow seems to come amiss to this fish, and it will follow ships, and snap up whatever may be thrown out to it; even iron nails have been found in its stomach. It is common in the Southern Seas, and in the Mediterranean. This fish was well known to the ancients, as the Ἱππουρος, and Χρύσοφρυς, of the Greeks, and the *Hippurus*, or *Aurata*, among the Romans; in consequence of the dorsal fin of one of the species resembling a Horse's tail, and the golden colour of another. By them it was considered a delicacy, and those taken near Ephesus were particularly esteemed: it is still eaten in parts of France during Lent.

CORYPHÆNA. CORYSTES.

C. Equisetis, Lin.; *Horse-tailed Coryphene*. Is similar to the preceding, and differs in having the back and upper part of the tail spotted with brown.

C. Pelagicus, Lin.; *le Caranxomore Pélagique*, Lacep. Belongs to this subdivision, but has the head oblong; it is a common species in the Mediterranean.

β Oligopodes.

Dorsal and anal fins very deep, the latter extending nearly as far as the throat; ventral extremely small, and placed anterior to the pectoral; scales large, and notched to receive the little spine of the next scale.

Of these there is but one species, the

C. Velifera, Pallas; *l'Oligopode Vélifère*, Lacep.; *Sailing Coryphene*, Shaw. This curious fish was first described by Pallas; its body is very much elongated and narrow, so that it is with difficulty distinguished from the dorsal and anal fins, which are very large, and resemble a fan in appearance; the former begins from the forehead, and the latter from between the gills, and extend as far as the tail; and their extent is such, that when expanded, their depth is greater than the whole length of the animal. This fish is not able to fly, as supposed by some Naturalists, which will be readily admitted if the attachment of the fins be noticed; their use seems to be to give the body a more complete balance, and to facilitate lateral motion. It is a native of the Indian Seas.

γ Centrolophes:

Very small spiny prominences anterior to the dorsal fin; body compressed; head oblong; teeth fine, and in a single row; anal shorter than the dorsal fin.

C. Pompylus, Lin.; *le Centrolophe Negre*, Lacep.; *Black Coryphene*. Is about nine inches long, and of a black colour; its snout rounded; the lower jaw longer than the upper; eyes very large; the little spines, which are almost imperceptible, and placed between the back of the head and the dorsal fin, are three in number; both anal and dorsal fin very narrow. Taken near Fecamp.

C. Fasciolata, Pall.; *le Coryphene Ondé*, Lacep.; *Banded Coryphene*. This beautiful fish is of a milk-white colour, and shining like silver, with a greyish tinge on the back; the dorsal and anal fins marked with small transverse brown bands, those on the former wavy; the tail, which is forked, is also striped with brown. It is found in Amboina.

δ Leptopodes.

The dorsal and anal fins terminating in the tail, which is pointed; there is but one ray to each of the ventral fins.

Of this division the only known species is,

C. Leptopodus; *l'Oligopode noir*, Riss. Which is found in the Mediterranean Sea, and is very small.

See Linnæi *Systema Naturæ*; Lacepede, *Histoire Naturelle des Poissons*; Cuvier, *Règne Animal*.

CORYSTES, in *Zoology*, a genus of the class Crus-

tacea, order *Malacostraca*, family *Oxyrynchi*. Generic character: second joint of the internal division of the exterior palpi, becoming insensibly narrowed towards the superior extremity; exterior antennæ as long as the body.

Type, *C. dentatus*, (*Albunea dentata*, Fab.)

Inhabits the European Seas. British.

CORYTHUS, from the Greek κόρυθος, or κόρυς, the same bird sometimes called κορυδαλλὸς, Cuv. In *Zoology*, a genus of animals belonging to the family *Conirostres*, order *Passeres*, class *Aves*.

Generic character. Beak large; the point of the upper curved over the lower mandible.

In this genus may be included the two following species:

C. Enucleator, Cuv.; *Loxia Enucleator*, Lin.; *le Dur bec*, Buff.; *Pine Grosbeak*, Pen. About nine inches in length; bill dusky and very thick at the base; general colour crimson rose; the beak and lesser wing coverts black, each feather edged with reddish brown; greater wing-coverts tipped with white, forming two bars on the wings; belly and vent straw coloured; tail feathers black with pale edges; legs brown. Very common in North America, but occasionally, though not often seen in England.

The *Loxia Flamengo* of Sparrman is probably a variety of this species.

C. Psittaceus, Cuv.; *Loxia Psittacea*, Lath.; *Parrot-billed Grosbeak*. About the size of a Hedge Sparrow; bill pale; the upper mandible long and curved, the under short and truncated; head and neck of male yellow; general colour greenish olive brown, pale beneath; edges of quills and tail feathers yellow; legs pale brown; the head and neck of the female is similar to the rest of the body in colour, except that the sides of the head are tinged with yellowish grey. Native of the Sandwich Islands, particularly of Owhyhee, where it is known to our sailors by the name of Paroquet.

See Cuvier, *Règne Animal*; Latham's *General History of Birds*.

COSCINOMANCY, Gr. κοσκινόμαντις; "She who tells fortunes with the sieve and shears." Fawkes, Theocritus, *Id.* iii. from κοσκίνον, a sieve, and μαντὶς, a diviner.

For a description of Coscinomancy, see CHIROMANCY.

And that ordinary way of divination, which they call *coskinomancy*, or finding who stole or spoiled this or that thing by the sieve and shears, Pictorius Vigillanus professeth he made use of thrice, and it was with success.

More. Antidote against Atheism, book ii. ch. ii.

COSI (Sanscrit, *Kausiki*) River rises in the hills not far from Kat'hmándu, the Capital of Népál, and flowing in a south-easterly, and afterwards in a southerly direction, enters the District of Púrniyà in the Province of Bengal, about twenty miles to the north of Nát'h-púr, forming several rapids in its descent towards the plain. Its bed is full of islands covered with tall grass and tamariaks, and in the rainy season is nearly two miles wide; many of the channels are quite dry in the cold season, but there is always water enough in some for boats carrying between four and five hundred weight. Like other mountain streams, it is subject to a sudden rise and fall; and as some of its tributary waters come from the snowy ridges of Himá-laya, its temperature is low, even in the hot season, as far south as the upper part of Bengal. It flows into the Ganges, nealy in 25° 27′ north, and 87° 24′ east, after a course of about 300 miles. (Hamilton, (Buchanan,) Kirkpatrick, W. Hamilton's *Gazetteer* and *Hindostan*, i. 236.)

COSMEA, in *Botany*, a genus of the class *Syngenesia*, order *Frustranea*. Generic character: receptacle chaffy; down two or four bristled; calyx double, each one-leaved, eight-parted.

Three species, natives of Mexico. Willd.

COSME'TICK, *s.* } Gr. κόσμος, *ornatus* adorned.
COSME'TICK, *adj.* } Κοσμητὴς, Lat. *cosmetæ*, Juve-
COSME'TICAL. } nal, vi. 477, which is rendered by Holliday, "The tiring maids."

No better *cosmeticks* than a severe temperance and purity, a real and unaffected modesty and humility, a gracious temper and calmness of spirit, a sincere and universal charity. No true beauty without the signatures of these graces in the very countenance. *Ray. On the Creation*, part ii.

The learned Vossius says, his barber us'd to comb his head in Iambicks. And indeed in all ages, one of this useful profession, this order of *cosmetick* philosophers, has been celebrated by the most eminent hands. *Tatler*, No. 34.

And I have known a physician of learning and sense, after eight years study in the university, and a course of travels into most countries of Europe, owe the first raising of his fortunes to a *cosmetic* wash. *Spectator*, No. 33.

Sir, may I be so happy as to see again some lines from your hands, to continue or rather begin a correspondence, as to the *cosmetical* (but to my aims truly vital) parts of it.

Mr. Hartwell, to Mr. Boyle. Anno 1647.

This oil [of the cashew] is used as a *cosmetick* by the ladies to remove freckles and sun-burning; but the pain they necessarily suffer makes its use not very frequent.

Granger. The Sugar Cane, (note to v. 137.)

I was never permitted to sleep till I had passed through the *cosmetick* discipline, part of which was a regular lustration performed with bean-flower water and May-dews.

Johnson. Rambler, No. 130.

COSMIBUENA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx deciduous, five-toothed; corolla, tube very long; stamens inserted into the tube; apex of the capsule two-valved, two-celled; seed oval.

This genus, allied to *Cinchona*, contains two species, natives of South America.

CO'SMICAL, *adj.*
CO'SMICALLY,
CO'SMOGONY,
COSMO'GONIST,
COSMO'GRAPHER,
COSMOGRA'PHICAL,
COSMOGRA'PHICALLY,
COSMO'GRAPHY,
COSMO'LATRY,
COSMO'PLASTICK, *adj.*
COSMO'POLITE,
COSMOPO'LITICAL.

Gr. κόσμος, the world. See the quotation from Holland's Pliny.

Of or pertaining to the world.

Cosmogony; κόσμος, and γενέσθαι, *gigni*, *nasci*, to beget.

Cosmography; κόσμος, and γράφειν, to write, to describe.

For, the world, which the Greekes by the name of ornament, called κόσμος, wee for the perfect neatnesse and absolute elevancie thereof, have tearmed *Mundus*. *Holland. Plinie*, vol. ii. fol. 2.

First, your lordship knoweth that the *cosmographers* haue diuided the earth by 360 degrees of latitude, and as many in longitude, vnder the which is comprehended all the roundnes of the earth.

Hakluyt. Voyage, &c. M. Robert Thorne, vol. i. fol. 215.

I and my partener haue one thousand foure hundred duckets that we employed in the sayde fleete, principally for that two English men friends of mine, which are somewhat learned in *cosmographie*, should goe in the same shippes, to bring me certaine relation of the situation of the country, and to be expert in the nauigation of those seas. *Id. Ib.*

COS-MICAL. — COSSACK.

I haue often times (sayd he) and many wayes looked into the state of earthly kingdomes, generally the whole world over, (as farre as it may be yet knowen to Christian men commonly) being a studie of no great difficultie, but rather a purpose somewhat answerable to a perfect *cosmographer*, to finde himselfe *cosmopolites*, a citizen and member of the whole and onely one misticall citie universall, and so consequently to meditate of the *cosmopolitical* gouernment thereof, vnder the King almightie, passing on very swiftly toward the most dreadfull and most comfortable terme prefixed. *Hakluyt. Voyage, &c. Wolstan*, vol. i. fol. 6.

If therefore the dog-star had this effectuall heat which is ascribed unto it, it would afford best evidence thereof and the season would be most fervent, when it ariseth in the probablest place of its activity, that is, the *cosmical* ascent; for therein it ariseth with the sun, and is included in the same irradiation.
Sir Thomas Brown, book iv. ch. xiii.

This name hath bene taken vp in honour of Saint Swithin, the holie bishop of Winchester about the yeare 860, and called the Weeping Saint Swithin, for that about his feast Præsepe and Aselli, rainie constellations do arise *cosmically*, and commonly cause raine. *Camden. Remaines. Names*, p. 88.

It was a most ancient and in a manner universally received tradition amongst the Pagans, as hath often been intimated, that the *cosmogonia* or generation of the world took its first beginning from a chaos, (the divine *cosmogonists* agreeing herein with the Atheistick ones;) this tradition having been delivered down from Orpheus and Linus (among the Greeks) by Hesiod, and Homer, and others. *Cudworth. Intellectual System*, book i. ch. iv.

——————— *Cosmographers*,
By charts and maps exactly that have shown,
All of this earth that ever can be known.
Drayton. To the Noble Lady. The Lady J. S.

I would correct those errors in navigation, reforme *cosmographicall* chartes, and rectifie longitudes, if it were possible.
Burton. Anatomy of Melancholy, fol. 244.

And this no more than what it doth upon the loadstone, and that more plainly upon the terrella or spherical magnet *cosmographically* set out with circles of the globe.
Sir Thomas Brown, book ii. ch. ii.

Cabato—whose *cosmographie*
And selfe proofe brake the ise
To most our late discouerers,
Debtors to his aduice.
Warner. Albion's England, book xi. ch. lxiii.

Therefore the better to expresse the mōsterous tyranny of the Turke, I haue here thought meet to shew the words of Sabastian Munster, as he expresseth the same in his learned booke of *cosmography*. *Grafton. Henry VIII. The twenty-first Yere.*

Besides I came tumbling out into the world a pure cadet, a true *cosmopolite*; not born to land, lease, house, or office.
Howell. Letter 60. book i. sec. 6.

We insist largely, upon an artificial, regular, and plastick nature, devoid of express knowledge and understanding, as subordinate to the Deity: chiefly in way of confutation, of those *cosmoplastick*, and hylozoick atheisms.
Cudworth. Intellectual System. Pref. 10.

I shall express what I call general nature by *cosmical* mechanism, that is, a comprisal of all the mechanical affections (figure, size, motion, &c.) that belong to the matter of the great system of the universe.
Boyle. A Free Enquiry into the received Notion of Nature.

Inferences relate to the general intendments of God in the universe, which I therefore style *cosmical* ends, but do not reach to prove any thing about determinate nature of particular bodies.
Boyle. A Disquisition about the final causes of Natural Things.

We shall pass by what a *cosmographer* would perhaps except against in his doctrine about the generation and motion of the wind upon the surface of the earth, and shall only take notice in the remaining part of that section of thus much.
Id. An Examen of Mr. Hobbes's Doctrine touching Cold.

Now the proper introduction, as well as foundation and support, of this kind of history, is a theistical *cosmogony*.
Warburton. The Divine Legation.

COSMOLABE, an ancient mathematical instrument, applied to the measurement of geographical or astronomical distances. It is somewhat similar to the Astrolabe; and in a Treatise upon its use by Morgard, in 1612, it is termed a Pentacosin, and the Universal Instrument.

COSS, Cossick numbers, a corruption of the Italian name for Algebra, *Regola di* Cosa, *Cosa* being the unknown quality.

COSSAC, an English corruption of the Arabic word *Khássah*, (peculiar, select, excellent,) is the name given to a sort of fine calico or coarse muslin, manufactured in that part of Bengál which lies between the Mahánadi and Isámati rivers, to the north and east of the Ganges. The Serkár or District of Sunár-gángo was famous for this manufacture in the time of Akbar, (*Ayeen Acbery*, ii. 10,) and those cloths were formerly imported in considerable quantities into England; but they have since, like other cotton manufactures of India, been so well imitated by our own workmen, that the foreign articles are now almost entirely superseded. Ours are made principally in Scotland and Lancashire, and form an intermediate texture between calicoes and jaconots. They are generally woven in pieces of 1000 or 1200 reeds of Scotch, and 20 or 30 English measure. They ought to be ⅞ths of a yard (= 33¼ inches) wide, but are frequently not more than 28. They are often woven in double pieces, in which case there is a selvage only on one side; but there is a prejudice against such goods, probably on account of their being suspected of having been damaged, though they are always in reality superior to the narrow pieces with double selvages, which skilful workmen will never undertake. These cloths, which are in fact rather to be considered as coarse muslins than fine calicoes, are chiefly used for printing, and when well struck up with good patterns, form a showy and cheap article of women's dress, seldom fetching at the wholesale price more than one shilling per yard; they are, therefore, a very saleable article, and in general request. (Hamilton's *Hindostan; Edinburgh Encyclopædia.*)

COSSACK.

COSSACK, (or rather *Cazác*, as the word is spelt by the Russians,) is the name of a numerous and warlike people on the southern part of the Russian Empire. Their history and origin are involved in great obscurity; their name, which is a significant term in the Turkish language, and means "a litter," does not indicate a Tátár descent, but it appears to be the appellation which the Greeks changed into *Casachia*; and, if such be really the case, the Cazács were anciently a Circassian tribe inhabiting the north-western declivity of Mount Caucasus. For that name is given by the Emperor Constantine Porphyrogenetes, who reigned in the Xth century, (*De Administr. Imp.* c. 42. p. 133. ed. Lugd. Bat. 1611,) to a part of the country now inhabited by the Circassians; which people are still called Cazákh or Cazác by some of the neighbouring tribes; while the words Cazác and Cherkas (Circassian) are used as convertible terms by the earlier Russian authorities. (Peysonnel, *Observ. Historiques*, p. 125; Klaproth's *Reise*, i. 147; *Asia Polyglotta*, 85, 130.)

SSACK. The first distinct notice of the Cossacks, in history, occurs about the middle of the XIVth century, when the conquest of Red Russia by the Poles led many of the natives of that country to seek a refuge on the banks of the lower Dnïeper, where wandering hordes of Tátárs and Circassians had established an independent State. The destruction of Kïev, and frequent irruptions of the Tátárs into the southern Provinces of Russia, in the beginning of the next century, increased the number of fugitives, and this new State was then extended to the Bog and Dnïester. Of this mixed people, the most powerful body was then established beyond the falls (Zaporog) of the Dnïeper. These were called the Zaporogski, or Zaporovtzi Cossacks, while the older settlers were named from Little Russia, where they had fixed their abode. However probable it may be that the Cossacks owe their name to a Circassian or Caucasian tribe, the language and religion of the present race indicates clearly that they are lineal descendants of the Russian and Polish fugitives, who found an asylum in the Ukraïn and neighbouring Provinces in the XIIIth century.

Under the Tzar Ivan Vasilïevich, in the latter half of the XVth century, a guard of Tátár Cossacks was first employed; and these were called Azovski or Ordinski, according as they came from the Turks at Azov, or the Great Horde, (Orda or Ordú) on the Volga. They had therefore already, if not sooner, established themselves on the lower part of the Don, and may be considered as the root from which the present occupants of that and the neighbouring country sprang; but the more immediate origin of the Donski Cossacks, as a distinct people, was the expedition sent against the Turks by Ivan Vasilïevich II. in 1569, when 5000 of the Zaporogian Circassians (i. e. Cazács) on the Dnïeper were despatched under the command of Prince Michael Vyshnevetzkyi, and with the assistance of their brethren already settled near the Don, drove the enemy out of the territory of Astrakhán. The victors remained in the country near the Don, and appear, in conjunction with the original settlers on that river, to have founded the town of Cherkask, (i. e. Circassian Town,) in or near A. D. 1570; and the disturbances which broke out in Russia soon afterwards, contributed materially to the extension and consolidation of their independence. They soon became a terror to their neighbours, who were under the necessity of securing their good-will by concessions, which would not under any other circumstances have been granted; nor was it till a very late period, that the Imperial Cabinet ventured to make any encroachments on their freedom.

Their country is still to be considered rather as a distinct and feudatory State under the protection of Russia, than as a Province of the Empire.

The various subdivisions of the Cossacks have long been formed into distinct communities, acknowledging a common origin, but differing in government, habits, and position. Those of the Don are the most considerable in number and importance; the Malo-Russians, though of a mixed and more recent origin, are numerous, and may be considered as the second in rank; the Chernomortzi, or Cossacks of the Black Sea, are a branch settled on the river Cúbán, and in the Peninsula of Taman, by an Ukáz of the Empress Catharine, dated in June 1792. Those of the Volga obtained their independence in 1734; but all except a small number are now mixed with the other inhabitants of the Province of Astrakhán. The Grebenskoï Cossacks were stationed on the river Terek, in the middle of the last century, as a protection to what was then the Russian frontier; and notwithstanding their intercourse and intermarriages with the Chechentzes and other mountaineers, they still retain the use of the Russian language.

Don sack. Malo- sian. Tcherno rtzi. Volga.

COSSACK.

5. Grebenskoï.

Another division of the Cossacks is that stationed in the Government of Orenburg on the banks of the Samara, Ural, and Ilek, to watch the movements of the Kirgis, Kaïsaks, and Bashkirs.

6. Orenburg.

The Cossacks of the Ural (who were named from the Yaïk, till after the rebellion of Pugaches in 1773) have occupied the lower part of that river, according to their own traditions, for the last three hundred years. They now enjoy the same privileges as their brethren on the Don, and are spread over the country, from the Ilek to the mouth of the Ural, and maintain themselves by their herds and fisheries.

7. Oural or Uralian.

To the enterprise, which terminated in the establishment of the Siberian Cossacks, the Empire of Russia owes its extension to the shores of the Eastern Ocean. A body of these, settled on the Don, who had long been the terror of the Provinces near the Caspian and of the whole tract of country between that sea and the Volga, were, at length, themselves alarmed by the formidable preparations of Ivan Vasilïevich II., who was marching against them with a very powerful force. The greater part of them dispersed themselves on the report of the Emperor's approach; but about 7000 under the command of their Atamàn, Yermac, retreated along the banks of the Káma into Perm; and, boldly forcing their way through the passes in the Uralian Mountains, entered the plains of Siberia, where they defeated the wild tribes who opposed their progress, and crossed the Tobol, Irtish, and Ob, in quest of some spot, on which they might fix, as the seat of their future dominion. At length, wearied out by the rigour of the climate, and the constant struggle which his little army had to maintain, Yermac wisely resolved to throw himself upon the generosity of Ivan, who magnanimously granted the pardon and protection which he asked; and a few years afterwards, by means of considerable reinforcements of the Don Cossacks which he sent to join their countrymen, extended his conquests to the borders of China.

8. Siberian Cossacks.

The Don Cossacks, as the largest and most completely organized body of this singular people, are those who deserve, and have attracted the largest share of public notice. They are generally stigmatized by the Russians, as "a band of lawless banditti;" but the observations of our own travellers, and of some foreigners, have clearly shown that this evil report is ascribable only to the jealousy of the Russians, and that dastardly spirit which often leads men to seek to screen, as they hope, their own inferiority, by vilifying those whom they feel to be their superiors. The territory of the Don Cossacks occupies an area of about 3600 square miles, and is bounded by the Governments of Saratov, Astrakhán, Caucasus, Taurida, Yekaterinoslav, and Voronezh. Extensive plains of a productive soil, richly repaying the labours of the husbandman, wherever they are reclaimed from the state of uncultivated pasture, form the principal feature in the landscape throughout this part of the Russian dominions. The

COSSACK. spacious *Steppes*, for so the Russians call a level waste, are, for the most part, completely naked. Near the rivers and large towns, however, the country wears a different aspect; the security of finding a sale for their produce, and the facility afforded for its removal by water-carriage, have conquered the disinclination for agricultural employments, prevalent among the Cossacks, and natural to a restless and martial people. Those rivers are, beside the Don, the Donetz, (or Danaetz,) Khoper, Medweditza, Havla, Buzuluk, Sal, and Manych. The Don is compared, by Dr. Clarke, to the Nile; a comparison to which the alluvial soil of the island on which old Cherkask stood, and the annual inundations of the river, must have given rise; for the winters in Southern Russia are too severe to allow, as that writer hastily concluded, a similarity of vegetable productions in both those streams. Its bed consists of sand, marl, and lime, and is remarkably free from stones. The inundation lasts from the middle of April to the end of June, and it is only during that season that it has sufficient depth of water for vessels of any size. It is then navigable as high as Voronezh. The Donetz, which is navigable as far as Isium, falls into the Don about sixty miles above Cherkask. It is called Severnoï Donetz, (Northern Donetz,) to distinguish it from one of the small outlets by which the Don dischages its waters into the Sea of Azov. These rivers abound in fish, of which the most valuable are various kinds of sturgeon, especially the gigantic *Beluga*, (*Accipenser huso*,) the sterlet, (*A. ruthenus*,) trout, rudak, Prussian carp, tench, pike, perch, tortoises, and craw-fish of a very large size.

Among the more remarkable quadrupeds, the *bisòk* deserves to be named, as it is doubtful whether it has been described by Naturalists. It is of a greyish colour, and is probably a variety of the jackal species, though represented as bolder and more ferocious than those animals usually are. A wolf is called *bireg* in the Ossetian Language, from which, perhaps, the word mentioned above may have been borrowed. The wild animals most commonly found are, however, of smaller dimensions, and those of the rat and marmot tribe are most numerous, particularly the *surók*, (*Arctomys Bobac*,) called also Switch, from the cry it utters, and the surlik, (*Arctomys citellus*.) The latter is a beautiful little creature, says Dr. Clarke, about the size of a weasel, with a sort of a deep yellow, spotted with white. These animals are often kept tame in the houses of the Cossacks, but always bury themselves in the earth from September to April. On comparing the different and apparently contradictory accounts of Dr. Clarke and Messrs. Gmelin, Pallas, and Klaproth, it is manifest that the moral and intellectual improvement of the Cossacks have made rapid advances since the earliest of those travellers wrote; and though the last author does not give quite so favourable a report of the state of manners at Cherkask, as our amiable and eloquent countryman, he seems almost unconsciously to substantiate the leading statements of Dr. Clarke; they may, therefore, be safely followed in drawing a rough outline of the character, habits, and occupations of this high-spirited and misrepresented people.

"Polished in their manners, instructed in their minds, hospitable, generous, disinterested, humane and tender to the poor, good husbands, good fathers, good mothers, virtuous daughters, valiant and dutiful sons, such," says that animated writer, "are the natives of Cherkask. In conversation, the Cossack is a gentleman; for he is well-informed, free from prejudice, open, sincere, and honourable." Their superiority to the Russians, in all the estimable qualities both of body and mind, seems now to be acknowledged by every body but the Muscovites themselves. Their noble freedom of spirit also, which contrasts them so strongly with their Russian neighbours, is distinctly noticed by M. Klaproth, (*Reise in Kaukasus*, i. 151;) who also bears testimony to their quickness of apprehension and soundness of judgment. "They are a handsome race, and taller than the Russians," says Bishop Heber, (Clarke's *Travels*, i. 385,) which exactly agrees with the remark of M. Klaproth, "The Cossacks are, in general, much taller and better made than the rest of the Russians, having also, on the whole, handsomer and more expressive countenances." (*Reise*, i. 149.) COSSACK

Their habits, though they are all soldiers, are not hostile to improvement in useful arts and occupations. Their merchants go to war, and their military officers are merchants. "In Cherkask," says Dr. Clarke, (i. 382,) "they live an amicable and pleasant life. Sometimes they have public amusements, such as balls and other assemblies of the same nature. Once they had a theatre, but it was prohibited. In some of their apartments we observed mahogany book-cases, with glass doors; each containing a small library. They are, in every respect, entitled to praise for cleanliness, whether with reference to their persons or to their houses. There is no nation more cleanly in its apparel than that of the Cossacks The dress of the women is singular: it differs from all the costumes of Russia; and its magnificence is displayed in the ornaments of a cap, somewhat resembling the mitre of a Greek Bishop. The hair of married women is concealed under the cap, which is covered with pearls and gold, or it is adorned with flowers. The dress of a Cossack girl is elegant; a silk tunic with trowsers fastened by a girdle of solid silver, yellow boots, and an Indian handkerchief worn as a turban upon the head. The common dress of men in Cherkask is a blue jacket, with a waistcoat and trowsers of white dimity; the latter so white and spotless, that they seem always new. We never saw a Cossack in a dirty suit of clothes. Their hands, moreover, are always clean, their hair free from vermin, their teeth white, and their skin has a healthy and cleanly appearance."

It is not to be supposed that this eulogy can apply universally, or that the national character of the Cossacks is faultless. A love of pleasure and idleness, irascibility, and a passion for boisterous sports, the failings of almost every half-civilized people, are predominant among them. They are not, however, insensible to their want of cultivation; and M. Klaproth, (*Reise*, i. 155,) who was present at a public examination of the boys educated in the Gymnasium, or Public School, expresses his astonishment at the excellent manner in which that institution is conducted. The establishment of an University at Kharkov, in the Ukraïn, barely 200 miles from Cherkask, has also been of great service in promoting the advancement of knowledge among the Don Cossacks.

The continued incursions of the Tátárs from the Steppe, or level country, near the Crimea, had rendered the Ukraïn, otherwise called Little Russia, so insecure towards the latter end of the XVth century,

COSSACK. that it was thought expedient to station all the young unmarried men among the Cossacks, who then occupied that Province, on its southern boundaries, near the mouths of the Dnieper. This measure received the approbation of the Polish Government; and, in 1540, Sigismond I. made a grant to them of the lands above the falls of that River, as the reward of their services. Their numbers were soon augmented by refugees from the Ukraïn; for the Ruzines, or Russian subjects to the Crown of Poland, who were settled there, had been so much harassed on account of their religion, that they were glad to withdraw to any country wherein they could follow the rites of their forefathers without molestation. This little military Republic at first acknowledged the supremacy of the Hetman of the Ukraïn; but when he, in 1654, placed himself and his people under the protection of the Tzar of Muscovy, the Zaporogian Cossacks remained in a state of entire independence. Surrounded, however, as they were, by nations more powerful than themselves, they were obliged to yield to circumstaces, and occasionally submit to one or other of them; and, after the peace of Cainárjí, in 1774, when Russia had driven her rivals out of the field, the Empress Catharine determined finally to disperse this community of freebooters, who, in addition to their predatory incursions upon her subjects, had the audacity to betray an inclination to render themselves independent of her authority. Eight years afterwards, however, it appeared that her orders had not been duly executed; for the Zaporogian Cossacks were still in existence, and, in consequence of the services they had rendered in the war then just terminated by the peace of Yassi, (in 1792,) an Ukáz was issued in the month of June of that year, ceding to them a territory of 4068 square miles in extent, viz. the Peninsula of Taman, and the country lying between the Cúbán and the Sea of Azov, as far as the River Yeya, (the Ae of Dr. Clarke, properly Eyú,) and the junction of the Laba with the Cúbán, part of the territory which Sháhín Girái had abdicated in favour of Russia, in 1783.

On this change of abode, the Zaporogian Cossacks received the names of Chernomortzis, or Cossacks of the Black Sea, (*Cherno more*, in the Russian Language,) and a Constitution similar to that of their countrymen on the Don; but "it was materially altered," says M. von Engelhardt, from whom this summary is borrowed, (*Reise in die Krym*, i. 96,) "by the Ukázes of 1802, 3, and 4;" i. e. the liberties originally granted, were considerably abridged. Their Atamàn, whose post is held for life, instead of being elected by themselves, was henceforth to be chosen by the Emperor, from the candidates whom they presented. This officer, who is their civil and military Chief, presides in the *Voïskovaya Kantzelaría* or Supreme Court of Justice; in which there are, besides the President, two permanent Members, and four Assessors, who are elected every three years. This Bench, as well as the Attorney General (*Procureur*) attached to it, are under the superintendence of the Governor General of Tauria (the Crimea.)

The original population of the Chernomortzis was estimated at 25,000, and the quota of troops required from them amounts to 14,000 men. They are principally employed on the *cordon*, or line of forts along the northern bank of the Cúbán, and in repelling the aggressions of the Circassians; and in time of peace they are called into actual service only one year in three. Their accoutrements are those of the other Cossacks, and their dress the national costume of the Poles; a long jacket, a surtout with slashed sleeves, long wide trowsers, and a long sheep-skin cap. Each man is provided with a cloak of felt, such as is common among the people of Mount Caucasus, and a *Báshlic* or cloth hood, as a protection against rain. They have no distinct uniform, but blue and red are their favourite colours. COSSACK.

The inferior departments of their Government are similar to those of the Don Cossacks; and their Public Revenue, which, in 1811, amounted to 240,000 rubels, (paper money, about £40,000.) annually, arises from the contracts for the brandy manufacture, the produce of the salt lakes, the fishery at Ajuyev, on the Sea of Azov, and the barter trade with the Mountaineers, as well as from an excise duty, and a tax called *poshlin*. The monopolies of the salt lakes and fisheries apply only to a tenth of the quantity taken by each individual; for every one is at liberty to gather as much salt, or catch as much fish as he pleases, provided he gives up the tenth of what he has taken to the contractor. No other taxes are levied, either by the Crown or the local Government; and every person provided with the proper certificates from the officers of the Imperial Government, is at liberty to occupy as much land as he thinks he can cultivate. It is left entirely to his own choice to enter into the corps of Cossacks or not, as he thinks fit. Notwithstanding the vigilance of the agents of Government, the Russian Serfs of the adjoining Provinces, are continually emancipating themselves, by settling clandestinely among the Chernomortzi Cossacks, whose numbers, in the short space of twenty years, have thus increased from 25,000 to 60,000 souls.

This rapid increase of population was not, however, accompanied by a proportionate improvement in the state of the country. "Though blessed," says M. von Engelhardt, "with a fertile soil, and great facilities for the transport of its produce, little cultivation was to be seen, even near their towns and villages, and that little of the worst kind; a valuable orchard, near Taman, the only one in the neighbourhood, was entirely neglected, and the trees cut down for fire-wood; and all trade and commerce was solely in the hands of Greeks, Armenians, and Russians, or other foreigners. This thoughtless inattention to the advantages they possess, can only be ascribed," says the same writer, "to their extreme idleness and love of drinking;" certainly not to their military constitution and habits, for "the contrary is proved by the prosperity and industry of the Don Cossacks, which are both rapidly advancing," although they are removed from their homes by their military duties in greater numbers, and for a longer period than the Chernomortzis." (*Reise*, i. 101.)

"The love of intoxication," he adds, "is more prevalent among the Cossacks of the Black Sea, than among the lower orders of Russians, from whom they are distinguished by their Polish dialect, crescent-shaped mustachios, shorn heads, and, in short, by almost every thing, except the Greek rites, and the use of the Russian characters. They are strongly built, have little change of countenance, and an expression of gloomy gravity, which, among the common people, who utter more oaths than words, often settles into a

COSSACK. decided ill humour, or, where there is less phlegm than usual, into a love of mischief. To this unprepossessing face there is superadded so extraordinary a decree of uncleanliness, that the Chernomortzis of the lower orders are often next to the gypsies of the Steppe, the most disgusting objects which meet the traveller's eye. Even the officers, notwithstanding their superiority to the inferior classes, generally betray something of their national habits; they help themselves from the dishes with their fingers instead of forks, use the table instead of a plate, and are, not a few of them, as much addicted to drinking as the privates. That, indeed, is the sin that most easily besets the Cossacks; and a true Chernomortzi almost thinks himself unworthy of the name of a Christian, if he is not gloriously drunk at Christmas."

It was therefore with great reason that Dr. Clarke affirmed, that "The Cossacks of the Black Sea do not resemble their brethren on the Don, in habits, disposition, or any other characteristic." He did not remain long in their territory, and had not the same means of studying their manners as the writer just cited; his judgment of them was, therefore, more favourable. "They are blunt," he says, "and even rude, and when poor are clad like the wildest mountaineers; having their heads bald, with the exception of one braided lock hanging from the crown, and placed behind the right ear, the distinctive mark of the *clan*, retained even by the officers, and preserved with an almost religious veneration. When rich, they clothe themselves in embroidered silks or velvets of every colour; wear their hair cropped, and give their heads the appearance of the finest Roman busts. They are more cheerful and noisy than the Cossacks of the Don; turbulent in their mirth, vehement in conversation, somewhat querulous, and, if not engaged in dispute, are generally laughing or singing." (Clarke's *Travels*, ii. 8.) They are despised by the Donskoïs as an inferior race, but affect to hold the latter in an equal degree of contempt; saying, that "One Chernomortzi is a match for any three of the Donskoïs." A dance, much resembling the English hornpipe, the music of the bagpipe, and puppet shows, are among the favourite pastimes of the Cossacks. (Clarke, i. 306.) Feats of horsemanship, in which they are only inferior to the Circassians, and excursions on the water, are also frequent amusements. Old Cherkask, which has been replaced by the new Capital since the date of Dr. Clarke's *Travels*, reminds the traveller of Venice, and may be almost said to float upon the water. Its houses are all raised on piles, and accessible only by means of boats or narrow wooden bridges.* Footpaths, running like galleries before them, form a sort of causeway to every quarter of the town. The children play about on the tops of the houses, and "as we sailed into this city," (says Dr. Clarke, i. 361,) "we beheld the younger part of its inhabitants sitting upon the ridges of the sloping roofs, while their dogs were actually running about and barking in that extraordinary situation. During our approach, children leaped from the windows and doors, like so many frogs, into the water, and in an instant were seen swimming about our boat. Every thing seemed to announce an amphibious race; not a square inch of dry land could at seen: in the midst of a very populous metropolis, COSSAC be least one-half of its citizens were in the water, and the other half in the air. The town is divided into eleven *stanitzas*, or districts, and contains 15,000 inhabitants. The number of houses amounts to 3000, allowing, upon the average, five persons to each. Here are six churches; four built of stone, and two of wood." There is also a Mosque for the use of the Tátár inhabitants, who are Mohammedans. The principal Church, which was built by order of Peter the Great, is very remarkable on account of its treasures. Its screen is richly gilt, and painted a bright green colour, which is also that of the wax candles, used in divine service. The treasures consist of presents from different Sovereigns; standard and embroidered flags bearing the Imperial arms; silver-headed staves of the Atamàns, and one an unadorned but massive club, presented by Peter the Great. "Besides a multitude of pictures of the Saints," says M. Klaproth, (*Reise*, i. 152,) "either worked in gold or covered with gold leaf, and adorned with the largest and most beautiful gems, there is a wide and lofty altar-piece all sprinkled over with pearls, very many of them of the largest and finest sorts." The other public buildings, which are all of wood, are 1. the Voiskovaya Kantzelaría, or Public Court, where justice is administered, and all public business is transacted; 2. an inferior Court of Justice; 3. the Gymnasium or Public School, where the learned Languages and the elements of Science are taught; 4. an Apothecaries' Hall; 5. a Town-hall, and six Prisons, four for male and two for female culprits. The shops, which are numerous, are kept chiefly by Greeks, and are supplied from Turkey as well as the eastern parts of Europe. There are two public Baths, and each *stanitza* has its own tavern and cook's shop. The timber used in building, is principally brought from the Volga, as there is not enough near the Don for the demand at Cherkask. The liability to inundation is so great, that Dr. Clarke says, (i. 391,) that he and his companion "could find only one dry place in the whole town," and even that "was traversed by wooden causeways, proving that the usual precaution was requisite there also." In such a swamp, fevers, as might be supposed, are common, and the damage done by extraordinary inundations is often great; the principal part of the inhabitants, therefore, were long exceedingly desirous of removing their Capital to another site; and their wish was realized about seven years after Dr. Clarke visited the place, by the foundation of New Cherkask, on high ground, near an arm of the Don, about four miles from the old city.

Cherkask.

The religion professed by the Cossacks is that of the Greek Church; nor does it appear that there are members of any other sect or creed, except Mohammedans, established among them. Their language is the dialect of Little Russia, nearly approaching to that of Poland. (Engelhardt, i. 102; Scherer, *Annales de la Petite Russie*, i. 17.)

The peculiar form of Government under which these Cossacks live, while it renders them faithful subjects to Russia, effectually secures their personal liberty. It is a sort of Military Democracy, deriving its authority from the Emperor, whose supremacy it acknowledges, and submitting to his direction in all cases which involve the general interests of his Empire. The whole territory of these feudatory Chiefs, for such the Cos-

* See a similar description of the houses on the lake Prasias. Herod. v. 16.

COSSACK. sacks, in all probability, originally were, is divided into 112 *stanitzas*, dispersed along the course of the rivers included within their boundaries :

	Stanitzas
On the Don, including 11 stanitzas of Cherkaski	62
Donetz (or Little Don)	9
Medweditza	11
Khoper	20
Buzuluk	10

As all, except the immediate vicinity of the rivers, is pasture land, (for the Cossacks are a pastoral and military, not an agricultural people,) grain is not raised in sufficient quantities for their wants; a certain allowance of corn, therefore, is annually remitted from Voronezh to each *stanitza*, according to the reported number of its inhabitants; and the area and extent of fishery allotted to each, is also fixed by the Imperial Government. They are, moreover, exempted from all taxes; and the subdivision of the land allotted to each *stanitza*, is settled by the inhabitants and their Atamàn, who is annually chosen by the people. He was formerly the Military as well as Civil Governor of the *Stanitza*; and, in time of actual service, marched out at the head of his contingent; at present his duties are restricted to providing the stipulated quota of troops, who are placed under the command of officers named by the Emperor. The Atamàns of each separate district, are all subject to the Glavnoï Atamàn or Generalissimo of the Cossacks. He presides in the Council at Cherkask, which consists of the Generals, Colonels, and Staff Officers, and to which an appeal lies from the sentence of the local Atamàns. This President was formerly elected by the other Atamàns, and possessed an almost unlimited sway; but all power has been much abridged, and his appointment is now vested in the Crown. The Emperor Paul adopted the plan of giving titles to the children of all who had attained the rank of Colonel; thus creating an aristocracy little consistent with the equality of rank and privileges guaranteed by the Civil Constitution of the Cossacks.

In return for the allowances mentioned above, every man is liable to be called into service for a term not exceeding three years. He must be clothed, armed, and mounted at his own expense; but is maintained, while on duty, by the Government. After three years' service he is exempt from duty abroad, except on extraordinary emergencies; and after twenty years he is no longer liable to be called into service beyond the limit of the Cossack territory, nor in the intervening period are any duties imposed except those required by the Post, Police, and Military stations on the line of Caucasus. Twenty-five years of service give a claim for his final discharge; and the privileges enjoyed by the Cossacks are considered as a very sufficient compensation for their services. Their whole male population is supposed to amount to half a million, and the number liable to be called into action to 200,000; but the whole amount of those usually employed, is, probably not more than 10,000 or 12,000. COSSACK.

Yekaterinodar (spelt Ekaterinedara by Dr. Clarke) is the Metropolis of the Chernomortzi Cossacks; and when he saw it in July, 1800, it bore no resemblance to a town, but was rather a forest of oaks, in which a number of straggling cottagers, widely separated, were concealed, not only from all general observation, but even from the view of each other. (ii. 18.) Its very foundation took place only eight years before. The interval of eleven years, which had elapsed between the visits of the English and the Livonian traveller, had evidently made a considerable change in the appearance of Yekaterinodar; its wide streets, and two spacious market places, were already laid out, and though not yet populous, it contained 2500 inhabitants; but its spacious gardens and many waste spaces continued to make it look "more like a village than a city." A wooden church, of considerable dimensions, abundantly provided with gates and cupolas, had already risen within the walls of the fort on the high bank of the Cúbán, and formed the most conspicuous and ornamental object in the place. However agreeable and interesting a short residence in this nascent city may be in the summer months, it must be a most deplorable abode in winter; when, to borrow the words of M. von Engelhardt, who had experienced its miseries at that season, "the streets are full of grey mire, which often comes up to the horses' belly, and the poor, the only people who go on foot, stalk about in fen-boots, carefully secured half-way up the thigh, lest they should be left behind in the mud, and feeling their way before them with a stick, to guard against the accident which often falls to the lot of their neighbours on horseback, a tumble into a hole concealed by the slough." The want of a drain for the superfluous moisture, is an inconvenience felt every where in the Steppes, even in elevated situations; so that not only in Yekaterinodar, but likewise in Georgievsk, Rostov, Cherkask, and Odessa are the passengers continually in danger of being imbedded in the mud. Ekaterinedara.

The north-western part of the Chernomortzi territory is the best cultivated and most populous; probably on account of the numerous streams running from east to west through those districts into the Sea of Azov. These rivers are properly a chain of small lakes connected with each other by natural channels, which have a fall sufficient to turn a mill. On several of them there are considerable villages, particularly on the Beïsú, (Clarke's *Bey's eau*,) where there is a large convent; and on the Kirpil and Yeya (Eyú) where Medvedovka and Cherbinovka, the chief towns of their respective districts are placed.

See Pallas's *Travels in Russia*, i. 468. ii. 330; Clarke's *Travels*, i. 368. ii. 5. 8vo. ed.; Von Engelhardt und Parrot's *Reise in die Krym und den Kaukasus*, Berlin, 1815, vol. i. 69; Storch, *Tableau de l'Empire de Russie*, i. 25; Tooke's *View of the Russian Empire*, i. 390.

COSSET. COST.

COSSET, *n.* a *cosset* is said, in the Glosse to the *Shepherd's Calendar, November*, to be "a lambe brought up without the dam." Florio has "*Casiccio, cassiccio*, a tame lamb bred up by hand in a *house*." (*Casa*, a cottage.) To the same purport are Ray and Grose. Moor (Suffolk Words and Phrases) adds, that the term is extended to a much indulged child. "'Twas *cossetted* too much by half."

> The fairest May she was that euer went,
> Her like she has not left behind I weene.
> And if thou wilt bewail my wofull teene,
> I shall thee giue yond *cosset* for thy paine.
> *Spenser. Shepheard's Calendar. November.*

COSSINIA, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Sapindi*. Generic character: calyx inferior, five-parted; corolla four or five petals; capsule three-celled, bursting at the top, cells mostly three-seeded.

Two species, natives of Islands in the Indian Ocean.

COSSONUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Curculionidæ*. Generic character: ninth joint of the antennæ forming an avoïd or abconic club; the first inserted near the middle of the proboscis, or towards its base; body generally cylindrical.

Type, *C. linearis*, Fab.

COSSUS, in *Zoology*, a genus of insects of the order *Lepidoptera*, family *Bombycites*. Generic character: antennæ setaceous, of the length of the thorax, having only a single series of denticulations in either sex.

Type, *C. lignipoida*, Fabr.

The species given as the type of this genus, is a British insect, well known under its familiar appellation of the Goat Moth. The larva feeds on the wood of the willow, ash, and oak, which it perforates. The larva is strongly and unpleasantly odorous. It remains three years in this state, when it spins a strong web, intermixed with particles of wood, and changes into the pupa state in the month of May; and in June the perfect insect comes forth. It is said that those which feed on the oak are paler than those of the willow. Samouelle, *Compend.* p. 246.

COSSYPHUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Tenebrionites*. Generic character: head concealed beneath the thorax, which is semicircular, and helmet-shaped; the last five points of the antennæ, forming a perfoliated club; terminal joint of the maxillary palpi securiform.

Type, *C. depressus*, Fab.

The only species of this genus at present known, is a native of the East Indies.

COST, *v.* Cost, *n.* Co'stious, Co'stless, Co'stly, Co'stness. Ger. and Dutch, *kost*; Ger. *kosten*; Sw. *kosta*; Fr. *couster*; It. *costare*, which the Etymologists, with the exception of Junius, derive from the Lat. *constare*. Junius thinks the A. S. *cyste, arca*, a chest, is the primitive word; *quod majores impensas facturi opus habeant* arcâ, *edque bene instructâ*.

In Scotch, to *cose* or to *coss*, Dr. Jamieson says, is to exchange, to barter; and this Ruddiman, in his *Glossary* to G. Douglas, derives from the A. S. *ceosan*, Eng. to *choose*; Dutch and Ger. *kiesen*; Sw. *kesa*; Fr. *choisir*; Lat. *eligere, seligere, æstimare*, to elect, to select, to take or pick out; and thus, to estimate, to value. *Ceos-an, ceos-ed, cos-ed, cost*, follow in a regular course of corruption, and present an obvious etymology.

The *cost* is the price or value given or paid; *cost* is used emphatically, for *great-cost*, high price or value. COS

The real price of every thing, what every thing really *costs* to the man, who wants to acquire it, is the toil and trouble of acquiring it. *Smith. Wealth of Nations*, book i. ch. v.

As the proud horse with *costly* trappings gay,
Exulting prances to the bloody fray;
Spurning the ground, he glories in his might,
But reels tumultuous in the shock of fight.
Falconer. Shipwreck, can. ii.

Costs, in *Law*, the expenses which parties necessarily incur in the prosecution and defence of actions: they consist of money paid to the King and Government for Fines and Stamp Duties; to the Officers of the various Courts; and to Counsel and Attornies for their fees and charges. Costs are of two sorts, those between Attorney and Client, and those between party and party; the former are payable in every case to the Attorney by the Client, whether he ultimately succeed or not in the matter intrusted to his care; the latter are only allowed in particular cases to the party succeeding against his adversary. Costs were not professedly allowed to the successful party by the Common Law, but were considered as included in the quantum of Damages. The first Statute which gave Costs under that title to the Demandant in a real action, was the Statute of Gloucester, 6 Edward I. ch. i. No Costs, however, were in any shape allowed a Defendant, even if he prevailed, until the Statute 23 Henry VIII. ch. 15; by this Statute, and those of the 4 James I. ch. 3; 8 and 9 William III. ch. 11; and 4 Anne, ch. 16, he is allowed the same Costs as the Plaintiff would have if he had recovered. In some cases double and treble Costs are given by Statute; these are not understood to mean according to their literal import, twice or thrice the amount of single Costs, but are calculated thus, if double Costs, the common Costs, and then half the common Costs; if treble Costs, the common Costs, half of these, and then half the latter. The King, or any person suing to his use, neither pays or receives Costs; Executors and Administrators also, when suing in right of the deceased, are exempt from paying Costs; Paupers, also, swearing themselves not to be worth £5. are, by Statute 11 Henry VII. ch. 12, and 23 Henry VIII. ch. 15, to have Writs gratis, Counsel and Attornies assigned them without fee, and are excused paying Costs, but shall suffer other punishment at the Judges discretion.

COSTS. COSTA RICA.

Many Statutes have from time to time been passed to explain and regulate Costs. As the intricacies of law increased, it became necessary to define in what cases Costs should be given to Plaintiffs, and in what to Defendants, and also the mode of taxing and recovering them. There is a short and comprehensive Abridgement of the Law of Costs by Mr. Tidd, from which much useful information may be gathered.

Cost, Co'stal. } Lat. *costa*, (of unknown origin.) See Coast.

B. Jonson uses *costs* or *coasts* for the ribs of a ship.

——— Has a nimble taile
Made like an auger, with which taile she wrigles
Betwixt the *coasts* of a ship, and sinks it streight.
Ben Jonson. Staple of Newes, act iii. sc. 2.

Whereby are excluded all cetaceous and cartilagineous fishes; many pectinal, whose ribs are rectilineal; many *costal*, which have their ribs embowed; all spinal, or such as have no ribs, but onely a back bone.
Sir Thomas Brown, book iv. ch. x.

CO'STARD, *n.* Co'stard-monger, Co'ster-monger. } A *costard* is said by the old Lexicons to be a kind of Apple. Drayton (*Poly-olbion*, song 18) mentions it among the sundry fruits, "That have their sundry names in sundry countries plac'd." And it is classed by Evelyn among those in prime in October; *coster* or *costardmonger*, is explained to be a Fruiterer in general. Skinner derives *costard* from *coster*, a head; but there is no authority for such a word. Honeywood (in Skinner) from Dutch, *kost*, *cibus*, and *aerd*, *natura*, *q. d. cibus naturalis*; springing spontaneously from the earth. Its origin is probably historical. *Pomarius*, is rendered by Drant, *Costerdmonger*.

The prodigall, by witte worde hath
ten talentes: in his heate,
He biddes the *costerdmongers*, and
thappothycaries neate.
Drant. Horace. Satyre 3.

Nay, come not neere th' old man: keepe out che vor'ye, or ice try whither your *costard*, or my ballow be the harder.
Shakspeare. Lear, fol. 304.

Fol. Upon my life he means to turn *costermonger*, and is projecting how to forestall the market; I shall cry pippins rarely.
Ford. The Sun's Darling, act iv. sc. 1.

Lady. Pray sister do not laugh, you'll anger him,
And then he'll rail like a rude *costermonger*.
Beaumont and Fletcher. The Scornful Lady, act iv. sc. 1.

COSTA RICA, a Province of the State of Guatimala, an important Republic of the New World, but at present, unfortunately, little known to the Geographer.

Costa Rica is, we believe, its most southern division, being bounded on the south by the Province of Veragua, which some very recent authors assert belongs to Colombia, and others to Guatimala, the first opinion being best supported. It is also limited on the east by the Caribbean Sea, on the west by the Pacific, and on the north is terminated by the boundary of Nicaragua.

Costa Rica, from thus embracing two oceans and a vast inland sea, will, most probably, notwithstanding the general heat of its climate, become of great im-

COSTA RICA.

portance as the New Governments obtain stability. Its name is derived from a pearl fishery which was very abundant on its shores, and from its valuable gold and silver mines. At present it is not very thickly inhabited by people of Spanish origin, as it is a very mountainous country, overspread with dense forests and waste lands, over which roam tribes of the aboriginal race, who are perfectly independent.

The small towns and mining stations occupied by the whites, and Negroes, or their descendants, export cacao, cattle, honey, hides, and wax; and the pearl fishery produces a species of shell fish which affords a purple dye. The pearl muscle and this fish are chiefly found at present in a small bay called Golfo de las Salinas, or Nicoya, which is indeed the chief port of Costa Rica on the Pacific; the port of Carthago also on the Pacific, and the next in importance, being situated at a great distance from the town which gives its name to it, and which is the Capital of the Province.

Carthago.

Carthago, or Cartago, is situated in latitude 9° 42′ north and in longitude 83° 30′ west, 360 miles north-west of Panama; but though the See of a Bishop and the residence of the Governor, it is not a place of importance, or of any considerable population, having been much deserted since the period of its greatest splendour, when it had arrived at the rank of one of the first towns in the New World. Cartago is only about ten leagues from the Atlantic, and seventeen from the Pacific Ocean, and is built on a river of the same name, which runs into the Pacific in latitude 84° 20′ west and in longitude 9° 40′ north.

Nicoya.

Nicoya is the next place of any note; it is built on the peninsula which forms one side of the Gulf of the same name, on the Pacific coast, and in latitude 85° 53′ west and longitude 10° 42′ north; its trade, consisting in the purple dye already mentioned, which is chiefly obtained from the Bay de las Salinas, about thirty miles eastward, and in salt, honey, maize, wheat, and poultry.

The ridge of the Cordillera of Guatimala, which runs through the centre of this Province, will long remain an obstacle to commerce; but it must be recollected that the same causes which once rendered its Capital, built nearly midway between the two Oceans and on the western flanks of the Andes, rich and flourishing, still exist, and that the commerce of Panama, Carthagena, Portobello, and the Havannah, requires only once more to be well-directed to render Guatimala one of the most splendid of the new States.

Despenza, Landeche, Queypo, and San Lorenzo, are the names of the Towns along the Pacific, on the great Gulf of Nicoya and Golfo Dolce; whilst on the eastern side of the Andes, there are no places of any note, and the Atlantic presents a boundary shore, which runs in an almost unvarying straight line from north to south. The rivers of Costa Rica are numerous but small, particularly those on the Atlantic coast, two of which alone, De los Anzuelos and Rio Suere, afford harbours for the vessels from Portobello on the Spanish Main.

But perhaps Gage's description of his Journey in 1637 through Costa Rica, in which he was very near being devoured by an alligator, on the banks of the great Lake of Nicaragua, affords the best picture of the inland parts of this country. "After that we had wholly lost the sight of it, (the Lake,) we began to enter into rough and craggy wayes, declining more to the South than to the North Sea. And in all the rest of our journey, we observed no thing worth committing to posterity, but only mighty woods and trees on the South Sea side, very fit to make strong ships, and many mountains and desert places, where we lay sometimes two nights together, either in woods or open fields, far from any town or habitation of Indians; yet, for our comfort in these so desert places, we had still a guide with us, and found lodges, which by command of the nearest Justices had been set up for such as travelled that way. We came at last through thousand dangers to the city of Carthago, which we found not to be so poor, as in richer places, as Guatimala and Nicaragua, it was reported to be—being well informed that Suere would be the best place for us to travel unto, by reason of more provision in the way, more towns of Indians, and *Estancias* (farms) of Spaniards, we resolved within four dayes after we had rested in Carthago, to undertake a new journey towards the North Sea. We found that countrey mountainous in many places, yet here and there some vallies, where was very good corn, Spaniards living in good farmes, who, as well as the Indians, bred many hogs; but the towns of Indians we found much unlike to those which we had left behind in Nicaragua and Guatimala, and the people in curtesie and civility much differing from them, and of a rude and bold carriage and behaviour towards us; yet they are kept under by the Spaniards, as much as those whom I have formerly spoken of about Guatimala."

Gage was taken prisoner by the Dutch on his sailing from Suere, and being deprived of his hoard of riches, was obliged to return to Carthago, whence he thought of journeying along the Andes to Panama; but having got intelligence of the dangers to be apprehended from the rugged nature of the country, and from the wild Indians of the mountains south of Carthago, he desisted from that intention, and travelled to Nicoya, to embark there on the Pacific for Panama. "The way we travelled from Carthago to Nicoya was very mountainous, hard, and unpleasant, for we met with few *Estancias* of Spaniards and few Indian towns, and those very poor, small, and all of dejected and wretched people; yet Nicoya is a pretty Town, and head of a Spanish Government. About Chira, Golfo de Salinas, and Nicoya, there are some farmes of Spaniards, few and very small Indian towns, who are all like slaves employed by the Alcaide Maior, to make him a kind of thred called *Pita*, which is a very rich commodity in Spain, especially of that colour, wherewith it is dyed in these parts of Nicoya, which is a purple colour, for which the Indians are here charged to work about the sea-shore, and there to find out certaine shels, wherewith they make this purple dye. *Purpura* is a kind of shell-fish, whose usual length of life is seven years, he hides himselfe about the rising of the Dog-star, and so continues for 300 dayes; it is gathered in the spring time, and by a mutuall rubbing of one or other of them together, they yield a kind of thick slime, like soft wax; but its famous dye for garments is in the mouth of the fish, and the most refined juice is in a white vein, the rest of his body is void and of no use: your Segovia cloth died therewith, for the richnesse of the colour, is sold at five or

six pound the yard, and used only by the great Dons of Spain; and in ancient times worn only by the noblest Romans, and called by the name of Tyrian purple."

Anson, Dampier, Wafer, and others, afford in their voyages many details of the coasts of Costa Rica.

CO'STIVE, } Probably a corruption of the Fr.
Co'STIVENESS. } *constipe, constipated*, q. v. It. *costipare, costipato.*

> Egges longe and white, be nutritiue,
> much better then the round:
> Egges roasted hard be *costiue*, yea
> vnholsome and vnsounde.
> *Drant. Horace. Satyre* 4.

I would she should knowe remedies for such diseases as come often, as the cough, the murre, and gnawing in the bellie, the laske, *costifnes*, the wormes, the head ache, &c.
Vives. Instruction of a Christian Woman, X. viii.

> He that courts others ears, may use designs,
> Be coy and *costive*; but my harmless lines,
> If they produce a laughter, are well crown'd.
> *Brome. Epistles.*

> But, trow, is he loose, or *costive* of laughter?
> I'ld know, to fill him his glasse, thereafter.
> *Ben Jonson. Entertainments*, fol. 104.

> While faster than his *costive* brain indites,
> Philo's quick hand in flowing letters writes;
> His case appears to me like honest Teague's,
> When he was run away with by his legs.
> *Prior. Epigrams.*

There is reason to suspect, that children being usually intent on their play, and very heedless of any thing else, often let pass those motions of nature, when she calls them but gently; and so they, neglecting the seasonable offices, do by degrees bring themselves into an habitual *costiveness*.
Locke. Works. Of Education, sec. 27.

> Tis true, sometimes to *costive* brains
> A couplet costs exceeding pains.
> *Lloyd. On Rhyme.*

COSTUME, Fr. *coutume*, custom; habit, manner; continual fashion or order.

Sergius Paulus wears a crown of laurel; this is hardly reconcileable to strict propriety, and the *costume*, of which Raffaele was in general a good observer.
Sir Joshua Reynolds. The twelfth Discourse.

COSTUS, in *Botany*, a genus of the class *Monandria*, order *Monogynia*, natural order *Scitamineæ*. Generic character: calyx three-cleft, gibbous; corolla three-parted, ringent; nectary two-lipped, inferior lip large, three-lobed.

Eight species, natives of South America and the East Indies. The plants of this genus, and of the whole natural order, are very interesting, and much sought for by the cultivators of exotic plants.

CO-SUFFERER, a fellow-sufferer. See to SUFFER.

> For those who yet write on our poet's fate,
> Should as *co-sufferers* commisserate.
> *Wycherly. Prologue to Love in a Wood.*

COSUMEL, or COZUMEL, is an Island on the Coast of Yucatan, in Mexico, forty miles in length, and from three to ten in breadth, in latitude 19° 40′ north and longitude 85° 51′ west; it is very fertile, and abounds with cattle and fowls.

This Island is remarkable as having been the first portion of New Spain visited by Juan de Grijalva. He saw it on the 13th of April, 1518, and gave it the name of *Santa Cruz*, because it was discovered on the day of "the invention of the Holy Cross." In the *Historia de los Hechos de los Castellanos en las Islas y tierra firme del Mar Oceano*, by that celebrated writer Antonio de Herrera, is a very curious and circumstantial account of this discovery, which is also mentioned at large by De Solis in the *Conquista del Mexico*.

Yucatan had been seen before this by Pinzon, De Solis, and Cerdova, and such accounts were current of its extraordinary fertility, extent, and riches, that Velasquez, the Governor of Cuba, fitted out an expedition, which he placed under the command of Grijalva, to explore the country. The currents set the vessels to Cosumel, where Grijalva found an Indian woman of Jamaica, who had been driven there with her husband and nine men, in a canoe by a violent storm. The natives had sacrificed all her party to their Deities, and she gladly embraced the proferred aid of the Spanish Chief. From her, and other sources, he heard an account of the interior, very flattering to that ardent desire for gold and power, which was the only object of the adventurers.

Cosumel had at that time several Temples, one of the largest being in the shape of a tower, hollow at top, with four large windows or wide openings, and galleries, in which were many idols; at the foot was a wall with a kind of battlement, and on this wall was a mark drawn with white lime, three yards high, resembling a cross. From these high buildings and the cross, as well as from the appearance of the coasts, Grijalva named the country New Spain, a name it has ever since borne, but which the late revolution has changed into the more appropriate one of Anahuac, or Mexico.

On the return of this Navigator, Velasquez was again anxious to explore the coast, and an expedition on a large scale was undertaken, of which Cortez made himself the commander, and steered for Cosumel, where he reviewed his troops, and having heard that the word *Castellano* was frequently repeated by the Indians of these coasts in former voyages, Cortez inquired of the Caciques, if any whites dwelt amongst them; and learning that some were to be found, he despatched two ships to Cape Catoche, where the word had been chiefly heard, and sent the Indians to the continent to bring off any European who might be there. Two Spaniards, Alonzo Guerrero and Jeronimo de Aguilar, were discovered, but the former had married an Indian woman, by whom he had several children, and refused to obey the summons; the latter came very cheerfully, after trying to persuade his companion to accompany him. In this, Aguilar lost so much time, that Cortez had sailed when he reached Cosumel; an accident, however, drove the fleet back into harbour, and the unfortunate wanderer was enabled to throw himself at the feet of the Spanish leader; but as he had very nearly forgotten the use of his native language, was bronzed in his complexion by the burning climate, and almost naked, it was with great difficulty he was recognised as a Spaniard. He carried a bow and quiver across one shoulder, and over the other wore a mantle like a cloak, in the ragged corner of which he had tied an old Missal, or book of the *Office of the Virgin*, which he immediately showed to his countrymen, ascribing his deliverance to his devotion. On coming before Cortez, he squatted down on his hams, after the manner of the Indians, and no one could have imagined that he was the European whom they were seeking. At length he was able to relate that he was a native of Ecija, and had been educated for the Church, but had been wrecked eight

COSUMEL — COTCITEPETL.

years before on the shallows of the Alacranes, on a voyage from Hispaniola to Darien; when he and his companions in misfortune, endeavouring to reach Cuba in the ship's boat, were carried by the currents to the coast of Yucatan, and there enslaved. The Indians had sacrificed several to their idols; others, amongst whom were two women, were worn out with disease and fatigue, and soon died. Guerrero and himself were the only survivors, and he had been condemned to die, and to be eaten, (according to De Solis,) but had effected his escape, and wandered into a country where the Chief was an enemy of his enslavers. This Chief saved him, and had ever since protected him. Guerrero had adopted all the Indian customs, but Aguilar, in whom Cortez trusted he should find a competent guide, was found ignorant of the country, having been kept in constant employment and servitude by the natives. This man was, however, subsequently employed with great success in the conquest of Mexico by that leader.

Cosumel was formerly inhabited by the Spaniards, as the ruins of several buildings in a palm wood indicate, but is, we believe, now untenanted by man.

CO-SUPREME, a fellow-supreme. See SUPREME.

> Whereupon it made this threne,
> To the phenix and the dove,
> *Co-supremes* and stars of love;
> As chorus to their tragic scene.
> *Shakspeare. Passionate Pilgrim.*

COTABAMBA, a Province of Peru, reaching from the river Abancay southward for eighty miles to the Apurimac. It begins twenty leagues south-west of Cuzco, and abounds with cattle, maize, wheat, and fruit; has several gold and silver mines, with a population of 10,000 souls. A plant, from whose tendrils the cords and thick ropes used in Peru and La Plata for the construction of extensive rope-bridges, grows plentifully in Cotabamba. This country is filled with high mountains, which are covered with snow during the greater part of the year. Cotabamba, a small unimportant place, is its chief Town.

COTCITEPETL, *The Speaking Mountain; tepetl* being a mountain in the ancient Mexican Language, as *tepec* is in the modern Turkish. In the *Codex Vaticanus*, No. 3738, are exhibited in Mexican painting the four great epochas of Nature according to the Aztec Cosmogony; and in one portion is represented the volcano of Cotcitepetl, which is highly curious, as having been the place of penance, on whose summit Quetzalcoatl, the last great lawgiver of the Mexican nations, did penance after the age of water. It is represented with the hieroglyphic symbols of a mouth and tongue, whence its name, and it will be found on the Chronological Plate XXVIII. of MISCELLANIES.

Quetzalcoalt is the most mysterious personage of the whole Mexican Mythology; he is called God of the Air, and was High-priest of Tula, his reign having been the golden age of the people of Anahuac. On the occasion of a great famine he performed penance on Cotcitepetl, near Tlaxapuchicalco, where he walked barefooted on agave leaves, to appease the Gods. Having succeeded, and having seen his people completely happy, he was made immortal by accepting a beverage from Tezcatlipoca or the Great Spirit. This inspired him with a desire for travelling, and he at length came to Cholula, where he taught the people various arts, amongst others, that of casting metals and regulated the Toltec religion and calendar. His doctrines were entirely those of peace, and he permitted no other sacrifice to the Great Spirit than the first fruits of the harvests. COTC — TEPET — COTE

From Cholula, where a pyramid of vast size was afterwards dedicated to him as God of the Air, which is now extant, he went to the estuary of the river Goasacoalco, or Huasacualco in Tabasco, which flows into the Mexican Gulf, and at that place he disappeared, promising however to return. His migration from the north of Spanish America is clearly traced, and affords another link to the chain of evidence which is daily unfolding towards the developement of the great question of the origin of the American population. His long beard and flowing garments afford strong presumption of his Asiatic derivation, and his wise laws not a little resemble those of Buddha and Brahma.

But the most curious facts connected with this Speaking Mountain are, that the Saint who gave it a name and character was supposed by Montezuma and his subjects to be the common father of those Europeans who were the subduers of the Mexican race; and in his affecting speech to Cortez, Montezuma unhesitatingly informed him, that the Spaniards had been long expected to visit them, from the counsels their ancestors had received in ages gone by from Quetzalcoatl.

With less foundation, and with equal credulity, the Spaniards fancied in their turn that the Mexican High-priest who had delivered this oracular and prophetic advice, must have been no less a personage than the divine Saint Thomas; an opinion which also prevails amongst the Spaniards of La Plata, concerning another Indian lawgiver.

COTE, to cite, now written to *quote*, q: v.

> But as touching the labour nowe lastly bestowed on thys present woorke, thou shalt vnderstande most ientle reader, that the text is throughout *coted* in the margin with much more diligence and treuth, than I haue yet seen in any Newe Testament hitherto sette forth in any tongue. *Udall. Preface.*

COTE.

As in a *cote*, or in an oxes stall,
But nourished in an emperoures hall.
Chaucer. The Clerkes Tale, v. 8274.

At the concludyng of whiche amitie he granted lycence and libertie for certayn *cotteshold* shepe to be transported into the countie of Spayne (as people report) which haue so there multiplied and encreased that it hath turned y^e^ commoditie of England, moche to the Spanish profit, & to no small hynderance of the lucre and gayne whiche was beforetymes in England, raysed of wolle and fell. *Hall. Edward IV. The fourth Yere.*

Moche rather is that servaunt to be commended, whiche haulnge a lyttell reward of his maister, wyll in a small *cotage* make hym hartye chere, with moche humble reuerence.
Sir Thomas Elyot. Governour, p. 161.

And albeit a *cote* in our language is a little slight built country habitation (such as after the French we call a *cottage*) yet as all things begin little, so that which first bore the name of a *cote*, might afterwards come to be the habitation of a worshipfull family, and yet retaine the name of *cote* still, which being no other originally in itselfe than is aforesaid, yet carrieth it honour in the antiquity thereof. We also use this word *cote*, for a garment, but it seemith to have been at first metaphorically brought in use, in regard of being shrowded therein, as in the little house or *cote* of the body, but anciently we so used it not, for our ancient word for a *cote* in this sence, was a reaf.
Verstegan. Restitution of Decayed Intelligence, ch. viii.

——— As when a prowling wolfe,
Whom hunger drives to seek new haunt for prey,
Watching where shepherds pen thir flocks at eeve
In hurdl'd *cotes* amid the field secure,
Leaps o'er the fence with ease into the fould.
Milton. Paradise Lost, book iv. l. 186.

Diuerse discourses in their way they spent;
Mongst which Cymochles of her questioned,
Both what she was, and what that vsage ment,
Which in her *cote* she daily practiced.
Spenser. Faerie Queene, book ii. can. 6. st. 9.

He followed fast, and chaced him so nie,
That to the folds, where sheep at night do seat,
And to the little *cotes*, where shepherds lie,
In winter's wrathful time, he forced him to flie.
Id. Ib. book vi. can. 9.

But if to my *cottage* thou wilt resort
So as I can, I will thee comfort.
Id. Shepheard's Calendar. September.

They enuy others whatever they enjoy of estates, houses, or ornaments of life, beyond their tenuity or *cottagely* obscurity.
Taylor. Artificial Handsomeness, p. 172.

Himself goes patched like some bare *cottyer*
Lest he might ought the future stocke appeyre.
Hall. Satire 2. book iv.

But what plain fare her *cottage* did afford,
A hearty welcome at a humble board,
Was freely hers; and to supply the rest,
An honest meaning, and an open breast.
Dryden. The Hind and the Panther.

Hail Independence—never may my *cot*
Till I forget thee, be by thee forgot.
Churchill. Independence.

There through the dusk but dimly seen,
Sweet evening objects intervene:
His wattled *cotes* the shepherd plants,
Beneath her elm the milk-maid chants.
Warton. Ode 11.

If a man living in a *cottage*, should behave as if he lived in a palace, if he should order his servants about him, command his tables to be filled with the most costly food, and call for the richest apparel, what would his neighbours who saw things in their true light, say of him? *Gilpin. Sermon* 13. vol. i.

Where'er from time thou court'st relief,
The muse shall still, with social grief,
Her gentlest promise keep:
E'en humble Harting's *cottag'd* vale,
Shall learn the sad repeated tale,
And wild her shepherds weep.
Collins. Ode on the Death of Colonel Charles Ross.

Resolve me, why the *cottager* and king,
He whom sea-sever'd realms obey, and he
Who steals his own dominions from the waste,
Repelling winter blasts with mud and straw,
Disquieted alike, draw sigh for sigh,
In fate so distant, in complaint so near?
Young. The Complaint. Night 7.

COTE. COTE D'OR.

The *cottage-curs* at early pilgrim bark;
Crown'd with her pail the tripping milk-maid sings,
The whistling ploughman stalks a field, and hark,
Down the rough slope the pondrous waggon rings.
Beattie. The Minstrel, book i.

Bring health, that loves at early dawn
To meet the milk-maid on the lawn;
Bring pleasure, rural nymph, and peace,
Meek *cottage-loving* shepherdess!
Warton. Ode 11. *On the approach of Summer.*

COTE. "To *cote*, is to *overtake*. In the laws of coursing, Mr. Tollett says, 'To *cote* is when a Greyhound goes endways by the side of his fellow, and gives the Hare a turn.' This quotation seems to point out the Etymology of the verb to be from the Fr. *côté*, the side." Steevens. See COURSING.

"Fr. *coste a coste*; equally, in even rank, side by side, cheek by jowl." Cotgrave.

She, of the gods and goddesses
Before the wanton noted,
Was of the gods and goddesses
For wantonnesse out-*coted*.
Warner. Albion's England, book vi. ch. xxx.

Æthe, Agamemnonides that was so richly maind,
Gat strength still, as she spent; which words, her worth had prou'd with deeds,
Had more ground beene allow'd the race; and *coted* farre his steeds
No question leaving for the prise.
Chapman. Homer. Iliad, fol. 318.

ROSIN. To thinke, my lord, if you delight not in man, what leaton entertainment the players shall receive from you: we *coated* them on the way, and hither are they comming to offer you seruice. *Shakspeare. Hamlet*, fol. 262.

COTE D'OR, a Department of France, situated in the eastern part of that Kingdom, and deriving its name from a mountain south of Dijon. It is bounded Boundaries on the north by Aube, north-east by Upper Marne, east by Upper Soane, south-east by Jura, south by Soane and Loire, and west by Nyevre and Yonne. It constituted the northern part of the former Province of Burgundy, and is divided into the four Arrondissements of Dijon, Beaune, Semur, and Chatillon sur Seine. Its form is an irregular oval; its greatest length being about sixty-five miles, and its breadth nearly fifty; and it comprises an area of 3500 square miles, with a population of 355,500 individuals. Its surface presents considerable variety, and is watered by the Soane, the Rivers, Ouche, the Tille, and the Seine, the last of which has its source in this Department. The Province of Burgundy has long been noted for its fertility, especially in producing corn and wine, the latter of which is Wines esteemed in most countries of Europe. This constitutes the chief trade of Cote d'Or, which is much facilitated by the great canal uniting the Mediter- Great ranean and the Atlantic Ocean. This canal, which is Canal. called by the same name as the Department, and sometimes by those of the Canal of Burgundy, the *Canal de l'Est*, &c., was first projected by Henry IV., and passes through a space of about 130 miles in length, joining

COTE D'OR.

the Soane and the Yonne. The ridge of hills from which the Department derives its name, runs from north to south nearly its whole length, while a branch diverges towards the west near its southern confines. Its chief mineral productions are iron, porphyry, and mill-stones, but the produce of the surface constitutes the chief wealth of the inhabitants.

Dijon.

Dijon is the Capital of this Department, and was the Metropolis of the Duchy of Burgundy. It stands near the river Ouche, on the margin of a fertile plain, and is nearly a league in circuit, including the suburbs, though the space within the walls is much less. The walls have a handsome appearance, but the fortifications are old, and incapable of much resistance. The streets are in general regular, and well paved, and many of the houses neat and commodious. It is entered by four gates; contains eight Churches, several Hospitals, a Royal College, an Academy of Sciences, a Public Library, consisting of about 40,000 volumes, and a Museum with many beautiful paintings and engravings. There is also a Citadel, which was built by Louis XI. The *Place Royale*, in shape resembles a horse-shoe, and contains the Provincial Palace, the House of Assembly belonging to the ancient Parliament of Burgundy, and other public buildings. Several of the churches were distinguished for their architecture. That of St. Benigne is noted for its spire, which is 370 feet high. St. Michael's is remarkable for the richness of its portal, and that of Notre Dame is esteemed one of the best specimens of Gothic architecture in Europe. The Cistertian Abbey took the lead of all the monastic institutions; and about a quarter of a league from the town stood the *Chartreuse*, which was nearly destroyed at the Revolution. Before this event, the University of Dijon was ranked among the first in France; and though its functions were suspended during that period, it has since been restored, and has Professorships of Theology, Philosophy, Mathematics, Latin, German, History, Rhetoric, Eloquence, and Poetry. The Academy of Sciences was founded a century ago, and has long been one of the first Provincial institutions of the kind in France. Dijon is the See of a Bishop, and has manufactures of silk, cotton, and wool, the produce of which, with corn and wine, form the principal articles of its trade. It has long stood high in the scale of literary and scientific character among the Provincial towns of France; and few places have produced more distinguished characters, among which are Bossuet, Crebillon, Piron, Rameau, Monnaye, and Languet. The population of Dijon was lately stated at 21,600. It is situated about 100 miles north of Lyons, and 175 nearly south-east of Paris, in latitude 47° 19′ north and longitude 5° 2′ east.

Beaune.

Beaune, Semur, and Chatillon sur Seine, are the other three chief Towns, and the heads of the Arrondissements into which the Department is divided. The

Semur.

first of these has already been described. Semur is but a small Town, with a population not exceeding 5000 individuals, but is the place where the Parliament of Burgundy formerly met, and has considerable manufactures of woollen, linen, and leather, with a trade in corn, wine, and cattle. It stands about thirty-five miles nearly north-west of Dijon. Chatillon sur Seine is situated in the mountainous, part of Burgundy, about twenty miles east of Tonnerre, and has nearly 4000 inhabitants. It was the scene of some fruitless negociations between the Allies and Buonaparte in the spring of 1814.

COTERIE, Fr. *coterie*, company, society, association of people. Menage writes *cotereux, coterie*; Mid. Lat. *coterellus*; and this he, with Spelman, thinks is from the Low Lat. *cota*, a *cot*; cotæ *seu tugurii habitator*. See Menage, Du Cange, Spelman, and Vossius, *de Vitiis*. Skinner has "Cottarells, *clientes seu beneficiarii omnium vilissimi, a nostro* cote." See also *cotterie*, in Cotgrave, for the earlier usage of the word.

> Fine B—— observes no other rules
> Than those the *coterie* prize;
> She thinks, whilst lords continue fools
> 'Tis vulgar to be wise.
> *Lovibond. On a very fine Lady.*

COTES DU NORD, a Department of France, which derives its name from its geographical position, and comprises the northern maritime part of the ancient Province of Brittany. It is a rectangular Province, washed by the English Channel on the north, and bounded by Finisterre on the west. Its length from east to west exceeds sixty miles, and its breadth varies from less than thirty to forty-five miles. Its area is about 2800 square miles, and its population 520,000 individuals. This Department, forming a part of the western peninsula, is not watered by any large river, nor is it particularly distinguished for its fertility. Its chief products are hemp, flax, maize, and apples for cider; but little corn is grown, and large districts are covered with heaths. The breed of cattle, however, is good, and the butter superior to that produced in the central departments of the Kingdom. The chief mineral products are lead and iron, and the principal manufactures, linen, woollen stuffs, thread, leather, and hardware. As this Department is much exposed to the influence of the winds both from the English Channel and the Atlantic Ocean, its climate is changeable and moist, and a considerable quantity of rain falls in the course of the year. Cotes du Nord is divided into five Arrondissements, of which St. Brieuc or St. Brieux is the chief,* which has been already described. Dinan, Lannion, and Guingamp are small Towns in this Department, containing 4000 or 5000 people each, and Loudeac is another still less.

COTGAU, refuse Wool so clotted that it cannot be separated, Stat. 13 Richard II. c. 9.

COTILLON, Fr. a petticoat; the word is applied to a figure dance by eight persons, the parent of the modern *Quadrille*.

COTOPAXI, (*The Shining Mountain,*) is the most noted of all the American volcanoes. It is twelve leagues south-east of Quito, and five north of Latacunga, in about 0° 45′ south latitude.

Its name is derived from the language of the Incas, and signifies the brilliant or shining mass or mountain; which it well deserves, being a most perfect and beautiful cone, covered with translucent snow, varied only by the wall of black and scorified rock that surrounds its summit and protects its vast crater, which it is impossible to reach on account of the immense crevices in the sides of the volcano.

Cotopaxi is also the loftiest volcano at present in activity in the world, being 18,891 feet above the Pacific Ocean.

* St. Brieux is described by an error of the Press under the name of St. Briene.

COTOPAXI.

Herrera mentions an eruption of this Mountain in 1533; and after being quiescent for more than two centuries, it burst out again in 1742, and continued its ravages for a long time. Condamine and Bouguer passed nine or ten days on Cotopaxi, in March 1738, to endeavour to constitute it one of the points of their geodesic operations; but they were obliged to quit their hazardous station, at the base of the permanent snow, from the impossibility of retaining their Indians during the festival of Easter. M. Godin and Don George Juan also encamped on it a little lower down with the same views. The latter fell into a ravine nearly thirty feet deep with his mule in ascending it. He was, however, fortunately not wounded. La Condamine returned, alone, in April to make a last effort. He met with the most untoward accidents; and was two days without fire in a tent buried in the snow, and could not therefore procure water. The eye-glass of a telescope, on the first appearance of the sun, gave him the means of softening the rigours of a situation in which cold, darkness, and thirst, simultaneously offered all their greatest horrors, and he succeeded in planting a signal on a higher point than he had before ascended, but Bouguer would not use it, preferring the spot first chosen.

Condamine now (in May) attempted to scale the peak of Cotopaxi, over nearly 3000 feet of eternal snows; but although, perhaps, he might have succeeded if he could have obtained assistance, the Cacique of Mulahala, the Indians, and the Mestizoes of the neighbourhood, would not even listen to his proposals, probably thinking he was deranged.

In 1742 Condamine witnessed, at a distance, the awful spectacle of that eruption which took place after the Mountain had been at rest ever since the arrival of the Spaniards in Peru.

The first eruption of Cotopaxi on record, that of 1533, which took place soon after the invasion of Peru, was, according to Indian tradition, foretold by Huana Capac, father of Atahualpa, who declared that whenever it should occur, Peru must yield to the white and bearded strangers who would overrun the country; Garcilasso, himself of the race of Incas, mentions this circumstance in his *Commentarios Reales de los Yncas*; Pedro de Cieça de Leon relates it in his *History of Peru*; and Herrera, as well as the other Spanish historians comment on it.

The snows which had been amassed on the vast cone for more than two hundred years, suddenly melted on the evening of the 15th of June, 1742, and the most terrible effects followed. The mountain was in incessant action, particularly on the 27th of September, 1743, and on the night of the 30th or 31st of November, 1744. During these tremendous visitations, cataracts of fire poured out from new mouths in its flanks; cascades of half melted snow precipitated themselves on the plains; a sea of boiling water covered in a few minutes many leagues of the surrounding country, and rolled along with its dreadful waves vast inflamed masses, blocks of ice, and fragments of rocks.

In 1742 the noise of the eruption was heard even as far north as La Plata in Colombia, 300 miles distant as the bird flies, whilst on the south it was distinguished at Guayaquil and even at Piura, or more than 120 leagues (of 25 to a degree) distant from the crater. It is said that the waters ejected made several bounds from the cone downwards to the plains, which saved many lives of those over whom they vaulted through the air; vallies were formed and hills created by the force thus exerted, and by the mud which the water deposited when it retired.

COTOPAXI. — COTQUEAN.

In 1744 the rivers swelled so prodigiously, that three or four stone bridges were washed away; and the village of Napo, thirty leagues distant in a straight line, and sixty by the sinuosities of the ground, from the volcano, was swept entirely down between midnight and one in the morning, five or six hours after the great explosion. The ashes were carried as far as the South Sea, or more than 240 miles; and they covered the country for miles round the mountain, so thickly as to destroy all vegetation, even at the distance of sixteen miles, being three or four inches deep. The fall or shower of ashes was preceded by one of fine earth, of a white, red, and green colour, and of a highly disagreeable odour; and this was itself ushered in by a shower of small gravel, accompanied in several places by an immense cloud of large white winged insects, with which the earth was covered in an instant, but they all disappeared before day.

In 1738 the peak of Cotopaxi was measured geometrically, and found to be 3000 feet, at least, higher than the lower line of congelation or of eternal snows; the crater was judged also to be about 4800 feet in diameter. From this vast mouth the fire darted in one grand and awful column to the sky, to the astonishing altitude of nearly 3000 feet above the edges of the crater. It is impossible to imagine a more sublime spectacle.—A body of intense flame darting from the apex of a perfectly conic mountain to the height of nearly a mile, the diameter of which was greater even than the aspiring elevation to which it reached. It was also found that rocks had been shot from the crater to a distance of nine or ten miles around, some of which were as large as the cottages of the Indians.

In 1750 Cotopaxi gave some dreadful threatenings; and in 1768 its eruptions were again most terrific, and such a quantity of ashes were shot out that they completely obscured the sun's light for some hours in the neighbouring town of Hambato. In 1803 the snow on the cone melted, and at Guayaquil, 150 miles distant westward, the thunders of the mountain were distinctly heard. Humboldt attempted in 1902 to reach the crater of Cotopaxi, but found it an impossible task.

COTQUEAN, Mr. Gifford says, is a corruption of Cuck-quean, (q. v.) a woman whose husband is unfaithful to her bed. But in Hall it is evidently applied as explained in Philips's *New World of Words*, quoted by the editor of Hall's Works: viz. "A man that is too busy in meddling with women's affairs." See also the citation below from *The Spectator*.

Vas. Scold like a *cot-quean*, that's your profession.
Ford. 'Tis Pity She's a Whore, act i. sc. 2.

Nur. Go you *cot-queane* go,
Get you to bed, faith you'll be sicke to-morrow
For this night's watching.
Shakspeare. Romeo and Juliet, fol. 72

Whose mannish hus-wives like their refuse state
And make a drudge of their uxorious mate;
Who, like a *cot-queene*, freezeth at the rocke,
Whiles his breech't dame doth man the forrein stock.
Hall. Satire 6. book iv.

COT-QUEAN — COTTES-WOLD HILLS.

OVID. We tell thee thou anger'st us, *cot-queane;* and we will thunder thee in peeces, for thy *cot-queanitie.*

Ben Jonson. Poetaster, act iv. sc. 4.

You have given us a lively picture of that kind of husband who comes under the denomination of hen-pecked; but I do not remember you have euer touched upon one that is of the quite different character, and who, in several places of England, goes by the name of a *cott-quean.* *Spectator,* No. 482.

COTTESWOLD HILLS, (*Cote,* a sheepcote, and *wold,* a hill,) a range of hilly land in the County of Gloucester, stretching nearly thirty miles from Broadway Hill to Tetbury, and twenty from Birdless Hill to Burford, and including an area of 200,000 acres. The soil is chiefly calcareous, and of late years has been converted from sheep-walks into full cultivation. On that part of the range near the ancient Borough of Campden-Chipping were celebrated during the reigns of James I. and Charles I. some rural sports and contests, instituted by Robert Dover, an Attorney of Barton on the Heath, in Warwickshire. The meetings were held and prizes distributed on Whit-Monday, and some of the chief wits of the day, among whom are to be mentioned Ben Jonson and Drayton, wrote verses on the festivities, which were published in a volume entitled *Annalia Dubrensia, upon the Yearly Celebration of Mr. Robert Dover's Olympick Games uvon Cotswold Hills,* 1636. This volume is now of rare occurrence. There are thirty-three contributors of verses, of whom the names of four only have escaped oblivion with posrity, Drayton, Ben Jonson, Owen Feltham, and Thomas Heywood, and not one line which has been furnished by any of these on this occasion deserves preservation, farther than as food for curiosity. Some of the titles are remarkable: Drayton addressed his panegyric "to Robert Dover, on his brave annual assemblies;" William Durham of Oxon, wrote "on his dauncing assembly," and continues in the following strain: COTT WOL HILL — COTT

> The candid winds as they these downes fly over,
> Whistle the praise of praise-deserving Dover.

Ben Jonson contributed a bad epigram in ten lines, "to my Joviall good friend Mr. Robert Dover on his great instauration of his hunting and dauncing at Cotswold." Owen Feltham wrote "to the generous and nobly minded Mr. Robert Dover on his heroick meetings." Timothy Ogle anagrammatized *Robertus Dover, Do robur et virtus,* a sentence of which he might as well have left the interpretation also. William Ambrose following the same course, exhibited the name of his friend Master Robert Dover, "O most rare true bred!" The contributor of the following curious piece, unhappily, is anonymous:

TO HER MODEST MIRTH-MAKING
Friend
Mr. Robert Dover,
This pastorall Pipe, by
The name of a *Syrinx,* dedicates herselfe, with
Her annexed *Anagrams.*
Incerti Authoris opus.

Verus Rubor dotes, Robertus Doverus. } *Ana.*

Syrinx sive fistula pastoricia Constans Ex centum et nonaginta Syllabis.

The *Nympha Libæthris,* or *Cotswold Muse* of Clement Barksdale, 1651, is a collection of Miscellaneous verses not in any way bearing upon Robert Dover or his sports. Barksdale, who taught a private School at Hawley, near Cotteswold, during the Civil wars, and held the living of Naunton after the Restoration, was (according to Antony Wood) "a good disputant, a great admirer of Hugo Grotius, a frequent preacher, but very conceited and vain, a great pretender to Poetry, and a writer and translator of several little Tracts, most of which are mere scribble."

CO'TTON, *v.*
Co'TTON, *n.*
Co'TTON, *adj.*
Co'TTONOUS,
Co'TTON-WICK.

} Fr. *cottoner, cotton;* It. *cottone;* Sp. *coton;* Dutch, *kottoen.* Skinner says, so called from its similitude to the down which adheres to the quince, *malis cydoniis,* which the Italians call *cotogni;* and *cotogni,* manifestly *a cydonio.*

To *cotton; consentire, quadrare, congruere, mallem a* Lat. *coadunare.* Skinner. It is, perhaps, merely

To be or cause to be like *cotton;* as soft, as easy, as yielding as *cotton;* and thus, to take any thing easy

or quietly; to assuage, to mitigate, to yield, to accede or agree to. Cotton is the produce of the GOSSYPIUM, *q. v.*

So feyneth he, things true and false
so alwayes mingleth he
That first with midst, and midst with laste
maye *cotten*, and agree.
Drant. Horace. The Arte of Poetry.

The poorer sort do line their clothes with *cottō*-cloth, which is made of the finest wool they can pick out, & of the courser part of the said wool, they make felt to couer their houses and their chests, and for bedding also.
Hakluyt. Voyage, &c. The Tartars, vol. i. fol. 98.

He meanes whatever horseman next he spide,
To take his horse of frend or else a foe,
At this is Discord pleas'd, and said to Pride
That she was glad their bus'nes *cotned* so.
Harrington. Orlando, book xvii. st. 17.

William *Cotton* (of another family) was made bishop of Exeter; the queen merily saying (alluding to the plenty of clothing in those parts) "that she hoped that she had well *cottened* the west."
Fuller. Worthies. Hant-shire.

Oaks bear also a knur, full of a *cottony* matter, of which they antiently made wick for their lamps and candles.
Evelyn. On Forest Trees, ch. iii.

There is a salix near Darking in Surrey, in which the julus bears a thick *cottonous* substance. *Id. Ib.* i. 19. sec. 8.

The chiefest manufacture of the country is *cotton-cloth*; this serves for cloathing the Indians, and even the poorer sort of Spaniards wear nothing else.
Dampier. Voyage. Anno 1675.

There are two sorts of *cotton-trees*; one is called the red, the other the white *cotton-tree*; the white *cotton*-tree grows like an oak, but generally much bigger and taller than our oaks. The red *cotton*-tree is like the other, but hardly so big.
Id. Ib. Anno 1684.

And in the slender part of this funnel, we use to put some *cotton-wick*, to break the violence of the oil that is to be poured in, which might else disorder the experiment.
Boyle. Hydrostatical Paradoxes.

And every sultry clime (yields) the snowy down
Of *cotton* bursting from its stubborn shell
To gleam amid the verdure of the grove.
Dyer. The Fleece, book ii.

Nor should, though small, the anata not be sung,
Thy purple dye, the silk and *cotton* fleece
Delighted drink.
Granger. The Sugar Cane, book iv. l. 535.

Let a weaver, who has received ten palas of *cotton-thread*, give them back increased to eleven by the rice-water and the like, used in weaving; he who does otherwise, shall pay a fine of twelve panas.
Sir William Jones. Institutes of Hindù Law, ch. viii. sec. 397.

COTTUS, from the Greek κοίτη, the bed of a river, Lin.; *Bullhead*, Pen. In *Zoology*, a genus of animals belonging to the family *Percoïdes*, order *Acanthopterygii*, class *Pisces*.

Generic character. Head flattened horizontally, and spiny; pectoral fins very large, and having the ventral placed beneath them; anterior spiny portion of the dorsal fin distinct from the soft posterior part.

This genus derives its name from living under stones in the beds of rivers: it resembles the genus *Scorpæna* in the large size of its pectoral fins, and its ventral fins being placed under them; the head, which is spiny, connects it with that genus, but it approaches to the *Uranoscopi* by being flat; and, like them, it has the spiny portion of the dorsal fin completely distinct from the soft posterior part. The Cotti live some time after having been taken from the water; and when irritated distend the head by filling the gills with air. Some few of them are British species. COTTUS.

α Fresh-water Bullheads.

Head almost smooth; small hooked spine on the preopercule.

C. Gobio, Lin.; *le Chabot Commun*, Bl.; *Bullhead*, or *Miller's Thumb*, Will.; *River Bullhead*, Pen. This fish is about three inches long, and found in all our clear brooks, lying generally at the bottom under a stone; its head is large, broad, flat, and thin at the edges, in order to enable it to get easily under the stones; the fore part of the dorsal fin is very low, and consists of six rays, whilst the posterior part is higher, and composed of seventeen rays; pectoral fins round and scalloped at their edges; tail rounded; the colour of the fish is dusky, mixed with a dingy yellow; the belly whitish.

β Marine Bullheads.

Two or three spines on the preopercule, one on the opercule and two before the eyes; not unfrequently others on the shoulders.

C. Scorpius, Lin.; *le Chabot ou Scorpion de Mer, Crapaud ou Diable de Mer*, Bl.; *Father Lasher*, Will. About eight or nine inches in length; the head large and well covered with spines, which can be erected by swelling out the gill-covers and cheeks; the gill-covers terminated by very long, strong and sharp spines; mouth large, the jaws furnished with a row of teeth and others in the palate; back high and belly prominent; towards the tail the body becomes very slender; the colour is marbled, grey, and brown; the fins transparent, but barred with brown; belly white. It is very common on our coasts, and is taken in the Newfoundland Seas, where it is called *Scolping*.

C. Quadricornis, Bl.; *Four-horned Bullhead*. Has four bony tubercles on the occiput; these, Pallas has observed, are wanting in the young fish. Native of the Baltic Sea.

C. Bubalis, Euph.; *Horned Bullhead*. This species is described by M. Euphrasen in the *Nouv. Mém. de Stockholm*: the head bears two horns, is rough and spiny; the lateral line scabrous and tuberculated. Found in the Western Ocean.

C. Diceraus, and *C. Hemilepidotus*, Pall. Belong to this subdivision, and an account of them may be found in the *Mémoires de l'Académie de Petersbourg*.

Some of the *Bullheads* have the spiny part of the dorsal fin divided into two distinct portions; such are the two following species:

C. Acadianus, Pen.; *Acadian Bullhead*. About five inches long, head and gill-covers very rough and spiny; dorsal fin having the first portion composed of four spines, and very long; the other two gradually shorter, both anteriorly and posteriorly, but longest in the middle; tail rounded. The fish is of a dingy yellow colour, blotched with purple. Caught near Nova Scotia.

C. Hispidus, Schneid.; *Sea Raven*, of New York; *Dirty Bullhead*. Head very spiny, mouth very large; a groove between the eyes; lateral line spiny; four short spines contained in sheaths, running in a line above it from the head to the tail: colour dirty black. Taken near New York.

COTTUS.

COTYLEDON.

β Armed Bullheads.

Body covered with angular scaly plates, resembling armour.

C. Cataphractus, Lin.; *l'Aspidophore Armé*, Lacep.; *Armed Bullhead*, Pen.; *Pogge*, Will. About five inches in length; the body is covered with numerous scaly or bony plates, divided into several compartments, having their extremities projecting in a sharp point, and forming several echinated lines along the back and sides from head to tail; the head is large and bony, and has two small crescent-shaped points on the top; the throat has several white beards; the pectoral fins large and rounded; general colour brown above and white beneath, with black spots on the fins. It is common on most parts of the British coast.

C. Japonicus, Pall.; *l'Aspidophore Lisiza*, Lacep.; *Japanese Bullhead.* About six inches in length; body octangular, of a yellowish white colour, striped transversely with brown; head lengthened, and having a conical tubercle above each eye; the scales with which the body is covered are pointed; no cirrhi or beards on the throat. Found on the Japanese coast.

C. Decagonus; *Agonus Decagonus*, Schneid.; *Decagonal Bullhead.* Body before the vent presenting eight angles, but behind it only six.

C. Monopterygius, Bl.; *Agonus Monopterygius*, Schneid.; *Aspidophoroide Tranquebar*, Lacep.; *Single-finned Bullhead.* This fish differs from the other species, in having the dorsal fin single; the body is thin, octagonal before, and hexagonal behind, and is covered with light scales; two spines upon the forehead; no beards; the colour is brown above, and grey on the sides, with brown transverse bands and spots. Found at Tranquebar

The four preceding species form Schneider's genus *Agonus*, (from the angular shape of the body,) and the *Aspidophorus*, of Lacepede, from their scaly covering.

η Flat-headed Bullheads.

Head very flat and spined; ventral fins behind the pectoral.

C. Insidiator, Forskall; *Platycephalus Insidiator*, Schneid.; *Cunning Bullhead.* About ten inches in length, grey above, spotted with brown and white beneath, with the tail white; head rough, with sharp elevated lines, and two sharp spines on the sides of the head; it hides itself in the sand, where it lays in ambush for its prey.

The other species are,

C. Scaber, Bl.; *Platycephalus Scaber*, Schneid.

C. Spatula; *Platycephalus Spatula*, Schneid.

C. Madagascariensis, Commerson.

See Linnæi *Systema Naturæ*; Bloch, *Icthyologia* à Schneider; Cuvier, *Règne Animal*; Lacepede, *Histoire des Poissons*; Pennant, *British and Arctic Zoology.*

COTULA, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Corymbiferæ*. Generic character: receptacle nearly naked, down marginate; florets of the disk, four-cleft; scarcely any radial florets.

Twenty-two species, mostly natives of the South of Africa.

COTYLEDON, in *Botany*, a genus of the class *Decandria*, order *Pentagynia*, natural order *Sempervivæ*. Generic character: calyx five-cleft; corolla of one petal; nectary of five scales at the base of the germen; capsules five. COTYLEDON.

Thirty-five species of this genus have been described mostly natives of the Cape of Good Hope; the leaves of the plants are succulent, and many of the flowers beautiful; *C. umbilicus*, and *lutea*, are natives of England. COUCE

Now how the fire was *couched* first with stre,
And then with drie stickes cloven a-three.
Id. Ib. v. 2936.

His almagest, and bokes gret and smale,
His astrelabre longing for his art,
His angrim stones, layen faire apart
On shelves *couched* at his beddes hed.
Id. The Milleres Tale, v. 3211.

My father ye shall well beleue
The yonge whelpe, which is affaited
Hath not his maister better awaitted
To *couche*, when he saith go lowe
Than I anone.
Gower. Conf. Am., book i. fol. 15.

He meant as in his bed or in his *couch.*
Chaucer. The Wif of Bathes Prblogue, v. 5670.

The memorie therefore must be cherished, the which is a fast holding both of matter and words *couched* together to confirm any cause. *Wilson. The Arte of Rhetorique.*

And this I sing, in corner closely *coucht*
Like Philomene since that the stately courts,
Are now no place, for such poor byrds as I.
Gascoigne. The Steele Glas.

But whanne thou schalt prei, entre into the *couche*, and whanne the dore is schitt, prei thi fadir in hidlis, and thi fadir that seeth in hidlis schal yelde to thee.
Wiclif. Matthew, ch. vi.

Thei broughten our syke men into stretis, and leiden in litel beddis and *couchis.* *Id. The Dedis of Aposlis*, ch. v.

Whan Palinurus quick from *couche* himself to stere begonne
To feele the winde, and quarters all with eares attentif harks.
Phaer. Æneidos, book iii. p. 80.

Her *couched* harth she steeres.
Id. Ib. book viii. p. 190.

——— Than Juno Queene
Enforst with furious rage vprose: why dost thou me constraine,
Deepe silence now to breake, and to disclose my *couched* paine.
Id. Ib. book x. p. 226.

These things she spake, but he remembring Joue's commandment still:
Dyd stand with fixed eyes, and *couchyd* care his hart dyd fill.
Phaer. Æneidos, book iv. p. 96.

And there was a squyer called Albert of Colayne, he turned and *couched* the spere in the rest, and came rennying agaynst the lorde of Poytrell, and gaue him suche a stroke on the targe that the spere flewe all to peaces.
Froissart. Cronycle, ch. xlviii.

——— Great towers of stone strongly *couched*
Haue heauie falls when they be vndermin'd.
Mirrour for Magistrates, fol. 327.

In these woordes M. Harding hath priuily *cowched* sundrie arguments, which of what value or force they be, I pray thee (gentle reader) to vnderstande.
Jewell. Replie to M. Hardinge, fol. 101.

One that distinctly observes the watry humour of the eye; is so much wiser than one who observes it not; as to know where a cataract is bred; and that by *couching* it, the sight may be restored. *Grew. Cosmo Sacra*, book v. ch. v.

The emperor's ban was already formally *couched*, and ready to put to the print. *Reliquiæ Wottonianæ*, p. 521.

——— Gan eft-soones prepare
Himselfe to battell with his *couched* speare.
Loth was that other, and did faint through feare
To test th' vntryed dint of deadly steele.
Spenser. Faerie Queene, book i. can. 3.

Mean while in Rome (the Mistris once
Of all the world) they view
Such wonders *couch't* in ruins, as
Vnseene might seem vntrew.
Warner. Albion's England, book ii. ch. lxxiv.

This said, he shakes aloft his Roman blade,
Which like a faulcon tow'ring in the skies,
Coucheth the fowl below with his wings shade,
Whose crooked beak threats, if he mount he dies.
Shakspeare. Rape of Lucrece.

——— As through fallow fields,
Blake oxen draw a well-joynd plough, and either evenly yeelds
His thriftie labour; all heads *coucht* so close to earth they plow
The fallow with their hornes, till out the sweate begins to flow.
Chapman. Homer. Iliad, book xiii. fol. 182.

Wherefore, by the immediately proceeding consequence, we find that 125,000 parts of flame may be *couched* in the room of one least part of gunpowder. *Digby. Of Bodies*, ch. viii.

But when the purple morning night bereaues
Of late vsurped rule on lands and seas,
His loathed *couch* each wakeful hermit leaues.
Fairfax. Godfrey of Boulogne, book viii. st. 42.

His crest was couered with a *couchant* hound,
And all his armour seem'd of antique mold.
Spenser. Faerie Queene, book iii. can. 2.

CÆS. I must preuent thee, Cymber,
These *couchings* and these lowly courtesies
Might fire the blood of ordinary men.
Shakspeare. Julius Cæsar, fol. 118.

When to the heavens her spacious front she rais'd
And bellow'd thrice, then backward turning gaz'd
On those behind, till on the destin'd place
She stoop'd, and *couch'd* amid the rising grass.
Addison. Ovid. Metamorphoses. The Story of Cadmus, book iii.

His cataracts are *couch'd*, and then he has the ideas (which he remembers not) of colours, *de novo*, by his restor'd sight convey'd to his mind, and that without any consciousness of a former acquaintance: and these now he can revive, and call to mind in the dark. *Locke. On Humane Understanding*, book i. ch. iv.

We have the strength of the apostle's argument to prove the truth of this mysterious doctrine of the resurrection; although artificially *couched* by way of insinuation and address.
Stillingfleet. Sermon 12. vol. iv.

When the sultan visits his friends, he is carried in a small *couch* on four men's shoulders, with eight or ten armed men to guard him. *Dampier. Voyage. Anno* 1686

Oh then when pious consuls bore the sway!
When *couchant* vice all pale and trembling lay!
Our censors then were subject to the law,
E'en pow'r itself, of justice stood in awe.
Dryden. Juvenal. Satire 11.

COUCH. — COVENABLE.

The king had scarce company about him to entertain him, when the duke's levees and *couchees* were so crowded that the antechambers were full.
Burnett. Own Times. King Charles. Anno 1684.

You wish my subject I wou'd wave,
The preface is so very grave.
Come then, my friend, I'll change my stile,
And *couch* instruction with a smile.
Cotton. Death and the Rake.

Me, O my God! thy piercing eye,
In motion, or at rest, surveys;
If to the lonely *couch* I fly,
Or travel through frequented ways.
Blackloch. Psalm 139. *imitated.*

Like some dread herald, tigers I'll compel
In the same field with stags in peace to dwell,
The rampant lion now erect shall stand,
Now *couchant* at my feet shall lie depress'd.
Jenyns. Ode.

COVE, *v.* } Fr. *couver*; It. *covare*; Lat. *cubare*;
COVE, *n.* } to brood, sit on, *cowre* over. Holland renders *in secretis recessibus*, within secret *coves* or noukes.

A *cove*; a nest or nook; a place so sheltered as to supply a secure nest; and thus applied to,—small bays or inlets.

But being not able to *cove* or sit upon them, nor to remain herself upon the land out of the sea any long time, she [the tortoise] bestoweth them in the gravel, and afterwards covereth them with the lightest and finest sand that she can get.
Holland. Plutarch, fol. 800.

To the end, that embarking himselfe into those vessels which were in readinesse for him within secret *coves* and noukes, against all doubtfull accidents that mought befall him, he might escape.
Id. Ammianus. Constantius and Julianus, fol. 77.

When we had been here about a week, we hal'd our ship into a small sandy *cove*, at a spring tide, as far as she would float.
Dampier. Voyage. Anno 1688.

The watering place, which was in a small *cove* a little within the south point of the bay, bore south by east, distant about a mile. *Cook. Voyages*, vol. i. book ii. ch. ii.

The mosques and other buildings of the Arabians, are rounded into domes and *coved* roofs, with now and then a slender square minaret terminating in a ball or pine-apple.
Swinburne. Travels through Spain. Letter 44.

CO'VENABLE, } "Fr. *convenable*; convenient,
CO'VENABLY. } apt, fit, meet for; agreeable, suitable, according to; proper, comely, decent, beseeming, seemly." Cotgrave. See CONVENIENT.

"The witnessingis weren not *covenable*," in Wiclif, is, in *Bible* 1551, "their witness agreed not together." "Be thou bisi *covenabli* withouten rest," in Wiclif, is, in *Bible* 1551, "*in ceason*."

Dame, quod he, as yet unto this time ye han wel and *covenably* taught me, as in general, how I shal governe me in the chesing and in the withholding of my conseillours.
Chaucer. The Table of Melibeus, vol. ii. p. 93.

For many seiden false witnessing agens him, and the witnessingis weren not *covenable*. *Wiclif. Mark*, ch. xiv.

Be thou bisi *couenabli* withouten rest.
Id. 2 *Timothy*, ch. iv.

Then they agreed that the prelates shuld chose out twelfe persones amonge theym, who shulde haue power by theym; and by all the clergy, to ordayne and to deuise all thynges *couenable* to be done. *Froissart. Cronycle*, vol. i. ch. 170.

So that if he and you togyther myght *couenably* be conioyned, and meanes found to haue a conclusyon of peace, he wolde be therof right ioyfull.
Froissart. Cronycle, vol. ii. ch. 175.

COVENABLE. — COVENANT.

That Christe might vnite euery one of vs within our selues, and with God, although we be distant bothe in bodie and also in soule, yet he hath deuised a meane *covenable* to the counsel of the Father, and to his owne wisdome.

Jewell. A Replie to M. Hardinge.

And, like as your grace thinketh the Earl of Essex to be *covenable* and proper for that room, so am I of semblable opinion.

Strype. Memorials. Henry VIII. Anno 1524.

However, in case the infant may assure this lady a *covenable* dower, we will not let to stretch ourselves to twice as much as her father left her by his testament, peradventure to an 100,000 crowns. *Id. Edward VI. Anno* 1549.

A Carm [Carmelite] me hath y*couenant*.

Piers Ploukman. Crede, book i.

His lordes shepe, his nete, and his deirie,
His swine, his hors, his store, and his pultrie,
Were holly in this reves governing,
And by his *covenant* yave he rekening,
Sin that his lord was twenty yere of age;
Ther coude no man bring him in arerage.

Chaucer. The Prologue, v. 602.

Hold ye than me, or elles our *covent*,
To pray for you ben insufficient?

Id. The Sompnoures Tale, v. 300.

This *couenant* woll I alowe
She saith, if any other thynge,
But that thou hast of my teachyng,
Fro deth thy body maie respite,
I wol the of thy trouth acquite.

Gower. Conf. Am., book i. fol. 18.

Whanne these thynges were knowen, there was thanne no longer delay, but these maryages were sworne and *couenaunted*, that Wyllyam of Haynault shulde haue in maryage Margaret of Burgoyne, and Johan of Burgoyne to haue to hus wyfe Margarete of Haynault. *Froissart. Cronycle*, vol. i. ch. 449.

And he wente and spak with the princis of prestis, and with the magistrates how he schulde bitraye hem to hem. And thei joyeden and maden *couenant* to gyue him money.

Wiclif. Luke, ch. xxii.

In token and remembrance wherof, vpon our earnest request to the same John Fox, he hath left here an old sworde wherewith he slewe the keeper of the prison: which sworde we doe as a monument and memoriall of so worthy a deede, hang up in the chiefe place of our *couent*-house.

Hakluyt. Voyage, &c. John Foxe, vol. ii. part i. fol. 135.

It was *couenaunted* that the Romans shoulde præfixe Sabine names before their owne, and likewise the Sabines Roman names.

Camden. Remaines. Surnames, p. 106.

A *covenant* to do any action at a certain time or place is then dissolved by the *covenanter*, when that time cometh, either by the performance or by the violation.

Hobbes. De Corpore Politico, part i. ch. ii.

All *covenants* are dischargeable by the *covenantee*, to whose benefit, and by whose right, he that maketh the *covenant* is obliged. This right, therefore, of the *covenantee* relinquished, is a release of the *covenant*. *Hobbes. De Corpore Politico.*

COVENANT

I am sorry to hear of new oathes in Scotland between the *covenanters*, who they say will have none but Jesus Christ to reign over them: a sacred cover of the deepest impiety.

Reliquiæ Wottonianæ, p. 580.

I wish likewise, first, that some good means were devised for the restraint of making these inordinate and *covenous* leases of lands, holden in chief, for hundreds or thousands of years.

Bacon. Of Alienations.

Whereof the number in any one house is or of late hath been less than a *covent*, that is to say, under thirteen persons.

Strype. Memorials. Henry VIII. Anno 1536.

Whether the *covent-seal*, and the writings of the house, were well kept. *Burnett. History of Reformation. Anno* 1535.

And this I tell you all, I had rather die a *covenant-keeper*, than live a *covenant-breaker*. *State Trials. Trial of Christopher Love.*

And therefore since what God promises in the new covenant infinitely exceeds the merit of what he requires, our performance of what he requires, doth not at all oblige him to bestow the blessings of his promise on us, unless we perform it upon a *covenant-engagement*; and therefore till this engagement is made and sealed in our baptism we can have no promise to rely upon.

Scott. Christian Life, part ii. ch. vii.

In the last place, he is pleased to say, (and that I believe hath carried on this design,) "The *covenant-interest*."

State Trials. Trial of Christopher Love.

So that the church and kingdom of Christ consists of all those people, nations, and kindreds, who have been admitted into this *covenant-relation* to him, wherein by a solemn vow of fealty and allegiance, they have indispensably obliged themselves to serve and obey him. *Scott. Christian Life*, part ii. ch. vii.

I confess it was agreeable to my judgment and conscience, and I thought the interest of godliness would be more promoted, if the king went into Scotland upon *covenant-terms*; it would be more for the good of the nation.

State Trials. Trial of Christopher Love.

'Twas this made the *covenant-makers* to make it,
And this made our Levites to make us to take it,
And this made both makers and takers forsake it.

Brome. The Satire of Money.

Thomas Johnson, *covenant-servant* to Peter aforesaid, succeeded and exceeded his master, casting them clearer and better.

Fuller. Worthies. Sussex.

At least such subtle *covenants* shall be made,
Till peace itself is war in masquerade.

Dryden. Absalom and Achitophel.

Surely they never wanted so much knowledge as to inform, and convince them of the unlawfulness of a man's being a murtherer, and hater of God, a *covenant-breaker* without natural affection, implacable, unmerciful.

South. Sermons, vol. ii. p. 251.

We must first, by our holy lives, make ourselves objects of his mercy; if we do that, Christ will save us. But without our own endeavours, the gospel *covenant* is of no effect.

Gilpin. Sermon 1. vol. i.

In the beginning of the Reformation in Scotland, a National COVENANT appears to have been entered into for the protection of the infant Church. During the administration of the Earl of Arran, a negative confession of Faith, enumerating and renouncing the corruptions of Popery, was framed and subscribed by the Sovereign and his leading subjects. In 1588, on the alarm of the Spanish Armada, this Bond was formally and solemnly renewed. It professed to be framed for the maintenance of true Religion, and for the defence of the King's person and government, in opposition to all enemies, foreign and domestic. After a general confession of Protestantism, and a particular abjuration of Popery, it added the most solemn promises of mutual support of the one, and opposition to the other. (Dunlop's *Collection of Confessions*, ii. 108.)

It was eagerly and universally subscribed by the King, Clergy, Nobles, and People. Leagues of this kind were by no means uncommon among Roman Catholics, and a counter-association was deemed a useful protection against them. It was renewed at different times in the reign of James VI. (Robertson's *History of Scotland*, book vii.)

In 1638, after the institution of the Assembly known as the *Tables*, Alexander Henderson, the leader of the Clergy, and Archibald Johnston, of Wariston, an Advocate, after a preparatory fast, founded on the original Bond the SOLEMN LEAGUE AND COVENANT. In many particulars it essentially varied from the former Bond. After the profession of Faith, and the renunciation in no very measured terms of the *diabolical* mass, the *wicked* hierarchy and the *impious* priesthood, it vindicated at some length its own intolerance. It then prohibited and abjured the Canons and Liturgy, and concluded by a vow to support the Sovereign in the preservation of Religion, Liberty, and Law. After exhortation and prayer, it was adopted and subscribed in the Grey Friars' Church at Edinburgh, on the 1st of March; copies were rapidly transmitted throughout Scotland, and within two months almost the whole Kingdom had submitted to the Covenant, which henceforward became the bloody watchword of misguided enthusiasm. (Laing's *History of Scotland*, iii. 147.)

In 1643, the Scots, during their union with the English Rebels, demanded the adoption of a Religious Covenant between the two Kingdoms. Henderson was again employed, and the extirpation of Prelacy was one of the foundations of the Bond. Sir Harry Vane, however, succeeded in introducing an ambiguous clause, which, as occasion offered, might be interpreted in favour of the Independents. The document itself may be found, among other places, in the VIIth Book of Clarendon's *History*, or in a Tract of less common occurrence, printed "by special order of the House" at the time, and entitled *The Covenant, with a Narrative of the proceedings and solemne manner of taking it, on Monday, 25th of September, by the Honourable House of Commons, and Reverend Assembly of Divines at St. Margaret's, Westminster*. From this last it appears, that Mr. Philip Nye made the Exhortation, Mr. John White prayed before, and Mr. Dr. Gouge after the Exhortation; besides which, Mr. Alexander Henderson made an elaborate and lengthy speech. "Then the Covenant was read, notice being first given to the Assembly, that, after the hearing of it, each person should immediately, by swearing, worship the great name of God, and testifie so much outwardly, by lifting up of their hands; which was all done very solemnly, and with so much joy seen in the countenances, and manifested by clapping of the hands, as was suitable to the gravity of such a worke, and the sadnesse of the present times." It was soon after enforced by penalties in every parish throughout the Kingdom.

Upon this compound of hypocrisy and fanaticism, may be justly charged much of the Tragedy of the succeeding years. Charles I. rejected it, when he unhappily intrusted himself to the Scotch Army, in 1645; but the necessity of the times compelled Charles II. to subscribe to it on his Coronation at Scone, in 1651. After the Restoration, a provision was made against it by Act of Parliament, 14 Charles II. 4; and in 1661 it was burned by the common hangman, the people assisting in the ceremonial with as much drunken joy as they had manifested a few years before, on its adoption.

COVENANT, in *Law*, the Agreement or consent of two or more parties by deed in writing, sealed and delivered, to do or omit a direct act, which is a species of express contract, and the violation of which is a Civil injury. A Covenant is either in *fact*, or in *law*. A *Covenant in fact*, is that which is expressly agreed on between parties, and inserted in the deed; and a *Covenant in law* is that which the law intends and implies, though it be not expressed in words; as if a party grants a lease to another, the law intends a Covenant on the lessor's part, that the lessee should quietly enjoy the premises. There is also a Covenant *real* and *personal*; the former is that whereby a man binds himself to pass a thing real—as lands or tenements, or to levy a fine of lands; the latter is merely annexed to the person, as if one Covenants with another by deed to build a house, or serve him. No set form of words are necessary to be made use of in creating a Covenant; any words expressing a party's concurrence to the performance of a future act will be effectual. All Covenants must be to do that which is lawful, otherwise they will not be binding; and if the thing to be done is impossible, the Covenant is void.

COVENTRY is a City usually described as being situated in the County of Warwick. In conjunction however with certain adjacent villages it constitutes a separate County, by virtue of a charter granted by King Henry VI. in the year 1451. The chief parts of Coventry are seated on a gentle declivity; and the City, which extends about three-quarters of a mile in length, exclusive of the suburbs, is watered by two streams, the Radford and the Sherboura. The streets are in general narrow; and the domestic architecture is principally of an ancient character, the upper parts of the houses greatly projecting, and many having undergone little change since their erection in the XVth and XVIth centuries. It contains three Churches. St. Michael's is a beautiful specimen of the English, or pointed style of architecture, with a fine tower and spire, begun in 1373 and finished in 1395. The tower is 136 feet 3 inches in height, and is superbly enriched. In various niches are introduced the figures of Saints; and each division is adorned with embroidery work, and embossed decorations. An astonishing degree of lightness and elegance is produced by an octagonal prism on the summit, supported by eight springing arches. From the octagon proceeds a spire, 130 feet nine inches in height. The wall of the spire is seventeen inches thick at the bottom, and its total inclination from the perpendicular four and a half inches. The body of the Church, which is in the best character of the decorated English style, is supposed to have been erected in the time of Henry VI. Trinity Church is a respectable structure, having also a lofty spire. Within its walls lie the remains of Philemon Holland, the voluminous Translator, to whom there is a tablet on the south of the Choir; he died in 1636, at the advanced age of eighty-five, having, during the last years of his life, received an allowance from the Common Council of the City, of £3. 6*s*. 8*d*.; "being," as is noted in their book, now "groune weake and decaied in his estate, and being a man of good deserts, in respect of the abilities wherewith God hath endowed him." Our pages are so frequently

COVENTRY. indebted to his versions, that we cannot forbear from citing a contemporary epigram upon him:

Holland with his translations doth so fill us,
He will not let *Suetonius* be *Tranquillus*.

The Church dedicated to St. John, is of a cruciform shape, and is a good specimen of the architectural style that prevailed in the reign of Edward III. St. Michael's and Trinity Churches are Vicarages in the Patronage of the King; St. John's, a Rectory, in that of the Corporation. St. Mary's Hall stands at a short distance south from the Church of St. Michael, and was erected in the reign of Henry VI., as a place of meeting for the Trinity Guild, but is now used for purposes of Civil dignity and festivity, by the Mayor and Corporation. The great Hall is twenty-one yards long, and ten yards broad; and has been esteemed, by judicious Antiquaries, as one of the most interesting architectural vestiges of the XVth century. In the timber-work of the roof are numerous whole-length carvings of Angels, playing on musical instruments. Several of the windows are filled with painted glass, containing armorial devices, and the portraits of early Sovereigns, and of illustrious personages connected with this ancient Guild. Beneath the north window is a piece of tapestry thirty feet in length, and ten feet in height, which has attracted much antiquarian notice, and comprises representations of Henry VI., his Queen, the renowned Margaret, and various persons of their Court. The chair of state, the gallery for minstrels, and many other particulars in this Hall are venerable examples of the grandeur and the fashions of former ages.

Coventry became celebrated at an early period, for the success with which its inhabitants cultivated manufactures. The cloths, caps, and bonnets made here, were articles of considerable traffic at the commencement of the XVth century; and woollen and broad cloths remained the staple manufactures until the destruction of the Turkey trade, towards the close of the XVIIth century. The principal manufactures at present are those of ribands and watches. The former was introduced about a century back, and has progressively risen to great importance; the manufacture of watches was not pursued to any great extent until within the last thirty years; but it is probable that more watches are now made here than in the Metropolis. The Oxford and Coventry canal, the head of which is at the upper end of Bishop-street, afford great facilities to commerce.

This City is divided into ten wards, and is internally governed by a Mayor, ten Aldermen, and twenty Common-councilmen. The Magistrates have a jurisdiction, in criminal matters, extending to capital punishment, under a grant of Henry VI.; but this power they uniformly refer to the Judge who travels the midland circuit. Coventry returned Representatives during the four Parliaments of Edward I. Occasional interruptions afterwards occurred; but since the year 1453, the privilege has remained undisturbed, and two Representatives are now elected by the Freemen, who in number amount to nearly 4000; the freedom being acquired by a servitude of seven years to a trader in Coventry, or its suburbs. A weekly market is held here, and there are several fairs, one of which is called the Great, or Show fair, and continues eight days. This latter celebration is founded on the following story. It is said that Leofric, fifth Earl of Mercia, who possessed the property of the tolls and services of Coventry, exacted his dues with so rigid a hand that the inhabitants were aggrieved to a deplorable degree; and that Godiva, his pious Countess, became their advocate. The Earl, wearied by her solicitations, and thinking to silence her importunity, promised to accede to her wish, if she would ride, unattired through the Town at mid-day. His terms, according to the legend, were accepted; and the Countess rode naked through the Town, veiling her beauties with the flowing tresses of her hair. It is added, that she modestly commanded all persons to keep within doors, and from their windows, on pain of death; but that one person could not forbear taking a glance, who lost his life for such an indulgence of curiosity. In commemoration of this occurrence, a procession occasionally takes place at the show fair, in which a female, of easy purchase, rides in a dress of linen closely fitted to her limbs, and imitating their complexion. A wooden image of the curious person who stole a glance at the passing Countess, and who is to this day called *Peeping Tom*, is to be seen at the corner of a house in High-street, adjoining the King's Head Inn. Mr. Pegge, in some Remarks printed in Gough's edition of Camden's *Britannia*, (ii. 346,) has exploded this tale. He shows that it is first mentioned by Matthew of Westminster, in 1307; that is, 250 years after the time of Leofric, and that numerous preceding authors, who have treated of Leofric and Godiva, have been silent respecting it. A painted window in Trinity Church, which represented the transaction, with an inscription,

I Luriche for the lobe of thee
Doe make Cobentre tol free,

was not set up till the reign of Richard II., and the pageant is supposed not to have originated earlier than that of Charles II. A similar story is told at St. Briavel's Castle, in Gloucestershire. (Rudder's *Gloucestershire*, 307.)

Coventry is a place of great antiquity, the final syllable of its appellation being evidently the British *Tre*, signifying a Town. *Covent* is a Saxon prefix. It does not, however, appear to have possessed any military importance during the ascendancy of the Romans in Britain. Its first great prosperity must be ascribed to a monastic foundation, which took place in the reign of Edward the Confessor, through the pious munificence of Earl Leofric and the Countess Godiva. In the reigns of Edward III. and Richard II. the City was encompassed by walls, which remained until the XVIIth century. In the reign of the latter Monarch, Gosford Green adjoining the City was chosen as the scene of judicial combat between the Duke of Norfolk and the Duke of Hereford, afterwards Henry IV.; the particulars of which may be read with great interest in the graphic accounts of Froissart, and of Holinshed, (494,) and with more brevity, but not less spirit in Shakspeare's *Richard II.* A Parliament was held at this City in 1404, since termed *Parliamentum Indoctorum*, from the circumstance of all Lawyers being prohibited from sitting in it. Henry VI. and his Queen were greatly attached to this place, and eminently advanced its prosperity by their frequent visits and numerous favours. In the year 1459, a second Parliament was held here, in which attainders were passed against many of the leaders on the Yorkist side, and which was afterwards, in consequence, named

COVEN-TRY. COVER.

Parliamentum Diabolicum. Several succeeding monarchs also honoured this City with their presence. Queen Elizabeth was here entertained by the constituted authorities of the City; and here, for a short time, was confined the unfortunate Mary Queen of Scots. In the Civil war of the XVIIth century, Coventry was conspicuous for its activity in the Parliamentary interest, and was threatened with the horrors of assault; but escaped that calamity. In manifestation of displeasure, the walls which surrounded the City were levelled with the ground, by order of King Charles II. From 1102 to 1188, the Bishops of the See of Lichfield resided at Coventry, and signed themselves *Coventriæ Episcopi* only. In the reign of Henry III. it was agreed that the Bishop should be elected from both Cities, with precedence to Coventry in the title; and thus it remained till the Restoration, when Bishop Hacket, who was a staunch Royalist, reversed the form, in consequence of the different parts espoused by the two Cities in the Rebellion. The Cathedral, which occupied the hill close on the north of St. Michael's and Trinity Churches, was destroyed at the Reformation. A splendid Cross used to stand in the centre of the Corn Market. It was erected in the XVIth century by a bequest of Sir William Holleys, sometime Lord Mayor of London; and in the year 1771 the last fragments were removed. Population in 1821, 21,242. Distant eighteen miles south-east from Birmingham; forty-nine north-west from Oxford; and ninety-one north-west from London.

Co'VERT-WAY.

Fr. *couvrir*; It. *coprire*; Sp. *cubrir*. Manifestly, says Junius, from *co-operire*, (*con*, and *operire*, from *ob*, and *parere*.)

To put, place or lay over, on, against; to overlay, *sc.* so as to hide or conceal, to shelter or protect; and thus, consequentially, to hide, to cloak, conceal, shelter, protect.

Gower uses *covereth*, as equivalent to *re*-covereth. Met.

Coverlet. Fr. *couvre-lict*; It. *copraletto*; so called a cooperiendo lectum; from covering the bed, or couch.

þe kyng controued þer ouer, a brigge forto make,
And of Leulyn to *couere*, Snowdoun forto take.
R. Brunne, p. 240.

Other catel other cloth. to *coueren* with oure bones.
Piers Plouhman. Crede, B. 3.

And Constantyn shal be here cook. and *coverer* of here churche.
Id. Vision, p. 84.

——— If that thou
Threw in a water now a stone,
Wel wost thou it wil make anone
A litel roundel as a cercle
Parauenture, as brode as a *couercle*.
Chaucer. The second Booke of Fame, v. 284.

Whan that my fourthe husbonde was on bere,
I wept algate and made a sory chere,
As wives mowe, for it is the usage;
And with my *couercheje covered* my visage.
Id. The Wif of Bathes Prologue, v. 6171.

Religious folke ben full *couert*
Seculer folke been more appert.
Chaucer. The Romant of the Rose, v. 6149.

But he (which wisdome and prowesse
Hath of the god and the godesse)
The shelde of Pallas gan embrace,
With which he *coucreth* saufe his face.
Gower. Conf. Am. book i. fol. 10.

This maister hath hir euery ioynte,
With certein oyle and balsam anoynte,
And put a licour in hir mouthe
Whiche to fewe clerkes couthe,
So that she *coucreth* at laste.
Id. Ib. book viii. fol. 181.

Where for to kepe hem in *couert*,
The daies when the sonne brent,
A large cloude hem ouerwent.
Id. Ib. book v. fol. 93.

Thei londe, and faile of that thei seche
By *couerture* and slight of speche.
Id. Ib. book viii. fol. 185.

Thinke that the hurtful hooke
is *couered* with such baite:
And that in such a pleasant plot
the serpent lurkes in waite.
Turbervile. An Answer in dispraysc of Wit.

He that doth thus, seeketh not how to slaundre, backbyte, betray and falsely accuse his neibour, but as Christ hath *couered* his faults so spreadeth he furth charitie, which hydeth a multitude of sins.
Strype. Records. Robert Wisdome, vindication of himself.

This apparell is not the *couering* of our Lorde it is the *couer* of antichrist.
Vives. Instruction of a Christian Women, F. 4.

And the wyfe toke and spread a *couerlet* on the top of the well, and strawed theron steaped barley to drye.
Bible, 1551. 2 *Kings*, ch. xvii.

For these places be nothing els but *coverts* or boroughes, wherein if any one search diligently, he may find game at pleasure.
Wilson. The Arte of Logic, fol. 37.

All which time wee could no where set foot on shore, but rested day and night wet and weatherbeaten in our *couertlesse* boate, which was sometimes ready to sinke vnder vs.
Hakluyt. Voyage, &c. M. Laurence Keymis, vol. iii. fol. 674.

I long for Phœbus glade and going down,
My drearie teares more *couertly* to shed.
Turbervile. To his absent Friend, &c.

But yet al the abominaciõs y^t euer were i y^e world haue been cloked with a beautiful title of God himself, and the *couerture* of his religion.
Caluine. Foure Godlie Sermons, serm. 1.

Which bridge was made & *couered* with bordes, onely to kepe of the wether, so that vnder the *couerture*, ther might stand xii. persons on euery syde of the grate.
Hall. Edward IV. The fourteenth Yere.

Still does he glance the fortune of that day
When, drown'd in his own blood Goliah lay,
And *cover'd* half the plain; still hears the sound,
How that vast monster fell, and struck the ground.
Cowley. The Davideis, book ii.

And the better to shew, that this body was model'd in heauen: albeit the several parts of the furniture, viz. the ark, altar, table, and candlestick, had so many several sorts of *covers*.
Grew. Cosmo Sacra, book iv. ch. viii.

Like pictures, or like books' gay *coverings* made
For laymen, are all women thus array'd.
Donne. Elegy 19.

——— Those leaves
They gathered, broad as Amazonian targe,
And with what skill they had together sow'd,
To gird thir waste, vain *covering* if to hide
Thir gilt and dreaded shame.
Milton. Paradise Lost, book ix. l. 1113.

COVER.

Without the bed her other fair hand was,
On the green *coverlet*; whose perfect white
Show'd like an April daisy on the grass,
With pearly sweat, resembling dew of night.
Shakspeare. Rape of Lucrece.

All to be *covered* with a *cover-pane* of diaper of fyne sylke.
Leland. The Inthronization of Archbishop Nevill.

Wherefore Adam and his wife as yet sought no corners, nor *covering-places* to shelter them from the divine light: but, having done nothing amisse, appeared naked in the presence of it without any shame or blushing.
More. Moral Cabbala, fol. 36.

Enforc't to seeke some *covert* nigh at hand.
A shady grove not farre away they spide,
That promist ayde the tempest to withstand.
Spenser. Faerie Queene, book i. can. 1.

Look, sweetest Doris, on my love-sick heart;
In that true mirror see how fair thou art;
There by love's never-erring pencil drawn,
Shalt thou behold thy face, like th' early dawn,
Shoot through the shady *covert* of thy hair.
Carew. To A. D.

You may be sure that the kyng of Englande would not have suffered the French kyng to haue buylded such a *couert* nest so nere his town of Calice, and the territories of the same, except hys league had bound him.
Grafton. Edward IV. The seventeenth Yere.

They which were next about the king, did subborn his foole, to insinuate the vnderstanding thereof by subtiltie of *covert* words which was thus.
Fox. Martyrs, fol. 347. *King Edward III.*

Himself [York] is made protector of the land
A title found, which *covertly* did bear
All-working pow'r under another style;
And yet the sov'reign part doth act the while.
Daniel. History of Civil War, book vi.

That all which did such strangenesse in him see,
By secret meanes gan of his state enquire,
And priuely his seruant thereto hire:
Who, throughly arm'd against such *couerture*,
Reported vnto all, that he was sure
A noble gentleman of high regard.
Spenser. Mother Hubberd's Tale.

Hee after Eve seduc't, unminded slunk
Into the wood fast by, and changing shape
To observe the sequel, saw his guileful act
By Eve, though all unweeting, seconded
Upon her husband, saw thir shame that sought
Vain *covertures*.
Milton. Paradise Lost, book 10. l. 337.

DUKE. It was in her husband's time, when she was *covert-baron*.
State Trials. Trial of the Duke of Norfolk.

In a word, it is love that sanctifies all the actions of our duty, and makes them of a sweet-smelling savour to God; and it is love that will be the best *cover*, and make the best apology, for the worst of our errors. *Sharp. Works. Sermon* 9. vol. iv.

This done the host produced the genial bed,
Sallow the foot, the borders and the sted,
Which with no costly *coverlet* they spread,
But course old garments.
Dryden. Ovid. Metamorphoses, book viii.

Nay, if he be such a man my righteous spirit rises at him! Does he put on holy garments for a *cover-shame* of lewdness?
Id. The Spanish Friar, act iii.

Obscure in *coverts* lie his dreaming hounds
And bay the fancy'd boar with feeble sounds.
Smith. Phædra and Hippolitus, act ii.

A fine time of day for a man to set up an equipage of noise, when he has most need of quiet; instead of her being under *covert-baron* to be under *covert-feme* myself.
Dryden. The Spanish Friar, act iv.

As to what you write in your friend's name perhaps I shall not mistake, If I guess, that, when he seems but to propose a question, he means an objection; and *covertly* intimates, that I, among many others, am reduced to that pass, that to embrace our religion, we must renounce our reason.
Boyle. Of Reason and Religion, part i.

COVE — COVE TURE

And for such as dare not to expose themselves, with what safety are they preserved under the *coverture* of the earth, in their root, seed, or fruit, till invited out by the kindly warmth of the spring.
Derham. Physico-Theology, book x. *Of Vegetables.*

Horrour *covers* all the heath.
Clouds of carnage blot the sun.
Gray. The Fatal Sisters.

For under the *cover* of this word, [simple citizen,] which conveys the idea of a person in lower life, we think very little of the dignity of a free citizen of Corinth.
Hurd. On the Provinces of the Drama.

All sewing is performed by the women, they are the taylors, shoe-makers, boat-builders, or boat-*coverers*.
Cook. Voyage, vol. vi. book iv. ch. ix.

Nor beauteous *covering* was withheld, for streight,
At the divine command, the verd'rous grass
Upsprang unsown, with every seedful herb,
Fruit, plant, or tree, pregnant with future store.
Jago. Edge-hill, book i.

It's [eider down] remarkably light, elastic, and warm qualities, make it highly esteemed for stuffing *coverlets*, by such whom age or infirmities render unable to support the weight of common blankets. *Pennant. British Zoology. The Eider Duck.*

Great Britain was not there. Almost in despair, I hope she will never, in any rags and *cover-sluts* of infamy, be seen at such an exhibition. *Burke. On a Regicide Peace.*

Within the *covert* of a gloomy wood,
Where fun'ral cypress star-proof branches spread,
O'ergrown with tangling briars a cavern stood.
Lloyd. The Progress of Envy.

Vice peoples it [the world] in all its variety of shapes—and in all its variety of guilt—open, and *covert*, from the profligate man of pleasure, who glories in his shame, to the sly old knave, who has nothing but softness on his tongue, and nothing in his heart but a design to cheat you.
Gilpin. Sermon 5. vol. i.

In short, both the notoriously wicked man and the decent man, are equally men of the world, and alike intent to impose on the simplicity of others: the one only acts more *covertly* than the other. *Id. Sermon* 5.

He in this light may be compared to the commander of a numerous army, who, tho' he is obliged to expose many to danger, and some to destruction, yet protects others with ramparts and *covert-ways*: but so long as he exercises this power for the good of the whole, these distinctions amongst individuals ought never to be imputed to partiality or injustice.
Jenyns. The Nature and Origin of Evil.

COVERT-WAY, a space of five or six fathoms on the outer border of the mote in a fortified place.

COVERTURE, in *Law*. By marriage Husband and Wife are in Law one person, that is the legal existence of the Woman is consolidated into that of the Husband, under whose protection and *cover* she performs every thing, and is therefore called a *Feme Covert*, and her condition during marriage is called her *Coverture*. Upon the principle of the union of person in Husband and Wife, depend almost all the legal rights, duties, and disabilities, that either of them acquire by marriage. For this reason a man cannot make a grant to his Wife, for that would be supposing her to have a separate existence; he may, however, bequeath any thing to her by will, for that cannot take effect till the Coverture is determined by his death. The Husband is bound to provide necessaries (but nothing

beyond them) for his Wife. If she is indebted before marriage he is bound to pay those debts, for he has adopted her and her circumstances together. If she is injured in person or property, she cannot bring an action for redress, without his concurrence and in his name, as well as her own; neither can she sue or be sued without making the Husband a defendant, unless indeed the Husband has abjured the realm, or been banished, then he is dead in Law, and the Wife is considered as a *Feme Sole*. In criminal prosecutions the Wife may be indicted and punished separately, for the union is only a civil one. They are not allowed by Law to be evidence for or against each other in trials of any sort; where, however, the offence is against the person of the Wife, as the forcibly compelling her to marry the Husband, her evidence would be received; the Statute 3. Henry VII. ch. 2, making this crime Felony. In Civil Law, Husband and Wife are considered as distinct persons, and may have separate estates, contracts, debts, and injuries; and, therefore, in our Ecclesiastical Courts a Woman may sue and be sued without her Husband.

CO'VET, *v.*
Co'VETING, *n.*
Co'VETINGLY,
Co'VETISE, *v.*
Co'VETOUS,
Co'VETOUSLY,
Co'VETOUSNESS.

Fr. *convoiter*. Menage, Skinner, and Junius, agree from the semi-barbarous, *convotare*; votem *facere*; Menage. *Omnibus* votis *prosequi*; Skinner. *Miro desiderio æstuare, atque omnibus* votis *aliquid cupiscere*. Junius.

"Fr. *convoiter*; to covet, desire, affect greedily; wish or long for, thurst or lust after." Cotgrave.

And ofte wo so *coueyteþ* al, al leseþ ywys.
R. Gloucester, p. 306.

Cassibel, Kyng of Breyteyne, to July sendeþ gretyng.
Wonder it ys sire emperour þat noble gentrise
þat is so noble & eke y fuld with so fyl *couetyse*,
þat worlde's nobleye hast so muche, of eche mon mest,
þat for *couetise* art y come so far fro þe est,
To wilne oure lutel God. *Id.* p. 46.

Boþe riche & pouere he ȝemed in euenhede,
Non suld do oþer wrong for *couitise* no drede.
R. Brunne, p. 37.

They *coueten* confessiones to kachen some hyre.
Piers Ploukman. Crede, D. 1.

For Mede haþ knyt clerkes. and *covetyce* togeders.
Id. Vision, p. 48.

Encombred wt *covetyse*. þei conne nat out crepe
So harde hath averyce hasped hem to geders.
Id. Ib. p. 22.

The difference betwene avarice and *coveitice* is this: *coveitise* is for to *coveit* swiche thinges as thou hast not; and avarice is to withholde and keep swiche thinges as thou hast, without rightful nede. *Chaucer. The Persones Tale*, vol. ii. p. 350.

For ye ben riche ynough, and had no nede of other mennes good: and ye might lightly in this wise gete you a *covritous* name; whiche is a vicious thing, and ought to ben eschewed of every good man: for after the sawe of the apostle, *coveitise* is rote of alle harmes.
Id. The Tale of Melibeus, vol. ii. p. 130.

The *couetous* was wonder gladde,
And to that other man he badde,
And seith, that he firste axe shulde
For he supposeth, that he wolde
Make his axing of worldes good.
Gower. Conf. Am. book ii. fol. 29.

Right so full ofte it stant by loue,
Though thou *coueyte* it euermore,
Thou shalte haue no dele the more.
Id. Ib. book v.

But is this strange? when lords, when knights and squires, (Which ought defende the state of common welth)
Are not afraid to *couet* like a king?
O blind desire: oh high aspiring harts.
Gascoigne. The Steele Glas.

For I wiste not that *coueityng* was synne, but for the lawe seide thou schalt not *coueite*. And thorugh occasioun taken, synne bi the maundement hath wrought in me al *coueitise*.
Wiclif. Romayns, ch. vii.

The *coueting* of the goodes, doth nought but dull the sprete,
And some men chaunce to taste the sower, that gropeth for the sweet.
Vncertaine Auctors. Discription of an Vngodly Worlde.

But the Farisees that weren *coueytous*, herden alle these thingis: and thei scorneden him. *Wiclif. Luke*, ch. xvi.

All these thinges heard the Pharises also which were *couetous*, and thei mocked hym. *Bible*, 1551.

So was he faine
From thence agayne,
To put it in a cup,
And by and by,
Couetously,
He supped it fayre vp.
Sir Thomas More. Works, c. 1.

Mammon, said he, thy godhead's vaunt is vane,
And idle offers of thy golden fee;
To them that *couet* such eye-glutting gaine,
Proffer thy gifts, and fitter seruants entertaine.
Spenser. Faerie Queene, book ii. can. 7.

Sharp, assaulting, piercing weapons, found out and forg'd by the passions and wits of men, to arm their rage, to satisfye their *covetings* and ambitions, to manage all their quarrels that the carnal or diabolical affections of men have commenc'd or inflam'd through the world.
Hammond. Works. Sermon 1. vol. iv.

And in their raging surquedry disdayn'd
That the fast earth affronted them so sore,
And their deuouring *covetise* restrayn'd,
Thereat she sigh'd deepe, and after thus complayn'd.
Spenser. Faerie Queene, book iii. can. 4.

As in the first chaos confusedly
Each element's qualities were in th' other three:
So pride, lust, *covetise*, being several
To these three places, yet all are in all.
Donne. To Sir Henry Wotton.

Hereupon, saith our Saviour to the Pharisees who were *covetous*, If you give your riches to the poor, all things shall become pure unto you: as if he should say—this sin of *covetousness* is the main chain whereby the devil holds you captive at his pleasure; strein and force yourselves only to break this chain, and then you shall be free indeed in perfect liberty.
Chillingworth. Sermon 7.

Let us make the assay vpon him, if he care nor for't, he will supply vs easily: if he *couetously* reserue it, how shall's get it? *Shakspeare. Timon of Athens*, fol. 94.

Desire of riches, *covetousness*, a name used always in signification of blame; because men contending for them, are displeased with one another's attaining them, though the desire in itself be to be blamed or allowed, according to the meanes, by which those riches are sought.
Hobbes. Of Man, part i. ch. vi.

In like manner the more the *covetous* man increaseth his estate, the more his desires are enlarged and extended, and he finds continually new occasions and new necessities; and every day as he grows richer, he discovers new wants; and a new poverty to be provided against, which he did not think of before, comes into his mind: *et minus hæc optat, qui non habet*; and he that is without these things *covets* them less than he that hath them. *Tillotson. Works. Sermon* 37. vol. ii.

Now riches were an admirable thing indeed, and worth our *coveting*, if they would help to cure these distempers of our minds, but they are the least fitted for such a purpose of any thing in the world; for not he that hath the greatest estate, but he that hath the fewest and most reasonable desires, and the best governed passions and the most virtuous inclinations, is the happiest man, and dwells nearest to satisfaction.
Id. Ib. Sermon 33.

COVET. — COVIN.

Th' ambitious youth too *covetous* of fame,
Too full of angels' metal in his frame,
Unwearily was led from virtue's ways,
Made drunk with honour, and debauch'd with praise.
Dryden. Absalom and Achithopel.

The word in Greek is πλεονεξία, which properly signifies *covetousness*, or an intemperate ungovern'd love of riches.
Locke. Works, vol. iii. *Ephesians*, ch. v. 3—20. notes 3 (e.)

Comedy makes all its characters general; tragedy, particular. The *Avare* of Moliere is not so properly the picture of a *covetous* man, as of *covetousness* itself.
Hurd. Works, vol. ii. p. 48. *On the Provinces of the Drama.*

COVEY, *n.* Fr. *couvée*; It. *covata*; Sp. *covada*. "A brood, or hatching of Chickens; as many as come of one sitting." Cotgrave. It is now chiefly applied to Partridges. See Cove.

All this doth she to amuse the fowler after her, until she have trained him a certain way from the *covy*.
Holland. Plinie, vol. i. fol. 287.

Who are they in the corner? As I live, a *covy* of fidlers.
Beaumont and Fletcher. The Elder Brother, act iv. sc. 3.

See how the well taught pointer leads the way:
The scent grows warm; he stops; he springs the prey;
The fluttering *coveys* from the stubble rise,
And on swift wing divide the sounding skies.
Gay. Rural Sports, can. 2.

A partridge followed by a large *covey* of young birds, was surprised by a violent shower of rain. She collected them under her, and to secure them farther, spread her wings to prevent every injury. In vain!
Pennant. British Zoology. The Partridge.

COUGH, *v.* COUGH, *n.* COUGH-BREEDING. "*A vet.* Belg. *kugh*, so called from the sound, *cugh, cugh.*" Minsheu. Skinner agrees that it is *a sono fictum*; Dutch, *kucchen, tussire.*

The harbinger of death,
To me I see him ride,
The *cough*; the colde, the gasping breath,
Doth bid me to prouyde.
Vncertaine Auctors. The aged Louer renounceth loue, &c.

Thou hadst four teeth, good Elia heretofore,
But one *cough* spit out two, and one two more:
Now thou mayst *cough* all day, and safely too,
There's nothing left for the third *cough* to do.
Cartwright. Si Memini Fuerunt.

When all aloud the wind both blow,
And *coughing* drowns the parson's saw,
And birds sit brooding in the snow,
And Marian's nose looks red and raw.
Shakspeare. Songs. Winter.

A priceless treasure, not to be express'd,
A guest too great for thy *cough-breeding* breast.
Sidney. Arcadia, book vi.

She from More-fields, breathless and lame
To see her graceless godson came.
The salutations being past,
Coughing and out of wind, at last
In his great chair she took her place
"How does your brother?"
Somervile. Fable 14. *The Fortune Hunter*, can. 2.

If such authorities prevail,
To varnish o'er this petty sin,
I plead a pardon for my tale,
And having hemm'd and *cough'd*—begin.
Lloyd. The New River Head.

——— Thee, confus'd,
Slow Febris creeps from; thee, the meagre fiend,
Consumption flies, and checks his rattling *coughs.*
Whitehead. To the Nymph of Bristol Spring.

CO'VIN, CO'VINE. "Deceit or collusion. Fr. *couvine, a convenire*; it is a deceitful assent or agreement, between two or more to the prejudice or hurt of a third." Minsheu. See Covenant.

COVI — COUN

Ther n'as baillif, ne herde, ne other hine,
That he ne knew his sleight and his *covine*
They were adradde of hem, as of the deth.
Chaucer. The Prologue, v. 606.

——— Thei treate
With faire behestes and yeftes greate
Of golde, that thei than hane engined
To gether, and whan thei be *couined*
Thei feignen for to make peace.
Gower. Conf. Am., book i. fol. 14.

A man by art of vsarye
by guyle, and treachers trade,
By fraude, and *couin* full of goods,
is veray sore afrayd
To spend amongste good companie.
Drant. Horace. Satyre 2.

When purveyours, prouide not for themselues;
When takers, take no brybes, nor vse no brags;
When customers, conceale no *covine* vsde.
Gascoigne. The Steele Glas

He, because he would not kick against the pricke, framed himselfe to give fairer words and gentler language, yea and confessed the debt which by *covin* and cantelous packing was turned over, as due to the prince's treasurie.
Holland. Ammianus. Constantius and Julianus, fol. 110.

The king could not be made an instrument of *covin* and fraud, but the patent was void.
State Trials. The King against Hampden.

The lawes ouerlashed with *couine* and craft,
And we that did gouerne did wink at this geare:
The worser thereby, our faithful friends were.
Mirrour for Magistrates, fol. 84.

CO'ULTER, or CU'LTER, *n.* Fr. *coultre*; It. *coltro*; A. S. *cultor*; Dutch, *kultor*; Lat. *culter*; of uncertain origin. See the Quotation from Pliny.

To come now unto our ploughs. Of sheares, there be many sorts; first, there is that instrument called a *culter*, which serveth to make way before, cutting and cleaving the hard and thicke ground as it goeth, before it be broken up and turned at one side. this sheweth by the slits and insicions that it maketh (as it were by a true line drawn) how the furrowes shall go.
Holland. Plinie, vol. i. fol. 378.

——— While that the *culture* rusts
That should deracinate such sauagery.
Shakspeare. Henry V. fol. 92.

Vpon a dreadfull scorpion he did ride,
The same which by Dianais doom vnjust,
Slew great Orion: and eke by his side
He had his ploughing share, and *coulter* ready tyde.
Spenser. Faerie Queene, book vii. can. 7.

He wets the rusty *coulter* now,
He binds his oxen to the plough
And wide his future harvest throws.
Akenside. Ode 12.

CO'UNCIL, CO'UNCILIST, CO'UNCIL-BOARD, CO'UNCIL-BOOK, CO'UNCIL-CHAMBER, CO'UNCIL-HOUSE, CO'UNCIL-MAN, CO'UNCIL-TABLE. Fr. *concille*; It. and Sp. *concilio*; Lat. *concilium*. Vossius doubts not *a consulendo*; and *consulo*, from *con*, and *salio*; and Martinius, *Qui* consulunt, *rationibus in unam sententiam quasi* saliunt.

Council appears to be now restricted in its application to a body or assembly of persons met together, to consult, advise or deliberate. *Counsel*, to the advice itself. Our older Writers wrote the word variously, *Council, Councel, Counsel.* See Counsel.

I have not therefore, I confess, read more of the *councils* save here and there; I should be sorry to have been such a prodigal in my time: if ye provoke me (for at no hand else will I undertake such a frivolous labour) I will in three months be an expert *councilist.*
Milton. Apology for Smectymnuus.

From a prince that rules by awe,
Whose tyrannic will's his law;
From an armed *council-board*
And a sceptre that's a sword
Libera nos, &c.
Cotton. The Litany.

The *council-chamber* place of my arrest,
Where chief I was, when greatest was the store,
And had my speeches noted of the best,
That did them as high oracles adore.
Drayton. Legend of Thomas Cromwell.

The lord mayor and alderman, and the sheriffs of the city were often sent to the *council-table* to give an account of their proceedings in raising of ship-money.
Baker. Charles I. Anno 1640.

Sitting in *councell* with his companions in the *councell-house* at Athens about the dispatch of certain causes, he spake unto Sophocles the poet, then present among them, and bad him speak first and say his opinion, being the oldest man of the whole company.
Sir Thomas North. Plutarch. Nicias, fol. 458.

Orange, with youth experience has;
In action young, in *council* old:
Orange is what Augustus was,
Brave, wary, provident and bold.
Waller. Of the Lady Mary Princess of Orange.

Nay and his great friend Paget himself escaped not, but was often by him taken up very short at the *council-board*, where he used to speak freely: insomuch that he told the protector, that he had been discouraged at his grace's hands in open *council* to say his opinion, as much as ever man was.
Strype. Memorials. Edward VI.

How I came to be joined with these two lords, by the king's ordering our names to be struck out of the *council-book* at the same time, I neither knew, nor could ever give any reason.
Sir William Temple. Memoirs, vol. ii. p. 560.

Mr. Hyde asked me one day in the *council-chamber* why I came so seldom in the house or *council*; I told him, it was upon Solomon's advice, neither to oppose the mighty, nor go about to stop the current of a river. *Id. Ib.* p. 452.

Sir Robert wearyd by Will Pultney's teasings,
Who interrupted him in all his leasings,
Resolv'd that Will and he should meet no more;
Full in his face Bob shuts the *council-door*.
Swift. On Mr. Pultney being put out of the Council.

Soon after, by my advice, he was put to the banker in Lombard-street, is now a common-*council-man*, will shortly be deputy of the ward, and may in time bid fair for the chair.
Tatler, No. 249.

Their fury triumphs o'er the men of phlegm,
And, *council-proof* will never baulk a theme.
Fenton. Epistle to Thomas Lambard, Esq.

The star chamber, the high commission court, the court of honour, with some others, were taken away by Act of Parliament; and the power of the *council-table* restrained.
Ludlow. Memoirs, vol. i. p. 11.

Yet frequent now, at midnight solemn hour,
The rifted mounds their yawning cells unfold,
And forth the monarchs stalk with sovereign power,
In pageant robes, and wreath'd with sheeny gold,
And on their twilight tombs aerial *council* hold.
Collins. An Ode on the Superstitions of the Highlands.

COUNCIL, in *Ecclesiastical History*, is a Convention of Pastors, assembled together for the regulation of Ecclesiastical affairs.

igin of ancils.

It may reasonably be supposed that, as Christianity spread, circumstances would arise, which would make consultation necessary among those who had embraced the Gospel, or at least among those who were employed in its propagation. Not long after the ascension of our Saviour, in consequence of a dispute whether the yoke of the law should be imposed on the Gentile converts, an assembly of the "Apostles and Elders" was convened; who, after consultation, having decided the point in question, sent their decree, (which they declared to have been made under the direction of the Holy Ghost,) to all the Churches, and commanded that it should be the rule of their conduct. This is generally considered to be the *first* Council; but it differed from all others in this circumstance, that it was under the especial guidance of the Spirit of God. Although the Gospel was soon after propagated in many parts of Europe, Asia, and Africa, there does not appear to have been any public meeting of Christians, held for the purpose of discussing any contested point, until the middle of the IId century. From that time, Councils became frequent; but, as they consisted only of those who belonged to particular districts or countries, they are usually termed *Provincial* or *National Councils*, in contradistinction to *Oecumenical* or *General Councils*, which were composed of Delegates or Commissioners from all the Churches in the Christian world, and which consequently represented the Church Universal.

Different classes of Councils.

Number of Councils.

The number of Councils, which, according to Chronologers and Historians, have been held at various times, is very great. Dr. Playfair reckons 1504, in all countries, between the years A. D. 33, and 1549; Mr. Baxter computes 481 Provincial Councils; and M. Du Fresnoy a much larger number. Authors are by no means agreed concerning the number of General Councils. The Papists usually reckon eighteen; but Protestant writers will not allow that nearly so many had a right to that name. Bullinger reckons only six; Dr. Prideaux, seven; and Bishop Beveridge, eight. The following are the principal Councils noticed in Ecclesiastical History.

Council of Nice.

1. The *Council of Nice* derives its name from *Nice*, a city of Bithynia, at which it was convened, A. D. 325, by order of the Emperor Constantine, who was present during its deliberations. The Bishops assembled, who were 318 in number, condemned the Arian heresy, and framed the Creed, which is hence called the *Nicene*.

Council of Constantinople.

2. The *Second General Council* was that held at *Constantinople*, A. D. 381, by order of the Emperor Theodosius the Great. In it were condemned the Macedonian heretics, who denied the Divinity of the Holy Ghost. Though usually termed a General Council, this assembly was actually composed of only 150 Bishops of the Eastern Empire. They completed what the Council of Nice had left imperfect, and fixed in a full and determinate manner the Catholic doctrine of three persons in one Godhead; which is still received among all real Christians.

Council of Ephesus.

3. The *Council* held at *Ephesus*, A. D. 431, under the Emperor Theodosius the Younger, is the *Third General Council*. Two hundred Bishops who were convened at this Council, condemned the heretical tenets charged upon Nestorius. Not to dwell on comparatively uninteresting discussions, it may suffice to remark, that the doctrine established at this Council, was that which has always been professed by the Orthodox Christian Church; viz. that Christ was one Divine person, in whom two natures were most closely and intimately united, without being mixed or confounded.

Council of Chalcedon.

4. The *Fourth General Council*, called A. D. 451, by order of the Emperor Marcian, was summoned to assemble at *Nice*, but was afterwards held at *Chalcedon*, in Bithynia. This Council, which was composed of 600, or (according to some writers,) 630 Bishops, established the Catholic faith concerning the mystery

 of the Incarnation of Jesus Christ, in opposition to the errors of Eutyches, who affirmed that there was but one nature in Christ.

Second Council of Constantinople.

5. The *Fifth General Council*, and the *Second* of *Constantinople*, was held A. D. 533, by command of the Emperor Justinian. The principal transaction of this Council, was the condemnation of the "three chapters;" by which are meant, 1. the writings of Theodore of Mopsuestia, who lived 150 years before, and who was said to have led the way to the Nestorian heresy; 2. those of Theodoret against Cyril; and 3. an Epistle of Ibis to Maris the Persian, in which the orthodoxy of the *Council of Ephesus* was attacked.

Third Council of Constantinople.

6. The *Sixth General Council*, and the *Third* of *Constantinople*, was assembled by order of the Emperor Constantius Pogonatus. This Council condemned the heresy of the Monothelites, who allowed only one will to Christ.

Second Council of Nice.

7. The *Seventh General Council* was convened, to compose the disputes which had arisen on the subject of image-worship. It met at Constantinople in 786; but its deliberations being disturbed by the violence of the Iconoclasts or image-breakers, the Empress Irene desired its members to disperse for the present. In the following year the Council resumed its deliberations, whence it is called the *Second of Nice:* it determined that a relative honour was to be given to holy pictures and images, and denounced severe punishments against all who maintained that God was the only object of religious adoration.

Fourth Council of Constantinople.

8. The *Eighth General Council or Fourth of Constantinople* was held at that City in 869. In it the worship of images was confirmed; and the disputes between the Latin and Greek Churches were concluded, or at least suspended.

These are all the Councils, reputed by Protestant writers to be Oecumenical or General; but the Church of Rome has added nine others, whose decrees she pronounces to be obligatory upon the consciences of all men. Of these, the most memorable is the *Council of Trent*, which was convoked and opened under the Pontificate of Paul III. in December, 1545, and continued under Julius III.; and which after sitting, with some interruption, eighteen years, was brought to a close in 1563. This Council, though termed by Romanists a General Council, was so far from being General, that only 196 Bishops were present: they unanimously condemned the Reformation, and confirmed all the doctrinal corruptions of Popery.

The first four Councils, it will be seen, were convoked by the Emperors of the East, whose dominions included the whole, or nearly the whole of Christendom; and they continued to exercise the same power for several centuries afterwards. But, at length, the Popes of Rome, among other usurpations, assumed to themselves the right of summoning General Councils; and the first which met by their authority was the *First Lateran Council*, in the year 1123.

Councils not infallible.

Different General Councils have made decrees directly opposite to each other, particularly in the Arian and Eutychian controversies, which related to fundamental articles of the Christian doctrine. Indeed, neither the first General Councils themselves, nor those who defended their decisions, ever pretended to infallibility. This claim was of a much more recent date, and suited to the dark ages, in which it was asserted and maintained; but it is now considered equally groundless and absurd. If God had been pleased to exempt them from a possibility of error, he would have announced that important privilege in his written word; but no such promise or assurance is mentioned in the New Testament. Since the Scriptures are the only source from which we can learn the terms of salvation, it follows (as the Anglican Church has declared in the XXIst Article of her Confession) that "things, ordained by General Councils as necessary to salvation, have neither strength nor authority, unless it may be declared that they be taken out of Holy Scripture." Upon this ground the members of that Church receive the decisions of the first four General Councils, in which they find the truths revealed in the Scriptures, and therefore they believe them. They reverence the Councils for the sake of the doctrines which they declared and maintained; but they do not believe the doctrines upon the bare authority of the Councils. The Greek Church receives the decisions of the first seven Councils; but the Coptic and Abyssinian Churches admit only those of the First Council of Nice, the First of Constantinople and of the Council of Ephesus. Much as the authority of Councils has been extolled by the Papists, History shows that, whatever they may be in *theory*, they were, for the most part, in *fact*, very disorderly; their deliberations having been disgraced by violence, disorder, and intrigue, and their decisions formed under the influence of some ruling party. Hence General Councils have been discontinued since the Reformation.

Abstracts of the proceedings of General Councils will be found in the Ecclesiastical Histories of Mosheim, Du Pin, and others, and in Dr. Cave's *Historia Literaria*. There are extant several collections of their Canons: the two most celebrated of these are, 1. the *Concilia Generalia*, edited by Severinus Binius, of which there are three editions, one printed at Cologne in 1606, and again in 1618, in four volumes, folio, and another at Paris in 1638, in nine volumes, folio; and 2. edited by Philip Labbe and Gabriel Cossart, Paris, 1671, 1672, in seventeen closely printed volumes, to which Stephen Baluze published a supplement, in 1683, in one volume. These and some other collections by Popish editors, are confessedly works of great labour and learning; but they must be consulted with suspicion, on account of the fraudulent alterations introduced into them; which have been ably exposed by our learned countrymen, Thomas James, in his *Treatise of the Corruption of Scripture, Councils, and Fathers, by the Prelates, Pastors, and Pillars of the Church of Rome, for maintenance of Popery*, London, 1688, 8vo.; and Dr. Thomas Comber, Dean of Durham, in his *Roman Forgeries in the Councils, during the first four centuries; together with an Appendix concerning the Forgeries and Errors in the Annals of Baronius*, London, 1689, 4to.

The proceedings of the national Councils of the British Church, were collected by Sir Henry Spelman, and Sir William Dugdale, and printed in one volume, folio, at London, in 1639—64; but the best and most copious edition is that of David Wilkins, London, 1737, in four large volumes, folio.

For the proof and illustration of the judgment of the Church of England, on the authority of General Councils, as delivered in the XXIst Article of her Confession, the works of Bishops Burnet, Beveridge, and Tomline, and of Dr. Hey, may be advantageously consulted.

COUNCIL. The *Privy* COUNCIL, *Consilium privatum Regis*, is the principal Council belonging to the King in his Court or Palace. In ancient times it consisted of twelve or thereabouts; but having increased so that its numbers were inconveniently large, it was limited in 1679 to thirty, whereof fifteen sate by right of office, and the remainder, ten Lords and five Commoners, were named by the King. It is now considered indefinite in number, but only such Members attend as are summoned upon each particular occasion. The *Lord President of the Council* ranks as fourth Great Officer of State. His office is as ancient as the reign of King John. It appears to have been dormant in the reign of Elizabeth, though exercised in that of James I., and formally revived under Charles II., in the person of Anthony, Earl of Shaftesbury. He is appointed by letters patent under the Great Seal, *durante bene placito*. His duties are to propose business at the Council table, and to report the transactions thereof to the King. Privy Counsellors are nominated by the King without patent or grant, and they are removable at his pleasure. Any natural born subject of England is capable of being a Member; but no person is capable if born out of the dominions of England, unless of English parents, even though he be naturalized.

The oath of a Privy Counsellor binds him, 1. to advise the King according to the best of his cunning and discretion; 2. to advise for the King's honour and good of the public without partiality, through affection, love, meed, doubt, or dread; 3. to keep the King's Council secret; 4. to avoid corruption; 5. to keep and strengthen what shall be there resolved; 6. to withstand all persons who should attempt the contrary; to observe, keep, and do, all that a good and true Counsellor ought to do for his Sovereign Lord.

The power of the Privy Council in offences against Government extends only to inquiry, and their committal is not privileged beyond that of an ordinary Justice of the Peace. But in Plantation or Admiralty causes, and in cases of Lunacy and Idiocy, the appeal lies to the King's Majesty himself in Council; so also in disputes of Colonies concerning their Charters, or in any claim in the nature of a feodal grant from the King or his ancestors. A conspiracy among any of the King's Household Servants to take away the life of a Privy Counsellor is Felony, though nothing be done in it. (3 Henry VII. ch. 14.) On the attempt of Guiscard upon Mr. Harley, a statute, 9 Anne, ch. 16, made it Felony, without Benefit of Clergy, for any person who attempted to kill, or who should assault, strike, or wound, a Privy Counsellor in the execution of his office. The Privy Council is dissolved by the Common Law on the demise of the Crown; but by 6 Anne, ch. 7, 8, it continues for six months after the accession of the new Prince, unless he determine it sooner. The King with the advice of the Privy Council issues Proclamations, which if they are consonant to the law of the land, are binding on the subject.

The *Common* COUNCIL of the City of London probably arose out of the *Folkmotes*, or General meetings of the Citizens, which were not discontinued till after the reign of Henry III. Afterwards, when these large assemblies became inconvenient, two Citizens were returned from each Ward, who being added to the Lord Mayor and Aldermen, might form the *Court of Common Council*. In 1347 it was determined that each Ward should send delegates in proportion to its extent, not less than six, nor more than twelve; and the aggregate number thus returned by election on St. Thomas's day is 236. This Court forms the legislative body of the City. Various Committees are appointed out of it, and the nomination of several Officers belongs to it. It assembles in a chamber at Guildhall on every Thursday. COUNCIL. COUNSEL

CO-UNDERSTANDING, a mutual or reciprocal understanding.

I cannot yet get that grammar, which was made for the constable of Castile, who you know was born dumb; wherein an art is invented to speak with hands only, to carry the alphabet upon ones joints and at his fingers ends. which may be learned without any great difficulty by any mean capacity, and whereby one may discourse and deliver the conceptions of his mind without ever wagging of his tongue, provided there be reciprocal knowledge, and *co-understanding* of the art 'twixt the parties; and it is a very ingenious piece of invention.

Howell. Letter 71. book ii.

CO-UNE, } *Co*, and *unus*, one. See UNITE. Con-
Co-UNITE. } joined, combined, united. See ATONE.

These three are Ahad, Æon, Vranore:
Ahad these three in one doth *co-unite*.

More. On the Soul, book i. st. 39.

Our souls be *co-unite*
With the world's spright and body, with these herself she has dight.

Id. Ib. part ii. book iii. can. 2. st. 44.

Not that man hath three distinct souls: for the intellectual in man, containeth the other two: and what are different in plants beasts and man; are in man *one*, and *co-un'd* together.

Feltham. Resolves 95.

See COUNCIL, above.

Counsel is applied to advice, consultation, deliberation, design, plan or purpose: and also (elliptically) to him, who is of *counsell*, who gives *counsell* or advice, who aids or assists in consultation or deliberation, in forming plans or designs; to the *counsellor* or adviser; and technically to the pleader or advocate. And see the Quotation from Hobbes.

And in fourty nyȝt hy bylueđ þere abonte
And *conseylde* of bataȝle, & ordeynede her route.

R. Gloucester, p. 359.

And as he and ȝis *counsell* stable *councell* nome,
Þese letres sende to July þe emperour of Rome.

Id. p. 54.

Þe barons þider cam & *counseild* þat beste felle.

R. Brunne, p. 248.

His barons gaf him *conseile* for to take a wyfe
Elfled þe faire.

Id. p. 35.

I purpose not (quod he) to werken by thy *conseil*, for many causes and resons: for certes every wight wold hold me then a fool; this is to sayn, if I for thy *conseilling* wolde change thinges, that ben ordeined and affirmed by so many wise men.

Chaucer. The Tale of Melibeus, vol. ii. p. 79.

I loved hire firste, and told thee my wo
As to my *conseil* and my brother sworne
To forthser me, as I have told beforne.

Id. The Knightes Tale, vol. i. p. 47.

A ful gret fool as any *conseillour*
That serveth any lord of high honour,
That dare presume or ones thinken it,
That his *conseil* shuld passe his lordes wit.

Id. The Marchantes Tale, vol. i. p. 382.

COUNSEL

The kynge *counsailed* in the case
By Antenor and Æneas,
Therto hath youen his assent.
Gower. Conf. Am. book i. fol. 14.

What is his name? It is *daunger*
Which is my ladis *counseller*.
Id. Ib. book iii. fol. 59.

For sothe the prince of prestis and the eldre men *counceiliden* the puple that they schulden axe Barabas, but thei schulden distrie Jhesus. *Wiclif. Matthew*, ch. xxvii.

For whi, who know the witt of the Lord? or who was his *counsilor*. *Id. Romaynes*, ch. xi.

Beware therefore of men, for they shall deliuer you vp to their *counsels*, and they shall scourge you in their sinagoges or *counsel-houses*. *Tyndall. Workes*, fol. 214.

Sothely Farisees geden out anoon and maden a *counseyl* with Herodians agens him hou thei schulden leese him.
Wiclif. Mark, ch. iii.

And the Pharises departed and streyght way gathered a *counsell*, with thē that beloged to Herod, against him, that they might destroy him. *Bible*, 1551.

In the name of the Lord so be it. There was put forth before us the deane and college of the right *counsailful* facultie of decrees of the vniuersitie of Parys this question.
Hall. Henry VIII. The eighth Yere.

In matters of spiritual joy and sorrow, I will if I can, be *counseled* by an heart which once was broken, that I may see how he recovered, and repair my breaches by a pattern.
Hammond. Works. Sermon 10. vol. iv.

The danger of their marching in his rear, and carrying as great an addition of strength to the enemy, as General Goring could carry to the king, except he carried with him the forces of several garrisons, which were then joyn'd to him, made it very *counsellable* to suspend a present obedience to those orders, till his majesty might receive the full and true state of his affairs in those parts.
Clarendon. History of the Rebellion, &c. book ix.

Very few men of so great parts were, upon all occasions, more *counsellable* than he; so that he would seldom be in danger of running into great errors, if he would communicate, and expose all his own thoughts and inclinations to such a disquisition.
Id. Ib. book iv.

Counsel, is where a man saith, Do, or do not, this, and deduceth his reasons from the benefit that arriveth by it to him to whom he saith it.
Hobbes. Leviathan, part ii. ch. xxiv.

He [the Earl of Strafford] moved the lords to have *counsel* allowed him, which was much opposed by the commons, but his accusation having much in it of matter of law, he had permission to have *counsel*. *Baker. Charles I. Anno* 1646.

I would to Jove, Athenia, and Phoebus, I could make
(Of all) but ten such *counsellors*; then instantly would shake
King Priam's city, by our hands laid hold on, and laid waiste.
Chapman. Homer. Iliad, book ii. fol. 24.

To such a passe were things brought, that the greatest part of the common people of Rome came laden with wine into the *counsell-house*, and being drunke, consulted of the safety of the state. *Hakewill. Apologie*, fol. 372.

No *counsel-keeper*, nor no secret thing
Will then be found.
More. On the Soul, part iii. st. 18.

And curtain'd with a *counsaile-keeping* caue.
Shakspeare. Titus Andronicus, fol. 37.

For the great offices and officers of the kingdom, I shall say little, for the most part of them are such as cannot well be severed from the *counsellorship*; and therefore the same rule is to be observed for both, in the choice of them.
Bacon. Advice to Sir George Villars.

To preuent which outrage, by gentle messages intreating of the barons a place and day of meeting, who thereto designed Running-mead, (since called *Counsell-mead*, for such consultations of state.) *Speed. King John*, book ix. ch. viii.

Not Lemuel's mother with more care,
Did *counsel* or instruct her heir;
Or teach with more success her son
The vices of the times to shun.
Waller. Epitaph on Sir George Speke.

As if it were not more advantageous to mankind to be instructed in wisdom and virtue, than in politicks; and to be made good fathers, husbands, and sons, than *counsellours* and statesman. *Spectator*, No. 124.

When wide example bids me be unjust,
False to my word—or faithless to my trust;
Bid me the banefull errour, *counsell'd* see,
And shun the world, to find repose with thee.
Boyse. Address to Poverty.

COUNSEL, COUNSELLOR, in *Law*, a person retained by a client to plead his cause in a Court of Judicature. Of Counsellors there are two degrees, Barristers and Serjeants. From both of which some are selected to be his Majesty's Counsel learned in the law, the two principal of whom are his Attorney and Solicitor General. King's Counsel must not be employed in any cause against the Crown without special licence, which licence, however, is never withheld. Of late years a custom has prevailed of granting patents of precedence, to such Barristers as the Crown thinks proper to honour with that mark of distinction, whereby they are entitled to such rank and pre-audience as are assigned in their respective patents. These, as well as the Queen's Attorney and Solicitor General, rank promiscuously with the King's Counsel, and sit together with them within the Bar of the Courts; they receive no salaries, and are not sworn, and therefore are at liberty to be employed in causes against the Crown. All other Serjeants and Barristers indiscriminately, (except in the Court of Common Pleas, where only Serjeants are allowed to practise,) may be employed by any suitors. The order of precedence and pre-audience at the Bar stands thus: the King's Serjeant, so constituted by special patent; the King's Ancient Serjeant; the King's Advocate General; the King's Attorney General; the King's Solicitor General; the King's Serjeants; the King's Counsel, and Queen's Attorney and Solicitor General; Serjeants at Law; the Recorder of London; Advocates of the Civil Law; Barristers. A Counsel has the privilege of enforcing on the Court any thing of which he is informed by his Client, if pertinent to the matter, and is not bound to examine whether it be true, for that is at the peril of the person instructing him: great latitude of speech is also allowed Counsel, to enable him to discharge his duties efficaciously to his Clients.

COUNT, *v.*
COUNT, *n.*
CO'UNTABLE,
CO'UNTER,
CO'UNTING-HOUSE,
CO'UNTLESS.

Fr. *compter*; It. *contare* Lat. *computare*; from *con*, and *putare*; of unsettled Etymology. See COMPT, and ACCOMPT.

To reckon, to number, to calculate, to compute, to value or estimate.

Countour, in Chaucer, is *counting*-house; also, Arithmetician.

The gretest clerkes ben not the wisest men,
As whilom to the wolf thus spake the mare:
Of all hir art ne *count* I not a tare.
Chaucer. The Rewe Tale, v. 4054.

Up to hire husbond is this wyf ygon,
And knocketh at his *countour* boldely.
Id The Shipmannes Tale, v. 13143.

That though Argus the noble *countour*
Sate to reken in his *countour*,
Yet should he faile to reken euen
The wonders me met in my sweuen.
The Dreame of Chaucer, fol. 241.

Caton *counteth* hit nought and canonistres at lesse.
Piers Ploughman. Vision, p. 163.

Florent behight hir good enough,
Of londe, of rent, of parke, of plough:
But all that *counteth* she at nought.
Gower. Conf. Am. book i. fol. 17.

Curyowsly he can both *counter* and knak.
Skelton. Laureate, againste a comely Coystrowne curiowsly chauntyd, and carryshly cownted, *&c.*

There was *counteryng* of carols in meter and in uerse
So many, that long it were to reherce.
Id. The Crowne of Laurell.

Aulus, my sonne, when thou in youth
counters in purse didste beare.
Drant. Horace. Satyre 3.

He hath abundance of gold and siluer in his owne handes or treasurie: but the most part of his know not a crowne from a *counter*, nor gold from copper.
Hakluyt. Voyage, &c. Description of Russia, vol. i. fol. 320.

But these fancies are now so generally cried downe that to reuiue them would be *counted* no lesse then folly, and to defend them absurdity. *Hakewill. Apology*, fol. 263.

As for an enemy that is long a making: he is much the worse, for being ill no sooner. I *count* him as the actions of a wise state, which being long in a resolving, are in their execution sudden, and striking home. *Feltham. Resolve* 3.

IREN. Sure Eudox. The evils which you desire to be *recounted* are very many, and almost *countable* with those which were hidden in the basket of Pandora.
Spenser. On Ireland, vol. viii. p. 300.

There were taken by the king's armie, 100 knightes and seruitours on horse-backe, and foot-men without number, besides thirtie men of armes, and other inferiour souldiers not *countable*.
Speed. Richard I. book ix. ch. vii. sec. 65.

Nature itself cannot err: and as men abound in copiousness of language; so they become more wise or more mad than ordinary. For words are wise men's *counters*, they do but reckon by them: but they are the money of fools, that value them by authority of an Aristotle, a Cicero, or a Thomas, or any other doctor whatsoever, if but a man. *Hobbes. Of Man*, part i.

But, oh! her mind, that Orcus, which includes
Legions of mischief, *countless* multitudes
Of former curses, projects unmade up,
Abuses yet unfashion'd.
Donne. Julia. Elegy 15.

——— This *counter-caster*,
He (in good time) must his lieutenant be,
And I (blesse the marke) his Mooreship's auntient.
Shakspeare. Othello, fol. 310.

I find in my *counting-house* a manor pawn'd,
Pawn'd, my good lord.
Massinger. The City Madam, act v. sc. 2.

For then to sacrifice a bullock,
Or, now and then a child, to Moloch,
They *count* a vile abomination,
But not to slaughter a whole nation.
Butler. Hudibras, part i. can. 3.

That the same governors take the keys from the proctors and other officers; and to govern the house, and to receive all rents, and make all payments, and to be *countable* to the king's grace thereof. *Strype. Memorials. Henry VIII. Anno* 1535.

[He] thereby no more increases his own knowledge, than he does his riches, who taking a bag of *counters* calls one in a certain place a pound, another in another place a shilling, and a third in a third place a penny.
Locke. On Human Understanding, book iv. ch. viii.

Besides they loll upon their *counters* half an hour longer than they need, to drive away other customers who are to share their impertinencies with the milliner, or go to another shop.
Spectator, No. 156.

Men in trade seldom think of laying out their money upon land, till their profit has brought them in more than their trade can well employ; and their idle bags cumbring their *counting-houses*, put them upon emptying them on a purchase.
Locke. Works. On the lowering of Interest and raising the value of Money.

I would not be that guilty man,
With all his golden store;
Nor change my lot with any wretch,
That *counts* his thousands o'er.
Logan. A Tale.

I soon caught from my fellow apprentices the true grace of a *counter-bow*. *Rambler*, No. 116.

But who the *countless* charms can draw,
That grac'd his mistress true;
Such charms the old world seldom saw,
Nor oft I ween the new.
Granger. Bryan and Pereene.

——— He inspires
Their balmy odours, and imparts their hues,
And bathes their eyes with nectar, and includes,
In grains as *countless* as the sea-side sands,
The forms with which he sprinkles all the earth.
Cowper. The Task, book vi.

And you all remember, that in the same virtuous cause he submitted to keep a sort of public office or *counting-house*, where the whole business of the last general election was managed.
Burke. On the Nabob of Arcot's debts.

COUNT, in *Law*, is properly the Declaration of complaint in a *real* action, the term *Declaration* being strictly applicable to *personal* actions only: the two, however, are often used indiscriminately.

COUNTER, or as it is sometimes spelled more directly from the French *compter*, the name of a prison in London, which Minsheu derives either *a continendo*, or *a computando*, "because whosoever slippeth in there must be sure to *account* and pay well too ere he get out againe."

COUNT, COUNTESS, CO'UNTY. } Fr. *comte*; It. *conte*; Sp. *conde*, Lat. *comes*. *In imperio* comites *olim vocabant, quotquot e* comitatu *principis erat.* Spelman, *Gloss. Arch.*

County, was the ancient general term for a Nobleman. A goodly *Count-comfect*, i. e. a specious Nobleman made out of sugar. Steevens.

BEAT. Princes and *counties!* surelie a princely testimonie, a goodly *count*-comfect, a sweet gallant surelie, O that I were a man for his sake. *Shakspeare. Much Ado about Nothing*, fol. 116.

NER. Then is there the *countie* Palintine.
POR. He doth nothing but frowne; as who should say, 'An you will not have me, choose' he heares merrie tales, and smiles not. I feare hee will proue the weeping phylosopher when he growes old, being so full of vnmannerly sadnesse in his youth.
Id. Merchant of Venice, fol. 163.

I take it, she that carries vp the traine,
Is that old noble lady, Dutchesse of Norfolke.
1. It is, and all the rest are *countesses*.
2. Their coronets say so. *Id. Henry VIII.* fol. 124.

Each [division] contained a hundred freemen, who were subject to an officer called the *centenarius*; a number of which *centenarii* were themselves subject to a superior officer, called the *count* or *comes*.—Shire is a Saxon word, signifying a division; but a *county*, *comitatus*, is plainly derived from *comes*, the *count* of the Franks; that is the earl, or alderman (as the Saxons called him) of the shire, to whom the government of it was intrusted.
Blackstone. Commentaries. Introduction, sec. 4.

COMES, which we render COUNT, COUNTEE, or COUNTY, appears to have been first used as a title of dignity under the reign of Constantine. During the existence of the Republic the inferior officers, as *Tribuni, Præfecti, Scribæ, Medici, Haruspices, Accensi, Præcones*, who accompanied the *Proconsules* and *Proprætores* into their Provincial Governments, were known as the *Co-*

COUNTY. *mites* or *Cohors* of their principal. (Cic. *pro Rab. Post.* 6.) On the establishment of the Imperial Government the name was applied to the Court and household of the Prince; and Dio (53) mentions a Council of Senators selected by Augustus as his *Comites*. (Salmas. ad Sueton. *Tib.* 46.) On the first distribution of his dominions and the foundation of the new Capital under Constantine, ten out of the thirty-five Provincial Generals received the title of *Comes*. The civil officers likewise who were honoured with this distinction, gradually became very numerous, and lists of them may be found in the *Cod. Theod.* vi. 12—20, in the *Notitia Imper.*, and in the *Glossaries* of Spelman and Du Cange.

After the fall of the Roman power the title was retained by the Conquerors, and under Charlemagne it denoted equally a military or civil employment. About the end of the XVth century in Germany and under the last Princes of the Merovingian race in France, the title appears to have become hereditary in families, from the weakness of the Crown, which was unable to recall the dignity which it had once bestowed. Selden, in his *Titles of Honour*, treats the origin and progress of the title at much length, and with his usual learning.

The title *Comes*, though granted in fee to his Nobility by William the Conqueror, became merged in the Saxon Earls, whose territory in like manner was signified by County or *Shire*, a division attributed to Alfred. Three out of the fifty-two English Counties (forty for England, twelve for Wales) are distinguished as *Counties Palatine*. Chester and Durham are such by prescription as old as the Conquest. (Selden, 2, 6, 8.) Lancaster was so created by Edward III. in favour of Henry Plantaganet, whose heiress was married to the King's son, John of Gaunt, (Cart. 36, Edward III. 9.) They are called *Palatine, a palatio*, because the owners of them exercised in these Counties as full regal privileges and rights as the King himself did in his Palace. These high privileges were probably granted to Chester and Durham as border Counties requiring prompt administration of justice; on which account Pembrokeshire and Hexhamshire, were formerly considered Palatine. The rights of the former were entirely taken away in 27 Henry VIII., when the powers of the others were much abridged; and the latter, which belonged to the Archbishop of York, was reduced to a part of Northumberland in 14 Elizabeth. The County Palatine of Durham is the only one remaining in the hands of a subject. The Earldom of Chester was united to the Crown by Henry III., and the title has ever since been bestowed on the King's eldest son. Henry IV., son of John of Gaunt, did not think it safe to annex his hereditary right in Lancaster to the throne which he had usurped; and it was not until the attainder of Henry VI. that this Duchy and County was vested in the Crown, though under separate guidance and governance for its other possessions. Lancaster and Durham have Chanceries, Chester a Court of Exchequer and a Chief Justice.

Counties Corporate are Cities and Towns invested by special grace with the privileges of Counties in themselves. They are London, (the Shrievalty of which is always united with that of Middlesex,) Bristol, Canterbury, Chester, Coventry, Exeter, Gloucester, Kingston-upon-Hull, Lincoln, Lichfield, Newcastle-upon-Tyne, Norwich, Nottingham, Pool, Southampton, Worcester, York. 3 George I. 5.

COUNTENA'NCE, *v.* Countena'nce, *n.* Countena'ncer, Countena'ncing. Fr. *contenance*. *Vultus, aspectus, gestus*, q. d. continentia, *sc. vultus; a rim aut minus severis gestibus et motibus.* Contenancer, *favere, vultu*, sc. *propitio et favorabili intueri.* Skinner. COUN MAN

The *continence*, keeping or composure of the features of the face; the composure or settledness of face, looks or aspect; the firm or fixed aspect of confidence, of assurance, of courage, of encouragement; and thus applied to,

Encouragement, support, power, patronage. And, to *countenance*,

To encourage, to support, to favour, to patronize.

In *Every Man out of his Humour*, upon the expression "I'll give you more than *countenance*," Mr. Gifford has this note. "*Countenance* is a law term, from the French *contenement*, or the Latin *contenementum*, and denotes the credit and reputation which a person hath by reason of his freehold; and most commonly what is necessary for his support and maintenance according to his condition of life." *Observations on the more Ancient Statutes*, p. 11; Ben Jonson's *Works*, ii. 111.

Amiddes of the temple sate Mischance,
With discomfort and sory *contenance*.
Chaucer. The Knightes Tale, v. 2012.

The kynge his hardie *countenance*
Beholde: and his wordes wise,
And saide vnto hym in this wise.
Gower. Conf. Am., book iii. fol. 61.

Wherof first he made *cõtenaunce* as thoughe he had ben in doute whether it hadde ben the ii. bretherne of Constant or none.
Fabyan, vol. i. ch. lxii.

It makes mee laugh agood to see thee lowre
and long to loken sad:
For when thy crabbed *countenance* is so sowre,
thou art to seeming glad.
Turbervile. Of the straunge Countenance of an aged Gentlewoman.

So from himself impiety hath wrought,
That for his prey to pray he doth begin,
As if the heavens should *countenance* his sin.
Shakspeare. The Rape of Lucrece.

He would have pardoned him, [the Earl of Strafford] if it could have preserved him against the tumult raised and *countenanced* by the Parliament itself, for the terrifying of those they thought might favour him. *Hobbes. Behemoth*, part ii. fol. 523.

Rhe. Agelastus, so surnamed for his gravity, was a very wise fellow, kept his *countenance* all days of his life, as demurely as a judge that pronounceth sentence of death on a poor rogue, for stealing a piece of bacon as would serve at a meal with a calf's head. *Massinger. The Lover's Melancholy*, act i. sc. 2.

When Cain, upon the non-acceptance of his offering, was out of *countenance*: God tells him, *Gen.* iv. 7, If thou dost not well, μὴ ὀρθῶς say the Septuagint, Not rightly, or as I have prescribed: Sin lieth at the door: that is, thou art to be dealt with as a contemner of my law. *Grew. Cosmo Sacra*, book iv. ch. iii.

Orl. Are you her grace's *countenancer*, lady.
Beaumont and Fletcher. The Honest Man's Fortune, act iv. sc. 1.

Particularly the said Archibald Marquis of Argyle, at least they, or one or other of them, were authors, aiders, abettors, assisters, promoters, *countenancers*, contrivers, or art and part.
State Trials. Proceedings against the Marquis of Argyle.

Amongst whom it was agreed, the taking of the tower to be very fit for the better *countenancing* of the action.
Id. Trial of Sir Christopher Blunt.

But as to the civil religion, Socrates never opposed it, but always *countenanced* it both by discourse and example.
Bentley. Of Free Thinking, p. 177.

——— Nor with a troubled look,
Or trembling hand, the funeral present took,
Ev'n kept her *countenance* when the lid remov'd
Disclos'd the heart, unfortunately lov'd.
Dryden. Sigismonda and Guiscardo.

The *countenancing* of the rich man against the poor, was occasioned partly from the servants of the king's great officers, who did use to commit the hearing and examining of causes to them.
Strype. Memorials. Edward VI. Anno 1553.

You cannot imagine, as you have not been long enough in your post to know it by your own observation, how great an advantage it is to a man to have the *countenance* of the governor of his province. *Melmoth. Cicero. To Publius Lentulus.*

COUNTER, *adv.* Fr. *contre*; Lat. *contra, pro contera, ut supra pro supera, intra pro intera.* Vossius. Against, in opposition, in resistance, contrariwise.

A hound that runs *counter*, and yet draws drifoot well.
Shakspeare. Comedy of Errors, fol. 94.

For that punishment follows not in this life, the breach of this rule, and consequently that it has not the force of a law in countries, where the generally allow'd practice runs *counter* to it, is in itself evident.
Locke. On Human Understanding, book i. ch. iii.

CO'UNTERACT, *v.* } See *counter*, and *act*. To
Co'UNTERACTION. } act contrary, in opposition, in resistance, in hindrance or prevention. And thus, To hinder, to prevent. Smith writes it, *Contra-act*.

These have no antagonist grinders, nor *contra-acting* milstones.
Smith. Portraiture of Old Age, p. 83.

But in this case we can find no principle within him strong enough to *counteract* that principle, and to relieve him.
South. Sermons, vol. ii. p. 362.

Liberal, not lavish, is kind Nature's hand;
Nor was perfection made for man below,
Yet all her schemes with nicest art are plann'd,
Good *counteracting* ill, and gladness woe.
Beattie. The Minstrel, book i.

The physician who undertakes to cure a disease, must of course, while he administers proper medicines, enjoin his patient to abstain from every thing (however pleasing and agreeable) which may, in any degree, *counteract* those medicines, and nourish the disease.
Bishop Horne. Works. The Duty of Self-Denial. Discourse 1.

They [the beauties of writing] are wholly subject to the imagination, and do not force their effects upon a mind preoccupied by unfavourable sentiments, nor overcome the *counteraction* of a false principle or of stubborn partiality.
Johnson. Rambler, No. 93.

COUNTER is much used in Composition; it may be so used with any word, of which contrariety or opposition may be predicated. A sufficiently copious collection of examples to illustrate the usage is subjoined. For many of them, we are perhaps indebted to the French, e. g. *Contre-ballancer,—changer,—chanter, —gage,—garde,—mander,—miner,—peser,—poison,—scarpe,—signer,—seeler.*

The selly shippe was sows and smitten sore,
With *counter*-buffets, blowes and double blows.
Gascoigne. Hea bes. Voyage into Holland.

Then incontynent the constable, for doute of his men, sent out another company of men of armes, to be a *countergarde* to the foragers that were gone before for the engyn.
Froissart. Cronycle, vol. i. ch. 319.

All these Flēmynges lay in the vale of Cassell in tentes and pauylions, to *coūtegaryson* the French garysons, that the French kynge had layed at Saynt Omars, at Ayre, at Saynt Venaunt, and in other towns and fortresses there about.
Id. Ib. vol. i. ch. lxii.

Vpon the sayde Sonday of Lent, the mayre, aldermen, and shryuys, with the sayde enqueste and foure men of every warde were chargyd to appeare at Westmynster, before the kynge, at whiche appearaunce, they were *coūtyrmaundyd*, tyll upō the nexte morowe. *Fabyan. Anno* 1256.

But the most part of the said mines came to no proofe though they put fire in them, and many were met with *countermines* and hunken by our men. COUNTER
Hakluyt. Voyage, &c. The Loss of Rhodes.

He openly sayed, I cannot holde by the cloudes, for though my horse fayled me, surely I wil not fayle my *countre-paignions*. [In Grafton—*Counter-pannion.*]
Hall. Edward IV. The sixth Yere.

The *counterparte* came in freshly, appareyled euery man after his deuise. *Id. Henry VIII. The second Yere.*

Counterplede nat cōscience. ne holy churche ryghtes.
Piers Ploukman. Vision, p. 138.

I would graunte that, though I should anone die, and by my mouth fight in the quarell, if any wighte woulde *counterpleade*.
Chaucer. The Testament of Loue, book ii.

And she answered, let be thine arguing
For loue ne wol not *counterpleted* be
In right ne wrong.
Id. The Legend of Good Women. Prologue, fol. 200.

Philosophers, (that bookish broode)
maye teache the thinge by sleight,
But skille and practyse *counterpleas*,
and profit it denyes.
Drant. Horace. Satyre 3.

It shall do vs as much good
And to our harte as much auaile
The *counterpeise*, ease, and trauaile
As we had won with labour.
Chaucer. The third Booke of Fame, fol. 283.

And didden all hir might, sens they were one
For to recoueren blisse, and been at ease
And *paised* wo with ioy *counterpaise*.
Id. Troilus, book iii. fol. 174.

All the losses that a man maie haue of any temporall goodes, can not *counterpeise* the least losse of good fame.
Golden Boke, O. 8.

But the whole cause of the remission of our sinnes & our saluation, is the bloud of Christ, which hath fully *counterpayed* the iustice of God the father, & hath pacified his wrath towardes vs that believe. *Frith. Workes*, fol. 22.

Wherfore shortly after was made in Westmynster-hall a scaffolde for the lordes, and a presence for a judge railed and *counterrailed* about, and barred with degrees.
Hall. Henry VIII. The thirteenth Yere.

The 21st, in this latitude of 18 degrees we met with a *counter-sea* out of the north boord, and the last voyage in this very place we had the *counter-sea* out of the south, being very calme weather as now it is also.
Hakluyt. Voyage, &c. M. James Welsh.

Not skilde to *counter-shape* his mournful grace
That men might deeme what art could not supplie,
Deuisde with painted vaile to shroude the face
Like sort my pen shal Gascoigne's praise discrie.
Gascoigne. R. N., in commendation to the Author, &c.

Folweth ecco, that holdeth no silence,
But ever answereth at the *countretaille*.
Chaucer. The Clerkes Tale, v. 9069.

"Now by that other" (quod I) "methinketh thilke iewel so precious, that to no soch wretche as I am wolde vertue therof extende, and also I am to feble in worldely ioyes, any soche iewell to *contreuaile*.
Id. The Testament of Loue, book i.

Where Rome than would assaile,
There might no thing *contreuaile*
But euery contry must obeye.
Gower. Conf. Am., Prologue, fol. 5.

Of all the heauenly gifts that mortal men commend,
What trusty treasure in the world can *counteruaile* a friend.
Vncertaine Auctors. Of Friendship.

Than shuln ye evermo *counterwaite* emboyssements, and alle espiaile. *Chaucer. The Tale of Melibeus.*

COUNTER And sir, I wyll ye knowe the dethe of my son toucheth me so nere, that and it were not for brekynge of this voyage that we be in, I shulde bring the host into suche trouble, that with honour it shulde be amended, and so *counteruenged*, that it shulde be spoken of a hūdred yeres hereafter in Englande.

Froissart. Cronycle, vol. ii. ch. xi.

Counterwaying your busy diligence.

Skelton. The Crowne of Laurell.

Prudent Rebeca, of whom remenbraunce
The Bible maketh, with whose chaste lyuinge
Your noble demenour is *counterwaynge*. *Id. Ib.*

So that for a man to go about to *counterargue* this common belief, is as fruitless as to whistle against the winds.

Glanville. The Vanity of Dogmatizing, ch. ix.

But he had laid a *counter-ambush* for them of his Illyrians, who staying behind the rest did set upon the backs of the Etolians.

Ralegh. History of the World, book v. ch. iv. sec. 2.

In case such authority be made not manifest unto him upon demand, he is no longer obliged: for the covenant made with the author is not valid, without his *counter-assurance*.

Hobbes. Of Man, part i.

It comforteth me in all my distresses, though I have I know not how many personal distresses, yet I draw that comfort out of the news of your faith, which upholds my heart and doth *counterbalance* my afflictions.

Goodwin. Works, vol. i. fol. 235.

Not thy strength is approv'd with words (good friend) nor can we reach
The body, nor make th' enemy yeeld, with these our *counter-braves*.

Chapman. Homer. Iliad, book xvi. fol. 230.

Sir Edward Harbert is return'd, having had some clashings and *counterbuffs* with the favourite Luynes, wherein he comported himself gallantly. *Howell. Letter* 5. book i. sec. 3.

Then came of Laodice another knight,
On him the staffe in pieces three did teare,
Yet was the *counterbuffe* thereof so great,
The knight had much ado to keepe his seate.

Harrington. Orlando, book xvii. st. 67.

So as they past together on their way,
He gan deuize this *counter-cast* of slight,
To giue fair colour to that ladies cause in sight.

Spenser. Faerie Queene, book vi. can. 3.

As touching the sea-hares among the Indians, it is constantly affirmed, that taken they cannot be alive; and that by way of *countercharge*, a man is their poyson.

Holland. Plinie, vol. ii. fol. 427.

And *counter-changeably* writte in the Argent, ATER, and in the sables, ALBVS.

Camden. Remaines. Impresses, p. 225.

In suche maner, that as well by day as by night (whiche came vpon them in thies *counter-chaunces*) they were all deade, partely wyth strokes of arowes, and partlye wyth theire owne hādes.

Nicoll. Thucydides, fol. 107.

Then, thou seducing hope, farewell,
No more thou shalt of sense bereave me,
No more deceive me.
I now can *counter-charm* thy spell,
And for what's past so far I will be even,
Never again to hope for any thing but heaven.

C. Cotton. Hope. Pindaric Ode.

The excrements or bones which the hyæna dischargeth out of the belly at the time that she is killed, serve for *countre-charms* or preservatives against sorceries and practices of magicians.

Id. Plinie, vol. ii. fol. 313.

Nor ready always like as a cock croweth againe when he heereth others, to *counter-chaunt* (as it were) to all those that make any speech. *Holland. Plutarch*, fol. 327.

O thinke vpon the matchlesse valiancie
Of our forefather's deeds in former daies,
And let vs *counter-checke* the memoric
Of their stout acts by that immortall praise,
To which our deeds our names this day may raise.

Mirrour for Magistrates, fol. 766.

If againe, it was not well cut, he wold say, I lie: this is called the *counter-checke* quarrelsome. COUNT

Shakspeare. As You Like It, fol. 206.

Either therefore let him never cite S. Austin against us in this point, or else we must be forced to *counter-cite* him once more then we meant.

Hall. The Honour of the Married Clergie, vol. i. fol. 703.

Now I dare appeal to any one, if he can conceive any thing more subtil or more unitive then the essential notion of a spirit, as it is immediately *counter-distinct* to matter.

More. Preface. General, fol. 14.

But I call it moral, in *counter-distinction* to philosophical or physical; as Philo uses this terme moral in divine matters.

Id. Defence of Moral Cabbala, fol. 153.

If evil angels, by their confederates are permitted to perform such astonishing things as seem so evidently to carry God's seal and power with them, for the confirmation of falshoods, and gaining credit to impostors, without any *counter-evidence* to disabuse the world; mankind is exposed to sad and fatal delusion.

Glanville. Against Modern Sadducism, ess. 6.

Annibal himselfe was present in person to encourage and escort his soldiours, whereas the rouling tower was driven, which was so high, that it overlooked all the mures and *counter-fabrickes* of the cittie. *Holland. Livius*, fol. 400.

Whyche thynge they durst not do, whan they shoulde perceyue themself *contre-gaiged* with any parte of their soulde.

Nicoll. Thucydides, book viii. fol. 207.

The vnhappy & myserable, that haue no hope of goodnes, shulde not be reputed to do more wisely, to *counter-garde* or safe their liue, than they, that be of an other condition, that is better.

Id. Ib. book ii. fol. 56.

And though in this life we have not always such a sensible experience of the evil and mischief of this malignant temper, because now it is *counter-influenced* by those more meek and auspicious ones that are in conjunction with it; yet when we go into eternity, we shall be confined to such a society of spirits as are all thro' out of our genius and temper.

Scott. Christian Life, part i. ch. iii.

If he ask me now, how he shall know her? (I suppose he meaneth, how he should know her to be the true) I must *contre-interrogate* him, who he is? that is, in whose name he speaketh?

Hammond. Works, vol. ii. p. 643.

Sense of pain, if permitted to operate, causeth groans, with many involuntary motions and all endeavours to avoid it. All which are sometimes *countermanded* by the force of mere phancy.

Grew. Cosmo Sacra, book ii. ch. vi.

Then do I thinke there is some greater hand,
Which thy endeavours still doth *countermand*.

Browne. Pastorals, book i. song 1.

Passions kept their place, as servants of the higher powers, and durst not arrogate the throne, as now: no *countermands* come hence, to repeal the decretals of regal faculties.

Glanville. Vanity of Dogmatizing, p. 4.

The English in a fog came within musket-shot of them before they were discried; then the captain commanded a *counter-march*. *Whitelock. Memorials. Charles I. Anno* 1641.

Jeroboam threatens, the prophet stands undaunted; Jeroboam fawnes, and promises, the prophet holds constant, now comes a gray-headed seer, and pleads a *counter-message* from God, the prophet yields, and transgresses.

Hall. Cont. The Seduced Prophet, fol. 1180.

The German powers, false shuffling, and agen
All *countermin'd* by skilfull Italy,
Each one in possibility to win,
Great rests were vp and mightie hands were in.

Mirrour for Magistrates, fol. 528.

Others he employed in a more special nature and trust, to be his pioneers in the maine *countermine*.

Bacon. Henry VII.

In which happy state we shall be no longer ground between those *counter-moving* milstones of the law in our minds, and the law in our members: but being entirely resigned to God, we shall ever obey him *secundo flumine*, with a full current of inclination, and nature.

Scott. Of the Christian Life, part i. ch. iii

 Meeting no joggs, or *countermotions* to interrupt it, the return of the parts is so quick, that the mind cannot take notice of their succession to each other.

Glanville. Vanity of Dogmatizing, ch. ix.

Which observation cannot be thought strange, by men that understand how hard, or almost impossible it is for one prince that is humorous, succeeding many that were goodly and judicious, to work upon the sudden any dangerous effect, by *countermotion* or opposition to the spheres of the former government.

State Trials. Trial of Henry Garnet.

But they are placed in those imperial heights,
Where, *countermur'd* with walls of diamond,
I find the place impregnable.

Kyd. Spanish Tragedy, act iii.

The Frenchmen besieged the towne and bet it with ordinaunce, and they within manfully defended it, and made new *countermures*, so that their enemies could not enter without ieopardie.

Grafton. Henry VIII. The nineteenth Yere.

But before they had with their *countermures* and rampiers stopped up all passages, five horsemen being sent even amongst the guards of the enemies, brought news to Rome, that the consul with his armie was besieged. *Holland. Livius*, fol. 105.

But beyond this some are despisers still and hope to drown the noises of Mount Sinai, the sound of cannons, of thunders and lightnings, with a *counternoise* of revelling & clamorous roarings.

Taylor. Sermon 13. part ii.

But afterwards when *counternews* came that Eumenes was alive and coming homeward againe, Attalus laid aside his diadem, and went to meet his brother.

Holland. Plutarch, fol. 155.

Then may I hope that I have not preach'd in vain, that what I have now only, as a precentor, begun to you, the whole chorus will answer in the *counterpart*, what hath been now proclaimed to your ears, be echoed back again by your hearts, and lives; and the veryest stone in the temple take up its part, the hardest, impenetrablest unmercifullest heart join in the ἀμοιβαῖον.

Hammond. Works, vol. iv. fol. 556.

Let him not copy what in you is writ
Not making worse what nature made so clear,
And such a *counterpart* shall frame his wit,
Making his style admired every where.

Shakspeare. Sonnet 84.

Æneas, not lightly gauled at her impatience whom he still loued more than a little, (howbeit lesser than his own regarde of honour) thankfully acknowledged her great bounty, *counterpleading* to have pretended a departure without leave taken.

Warner. Albion's England. Addition to Book II.

My lord I must confess, as your case lies,
You have great cause your subjects to suspect;
And *counterplot* against their subtelties
Who all good care and honesty neglect.

Daniel. History of Civil War, book ii.

For the courage, wherewith the mariners on both sides brought up their gallies to any part they were bidden, was very great and great was the plotting and *counterplotting*, and contention one against another of the masters.

Hobbes. Thucydides, book vii. p. 429.

Giving by his good demeanour and carriage a *counterpeise* to the ballance for to hold her firm, or a weight rather to make her incline and bend that way which is good for them both.

Holland. Plutarch, fol. 927.

Nor was without example in those days;
Wherein (as in all ages) states do take
The side of public peace, to *counterpaise*
The weight of wrong, which time may rightful make.

Daniel. History of Civil War, book vii.

What saw my life wherein my soul might joy?
What had my days, whom troubles still afflicted,
But only this to *counterpoise* annoy?

Id. The Complaint of Rosamond.

As that it may so fall out that an imposition may be set by a foreign prince that may wring our people, in which case the *counterpoise* is, to set on the like here upon the subjects of that prince. *State Trials. The Great Case of Impositions.*

And you may perceive by the body of the act, that for the *counterpoising* of the imposition of four ducats laid by the Venetians upon our merchants, there was imposed 18*s.* for a butt of malmsey, upon their merchants bringing it hither.

State Trials. The Great Case of Impositions.

The Median apple-tree: the fruit whereof is a *counterpoison* and singular antidote against all venom.

Holland. Plinie, vol. i. fol. 359.

I can liken such a one to him, who being empoysoned will not drinke any antidote or *counterpoison*, unlesse the pot or cup wherein it is be made of colion earth in Attica.

Id. Plutarch, fol. 47.

And what success had Richard himself after all these mischiefs and murders, policies and *counterpolicies* to Christian religion.

Ralegh. Preface, fol. 7.

But against the stroke of Providence all *counterpractices* are vain. *State Trials. Trial of Henry Garnet.*

Notwithstanding all these *counterpreparations*, the Gauls kept on their way; and, entering into Tuscany, destroy, and put to fire and sword all that lay before them.

Ralegh. History of the World, book v. ch. iii. sec. 8.

The cause of sense is the external body or object, which presseth the organ proper to each sense, either immediately, as in the taste or touch; or mediately, as in seeing, hearing, and smelling: which pressure, by the mediation of nerves, and other strings and membranes of the body, continued inwards to the brain and heart, causeth there a resistance, or *counterpressure* or endeavour of the heart, to deliver itself.

Hobbes. Of Man, part i. ch. i.

I do not read of many of our own that agree with him, but Polidor, Bodin, and other strangers, who may well be excused for their ignorance in British antiquities, and deserve not to be laid in ballance to *counterprize* the authoritie of so many learned authors of our country, who with ioynt consent have affirmed the Britane history. *Stow. Preface*, fol. 2.

But the generality and uncertainty of the articles was such, as rendered it a bare show only: no particular being charged, concerning which I might provide for any witnesses or *counterproof*. *State Trials. Trial of Archbishop Laud.*

The second benefit and right, which by denying me a trial *per pares*, you take from me is the benefit of seeing, hearing, and *counterquestioning* the witnesses produced against me; which in such way of trials ought to be *viva voce*.

Id. Proceedings against Colonel Andrewe.

First that this present manner of exercising of this office hath so many testimonies, interchangeable warrants, and *counterrolments*, whereof each, running through the hands and resting in the power of so many several persons, is sufficient to argue and convince all manner of falsehood.

Bacon. Historical Account of the Office of Alienations.

To compare their university to yours, were to cast New Inn in the *counterscale* with Christ Church College, or the Alms-houses on Tower-hill to Sutton's hospital.

Howell. Letters, book i. sec. 1. let. 8.

Letters and messengers from Bristol informed that Prince Rupert having delayed the treaty for surrender of it, till his *counterscarfes*, and inmost lines were finished, and then refused the honourable conditions offered to him by Sir Thomas Fairfax.

Whitelock. Memorials. Anno 1645.

Fabius made not one entire battaile of allies and citizens mingled together, but three battaillons severally by themselves, of three sundry nations, and raunged them along all about the *counterscarpe* and trench of his enemies.

Holland. Livius, fol. 103.

They compared the loss of Weymouth, in the view of his army, after he had been in the town, and when the whole direction was in him, with the *counterscuffle* at Petherton Bridge, when two of his own parties, pursuing the orders they had received, fought with each other, whilst the enemy retired to their own strengths.

Clarendon. History of the Rebellion, book ix.

[He] yeelding to their behest, stood on the bridge of Dublin, and shot to that mole-hill, leauing behind him a monument, rather by his posteritie to be woondered, than possiblie by anie man liuing to be *counterscored*.

Holinshed. Ireland, vol vi. ch. iii.

COUNTER

And you shall beare
A better witnesse backe then words, which we
On like conditions, will haue *counterseal'd*.
Shakspeare. Coriolanus, fol. 28.

They [the States] greatly mistrusting whereat he did aime, bewailed the miseries whereunto their country seemed to be brought, yet they suffered him to choose his counsellors of estate, and to stampe his owne armes both in their great and *counterseale*. *Speed. Queen Elizabeth. Anno* 1585.

Moreover, I find there are some words now in French which are turn'd to a *counterssense*.
Howell. Letters, book iv. fol. 19.

For the present, he [King John] gaue commaund to his seneschall of Normandie, to attempt on them some *counterseruices*.
Speed. King John. Anno 1201.

Heavens thy fair eyes be,
Heavens of ever-falling stars,
'Tis seed-time still with thee,
And stars thou sow'st, whose harvest dares
Promise the earth to *countershine*
What ever makes heaven's fore-head fine.
Crashaw. Steps to the Temple. The Weeper.

They agreed upon a *countersign*, that to know 'twas themselves, and not the ass, they should bray twice together.
Shelton. Don Quixote, book ii. ch. xxiv.

As a curre that goes through a village, if he clap his taile betweene his leggs and runne away, every curre will insult over him, but if he bristle up himselfe, and stand to it, give but a *counternarie*, there's not a dogge dares meddle with him. Much is in a man's courage and discreet carriage of himselfe.
Burton. Anatomy of Melancholy, fol. 355.

If he once will'd adultery should be sinful and to be punisht with death, all his omnipotence will not allow him to will the allowance that his holiest people might as it were by his own antinomie, or *counterstatute*, live unreprov'd in the same fact as he himself esteem'd it, according to our common explainers.
Milton. Doctrine, &c. of Divorce.

'Tis obedience to, and imitation of God, perfectly separated from all sinfull defects, and freed from the clog of *counterstriving* principles. *Scott. Of the Christian Life*, part i. ch. i.

If our belief of the future rewards and punishments be but founded on such evidence, as gives a full satisfaction to our minds, 'twill draw our souls to God like an invincible loadstone, in dispite of all the oppositions of temptations from without, and of all the *counterstrivings* of a corrupt nature from within.
Id. Ib. part ii. ch. v.

One time, when he his weapon fayn'd to shift
As he was wont, and chang'd from hand to hand,
He met him with a *counterstroke* so swift
That quite smit off his arme, as he it vp did lift.
Spenser. Faerie Queene, book v. can. 10.

You haue forc'd your most importunate inclinations, and withstood the most violent *counterstruggling* of a perverse and degenerate nature.
Scott. Of the Christian Life, part i. ch. iv.

The regency yet held, and the miseries of France (being burnt vp by the fiery reflections of two *counterruns*) were nothing diminished. Who should give to them a period?
Speed. Henry VI. Anno 1431.

This he could not more effectually do, than by a *counterassay* of restraint, curbing their wild exorbitance almost into the other extreme; as when we bow things the contrary way, to make them come to their natural straitness.
Milton. Doctrine, &c. of Divorce.

What is the proper *countertype*, or thing which the water figureth in this sacrament.
Mede. Works. Discourse 17. book i.

When Fame yet smiling mildly thus replies:
"Alas," (quoth she) "what labour thou hast lost!
What wond'rous mists thou casts before our eyes,
Yet will the gain not *countervail* the cost."
Drayton. The Legend of Robert Duke of Normandy.

Robert Phillips was so notable a singing man, (wherein he gloried) that wheresoeuer he came, the best and longest song with most *counteruerses* in it, should bee set vp at his comming. COUN
Fox. Martyrs. Persecution in Windsore.

Mean while, ere thus was sin'd and judg'd on earth,
Within the gates of hell sat Sin and Death
In *counterview* within the gates, that now
Stood open wide.
Milton. Paradise Lost, book x. l. 282.

If Wrights had ten fellow-ships of St. John's it would not *counterweigh* with the loss of this occasion.
Ascham. Letters, p. 375.

The falcon charges at first view
With her brigade of talons, through
Whose shoots the weary heron beat
With a well *counterwheel'd* retreat.
Lovelace. Luc. P. p. 23.

Like as a ship, that through the ocean wide
Directs her course vnto one certaine coast,
Is met with many a *counterwind* and tide,
With which her winged speed is let and crost,
And she herself in stormye surges tost.
Spenser. Faerie Queene, book vi. can. 12.

Concerning which he breakes with her,
Indeuoring her consent.
Whereto, amaz'de, she *counterworks*
Nor would for ought relent.
Warner. Albion's England, book x. ch. xviii.

And it is divers times seen, that paternal virtue and vice hath his *counterworking* to these inclinations.
Ralegh. History of the World, book i. ch. i. sec. 11.

Attractions of either kind are less perspicuous, and less perceptible, through a variety of *counterattractions* that diminish their effect. *Shenstone.*

I was extremely glad to find by yours of the 20th and 30th past, that his majesty had resolved to support me in the claim I had made here of a free trade for all our ships, and the merchandize they carry (if not *counterband*) without any exception of their trading from one enemy's port to another.
Sir William Temple. Letter to Sir Joseph Williamson.

It [absent good] indeed may be in the mind, and view'd as present there; but nothing will be in the mind as a present good, able to *counterbalance* the removal of any vneasiness which we are under, till it raises our desire, and the vneasiness of that has the prevalency in determining the will.
Locke. On Human Understanding, book ii. ch. xxi.

But the cause is not the subtilty or too great delicacy, as Mr. Boyle thinks, but the too great lightness thereof, which renders it unable to be a *counterballance* or an antagonist to the heart and all the muscles ministering to respiration, and the diastole of the heart. *Derham. Physico-Theology*, book i. ch. i.

The giddy ship betwixt the winds and tides
Forc'd back, and forwards, in a circle rides,
Stunn'd with the different blows; then shoots amain,
Till *counterbuff'd* she stops and sleeps again.
Dryden. Cymon and Iphigenia.

[Example] makes all things, as it pleases, understood
The good receiv'd for bad, and bad for good;
That slily *counterchanges* wrong and right,
Like white in fields of black, and black in white.
Butler. Satire upon the licentious age of Charles II.

Carnations, whose petala are long and slender, have an empalement of one piece: and others, such as knap weeds, have it consisting of several pieces, and in divers rounds, and all with a *counterchangeable* respect to each other, for the greater strength and security of themselves, and the petala, &c. they include.
Derham. Physico-Theology, book x. (note 7.)

But to this parchment let the drapier
Oppose his *countercharm* of paper,
And ring Wood's copper in our ears,
So loud till all the nation hears.
Swift. On our want of Silver, (1725.)

 What unnatural motions and *counterferments* must such a medley of intemperance produce in the body?
Spectator, No. 195.

No created power can put any difficulty in his way, much less make any effectual resistance; because omnipotency can check and *countermand*, and bear down before it all other powers.
Tillotson. Sermon 40.

Abraham is now in the land of Canaan; and again surrounded with the same idolatrous and inhuman sacrifices. Here he receives the command: and, on the point of performance, has it *countermanded* as a favour.
Warburton. Rem. on occasional Reflections, part ii. rem. 22.

We all stood up in an instant, and Sir Harry fil'd off from the left, very discreetly *countermarching* behind the chairs towards the door. *Tatler*, No. 86.

Turning to the right or to the left, facing about, doubling their ranks, shifting their stations, and throwing themselves into all the figures of *countermarches* of the most changeable and perplexed exercise. *Spectator*, No. 63.

As soon as we heard the noise of their digging, we endeavoured to *countermine* them: but the castle walls being joined with an entire wall at the foundation, the mortar whereof was so well tempered that it was harder than the stones themselves, we could by no means break through it.
Ludlow. Memoirs, vol. i. p. 74.

The devils spring their *mines* of mischief against good men, but the good angels *countermine* them.
Bishop Bull. Works. Sermon 12. vol. i.

Which was a *counterpace* to the despatch I had received by De Cross, and to the consequences of it.
Sir William Temple. Works, vol. ii. p. 463.

He [the verbal copier] is to consider at the same time the thought of his author, and his words, and to find out the *counterpart* to each in another language.
Dryden. Preface to Ovid's Epistles.

The familiar airy muse was privileg'd as a sort of *counterpedagogue*, against the pomp and formality of the more solemn writers. *Shaftesbury. Advice to an Author*, part ii. sec. 2.

In which case surely it concerns us to have somebody to *counterpetition* us, and to ask a fish, while we are begging for a serpent; and to be so kind to us as to keep our prayers from being granted. *South. Sermon* 8. vol. ii.

But see the irresistible strength of that unsuspected creature, a silent woman. Prudentia had *counterplotted* us, and had bespoke on the same evening the poppet shew of the creation of the world. *Tatler*, No. 16.

He found, suitably to my conjecture, so great a pressure against the drums or thin membranes of his ears, which were not sufficiently *counterpressed* from within, as put him to a great deal of pain, till he had found some contrivancies to lessen the inconvenience.
Boyle. New Experiments about the differing Pressure, &c.

The course of sensation, saith he, is an object pressing the organ; which pressure is by means of the nerves conveyed to the brain, and so to the heart; where, by the resistence of *counterpressure* of the heart outwards, is made an image or phantasm, which is sensation.
Clark. On the Attributes, p. 92.

First, that the *counterproject* of England, relating to the places where the states-general may put and keep garrisons, ought to be followed, except Lier, Halle to fortify, and the castle of Ghent. *Swift. Rem. on the Barrier Treaty.*

A second order was got to be signed and *countersigned*, that if the Glencoe men could be separated from the rest of the Highlanders, some examples might be made of them, in order to strike terror into the rest.
Burnett. Own Times. King William and Mary, Anno 1692.

Though it was of the same height and thickness with the rest of it, and also as well flanked; yet it proved not to be lined with earth within as all the other parts were, nor had any *countercarp* without. *Ludlow. Memoirs*, vol. i. p. 319.

Wise people, who believ'd with reason
That this eclipse was out of season,
Affirm'd the moon was sick, and fell
To cure her by a *counterspell*.
Swift. On our want of Silver.

These synods, although reprobated by pope's in *countersynods*, are yet by many Roman Catholick divines retained in great veneration. *Barrow. On the Pope's Supremacy.*

There is a kind of *countertaste* founded on surprise and curiosity which maintains a sort of rivalship with the true. *Shenstone.*

Such were our *countertides* at land, and so
Presaging of the fatal blow,
In their prodigious ebb and flow.
Dryden. Threnodia Augustalis.

EMP. When your triumphant fortune high appears,
What cause can draw these unbecoming tears.
Let cheerfulness on happy fortune wait,
And give not thus the *countertime* to fate.
Id. The Great Mogul, act iv.

Whenever they endeavour to rise to any quick turns and *counterturns* of plot, as some of them have attempted, since Corneille's plays have been less in vogue, you see they write as irregularly as we, though they cover it more speciously.
Id. On Dramatick Poesy.

Thirdly, the catastasis, called by the Romans, status, the hight and full growth of the play; we may call it properly the *counterturn*, which destroys that expectation, imbroils the action in new difficulties, and leaves you far distant from that hope in which it found you. *Id. Ib.*

Now, I beseech you, brethren put all this together, and then consider seriously with yourselves, whether all that you can ever get by the care and pains you take for this world, will *countervail* with the loss of your souls. *Bishop Beveridge. Sermon* 23.

Surely, the present pleasure of a sinful act is a poor *countervail* for the bitterness of the review, which begins where the action ends, and lasts for ever. *South. Sermons.*

I shall very briefly set down some certain principles, by which he is likely enough to play over his own game again, and, if not *counterworked*, to trump up the same religious cheats upon the world, with more advantage than before.
Id. Ib. vol. v. p. 143.

[They] are pleased to think that what I have here to relate is better to be given in my own words, than in the words of another person: especially as it is a work designed for information and not merely for amusement: in which, it is their opinion, that candour and fidelity will *counterbalance* the want of ornament.
Cook. Voyage. Introduction to vol. iii. p. xv.

Hence all your specifick and detailed enumerations: hence the innumerable checks and *counterchecks:* hence that infinite variety of paper chains, by which you bind together this complicated system of the colonies.
Burke. On American Taxation.

I shall never praise confiscations or *counterconfiscations*, as long as I live. *Id. Letter to Richard Burke.*

We have seen the British declaration. This is the *counterdeclaration* of the directory.
Id. On a Regicide Peace.

And now to shew I do him no wrong, I will here give the reader an instance of his dexterity, in the *counterexercise* of his arms.
Warburton. The Divine Legation, book vi. notes, p. 17. [E.]

I received a *counterexpress* from him requiring me to advance no farther, as he should not have occasion, he said, for my assistance. *Melmoth. Plancus to Cicero*, book xiv. let. 21.

[Who] would waste attention at the checker'd board,
His host of wooden warriors to and fro
Marching and *countermarching*, with an eye
As fix'd as marble, with a forehead ridg'd
And furrow'd into storms, and with a hand
Trembling, as if eternity were hung
In balance on his conduct of a pin?
Cowper. The Task, book vi.

COUNTER. — COUNTERFEIT.

These are the marks of a profligate fellow in low life, who corrupts only his equals. But his full *counterpart* is as often seen in a higher station; distinguished from him only in having the means of access to higher modes of dissipation.

Gilpin. Sermon 42. vol. ii.

They instantly broke up the negociation, as soon as they had obliged our ambassador to violate all the principles of treaty, and weakly, rashly and unguardedly to expose, without any *counter-proposition*, the whole of our project with regard to ourselves and our allies. *Burke. On a Regicide Peace.*

As this paper is become in a manner the only visible maintenance of the whole people, the dread of a bankruptcy is more apparently connected with the delay of a *counterrevolution* than with the duration of this republick.

Id. Thoughts on French Affairs.

Cambon, incapable of political calculation, denounced incessantly as *counterrevolutionists*, those intelligent persons who are desirous, at least of having things discussed.

Id. Appendix to vol. vii. p. 343.

Montagu the father of publick credit *countersecuring* the state by the appearance of the city with the lord mayor of London at his side, was obliged, like a solicitor for an hospital, to go cap in hand from shop to shop, to borrow an hundred pounds and even smaller sums. *Id. On a Regicide Peace.*

This reads the stoics, and from them
Learns all misfortunes to contemn;
But a bare nose, or finger's bleeding,
Shall *countervail* his ten years reading.

Cambridge. Learning. A dialogue between Dick and Ned.

There is not, there never was, a principle of government under heaven, that does not in the very pursuit of the good it proposes, naturally and inevitably lead into some inconvenience, which makes it absolutely necessary to *counterwork* and weaken the application of that first principle itself.

Burke. For shortening the duration of Parliaments.

CO'UNTERFEIT, *v.* Co'UNTERFEIT, *adj.* Co'UNTERFEIT, *n.* Co'UNTERFEITER, Co'UNTERFEITRESS, Co'UNTERFEITING, Co'UNTERFEITINGLY, Co'UNTERFEITLY, COUNTERFE'SANCE. Fr. *contrefaire*; It. *contrafare*; Lat. *contra*, and *facere*. Menage says, *contrefait*, contrafactus, factus contra *quam oportuit*. From this Etymology to *counterfeit* is,

To form or make any thing wrongfully; as, to forge the legal coin of the realm: and then, more generally,

To assume or pretend to a sameness, similarity or likeness; to copy, to imitate, to resemble; to follow in imitation, to follow as an example.

This messenger drank sadly ale and wine,
And stolen were his letters prively
Out of his box, while he slept as a swine:
And *contrefeted* was full subtilly
Another lettre.

Chaucer. The Man of Lawes Tale, v. 5467.

This letter, as thou haste herde deuise
Was *counterfete* in such a wise
That no man shulde it apperceiue.

Gower. Conf. Am., book ii. fol. 33.

And as in y^{e} begynning he had put forth Christ as the cause, and author of our righteousness and saluation, euen so here setteth he hym forth, as an ensample to *counterfate*, that as he hath done to vs euē so should we do one to another.

Tyndall. Workes, fol. 49.

Euery Christian mā ought to haue Christ alwayes before his eyes, as an ensample to *counterfate* and follow, and to do to his neighbour as Christ hath done to him. *Id. Ib.* fol. 83.

And sprincles eke the water *counterfet*
Like vnto blacke Auernus lake in hell.

Surrey. Æneis, book iv.

She had of mine (whereof few folkes did knowe)
A *counterfayte*, a thing to me deare bought,
Which thing to haue I many times had sought,
And when she knew how much I did esteeme it
Shee vowde that none but I should thence redeem it.

Gascoigne. The Fruites of Warre.

The deuyll, whiche is a *counterfetter* of God's workes imagineth by all meanes that he can, to set vp and stablyshe all maner of intolerable errours, and to augment his kyngdome.

Udall. Revelacion, ch. viii.

Neither is Thomas Cardinal's life any thyng save a *counterfaytyng* of Saint Thomas of Canterbury.

Tyndall. Workes, fol. 361.

In whose [Christ] syghte nothing is acceptable, that is *counterfaytely* done or els by *coaction*. *Udall. Ephesians*, ch. vi.

But for that dame nature, the *counterfeitresse* of the celestiall workemen, eftsoones breedeth barnacles, therefore their brood is accompted more maruellous than to be maruelled, more woonderfull than woondered. *Holinshed. Ireland*, ch. ii.

The prating parrot comes to them abroad,
And is not heard to *counterfeit* a word.

Drayton. Noah's Flood.

And when at euen he came to the flock,
Fast in the folds he did them locke,
And tooke out the woolfe in his *counterfeit* cote,
And let out the sheepes blood at his throte.

Spenser. Shepheard's Calendar. September.

Extreme was his audacity,
Little his skill that finish'd thee;
I am asham'd and sorry
So dull her *counterfeit* should be,
And she so full of glory.

Davies. Hymn 12. *The Picture.*

Counterfeiters of money he punished with pulling out their eyes. *Baker. Henry I. Anno* 1112.

The Frēch kyng fayning that he was thicke of hearyng, caused him to repete his saiyng agayn whiche so *counterfeited* the very guesture of the duke's angry countenance and roryng voyce, that no man hath sene a better *coūterfaytor* or player in any comedie or tragedie. *Hall. Edward IV. The fourteenth Yere.*

Lying and *counterfeiting* my soul abhorreth; for I am not desperate nor void of grace, now to speak falsely.

State Trials. Trial of Earls of Essex and Southampton.

And since the wisedome of their choice is rather to haue my hat than my heart, I will practice the insinuating nod, and be off to them most *counterfetly*. *Shakspeare. Coriolanus*, fol. 12.

Such then (said Vna) as she seemeth here,
Such is the face of falshood, such the sight
Of foule Duessa, when her borrowed light
Is layd away, and *counterfesaunce* knowe.

Spenser. Faerie Queene, book i. can. 9.

Him needed not instruct, which way were best,
Himselfe to fashion likest Florimel,
Ne how to speake, ne how to vse his gest:
For he in *counterfeisance* did excell;
And all the wyles of wemen's wits knew passing well.

Id. Ib. book iii. can. 8.

This proclamation also took notice, how persons beyond sea had of late attempted to *counterfeit* testons, shillings, groats, and other the king's coin of silver, and in great multitudes brought them into the realm; such *counterfeits* were to forfeit their lives and lands, goods, and chattels.

Strype. Memorials. Edward VI. Anno 1548.

For birds in cages have a call,
To draw the wildest into nets,
More prevalent and natural
Than all our artificial pipes and *counterfeits*.

Butler. Upon an Hypocritical Nonconformist.

Think freely on all the various pretenses to Revelation: compare the *counterfeit* Scriptures with the true; and see the divine lustre of the one, to which all others serve as a foil.

Bentley. On Free Thinking, p. 65.

Hark, from afar the feather'd matron [the hen turkey] screams,
And all her brood alarms, the docile crew
Accept the signal one and all, expert
In th' art of nature and unlearned deceit:
Along the sod, in *counterfeited* death,
Mute, motionless they lie; full well appriz'd,
That the rapacious adversary's near.

Smart. On the Omniscience of the Supreme Being.

COUNTERPANE — COUNTERPOINT.

COUNTERPANE, "one part," Cole says, "of a pair of deeds or indentures." It is the legal term. *Counter-pana* indenturæ. Gifford.

Contra-schedula forte, q. d. *contra pannus; pannus*, by an easy metaphor, began in succession of time to signify *parchment;* and hence, the

"Fr. *panne*, skin or hide." Skinner.

"*Contreschedule*, the counterpane of a schedule." Cotgrave.

Thys Duke of Aumerle went before from Westminster to see his father the Duke of Yorke, and sittynge at dyner had his *counterpaine* of the endenture of the confederacye wherof I spake before in his bosome. *Hall. Henry IV. The first Yere.*

Read, scribe; give me the *counter-pane.*
Ben Jonson. Bartholomew Fair. The Induction.

Which the Apostle having perfected, he proceeds in the first seven verses of this chapter to finish the *counterpane* or second draught, the antitype, which answereth to this original.
Goodwin. Works. Sermon 2. part ii. fol. 2.

CO'UNTERPOINT, or Co'UNTERPANE. } Fr. *contrepoint;* It. *contrapunto, instratum, stragulum*, q. d. contrapunctum; i. e. *contrariis seu se invicem decussantibus suturis* compunctum *seu consutum.*

"Fr. *contrepoinct;* the back stitch, or quilting stitch; also, a quilt, counterpoint, (quilted,) covering; also, a crossing, difference, opposition; also, a ground, or plain song, (in musick.") Cotgrave.

He shrunk down into his bed all covered with the clothes and hid with the sheets and *counterpoint.*
Shelton. Don Quixote, vol. iv. p. 223.

For no man is so madly disposed or simple witted, as to bring into so poor and mean houses, bedsteads with silver feet, imbroidered coverlets, or *counterpoints* of purple silk.
Sir Thomas North. Plutarch. Lycurgus, fol. 39.

Here M. Hardinge by *counterpointes*, and by sundrie circumstances of difference, compareth the state of the primitiue churche, and his churche of Rome together.
Jewell. A Replie to M. Hardinge, fol. 203.

On which a tissue *counterpane* was cast,
Arachne's web the same did not surpass,
Wherein the story of his fortunes past,
In lively pictures neatly handed was.
Drayton. The Barons' Wars, book vi.

A tester of scarlet, embroidered with a *counterpoint* of silks ay belonging to the same, and curtains of crimson taffata, two *counterpoints* of imagery for the nurse's bed.
Strype. Memorials. Edward VI. Anno 1548.

Where the voices join they move exactly together in plain *counterpoint*, which shows little more than a single air.
Malone. Life of Dryden. Hughes to Steele.

Pray hand him in and let him stain
Each curtain, and each *counterpane;*
Yes, he shall roost upon my toilet,
Or on my pillow, he can't spoil it.
Smart. Fables. Madam and the Magpie.

COUNTERPOINT signifies, in *Music*, a part or parts added to a given melody. In ancient times, musical sounds were represented by certain letters of the alphabet, and a great improvement was made, on the old system, by the celebrated Guido D'Arezzo, who substituted *points*, or dots in the place of the letters.

The simple harmony of that remote period, consisted of notes equal in length; and the term *Contrapunctus*, or Counterpoint, was applied to it, in consequence of the *points*, by which it was represented, being placed under, or, as it were, *against* each other on the staff. By Counterpoint, therefore, we understand the several parts which compose musical harmony, and the science of Counterpoint consists in a knowledge of the rules according to which those parts must be constructed; on this account the term is frequently used for composition in general. When the notes employed are of equal duration, the Counterpoint is called simple. When notes of various lengths are used, the Counterpoint is said to be figurate, or florid.

COUNTER-POINT — COUNTRY.

COUNTERSCARP, Fr., the outer slope of the mote in a fortified place.

COUNTERTENOR, so called, because in vocal compositions it is found to be above, or *against* the Tenor: this is the highest of male voices, and therefore it is called *Alto* (high) by the Italians. It may be observed, that the human voice in singing proceeds either from the chest, or from the head. These voices have very different qualities, which we distinguish by the terms Natural and *Falsetto;* and one of the chief difficulties which a singer encounters, is so to unite them that no difference may be perceptible, save that which is felt in proceeding from grave to acute, or contrariwise. Few men, in their natural voice, can sing higher than G, on the second line of the treble staff; but the Countertenor frequently rises to the C, and sometimes to the D above: of course, those who perform this part are obliged to use their *falsetto.*

COUNTOR, Fr. *conteur*, the ancient legal name for a Serjeant at Law retained to plead a cause. In the *Grand Customarie*, 63, 64, the following distinction is drawn between *Plaideurs* and *Conteurs.* "*Plaideurs* be another sort of spokesmen, in the nature of Counsellors at Law, for one that is himselfe present, but suffereth another to tell his tale." "*Conteurs* be those which a man setteth to speake for him in Court."

CO'UNTRY, Co'UNTRIFY. } Fr. *contree;* It. and Sp. *contrada;* D. *kontreye.*

Spelman;—*Contrata. Patria, Italic. a* con, *id est, simul, et* strada, *via, quasi regio vel tractus in quem plures congrediuntur.* Skinner. Q. d. Lat. conterrata, i. e. tractus *terrarum proximè invicem sitarum, vel, ut nos loquimur, adjacentium. Contrata*, in low Latin, appears to have been a common word. Others say from *Contracta.* See Menage, and Du Cange.

A space, a tract, a region of land; applied also, to the inhabitants collectively. Opposed to the town; also, to the Court.

It is much used in *Composition.*

Ful wel beloved, and familier was he
With frankeleins over all in his *contree.*
Chaucer. The Prologue, v. 216.

In *countries* some must rule, some must obey, euery man may not beare lyke stroke, for euerye man is not lyke wise.
Sir John Cheke. The Hurt of Sedition, B. 2.

Wherefore the gouernours, in the stede of physitions attendynge on their cure, oughte to knowe the causes of the decay of theyr publike weale, whiche is the healthe of theyr *countrey* or cytie, and than with expedition to procede to the mooste spedy and sure remedy. *Sir Thomas Elyot. Governour*, p. 231.

I might haue learn'd this by my last exile
That change of *countries* cannot change my state
Where euer that my bodie seeke a seate,
I leaue my heart in Albion's glorious yle.
Stirling. Aurora. Sonnet 56.

And you! brave Cobham, to the latest breath,
Shall feel your ruling passion strong in death.
Such in those moments, as in all the past,
"Oh, save my *country*, heaven," shall be your last.
Pope. Moral Essays. Epistle 1.

God made the *country*, and man made the town.
What wonder then that health and virtue, gifts,
That can alone make sweet the bitter draught,

COUN-TRY.

That life holds out to all, should most abound
And least be threaten'd in the fields and groves.
Cowper. The Task, book ii.

Well to be sure it must be own'd
It is a charming spot of ground;
So sweet a distance for a ride,
And all about so *countrified*.
Lloyd. The Cit's Country Box.

But though she ne'er adorn'd his brows,
She had a vast contempt for spouse,
As being one who took no pride,
And was a deal too *countrified*.
Id. The Temple of Favour.

COUNTRY, in *Composition*.

But what neede we to goe into Egypt to fetch an exãple to proone this? Looke of mine own *countreymen*, if they be not openly indurated and so blynded that no mã is able to defend them by any reason. *Barnes. Workes*, fol. 282.

Whan from the town the prince himself descending there we vew,
King Helenus, king Priam's son, with lordes a stately train,
His *countrymen* he knew, and vs to towne he brought ful fayne.
Phaer. Æneides, book iii. p. 75.

Nay, such an one perhaps would be more pleased with the streperous noise of a single fiddle, or the rustical musick of the *country-bagpipes*, or the dull humming of a Jew's trump, than the fullest and most exquisitely composed harmony.
Cudworth. Concerning eternal and immutable Morality.

Have a good heart, man; a cuckold, though he be a beast, wears invisible hornes; else we might know a city-bull from a *country*-calf. *Ford. The Fancies*, act iii. sc. 3.

In all sects and institutions of the world, the professors did in some reasonable sort conform to the rules of the profession, (as appears in all the schools of philosophers, and religions of the world and the practices of the Jews, and the usages and the *country-customs* of the Turks.) *Taylor. Sermons*, part i.

Diogenes having observed them, and all the other funninbrums that make a compleat *country-fair*, he said to his friend, "Lord, how many things are there in this world of which Diogenes hath no need!" *Walton. Angler*, part i. ch. xxi.

One Hespernis, a man of quality in the city, whereof Austin was Bishop, who by the affliction of his cattle and servants, perceiving his *country-grange* liable to some malignant power of spirits, be intreated our Presbyters, in my absence, that some one of them would goe to the place; through the prevalency of whose prayers he hoped the evil spirits would be forced away.
Mede. Works, book ii. ch. 7.

As for this apparrell, his shooes and other habits, he wore neither after his owne *country-guise*, nor in a civile fashion, no nor so much as in manlike manner, nor yet alwaies, I may tell you, sorting with the state and condition of a mortal wight.
Holland. Suetonius. Caligula, fol. 147.

She should (for more eschuing of resort)
Not any longer in the city stay,
But at his *country-house*, where in good sort
Till his return the season passe she may.
Harrington. Orlando, book xliii. st. 86.

And on the panting billowes bravely rides,
Whilst *country-lasses*, walking on the sides,
Admire her beauty [the swan] and with clapping hands,
Would force her leave the streame, and tread the sands,
When she regardlesse swims to th' other edge,
Until an envious bryer, or tangling sedge,
Dispoils her plumes.
Browne. Britannia's Pastorals, book i. song 5.

As *country-maidens* in the moneth of May,
Merrily sporting on a holy day
And lusty dancing of a lively round
About the May-pole, by the bag-pipes sound.
Bartas, in Hakewill's Apologie, fol. 111.

The queene grip't hard her Hector's hand, and said, O worthiest sonne,
Why leav'st thou field? in't not because the cursed nation
Affict our *countrimen* and friends?
Chapman. Homer. Iliad, book vi. fol. 89.

——— Nor *country-parsons*
O' the inquisition, nor busie justices
Trouble the peace, and both torment themselves.
Ben Jonson. The Staple of Newes, act i. sc. 5

The most of these [knives] for common use of *country-people* are made in this county; whereof the bluntest, with a sharp stomach, will serve to cut meat, if before them.
Fuller. Worthies. Yorkshire.

COUN-TRY.

On this warrant, I have in these our *country-proverbs* alleged more than I allow, branding some with a note of infamy, as fit to be banished out of our discourse.
Id. Ib. Local Proverbs.

RIXUS. I was saying, the shepherd's life had some goodness in it, because it borrowed of the *country-quietness*, something like ours, but that is not all; for ours, besides that quiet part, doth both strengthen the bodies, and raise up the mind with this gallant sort of activity.
Sidney. Works. The Lady of May, vol. iii.

That at another time I pressed him hard to lend money, the king being present: at which he conceived that I favoured Alderman Harrison for *country-sake*; because himself was committed, and not the other. *State Trials. Trial of Archbishop Laud.*

Our author makes the Norman invasion a reuniting of severall kindred, rather than a conquest by a mere stranger, taking argument as well from identity of *countryship*, (being all Germans by original, and the people of the Cimbrica Chersonesus, now Denmark, anciently called Saxons,) as from contingency of blood 'twixt the Anglo-Saxon kings and the Norman dukes.
Selden. Illustrations of the Poly-olbion, song 4.

This while Adoni looking pale and wan,
As erst I told, and overgrown with haire,
To travell to his *country-ward* began.
Harrington. Orlando, book xliii. st. 89.

When a *country-wench* cannot get her butter to come, she says, the witch is in her churn. We have been churning for peace a great while, and 'twill not come, sure the witch is in it.
Selden. Table-talk, p. 83.

P. Jovius commends his Italian *country-women*, to have an excellent faculty in this kinde, aboue all other nations, and amongst them the Florentine ladies.
Burton. Anatomy of Melancholy, fol. 479.

When I have been once or twice at court, I begin to value myself again, and to despise my *country-acquaintance*.
Dryden. Marriage A-la-mode, act iii. sc. 1.

Then I must tell you, that the subject we discourse of was a neck of veal, which as I learned by enquiry, had been bought of a *country-butcher* on the Tuesday preceding.
Boyle. Observations about Shining Flesh, &c.

A court-clock does not go so well, in his opinion, as a *country-clock*. But what then? they are both still but clocks: and the *country-clock* cannot reproach the court-clock, or vaunt its own perfections; because the court-clock is governed by necessity in going amiss, therefore can be guilty of no crime; and the *country-clock* is governed by the same necessity in going better, and therefore can boast of no virtue.
Hoadley. Letters signed Britannicus, &c. Letter 23.

Give me an honest home-spun *country-clown*
Of our own growth; his dulness is but plain,
But theirs embroidered.
Dryden. The Spanish Friar, act ii.

A treasure, which if *country-curates* buy,
They Junius and Tremellius may defy:
Save pains in various readings and translations,
And without Hebrew make most learn'd quotations.
Id. Religio Laici. An Epistle.

At Bartholomew fair ne'er did bullies so justle,
No *country-election* e'er made such a bustle:
From garret, mint, tavern, they all post away,
Some thirsting for sack, some ambitious of bay
Buckinghamshire. The Election of a Poet Laureat.

At the first *country-gentleman's* he visited, he saw three tailors cross-legg'd upon the table in the hall, who were tearing out as loud as ever they could sing,
——— After the pangs of a desperate lover, &c.
Dryden. Marriage A-la-mode, act iii. sc. 1.

Long galleries of ancestors, and all
Those follies which ill-grace a *country-hall*,
Challenge no wonder or esteem from me,
Virtue alone is true nobilitie.
Dryden. Juvenal. Satire 8.

Having often received an invitation from my friend Sir Roger de Coverly to pass away a month with him in the *country*, I last week accompanied him thither, and am settled with him for some time at his *country-house*, where I intend to form several of my ensuing speculations. *Spectator*, No. 106.

Assert thy client's freedom, bawl, and tear
So loud, thy *country-judge* at least may hear,
If not discern; and when thy lungs are sore,
Hang up the victor's garland at thy door.
Dryden. Juvenal. Satire 7.

How happy is the harmless *country-maid*,
Who rich by nature, scorns superfluous aid.
Roscommon. Guarina's Pastor Fido, act ii. sc. 5.

Here's Wolston's tract, the twelfth edition,
'Tis read by every politician:
The *country-members* when in town,
To all their boroughs send them down.
Swift. On the death of Dr. Swift.

The *country-party* was something greater yet in number, and kept in more credit upon the corruption of others, and their own pretence of steadiness to the true interest of the nation, especially in the points of France and popery.
Sir William Temple. Memoir

The *country-people* live either on breeding heads of cattle, but most for their own use, or fowls, especially they who live near the city, which they send thither to sell.
Dampier. Voyage. Anno 1688.

I could not but observe with a great deal of pleasure the joy that appeared in the countenances of these ancient domesticks upon my friend's arrival at his *country-seat*.
Spectator, No. 106.

Ye *country-vicars*, when you preach in town,
A turn at Pauls to pay your journey down,
If you would shun the sneer of every prig,
Lay by the little band and rusty wig.
Pitt. On the Art of Preaching.

For never could their mighty spirits yield,
To see themselves and *country-men* in chains;
And earth's kind bosom hides them in the field
Of battle, so the will supreme ordains.
Smart. The famous general Epitaph from Demosthenes.

There were hardly any Pagans then, except peasants, *country-slaves*, and barbarous soldiers, who were more moved by miraculous stories than by syllogisms.
Jortin. Ecclesiastical History, vol. iii. p. 170.

How ill mean neighbourhood your genius suits?
To live like Adam 'midst an herd of brutes!
Leave the meer *country* to meer *country-swains*,
And dwell where life in all life's glory reigns.
Harte. Eulogius, or the Charitable Mason.

CO'UPLE, *v.* Co'UPLE, *n.* Co'UPLEMENT, Co'UPLET, *n.* Co'UPLING, *n.* Co'UPLE-BEGGAR. Fr. *coupler, accoupler*; It. *accopiare*; Lat. *copulare, atum*; to brace together. Vossius says *συμπλοκη, a πλοκη, sive πλοκα*, (from *πλεκ-ειν, plect-ere, nect-ere*, to knit together,) and by metathesis, *copla*; or, he adds, it may be from the Hebrew. Schedius thinks, *copula* is *co-apula*, from *apio*, i. e. *necto*.

To connect, to conjoin, to combine, to brace; generally restricted to the conjunction or union of *two* only. See BRACE.

The Bible bereþ witnesse. a book of þe olde lawe
Þat a corsede alle *couples* þat no kynde forth brouhte.
Piers Ploukman. Vision, p. 316.

I have a wif, the werste that may be,
For though the fend to hire y*coupled* were,
She wolde him overmatche I dare wel swere.
Chaucer. The Marchantes Prologue, v. 9095.

——— The great Antiochas,
Of whom that Antioche toke
His firste name, as saith the boke,
Was *coupled* to a noble quene.
Gower. Conf. Am., book viii. fol. 175.

The fier and ayre agreed, and to this *couplyng* gaue their light
In signe of ioye, and ouer head the mountain fairies shright.
Phaer. Æneidos, book iv.

And to masons and carpēters to bye hewed stone, & tymbre for to make *couples* and beames for the houses which the kynges of Juda had destroyed. *Bible. Anno* 1551.

Even to the artificers and builders gave they it, to buy hewen stone, and timber for *couplings*, and to floor the houses, which the kings of Juda had destroyed.
Bible. Modern Version. 2 *Chronicles*, ch. xxiv. v. 11.

When one saith, a man is a body, he intendeth that the name of body is necessarily consequent to the name of man; as being but several names of the same thing, Man; which consequence is signified by *coupling* them together with the word *is*.
Hobbes. Leviathan, part iv. ch. xlvi.

For Christ is the head, whereby the whole bodie being compacted and *coupled* by every ioynt of gouernment, dothe according to the operation in the measure of euery member, increase to a perfect bodie. *Whitgift. Defence*, fol. 469.

One I could hear appointing with his sweeting
A place convenient for their secret meeting:
Others when winter shortly should decline,
How they would *couple* at Saint Valentine.
Drayton. The Owl.

And with all remember that Hierapolis was the city of Magog, which also is seated directly north from Judea: with whom also Ezekiel *coupleth* Gomer and all his bands of the north quarters.
Ralegh. History of the World, book i. ch. viii. sec. 4.

The hardy *couple* on their way forth wend,
And met an host that on them rore and gape,
Of sauage beasts, tofore vnseene, vnkend,
Differing in voyce, in semblance, and in shape.
Fairfax. Godfrey of Boulagne, book xv. st. 51.

A sorry *couple* certainly they be.
The man a bloody knife holds at his heart
With cheerlesse countenance; as sad as shee.
More. On the Soul, book i. st. 74.

Where making ioyous feasts, their dayes they spent,
In perfect loue, deuoid of hateful strife
Allide with bands of mutuall *couplement*.
Spenser. Faerie Queene, book iv. can. 3.

For he desiryng nothing more than to pass ouer the remnat of his life in peace, rest, and tranquilitie, imagined in himselfe that by thys conjunction and *couplement* of matrimonie, no warre or hostilitie hereafter should be attempted eyther against him or his dominions. *Grafton. Henry VII. The twenty-seventh Yere.*

Anon as patient as the female doue,
When that her golden *cuplets* are disclos'd;
His silence will sit drooping.
Shakspeare. Hamlet, fol. 279.

Some independent ideas, of no alliance to one another, are by education, custom, and the constant din of their party, so *coupled* in their minds, that they always appear there together.
Locke. On Human Understanding, book ii. sec. 18.

By this account the duke and the divine are represented as a *couple* of bloody wretches, combining together to make an innocent man guilty of treason, and then cry out for execution against him. *Strype. Memoriale. Edward VI.* vol. iii. ch. xxviii.

No *couple-beggar* in the land
E'er join'd such numbers hand in hand;
I join them fairly with a ring;
Nor can our parson blame the thing.
Swift. Riddles.

But in this necessity of our rhymes, I have always found the *couplet* verse most easy, (though not so proper for this occasion,) for there the work is sooner at an end, every two lines concluding the labour of the poet. *Dryden. Annus Mirabilis.*

The noble hater of degenerate rhyme
Shook off the chains and built his verse sublime
A monument too high for *coupled* sounds to climb.
Watts. The Adventurous Muse:

Such were our *couple*, man and wife,
Such were their means and ways of life.
Lloyd. The Spirit of Contradiction.

The Persian poets, Sadi, Hafez, Jami, and others, frequently extol his virtues, and one of them has this *couplet*.
Sir William Jones. Works, vol. i. *Mr. Jones to B. D.*

CO'URAGE, *v.*
Co'URAGE, *n.*
Co'URAGE, *adj.*
COURA'GEOUS,
COURA'GEOUSLY,
COURA'GEOUSNESS.

Fr. *courage*; It. *coragio*; Sp. *corage*. *Cordis actio*, says Minsheu. Q.d. coratio *seu* cordatio, i. e. cordis *robur et erectio*. Skinner.

Courage, the verb, is used in our old writers as we use *encourage*; and the noun, as *encouragement*.

Courage, the noun, is applied to a hearty desire, a hearty devotedness, a deep fixed resolution;—as distinguished from fortitude, it is applied to express a more active spirit of bravery, of boldness, daring or hardihood. Dr. Cogan observes, "*Courage* is active fortitude. It meets dangers, and attempts to repel them." And see the quotation from Hobbes.

Harald, a man wyþ grete herte *corageus* ỳ nou.
R. Gloucester, p. 359.

But though this mayden tendre were of age,
Yet in the brest of hire virginitee
There was enclosed sad and ripe *corage*.
Chaucer. The Clerkes Tale, v. 8096.

Befelle, that, in that seson on a day,
In Southwerk at the Tabard as I lay,
Redy to wenden on my pilgrimage
To Canterbury with devout *corage*.
Id. The Prologue, v. 22.

Were it for holinesse or for dotage,
I cannot sain, but swiche a gret *corage*
Hadde this knight to ben a wedded man,
That day and night he doth all that he can
To espien, wher that he might wedded be.
Id. The Marchantes Tale, v. 9130.

Of man's herte the *courage*
Was shewed then in the visage.
Gower. Conf. Am. Prologue, fol. 2.

Thou mayst see how diligently (as a mother careth for her childe if it be in perill) Paule writeth vnto Timothy to instruct him, to teach hym, to exhort, to *courage* hym, to stirre him vp, to be wise, sober, diligent, circumspect, sad, humble and meeke.
Tyndall. Workes, fol. 252.

Moreouer charge Josua: and *courage* him & bolden him.
Bible, 1551. *Deuteronomie*, ch. iii.

Thus the warre was renewed, wherby many great myschyefes haue fallen, to the distruction of moche people and countreys, and the faythe of Christ so febled and decayed, and the enemyes of God rysen and *coraged*.
Froissart. Cronycle, vol. ii. ch. 204.

Likewise as of men, he who so is most like stomacked vnto a woman, nor lusty *couraged*, wil remember iniury longest, and seeke for reuenge most violently, nor can be content with a meane reuengaunce. *Vives. Instruction of a Christian Woman.*

O most *couragious* youth, how much the more thou dost receede
In valient herte: so much the more 'tis meete I shulde indeede
Giue graue aduice, and charely for chaunces all prouide.
Phaer. Æneidos, book xii.

Then the Bretons closed togyder with grete *courage*, and pytched theyr speres and glayues in the erthe, and helde strongly theyr place, and fought *couragyously*.
Froissart. Cronycle, vol. ii. ch. xlvii.

This Henry yet, as wytnessyth Ranulfe, was not all bareyn of vertues, for he was of so great *courageousness*, yᵗ he wolde often saye yᵗ all the worlde suffysyth not to a *coragyous* harte.
Fabyan, vol. i. ch. 236.

Thou shalt warne the elders of the people that they be sobre, watchful and dilygent to all godly workes. And that they ouercome the vnlustyness of their age with the *couragiousness* of faith.
Udall. Titus, ch. ii.

And alas my lord this is a pitious case, that having so much business as ye have, these inward disorders should be added unto them to the *courage* of such as would this realm any ways evil.
State Trials. Proceedings against Bishop Gardiner

For thy great wonder were it, if such shame
Should euer enter in his bounteous thought,
Or euer doe that mote deseruen blame:
The noble *courage* neuer weeneth ought,
That may vnworthy of it selfe be thought.
Spenser. Faerie Queene, book iii. can. 2.

——— Theire discipline,
(Now mingled with their *courages*) will make knowns
To their approuers, they are people, such
That mend vpon the world.
Shakspeare. Cymbeline, fol. 378.

SAM. Be of good *courage*, I begin to feel
Some rouzing motions in me which dispose
Of something extraordinary my thoughts.
Milton. Samson Agonistes, l. 1382.

Courage, in a large signification, is the absence of fear in the presence of any evil whatsoever; but in a strict and more common meaning, it is contempt of wounds and death, when they oppose a man in a way to his end. *Hobbes. Human Nature*, ch. ix.

With this victory the women became most *couragcous* and proud, and the men waxed as disgracefull, fearefull, & desperate.
Stow. The West Saxons.

Yet since that other men's iniquity
Calls on the sword of wrath against my will,
And that themselves exact this cruelty,
And I constrained am this blood to spill:
Then on, brave followers; on *courageously*.
Daniel. History of Civil War, book iv.

The self-same individuals that
Did run, as mice do from a cat,
When we *courageously* did wield
Our martial weapons in the field.
Butler. Hudibras, part i. can. 3.

To secure the honours which are bestowed upon *courage* by custom, it is indeed necessary that this danger should be voluntary. for a *courageous* resistance of dangers to which we are necessarily exposed by our station, is considered merely as the discharge of our duty, and brings only a negative reward, exemption from infamy. *Adventurer*, No. 1.

Wouldst thou then raise thy patriot office higher,
To something more than magistrate aspire?
And left each poorer, pettier chace behind,
Step nobly forth, the friend of human kind?
The game I start *courageously* pursue.
Langhorn. The Country Justice.

COURIER, Fr. *courier*; It. *corriere*; Sp. *correo*, from the Lat. *currere*, to run.

A runner; a running messenger; generally, a messenger.

The same Saturdaye the prince and his cõpany dysloged fro a a lyttell vyllage therby, and sent before hym certayn *currours* to se if they myght fynde any aduẽture, and to here where the Frẽchmen were. *Froissart. Cronycle*, vol. i. ch. 159.

But finding his defeat, his enterprize so lost,
He his swift *couriers* sends, to will his valiant brother,
And Oxford, in command being equal to the other,
To charge with the right wing, who bravely up do bear.
Drayton. Poly-olbion, song 22.

Whereupon, he addressed aforehand his letters and *courriers* to the chiefe of the Barchine faction, to frame and prepare the minds of that side, so as they of the other part might not gratifie, or do any thing in favour of the Romanes.
Holland. Livius, fol. 398.

RIER. — UR-ND.

The court was resolved to expedite the passes in the very same form with that agreed upon by the confederates; and were absolutely of opinion, that the clause for liberty of *couriers* was necessary, and particularly as to themselves.
Sir William Temple. Works, vol. iv. p. 170.

The most celebrated of these is the carrier, which from the superior attachment that pigeon shews to its native place, is employed in many countries as the most expeditious *courier*: the letters are tied under its wings, it is let loose, and in a very short space of time returns to the home it was brought from with its advices. *Pennant. British Zoology. The Common Pigeon.*

COURLAND was formerly a Duchy dependent upon Poland, but now forms a Government of the Russian Empire, to which it was annexed in 1795. It borders on the southern shores of the Gulf of Riga, and is separated from Livonia on the north-east by the Dwina. On the other sides it joins the Governments of Wilna and Witepsk. The superficial content of Courland is about 11,000 square miles, and the population 450,000. The surface of the country is diversified; and the climate, though generally considered as healthy, is variable, and subject to frequent fogs. In some places the soil is fertile, but the state of society has yet prevented cultivation from making that progress which is essential in rendering it productive. Far less grain is therefore grown than the country is capable of yielding, and flax and hemp constitute its chief productions. Much of the interior is covered with extensive forests, which abound with wild boars, wolves, elks, and most kinds of game. They also supply large quantities of timber. Though the Dwina flows along one side of the Province, but little advantage is taken of it to increase the commerce of the country, which is chiefly carried on at the ports of Liebau and Windau, where flax, hemp, timber, wax, honey, tallow, resin, and other produce are exported. Amber is also found on some parts of the coast, and forms one of the exports. Manufactures are scarcely known, except as they relate to a few articles for domestic consumption.

Courland is now divided into five circles, and its
m. chief Town is Mittau, which stands on the river Aa, in the former Province of Semigallia. It is an extensive town, including many gardens and open spaces, with a population of about 12,000 individuals. None of the streets can be considered handsome, and the walls and ditches are falling into decay. The Palace, which stands out of the town, and was formerly the Ducal residence, is a large pile of building, and was for a time inhabited by Louis XVIII., during his exile. Many of the inhabitants of Mittau are Germans, and about 1000 of them Jews. The Capital of this Province contains a Calvinistic, a Catholic, and two Lutheran Churches, in one of which the service is performed in Lettonian, which is the general language of the country, though in many of the towns German is currently spoken. Mittau is about 140 miles north of Koningsberg, and in latitude 56° 39′ north and longitude 23° 43′ east. The most important of the other towns in this Government are the two seaports of
n. Liebau and Windau. The first is situated nearly seventy miles west of Mittau, and has a commodious harbour for small vessels, with a population of 5000 individuals. It is the chief trading place in the Government, and exports the produce of the surrounding country; a commerce for which it was distinguished as early as the XIIIth century; but it afterwards suffered greatly during the wars of the Swedes in this quarter. Latitude 56° 32′ north, longitude 20° 55′ east. Windau more than seventy miles west of Mittau, on the southern shore of the Baltic. It was the Capital of a Palatinate, and has a castle, once the residence of the Livonian Knights; the States of Courland likewise held their meetings here; but it is now much decayed, and is chiefly supported by ship-building, and exporting corn, pitch, tar, wax, and timber. The population is only about 1000 persons.

COURLAND. — COURSE. Windau.

The peasants of Courland like those of the other Russian and Polish Provinces, were till lately held in a state of complete vassalage, from which they have now been released by an ukáz of the Emperor.

COURSE, *v.*
COURSE, *n.*
CO′URSER,
CO′URSING, *n.*
CO′URSITOR,
CO′URSER-BREEDING.

Fr. *course*; Lat. *cursus*, from *currere, cursum*, to run. A race or running, pursuing; also, the space run over, passed over; the passage or progress; the way, the manner or method, the order or series of proceeding or succeeding; the order or train; *sc.* of events.

To *course*, is,—to run, to run after, to pursue.

Right welcome be thou faire freshe May,
I hope that I some grene here getten may.
And from his *courser*, with a lusty herte
Into the grove ful hastily he sterte.
Chaucer. The Knightes Tale, v. 1516.

So besily vpon the note
Thei herken, and in such wise assote,
That thei their right *cours* and weie
Foryete, and to their eare obeie.
Gower. Conf. Am., book iv. fol. 11.

And to that one the same tide
A *courser*, that he should ride
Into the felde anon he badde,
Wherof this man was wonder gladde.
Id. Ib. book vi. fol. 134.

But when we came on shore, and had *coursed* them twice about the island, they tooke the sea and swamme towards islands distant from that three leagues.
Haktuyt. Voyage, &c. M. John Davis, 3.

Also wheras they haue desyred for the *course* of marchaundyse, we haue cõsented that they haue all theyr auncyent *course*, payeng custome of olde tyme contynewed.
Froissart. Cronycle, vol. ii. ch. xx.

A *courser* faire he thought to graue, barded for the field,
And on his back a semely knight well armed with spear and shield.
Vncertaine Auctors. The Tale of Pygmalion, &c.

Caius Cesar beyng yong, fleyng the company of Sylla, bicause he was perteigning to Marius, he being among the Rhodiens, wan his meate with *coursyng* and cunnyng of horses, with his handes bound behind him. *Golden Boke*, G g. 2.

And somouche the more, that the armye by sea, the whiche was at Ye, hauyng takene the poorte and soiourne at Epidaure, made manye *coursynges* and pillages, in the lande of Egyne.
Nicoll. Thucydides, fol. 219.

And euery while, that mighty yron man,
With his strange weapon, neuer wont in warre,
Them sorely vext, and *courst*, and ouer-ran,
And brake their boawes.
Spenser. Faerie Queene, book v. can. 4.

They so framed the mouable roofes of their dining roomes that one face succeedes another, which they vary as often as they serue in a new *course*. *Hakewill. Apologie*, fol. 407.

Therefore this sin of kind not personal,
But real and hereditary was;
The gilt thereof, and punishment to all
By *course* of nature and of law doth pass.
Davies. The Immortality of the Soul, sec. 8.

The mayster of hys horse folowed hym with a spare horse, the henxmen folowed bearyng the kyng's pecces of harnesse, euery one mounted on a great *courser*.
Grafton. Henry VIII. The fifth Yere.

COURSE. — COURSING.

Methinks your years should promise no ill meaning.
FATH. I am no bawd, no cheater, nor a *courser*
Of broken-winded women.
Beaumont and Fletcher. The Captain, act v. sc. 1.

It would be tried also in flying of hawks, or in *coursing* of a deer, or hart, with greyhounds. *Bacon. Natural History.*

Mercvrie, Lat. *Quasi medius currens inter Deos et homines*, as the grammarians etymologize it, a mediate *courrier* betweene Gods and men. *Camden. Remaines. Names*, p. 80.

Now turning from the wintry signs, the sun
His *course* exalted through the ram had run,
And, whirling up the skies, his charriot drove
Through Taurus and the lightsome realms of love.
Dryden. The Flower and the Leaf.

Through the wide caves the blast is heard afar:
With speed two more provide his azure car,
A concave shell; two the finn'd *coursers* join:
All wait officious round, and own the accustom'd sign.
Hughes. The Court of Neptune.

Of all that Ithaca's rough hills contain,
And all wild Elis' *courser-breeding* plain;
To me alone my father's arms descend,
And mine alone they are, to give or lend.
Pope. Homer. Odyssey, book xxi.

The same horse [Childers] has also ran the round *course* at Newmarket, (which is about 400 yards less than four miles) in six minutes and forty seconds.
Pennant. British Zoology. The Horse.

A valiant son springs from a valiant sire,
Their race by mettle sprightly *coursers* prove;
Nor can the warlike eagle's active fire
Degenerate to form the timerous dove.
Lyttelton. Horace. Ode 4. book iv.

Arrian, who flourished under Hadrian and the Antonines, is the first author who has made any specific mention of COURSING. In the *Cynegeticus* of Xenophon this sport is wholly omitted, and therefore, probably, was unknown to him; in the work of Arrian under the same name, many particulars of it are described with great precision. Arrian professed, indeed, to supply the *lacunæ* of his predecessor. The Gauls, he says, had a breed of dogs which they called ὀυετραγοι: so named (we know not why) from their swiftness; they were of extraordinary beauty, and the classical sportsman dilates with much keenness on their breeding, training, and general treatment. The mode of hunting the hare with them was as follows. Early in the morning persons were sent out to mark the *forms*, and when these were ascertained, the huntsmen on horseback followed with the hounds; the hare was allowed due law, and not more than two dogs were loosed to follow her; for the Gauls, it should be remarked, with a degree of civilisation which could scarcely be expected from them, pursued their game much more for the sake of the sport than for the animal itself; and if the Course were good they rejoiced whenever the hare was able to escape. It is somewhat remarkable that Arrian, however closely in many points agreeing in this description with the modern system of Coursing, never once affirms or implies that the dogs employed in it ran not by scent but by eye. There is a translation of his *Cynegeticus* into French, with critical notes and dissertations, by M. Gail, published at Paris in 1801, of which we have not been able to procure a copy; but which, it is probable, may contain further information connected with this subject.

Greyhounds were well known in England in the Xth and XIth centuries, and they were employed not only in Coursing the Hare but also the Deer and Fox. COURSING

"The Coursing of Deer formerly was a recreation in high esteem, and was divided into two sorts, the *Paddock*, and the *Forest* or *Purlieu*. For the Paddock Coursing, besides the Greyhounds, which never exceeded two, and for the most part consisted of one brace, there was the Teazer or mongrel Greyhound, whose business it was to drive the Deer forward before the real Greyhounds were slipt.

"The Paddock was a piece of ground generally taken out of a Park, and fenced with pales or a wall; it was a mile in length, and about a quarter of a mile in breadth, but the further end was always broader than that which the Dogs started from, the better to accommodate the company in seeing which Dog won the Match. At the hither end was the Dog-house, (to enclose the Dogs which were to run the Course,) which was attended by two men, one of whom stood at the door to slip the Dogs, the other was a little without the door to let loose the Teazer to drive away the Deer. The Pens for the Deer intended to be Coursed were on one side, with a Keeper or two to turn them out; on the other side, at some distance, stood the spectators. Along the Course were placed *Posts*. The first, which was next the *Dog-house* and *Pens*, was the *Law-post*, and was distant from them one hundred and sixty yards. The second was the *Quarter of a Mile*, the third the *Half Mile*, the fourth the *Pitching Post*, and the fifth marked distance, in lieu of a post, was the *Ditch*, which was a place made so as to receive the Deer, and keep them from being further pursued by the Dogs. Near to this place were seats for the Judges who were chosen to decide the Wager.

"So soon as the Greyhounds that were to run the match were led into the Dog-house, they were delivered to the keepers, who, by the Articles of Coursing, were to see them fairly slipt; for which purpose there was round each Dog's neck a falling Collar, which slipt through rings. The Owners of the Dogs drew lots which Dog should have the wall, that there should be no advantage; the Dog-house door was then shut, and the keeper turned out the Deer; after the Deer had gone about twenty yards, the persons that held the Teazer loosed him, to force the Deer forward, and when the Deer was got to the *Law Post*, the Dogs were led out from the Dog-house and slipt. If the Deer swerved before he got to the *Pinching Post*, so that his head was judged to be nearer the *Dog-house* than the *Ditch*, it was deemed no match, and was to be run again three days after; but if there was no such swerve, and the Deer ran straight until he went beyond the Pinching Post, then that Dog which was nearest the Deer, (should he swerve) gained the contest; if no swerve happened, then that Dog which leaped the Ditch first was the Victor; if any disputes arose, they were referred to the Articles of the Course, and determined by the Judges.

"In Coursing Deer in the *Forest* or *Purlieu*, two ways were used; the one Coursing from wood to wood, and the other upon the lawns by the Keeper's Lodges. In the first some hounds were thrown into the cover to drive out the Deer, whilst the Greyhounds were held ready to be slipt when the Deer were expected to break; if the Deer was not of a proper age and size,

 the Dogs were not let loose; and if, on the other hand, he broke at too great a distance, or was otherwise deemed an overmatch for one brace, it was allowable to *way-lay* him with another brace of fresh Greyhounds.

"For the Coursing upon the *Lawn*, the Keeper had notice given him, and he took care to lodge a Deer fit for the purpose, and by sinking the wind of him, there was no danger of not getting near enough to slip the Greyhounds, and having a fair Course.

"In Coursing the Fox, no other art was necessary but to get the wind, and stand close on the outside of the wood, where he was expected to come out, and to give him law enough, or he instantly returned back to the cover; the slowest Greyhounds were speedy enough to overtake him; and all the hazard was the Fox spoiling the Dog, which frequently happened; for the most part, the Greyhounds used for this Course were hard-bitten dogs, that would seize any thing." Daniel's *Rural Sports*, vol. i. p. 487.

In Vele's *Booke of Hawkyng, Hunting, and Fishing*, and in the *Jewel for Gentry*, the following are represented as the qualifications of a good Greyhound:

"A Grehoūd should be
hedded like a snake,
necked like a drake,
foted like a catte,
tailed like a ratte,
syded like a breme,
chined like a beme.
the first yere he must lerne to feed,
ye second yere to feeld him lede,
the thirde he is felow lyke,
the fourth yere he is none lyke,
the fifth yere he is good enough,
the sixth yere he shall holde to plough,
the seventh yere he wyll avayle
great bytches for to assayle,
the eighth yere lick ladell,
the ninth yere cart sadel,
and when he is comen to that yere,
have hym to the tannere,
for ye best hounde that ever bytch had,
at the ninth yere he is ful bad."

The Greyhound should not be *tried* till it is twelve-months old, at two years it is full grown; the diet, when a dog was engaged to run, consisted in old times of bread made of half a peck of oatmeal and a peck of wheat, both ground and bolted through a fine sieve. Anniseeds beaten and liquorice were to be scattered amongst it, and it was then kneaded up into small loaves with the whites of eggs and new ale, and thoroughly baked. This bread, soaked in broth, was given after having aired and walked the dogs out morning and evening. Upon Coursing days a toast and butter or oil was given early in the morning.

The Laws of Coursing were established by the Duke of Norfolk in the reign of Elizabeth, and they are thus given by Gervase Markham in his 1st Book of *Country Contentments*:

"These underwritten were held for authenticall once, and invented, received, and subscribed unto, by many noble and worthie personages, suting fully with the reasons and grounds of the pastime.

"First, therefore, it was ordered that he which was chosen Fewterer or letter loose of the Greyhounds, should receive the Greyhounds matcht to runne together into his leashe as soon as he came into the field, and to follow next to the Hare-finder till he came to the forme: and no Horseman nor Footman on pain of disgrace to goe before them or on either side, but directly behind, the space of forty yards or thereabouts.

"Item, that not above one brace of Greyhounds to Course a Hare at one instant.

"Item, that the Hare-finder give the Hare three sollowes before he put her from her seat, to make the Greyhounds gaze and attend her rising.

"Item, that the Fewterer shall give the Hare twelve-score lawe ere he loose the Greyhound, except it be in danger of loosing sight.

"Item, that Dogge which giveth the first turne, if after the turnes be given and neither coat, slip, nor wrench extraordinary, then he which gave the first turne shall be held to winne the wadger.

"If one Dogge give the first turne, and the other beare the Hare, then he which beare the Hare shall winne.

"If one Dogge give both the first turne and last turne, and no other advantage between them, that odde turne shall winne the wadger.

"If a coate shall be more than two turnes, and a goe by, or the bearing of the Hare equall with two turnes.

"Also, if neither Dogge turne the Hare then he which leadeth last at the covert shall bee helde to winne the wadger.

"If one Dogge turne the Hare, serve himselfe, and turne her againe, those two turnes shall be as much as a coate.

"Also, if all the course be equall, then he only which beares the Hare shall winne, and if she bee not borne, then the Course must be adjudged dead.

"If he which comes first into the death of the Hare, takes her up and saves her from breaking, cherrisheth the Dogs and cleanseth their mouths from the wooll or other filth of the Hare, for such curtesie done hee shall in curtesie challenge the Hare; but not doing it he shall have no right, priviledge, or title therein.

"Item, if any Dog shall take a fall in the course, and yet performe his part, he shall challenge the advantage of a turne more than he giveth.

"Item, if one Dogge turne the Hare, serve himselfe, and give divers coats, and in the end stand still in the field, the other Dogge without turne giving running home to the covert, that Dogge which stood still in the field shall be then adjudged to loose the wadger.

"If any man shall ride over a Dogge and overthrow him in his Course, (though the Dogge were the worse Dogge in opinion,) yet the party for the offence shall either receive the disgrace of the field or pay the wadger, for between the parties it shall be adjudged no Course.

"Item, those which are chosen Judges of the leashe, shall give their judgment before they depart from the field, or els he in whose default it lieth shall pay the wadger by a general voice and sentence."

These Laws, with very slight variation, still form the Code of the principal Coursing Meetings in England; among which, the chief is that held at Swaffham, in Norfolk. The Wiltshire Downs, and the Tiverton Wolds in Yorkshire, are also celebrated for this sport.

COURSING. — COURT

The following authenticated instance of the speed of two Greyhounds is recorded by Daniel, i. 515. In February, 1800, a brace of Greyhounds in Lincolnshire ran a Hare four miles, measured straight, in twelves minutes, and during the Course there were several turns. The Hare was dead before the Dogs touched her.

COURING. — COURT

COURT

COURT, *v.*
COURT, *n.*
CO'URTEOUS,
CO'URTEOUSLY,
CO'URTEOUSNESS,
CO'URTESY, *v.*
CO'URTESY, *n.*
CO'URTEZAN,
CO'URTIER,
CO'URTIERY,
CO'URTING,
CO'URTLIKE,
CO'URTLY, *adj.*
CO'URTLY, *adv.*
CO'URTLINESS,
CO'URTLING,
CO'URTSHIP.

Court; *area circà ædes:* from Lat. *cohors*, or *cors*; see COHORT. Spelman says, As bands or troops of soldiers were called *cohorts, ab avium* cohorte; so more modernly, The family or company of Princes was called *Cors*, and *Curs*; Gall. *court*; It. and Sp. *corte*.

In Low Lat. *Curtisanus*, was one who followed the *Court*; now *Courtier*; and thus, *Courtman* in Chaucer.

Courtezan; Fr. *courtisane*; It. *cortegiana*; q. d. *Aulica*; more commonly applied to *Harlots, quia tales urbanæ plerumque et ad* aulicos *mores compositæ sunt.* Skinner.

For *courtesy*, see the Quotation from Spenser.

A *courtesy*; a *courteous* act of demeanour.

To *court*, is,—to practise the art of a *Courtier*, or attendants upon *courts*; to endeavour to please, or to gain or win favour, to woo.

Court is much used in *Composition.*

It peined hire to contrefeten chere
Of *court*, and ben estatelich of manere.
And to ben holden digne to reverence.
Chaucer. The Prologue, v. 140.

He on his courser, sterting as the fire
Is ridden to the feldes him to play,
Out of the *court*, were it a mile or twey.
Id. The Knightes Tale, v. 1506.

Curteis he was, lowly, and servisable,
And carf before his fader at the table.
Id. The Prologue, v. 99.

For, brother min, take of me this motif,
I have now ben a *court-man* all my lif.
Id. The Marchantes Tale, v. 9366.

A knight ther was and that a worthy man,
That fro the time that he firste began
To riden out, he loved chivalrie,
Trouthe and honour, freedom and *curtesie.*
Id. The Prologue, v. 46.

There was whylom by daies olde
A worthy knight, as men tolde;
He was neuew to the emperour,
And of his *court* a *courteour.*
Gower. Conf. Am., book i. fol. 16.

Wherein I see, a corps of comely shape
(And such as might beseeme the *courte* full wel)
Is cast at heele by *courting* al to soone.
Gascoigne. The Steele Glas.

If Demetrie and the werkmen that ben with hym han cause aghen ony man, there ben *courtis* and domes & iugis, accuse thei ech othire.
Wiclif. The Dedis of Apostles, ch. xix.

But still the *court* must not be fild with wordes, and vayne report
Which in abundance great from thee do flie.
Phaer. Æneidos, book xi. fol. 261.

This good emperour was strong in vertue, meke in woordes, attemperate in his exercises, homely with euery man, sad among sad men, hasty among hasty men, mery with mery men, and wise among wise men, as it is conenable for a *curteous* prince to be.
Golden Boke, H 2.

Yet fearing that by the castynge out of mo deuils they might afterward happely lese mo of theire hogges, they prayed hym *courteisely* to geate hym quickly thense.
Sir Thomas More. Workes, fol. 540.

Ile wayte my opportunitie,
to meete him in the ways,
To leade him home, to *curtesy* him,
and cap him when he stayes.
Drant. Horace. Satyre 9.

Yet *coortsye* him and worshipp him,
and if he would it so,
Thou maist not staye to wayte on him
in place where he shal go.
Id. Ib. Satyre 5.

But now let no man require of me that I should (vnto such an abhominable & detestable deuill, as hath brought in this wicked and shamefull learnying and maners) put off my cappe, & make low *curtesie*, and geue fayre wordes, and say: God geue you good morow, syr deuill, how fare you. *Barnes. Workes*, fol. 193.

And he saith also that hys belief is so necessary to saluacion, y^t the contrary beliefe is damnable, for elles he woulde not of hys *courtesie* cry oute sore vpon the clergye for teaching y^e contrary. *Sir Thomas More. Workes*, fol. 389.

And being come near to Greenwich (where the *court* then lay) presently vpon the newes thereof, the *courtiers* came running out, and the common people flockt together, standing very thicke vpon the shoare. *Hakluyt. Voyage, &c. Richard Chanceler.*

And *courtlike* life is thought another heauen.
Gascoigne. The Steele Glas.

His youth, his sport, his pleasant chere,
His *courtly* state and company,
In him so strangely alterd were.
Vncertaine Auctors. A comparison of his Loue, &c.

It is the parte of godly menne vtterly to endeavour themselues, that they be at debate with no man, whether they be good or euill: they muste moue and allure all menne with *courtiousnesse*, ientlenesse and beneficialnesse as muche as maye be to loue and to concorde. *Udall. Matthew*, ch. v.

Thus left by thee, and by him *courted* still,
Thy grace with-drawn, his favours mustred faire,
How could poor wretches wrestle with self-will
But soone be catch'd by such a subtle snare.
Stirling. Doomes-day. The tenth Houre.

The *court's* a school indeed, in whiche some few
Learn vertuous principles but most forget
What ever they brought thither good and honest.
Trifling is there in practice, serious actions
Are obsolete and out of use.
Beaumont and Fletcher. The Custom of the Country, act ii. sc. 1.

Vpon her front her lockes were curled new,
Her eies were *courteous*, full of peace and loue;
In look a saint, an angell bright in shew,
So in her visage grace and vertue stroue.
Fairfax. Godfrey of Boulogne, book xiv. st. 4.

Whence softly sallying out as loth the place to leave
She Sence a pretty rill, doth *courteously* receive.
Drayton. Poly-olbion, song 26.

COURT. That so knowledge may not be a *courtezane* for pleasure, or as a bond-woman for gaine; but as a spouse for generation, fruit, and honest solace.

Bacon. On Learning, by G. Wats, book i. ch. v.

MAL. Toby approaches; *curtsies* there to me.
To. Shall this fellow liue?

Shakspeare. Twelfth Night, fol. 263.

Of *court*, it seemes, men *courtesie* do call
For that it there most vseth to abound;
And well beseemeth, that in princes hall
That vertue should be plentifully found,
Which of all goodly manners is the ground
And root of ciuil conversation.

Spenser. Faerie Queene, book vi. can. 1.

LAD. Shepherd, I take thy word,
And trust thy honest offer'd *courtesy*,
Which oft is sooner found in lowly sheds
With smoaky rafters, than in tap'stry halls
In *courts* of princes, where it first was nam'd
And yet is most pretended. *Milton. Comus*, l. 323.

But tydings there is none I you assure,
Saue that which common is, and known to all
That *courtiers* as the tide doe rise and fall.

Spenser. Mother Hubberd's Tale.

Cause he is no common strainer,
After painted nymphs for favours,
Or that in the garb he savours
Little of the nicety,
In the sprucer *courtiery*.

Ben Jonson. Entertainment, fol. 96.

For he is practiz'd well in policie
And thereto doth his *courting* most apply:
To learne the enterdale of princes strange,
To mark th' intent of counsells, and the change
Of states, and eke of priuate men some-while
Supplanted by one falshood and faire guile.

Spenser. Mother Hubberd's Tale.

Before array'd in sumptuous bravery
Deck'd *court-like* in the choice, and newest guise.

P. Fletcher. The Purple Island, can. 8.

CALIS. How dost thou like my gown?
MIRT. 'Tis rich and *courtlike*.

Massinger. Guardian, act i. sc. 2.

CRI. Indeed, I must declare myselfe to you no profest *courtling*; nor to have any excellent stroke, at your subtle weapons.

Ben Jonson. Cynthia's Revels, act. v. sc. 4.

DAU. On what *courtly* lap hast thou late slept, to come forth so sudden and absolute a *courtling*?

Id. The Silent Woman, act iv. sc. 1.

The French are passing *courtly*, ripe of wit,
Kind, but extreme dissemblers.

Ford. Love's Sacrifice, act i. sc. 1.

Needs a shipwreck'd seaman be *courted* to come to shore, or a weary traveller to a place of rest?

Bishop Beveridge. Sermon 116.

In that sweet isle where Venus keeps her *court*
And every Grace and all the Loves resort.

Dryden. Cymon and Iphigenia.

We cannot omit to observe this *courtly*, (shall I call it?) or good quality in him; that he was *courteous*, and did seem to study to oblige.

Strype. Memorials. Henry VIII. Anno 1530.

I endeavoured to clothe virtue, though not in a gaudy, in a fashionable habit, and divesting her not only of her sack-cloth, but her blacks, where I saw she appeared in them with disadvantage, I endeavoured to give her as much of the modern ornaments of a fine lady, as I could, without danger of being accused to have dressed her like a *courtezan*.

Boyle. Occasional Reflections, the Last Section, reflec. 1.

Courtesy and condescension is another happy quality, which never fails to make its way into the good opinion, and into the very hearts of those who are under the good magistrate's inspection.

Atterbury. Sermon 3. vol. ii.

Now, Proteus! now (to truth compell'd)
Speak and confess thy art excell'd.
Use strength, surprise, or what you will,
The *courtier* finds evasion still;
Not to be bound by any ties,
And never forc'd to leave his lyes.

Gay. Fable 33. *The Courtier and Proteus.*

The day would fail me, should I reckon oe'r
The sighs they lavish'd, and the othes they swore
In words so melting, that compar'd with those
The nicest *courtship* of terrestrial beaux
Would sound like compliments, from country clowns
To red cheek'd sweet-hearts in their home-spun gowns.

Tickell. Kensington Gardens.

They *courteously* invited him ashore, and conversed with him by signs, but very little of the meaning of either party could be understood by the other.

Cook. Voyage, vol. ii. book iii. ch. viii.

One [historian] relates that Robert Bruce was (in chacing these animals) preserved from the rage of a wild bull by the intrepidity of one of his *courtiers*, from which he and his lineage acquired the name of *Turn-bull*.

Pennant. British Zoology. The Ox.

For, with all the *courtliness* and gallantry you make me master of, I never intended by the good company, I mentioned with so much respect, either those foolish men, or women, who prefer the forward assurance of their boys to every other consideration.

Hurd. Works, On the use of Foreign Travel, dial. 8.

The patience of their pride seems to have been worn out with the importunity of our *courtship*.

Burke. On a Regicide Peace.

COURT, in *Composition*.

CAL. Why, has this *court-air* taught me knavish wit?

Massinger. The Great Duke of Florence, act iii. sc. 1.

——— Nor in *court-amours*,
Mixt dance, or wanton mask, or midnight bal.

Milton. Paradise Lost, book iv. l. 767.

——— How much did Stallion spend
To have his *court-bred-fillie* there commend
His lace and starch. *Ben Jonson. Under-woods*, fol. 185.

To know the will of God better then his whole kingdom, whence should he have it? Certainly *court-breeding* and his perpetual conversation with flatterers was but a bad school.

Milton. Answer to Eikon Basilikè.

Ne'er talk to me, you are no men but masquers; shapes, shadows, and the signes of men, *court-bubbles*, that every breath or breaks or blows away.

Beaumont and Fletcher. The Elder Brother, act iv. sc. 1.

——— Howsoever, you should say so for your credit
Being the only *court-bull*.

Massinger. The Picture, act v. sc. iii.

SANAZ. What is't?
CAL. That you would give me
A subtle *court-charm*, to defend me from
The infectious air of the country.

Id. The Great Duke of Florence, act iii. sc. 1.

But when the church can make use of the king's power, then to bring all under the king's prerogative, the Catholicks of England go one way, and the *court-clergy* another.

Selden. Table Talk, p. 23.

There is no little comfort left in that:
And—then my three *court-codlings* that look parboil'd,
As if they came from Cupid's scalding-house.

Massinger. The Old Law, act iii. sc. 2.

Another hiding his *court-compliance* with a grave sentence, commended the choice of certain before uncertain, upon due examination; to like purpose answer'd all the rest of his sages, none openly dissenting from what was likely to be the king's [Edwin] creed. *Milton. History of England*, book iv.

To play his master's prize against all masters whatsoever in this subtile mysterie, at these foure, the choice, and most cunning weapons of *court-complement*: viz. the bare accost, &c.

Ben Jonson. Cynthia's Revels, act v. sc. 3.

SER. Away with the joyntstooles, remoue the *court-cub-bord*, looke to the plate. *Shakspeare. Romeo and Juliet*, fol. 57.

COURT. He says Sir Henry Martin came and saw it, and said it would make a good *court-cupboard*. If Sir Henry did say so, the scorn ill became either his age or profession; though a *court-cupboard* be somewhat a better phrase than a dresser.

State Trials. Trial of Archbishop Laud.

This was very usual, whensoever the *court* was full of business, to hold one *court-day* out of term. This is warranted by the commission; and warning of it was always publicly given the *court-day* before, that all whom it concerned might take notice of it. *Id. Ib.*

And for his purpose to promove his hate,
Into the plot he his *court-devile* drew,
Cunning in all the strategems of state,
Which he suborn'd my father to pursue.

Drayton. The Legend of Matilda the Fair.

A parcell of *court-dirt*, a heape, and masse
Of all vice hurl'd together, there he was,
Proud, false, and treacherous, vindictive, all
That thought can adde.

Ben Jonson. Under-woods. A little shrub growing by.

The king's age was abused by dame Alice Peirs (a most busie *court-flie*) who (after queene Philip's death) kept the old man warme. *Speed. Edward III. Anno* 1375.

——— He, Sir Diaphanous,
And Mr. Bias, his *court-friend's* desire
To kisse his neice's hands, and gratulate
The firme recovery of her good fame.

Ben Jonson. Magnetick Lady, act v. sc. 7.

He then discovered the whole plot; which he had scarce done, when his father came rapping at the *court-gates*, and coming to the king shewed him the indenture of confederacy which he had taken from his son. *Baker. Richard II. Anno* 1400.

But. Nay he can make obligations and write *court-hand*.

Shakspeare. Henry VI. Second Part, fol. 139.

Sawcy pedantic wretch, go chide
Late school-boys or sour prentices,
Go tell *court-huntsmen*, that the king will ride,
Call country ants to harvest offices.

Donne. The Sun Rising.

The parlament therefore, to clear themselves of aspersing him without cause, and that the people might no longer be abus'd and cajol'd, as they call it, by falsities and *court-impudence*, conceiv'd it most expedient and necessary that those letters should be made public. *Milton. An Answer to Eikon Basilikè.*

Let me have service methodically tendered; you are now one of us, your *courtesy!* [Grilla *courtesies*] Good. Remember that you are to practise *courtship*.

Ford. The Lover's Melancholy, act i. sc. 2.

Such sweet discourse, such ravishing behaviour,
Such charming language, such enchanting manners,
With a simplicity that shames all *courtship*
Flow hourly from her.

Massinger. The Great Duke of Florence, act i. sc. 2.

Beauf. Sen. You amaze me.
Your daughter's safe; and now exchanging *courtship*
With my son, her servant.

Id. The Unnatural Combat, act ii. sc. 3.

These successes did not mitigate the severity of the rulers at Westminster, who about the end of September, appointed a *court-marshall* to sit at Chester, for the tryal of the Earl of Derby.

Baker. Charles II. Anno 1651.

Lie. What *court-newes* is there? any proclamations,
Or edicts to come forth. Tho. Yes, there is one.

Ben Jonson. Staple of Newes, act iii. sc. 2.

By this instance, Henry acknowledged his power to be limited, and no wayes arbitrary: against the doctrine of our new *court-parasites*. *Knox. History of Reformation. Preface* 41.

We have a little above seen, how that by the flattery of some *court-preachers*, the custome is brought into the Church, to give into the prince, not onely swelling, but blasphemous titles in the publike prayer. *Id. Ib. Preface*, fol. 48.

That the commons have their commodities daily taken from them for the purveyance of the king's household, for which they are not paid, nor any assurance for payment thereof given, but only *court-promises*. *Baker. Henry VI. Anno* 1450.

That this our guest, may giue his friends to know
In his returne: that we as little owe
To fights, and wrestling, leaping, speed of race,
As these our *court-rites*; and commend our grace,
In all, to all superiour.

Chapman. Homer. Odyssey, fol. 112.

It is [said by holy Job, that God places kings in their thrones, "*in perpetuum*," then far from these weak tenures by copy of *court-roll*, at will or *courtesie*.

State Trials. Trial of Henry Garnet.

Another *courtier* of former times said hee had borne off many *court-stormes* in dangerous times, by suffering iniuries, and giuing thankes for them.

Camden. Remaines. Wise Speeches, p. 299.

Robert Passelve, an especiall favourite of Henry the Third, was afterwards by a *court-tempest* so shaken as he was glad to be Parson of Derham in Norfolk. *Id. Allusions*, p. 161.

I am confident of your Lordship's noble interpretation, since I seek no ends, no acquaintance, no other thanks, being one that have no *court-suits* to your lordship.

Cabbala. Mr. Ch. Th. to the Duke of Buckingham.

All men except *court-vassals*, opposed him and his tyrannical proceedings; the cry was universal; and this full parlament was at first unanimous in their dislike and protestation against his evil government. *Milton. An Answer to Eikon Basilikè.*

A discretion? A prettie *court-wager!* would any discreet person hazard his wit so?

Ben Jonson. Cynthia's Revels, act v. sc. 4.

Mor. In sadnesse; for using your *court-weapon*; me thinks you may. *Id. Ib.* act v. sc. iii.

After victorie in the warre against Pompy, Cæsar enclosed the temple of the said Venus, within a *court-yard* and a cloister, which Hadrian afterwards repaired and built new.

Holland. Livius, fol. 1365.

Yea, peers and mighty dukes with ribands blue,
(True blue, fair emblem of unstained breast)
Others I see, as noble and more true,
By no *court-badge* distinguish'd from the rest.

Gay. To Mr. Pope. Epistle 6.

A *court-clock* does not go so well, in his opinion, as a country-clock. But what then? they are both still but clocks: and the country-clock cannot reproach the *court-clock*, or vaunt its own perfections; because the *court-clock* is governed by necessity in going amiss, and therefore can be guilty of no crime; and the country-clock is governed by necessity in going better, and therefore can boast of no virtue.

Hoadley. Letters signed Britannicus, &c. Letter 23.

How many long-headed men do I know, both in the *court-end* and the city, with five times Plato's sense, who care not one straw what notion their sons have of God or virtue.

Bishop Berkeley. Works. The Minute Philosopher, dial. 2.

Nothing so monstrous can be said or feign'd,
But with belief and joy is entertain'd,
When to his face the worthless wretch is prais'd,
Whom vile *court-flattery* to a God has rais'd.

Dryden. Juvenal. Satire 4. l. 116.

Twice told the period spent on stubborn Troy
Court-favour, yet untaken, I besiege.

Young. Night Thoughts. Night 4.

The wise commander of the boat and lines,
For our high-priest the stately prey designs;
For who that lordly fish durst sell or buy,
So many spies and *court-informers* nigh.

Dryden. Juvenal. Satire 4. l. 76.

I had, not long since, the honour to be known to a very great *court-lady*, who was much troubled, that having frequent occasion to write letters, she could scarce handle her pen without blacking her fingers with ink.

Boyle. The usefulness of Experimental Philosophy, sec. 4.

The constitution of this parliament, that had sat seventeen years, was grown into two known factions, which were called that of the *court* and country; the *court-party* were grown numerous, by a practice introduced by my lord Clifford, of down right buying off one man after another, as they could make the bargain.

Sir William Temple. Memoirs, vol. ii. p. 141.

COURT.

COURT. Giving them to understand, that most of that noise, which they have so often heard ringing in their ears, about grievances and arbitrary power, popery and tyranny, persecution and oppression to tender consciences, *court-pensioners*, and the like, had been generally nothing else but mere flam and romance.

South. Sermon 1. vol. v.

——————— I return'd,
Hopeful in affluence of domestic joy
To reign, encircled with my offspring dear,
And *court-retinue*. *Fenton. Homer imitated.*

All this Latymer thought not amiss to say in one of his *court-sermons*, the more to expose this evil of racked rents.

Strype. Memorials. Edward VI. Anno 1563

Vain insect! know the time will come,
When the *court-sun* no more shall shine,
When frosts thy gaudy wings benumb,
And damps about thy wings shall twine.

Somervile. The Ant and the Fly. Fable 3.

——————— If best chance!
Court-zephyrs sweetly breathe, they launch, they fly,
O'er just, o'er sacred, all-forbidden ground,
Drunk with the burning scent of place or power.

Young. The Complaint. Night 5.

The historians tell us, that chancellor Hyde was brought into his master's contempt by this *court-argument*.

Warburton. To the Free Thinkers.

Your *court-broom*, that gathers
Motes, chaff, straw, and feathers,
And sweeps up all trash from the surface of life.

Brookes. Air 29.

By slavish methods must he learn to please
By smooth tongu'd flatt'ry, that curst *court-disease*,
Supple to ev'ry wayward mood strike sail,
And shift with shifting humour's peevish gale.

Churchill. Night. An Epistle to Robert Lloyd.

The councils even of the same reign were continually fluctuating, as opposite *court-factions* happened to prevail.

Burke. English History, book i. *A. D.* 84.

I shall spend my time more innocently, at least; and, I presume to think, more usefully in those studies, than in that slippery station, if it may deserve to be called one, of *court-favour* and dependance. *Hurd. Works. On Retirement*, dial. 2.

These essays, which are to give entire satisfaction to his *court-friend* in the affair of his retirement, went on very slowly.

Id. Ib. (*Note.*)

The squire only insisted that so much scholarship was indispensably necessary as might confer ability to draw a lease, and read the *court-hand*. *Johnson. The Rambler*, No. 198.

His majesty, I doubt not, had given credit to the calumnies which the *court-insects* had buzzed into his ears, of my being a favourer of republican principles, because I was known to be a supporter of revolution principles, and had a pleasure in letting me see what he thought of me.

Anecdotes of the Life of Bishop Watson, p. 314.

I'm told, your generals often fly,
When danger and when death are nigh:
Nay, when nor death nor danger's near,
As your *court-martials* make appear.

Cotton. The Scholar and the Cat. Fable 2.

Each method of weaving
Court-nets for enslaving;
Your chaffer for conscience, by barter and lure.

Brookes. Air 29.

There let him sleep, whilst we survey
The preparations for the day,
That day on which was to be shown
Court-pride by city-pride outdone

Churchill. The Ghost, book iv.

Nay, I might further say, and with much truth, that the politeness, in your lordship's, at least the *court-sense* of the word, is not to be attained by the ablest men.

Hurd. Works. On the Uses of Foreign Travel.

Of independence now he talks no more,
Nor shakes the senate with his patriot roar,
But silent votes, and, with *court-trappings* hung,
Eyes his own glitt'ring star, and holds his tongue. COURT.

Jenyns. The Modern fine Gentleman.

Courtesie *of England*, a legal tenure by which, if a man marry an heiress seised of Land, and issue is born of them, although neither the mother nor the child live, the husband keeps the Land during life. Bracton, v. 5, 30; Glanvil, vii. 18; Fitzh. *Nat. Br.* 140. The same holds good in Scotland, where the tenure is called *Curialitas Scotiæ*. Skene, *de verbor. signif. ad voc.* Curialitas.

Court is, in a *Law* sense, defined to be a place appropriated to the judicial administration of Justice. The Law has appointed a considerable number of Courts, some having a limited, others an extensive jurisdiction: some are appropriated to inquire only; others to hear and determine; some to adjudicate absolutely in the first instance; others upon appeal, and by way of review. Courts may be further divided into those of Record, and those not of Record; in the former, the acts and judicial proceedings are enrolled on parchment, for a perpetual memorial and testimony, which rolls are called the Records of the Court, and are of such high authority, that their truth is not to be questioned. These Courts may hold Pleas, according to the course of the Common Law, of real personal and mixed actions, where the debt is 40*s.* or upwards, as the King's Bench, Common Pleas, &c. Courts not of Record, cannot hold Pleas of 40*s.*, nor are their proceedings according to the course of Common Law, nor are they enrolled.

The King's Bench is the supreme Court of Common Law in the Kingdom, and is so called because the King used to sit there in person, and is still supposed to do so: it consists of a Chief Justice, and three Puisne Judges, or Justices, who are by their office the sovereign Conservators of the peace, and supreme Coroners of the land. This Court has a peculiar jurisdiction, not only over all capital offences, but also over all other misdemeanours of a public nature, tending either to a breach of the peace, or to oppression or faction, or any manner of misgovernment. It has a discretionary power of inflicting exemplary punishment on offenders, either by fine, imprisonment, or other infamous punishment, as the nature of the crime committed may appear to require. The jurisdiction of this Court is so great, that it keeps all inferior Courts within the bounds of their authority, and it may either remove their proceedings to be determined here, or arrest their progress below: it superintends all civil Corporations; commands Magistrates and others to do what their duty requires; in every case where there is no specific remedy, protects the liberty of the subject by summary interposition; takes cognizance both of Criminal and Civil causes, the former being called the Crown side, the latter the Plea side of the Court. This Court has cognizance on the Plea side of all actions of trespass or other injury alleged to be committed *vi et armis*; of actions for forgery of deeds, maintenance, conspiracy, deceit, and actions on the case which allege any falsity or fraud. In proceedings in this Court, the Defendant is surmised to be arrested for a supposed trespass, which, in reality, he never committed, and being thus in custody of the Marshal of the Court, the Plaintiff is at liberty to proceed against him for any other personal injury, which surmise the Defendant is not at liberty to dispute.

COURT. This Court is also a Court of Appeal, into which may be removed by writ of error all determinations of the Court of Common Pleas, and of all inferior Courts of Record in England.

The Common Pleas is also a Law Court of Record next in rank to the King's Bench. It derives its name from being the place wherein Civil actions, or those between subject and subject were originally litigated in contradistinction to Pleas of the Crown, or criminal proceedings, which were within the jurisdiction of the King's Bench. Real actions, or actions relating to the right or realty of freehold, must originally be brought here; personal pleas between man and man may be determined here, as well as in the King's Bench, and it consists, like the King's Bench, of a Chief and three Puisne Justices.

The Exchequer is a Court both of Law and Equity. It is a very ancient Court of Record, said to be established by William the Conqueror, as a part of the *aula regia*, though regulated and reduced to its present state by Edward I., and intended principally to order the revenues of the Crown, and to recover the King's debts and duties. This Court is said to derive its name from the Chequed cloth, resembling a chess board, (see CHECK,) by which the table is covered, and on which, when certain of the King's accounts are made up, the sums are marked and scored with counters. It consists of two divisions, namely the Receipt of the Exchequer, which manages the Royal revenue, and the Judicial, which is again subdivided into a Court of Equity and a Court of Common Law. The Court of Equity is held in the Exchequer, before the Lord Treasurer, the Chancellor of the Exchequer, the Chief Baron, and three Puisne Barons; its original business was confined to calling the King's debtors to account by bill filed by the Attorney General, and to recover lands, goods, chattels, or other profits belonging to the Crown. Now, however, it is thrown open, so that by a suggestion of privilege, namely, being an Accountant to the King, any person may be admitted to sue here, as well as the King's Accountant. An Appeal from the Equity side of this Court, lies immediately to the House of Lords; but from the Common Law side a writ of error must, in pursuance of the 31 Edward III. c. 12, be brought into the Court of Exchequer Chamber, from whence there lies an Appeal to the House of Lords.

The High Court of CHANCERY has already been noticed.

The Exchequer Chamber is merely a Court of Appeal, and was created by the 31 Edward III. c. 12, to correct the errors of the Court of Exchequer, and consists of the Lord Chancellor, Lord Treasurer, and Justices of the King's Bench and Common Pleas. By the 27 Elizabeth, c. 8, judgments given in the Court of King's Bench, if supposed to be erroneous, may be reversed on a writ of error being brought into the Exchequer Chamber: the Court is then composed of the Justices of the Common Pleas and Barons of the Exchequer. If a Cause upon argument in the Court below, is considered by the Judges of that Court to be of great difficulty, it may be removed into the Exchequer Chamber for decision, before any judgment is pronounced on it; in this event, the Court of Exchequer Chamber is composed of the twelve Judges, and occasionally, but rarely, the Lord Chancellor.

The House of Lords is the supreme Court of Judicature in the Kingdom; it has no original jurisdiction over Causes, but only upon Appeals and Writs of Error. The Lords are, in all Causes, the last resort, from whose judgment no farther appeal is allowed; every subordinate tribunal must conform to their determination. They are assisted in all dubious points of law by the opinions of the Judges, who are summoned by Writ to advise them. COURT.

Courts of Assize and Nisi Prius consist of two or more Commissioners, who are sent by the King's special Commission all round the Kingdom, London and Middlesex excepted, where Courts of Nisi Prius are holden in and after every term, before the Chief or other Judge of the several superior Courts, to try, by a Jury of the respective Counties, the truth of such matters as are then in dispute in the Courts of Westminster Hall. Justices of Assize, as the Commissioners are called, sit by virtue of five several authorities, viz. the Commission of the Peace, a Commission of Oyer and Terminer, a Commission of General Gaol Delivery, a Commission of Assize; that is, to take the verdict of a peculiar species of Jury called an Assize, and summoned for the trial of landed dispute; and of Nisi Prius, which is a consequence of the Commission of Assize, by which the Justices so commissioned are empowered to try all questions of fact issuing out of the Courts at Westminster, which are then ripe for trial by Jury.

The Court of Marshalsea is a Court of Record, originally instituted to determine causes between the Servants of the King's household and others within the verge; and hath jurisdiction of things within the verge of the Court, and of Pleas of Trespass, where either party is of the King's family, and of all other actions personal, wherein both parties are the King's servants: this Court hath now also the power of trying all personal actions, as debt, trespass, slander, trover, actions on the case, &c. between party and party, the liberty whereof extends twelve miles about Whitehall.

Court of Requests, and *Court of* CONSCIENCE, have already been described.

Besides these Courts, which are the chief Courts in the Kingdom for the adjudication of legal matters, there are various other Courts; such as the *Court of Admiralty*, for the decision of all maritime controversies, and the trials of malefactors who have committed offences on the High Seas.

The Court of Arches (so called because it used to be held in *Bow* Church, *Sta. Maria de Arcubus*,) is the chief Consistory Court belonging to the Archbishop of Canterbury, for the debating of Spiritual Causes. The Judge of this Court is called the Dean of the Arches'; he hath jurisdiction in all Ecclesiastical causes, except those which belong to the Prerogative Court, and also in all matters of Appeal from Bishops, or their Chancellors or Commissaries, Deans and Chapters.

Court of Peculiars is a Spiritual Court annexed to the Court of Arches, held in such parishes as are exempt from the jurisdiction of Bishops, and are peculiarly belonging to the Archbishop of Canterbury.

Court Prerogative is established for the trial of all Testamentary causes.

Court of Delegates, wherein Delegates or Commissioners are appointed by the King's Commission upon an appeal to him from either the Court of Admiralty, the Court of Arches, the Court of Peculiars, or the Prerogative Court

 Court of Commission of Review is formed by a Commission granted by the King as a matter of favour to revise the sentence of the Court of Delegates, when it is apprehended they have been led into any material error in their decision.

Court, Bishop's, or *Consistory Court,* is held in the Cathedral of each Diocese, for the trial of Ecclesiastical causes within that Diocese.

Court of Archdeacon is the lowest Court in the whole Ecclesiastical Polity; its jurisdiction is sometimes in concurrence with, and sometimes in exclusion of the Bishop's Diocesan Court.

Court of Faculties belongs to the Archbishop of Canterbury; its power is to grant dispensations for the marriage of persons without the publication of Banns, to ordain a Deacon under Canonical age, to enable a son to succeed his father in a Benefice, or one person to hold two or more Benefices incompatible with each other.

Courts Baron, are Courts which all Lords of Manors have within their respective precincts: they are inseparable incidents to a Manor, and are composed of the Lord's Tenants, who are bound by their tenure to assist him in the dispensations of justice within the Manor: their jurisdiction extends to the trial of controversies relating to the rights of land within the Manor; the holding plea of any personal actions of debt; trespass on the case, or the like where the damages do not exceed 40*s.*

Court Hundred is a larger Court Baron held for all the inhabitants of a particular Hundred, instead of a Manor.

Court Leet, or view of Frankpledge, a Court of Record, said to be the most ancient in the land, for criminal matters. It is usually held twice in the year, within a particular Hundred, Lordship, or Manor, before the Steward of the Leet, being the King's Court, granted by Charter to the Lords of those Hundreds or Manors. Its original intent was to view the Frankpledges, that is, the Freemen within the liberty, who were, according to the institution of Alfred, pledges for the good behaviour of each other; besides this, the preservation of the peace, and the correction of minute offences against the public good were the objects of this Court; there also, by immemorial usage, the Constables of the Hundred are elected and sworn. The business of this Court has, however, in great measure devolved upon the Quarter Sessions; and this is owing to the Statute 52 Henry III. c. 10, discharging Prelates, Peers, and Clergymen from their attendance on these Courts, and the Statute 1 Edward IV. c. 2, which expressly directed parts of their business to be transacted at the Quarter Sessions.

Court of General Quarter Sessions of the Peace, is a Court which must be held in every County once in every quarter of the year, which by Statute 2 Henry V. c. 4, is appointed to be in the first week after Michaelmas-day, the first week after Epiphany, the first week after the close of Easter, and in the week after the translation of Saint Thomas the Martyr, or the 7th of July. It is held before two or more Justices of the Peace, one of whom must be of the *quorum.* The jurisdiction of this Court, by the 34 Edward III. c. 1, extends to the trying of all felonies and trespasses whatsoever, though they seldom, if ever, try any greater offence than small felonies within the Benefit of Clergy. There are many offences also, which, by particular statutes, belong properly to their jurisdiction; as, small misdemeanours which do not amount to felony, especially offences relating to Game, Highways, Alehouses, Bastard Children, the Settlement and provision for the Poor, Vagrants, Servants' Wages, and Apprentices. The Records or Rolls of the Sessions are committed to the custody of a Special Officer, denominated the *Custos Rotulorum.*

Court, County, is an ancient Court of Justice, held monthly in each County by the Sheriff thereof, or his Deputy; it may hold Plea of many real actions, and of all personal actions under the value of 40*s.* and, indeed, to any amount by virtue of a Special Writ, called *Justicies,* which empowers the Sheriff, for the sake of despatch, to do the same justice in his County Court, as might otherwise be had at Westminster. The Freeholders of the County are the Judges in this Court, the Sheriff being only the Ministerial Officer.

Court of Hustings, the principal Court in the City of London, of great antiquity, mentioned by Edward the Confessor; held before the Lord Mayor and Aldermen in London, the Sheriffs, and Recorder, in Guildhall, for the trial of all pleas, real, personal, and mixt. Appeal lies to this Court from the Sheriffs' Court.

Court for the Relief of Insolvent Debtors. The crowded state of the Prisons in England drew the attention of the Legislature to the case of Insolvent Debtors in the year 1809, when an Act of Parliament, 49 George III. ch. 115, was passed for liberating Prisoners on surrendering their effects to their Creditors. This was the basis of the present Court, although since that period not less than ten Acts of Parliament have been passed to mould it into form. As at present constituted, it consists of a Chief Commissioner, and three others, a Chief Clerk, and a Provisional Assignee, in the latter of whom the Insolvent Debtor's property is vested for the benefit of the Creditors: three of these Commissioners are directed to go circuits three times in the year, if requisite, for the discharge of Debtors throughout the Kingdom. Debtors are at liberty, after remaining a stated period in prison, to apply to this Court for their discharge, on rendering to the Court an account of their property, and giving it up for the benefit of their Creditors. It is the Creditor's duty to apprise the Court of any malpractice, as to concealment of property or any fraud in contracting the debt, of which the Debtor may have been guilty; and it then remains in the breast of the Commissioners, either to remand him back to prison or to grant his discharge.

Court of the Lord High Steward of Great Britain. A Court instituted for the trial of Peers indicted for Treason or Felony, or for misprision of either. The office of Lord High Steward was formerly hereditary or held for life, or *dum bene se gesserit,* but now it is granted only *pro hâc vice,* and it hath been the constant practice of late, (and therefore seems now to have become necessary,) to grant it to a Lord of Parliament, otherwise he is incapable of trying such delinquent Peer. When such an indictment is found by a Grand Jury of Freeholders in the King's Bench, or at the Assizes before the Justices of Oyer and Terminer, it must be removed by writ of *certiorari* into the Court of the Lord High Steward, which alone has power to determine it. On the trial of a Peer, all the Peers who have a righ to sit and vote in Parliament, are by the 7 William III.

COURT. ch. 3, required to be summoned at least twenty days before such trial, to appear and vote thereon; and every Peer appearing shall vote in the trial of such Peer, first taking the oaths of allegiance and supremacy, and subscribing the declaration against Popery. During the session of Parliament, the trial of a Peer is not in the Court of the Lord High Steward, but before the Court of our Lord the King in Parliament. A Lord High Steward is, however, appointed in this case to regulate the proceedings, but he acts rather as Speaker or Chairman of the Court than as Judge; for the collective body of the Peers are therein the Judges, both of law and fact, the High Steward having a vote with the other Peers in right of his peerage. In the Court of the Lord High Steward, which is held in the recess of Parliament, he is the sole Judge of matters of law, as the Lord triors are of matter of fact; and as they may not interfere with him in regulating the proceedings of the Court, so he has no right to intermix with them in giving any vote upon the trial. Bishops are not summoned to the Court of the Lord High Steward, nor are they entitled to vote on trials in full Parliament, the extent of their privilege being to stay and sit in Court in capital cases, till the Court proceeds to the vote of guilty or not guilty. See Danby's Case, *Lords' Journals*, 15 May, 1679.

Court of the Lord Steward, Treasurer, or Comptroller of the King's Household, instituted by Statute 3 Henry VII. ch. 14, to inquire of Felony by any of the King's sworn servants in the cheque-roll of the Household, under the degree of a Lord, in confederating, compassing, conspiring, and imagining, the death or destruction of the King, or any Lord or other of his Majesty's Privy Council, or the Lord Steward, Treasurer, or Comptroller, of the King's Household. The inquiry and trial thereupon must be by a jury of twelve of the King's household.

The Court of the Lord Steward of the King's Household, or in his absence of the Treasurer, Comptroller, and Steward of the Marshalsea, was erected by 33 Henry VIII. ch. 12, with a jurisdiction to inquire of and determine all treasons, misprisions of treasons, murders, manslaughters, bloodsheds, and other malicious strikings, whereby blood should be shed within the limits (that is, 200 feet of the gate) of any of the Palaces or Houses of the King, or any other house where he should reside. The proceedings are also by a Jury, both grand and petit, of the Officers and sworn servants of the Household; the Statute referred to, sets out with minuteness the form and solemnity of cutting off the delinquent's hand, which was part of the punishment for shedding blood in the King's Court.

Court, University. The Courts of the Universities of Cambridge and Oxford are of a particular nature, granted by Charters which have been confirmed by Parliament, and they are now called the *Chancellor's Courts*. These two Universities enjoy the sole jurisdiction, in exclusion of the King's Courts, over all civil actions and suits when a Scholar or privileged person is one of the parties, excepting in cases where the right of freehold is concerned; and these, by their Charters, they are at liberty to try either according to the Common Law of the land, or according to their local customs. The jurisdiction of their Criminal Courts is equally extensive with that which concerns the redress of their Civil injuries; they have authority to determine all criminal misdemeanours under the degree of treason, felony, or mayhem, in a Court called the Court of the Lord High Steward of the Universities. See Charter, 7 June, 2 Henry IV., confirmed by the Statute 13 Elizabeth, ch. 29. When an Indictment is found against any Scholar of the University, or other privileged person, the Vice-Chancellor may claim the cognizance of it; which, when allowed, is tried in the Chancellor's Court by the ordinary Judge if the offence be only a misdemeanour, but if it be treason, &c. then it must be determined before the High Steward, under the King's special Commission to try the same. The oldest Charter mentioned in Blackstone is a Grant to the University of Oxford, 28 Henry III. 1244; the same privileges were confirmed and enlarged by almost every succeeding Monarch down to Henry VIII., in the seventeenth year of whose reign the most extensive of all the Charters was granted. A similar Charter was granted to the University of Cambridge in the third of Queen Elizabeth. COU

Court of Inquiry in Military Matters. A Meeting of Officers who are authorized to inquire into the conduct of a Commander of an expedition, a corps or a party, to investigate whether there be ground for a *Court Martial*, on such part of a person's conduct as is submitted to their consideration. Courts of Inquiry cannot award punishment, but must report the result of their investigation to the Officer by whose orders they are assembled.

Court Martial. A Court instituted for the trying and punishing offences committed by all persons subject to Martial Law. Its powers and authorities are regulated by the Acts of Parliament, passed for the enforcement and preservation of discipline in the Army and Navy, especially the Mutiny Act, 1 William and Mary. The judgments of a Court Martial are subject to the review of the King, and are never propounded till they are submitted to his consideration.

Court of Commissioners of Sewers. A Court erected by virtue of a Commission under the Great Seal; its jurisdiction is to overlook the repairs of Sea Banks and Walls, the cleansing of Rivers, Public Streams, Ditches, and other Conduits, by which waters are carried off. The Commissioners form a Court of Record, may fine and imprison for contempt, may make orders for the removal of any annoyance, or the safeguard and conservation of Sewers within their Commission. They have also the power of assessing and levying rates to be expended on the Sewers.

Courts, Stannary, are Courts of Record in Devonshire and Cornwall, for the administration of justice among the Tinners. They are held before the Lord Warden and his substitutes; the privileges of the Tinners are confirmed by Charter, 33 Edward I., and fully expounded by a private Act, 50 Edward III., and since explained by a public Act, 16 Charles I. ch. 15.

Courts of the Counties Palatine of Chester, Lancaster, and Durham, and of the Royal Franchise of Ely, are a species of private Courts, with a limited and local jurisdiction, having at the same time an exclusive cognizance of Pleas, both in matters of Law and Equity. In these, as well as in the Principality of Wales, the King's ordinary Writs, issuing under the Great Seal out of Chancery, are of no avail; and since the privilege of these Counties and Franchises have been abridged, all process issuing in the King's

name must be witnessed in the name of the owner of the Franchise. The Judges of Assize who act here, sit by virtue of a special Commission from the owners of the several Franchises, and under their seal, and not by a commission under the Great Seal.

Court of the Duchy Chamber of Lancaster, a Court of special jurisdiction, held before the Chancellor of the Duchy, or his Deputy, concerning all matters of equity relating to lands holden of the King, in right of the Duchy of Lancaster. The proceedings of this Court are the same as on the Equity side in the Courts of Chancery and Exchequer

Courts of Forest are Courts of special and private jurisdiction, instituted for the government of the King's Forests in the various parts of the Kingdom, and for the punishment of all injuries done to the King's deer, to the vert, or greensweld, and to the covert wherein such deer are lodged.

Court Pie Poudre, (*pedis pulverisati*, because Fairs being held mostly during the Summer, the suitors have dusty feet; or, as others say, because justice is done so speedily that the dust cannot be wiped from the feet before the decision is given; or, as Barrington says, (*Anc. Stat.* 337,) from *Pied—poudreaux*, a Pedlar.) An ancient Court, noticed in several of the Statutes, held in Fairs for rendering justice to buyers and sellers, and the redress of grievances arising in them.

Court of Augmentation: A Court created 27 Henry VIII. for determining suits and controversies relating to Monasteries and Abbey lands. This Court was dissolved by Parliament, 1 Queen Mary; the *Augmentation Office*, however, still exists, in which there are a variety of valuable records, as connected with lands formerly belonging to Monasteries and Abbeys.

Court of Star Chamber. A Court of ancient origin, new modelled by the Statute 3 Henry VII. ch. 1, and 21 Henry VIII. ch. 20; it consisted of divers Lords Spiritual and Temporal, being Privy Counsellors, together with two Judges of the Courts of Common Law, without the intervention of a Jury. Their jurisdiction extended legally over riots, perjury, misbehaviour of Sheriffs, and other notorious misdemeanours contrary to the laws of the land; but in the course of time the powers usurped by this Court became so illegal and oppressive, that it was abolished by the 16 Charles I. ch. 10. The just odium into which it had fallen before its dissolution, has caused few memorials of its nature, jurisdiction, and practice, to be handed down to us, except such as on account of their enormous oppression, are recorded in the histories of the times. There is, however, in the British Museum, (*Harleian MSS.* vol. i. No. 1226,) a very full account of its constitution and course, compiled by William Hudson, which treatise is also published at the beginning of the second volume of *Collectanea Juridica.*

CO'USIN, *n.* } Fr. *cousin*; It. *cugino*; Belg. *kosun*. *Cognatus, alii a* consanguineus, *alii a* congenius *deflectunt.* Skinner.
Co'USIN, *adj.* }
Co'USINAGE. }

The word was anciently applied to a *kinsman* generally; and *cousinage*, for *kin*.

Þis kyng was enticed so, þat he nom atte laste
Ys ost, and vp hys *cosyn* bi gan to werre faste.
R. Gloucester, p. 38.

Oon of the bissehopis seruauntis, *cosyn* of him whos eere Petir kitte of, seide, sigh I thee not in the gherd with him?
Wiclif. John, ch. xviii.

For I myself desiride to be departid fro Crist for my britheren that ben my *cosyns* after the fleisch that ben men of Israel.
Id. Romaynes, ch. ix.

Eke Plato sayeth, who so can him rede,
The wordes moste ben *cosin* to the dede.
Chaucer. The Prologue, v. 719.

And for as mochel as this goode man
And eke this monk, of which that I began,
Were both two yborne in o village
The monk him claimeth, as for *cosinage*.
Id. The Shipmannes Tale, v. 12966.

And he resigned in this cas
Thempire of Rome vnto Louis
His *cosin*, whiche a Lombarde is.
Gower. Prologue, fol. 6.

——— But remembrance,
That thei toke of his worthines,
Of knighthode, and of gentilnes,
And how he stode of *cosinage*
To themperour, made them assuage,
And durst not slaine hym for fear.
Id. Conf. Am. book i. fol. 16.

For the benefites of God are not ginen for the respecte of kynred, but for the good herte of a man: not to the *cosynage* of the fleashe, but to the promptnesse of the spirite. not to the nacion, but to the feyth. *Udall. Luke*, ch. iv.

And her neighboures & her *cosins* hearde tel how y^e Lord had shewed greate mercy vpon her, and they reioysed with her.
Bible, 1551. *Luke*, ch. i.

And then his grace did aske how our queenes graze did, calling her *cousin*, saying that he was glad that wee were come in health into his realme.
Hakluyt. Voyage, &c. George Killingworth, vol. i. fol. 263.

. Egbert his son succeeded, whose quiet government for a long season was afterwards defaced by the cruel murther of Ealbert and Egilbright his *cousins* Germans.
Stow. Kentish Saxons. Anno 66

Her dolour soone she ceast, and on her dight
Her helmet, to her courser mounting light:
Her former sorrowe into suddaine wrath,
Both *coosen* passions of distroubled spright,
Converting, forth she beates the dusty path.
Spenser. Faerie Queene, book iii. can. 4.

The other branch of the act, for taking away all prohibitions of marriages within any degrees but those forbidden in Scripture, was to make way for the king's marriage with Catharine Howard, who was *cousin-germen* to Queene Anne Boleyn; for that was one of the prohibited degrees by the canon law.
Burnett. History of the Reformation. Anno 1540.

To make his character entire,
He weds a *cousin* of the squire,
Not over weighty in the purse,
But many doctors have done worse:
And tho' she boasts no charm divine
Yet she can carve, and make birch wine.
Warton. Progress of Discontent.

A COUSIN *German* is a Cousin in the first degree. In England, the Sovereign in writs, commissions, and other formal instruments, whenever he mentions any Peer of the degree of Duke, Marquess, or Earl, usually styles him COUSIN. A Duke is "right trusty and right entirely beloved Cousin;" a Marquess, "right trusty and entirely beloved Cousin;" an Earl, "right trusty and well beloved Cousin." The custom is as

COUSIN. — COW.

ancient as the reign of Henry IV.; who, being either by his wife, his mother, or his sisters, actually related or allied to every Earl then in the kingdom, artfully and constantly acknowledged that connection in all his letters and public acts; whence the usage has descended to his successors, although the reason has long ago ceased. (Blackstone, *Commentaries*, i. 12.)

This title descending as low as an Earl was of course given to the higher grades. It is used also by the King of England to all reigning Princes below the degree of Crowned Heads. To style them Brother would not sufficiently accord with regal dignity; whilst from the intermarriages of the reigning Houses of Europe, Cousinhood may be securely predicated in almost every case.

COUTH, or COULD, past participle of *conne*; to know, to understand, to be able. See CAN.

Could is now used merely as a grammatical auxiliary.

This clerk was cleped hendy Nicholas;
Of secret loue he *coude* and of solas,
And therto he was slie and ful prive,
And like a maiden meke for to se.
Chaucer. The Milleres Tale, v. 3200.

[The Pater Noster] It is more digne than any other prayer; for that Jesu Crist himself made it: and it is short for it should be *coude* the more lightly.
Id. The Persones Tale, vol. ii. p. 384.

To dauncen well *couthe* they the guise.
Id. The Romant of the Rose, fol. 120.

This kynge had in subiection
Jude, and of affection
Aboven all other one Daniell
He loueth, for he *couth* well
Diuine, that none other *couthe*,
To hym were all thinges *couthe*,
As he it had of God's grace.
Gower. Conf. Am., book i. fol. 24.

But whē the kyng had abused her, anon her husband beyng an honest manne and one that *could* his good, not presuming to touch a kynges concubyne, [Jane Shore] left her vp to hym altogether. *Hall. Edward V.*

When a simple man saw him, that *could* no skill of service, he said: Good Gods! how every thing becometh noble men.
Sir Thomas North. Plutarch. Pompeius.

All as the sheepe, such was the shepheard's looke
For pale and wanne he was, (alas the while!)
May seeme he lov'd, or else some care he took,
Well *couth* hee tune his pipe and frame his stile.
Spenser. The Shepheard's Calendar. January.

COUTH-UTLAUGH, A. S. one who willingly and knowingly receives, cherishes, and conceals an Outlaw, for which offence in ancient times he was liable to the same punishment as the Outlaw himself. Bract. iii. 2, 3.

COUTOUBEA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-cleft; corolla of one petal, four-cleft; scales four, hood-shaped; stigma two-lipped; capsule two-valved, many-seeded.

Three species, natives of Africa. Persoon.

COW, *v.* "*Cow* a person, *imbellem et timidum reddere*; to render a man peaceful and timid. Swe. *kufna*, from Isl. *kuga*, to suppress, to subjugate. I know not whether I may not refer hither, *coward, imbellis, meticulosus*." Addenda to Junius.

To *cow*, may merely be to cause to *cower*, q. v.

——— I do shame
To think of what a noble train you are,
And of how *cow'd* a spirit.
Shakspeare. Pericles, Prince of Tyre, act iv. sc. 4.

I believe it is not in the power of Plowden to dastardize or *cow* your spirits, until you have overcome him, at leastwise have so much of him as will serve your turn. *Howell. Letter* 9. book i. sec. 1. COW

I would dye with you, but first I would so torture ye,
And *cow* you in your end, so despise you;
For a weak and wretched *coward*, you must end sure;
Still make ye fear, and shake, despised, still laugh at ye.
Beaumont and Fletcher. A Wife for a Moneth, act v. sc. 1.

Low in pocket, *cow'd* in courage,
Safely glad to sup their porridge.
Swift. Helter Skelter.

I would have you take notice, I am not only able to vanquish a people already *cowed*, and accustomed to flight; but I could Almanzor-like drive the British general from the field, were I less a Protestant or had ever been affronted by the confederates.
Spectator, No. 167.

Cow, *n.* (*Vacca.*) A. S. *ku*; Dutch, *koe*; Ger. *kuhe*; Swe. *ko*. The Etymologists incline to the Gr. κνέω, κύω, *uterum gesto*. One reason (Ihre says) is that this name is not given to the animal till it has brought forth. But if our ancestors had resorted to the Greek for a name for this animal, they would most probably have taken the Greek name itself.

Cow-boy, Cow-dung, Cow-eye, Co'wheard, Co'wheardess, Cow-hide, Cow-like, Co'wslip, Co'wslip-bank, Co'wslip-flower, Co'wslip-covered, Co'wslip-painted, Co'wslip-posies.

"*Cowslip*, A. S. *cuslippe*; flowers so called, because *Cows* delight in them, or, as others think, from their similitude or likeness to the lips of a *Cow*. Dr. T. H. thinks from their scent, rivalling the sweet breath of the *Cow*; such a scent as *Cows* breathe, from their mouth and lips." Skinner.

Ther ne was *kow* ne *cowkynde*.
Piers Ploukman. Vision, p. 223.

——— The goddesse
Of Io torned the likenesse
In to a *cowe* to go there oute
The large feldes all aboute.
Gower. Conf. Am., book iv. fol. 82.

To work hir will and all his fraud to find,
She craude the *cowe* in gift at loue his hande,
Who could not well his sister's suite withstande.
Turbervile. Against the ielous Heads, &c.

How often woold she flowers twine?
How often garlants make
Of *cowslips* and of columbine
And al for Corin's sake.
Vncertaine Auctors. Of the Mutabilitie of the Worlde.

MIRTH. I my gossip Tattle knew what fine slips grew in Gardiner's Lane; who kist the butcher's wife with the *cowes* breath; what matches were made in the Bowling Alley, and what bettes wonne and lost. *Ben Jonson. Staple of Newes*, act iii. sc. 3.

MALEF. Rather than as now,
(Though I had drown'd thee for it in the sea,)
Appearing, as thou dost, a new Pandora,
With Juno's fair *cow-eyes*, Minerva's brow.
Massinger. The Unnatural Combat, act iv. sc. 1.

An example of rising from so meane or meaner estate may appeare in Earle Goodwin, who being at the first but the sonne of a *cowheard*, came to be (as I take it) the greatest subject that England ever had.
Verstegan. Restitution of Decayed Intelligence, ch. x.

The *cowheardesse* comming in, and seeing him mind more his bow than his bread, in a great fury cast away both his bow and arrowes, checking him [King Elfred] as her groom, said, Thou fellow, doest thou see the bread burn before thy face, and wilt not turn it? and yet art thou glad to eate it before it is half baked? Little suspecting him to be the man that had beene serued with farre more delicate cates. *Speed. Elfred. Anno* 876.

At midnight the appointed hour,
And for the queen a fitting bow'r,
Quoth he, is that fair *cowslip-flower*,
On Hipent-hills that groweth.
Drayton. The Court of Fairy.

Whilst from off the waters fleet,
Thus I set my printless feet
O'er the *cowslip's* velvet head,
That bends not as I tread.
Milton. Comus, l. 898.

So fine a gown, a band so clean,
As well become St. Patrick's dean,
Such reverential awe express,
That *cow-boys* know you by your dress.
Swift. A Panegyric on the Dean.

Delany reports, and he has a shrewd tongue,
That we both act the part of the clown and *cow-dung*.
Id. A left hand Letter to Dr. Sheridan.

In a robe of *cow-hide*
Sat yesty Pride,
With his dagger and his sling.
Butler. A Ballad upon the Parliament.

His be yon Juno of majestic size,
With *cow-like* udders and with ox-like eyes.
Pope. The Dunciad, book ii. l. 162.

Soft on a *cowslip-bank* my love and I
Together lay; a brook ran murm'ring by:
A thousand tender things to me she said;
And I a thousand tender things repaid.
Philips. The Sixth Pastoral.

So from every flower and plant
Gather first th' immortal paint.
Fetch me lilies, fetch me roses,
Daisies, violets, *cowslip-posies*.
Hughes. The Picture.

——— Oh! when my friend and I
In some thick wood have wander'd heedless on,
Hid from the vulgar eye, and sat us down
Upon the sloping *cowslip-cover'd* bank.
Blair. The Grave

Near some *cowslip-painted* mead,
There let me doze out the dull hours,
And under me let Flora spread
A sofa of her softest flow'rs.
Smart. Idleness. Ode 1.

CO'WARD, *v.*
Co'WARD, *n.*
Co'WARD, *adj.*
Co'WARDICE,
Co'WARDIZE,
Co'WARDLIKE,
Co'WARDLINESS,
Co'WARDLY, *adj.*
Co'WARDLY, *adv.*
Co'WARDSHIP,
Co'WARDNESS,
Co'WARD-HEARTED.

"*Coward*, i. e. *cowred*, *cowered*, *cower'd*. One who has *cower'd* before an enemy. It is of the same import as *supplex*. *Coward* is the past participle of the verb to *cowre*, or to *cower*, a word formerly in common use." Tooke. See the first example from Chaucer, and to Cow, and to Cower. Also the various Etymologies, which have been proposed for this word, collected in Tooke.

But natheles, I say not thou shalt be so *coward*, that thou doute wher as is no drede.
Chaucer. The Tale of Melibeus, vol. ii. p. 99.

Ther may no man clepen it *cowardie*.
Id. The Knightes Tale, v. 2732.

Thine hert full sore thou wolt dispise
And eke repreue of *cowardise*,
That thou so dull in euery thing
Were domme for drede, without speaking.
Id. The Romant of the Rose, fol. 127.

A nyce herte, fie for shame.
A *cowarde* herte of loue vnlered,
Wherof arte thou so sore afered.
Gower. Conf. Am., book iv. fol. 67.

Lo thus vpon the worldes fame
Knighthode hath euer yet beset,
Whiche with no *cowardis* is let.
Gower. Conf. Am., book iv. fol. 74.

——— Come on, and let vs goe
And still through dastard *cowardice* continew not to flee.
Phaer. Æneidos, book xi.

I canne make no warrauntise of my selfe, seyinge that Sainte Peter so sodaynely faynted at a womannes woorde, and so *cowardlye* forsooke his maister, for whom he had so boldlye foughte within so fewe houres before.
Sir Thomas More. Workes, fol. 1235.

The false Scottes for dred
With the Duke of Albany,
Beside the water of Twede
They fled full *cowardly*.
Skelton. The Duke of Albany and the Scottes.

And as, syr, I knowe well that many men and women shoulde be therthrowe greatly troublid and sclaunderid, and as I said syr to you before, for myne vntrewthe and false *cowardness* many a one sholde be put into full greate reprefe
State Trials. Trial of Master William Thorpe.

Yf he be so good a man, and so valyant in armes as it is sayde, he wyll nat refuse it for his ladyes sake: yf he do, it shall tourne hym to moche blame, for I shall repute whersoeuer I go, that for *cowardnesse* he hath refused to ryn with me one course with a spere. *Lord Berners. Froissart. Cronycle*, vol. i. ch. 324.

Truly I think, ne vain is my belefe,
Of Goddish race some ofspring should he be:
Cowardry notes hartes swarued out of kind.
Surrey. Æneis, book iv.

Therefore he that professed himselfe chiefe prelate of religion, being more wicked than all other, blameth the *cowardship* of them that with deliberate counsell, did further debate the matter, whether Jesus were to be put to death or nay.
Udall. John, ch. xi.

This sleep betokens that which *cowardeth* a man's heart from ghostly comfort, and to stand in the same through a deceauable sleepe is this that lets a man of the blisse of heauen.
Fox. Martyrs. Letter of William Swinderby.

They went about with impudent words to smother his vertues, rayling at him as a slow-backe and *coward*, and delicate carpet knight, and one that knew how with trim words to set out deedes that were amisse. *Holland. Ammianus*, fol. 93.

Why do I name the lordly creature man?
The weak, the mild, the *coward* woman can,
When to a crown she cuts her sacred way,
All that oppose with manlike courage slay.
Cowley. On the Government of Oliver Cromwell.

And seeing none behold us, there will be much less any one to take notice of our *cowardize*; the rather because I heard oftimes the curate of our village, whom you know very well, preach, That he which seeks the danger, perisheth therein.
Skelton. Don Quixote, vol. i. book iii. ch. vi. p. 157.

Thou, that in counsels dost abound, O Laertiades,
Why stayst thou? why thus *cowardlike*, shunst thou the honour'd prease;
Take heed thy backe take not a dart.
Chapman. Homer. Iliad, book viii. fol. 107.

One of the souldiers when Harold was slaine did cut him in the legge with a sword, for the which deede Duke William, blaming him for his *cowardlinesse* and shameful act, put him out of the wars. *Stow. Harold. Anno* 1016.

So those men that are prodigal of their lives in base quarrels, peradventure would be *cowardly* enough; if either public service, or religion did call for their help; I scarcely believe any of them would die martyrs, if the times so required it.
Hale. Rem., p. 94.

His dishonesty appeares, in leauing his friend heare in necessity, and denying him, and for his *cowardship* aske Fabian.
FAB. A *coward*, a most deuout *coward*, religious in it.
Shakspeare. Twelfth Night, fol. 270.

Griev'd to behold his bear pursued,
So basely by a multitude,
And likely to fall not by the prowess,
But numbers of his *coward* foes.
Butler. Hudibras, part i. can. 3.

COWARD. — COWL.

He saw that, by the drowning of the master, (whom he himself treacherously knocked on the head, as he was swimming for his life) by the flight and dispersion of others, and *cowardly* patience of the remaining company, all was abandoned to his pleasure.
Cowley. On the Government of Oliver Cromwell.

Both Hockleyhole and Marybone,
The combats of my dog have known:
He ne'er, like bullies, *coward-hearted*,
Attacks in public to be parted.
Gay. The Mastif. Fable 34.

ARCHB. By heaven, 'tis Harry's plot to fright you hence,
That *coward-like*, you might forsake your friends.
Dryden. The Duke of Guise, act v.

Now, pusillanimous, deprest with fear,
He checks his virtue in the mid-career;
And of his strength distrusted, *coward* flies
The contest, though impowr'd to gain the prize.
West. Nemean Odes. Ode 11.

——— When honour'd urns
Of patriots and of chiefs, the awful bust
And storied arch, to glut the *coward-age*
Of regal envy, strew the public way
With hallow'd ruins.
Akenside. Pleasures of Imagination, book ii.

Cowardice, considered as distinct from the occasional panic mentioned above, is that habitual temper and disposition, which disqualifies from opposing the dangers and difficulties, which it is our duty or interest to combat. Every indication of *cowardice* is an indication of culpable and unmanly fear.
Cogan. On the Passions.

To which the loose improvidence, the *cowardly* rashness, of those who dare not look danger in the face, so as to provide against it in time, and therefore throw themselves headlong into the midst of it, have exposed this degraded nation, beat down and prostrate on the earth, unsheltered, unarmed, unresisting.
Burke. Speech at Bristol previous to the Election.

COWER, *v.* Fr. *couver*; (It. *covare*; Lat. *cubare*;) to brood, sit on or *cowre* over. See COVE.
To stoop or bend down, to stoop or shrink from.

——— Vp in an balke
There lurked, and there *coured* she
For poore thing where so it be
Is shamefast.
Chaucer. The Romant of the Rose, fol. 118.

They were compelled to lie many together, smothered vp in little tents and cabines, remaining there all day long, *cowring* downwards, and doing nothing, where before they lived in the country in a fresh open air and at liberty.
Sir Thomas North. Pericles, fol. 147.

As thus he spake, each bird and beast behold
Approaching two and two, these *cowering* low
With blandishment, each bird stoop'd on his wing.
Milton. Paradise Lost, book viii. l. 350.

——— See there with countenance blithe
And with a courtly grin the fawning hound
Salutes thee *cow'ring*, his wide opening nose
Upward he curls, and his large sloe-black eyes
Melt in soft blandishments, and humble joy.
Somervile. The Chase.

Pride rears her giant form aloft and treads
Injurious o'er the *cow'ring* gazers heads.
Cambridge. The Scribleriad.

COWL, *n.* / COWL, *v.* / COWL-STAFF, / CO'WLED, *adj.*

"*Cagoule*, a monk's hood or *cowle*." Norman. Cotgrave. It. *cuculla*; Sp. *cogulla*; Lat. *cucullus*; (Gr. κύκλος, *circulus*. Vossius.) A. S. *cugle*. *Pars vestis a tergo pendentis*, with which the head was covered against the weather.

And therefore all our monkes, whose profession was neuer to eate fleshe, set vp the Pope & tooke dispensations, both for the fast, and also for their straite rules, & made their straite rules as wide as y^e^ hoodes of their *cowles*.
Tyndall. Workes, fol. 230.

Who coming young to reign protected by the peers
Until his non-age out: and grown to riper years,
Prov'd upright, soft and meek, in nowise loving war;
But fitter for a *cowl*, than for a crown by far.
Drayton. Poly-olbion, song 17.

For so did two of their kings, Ethelrald and Kenred; the one *cowled* in Bradney and the other in Rome.
Speed. The Saxon Kings of Mercia. Anno 582.

Our *cowle-man's* foresay'd actor so
Preuailed that the fryer
In pulpets durst affirme him king,
And aids for him requier.
Warner. Albion's England, book viii. ch. xxxviii.

In vain the solemn *cowl* surrounds her face,
Vain all her bigot cant, her sour grimace.
Brown. Essay on Satire, part ii.

They will tell you that they see no difference between the idler with a hat and a national cockade, and an idler in a *cowl* or in a rochet. *Burke. On the Revolution in France.*

CO-WO'RKER, / Co-WO'RKING. } A fellow-worker, a fellow-labourer.

When we consider this, it will be then plain to us, that God doth nothing without an *vs*; and that his Son was an original *co-worker* with him in all things; which he accordingly sheweth unto him: for it follows, That doth the Son likewise.
Goodwin. Works, vol. ii. part ii. fol. 7.

I will answer thee speaking to this objection, so far as it relateth to the point in hand, viz. the power of God *co-working* within us.
Id. Ib. vol. iv. part iii. fol. 113.

And therefore in all acquired gifts, or habits, such as are those of philosophy, oratory, or divinity, we are properly συνεργοι *co-workers* with God. *South. Sermons*, vol. iii. p. 415.

For God is the principal agent, who first moves us, and then we act and move, and are said to be *co-workers* with God: and so are these words to be understood. *Id. Ib.* vol. vi. p. 401.

Again, the state of religion under the Gospel is the Kingdom of Heaven; Christ our Lord is the King of the Church; it he visibly governeth and ordereth by the spiritual governors as his substitutes and lieutenants, whence they peculiarly are styled his ministers, his officers, his stewards, his legates, his *co-workers*.
Barrow. Sermon 25.-vol. iii.

COWRY, (*Kaurī* supposed to be derived from the Sanscrit word *Kapurdda*,) is the Indian name of the shells commonly called Blackmoor's teeth, which are used as the small currency, not only in India but on all the southern coasts of Asia and Africa, and have thence been denominated *Cypræa Moneta* by Conchologists. In Bengál 4 karis (as they are there named) =1 gandà, 80 karis=1 pan, and 320 karis=1 ana or dām, so that 1 tākā or rupee=27*d.*=5120 karis. They are said to be found in the greatest abundance on the shores of the Maldive Islands.

COXCOMB, / Co'XCOMBLY, / Coxco'MICAL, / Coxco'MICALLY. } "A *cock's-comb* or *coxcomb*, because it groweth gagged like the teeth of a *combe*. English-men used to call vain and proud braggers, and men of mean discretion and judgement, *Coxcombes*. Because natural idiots and fooles haue and still do accustome themselves to weare in their cappes, *cockes* feathers, or a hat with a necke and head of a *cock* on the top, and a bell thereon, &c. and thinke themselves finely fitted and proudly attired therewith." Minsheu. See COCK. It is also applied
To the head or skull alone.

There ben white gees, rede aboute the nekke, and thei han a gret crest, as a *cokkes-comb* upon hire hedes.
Sir John Maundevile. Travaile, ch. xix.

Well geue him cloth and let the foole
goe like a *cockescome* still.
Drant. Horace. Epistle to Sceua.

COX-COMB.

A collier being drunk jostled a knight into the kennel, and cried, 'Twas his humour; the knight broke his *coxcomb*, and that was his humour. *Ford. The Sun's Darling*, act iii. sc. 1.

COXCOX.

Hir. Nay, who can say any citizen is an ass for loading his own back with money till his soul cracks again, only to leave his son like a gilded *coxcomb* behind him.
Massinger. The Virgin Martyr, act ii. sc. 3.

Cal. My looks terrifie them, you *coxcombly* ass you! I'le be judg'd by the company whether thou hast not a worse face than I.
Beaumont and Fletcher. The Maid's Tragedy, act i. sc. 1.

It is so far otherwise that a general fame for falsehood in this kind is a recommendation; and the *coxcomb* loaded with favours of many others, is received like a victor that disdains his trophies to be a victim to the present charmer. *Spectator*, No. 157.

For though hereditary wealth, and the rank which goes with it are too much idolized by creeping sycophants, and the blind abject admirers of power, they are too rashly slighted in the shallow speculations of the petulant, assuming, short-sighted *coxcombs* of philosophy. *Burke. Reflections on the Revolution in France.*

But this *coxcombically* mingling
Of rhymes, unrhyming, interjingling,
For numbers genuinely British
Is quite too finical and skittish. *Byron. Remarks.*

COXCOX, the Noah of the Mexican nations, is represented (Miscellanies, Plate XXVIII.) as floating on the waters of a deluge, under the peak of a mountain, on the trunk of a tree or ark.

In other Mexican paintings he is described as having saved himself, after having floated a long time on the waters, by reaching the top of the high mountain Colhuacan. Besides Coxcox he bore also the name *Teo-cipactli*, (Divine fish or sea monster;) the hieroglyphic *Cipactli* being one of the signs of the Mexican Calendar, answering to the Capricorn of the Greeks, which the Hindùs and other nations of the East call the sea monster in their Zodiacs. It is represented by the Mexicans as a sort of fish or crocodile with a horn in its front, and was therefore called *Espadarte*, or the *Narwhal*, by the early Spanish writers Gomera and Torquemada. The Capricorn of the Hindùs, depicted as the fish *Maharan* or *Souro*, and so celebrated in their mythology, is a fish with the head of an antilope. In Humboldt's *Antiquities of America*, a very learned and highly interesting discussion is given concerning the singular resemblance of the Hindù and Mexican divisions of time. The characters of the days of the Mexican month correspond with the signs of a Zodiac in use from the remotest antiquity in the East, whilst the system of division of periods into great cycles, and the denomination of the years that compose them, is also singularly coincident with those employed by the Japanese and the people of Thibet.

In the *Codex Vaticanus*, No. 3738, copied in 1566 by a Dominican monk, (Pedro de los Rios) is a Mexican drawing representing the four great destructions and renovations of the world; and in one compartment is drawn the age of water, which is the fourth cycle of Aztec cosmogony; Coxcox is depicted with his wife Xochiquetzatl, seated on a trunk of a tree covered with leaves, and floating amidst the waters of the deluge. In Mechoacan the Indians preserve a tradition, according to which Tezpi, as they call Teo-cipactli, or Coxcox, embarked in a spacious *acalli* or ark, with his wife, his children and several animals, and grain, the preservation of which from the deluge was of importance to mankind. When the great spirit, Tezcatli-poca, ordered the waters to withdraw, Tezpi sent out the zopilote (*Vultur aura*) from his bark. This bird, which fed on carcasses, never returned, on account of the number it found strewed on the recently dried parts of the earth. Tezpi then sent out other birds, one of which, the humming-bird, alone returned, holding in his beak a branch covered with leaves. Tezpi, thus observing that fresh verdure began to clothe the soil, quitted his bark near the mountain of Colhuacan.

COXCOX. — COY.

In another Mexican painting, preserved in the Borgian Museum, at Veletri, (fol. 24, MSS. No. 98,) Coxcox, the Mexican Noah is singularly depicted, as in venerable old age, with a long beard, and was thus named Huehuetonaca-teo-cipactli, from *hue* old, *tonacayo* our flesh, *teott* God, and *cipactli* sea monster; and this same figure is again found in folio 60.

COY, *v.*
Coy, *adj.*
Coy-bred,
Co'ying,
Co'yish,
Co'yly,
Co'yness.

Fr. *coy*, or *quoy*, corrupted from the Lat. *quietus*; It. *cheto*; Sp. *quedo*. "Fr. *quoy*; quiet, still, peaceable, restful, ease-affecting, husht, calm." Cotgrave; to which may be added Affecting ease, affecting indifference, affecting reserve.

To *coy*, to quiet, to still, to soothe, to calm, to assuage, to appease, to caress, to allure, to entice, to *decoy*.

Coy, in Chaucer, frequently, says Junius, is, "Silent, quiet, modest, bashful; to *coie*, to play the demure and modest man; also, to assuage, to appease.

Cambinhoy beres him *coy*, þat fendes whelp,
þer with craft he has þam raft, it may not help.
R. Brunne, p. 281.

Of her smiling she was simple and *coi*.
Prior. Prologue.

Ye ride as still and *coye*, as doth a maide
That were new spoused, sitting at the borde.
Clerk of Oxenford's Prologue, v. 2.

Jason is as *coye* as is a maide,
He loketh pitously, but naught he saied.
Chaucer. Hypsipyle, v. 181.

He kept him *coye* and eke prive,
Lest that in him she hadde se
Any lite foly continuance,
For she knew all the olde daunce.
Id. The Romant of the Rose, v. 4297.

In worde nor dede nedeth him not to *coie*.
Id. Prologue, v. 71.

He nist how best her hart for to *acoie*.
Id. Troilus, book v. v. 782.

How busie (if I loue) eke must I be
To pleasen hem, that tangle of loue, & demen
And *coyen* hem that they say no harme of me.
Id. Ib. book ii. fol. 162.

And oft eke him, that doth the heauens gide,
Hath loue transformed to shapes for him to base:
Transmuted thus, sometime a swan is he,
Leda to *coy*; and eft Europe to please.
Vncertaine Auctors. The Power of Loue ouer Gods themselues.

Some other when a bull,
some other time a showre
Of golden drops: as when he *coyde*
the closed nunne in towre.
Turbervile. To a late acquainted Friend.

But Phillida was al to *coye*,
For Harpalus to winne:
For Corin was her only joye
Who forst her not a pinne.
Vncertaine Auctors. Harpalus. Complaint of Phylidais.

So fares it, with oure fondlyng (lo)
though he desyres to go
And wolde this *coyithe* paramour,
vnbodden wende vnto.
Drant. Horace. Satyre 3.

COY — COZEN.

Who shall now lead ye fortunate? whose valor
Preserve ye to the glory of your country?
Who shall march out before ye, *coy'd* and courted
By all the mistresses of war.
Beaumont and Fletcher. Bonduca, act iv. sc. 3.

Pleasure is like a dog which being *coyed* and stroaked, follows us at the heels, but if rated and beaten off is driven away from us with ease. *Hall. Of Contentation*, vol. iii. fol. 519.

I argue not of her estate,
But set my rest on this,
That opportunitie can win
The *coyest* she that is.
Warner. Albion's England, book ii.

The mother's o'erjoying
Makes by much *coying*
The child so untoward.
Drayton. Ode to Cupid.

A yeare was past, and I past hope
Through *coyish* chaste denyall,
And yeat I could but not persist
In quest of further tryall.
Warner. Albion's England, book vi. ch. xxx.

Then while ye *coyley* stand
To hide me from those eyes,
Sweet, I would you advise
To choose some other fan than that white hand.
Drummond. Love suffers no Parasol.

By differing means both sexes grace their state,
I scorne men's *coynesse*, women's stoutnesse hate.
Stirling. Doomes-day. The sixth Hour.

As Eske her farth'st, so first, a *coy-bred* Cumbrian lass,
Who cometh to her road, renowned Ravenglass.
Drayton. Poly-olbion, song 30.

That smooth deceiving tongue of his can charm,
The *coyest* ear, the roughest pride disarm.
Fenton. Sappho to Phaon.

How long must Peneus chide in vain
His daughter's *coyness* and disdain?
Hughes. Apollo and Daphne.

Though, various as the flowers which paint the year,
In rainbow charms the changeful Nine appear,
The different beauties *coyly* they admit,
And to one standard would confine our wit.
Whitehead. A Charge to the Poets.

Though my opinion of your grace's integrity was but very little affected by the *coyness* with which you received Mr. Vaughan's proposals, I confess I gave you some credit for your discretion.
Junius. Letter 33.

COZ, a contraction of *cousin*, q. v.

Go now and seek the crowner, and lett him sitte o' my *coz*; for he's in the third degree of drink; hees drown'd: go looke after him. *Shakspeare. Twelfth Night*, fol. 258.

And though dear *coz*, no folks of taste
Their idle hours with you will waste,
Yet many a grist comes to your mill
Which helps your master's bags to fill.
Jago. Labour and Genius.

CO'ZEN, Co'ZENAGE, Co'ZENER, Co'ZENING. Minsheu derives this verb from the noun, *cousin*, q. d. to deceive any one *per speciem affinitatis*. Junius notices this Etymology, but prefers the Dutch, *koosen, lief koosen. blandiri, adulari*, to fawn upon, soothe or flatter. The primitive probably is the A. S. *costnian*, to try, to tempt; *costning*, trial, temptation. And ne gelædde thu us on *costnung*; And lead us not into temptation.

To entice, to allure, delude, deceive, defraud, cheat, (to chouse, q. v.)

COZE — CRAB

Whereupon when he had played the *cosining* mate with others, (for oftentimes deceit and lying are ioyned together, and he hath sufficiently proued himselfe to be a liar, by this triall of his wit,) peraduenture himselfe was beguiled by them whom he beforetime had defrauded.
Hakluyt. Voyage, &c. The true state of Island, vol. i. fol. 586.

And therefore let me beseech you to represent this condition to yourselves, and not any longer be flattered or *cousened* in a slow security: To day if you will hear his voice, harden not your hearts. *Hammond. Works. Sermon* 6. vol. iv.

If you stir far in this I'le have you whipt, your ears nail'd for intelligencing o' the pillory, and your goods forfeit: you are a stale *cozener*, leave my house.
Beaumont and Fletcher. The Scornful Lady, act iii. sc. 1.

The number of concealers are indeed a number of *cousteners* which the law may easily correct.
Hobbes. Dialogue on the Common Law.

It is true, he delivered it [the staff] into his hand, desiring that he would hold it till he had sworn; but that artifice was a plain *cousenage*, and it was prettily discovered: for the injured person, in indignation at the perjury, smote the staff on the ground, and broke it, and espied the mony. *Taylor. Rule of Conscience.*

In doctrine, and in discipline,
Rome hath, and now doth guide,
With still prouisoes from the laie
The Scriptures' light to hide,
Least should (as would, and cleerely doth)
Their *cosning* be espide.
Warner. Albion's England, book ix. ch. i.

All eyes were *cozen'd* by the borrow'd vest,
And Ajax (never wiser than the rest,)
Found no Pelides there; at length I came
With proffer'd wares to this pretended dame.
Dryden. Ovid. Metamorphoses.

But Christ was to be a light to the Gentiles, and there is no *cozenage* in the light, no fallacy in the day; wheresoever he shines, mists presently vanish, and delusions disappear.
South Sermon 3. vol. xi.

So some of these *coseners* of the king in their officers under him, were so touched in conscience, that they, privately some and some openly, made restitution to him.
Strype. Memorials. Edward VI. Anno 1553.

——— Great Xerxes on the stage
Of glorious war, amid the din of arms,
Can hear thy *coz'ning* artifice no more.
Glover. The Athenaid, book iv.

CRAB, *v* — A. S. *crabba*; Dutch, *krabbe*; Ger. *krabbe, krebs*; Fr. *écrevisse*. Wachter thinks, from the Ger. *krupen*; A. S. *creopan, reptare*, to creep. Other Etymologists from the Gr. καραβὸς; Lat. *carabus, cancri genus*. Junius thinks, that from this unpleasant little animal (*animalculo inamæno, horrente, minuci,*) various things bitter, difficult, rough, grim or gloomy, are in English called *crabbes* or *crabbed*, e. g. a kind of bitter and unpleasant apple; a *crabbed* look, a grim or gloomy look. Skinner derives the apple, *pomum sylvestre*, from the Dutch, *schrabben, schrappen*, to scrape, to bite; from its biting, sharp and rough taste; and *crabbed*, metaphorically, either from the hardness of the wood, or harsh taste of the fruit. To *crab* is,

CRAB, *n.*
CRAB, *adj.*
CRA'BBED, *adj.*
CRA'BBEDLY,
CRA'BBEDNESS,
CRA'BBY,
CRAB'S-EYES,
CRAB'S-HOUSE,
CRAB-TREE,
CRAB-TREE-CUDGEL,
CRAB-STICKS.

To imbitter or cause to be bitter, to be or cause to be difficult, harsh, sour, morose.

Ne dredè hem not, doth hem no reverence,
For though thin husbond armed be in maille,
The arwes of thy *crabbed* eloquence
Shal perce his brest.
Chaucer. The Clerkes Tale, v. 979.

Those nedest not to wrest good woorkes out of hym, as a man would wryng veriuce out of *crabbes* Nay they flowe naturally out of hym, as springes out of rockes.
Tyndall. Workes, fol. 10.

Such as with oten cakes in poor estate abides,
Of care haue they no cure, the *crab* with myrth they rost.
Vncertaine Auctors. The Pore estate best.

For whyies the hope of mine vnyolden herte
In endlesse toyles did labor for reliefe,
Came *crabbed* Chance and marrde my merry marte.
Gascoigne. Weedes. The Fruite of Fetters.

For there abideth and remaineth in vs yet of the olde Adam, as it were the stock of the *crabe-tree*, and euer among when occasion is geuen hym, shoteth forth his braunches and leues, budde, blossome, and fruit. *Tyndall. Workes*, fol. 90.

And 'tis easie to observe how age or sicknesse sowers and *crabbes* our natures.
Glanville. Preexistence of Souls, ch. iv.

Content, and if thou'lt come to my poor cote,
Although, God knows, my cheer be very small,
For wealth with me was never yet aflote:
Yet take in gree whatever do befall,
We'll sit and turn a *crab*, and turn a madrigal.
Drayton. Eclogue 5.

And with the sun doth fold againe;
Then iogging home betime
He turnes a *crab*, or turns a round
Or sings some merrie ryme.
Warner. Albion's England, book iv. ch. xx.

Methinks there is a kind of moral influence from faith on any wise and prudent heart, enough to enliven, and animate, and give it spirit against the force and threatnings of any the strongest temptation, and to encourage him in the most *crabbed*, uncouth, disconsolate undertakings of goodly obedience.
Hammond. Works. Sermon 1. vol. iv.

But in our daies they haue so acquainted themselues with the Irish, as they haue made a mingle mangle or gallimaufreie of both the languages, and haue in such medleie or checkerwise so *crabbedlie* iumbled them both togither, as commonlie the inhabitants of the meaner sort speak neither good English nor good Irish. *Holinshed. Ireland*, ch. i.

He [Appius Claudius] kept the same sower countenance still, the very same forwardnesse and *crabbedness* of visage, the same spirit of boldnesse in his appologie and defence.
Holland. Livius, fol. 85.

The mathematics with their *crabbedness* and intricacy, could not deter you, but that you waded through the very midst of them, and arriv'd to so excellent a perfection.
Howell. Letter 9. book i. sec. 1.

Persius is *crabby*, because antient; and his jerks, being particularly giuen to private customs of his time, dusky.
Marston. Scourge of Villainy.

It grows upon *crab-stocks*, and the lust itselfe is soure and unwholsome. *Taylor. Sermon* 19.

Yee have heard how humbly all good men alwaies have thought of themselues, and so thinke and iudge of themselves, are taught of God their Creatour by his holy word: for of ourselues we be *crab-trees*, that can bring forth no apples.
Homilies. Second part of Sermon, The Misery of Man.

CLOWN 3. Some shall have but a sour welcome of it, if my *crab-tree-cudgel* hold here.
Ford. The Sun's Darling, act v. sc. 1.

Your *crabbed* rogues, that read Lucretius,
Are against Gods, you know; and teach us,
The Gods make not the poet; but
The thesis, *vice versa* put,
Should Hebrew-wise be understood;
And means, the poet makes the God.
Prior. An Epistle to Fleetwood Shepherd, Esq. May 14, 1689.

As when the hungry *crab* in India's main,
Whose body two unequal legs sustain,
Intent some oyster's op'ning shell to spoil,
Moves to the gaping prey with awkward toil.
Cambridge. The Scribleriad, book iv.

What might have been well enough, and have been received with a veneration mixed with awe and terrour, from an old, severe, *crabbed* Cato, would have wanted something of propriety in the young Scipios, the ornament of the Roman nobility, in the flower of their life. *Burke. To a Noble Lord.*

This fruit, which is peculiar to the East Indies, is about the size of a *crab-apple*, and of a deep red-wine colour.
Cook. Voyage, vol. ii. book iii. ch. xi.

This, however, is certain, that at that time [moulting] they have no gall, but in its stead, the petrifaction called a *crab's-eye* is found. *Granger. The Sugar Cane*, book i. v. 342.

They should never be dressed till they have fed for some weeks in a *crab-house*, after being caught by the Negroes. *Id. Ib.*

This storm, which no soul can endure,
Requires a very different cure;
For such sour verjuice dispositions,
Your *crabsticks* are the best physicians.
Smart. Madam and the Magpie. Fable 10.

CRABRO, in *Zoology*, a genus of insects of the order *Hymenoptera*, family *Crabronites*. Generic character: antennæ, with the first joint long and cylindrical; upper wing with only one complete submarginal cell.

Type, *C. cribrarius*, Fab.

CRABRONITES, in *Zoology*, a family of insects of the order *Hymenoptera*, containing the following genera, *Crabro, Stigmus, Pemphredon, Mellinus, Alyson, Cerceris, Philanthus.*

The insects of this family are almost always black, with yellow bands or spots. Many of the males have the anterior legs furnished with a large scaly appendage, rounded at the edges, concave beneath, of a whitish or yellowish colour, and sprinkled with little transparent dots, which give it the appearance of being pierced with minute holes.

The females form little holes in the sand, in old wood, or in walls; they lay their eggs at the bottom, over which they deposit the larva of some insect, to form the nourishment of the future young, and then close the opening of the nest. The perfect insects are found about flowers, of which they suck the honey.

CRACK, or CRAKE, *v.* CRACK, *n.* CRA'CKER, CRA'CKLE, CRA'CKLING, CRA'CKNEL, CRA'CK-BRAINED, CRA'CK-HEMP, CRA'CK-ROPE. Dutch, *kracken*; Ger. *krachen*; Fr. *craquer*; It. *crocchiare*; Sp. *crurir*; all formed from the sound. Skinner. A source of Etymology, Wachter observes, not to be resorted to without necessity.

Crack is applied to the noise made, when any thing brittle partially bursts or breaks asunder; also, to the breach or separation itself; also, metaphorically, to bragging, i. e. *breaking* or bursting out, *sc.* in noisy threats or boastings, in clamorous pretensions. See to BRAG. And thus, to *crack*, is

To break or burst asunder partially; and consequently, metaphorically, to weaken, to injure, to destroy.

To send forth, utter or emit a sharp and sudden sound.

To brag or boast: in older authors written *crake*. Bale uses the expression *brag boasting*; and Chaucer, He *cracked bost*. See BRAG.

Crackle is a diminutive and frequentative of *crack*.

CRACK. *Cracknel*, a kind of cake, which, when broken, *edit crepitum*, sends forth a *crack*.

For which the wardein chidde and made fare,
But therof set the miller not at tare;
He *cracked* bost, and swore it n'as not so.
Chaucer. The Reves Tale, v. 3999.

It thinketh me, I sing as wel as thou,
For my song is both true and plaine,
And though I cannot *crakel* so in vaine
As thou doest in thy throte, I wat neuer how.
Id. The Cuckow and Nightingale, fol. 334.

What heauines did me pange
Wherwith my handes I wrange
That my senowes *cracked*.
Skelton. The Boke of Philip Sparow.

——————— Mynos hath assignde
Prometheus to the rack,
With hand and foote ystrecht awide
till all his limmes doe *crack*.
Turbervile. Of the Torments of Hell, and the Paines of Loue.

He says we are but *crakers*
He calleth vs England men
Strong harted lyke an hen.
Skelton. Why come ye not to Court.

Then cease for shame to vaunt,
and crowe in *craking* wise
Of her that least deserues to haue
her beauties fame arise.
Turbervile. The Louer against one that compared; &c.

These proud *crakes* can not there excuse you, nor yet help you.
Barnes. Workes, fol. 307.

If this be so, (as it is) then answere thou me, which art a Jewe, where be thy *crakes* become? They are vndoubtedly taken from the, and dispatched arte thou of them, synce the tyme that it hath pleased God, in the gospel of Christ to make all nacions equal.
Udall. Romaines, ch. iii.

When cutlers leaue, to sel old rustie blades,
And hide no *crackes*, with soder nor deceit.
Gascoigne. The Steele Glas.

If *crackling* cartes, if tauernes noyse,
if stifling dust disease the:
Auoyde the towne, and goe abrode.
Drant. Horace. Epistle to Sceva.

And fast some water fetch, some *cracklinge* fier brynge in their hand. *Phaer. Æneidos*, book xii. p. 280.

And whan the plate is hote, they caste of the thyn paste thereon, and so make a lytle cake in maner of a *crakenell*, or bysket, and that they eate to comfort with all theyr stomakis.
Froissart. Cronycle, vol. i. ch. xvii.

And take with thee ten loues and *cracknelles*, and a cruse of honye, and go to him. *Bible*, 1551. 2 *Kings*, ch. xiii.

I need not of honor or dignitie boast,
Or tell of my triumphes, or *crake* of my crowne:
The vaunt of vsurpers is void of renowne.
Mirrour for Magistrates, fol. 83.

Well, let all pass, and trust him who nor *cracks*
The bruised reed, nor quencheth smoking flax.
Donne. Letter to Ben Jonson.

When they were arrested, other of like cuill disposition began to *crake* and face. *Grafton. Henry VIII. The fourth Yere.*

In the meane time the stout bragges that are vsed by some, might well be spared: but we haue oftentimes seene greate clouds and small rayne, and heard great *crackes* of thunder, and (thanks be unto God) small harme done. *Whitgift. Defence*, fol. 44.

On the other, Rinaldo was a franke natured man, valient and courteous; Ferraw stout but too full of *cracking*, and thereby procuring himselfe enemies.
Harrington. Allegorie of Orlando Furioso, p. 413.

In the meane season, yea and at all times, let us learne to know ourselves, our frailty and weaknesse, without any *craking* or boasting of our own good deeds and merits.
Homilies. Second part of the Sermon of the Misery of Man.

He was a man of *crack'd brain*, great grand-son of Richard Fienes, of the ancient family of the earls of Bononia. **CRAC**
Camden. Elizabeth. Anno 1594.

As for the *crackers* of the brain, and tongue-squibs, they will die alone, if I shall not revive them. *Feltham. Resolve* 2.

'Twill heat the braine, kindle my imagination, I shall talke nothing but *crackers*, and fire-worke, to night.
Ben Jonson. Every Man out of his Humour, act v. sc. 4.

These barking whelps were never good biters,
Ne yet great *crakers* were ever great fighters.
Edwards. Damon and Pithias.

VIN. Come hither *crack-hempe*.
BION. I hope I may choose, sir.
Shakspeare. Taming of the Shrew, fol. 226.

Such short composures as are these at best, are but as fire-works at tryumphs. They *crackle*, shine and offer at heaven itself, but in a moment they fall and are extinct unprofitably.
Feltham. Letter 9.

The Pye's *crackling*, and rumour horrible
Of the contending wind, as it doth beat
The sea.
Shelton. Don Quixote, vol. i. book ii. ch. vi.

SPA. Very, very well: if I die in thy debt for this *crack-rope*, let me be buried in a coal sack.
Ford. The Fancies, act i. sc. 3.

The *crack-rope* Sancho, had enough to do to hold laughter, hearing his master's madness, that was so delicately gull'd.
Shelton. Don Quixote, vol. iii. book ii. ch. x.

By these, the springs of property were bent,
And wound so high, they *crack'd* the government.
Dryden. Absalom and Achitophel.

I do not meane that mysterious, extraordinary (and of late so much studied) book, called the Revelation, and which, perhaps, the more it is studied the less 'tis understood, as generally either finding a man *crack'd*, or making him so; but I mean those other writings of the prophets and apostles, which exhibit to us a plain, sure, perfect, and intelligible rule.
South. Sermons, vol. ii. p. 422.

When the night was fallen as black as ever I saw it, it soon began to clear up with the most violent flashes of lightning, as well as *cracks* of thunder, that I believe have ever been heard in our age and climate.
Sir William Temple. Memoirs, vol. ii. p. 273.

I remember, in particular, after having read over a poem of an eminent author, on a victory, I met with several fragments of it upon the next rejoicing-day, which had been employed in squibs and *crackers*, and by that means celebrated its subject in a double capacity. *Spectator*, No. 85.

He was then a lively, hopeful young man, getting into that company, and into their notions he became a *crack-brained* enthusiast. *Strype. Memorials. Charles II. Anno* 1679

For lo! the board with cups and spoons is crown'd,
The berries *crackle*, and the mill turns round.
Pope. The Rape of the Lock.

We'll see when 'tis enough, when both eyes out,
Or if it wants the nice concluding bout;
But, if it lies too long, the *crackling's* pall'd,
Not by the drudging-box to be recall'd.
King. Art of Cookery.

To which I may likewise add all those little *cracklings* of mirth and folly that are apter to betray virtue than support it.
Spectator, No. 382.

In vengeance rous'd the soldier fills his hand
With sword and fire, and ravages the land,
A thousand villages to ashes turns,
In *crackling* flames a thousand harvests burns.
Addison. The Campaign.

I have in store a pint or two of wine,
Some *cracknels*, and the remnant of a chine.
Swift. A Town Eclogue, 1710

CK. — DLE.

Then, as many of them as could get round me began to squeeze me with both hands, from head to foot, but more particularly on the parts where the pain was lodged, till they made my bones *crack*, and my flesh become a perfect mummy.

Cook. Voyage, book iii. ch. iii. vol. vi.

He was grave, but not sullen; would *crack* a joke, talk on different subjects, and endeavour to understand us and to be understood himself.

Id. Ib. vol. iii. book ii. ch. ii.

It has a method of obtaining its food by putting the point of its bill into a *crack* or the limb of a large tree, and making a quick tremulous motion with its head, it occasions a sound as if the tree was splitting, which alarms the insects and induces them to quit their recess.

Pennant. British Zoology. The Woodpecker.

They are more frugal of their glass than the English, and will often, in houses not otherwise mean, compose a square of two pieces, not joining like *cracked* glass, but one edge laid perhaps half an inch over the other.

Johnson. Journey to the Western Islands.

Freedom—at that most hallow'd name
My spirits mount into a flame,
Each pulse beats high, and each nerve strains,
Even to the *cracking*.

Churchill. The Ghost, book iv.

CRACOW, (the ancient *Cracovia* and *Corrodunum*,) and once the Capital of Poland, founded by Craco I., in 700, is now a free Town, surrounded by a small similarly free district. It stands on an extensive plain near the banks of the Vistula, about 150 miles south of Warsaw, near the borders of Austrian Galicia. Like many of the other cities in the eastern parts of Europe, it contains an extensive, but thinly peopled space. Its high walls, steeples, antique towers, and spacious area, give it an imposing appearance on a distant prospect; but on passing the gates, the illusion vanishes, and ruins and empty openings meet the eye in every direction. Its buildings, however, are still superior to those of Warsaw. Its Cathedral is noted as the former depository of the crown and regalia of Poland, as the cemetery of some of the Polish Kings, and as the prescribed place of their coronation. It is the See of a Bishop, who was also formerly the Duke of Sivaria, and one of the richest prelates in Poland. Cracow at the most flourishing period of its existence contained a population of nearly 80,000 individuals; but prior to the peace of 1814, it had only about 25,000 inhabitants. After participating in the changes consequent upon the dismemberment of the Kingdom of Poland, it was made a free City by the Congress of Vienna, with a surrounding District of 413 square miles, and 61,000 inhabitants; and the late change has been favourable, both to its commercial prosperity and population. Many of the inhabitants are either Germans or Jews; the suburb of Casimir being almost exclusively inhabited by the latter. Cracow is well situated for trade, and the chief articles of its commerce are wood, fish, Hungarian wines, wax, honey, and linen. The government is Republican, and the religion Catholic. The University of Cracow was founded in 1364, and is considered as the first in Poland; it consists of four faculties, and possesses the superintendence of a number of Grammar-schools dispersed through the City. Latitude 50° 4′ north, longitude 19° 57′ east. Coxe's *Travels in Poland*, &c.

CRA'DLE-CLOTHES,
CRA'DLE-TIME.

A. S. *cradele*. Lye thinks it a diminutive of *cræt*. Skinner is more decided: cræt, *carrus, addità terminatione diminutivâ*: q. d. carrulus, i. e. *vehiculum infantile*. *Cræt* or *Cart*, (by transposition,) from the A. S. *cyrran*, to turn. See CART.

CRADLE, — CRAFT.

To place, to lay, to repose, to nurse;—in a cradle, and generally, (and met.) to lay, to repose, to nurse.

——— To rocke þe *cradel*.

Piers Ploukman. Vision, p. 151.

And ys twei brepren were brogt out of *cradel* vnnethe.

R. Gloucester, p. 107.

In her *credille* ȝing telle Inglond scho game.

R. Brunne, p. 243.

And up he rose, and softely he went
Unto the *cradel*, and in his hand it hent,
And bare it soft unto his beddes fete.

Chaucer. The Reves Tale, v. 4210.

Fabius Quintilian in his booke where he doth instruct and teach an oratour, willeth his beginning and entrance to be taken from the *cradle*.

Vives. Instruction of a Christian Woman, B.

And so her *cradled* child the moist-red eyes
Had never shut, nor slept, since it saw light.

Donne. The progress of the Soul.

For from my *cradle* (you must know that) I
Was still inclin'd to noble poesy.

Drayton. Elegies. To Henry Reynolds.

Hercules: whose famous acts
We orderly shall tell,
Whereof the first but not the least,
In *cradle-time* befell.

Warner. Albion's England, book i. ch. iii.

See how he feeds th' Iberian with delays,
To render us his timely friendship vain:
And, while his secret soul on Flanders preys,
He rocks the *cradle* of the babe of Spain.

Dryden. Annus Mirabilis, st. 8.

The bed of sickness (after cares and strife)
Is weak man's *cradle* for a second life:
Death's but a moment; and before we die,
We touch the threshold of eternity?

Harte. Religious Melancholy.

——— Foster'd thus
The *cradled* hero gains from female care
His future vigour; but, that vigour felt,
He springs indignant from his nurse's arms.

Mason. The English Garden, book i.

CRAER, see CRAYER.

CRAFT, *v.*
CRAFT, *n.*
CRA'FTILY,
CRA'FTINESS,
CRA'FTLESS,
CRA'FTY,
CRA'FTSMAN,
CRA'FTSMASTER.

A. S. *cræft*; Ger. and Swed. *kraft*; power, strength. Wachter thinks the word was originally *krat*, from the Gr. κράτος. Of this Ihre doubts. Junius observes that *craft* is frequently used by Chaucer, for *strength*. Transferred from bodily strength to mental; and thus applied, to Art, to Science, to any trade, requiring art or dexterity; and (by the fault of those possessed of this mental power) applied to the power of deceiving, to artifice, to fraud. And see the Quotation from Hobbes.

Somner;—*Cræft, Ars scientia, peritia, artificium*, craft, art, science, skill, cunning; though now adayes it have almost lost the primitive signification, and for the most part is taken for fraud or deceit. *Cræftig*, crafty; *cræft-lease*, i. e. craftless; *cræftlic*, craftely. *Craftes-man*, in Chaucer, a skilful man.

"Trade or *Craft*" is a common legal and mercantile expression; and certain small vessels employed in *trade* are called *Craft*; i. e. *crafters* or *traders*; for by this latter name they are also signified.

CRAFT.

——— Mỳ werkes were þe beste
And konnyngest of mỳ *craft*.
Piers Plauhman. Vision, p. 89.

And colers of *crafty* werke. *Id. Ib.* p. 9.

But of his *craft*, fro Berwike unto Ware,
Ne was ther swiche an other pardonere.
Chaucer. The Prologue, v. 694.

Than I anon did all my *craft*
For to ydrawen out the shaft.
Id. Romant of the Rose.

——— ——— Sire, trusteth me,
And ye him know al so wel as do I,
Ye wolden wondre how wel and *craftily*
He coude werk, and that in sondry wise.
Id. The Chanones Yemannes Tale, v. 16071.

For in the lond ther n'as no *craftesman*,
That geometrie, or arsmetrike can,
Ne portreiour, ne kerver of images,
That Theseus ne yaf him mete and wages
The theatre for to maken and devise.
Id. The Knightes Tale, v. 1899.

This Dedalus, whiche fro his youthe
Was taught, and many *craftes* couthe,
Of fethers, and of other thynges
Hath made to flee diuers wynges
For hym, and for his sonne also.
Gower. Conf. Am., book iv. fol. 69.

For he abood a citee hauynge foundamentis whos *crafti* man and maker is God. *Wiclif. Hebrewis*, ch. xi.

The voice of harperis and of men, of musik and syngynge with pipe and trump schal no more be herd in it. And ech *craftie* man and ech *craft* schal no more be sounden in it.
Id. Apocalips, ch. xviii.

And the voyce of harpers, and musicions, and of pypers, and trumpetters, shal be herde no more in thee: and no *craftesman*, of whatsoeuer *craft* he be, shal be founde any more in the.
Bible, 1551. *Reuelacion*, ch. xviii.

Now iudge good reader, whether I haue rayled, or sayde the trueth, but all this doth Rastell leaue out full *craftely*: he reciteth full diligently both the head and tayle, but the middle, which expoundeth the matter wil he not let you see.
Frith. Workes, fol. 67.

That we hence forth be no more chyldren, wauerynge and caryed wyth euery wynde of doctrine, by the wylynes of men and *craftynes*, wherby they laye awayte for vs to deceiue vs.
Bible, 1551. *Ephesians*, ch. iv.

——— You haue made faire hands
You and your *crafts*, you haue *crafted* faire.
Shakspeare. Coriolanus, fol. 24.

To prudence if you add the use of unjust or dishonest means, such as usually are prompted to men by fear or want; you have that crooked wisdom, which is called *craft*; which is a sign of pusillanimity. *Hobbes. Of Man*, part i. ch. viii.

For thus, the king violated that oath which he ought most religiously to have sworn to, but that he might not seem openly and publicly to violate it, he *craftily* adulterated and corrupted it; and lest he himself should be accounted perjur'd, he turn'd the very oath into a perjury.
Milton. In Answer to Salmasius's Defence of the King.

The LL. of the senate and people set all other matters aside, and had a principall care above all things, to create consuls as soone as possibly they could. and such, especially, whose vertue and valour should be thought secured and safe enough, from Punicke *craftinesse* and deceitfull traines.
Holland. Livius, fol. 653.

It [covetousness] devours young heirs, and grinds the face of the poor, and undoes those who specially belong to God's protection, helpless, *craftless*, and innocent people.
Taylor. Holy Living. Of Covetousness, sec. 6.

——— And straight her tongue had teeth in it that wrought
This sharp invective: who was that (thou *craftiest* counsellor
Of all the Gods) that so apart, some secret did implore?
Chapman. Homer. Iliad, fol. 12.

Craftesmen, for gettinge of theyr lyvinge, very muche leysure have not. *Ascham. Works*, p. 79. CRAFT

This [damnation] is certain and this is more then all the torments, pains and miseries that this world hath, though Phalaris and his *craftsmaster* were alive againe to invent new ones. CRAG
Mede. Works. Discourse 44. book i.

Right against the bay, where the Dutch fort stands, there is a navigable river for small *craft*.
Dampier. Voyage. Anno 1688.

And does not Christ himself call Herod, that murdered John Baptist, fox? a beast notable for his *craft*, as well as for sucking of blood. *South. Sermon* 2. vol. ii.

This was necessary caution in those days and so it is in ours, there being as much slight and cunning *craftiness* used now. to pervert and draw men from the church, if not much more than ever. *Bishop Beveridge. Sermon* 51

Although you'll find it a hard province,
With all your *crafty* frauds and covine,
To govern such a numerous crew,
Who, one by one, now govern you.
Butler. The Lady's Answer.

They judged that the tide arose about four or five feet, and that boats and such *craft* might at high water enter the river, which seem'd to be pretty deep and broad within.
Cook. Voyage, vol. iv. ch. vii. book iii.

The light of the truth indeed is sure to expose the vanity of all those popular systems and prejudices, which are to be found in every country; derived originally from error, fraud and superstition; and *craftily* imposed upon the many, to serve the interest of a few. *Middleton. Miscellaneous Works*, pef. i. viii.

CRAG, *n.*
CRA'GGED, *adj.*
CRA'GGEDNESS,
CRA'GGINESS,
CRA'GGY.

Minsheu from Cam. Br. *cracg, rupes.* Skinner derives both from Ger. and Dutch, *kraeghe, jugulus, cervix*, (the neck,) *ut summitas montium, quæ sæpius præruptis rupibus obsita est.*

Rough or rugged, broken, jagged, points or projections of a rock; it is also applied to The neck; to a part of a neck of mutton.

Upon the which also stode
Of squared stone, a sturdy wall
Which on a *cragge* was founded all.
Chaucer. Romant of the Rose, fol. 135.

Takynge of vthers oute of our realme, prisonet and cheinet by the *cragges* in your cõtre.
Hall. Henry VIII. The fifth Yere. A Letter of the Kyng of Scottes.

Now being come to the watering place the sayde Wednesday by breake of day we tooke the fort of the fountaine which were certaine *cragges* or rocks hanging ouer the same, betweene which there was an opening or deepe valley through which this water runneth. *Hakluyt. Voyage, &c. Francisco de Vlloa.*

My sortes are such, that waying well my trueth,
They might prouoke the *craggy* rocks to rueth
And moue these walles with teares for to lament,
The lothsome life wherein my youth is spent.
Gascoigne. A Lady being both wronged by, &c.

That skip from *crag* to *crag*, and leap from rock to rock.
Drayton. Poly-olbion, song 30.

——— On a huge hill,
Cragged and steep, Truth stands, and he that will
Reach her, about must and about it go;
And what the hill's suddennesse resists, win so.
Donne. Satire 3.

That *craggedness* or steepness of that mountain, maketh many parts of it in a manner inaccessible.
Brerewood. On Lang. p. 176.

Besides, they may often seeme broken, when they are not, because they are formed *craggy* by nature, or the wind, and the raine having long since beaten away the earth from them, may thus have left them to appeare the very true anatomies of themselves.

Verstegan. Restitution of Decayed Intelligence, ch. iv.

The *cragginess* and steepiness of places up and down is a great advantage to the dwellers, and makes them inaccessible.

Howell. Instruction for Travellers, p. 132.

The island being generally mountainous, steep, and *craggy*, full of risings and fallings; 'tis very troublesome travelling up and down in it, unless in the cool of the mornings and evenings.

Dampier. Voyage. Anno 1699.

We had, as at all other places, some difficulty in landing. The *crags* were irregularly broken, and a false step would have been very mischievous. *Johnson. Journey to the Western Islands.*

At last through many a bog and lake,
Rough *craggy* road and thorny brake,
It led the easy fool, till night
Approach'd, then vanish'd in his sight.

Wilkie. The Boy and the Rainbow.

CRAIL, a Royal Burgh, Parish, and Seaport of Scotland, situated near the north entrance of the Frith of Forth, in the county of Fife. It stands on a steep shore, about two miles south-west of Fifeness, and has a small harbour, to which a few sloops and fishing boats belong. The town itself chiefly consists of two parallel streets, but several of the houses are falling into decay. The charter of a Royal Burgh was granted to Crail by Robert Bruce; and it still joins with Kilrenney, East and West Anstruther, and Pittenweem in sending a Member to the Imperial Parliament. An ancient Priory formerly stood at the east end of the town, the ruins of which are still visible. Near the harbour are also to be seen the remains of a Castle, in which David I. frequently resided, and wherein he finally closed his career. The Church is an ancient structure; and the neighbouring bulwark, called the *Dane's Dyke*, is supposed to have been built by the Danes, after their defeat at the water of Leven, in 874. The population of Crail, at the last census, gave 1854 inhabitants.

CRAKE, see CRACK.

CRAM, "A. S. *cramman, farcire, infarcire, densare, constipare*, to stuff or cramme." Somner.

To stuff or stow, to pack or press, or squeeze close; to stuff or stow, *sc.* the stomach with excess of food.

Yet they which *cram* them so with worldly pappe,
And neuer care to giue them heauenly crummes,
Shall see them sterue, when happe of hunger comes.

Gascoigne. From the Glasse of Gouernement. Chorus to Act i.

But whā we be coũsailled to liue tẽperately, & forbere our delicates & our glotonye, y^{t} will we not here of: but fain wold we haue sõe medicines, as purgacions & vomites, to pul doun & auoid y^{t} we *cram* in too much.

Sir Thomas More. Workes, fol. 100.

CEL. Spur bravely
Your firie courser, beat the troops before ye,
And *cramb* the mouth of death with executions.

Beaumont and Fletcher. The Humorous Lieutenant, act i. sc. 2.

For pigeons flesh he seems not much to care;
Cramm'd chickens are a more delicious fare.

Dryden. The Hind and the Panther.

Those endless readers may *cram* themselves in vain with intellectual food, and without real improvement of their minds, for want of digesting it by proper reflections.

Watts. Works. Of Books and Reading, vol. v. part i. ch. iv.

CRAMBE: Mr. Gifford quotes, in explanation, "A play at short verses, in which the word is given, and the parties contend who can find most rhymes to it." *Dict.* Strutt (*Sports and Pastimes*, iv. 4,) explains *Crambo* similarly.

So that nobody hath reason to call it a *crambe*, who considers, that there are multitudes, even of scholars that have never seen or heard of any thing of this nature.

Glanville. Preexistence of Souls. Preface, book iv.

Where every jovial tinker, for his chink,
May cry, mine host, to *crambe!* Give us drink.

Ben Jonson. The New Inn, act i. sc. 1.

His similes in order set,
And every *crambo* he could get,
Had gone through all the common places,
Worn out by wits, who rhyme on faces.

Swift. To Stella.

Or (if he strives true patriots to disgrace,)
May at the second table get a place,
With somewhat greater slaves allow'd to dine,
And play at *crambo* o'er a gill of wine.

Churchill. Independence.

Whether ye guide the poet's hand
To easy diction or the grand,
Forbid the Gallic namby pamby
Here to repeat its crazy *crambe.*

Byrom. Remarks on a Pamphlet, &c.

CRAMBE, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferæ*. Generic character: pouch leathery, globular, without valves, deciduous, containing one seed; the four longer filaments with a tooth near their summit.

Thirteen species, natives of both hemispheres, *C. maritima*, the Sea Kale, is a native of the sea shores of England.

CRAMBITES, in *Zoology*, a family of insects of the order *Lepidoptera*, consisting of the following genera, *Botys, Aglossa, Galleria, Crambus, Alucita.* From the division *Tinea* of the Linnæan *Phalænæ.*

CRAMBUS, in *Zoology*, a genus of insects of the order *Lepidoptera*, family *Crambites.* Generic character: tongue distinct; the four palpi very conspicuous; the inferior ones very large; wings incumbent, giving a cylindrical appearance to the insect.

Type, *C. carneus*, Fabr.

CRAMP, *v.*, CRAMP, *n.*, CRAMP, *adj.*, CRA'MPISH, CRAMP-RINGS, CRAMP-STONE. Ger. *krumpen*, contrahi, h. e. *per lineam curvam in se retrahi*; Swe. *krympa, krumpna*; Dutch, *krimp*, indigence, narrow or contracted circumstances; *krimping*, contraction; *kramp*, spasm, because it contracts. Wachter.

To contract or draw together, to constrain, to confine, restrain or restrict; to hold or keep in confinement, bonds or fetters, to bind or fetter.

Cramp, the adjective, crabbed, difficult.

For *Cramp*, the spasmodic disease, see the Quotations, from Holland's Pliny, and from Bacon.

Ich catche ȝe *crampe.*

Piers Ploughman. Vision, p. 91.

To ground dead she falleth as a stone,
Crampisheth her limmes crokedly.

Chaucer. Of Queene Annelida, fol. 256.

And many a sodayn *crampe* my hart hath pinched so,
That for the time my sences all, felt nether weale nor wo.

Vncertaine Auctors. The Complaint of a Louer, &c. for pitie.

The *crampe* dyuers nightes grypeth hym in hys legges.

Sir Thomas More. Workes, fol. 1434.

HUNT. ——————— Pish! then I see
Thou dost know the flexible condition
Of my apt nature; I can laugh, laugh heartily
When the gout *cramps* my joints.

Ford. Perkin Warbeck, act iii. sc. 2.

CRAMP. — CRANE.

The *cramp* (no doubt) cometh of contraction of sinews; which is manifest in that it cometh either by cold, or drinesse; as after consumptions and long agues; for cold and drinesse do (both of them) contract and corrugate. We see also, that chafing a little above the place in pain, easeth the *cramp*, which is wrought by the dilatation of the contracted sinews by heat.

Bacon. Natural History, Cent. 10. sec. 964.

Say the *crampe* take either feet or legges, plucking and stretching the sinews when one is in bed, the next way to be used, is to set the feet upon the floore or the ground where the bed standeth: or put case the *crampe* take the left side, then be sure with the right hand to catch hold of the great toe of the left foot; and contrariwise, if the *crampe* come to the right leg, do the like by the right foot. *Holland. Plinie*, vol. ii. fol. 305.

HILL. What do you think
Were best to apply to it? a *cramp-stone*, as I take it,
Were very useful.

Massinger. The Picture, act v. sc. 1.

I lived in the same house with a learned and judicious person, that was subject to be paralytic, who being frequently tortured by violent *cramps* was ordinariiy and spedily relieved by wearing or handling the tooth of a true hippopotamus or river horse.

Boyle. Of the Reasonableness of Specific Medicines, &c.

There are many receipts in the book, to dress *cramp-fish*, that numb the hands of those that touch them.

King. The Art of Cookery.

The late king used to bless *cramp-rings*, both of gold and silver, which were much esteemed every where; and when he was abroad, they were often desired from him.

Burnett. History of Reformation. Anno 1547.

Admire the magic of his [Dryden's rhyme] song,
See how his numbers roll along,
With ease and strength and varied pause,
Nor *cramp'd* by sound, nor metre's laws.

Lloyd. On Rhyming.

The flesh of this bird [Grebe] is excessively rank; but the fat is said to be of great virtue in rheumatic pains, *cramps*, and paralytic contractions.

Pennant. British Zoology. The Great Crested Grebe.

The power of curing CRAMP, by means of rings consecrated on Good Friday, was a gift formerly claimed by the Kings of England; the origin of this custom is thus given by Hospinian:

Reges denique Angliæ consueverunt, in die Paresceues, multâ ceremoniâ sacrare annulos, quemadmodum Pontifices Romani sequente die Cereum Paschalem, quos qui gerunt Comitiali morbo non vexari creduntur. Mos hic inde natus est quod in Templo Westmonasterii annulus multâ veneratione per diem servatus fuit, quòd salutaris esset membris stupentibus *valeretque adversus Comitialem morbum, quum tangeretur ab iis qui ejusmodi tentarentur morbis. Annulus hic allatus dicitur Eduardo Rege a quibusdam Hierosolymâ venientibus, quem ipse diu antea pauperi clam dederat, qui præ amore quem ergo D. Joannem Evangelistam habebat, eleemosynam petierat, sicut Polyd. Vergilius scribit*, lib. 8, *Hist. Angl.* Hospinian, *de Orig. Festor. Christian.* fol. 61, B.

CRAN — CRAN

Among the Harleian MSS. (295, fol. 1196,) is a letter from Lord Berners, at that time Ambassador to the Emperor Charles V. "to my Lord Cardinall's Grace from Saragoze the xxi. day of June, 1518," in which he says, "If yo^r g'ce rememb'r me w^t some Crampe-ryngs ye shall do a thing muche looked for; and I trust to bestowe theym well w^t Godd's g'ce who ev'more p's've & encrease yo^r moost rev'ent astate."

In the *Breviarie of Health*, by Andrew Board, *Doctor of Phisicke, an Englishman*, 1598, (fol. 106.) The Cramp is distinguished into four kinds, the last of which only (*spasmos*) is that to which the name is commonly applied. This, he says, principally affects the amorous; "it may come also thereon debilitie and weaknes for lacking of bloud and nature, and it doth come after a great sicknesse. The Kyng's Majestie hath a great helpe in this matter in hallowing Crampe-ringes, and so given without mony or peticion. Also for the Cramp take of the oyle of Lillies and Castory, if it doe come of a cold cause. If it doe come of a hot cause anoynt the sinewes with the oyle of Water Lillies, and Willowes, and Roses. If it doe come of any other cause, take of the oyle of Euforbium, and Castory, and of Piretory, and confect a compound all together, and anoynt the place or places with the parts adjacent."

Dr. Pegge, in his posthumous work, *Curialia Miscellanea*, (164) has given "The Ceremonies of blessing Cramp-rings on Good Friday, used by the Catholick Kings of England." It consists of certain Psalms and Prayers, besides the recital of which the King rubbed the Rings between his hands.

CRANE.

CRANE, *v.* } A. S. *craen*; Dutch, *kraene*; Ger.
CRA'NAGE. } *kran* Gr. γέρανος, *grus animal*, and *grus machina*.

Γέρανος *aiunt, quia γῆν ἐρευνᾷ, terram scrutatur, semina in arvis satis legens, est enim ex σπερμολόγοις, aut quia* cinereo *et* cano *est colore, tanquam senex,* γέρων. Martinius.

Applied to a machine for raising weights, as well as to the bird, both in the ancient and modern languages.

The king not being risen out of his bed, did giue one commandement that I should ride on hawking with many gentlemen of his court, and that they should shew me so much game and pastime as might be: which was done, and many *cranes* killed.

Hakluyt. Voyage, &c. M. Authony Jenkinson.

——— Crying out, in comming rudely on
At all parts like the *cranes* that fill, with harsh confusion,
Of brutish clanges all the aire: and in ridiculous warre,
(Eschewing the unsuffered stormes, shot from the winter's starre)
Visite the ocean, and conferre the pygmie souldiers death.

Chapman. Homer. Iliad, book iii. fol. 37.

——— Such clang is heard
Along the skies, when from incessant show'rs
Escaping, and from winter's cold, the *cranes*
Take wing, and over ocean spread away;
Wo to the land of dwarfs! prepar'd, they fly
For slaughter of the small pygmæan race.

Cowper.

Let the pleasure as it came with meat so also pass away with it. Philoxenus was a beast, ἤυξατο ποτὲ τὴν γέρανε αὐχένα ἐχεῖν, he wished his throat as long as a *crane's* that he might be long in swallowing his pleasant morsels. *Taylor. Sermon* 16. part i.

To this objection it might serve for a full answer, that there are other duties then customs and subsidies due upon the landing of wares; for example, wharfage, *cranage*, scavage, and such like.

State Trials. The great cause of impositions on an information in the Exchequer.

 The use of the Crane, considered simply as an elevator, appears to have been known in very early ages. Quintus Curtius asserts, that the Tyrians employed it during the siege of their Capital by Alexander, about whose time it is stated to have been invented; long afterwards Callias introduced it on a small scale at the siege of Rhodes, where it failed in its intended effect; and Caristion appears to have employed it at the siege of Samos. Archimedes at the siege of Syracuse produced his celebrated machine, which Polybius states to have been compounded of a powerful lever and balance. There are but few passages in any of the ancient authors which allude to the acting principle of the Crane; and wherever a description is attempted, it is evident, from the confused and vague mode of expression, that the writers did not comprehend it. Hence we are only able generally to infer the form and principle of the machine from the effects which we find described, after due allowance for exaggeration. From these descriptions it may be concluded, that up to, and after, the time of Archimedes, the Crane was merely an application and extension of the primitive contrivance for raising water from a well, by means of a bucket appended by a slender pole to the lighter end of a large beam or lever, movable on an upright post, or trunk, as its fulcrum, (*κηλώνειον, tolleno.*) Such, doubtless, was the mode of drawing water from the wells of the Patriarchs, and such may still be seen in many parts of England. Or to trace the invention to a simpler origin, the common fishing rod, which, it may be presumed, was among the very early contrivances in society, may have first suggested the idea. Follard considers the *louve* of the French fishermen to have resembled the ancient Cranes.

Upon this principle most of the military machines of the Greeks and Romans, known under the general name of *γέρανος* and *corvus*, were formed; and although the latter word is very extensively applied, both to machines and to the objects suspended from them, it would rather seem that the different names arose from the variety in the application of this same principle; wherein the substitute for the water bucket was varied as an object of attack and defence, from a simple obstruction of the effects of the battering ram to the formidable elevator of Archimedes. Among these, the construction of the double *Corvus* was very similar to the mode of elevating the drawbridge of a fortress.

The Crane used in the Ancient Theatres, wherein the stage apparatus was very complicated, was, probably, of this kind; being a contrivance for introducing the Deities upon the scene, either suspended by concealed cords, or sustained on artificial clouds. (See Bulenger, and Julius Pollux.) When these enormous levers, particularly those of Archimedes, were put into action, there is reason to believe, that the extremity to be depressed was acted upon by the united efforts of many men hauling ropes dependent from the extremity of the beam; and a lively idea of this action may be formed, by those who have seen the crew of a collier discharging her cargo in the River Thames.

Hitherto the substitute for the *jib* of the Crane was the capability which the balanced lever possessed of moving horizontally; but the Consul Duillius constructed for his vessels a machine, which, from the description, must have been very similar to the French *Grue*; and the offensive appendage to this was, from its effects, called the *Corvus Demolitor*. The *Carchesium*, mentioned by Vitruvius as being within the capacity of every soldier to make, was, probably, a lever moving simply on a fulcrum. The machines described by Vitruvius were for raising stones for building; he says they were also applied to the lading and unlading of vessels. One of them is expressly mentioned to have been put in motion by men walking within a large wheel, raising the weight with the aid of a combination of pulleys; the action of the capstan is described in another of the machines; and a third seems to have combined both: but in no one of these was there any jib or horizontal movement.

Cranes are of two kinds: in the first, called the Rat-tailed Crane, the whole machine with the load turns upon a strong axis; in the second kind, the jib alone turns.

Up to the middle of the last century Cranes were commonly constructed as follows; the principal member was a strong upright beam firmly fixed in the ground, and sustained by eight arms coming from the extremities of four pieces of wood laid across, through the middle of which passed the foot of the beam. About the middle of the upright the arms met, and were mortized into it; the top ended in an iron pivot, on which was borne a transverse piece advancing out to a good distance, something after the manner of a Crane's neck, (whence, probably, the name of the machine.) This projecting piece is now called the jib. The middle and extremities of the jib were again sustained by arms from the middle of the upright; and over it came a rope or cable, to the end of which the weight was fixed; the other end of the rope was wound about a barrel attached to a wheel, which, when turned, (commonly by means of men walking upon the inside of the rim of a wheel,) drew the rope, and this heaved up the weight, which might afterwards be applied to any side or quarter by the movement of the transverse piece on its axis.

The *Walking Crane* (as it is termed when the machinery is put into motion by men *walking* within or upon a wheel) was formerly in almost universal use in this country, particularly with the men *within* the wheel; and dreadful accidents continually occurred to the labourers employed, from the reaction of the machinery. Many skilful mechanics have turned their attention to the subject, with a view to devise a machine safer and more powerful than the common Walking Crane; and the Society of Arts annually offer their gold medal for improvements in this respect.

One of the largest and simplest of these Walking Cranes is erected in the Navy-yard at Brooklyn, in the State of New York. It is full thirty feet in diameter, and about four feet wide, admitting two men only abreast, who, with ease, draw up from the water heavy pieces of fir timber along an inclined plane, a distance of several hundred feet, without lifting them from the ground; the friction, and the smallness of the angle of ascent, prevent the timber from slipping back, when the motion of the wheel is stopped.

The Crane may be considered as a combination of the wheel and axle, and the pulley; and in its construction, the two most important *desiderata* are, to proportion the force employed to the weight to be raised, and to guard against accidents arising in the lowering of the burthen.

Mr. Padmore, of Bristol, made some of the first im-

CRANE. provements in Cranes, which were followed up by the late Mr. Ferguson, who in his *Lectures* has described several; and machines constructed on the principles suggested by these gentlemen, are still in use in many of the London warehouses.

Desagulier, in his *Philosophical Experiments*, has described several improvements on the Crane, and observes that Mr. Padmore was the first who combined the ratchet wheel and the brake; the brake is a lever pressing the arc of a circle strongly upon a wheel fixed to the principal axis of the wheel-work, to regulate the descent of bodies.

To Mr. Padmore is also due the merit of having first affixed cogs all around the outside of the walking wheel, and applying a trundle to turn it, which increases the power as much as the number of cogs in the wheel, is greater than the number of staves in the trundle. By a ratchet wheel with a catch Mr. Padmore provided against the great wheel running back by the force of the weight, even if all the men in the wheel should cease walking. By this, and the contrivance of the brake, heavy weights were enabled to be let down without danger.

Mr. Ferguson invented a Crane with four different powers, adapted to different weights. In this, trundles, with different numbers of staves, are applied to the cogs of a horizontal wheel with an upright axle, round which is coiled the rope that draws the weight. A winch is fixed to the axis of either of these trundles, and applied to the one or the other, according as the weight is smaller or larger. While in action the ratchet teeth of a wheel slip round below the catch that falls into them, and prevent the wheel from running back, and detain the weight in any part of the ascent, when the hold is quitted from the winch. If very heavy burthens are to be raised, additional action is given by the application of handspikes shipped into a circular drum upon the vertical axle below the great horizontal wheel.

Mr. Gottlieb, about thirty years since, constructed large Cranes for warehouses, one of which was put up in a sugar-house in Old Gravel-lane; and another on the same principle is erected in the East India Docks, where it is used for shipping and unshipping the masts of Indiamen, &c.

In these one or more horses turn an upright axis, carrying a horizontal cog wheel of large circumference, which turns a wheel of half the diameter, having an upright axis turning with it and carrying another wheel of the same diameter with upright cogs. Sometimes the upright axis carrying these two wheels is continued to the ground, and has a capstan head to receive handspikes, to regulate or increase the force. The upper wheel, with vertical cogs, turns two pinions, of diameters in the proportion of eight to five (in inches) both fixed in one axis. The latter turns a wheel of similar diameter to the wheel with vertical cogs, to which is fixed the rope, barrel, and a wheel at the opposite axis. The rope winds round the barrel, and comes over a sheaf wheel at the requisite height, and over a pulley in the head of the jib, drawing up the weight suspended by a hook at the extremity. When the goods are raised to the proper height, (which is known by marks on the rope,) the pinion turning the barrel wheel is thrown out of gear, and the machinery is stopped by a catch or pall falling into a ratchet wheel fixed on the axis of the barrel wheel.

Mr. Smeaton erected, in 1789, a Crane for the wool quay of the Old Custom-house; and the contrivance of the grooved barrel appears to have been first applied to this Crane by that great engineer. The grooved barrel is of infinite use, as the chain, substituted in heavy works for the rope, otherwise lies in such a manner that the action of the load tends to twist open the links laterally. Mr. Gilbert Gilpin was rewarded in 1803 by the Society of Arts for the same invention, and he has well described the advantages of the chain and grooved barrel. From his experiments it appears, that the pulleys used with a chain should be of cast iron, and deeply grooved to receive the vertical links. The horizontal ones are also confined between the lips of the pulley. The barrels should be of cast iron, and grooved of dimensions similar to the grooves of the pulleys—at such a distance as to admit the chain to bend without the danger of a double coil: by these means the links are retained at right angles with each other, the only position for free and uniform motion. The links of the chain should be as short as possible, to increase their flexibility. Brass guards should also be rivetted to the blocks, with grooves opposite to those in the pulleys, to prevent the chain slipping out. Mr. Gilpin found, from a variety of experiments, that the flexibility of a chain, reeved in grooved pulleys and over grooved barrels, to the flexibility of a rope, to be as thirty-one to twenty-six; and to the flexibility of a chain reeved in the ordinary way, as thirty-one to twenty-four. CRANE

To Mr. Ferguson is due the application of the vertical rollers above the axis or upper gudgeon of the jib; their use is to let the rope bend upon them, as the jib is turned to either side. The rollers ought to be so placed, that if the rope be stretched close by their outermost sides, the half thickness of the rope may be perpendicularly over the upper gudgeon of the jib; for then the length of the rope, between the pulley in the jib and the axle of the great wheel of the machine, will be always the same, in all positions of the jib; and the jib will consequently remain in any position to which it may be turned. Almost all the jibs of Cranes on the outside of the London warehouses are constructed in this mode; the wheelwork of the Cranes being generally at a distance in the interior building. A very great increase of friction, however, ensues by the angle in which the rope is bent; and consequently, rapidly wears it out. Mr. Bramah invented a jib to obviate this inconvenience. The support for his jib is a hollow pipe or column, firmly fixed by a square flanche bolted to beams in the ground; the rope for the Crane passes through this pillar. The jib of the Crane has two sockets fitting to the pillar, so that it can turn all round. A pulley is fixed on the back of the jib, and its edge hangs just over the centre of the column. The Crane rope, after going over the pulleys, passes down the hollow column, and goes round another pulley to convey it to the Crane-work. This ingenious contrivance does not, however, appear to have been so extensively adopted as might have been anticipated. When the chain is used instead of the rope, the old method is equally in use.

A simple Crane, whose power is very great, is still much used; it consists of a frame-work having a strong beam supported horizontally, ten or twelve feet from the ground, on the top of several vertical posts, braced with stays, &c. At the extremity of the

CRANE. horizontal beam, next the part whence the goods are to be moved, the upper pivot of the jib is supported; the lower pivot resting on a post in the ground. The jib, is a triangular frame of wood, the perpendicular sides moving upon the pivots as a vertical axis of motion. Near the upper end of the perpendicular post of the jib, a beam proceeds at an angle of 90° or more, but never less, forming the upper side of the triangle; the third side, or hypothenuse, is a strong brace, proceeding from near the foot of the perpendicular post, towards the extremity of the upper beam, from which extremity the weight is suspended by a rope passing over a pulley: the other end of the rope is wound round a vertical roller or capstan turning on pivots, one of which is supported by the horizontal beam first mentioned; the other on a post in the ground. The capstan is turned by long horizontal levers, capable of taking many men to it at once, or, in some cases, horses. The levers being of a great length, in proportion to the diameter of the windlass, the power of the machine is very considerable, and is doubled by the application of a pair of blocks, or pulleys, at the jib.

A very safe application of the principle of the walking wheel to a Crane was the subject of a patent to Mr. Hardie, in 1803, viz. the placing of the men upon the outer circumference of the wheel. The treadmills now used as a substitute for prison labour, are only extensions of this principle to a large scale; and these being well known, a description of Mr. Hardie's Crane is not necessary. Some of the Cranes of this kind, erected by Mr. Hardie, at the East India warehouses, were placed on the top floors so as to allow the Crane rope to drop directly down from the barrel in front of the loop-holes; and at the upper floors, where the shortness of the rope diminishes the swing of the goods, a sliding platform was provided immediately under the floor of the warehouse, which one man, by pulling a cord, drew in and out with the greatest ease, to receive and deliver the goods by a truck at the loop-hole. The part of the warehouse floor immediately above the sliding platform, consisting of a thin plate of cast iron, allowed the truck to run off in any direction without obstruction. A jib thus became unnecessary, and a saving of one man's labour in five was attained by getting rid of the friction of the pulley, besides what was gained by accelerating all the movements at the loop-holes.

Mr. Robert Hall, of Brasford, contrived a compound barrel, consisting of two cylinders of different radii, to be applicable as a Crane or windlass for raising weights; this allows the body to stop in any part of its progress, without a ratchet wheel and catch, as the two parts of the rope pull on opposite sides of the barrel.

Mr. Hall is also the ingenious inventor of a method of expanding the set of bars parallel to the axis of a Crane, by which means the velocity of the rope in raising weights may be increased or diminished, in proportion to the load to be raised.

The rope, in this case, instead of coiling round a cylinder, is wound over a reel consisting of two flat circular pieces, or plates, forming each end of the reel, and held fast on the axis or spindle by pins. The outer circular plate of each end of the reel has a spiral groove cut in it, and the inner circles have each eight radial grooves, or mortices, cut quite through them: the outer plates have also an iron tube made fast to them by a flanche or collar. When the parts are all joined, the axis passes through these tubes, connecting the ends of the reel. In fixing the transverse bars of the reel, the tenons at each of their extremities slide in the mortices of the inner circular plates; the smaller ends of the tenons going fairly through the inner plates, and entering the spiral grooves of the outer plates. The inner and outer circular plates are locked together by a catch, the stationary part of which is kept in a notch on the edge of the outer plate. When the diameter of the reel is to be enlarged, or diminished, the inner circular plate is kept in one position by a mechanical contrivance, and the adjustment is made by lifting the catch from the notch of the outer end plate to be disengaged; the winch moving the Crane is then worked; and the outer plate only turned round, and the tenons of the cross bars (being prevented from being carried round with the outer plate, by the mortices of the inner plates through which they pass being stationary) are obliged to change their distance from the axis by the spiral groove sliding over them, while they are able to move nearer or further from the axis by sliding in the radial grooves of the inner end plate. It is proper to remark, that the tenons must be cut so that the outside of all the bars next the rope shall be at an equal distance from the centre. CRANE.

Among other ingenious machines which have been brought forward by the patronage of the Society of Arts, is the Crane of Mr. Abraham Andrews, of Higham Ferrers, which weighs the body suspended at the time it is raising. The jib of this Crane is placed upon a horizontal beam movable upon a centre, a short distance from the bearing of the upright of the jib; and at the other extremity of the horizontal beam weights are placed. The distance of the centre of suspension of the horizontal beam, from the bearing of the upright, being to the distance from the centre of position to the other extremity of the horizontal beam in any given proportion; the weight placed at that extremity, determines that of the body suspended from the end of the jib in the same proportion.

Much of the moving power of the common walking Crane is lost, by not being able to employ the additional weight of the men working them; this advantage appears to have been insured, in some degree, to mechanists in Germany many years since, by causing the labourers to walk upon an inclined plane turning upon an axis. In Bockler's *Theatrum Machinarum*, an immense number of curious applications of wheels to turn machinery are described; and from some of these, probably, Mr. James Whyte, of Chevening, prepared his Crane, the prime mover of which is a circular inclined plane moving on a pivot, and carrying round with it an axis, over which the rope raising the weight is coiled. The supposed advantages of this Crane were simplicity, comparative small friction, consequent durability, safety, and variety of powers; its safety being insured, as it can move only while the workmen are pressing on a gripe lever attached to it. By the labourer walking nearer or further from the centre, smaller or larger weights may be raised, as is required.

Notwithstanding these advantages Mr. Whyte's Crane derives less use than might be wished from the weight of the man or men, for a great part of that weight lies

CRANE. directly upon the plane, and has no tendency to produce motion. If it is constructed on a small scale, the power applied is unequal, and the barrel too small for a large rope; and when large it is unwieldy and very apt to get out of order, as has been found by experience. A variety of other objections might be pointed out, but it is not considered necessary, as walking Cranes are now every where getting out of use, however ingenious in their construction.

The common method of lowering goods by the brake and brake wheels, even with the assistance of a counter weight, is liable to accidents to the men and to the goods also, when consisting of fragile articles. Mr. Hardie, whose Crane we have already described, has invented an ingenious method, to obviate these defects, which he calls a *lowering regulator*. Plate XXX., *Miscellanies*, fig. 5, is a section of the regulator; fig. 6, is an elevation of one end of the regulator: the same letters of reference being put to the corresponding parts in these figures.

a a is a cast iron box fixed to the floor *b*, divided into two compartments, each ten inches long, one of four and the other of two inches diameter; these are both filled with oil, a liquid not subject to any material change by frost, or they may be filled with water in summer and mild weather, and some spirituous liquor in frosty weather. The two cylinders communicate with each other by *c* an aperture at their top, and *d* an aperture at their bottom; the smaller compartment having a cock *e* with its axle passing through the side of the iron box, guarded by a stuffing-box; *f* is a quadrant, with notches fixed at its end, to receive *g* the iron claw, which keeps the cock in its proper situation, and shows the extent of its aperture when opened. The larger compartment has a piston *h*, with its rod passing through *i*, the top of the iron box (guarded here also by a stuffing-box) and passing through a guide; this rod is connected with a joint moved by a crank, which is turned by a pinion *p*, of about six teeth; and this pinion is moved by a wheel, of a size suited to the diameter of the barrel of the Crane, and the weight of the goods commonly lowered: this latter wheel is fixed to the axle of the Crane by a simple mode of connection, which admits of it being disengaged during the operation of rising; it is also provided with the barrel rope and counterweight, which are commonly used for the purpose of winding up the slack Crane rope on the barrel of the Crane, to be ready to repeat the operation of lowering.

If the cock *e* were quite shut, the oil or other liquid confined between it and the piston would prevent the piston from moving, and of course hinder the goods hanging from the wheels, &c. connected with *p* from descending; but if the cock were opened a very little, the oil would pass freely through it, and would therefore allow the piston *h* to move up and down slowly, and the goods to descend slowly also; and, in like manner, a further opening of the cock will permit the load to descend with greater velocity: thus the cock, by being more or less opened, gives the precise velocity desired to the descent of the goods, whatever their weight may be. When a small pinion, turned by a winch, is applied to the tooth wheel, occasionally employed to turn the pinion of the crank, one man with ease raises the goods an inch or two, in order to be swung from the floor preparatory to lowering; the natural defect of the winch, as a raising instrument, being of no consideration in such case, where the goods are raised merely to clear the floor: so that this Crane and lowering apparatus possesses a much higher degree of perfection in lowering than any of the other Cranes. The means afforded of regulating it to lower either small or great weights with facility, expedition, and safety, and without depending, during the operation, on the precarious attention and management of a man, render it far preferable to the hazardous and limited mode of lowering goods by the brake; while, with respect both to safety and great saving of labour, it obviously surpasses the modes of lowering by the capstan and the walking wheel, which require nearly the same number of men to lower, that they take to raise any weight. CRAN

Another kind of walking wheel Crane, formerly very common, has the barrel for the rope horizontal, and a large vertical wheel fixed on it. This is made of two wheels fixed on an axis at a distance apart, and united so as to form a large hollow drum. Several men get into this wheel, and by constantly walking upwards on the inside, give it a tendency to revolve and wind up the rope on the barrel. Some representations of ancient carriages show the progressive movement to have been obtained by similar wheels.

Many other constructions of wheel-work are in common use for Cranes. When they are turned by a winch, it is proper to apply a fly wheel to the axis, both to equalize the efforts of the labourer who turns it, and in case he should let go, to prevent the load from running down with dangerous velocity. It is convenient to have several powers to a Crane of this kind, in order to adapt it to the different burthens to be raised. This is best done by employing a train of several wheels, each turned by a pinion smaller than itself. Thus, suppose the barrel on which the rope or chain winds to be twelve inches diameter, a cog wheel of ninety-six teeth should be fixed on the end of it; this is turned by a pinion of twelve levers; on the same axis with this, is a wheel of thirty-two teeth moved by a pinion of eight, situated on a third axis, which should carry the fly wheel. A winch of one foot radius can be applied to any of these three axes in the Crane, and will give three different powers. Thus, if it be applied to the gudgeon of the barrel, it will double the power of the labourer, because the winch describes a circle which is twice as large as the barrel on which the chain winds. If the winch is fixed on the end of the axis which carries the pinion of twelve and wheel of thirty-two, it will give a purchase of sixteen times. And, lastly, when the winch is applied to the pinion of eight, the efforts of the labourer will be multiplied sixty-four times. This simple mechanism is rendered very complete, by fixing a fly wheel upon the axis of the pinion of eight, to prevent all danger of accidents, for which purpose it is more effective than a ratchet wheel, and requires no attention. The spindles of all the wheels are made capable of sliding endways, for the purpose of disengaging the whole from each other at pleasure, that when the wheels are not employed there may be no unnecessary friction in turning them round.

A Crane mounted on four trucks, capable of removal from place to place, was employed on Ramsgate pier for lifting stones used in the building, and is extremely well adapted for such a situation, as it requires no

 fixture, and will enable four men to take up four tons without any danger of upsetting; which is a sufficient power for the purposes to which it was applied. It was designed and executed by Mr. Peter Kier. Its base consists of a cast iron frame, nine or ten feet square, and about two tons weight, supported on four cast iron wheels, one pair of which are fixed on a common axle, which moves round on a centre fixed to one side of the frame. This axle has an arm projecting across beneath the frame to the opposite side, where a rack or segment of a wheel is fixed on it, engaging a pinion on the top of the axis of which a winch is applied. By turning this pinion it twists the wheels round upon their centre, to steer the Crane when moving from place to place. A vertical cast iron shaft, weighing twenty-three hundred weight, is erected on the centre of the iron frame, and is supported by oak braces stepped into boxes cast out of the iron frame at its angles, so as to form a very strong perpendicular column, round which axis the whole Crane traverses. The weight of the framing and wheel-work is supported by a steel pivot, or gudgeon, on the top of the shaft; and is guided by a collar embracing the shaft between the braces and the point of support. The framing of the jib consists of a long beam, bearing a pulley at the extremity, resting on the pivot of the upright pillar in the middle and the other end supporting the frame for the wheel-work. Into this beam are framed uprights, suspending a platform on which the men who work the Crane stand. The jib is braced by a diagonal stay, and a cross piece, or strut, to prevent its bending.

The figure of this Crane bears so close a resemblance to the *Grue* and *Gruau* of the French, as to induce a belief that it was copied from it. In the third volume of Follard's *Polybius*, a wood-cut is given of a French *Grue* precisely resembling Mr. Kier's movable Crane, except the carriage.

Mr. Bramah has applied the hydrostatic principle of obtaining power in several ways to the raising of weights; and it has been frequently employed in powerful Cranes, but more particularly when a very heavy weight is to be raised a small height. The hydrostatic principle is applied to the working of a Crane by the injection of water from a small pump into a large Cylinder, which is fitted with a piston beneath which the water is injected, the piston having a rack attached to it, for the purpose of turning a pinion upon the axis of a large drum wheel or barrel. The pump has valves to prevent the return of the water. The power of the cylinder is in proportion to its size, compared with the pump; for if the diameter of the cylinder be six inches, and the diameter of the piston of the small pump, or injector, only a quarter of an inch, the proportions between the two surfaces or ends of the pistons, will be as the squares of their diameter, which are as 1 to 24. Therefore the areas will be as 1 to 576; and supposing the intermediate spaces between them to be filled with water, any force applied to the small piston will operate on the other in the above proportion. And the force of any machine acting upon this principle can be increased *ad infinitum*, either by extending the proportion between the diameter of the injector and the great cylinder, or by applying greater power to the lever actuating the small pump.

The greatest advantages of the hydrostatic principle is, that its power can be transmitted to any distance, and in any direction, by means of pipes: practical objections however interpose, and the general adoption of the hydrostatic principle to Cranes has not been followed. The late Mr. Heriot, who organized the Thames Police, put forth this principle to the world in a crude state; but to Mr. Bramah, either as an original inventor or an improver upon Mr. Heriot's idea, is due the mechanical perfection of the application. It would not be possible to give a full explanation of Mr. Bramah's Crane without Plates, and we have reserved our graphic illustrations for machines of a more practical and more general use.

Cranes have been generally constructed of timber, but cast and wrought iron have been lately introduced, and in some cases with advantage, as they are generally exposed to the variations of the weather.

Mr. Jessop, Junior, has projected several very ingenious Cranes, all upon the principle of the whole machine moving upon the pivots of the jib. The post turning in a collar fixed level with the ground, and the bottom part going down several feet below the surface, and turning in a socket, the lateral pressure being eased by friction rollers. Cast iron Cranes erected by this gentleman, have had the upright and the jib generally cast separately; and in the jib the stay or braces has usually been cast in one piece. A variety of these Cranes, capable of lifting weights from one to ten tons, are in use.

There is, however, no person in England who has devoted so much skill and attention to the perfection of Cranes as Mr. John Lloyd, of Nelson-square. Uniting much practical experience to complete theoretical knowledge, his Cranes are universally considered as the best constructed in England. We have been particularly favoured by this gentleman with permission to take drawings of some of his principal Cranes; but the variety to be found is great, and the reader desirous of pursuing the subject of this article deeper than our limits permit, will find ample gratification in paying a visit to Mr. Lloyd's well-regulated manufactory.

In Plate XXX., fig. 1 is the plan, fig. 2, side elevation, and fig. 3, end elevation, of Mr. John Lloyd's Wharf Cranes. The same letters of reference answer to all the figures. Fig. 4 is a perspective view of a larger Crane, having, however, precisely the same parts.

An upright iron post *a a*, is sunk about nine feet below the ground, and works on a pivot in a brass socket *b*, let into a circular iron toe plate *c*, this plate is sometimes of stone. The brick work of the well *d d* is built upon the plate, and the upright return of the plate keeps it steady, as more particularly shown in the plan, fig. 1. At the surface of the ground, the curb plate *e e* is securely bolted over the transverse timber covering the well, and a circular projection on the under side of the plate is turned true for the friction rollers *f f* to work against. The side rollers are for keeping the Crane steady and upright, the pressure acting against the front rollers. On the surface of the outer periphery of the curb, is a toothed ring *g*, into which works the pinion *h* at the end of the spindle *i*. This spindle has at its upper end a bevelled wheel *k*, moving horizontally, into which works a pinion *l*, placed upon a spindle, one end of which is fixed to the upper part of the carriage bolted

CRANE. to the Crane, and to the other end, on the outside of the collar, is attached a winch. This part of the machinery, fully shown in the perspective view, fig. 4, is for the purpose of trying the Crane upon its vertical axis of motion. This is easily moved round by the effort of one man, with the heaviest weight suspended to the Crane.

The upright post of the Crane, at about two feet from the ground, branches into two cheeks *m m*, which receive the opposite ends of the axles of the wheel-work. Immediately above the steering tackle the pall spindle *n n*, is passed through the cheeks of the Crane, having three pinions *o o o*, of different diameters. This spindle is made to slide endwise, either to throw the whole out of gear, or to vary the power of the machine, according to the weight to be raised. The spindle is retained in the required position by the pall *p* falling in between the collars *q*. At each end of this spindle, winches *r r* are attached of 18 inches radius. The pinions upon the pall spindle work into toothed wheels *s s s* of different radii. On the axis carrying these wheels a pinion *t* is fixed, which turns the wheel *u* attached to the grooved cast iron barrel *v*, round which the chain winds, and passes forwards over the jib, and round the wheel pully *w*; at the end of the chain *x* a ramhead hook *y*, is attached for lifting the weight; when the chain is slack it falls easily upon the rollers *z z*. The jib A is composed of sound English oak, about 12 inches square, 21 feet long, and somewhat tapering towards the lower end, which is let into a cast iron socket between the cheeks, the back of which socket is seen at B. Strong wrought iron straps C C clasp the timber, and have their ends passed through the socket at D D From the iron upright at the ground line, an oak brace E springs from a similar socket, and meets the jib a few feet from its upper extremity, and is mortized into it, and further secured by bolts from the iron rib on the upper side of the jib, passing through to a similar rib on the under side of the brace. An oak stay F is occasionally placed to strengthen the brace, and prevent it from springing.

The well is built with steps descending, as shown in fig. 2, for the convenience of getting at the toe to oil it, &c. and the top is covered with an iron plate for security, and to prevent the accumulation of dirt.

When the weight is to be lowered, the brake handle G is depressed in the upright chased hole, in which it moves vertically, and is secured by a pin passing through the holes in the cheek at H, and pressing against the brake ring in the usual manner secures the load at the necessary height, while the Crane is moved round to the required position.

In very heavy weights it is considered prudent to lower the load by the men at the winch moving the wheels gently backwards.

The Crane described is capable of lifting a weight of eight tons, and the jib describes a circle of 18 feet radius. Cranes are constructed on this principle to lift a weight of twenty tons and upwards by the effort of six men. The perspective view in fig. 6 will show the whole of the acting parts more completely. A lowering apparatus on the hydrostatic principle is sometimes applied to these Cranes. The one described in a preceding paragraph has been much improved by Mr. Lloyd; who, to Cranes made for very heavy burthens, applies a double apparatus, with the cranks at right angles, and a parallel motion, which enables the load to be let down uniformly by the alternate motion of the cranks, and an improved cock. CRAN

Plate XXXI., fig. 1, is a Crane used in Mr. Lloyd's Engine Manufactory, in which the jib is horizontal, with a rack on the top, upon which works a traveller and carries a double block, moved upon the rack either by a winch applied at the head of the spindle at *a*, or otherwise as convenient. The upright has the lower gudgeon let into a block on the ground, and the upper one moving in a beam of a building. The Crane is worked by a cross lever acting upon a pinion which drives the barrel wheel. The whole is of cast iron, and will lift five tons easily by the effort of two men. It is a machine exceedingly useful in an iron foundery, or where weights have to be lifted small distances in a manufactory. The circle described by the jib is 15 feet radius.

Fig. 2 and 3, are the side and end elevation of a Portable Crane, consisting of a block of solid wood, beneath which are the wheels, and iron arms under the blocks to receive the brass step for the toe of the upright of the Crane. This upright passes through the block, and through an iron collar, supported by cross arms on the top of the block; the usual wheel-work and jib are attached, and immediately above the collar a counterpoise is placed, projecting as a long beam, to the end of which is suspended a movable weight. The figures sufficiently explain this.

Fig. 4 is a perspective view of a Portable Crane of a different description, made altogether of iron. The construction is sufficiently explained by the drawing. Above the collar the counterpoise is placed in the form of a box of the most convenient shape, attached to the upright, to receive movable weights. The box is made heavy in itself, and the weights are added according to the load to be lifted.

The jibs of the Cranes are made of wrought iron, and varied either with or without travellers as considered necessary.

A Crane for an Anchor Factory is manufactured by Mr. Lloyd, combining the wheel-work of the first described Crane, with the horizontal jib and traveller of the second one. The jib is made 30 feet long, and weights of 20 tons are lifted with ease from place to place within the sweep of its arm.

Farther information respecting Cranes may be found in Gregory's *Mechanics*; Ferguson's *Lectures*; Desagulier's *Experiments*; *Transactions of the Society of Arts*; Nicholson's *Journal*, &c. &c.

CRANGON, in *Zoology*, a genus of the class *Crustacea*, order *Malacostraca*, family *Astacini*. Generic character: second pair of legs didactyle, of the same length with the third pair; pedipalpes with their last joint obtuse at the point.

Type, *C. vulgaris*, Fabr.

The type of this genus (the Common Shrimp) is too well known to need any particular observation. See Leach, *Mal. Podophth. Brit.* t. 37. B.

CRANIA, in *Zoology*, a genus of bivalve *Mollusca*, respecting the true nature of which no inconsiderable doubt has existed, till it was elucidated by an admirable paper on *Orbicula* and *Crania*, in the thirteenth volume of the *Linnæan Transactions*. In this paper the genus is referred to the *Branchiopoda* of Cuvier, the family *Terebratulidæ* of Sowerby.

Generic character: "shell bivalve, inequivalve, nearly orbicular, compressed, fixed; upper valve patelliform, with four internal muscular impressions, two near the centre, approximating and nearly united, and two near the posterior margin, distinct; no hinge."

Mr. Sowerby gives the character of two distinct species, the first of which (*C. personata*) is the *Anomia Craniolaris*, Lin.; the second, (*C. antiqua*,) is a fossil species from Normandy.

Trans. Lin. Soc., vol. xiii. p. 465, t. 26.

CRANICHIS, in *Botany*, a genus of the class *Gynandria*, order *Monogynia*, natural order *Orchidiæ*. Generic character: corolla resupinate, ringent; lip of the nectary arched, anther parallel to the style, affixed behind, erect, acuminate, two-celled.

Six species, natives of Jamaica. Willd.

CRANK, *v.* / CRANK, *n.* / CRANK, *adj.* / CRA'NKLE, / CRA'NKLING. Dutch, *kranck-en, krenck-en, debilitare*, to debilitate or weaken. Kilian. Ger. *kranken, ægrotare*. Wachter. Swe. *kraencka, deteriorem reddere*, to deteriorate or cause to be worse. Howell (see the Example from him) considers the English *crank*, though used in a directly opposite signification, to be the Dutch word. Skinner dislikes such antiphrases; and prefers *un* or *onkranck*, *non æger*, the initial syllable being lost through the ravages of time. *Crank*, to wind, and, the diminutive *crankle*, are from the Dutch *kranckel-en, crispare, sinuare, flectere*; to crispen or curl, to wind, to bend. Warton, (on Milton,) considers the word to be unexplained, and that we are to understand by it *cross-purposes*. Minsheu calls it an old word, and still in use among country people for *lustie, couragious, spiritful*. He adopts the antiphrases rejected by Skinner. This consequential usage of *crank*, seems with as little difficulty to be traced to the Dutch *kronck-el*, to wind, to bend, as the English *buxom* or *bough-some*, to the English verb to *bow* or *bend*. The applications seem perfectly similar. See BUXOM.

> Remoone thy pecocks plumes
> thou *cranck* and curious dame:
> To other trulls of tender yeares
> resigne the flagge of fame.
> *Turbervile. To an olde Gentlewoman that painted hir face.*

> He, who was a litle before bedred and caried lyke a dead karkas on fower mannes shoulders, was now *cranke* and lustie.
> *Udall. Mark*, ch. ii.

> And when thou hast on foot the purblind hare,
> Mark the poor wretch to overshut his troubles,
> How he out-runs the wind, and with what care
> He *cranks* and crosses, with a thousand doubles.
> *Shakspeare. Venus and Adonis.*

> For prince's fauors often make
> The fauored to *cranke*.
> *Warner. Albion's England*, book vii. ch. xxxvii.

Jodocus Damhoderius, a lawyer of Bruges, hath some notable examples of such counterfeit *cranks*, and every village almost will yeeld abundant testimonies amongst us; we have Dummerers, Abraham-men, &c.
Burton. Anatomy of Melancholy, fol. 159.

We use the Dutch word *crank* in English to be *well-dispos'd*, which in the original signifieth to be *sick*.
Howell. Letter 6. book iv.

> She lodg'd him neere her bower, whence
> He loued not to gad
> But waxed *cranke* for why? no heart,
> A sweeter layer had.
> *Warner. Albion's England*, book vii. ch. xxxvi.

> Now on along the *crankling* path do keep,
> Then by a rock turns up another way,
> Rising tow'rds day, then falling tow'rds the deep,
> On a smooth level then itself doth lay.
> *Drayton. The Barons' Wars*, book vi.

> Meander, who is said so intricate to be,
> Hath not so many turns, nor *crankling* nooks as she.*
> * Wye or Gwy, so called (in the British) of her sinuosity, or turning. *Drayton. Poly-olbion*, song 7.

In plying down the river, the Resolution was found to be very *crank*, which made it necessary to put into Sheerness in order to remove this evil, by making some alteration in her upper works.
Cook. Voyage, vol. iii. book i. ch. i.

In the quotation from Captain Cook's *Voyages*, CRANK is used in its strictly maritime sense. A vessel is said to be Crank or Crank-sided, when (as is sometimes the case) from the build, the insufficiency of ballast, or other causes, she is incapable of carrying sail without danger of upsetting.

CRA'NNY, / CRA'NNIED. A *crannie*, crame or cleft. Fr. *cren, cran*; It. *crena*; Lat. *crena*; perhaps from the Gr. κρήνη, i. *fons*, sc. a fissure or chink, through which water may pass or issue. Minsheu. Skinner prefers the old Fr. *creneau*, though to this he assigns the same origin, the Lat. *crena*.

> I call you once, I call you twice;
> I beat you againe, if you stay my thrice:
> Through these *cranyes*, where I peepe,
> I'le let in light to see you sleepe
> *Ben Jonson. Witches' Charme*, charme 6.

> Ye work and work like moles, blind in the paths
> That are bor'd thro' the *crannies* of the earth,
> To charge your hungry souls with such full surfeits,
> As, being gorg'd once, make ye lean with plenty.
> *Ford. The Lover's Melancholy*, act ii. sc. 2.

> As towards Craven-hills, I many have of those
> Amongst the *crannyd* cleves, that thrugh the cavern creep.
> *Drayton. Poly-olbion*, song 28.

> Revealing day through every *cranny* spies,
> And seems to point her out where she sits weeping.
> *Shakspeare. Rape of Lucrece.*

> And therefore beat and laid about
> To find a *cranny* to creep out.
> *Butler. Hudibras*, part iii. can. 1.

> A bee of most discerning taste
> Perceiv'd the fragrance as he pass'd,
> On eager wing the spoiler came,
> And search'd for *crannies* in the frame.
> *Cowper. The Pine-apple and the Bee.*

CRANTARA, Gael., *Craan Tarigh*, the Cross of Shame; because, says Sir Walter Scott, in his note on the passage of the *Lady of the Lake*, (canto iii.) in which he has made such fine use of it, "disobedience to what the symbol implied, inferred infamy." The Highlanders of Scotland appear to have borrowed its

CRANTARA. CRAPLE.

use from the ancient Scandinavians, concerning whose customs we have this account from Olaus Magnus. "*Quoties imminent hostes in littore maris seu limitibus regnorum Septentrionalium, tunc illicò, jussu Præfectorum Provincialium, accedente consensu et consilio veteranorum in simili negotio valde peritorum, baculus tripalmaris communi eorum aspectui, agilioris juvenis cursu præcipiti ad illum pagum seu villam hujusmodi edicto deferendus committitur, ut* iii. iv. *vel.* viii. *die, unus, duo vel tres, aut viritim omnes et singuli, ab anno trilustri cum armis et expensis* x. *vel* xx. *dierum, sub pœnâ combustionis domuum (quæ usto baculo) vel suspensionis Patroni, aut omnium (quæ fune alligato signatur) in tali ripâ vel campo, aut vallo comparere teneantur subito, causam vocationis, atque ordinem executionis prædicti Præfecti Provincialis, quid fieri debeat audituri. Itaque nuntius ille quovis postâ seu veredario celerior, peractâ commissione lentè revertitur, signum afferens, omnia legaliter se fecisse: continuoque momento vicatim unus et item alius cursor, qualiter agendum sit præscripto loco demonstrat. Talique modo, qui vel habitudine corporis vel ætatis vigore idonei ad pugnam videntur, diurnali vel octiduano spatio, innumera multitudo cum armis et expensis congregatur, imò agricolæ grandæviores, propter consilia, et experientiam priorum conflictuum acceptorum campos accedunt, sicut et fœminæ in mœnibus urbium vel arcium, ut ejiciant saxa vel calcineas pultes.*" Olai Magni *Gent. Sept. Hist. Brevi-arium*, v. 3.

As late as the Rebellion of 1745, the Crantara, or Fiery Cross, was circulated in Scotland, and on one occasion it passed through the district of Breadalbane, a tract of thirty-two miles, in three hours. After Charles Edward had marched forward into England, two of the King's frigates threatened the coast of Appine with descent. The Crantara was sent round by Alexander Stuart, of Invernahayle, (who related the circumstance to Sir Walter Scott,) and in a few hours a sufficient force was collected to render the attempt of the English hopeless.

CRANTS, Dutch, *krants*; Ger. *kranz*; Swe. *krans*, *corona*, *corolla*; a crown or garland. See *Crance*, in Jamieson.

Mr. Malone says, that in the first folio of Shakspeare, *Rites* was substituted by the Editor for *Crants*, the reading of the 4to., 1604.

——— For charitable prayers
Shards, flints and pebbles should be thrown on her,
Yet here she is allow'd her virgin *crants*, [Rites]
Her maiden strewments, and the bringing home
Of bell and burial.
Shakspeare. Hamlet, fol. 278.

CRAPE, Fr. *crespe, cre'pe*; It. *crespo*; Lat. *crispus*, crisp. So called from its *crisp* texture.

Round a young vestal's blooming face
Plain *crape* or other simple stuff
With happy negligence enough.
Cooper. Ver-Vert, can. 1.

The *crape-clad* hermit, and the rich rob'd king,
Levell'd, lie mix'd, promiscuous in the tomb.
Cunningham. On a Pile of Ruins.

Du Cange explains *crippa* in conformity with the derivation given above, as *Bombycinus pannus* crispus, *tenuisque*. Crape is made of raw silk, gummed, twisted in the mill, and woven in the crossing. It is supposed to have been invented at Bologna; but the date of its introduction appears to be uncertain.

CRAPLE, or *Grapple*, from the A. S. *grip-an*, to gripe, *prehendere*. See Gripe, and Grapple.

But sodainly the Regent *crappeled* with her along boord, and when thei of the Carike perceiued that thei could not depart, thei let slip an ancre, and so with the streme the shippes turned. CRAH. CRASH.
Hall. Henry VIII. The fourth Yere.

Soone as they did the monstrous scorpion view,
With ugly *craples* crawling in their way,
The dreadfull sight did them so sore affray,
That their well knowen courses they forewent.
Spenser. Faerie Queene, book v. can. 8.

CRAPULA, Lat. *crapula*; Gr. κραιπάλη, παρὰ τὸ κάρα πάλλειν, *dolor caput vibrans*; a giddiness of the head.

The drunkard now supinely snores,
His load of ale sweats through his pores,
Yet, when he wakes, the swine shall find
A *crapula* remains behind.
Cotton. Night. Quatrains.

CRASH, *v.* CRASH, *n.* CRA'SHING, *n.* CRA'SHING, *adj.* } *Dentibus stridere*, perhaps from the Dutch, *schrantsen*, to break with the teeth, to comminute, (to crush;) or rather from the Fr. *escraser*, to bruise, *croissir, croquer, crepitare*. Minsheu from the Ger. *rauschen, strepitum edere*, to send forth a noise. All, Skinner adds, from the sound.

Weepe if thou canst a litle *crashe*,
dissemble al thy ioy,
Uppon his toumbe in hansome cost
and laboure eeke employ.
Drant. Horace. Satyre 5.

Their ores with *crashing* breake, & keele on ground with danger strikes. *Phaer. Æneidos*, book v.

The prince, (whose lookes his sdainfull anger show,)
Now meant to vse his puissance euery deele,
He shak't his head, and *crasht* his teeth for ire,
His lips breath'd wrath, eyes sparkled shining fire.
Fairfax. Godfrey of Boulogne, book vii. st. 42.

——— Atrides on his brow
(Aboue on th' extreme part of the nose) laid such a heauie blow,
That all the bones *crasht* under it, and out his eyes did drop
Before his feet, in bloudy dust.
Chapman. Homer. Iliad, book xiii. fol. 181.

By the violent force whereof, the mountaines were so beaten upon, that they groned againe, and there was heard the *crashing* noise of the sea shore dashed violently upon.
Holland. Ammianus. Constantius and Julianus, fol. 88.

——— Down th' extensive seat
Of this fair city, down her buildings sink!
Sinks the full pride her ample walls enclos'd
In one wild havoc *crash'd*, with burst beyond
Heavens loudest thunder.
Mallet. The Excursion.

The gilded roofs and towers of stone
Now instant all around
With sudden *crash* and dreadful groan
Rush thund'ring to the ground.
Mickle. On his Brother's Death.

We shall, if it be our lot to meet that great day of his coming, foretold by our sacred oracles, not only stand, with the man of morals, serene and fearless amidst the *crash* of falling worlds, but, with the religious man, become partaker of the glories of the Lamb, rise triumphant over them in those happier regions of perpetual stability and peace.
Warburton. Sermon 18. vol. x.

——— Mountainous in bulk
They roll to Delphi with a *crashing* sound,
Like thunder nigh, whose burst of ruin strikes
The shatter'd ear with horrour.
Glover. The Atheniad, book i.

CRASIS, Gr. κράσις, *mixtura, temperamentum corporis*. Κεκράσαι, (κράσις,) the second person of the preter perfect of κερά-ειν, *miscere*, to mix or mingle. Applied to The temper or temperature, produced by the mixture of various qualities.

SIS. I answer that then among many other great priviledges, he had transmitted downwards, by way of natural generation, that excel-
SA- lent and blessed and happy temper of body, which should haue
A been like his own happy *crasis*.
Glanville. Preexistence of Souls, ch. iv.

Among the Greek Grammarians, CRASIS is a contraction by which two consecutive vowels, or one of the two, are changed, as in τείχεα, τείχη· τριήρεες, τριήρεις: or when one is exploded, as in τειχέων, τειχών. Crasis is opposed to *Synæresis*, by which two vowels coalesce without any exclusion, as in τείχεϊ, τείχει. In French, Crasis has occasionally a somewhat different application. It is used, as by the Greeks, in the words *pan, fan*, for *paon, faon*; *l'homme, l'honneur*, for *le homme, le honneur*; but it is also used when *au* and *du* are substituted for *a le, de le*. (*Enc. Mét. Grammaire. ad voc.*)

CRASPEDIA, in *Botany*, a genus of the class *Syngenesia*, order *Segregata*. Generic character: common calyx imbricated; florets somewhat depressed; all the hermaphrodite florets tubular; down feathery; receptacle chaffy.

One species, *C. uniflora*, native of New Zealand.

CRASS, *adj.*
CRA'SSIMENT,
CRA'SSITUDE,
CRA'SSNESS.
} Lat. *crassus, a multâ* carne, *quasi* carassus *vel* creassus, *a* caro *vel* κρέας, flesh. Vossius. Gross, heavy, thick, dull, stupid.

And must needs be therefore as a void solitude and empty space, a mere vacuum as to the search of any created sense; which roving up and down could finde no *crassitude* any where but what these perfect Parvitudes have.
More. Appendix to Defence of the Philosophic Cabbala, fol. 141.

He was a man of stature conuenient, of countenaunce amiable and louely, of body somewhat *crasse* and corpulēt, quycke wytted, bold and hardy stomaked.
Hall. Henry VII. The twenty-first Yere.

For whatsoever is *crass* and external leaves stronger impress upon the phansie, and the remembrance of it strikes the mind with more efficacy.
More. Antidote against Atheism, book iii. ch. vi.

But when the passive affections of the soul are looked upon not as things really existing without the mind, but only as pictures of sensible things in the mind, or more *crass* or corporeal cogitations, then they are called phantasms or imaginations.
Cudworth. Immutable Morality, book iv. ch. i.

Now, as the bones are principally here intended, so also all the other solid parts of the body, that are made of the same *crassiment* of seed, may be here included.
Smith. Portraiture of Old Age, p. 179.

Scaliger finding a defect in the reason of Aristotle, introduceth one of no less deficiency himself; *Ratio materialis* (saith he) *sanguinis, crassitudo simul et multitudo*; that is, the reason of the vigour of this side, is the *crassitude* and plenty of blood, but this is not sufficient; for the *crassitude* or thickness of blood, affordeth no reason why one arm should be enabled before the other, and the plenty thereof, why both not enabled equally.
Sir Thomas Brown, book iv. ch. v.

For the ætherial body contracts *crassness* and impurity, by the same degrees as the immaterial faculties abate in their exercise.
Glanville. Preexistence of Souls, p. 150.

CRASSATELLA, in *Zoology*, a genus of bivalve shells, of the family *Mactraceæ*. Generic character: shell inequilateral, suborbicular or transverse, closed; hinge, teeth two, slightly divergent, with a lateral cavity; lateral teeth wanting or obsolete; ligament internal, inserted in the cavity of the hinge.

The shells of this genus are considerably allied to the *Mactræ* and *Lutrariæ*, differing from them, however, in the important particular of having the valves completely closed.

CRASSINA, in *Zoology*, a genus of bivalve shells of the family *Nymphaceæ tellinariæ*, of Lamarck. Generic character: shell suborbicular, transverse, equivalve, somewhat inequilateral, closed; hinge with two strong divaricate teeth in one valve, and two very unequal ones in the other; ligament external, on the longer side of the shell. CRASSINA. CRATCH.

This genus ought to be called *Astarte*, which is the name first applied to a fossil species by Mr. Sowerby, in his *Mineral Conchology*. *Venus Danmoniensis*, of Montague, a species by no means rare on our coast, especially in Devonshire, may be considered as the type.

C. Scotica is to be considered only as the same species in a different state of growth. The fossil species are numerous.

CRASSULA, in *Botany*, a genus of the class *Pentandria*, order *Pentagynia*, natural order *Sempervivæ*. Generic character: flowers in a cyme; corolla, petals five, expanded, joined at the base; five nectariferous scales at the base of the germen, germens five; capsules five.

More than sixty species of this interesting genus have been discovered near the Cape of Good Hope, to which district this genus is almost exclusively confined; many species are beautiful, others have singular succulent foliage: the species most worthy of cultivation in the greenhouse, are

C. coccinea, versicolor, perfoliata, odoratissima, columnaris, and *imbricata*; all the species yet known, are ably elucidated in the works of A. H. Haworth.

CRATÆGUS, in *Botany*, a genus of the class *Icosandria*, order *Digynia*, natural order *Rosaceæ*. Generic character: calyx five-cleft; corolla, petals five; berry inferior, two-seeded.

Thirty-two species are described, mostly natives of Europe and North America.

C. torminalis, the Wild Service Tree, is a native of England. *Eng. Bot.*

CRATÆVA, in *Botany*, a genus of the class *Dodecandria*, order *Monogynia*, natural order *Capparides*. Generic character: calyx four-cleft; corolla, petals four; berry one-celled, many-seeded.

Five species, natives of the tropical climates.

C. religiosa is considered a sacred plant by the inhabitants of the Society Islands, and is planted in their burial-places.

CRATCH, scratch, *sculpere, insculpere*. See *Scratch*, Junius.

So gret a weping was ther non certain,
Whan Hector was ybrought, all fresh yslain
To Troy, alas! the pitee that was there,
Cratching of chekes, rending eke of here.
Chaucer. The Knightes Tale, v. 2836.

CRATCH, Fr. *creicche, cresche*; a rack, ox-stail or crib. Cotgrave. Unless I am deceived, says Skinner, from the Lat. *cratica, craticula, crates*, a hurdle.

And sche baar her firste borun sone, and wlappide him in clothis, and leyde him in a *cracche* for ther was no place to him in no chaumbir. *Wiclif. Luke*, ch. ii.

But the Lorde answerde to him and seyde, Ypocrite, wher ech of you untieth not in the saboth his oxe or asse fro the *cracche*: and ledith to watir? *Id. Luke*, ch. xiii.

Shine happy star; ye angels sing
Glory on high to heaven's king:
Run shepherds, leave your nightly watch,
See heaven comes down to Bethleem's *cratch*.
Hall. Anthems. Christmas-day,

CRATCH. — CRAVE.

The shepherds and the *cratch* accorded well; yet even they saw nothing which they might not contemne; neither was there any of those shepherds that seemed not more like a king, then that king whom they came to see.
Hall. Cont. The Sages and the Starre, vol. iii. fol. 15.

Begin from first, where he encradled was,
In simple *cratch*, wrapt in a wad of hay
Between the toylefull oxe and humble asse.
Spenser. Of Heauenly Loue.

Selden, in his *Table Talk*, remarks that "The Coffin of our Christmas Pies, in shape long, is in imitation of the CRATCH," that is, the manger in which our Saviour was laid. To the same source, Archdeacon Nares (*Glossary, ad voc.*) refers the well-known Children's play, corruptly called *Scratch-cradle*, in which he describes the packthread twisted round the hands, to be a rude representation of a manger.

CRATE, *n.* Lat. *crates, ἀπὸ τῦ κρατεῖν, quia lignum unum alterum tenet.* Vossius.

I have seen a horse carrying home the harvest on a *crate*. Under his tail was a stick for a crupper, held at the two ends by twists of straw. *Johnson. Journey to the Western Islands.*

CRATE is now chiefly used for the open wicker or wooden case in which earthenware is packed.

CRATERIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*. Generic character: calyx five-parted; corolla none; nectary cup-shaped, with ten bristles crowned with hairs, in which the stamens are inserted; stigmas three; seed-vessel one-celled.

Two species, natives of Peru. Persoon, *Syn.*

CRAVAT. Skinner writes it *crabbat*, or rather *crabat*, a word then recently introduced into this country: *collare Croaticum*, because the *Croats* first used this kind of collar, or neck-cloth. Menage says, the *Croats* were commonly called *cravates*; and he names the year 1636, for the time of the introduction of this article of dress into France, about twenty-seven years before Butler published the three first Cantos of his *Hudibras*. Ihre has no doubt the word is of Gothic origin, compounded of *craw*, the neck, and *wad*, cloth.

The handkerchief about his neck
Canonical *crabat* of smeck,
From whom the institution came,
When church and state they set on flame,
And worn by them as badges then
Of spiritual warfaring men.
Butler. Hudibras, part i. can. 3. l. 1166.

Smectymnuus was a club of five parliamentary holders-forth; they wore handkerchiefs about their necks for a note of distinction, (as the officers of the parliament army then did,) which afterwards degenerated into carnal *cravats*.
Grey. Note on the above.

His sword-knot this, his *cravat* that design'd;
And this the yard long snake, he twirls behind.
Dryden. Epilogue 7.

CRAVE, *v.* CRA'VER, CRA'VING, *n.*

Swe. *kraef-wa*; A. S. *craf-ian, rogare, petere, implorare*, to ask, to beg, to desire. Somner.

Junius says, to beg with all eagerness, to beg again and again, earnestly, vehemently, incessantly.

And non so bold beggar. to bydden an *craue*.
Piers Ploughman. Vision, p. 89.

——— For ich borwe nevere
Ne *crave* of my comune. *Id. Ib.* p. 391.

He bad that one of hem shuld saine,
What thing is him levest to *craue*,
And he it shall of yefte haue.
Gower. Conf. Am., book i. fol. 29.

She geues no gift, but *craues* as fast;
She soone repentes a thankful dede;
She turneth after euery blast;
She helpes them oft, that haue no nede.
Vncertaine Auctors. Of Fortune and Fame.

I would, but they enioye,
I *craue*, that is debard:
They haue, but what will you more I say?
their seruice is prefard.
Turbervile. The Louer finding his loue flitted from wonted troth, &c.

Whereupon I cūming backe myselfe againe vnto Basile, was in suche wise on eche side continually called vpon of my maisters the Germaines, beeing *crauers* not of y^e^ lest importune sort, that because I would in ani wise discharge both his promise, and mine own honestie to, I finished vp the worke with litle more thē a monethes labour. *Udall. Preface to Matthew.*

All what ye *crav'd* was compast by my care,
Who onely labour'd to content your mind;
There wanted not a creature that was fayre,
When curious thoughts to wantonnesse inclin'd.
Stirling. Doomes-day. The eleventh Houre.

And beg besides, you'd hither bring
Only the mercy of a king,
And not the greatness; since they have
A thousand faults must pardon *crave*.
Carew. To the King, at his entrance into Saxham.

PER. I did but *crave*.
2. FISH. But *crave?* Then I'll turn *craver* too, and so I shall 'scape whipping. *Shakspeare. Pericles*, act iii. sc. 1.

He knew well, that hee had to deale with so wise and mercifull a physitian, as that the opening of the maladie was a *craving* of cure: If our spirituall miseries bee but confessed, they cannot faile of redresse. *Hall. Cont. The Good Centurion.*

Hither th' oppressed shall henceforth resort,
Justice to *crave*, the succour of your court;
And then your highness, not for ours alone
But for the world's protector shall be known.
Waller. A Panegyric. To my Lord Protector.

If any of you propose to eat upon another's account; to satisfy your bodily appetites, and the *cravings* of hunger; this is not the place for it, where you assemble in a body for a religious purpose. *Hoadley. The Nature and End of the Sacrament of the Lord's Supper.*

Plac'd above want, shall abject thirst of wealth
So fiercely war 'gainst my soul's dearest health,
That, as a boon, I should base shackles *crave*,
And, born to freedom, make myself a slave.
Churchill. The Conference.

CRA'VEN, *v.* CRA'VEN, *n.* CRA'VEN, *adj.*

Of the noun, Skinner says, I would rather derive it from the verb, to *crave, quia statim, sc. ab hoste veniam* petit. "*Craven*—is one who has *craved* or *craven* his life from his antagonist, *dextramque precantem protendens.*" Tooke, ii. 71.

Upon this noun, Shakspeare has formed the verb, to *craven*; to deprive of strength or courage.

——— Against self-slaughter
There is a prohibition so diuine
That *crauens* my weake hand.
Shakspeare. Cymbeline, fol. 383.

VAS. Come, sir, stand to your tackling, if you prove *craven*, I'll make you run quickly.
Ford. 'Tis Pity she's a Whore, act i. sc. 2.

For cowards such of *craven* kind
like hinds are not to drink,
Nor wash in fair Eurotas stream
their bodies as I think.
Holland. Plutarch, fol. 395.

Affirming in good earnest, it were better both for herselfe to be a widow, and for him to live single, and without a wife, than so to be mismatched as they were, and through the *craven* cowardise of others to languish and come to nothing. *Id. Livius*, fol. 33.

"The horrible word CRAVEN," says Blackstone, (*Comm.* iii. 22,) is "a word of disgrace and obloquy

CRAVEN. CRAWL.

rather than of any definite meaning." Sir Edward Coke, however, finds two etymologies for it, which we give below.

"Whosoever taketh upon him to be Champion for another, if he become recreant, that is, a crying Coward or Craven, he shall for his perjury lose *liberam legem*. Craven is derived of the Greek word χραυγν, (the learned Judge probably means κραυγη,) *à vociferatione:* others nearer home, of crying and craving of mercy and forgiveness. And *recreantia* is derived of the French word *recreance*, of giving back or cowardice. And some times it is called *creantia, per antiphrasim*, because he that useth it is not faithfull, but breaketh his oath. And so if the Appellant joyne battle, and cry Craven, he shall lose *liberam legem* for the cause aforesaid; but if the Appellee cry Craven, he shall be hanged: but if they combat until night come and the starres appear, the Defendant, in the Appeal, goeth quit, and the Plaintife in that case loseth not *liberam legem*. *Amittere liberam legem* is to become infamous, and of no credit, never to be Witnesse or Juror." *Institutes*, iii. 1. 101.

CRAUNCH, Dutch, *schrantsen, frangere, rumpere, laniare, frendere, et mandere, dentibus frangere*. Kilian. To crash, (q. v.) crush or bruise, with the teeth.

She would *craunch* the wing of a lark, bones and all, between her teeth, although it were nine times as large as that of a full-grown turkey. *Swift. A Voyage to Brobdignag.*

RUT. Not very well; she cannot shoot at buts,
Or manage a great horse, but she can *craunch*
A sack of small coale! eat you lime and haire,
Soap-ashes, loame, and has a dainty spice
O' the greene sicknesse.
Ben Jonson. The Magnetick Lady, act i. sc. 3.

CRAW, *n.* the crop or gorge of a bird, from the Dutch, *kraeghe, jugulus*, the fore part of the neck, *ingluvies*, which Vossius calls the *sinus interior circa guttur;* into which birds receive their food, before they pass it into their stomach. Ger. *kragen;* Swe. *krage*. See Minsheu, and Ihre.

In birds, there is no mastication or comminution of the meat in the mouth; but in such as are not carnivorous, it is immediately swallow'd into the crop or *craw*, or at least into a kind of antestomach. *Ray. On the Creation*, part i.

It is affirmed by Helmont and others, that treat of the *Lapides Cancrorum*, that they grew within the skulls of those *crawfishes*; from whence they have their name.
Boyle. Of unsuccessful Experiments.

We have seen some [Buzzards] whose breast and belly are brown, and only marked across the *craw* with a large white crescent. *Pennant. British Zoology. The Common Buzzard.*

CRAWL, *v.* CRA'WLER, CRA'WLING, *adj.* } *Repere*, to creep, *serpere*, to draw or draw along on the belly. Dutch, *krielen, scatere, præsertim ut vermibus*. Skinner.

To *creep* and to *crawl*, may admit the same distinction as the Latin *repere*, and *serpere* do. The first being applied to express the motion of a short-legged animal; the second, the motion of animals upon their bellies, as the worm, the slug.

——— An endles gulf down reatching deepe,
Shuld fowle apear, and *crauling* soules at light shuld quaking creepe. *Phaer. Æneidos*, book viii.

He wonneth in the land of Fayeree,
Yet is no Fary borne, ne sib at all
To Elfes, but sprong of seed terrestriall,
And whylome by false faeries stolne away,
Whiles yet in infant cradle he did *crall*.
Spenser. Faerie Queene, book iii. can. 3.

My comforts for heaven shall (I trust) never fail me; but for the present world, it shall be well for me, if I can without too much difficulty scramble out of the necessary miseries of this life; and without too much sorrow *crawl* to my grave. CRAWL. — CRAY-FISH.
Hall. Select Thoughts, vol. iii. fol. 25.

Unarm'd of wings and scaly oare,
Unhappy *crawler* on the land.
Lovelace. Luc. p. 140.

How hints, like spawn, scarce quick in embryo lie,
How new-born nonsense first is taught to cry,
Maggots, half-form'd, in rhyme exactly meet,
And learn to *crawl* upon poetic feet.
Pope. The Dunciad, book i. l. 63.

Sometimes he'd scow'r along the streets like wind,
As if some fifty bailiffs were behind:
At other times he'd sadly saunt'ring *crawl*,
As though he led the hearse, or held the sable pall.
Smart. The Horatian Canons of Friendship.

CRAY, CRA'YER, or CRARE. } Carpentier, *Supplement of Old French Words*—to Ducange, says, "*Sorte de vaisseau de guerre.*" And in his *Latin Supplement;* "Craiera; *Navis species, adde navis piratica, nostris etiam* Craier." Tyrwhitt, in a note on Shakspeare's *Cymbeline*, quotes the word from an Act of James I.

Your barke or *craer* made here for the riuer of Volga and the Caspian sea is very litle, of the burthen of 30 tonnes at the most. It is handsomly made after the English fashion: but I thinke it too litle for your goods and prouision of victuals.
Hakluyt. Voyage, &c. Arthur Edwards, vol. i. fol. 354.

Item, in the yeere of our Lord 1398, about the feast of S. Michael the Archangel, the foresaid Godekin & Stertebeker, with other their cõfederats of the Hans, took at Langsound in Norway a certain *crayer* of one Thomas Motte of Cley, called the Peter, (wherein Thomas Smith was master,) & the *crayer* they wickedly and unjustly carried away being worth 280 nobles.
Id. Ib. Henry IV. Prussian Ambassador, vol. i. fol. 168.

——————Oh, melancholy!
Who euer yet could sound thy bottom? finde
The ooze, to shew what coast thy sluggish care (*crare*)
Might'st easiliest harbour in?
Shakspeare. Cymbeline, fol. 389.

As often ye behold the tempests rough and proud
O'ertaken with a storm, some shell or little *crea*,
Hard labouring for the land, on the high working sea.
Drayton. Poly-olbion, song 22.

And this his maiestie's realm hath more plenty of ships, boats, *crayes* and other vessels, by reason of those, which by hope of lucre do follow that trade of liuyng.
Strype. Records. A Proclamation for the Abstcinyng from flesh in Lent tyme.

For skiffs, *crays*, shallops, and the like, why these
From ev'ry small creek cover'd all the seas.
Drayton. Battle of Agincourt.

Nevertheless, Timoleon without, gave them all the aid he could possible: sending them corn from Catana, in the fisher boats and small *crayers*, which got into the castle many times.
Sir Thomas North. Plutarch, fol. 228. *Timoleon.*

CRAY-FISH, Minsheu writes *craie-fish* or *craivish*. Skinner, *cray-fish potius* crevice; both say, from the Fr. *escrevice;* which Wachter derives from the Ger. *krebs*. See CRAB.

Nor of the *cray-fish* here which creeps amongst my stones,
From all the rest alone, whose shell is all his bones.
Drayton. Poly-olbion, song 26.

The shell-fish are, muscles, cockles, scallops, *cray-fish*, and many other sorts, all such as are to be found in every other part of the coast. *Cook. Voyage*, vol. iii. book i. ch. v.

The CRAY-FISH is the *Cancer Astacus*, of Linnæus. Plutarch has a strange passage, (*De rat. Anim.*) in which he says, the Art of searching for them in rivers

CRAY-FISH. — CRAZE.

by *invalids*, was taught by the practice of Hogs. Peter Oxe is recorded to have introduced them into Denmark as a luxury of the table in 1575, (*Algem. Welthistorie*, xxxiii. 204; Pontoppidan, *Naturgeschichte von Denmark*, 190;) and a dish of them in the time of Henry VIII., is made honourable mention of in Nichols's *Progresses*.

CRA'YON, *v.* } From *craye*, chalk. Fr. *crayonner*;
CRA'YON, *n.* } to paint or draw in dry colours; also, to draw first lines, or make the first draught of a picture. Cotgrave.

> Thy conscious pallet ne'er its hues should spare
> To draw a sportsman's hound or racer's mare;
> Nor thy reluctant *crayon* stoop to trace
> A fool's dull eye or villain's ill-mark'd face.
> *Scott. Essay on Painting.*

> And I wonder how any one can read the king's speech at the opening of that session, without seeing in that speech both the repeal and the declaratory act very sufficiently *crayoned* out.
> *Burke. On American Taxation.*

> He soon afterwards composed that discourse conformably to the plan which he had *crayoned* out, and sent it to me for such remarks on the language of it as should occur to me.
> *Malone. Life of Sir Joshua Reynolds*, vol. i. p. 45. *Note.*

CRAYONS are composed of coloured stones, earths, or other minerals pounded, and then reduced to a paste, by mixture with gum, glue, resin, soap, &c. and a little water.

CRAZE, *v.* } Ihre, Lye, and Skinner from the
CRA'ZEDNESS, } Fr. *ecrasser*, to crush, to break. See
CRA'ZINESS, } the first Example from Chaucer.
CRA'ZY. } Minsheu from the Gr. κρᾶσις, *temperamentum*. (See CRASIS, above.) He who labours under any disease, is said to be *crasie, propter δυσκρασίαν*, or a bad temperature of body. See DYSCRASY. To *craze*, as generally applied, is

To weaken, to debilitate, to impair, to deprive of natural strength, to bring to a state of imbecility.

> I am right siker, that the pot was *crased*,
> Be as be may, be ye no thing amased.
> *Chaucer. The Chanones Yemannes Tale*, v. 16402.

> Upon her whan I gased
> Me thought mine hart was *crased*.
> *Skelton. The Boke of Philip Sparow.*

> Downe by mine eyes the stroke
> descended to the harte,
> Which Cupid neuer *crasde* before
> by force of golden darte.
> *Turbervile. The Louer declareth how first he was taken, &c.*

> And on they come, as doth a rolling tide
> Forc'd by a wind, that shoves it forth so fast,
> Till it choke up some channel side to side,
> And the *craz'd* banks doth down before it cast.
> *Drayton. Battle of Agincourt.*

> For no *craz'd* brain could ever yet propound,
> Touching the soul, so vain and fond a thought;
> But some among the masters have been found
> Which in their schools the self-same thing have taught.
> *Davies. The Immortality of the Soul.*

> ——— Till length of years
> And sedentary numness *craze* my limbs
> To a contemptible old age obscure.
> *Milton. Samson Agonistes*, l. 571.

> And Phœbus to invade it [the field] with his shield
> Recovering Hector's broosde, and *crased* powres.
> *Chapman. Homer. Iliad*, book xv.

> And the nature, as of men that have sick bodies, so likewise of the people in the *crazednesse* of their minds possest with dislike and discontentment at things present, is to imagine that any thing (the virtue whereof they have commended) would helpe them; but that most, which they least have tried.
> *Hooker. Ecclesiastical Polity. Preface*, 14.

CRA — CRE

> Or be the shepherds which doe serue her laesie?
> That they list not their mery pipes apply,
> Or be their pipes vntunable and *craesie*,
> That they cannot her honour worthily?
> *Spenser. Colin Clout's come home againe.*

> Yea though the cause we maintain be never so good, yet the issue of diseas'd and *crazie* proofs brought to maintain it, must needs be the same. *Hale. Rem.*, part i. p. 17.

> Whereas the Atheists, thus impute to the generality of mankind not only light-minded credulity, and phantastry, but also such an excess of fear as differs nothing at all from *crazedness* and distraction or madness.
> *Cudworth. Intellectual System*, book i. ch. iv.

> There is no *crasinesse* we feel, that is not a record of God's having been offended by our nature; and every little ach about us is a thorn or briar springing out of that offensive earth, whereof we are composed.
> *Montague. Devoute Essayes*, part ii. *Of Sickness*, treat. 10. sec. 2.

> The sight of an old man, poor and destitute, *crazy* and scorned, unable to help himself, or to buy the help of others, is a shrewd argument to recommend covetousness to one even in his greenest years, and to make the very youngest and jolliest sparks, in their most flourishing age, look about them.
> *South. Sermons*, vol. iv. p. 459.

> Pray let me ask of you, could not the great God who grasps and surveys all future and distant things in one single view, could not he from the beginning foresee your morning prayer for his protection, and appoint all second causes to concur for the support of that *crazy* bridge, or to make that old tower stand firm till you had escaped the danger.
> *Watts. Of Disputes in General*, part i. ch. x.

CREAK, *v.* } Dutch, *kricken*; Fr. *criquer*. All
CREAK, *n.* } from the sound. See CRACK. *Creak*
CRE'AKING, *n.* } is applied to the noise emitted by ice when trodden upon, before the *crack*: to the noise of dry shoes, of a door opening, &c.

> He cryeth and he *creketh*.
> *Skelton. The Boke of Colin Clout.*

> Forsooth because it goeth, as it were, reculing backward, it pierceth and boreth an hole into the ground, and never ceaseth all night long to *creake* very shrill.
> *Holland. Plinie*, vol. ii. fol. 370.

> Here neither Chorus wafts you o'er the seas;
> Nor *creaking* throne comes downe, the boyes to please.
> *Ben Jonson. Every Man in his Humour. Prologue.*

> ROSILL. I shal stay here the for-horse to a smocke,
> *Creeking* my shooes on the plaine masonry,
> Till honour be bought vp, and no sword worne
> But one to dance with.
> *Shakspeare. All's Well that Ends Well*, fol. 235.

> Let not the *creaking* of shooes, nor the rustling of silkes, betray thy poore heart to woman. *Id. Lear*, fol. 298.

> For like as when we heare the grunting of a swine, the *creaking* of a cart wheele, or pully, the whistling noise of the wind, or roaring of the sea, we take no pleasure therein, but are troubled and discontented. *Holland. Plutarch*, fol. 19.

> At length some pity warm'd the master's breast
> (Twas then his threshold first received a guest:)
> Slow *creeking* turns the door with jealous care,
> And half he welcomes in the shivering pair.
> *Parnell. The Hermit.*

> Unlike to living sounds it came,
> Unmix'd, unmelodis'd with breath;
> But, grinding through some scrannel frame,
> *Creak'd* from the bony lungs of death.
> *Langhorn. The Misletoe and the Passion-flower.*

CREAM, *v.*
CREAM, *n.*
CRE'AMY,
CREAM-BOWL,
CREAM-COLOR,
CREAM-CUPS,
CREAM-FACED.

Fr. *creme*; It. *crema*; A. S. *ream*; Dutch, *room*; Ger. *ram*. All, says Skinner, from the Lat. *cremor*, supple, *lactis*. *Cremor*, Vossius derives from *cerno*, because it is that fatness, which is separated (*secernitur*) from the milk. Scaliger, (see in Menage, *v. Creme*,) thinks *cremor* an old French word, signifying the juice expressed from any grain or seed.

In Devon, Lye says, *ream* is still used. In A. S. we find *milc rem*, in Ger. *milchraum*, which gives reason to suspect the *c* to be borrowed from milc; but whence *ream*? *Cream* is applied, met.

To the richest portion of any thing.—To *cream*, To rise to the surface, as *cream* does; to take or skim off the *cream* or richest portion.

Poure folke for fere þo. fedde Hunger zerne
With *creym* and with croddes.
Piers Ploukman. Vision, p. 145.

There will no man deny but that baptisme was as full & as good as ours, & yet was there neither fonte nor holy water, candle, *creame*, oyle, salt, godfather, or godmothers, or any other, popetrie. *Frith. Workes*, fol. 95.

There are a sort of men, whose visages
Do *creame* and mantle like a standing pond,
And do a wilfull stilnesse entertaine,
With purpose to be drest in an opinion
Of wisedome, grauity, profound conceit.
Shakspeare. Merchant of Venice, fol. 162.

The poore old coüple wish't their bread
Were wheat, their whig were perry,
Their bacon beefe, their milk and curd
Weare *creame*, to make him mery.
Warner. Albion's England, book viii. ch. xlii.

In an instant, all the leads of the courts and entries were thronged with men and maid-servants of the duke's, who cried aloud, Welcome, Oh flower and *cream* of knights-errant.
Shelton. Don Quixote, vol. iii. book ii. ch. xxxi.

They looke at best like *creame-bowles*, and you soone
Shall find their depth: they're sounded with a spoone.
Ben Jonson. Under-woods, fol. 206.

The diuell damne thee blacke: thou *cream-fac'd* loone:
Where got'st thou that goose-looke.
Shakspeare. Macbeth, fol. 149.

THE. Your *creamy* words but cozen: how durst you
Intercept me so lately to my mother?
Beaumont and Fletcher. The Queen of Corinth, act iii. sc. 1.

He observed the offer of alliance came to me in a letter of his majesty's own hand; but that about the terms of a peace, from the secretary only. that it was in a style as if he thought him a child, or to be fed with whipped *cream*.
Sir William Temple. Memoirs, vol. ii. p. 395.

In vain she tries her pastes and *creams*
To smooth her skin, or hide its seams;
Her country beaux and city cousins,
Lovers no more, flew off by dozens.
Goldsmith. The Double Transformation.

There each trim lass that skims the milky store
To the swart tribes, their *creamy bowls* allots;
By night they sip it round the cottage door
While airy minstrels warble jocund notes.
Collins. On the Superstitions of the Highlands of Scotland.

Though cows would rarely fill the pail
But made th' expected *cream-bowl* fail.
Jones. The Enchanted Fruit, or the Hindu Wife.

Plumage in general *cream-color*, palest beneath.
Pennant. British Zoology. Cream-coloured Courser.

They sold some fish they had (amongst which there was an extraordinary flounder, spotted, like porphyry; and a *cream-coloured* eel spotted with black) for small nails.
Cook. Voyage, book ii. ch. iii. vol. v.

Whom to his rural board he led
In simple delicacy spread,
With curds their palates to regale,
And *cream-cups* from the Gopia's pail.
Jones. The Hindu Wife.

CREANCE, *v.*
CREANCE, *n.*

Creance, *n.* Fr. Faith, belief. *Creance*, *v.* to borrow. Tyrwhitt. "Fr. *creanser*, to promise, to assure by his promise; to undertake upon his word." Cotgrave. It is generally To deal upon credit.

A theef, that had reneyed our *creance*,
Came into the ship alone.
Chaucer. The Man of Lawes Tale, v. 5335.

We moun *creancen* while we han a name,
But goodles for to ben it is no game.
Id. The Shipmannes Tale, v. 13219.

Through grace of God's puruiance
This maiden taught the *creance*
Unto this wife so perfectly.
Gower. Conf. Am., book ii. fol. 32.

The heyre is kept vnder with feare, and ruled as other mens wyll, passyng that tyme vnder *creansers* & gouernours, untyl he be growen vp to that rypenes, whiche either the lawe or his father hath appointed. *Udall. Galathians*, ch. iv.

CREASE, *v.*
CREASE, *n.*

This word so common in speech is rare in writing. Robert of Gloucester writes crusade or croisade, *creysery*, and crossed, *creysed*; whence, says Mr. Hearne, I think came the common word, *cressed* or *creased*. Skinner thinks from the Lat. *creta*, *chalk*, inasmuch as it is a line or mark drawn by *chalk*, or from the Ger. *kreiss*, *circulus*. Mr. Hearne's Etymology appears the more rational.

Men of great parts are unfortunate in business, because they go out of the common road by the quickness of their imagination. This I once said to my Lord Bolingbroke, and desired he would observe, that the clerks in his office used a sort of ivory knife, with a blunt edge, to divide a sheet of paper, which never failed to cut it even, only requiring a strong hand; whereas if they should make use of a sharp penknife, the sharpness would make it go often out of the *crease*, and disfigure the paper.
Swift. Thoughts on Various Subjects.

CRE'ATE, *v.*
CRE'ATE, *adj.*
CRE'ATING, *n.*
CRE'ATION,
CRE'ATIVE,
CRE'ATOR,
CRE'ATRESS,
CRE'ATRIX,
CRE'ATURE,
CRE'ATURAL,
CRE'ATURELESS,
CRE'ATURELY,
CRE'ATURIZE,
CRE'ATURIZING,
CRE'ATION-DAY,
CRE'ATURE-SHIP,
CRE'ATURE-GODS,
CRE'ATURE-RELATIONS,
CRE'ATURE-WORSHIP,
CRE'ATURELY-GODS.

Fr. *creer*; It. *creare*; Sp. *criur*; Lat. *creare*, *atum*; Gr. κραίν-ειν, *efficere*, *perficere*.

"Fr. *creer*, to create, make, form, frame, give the first being unto." See the Quotation from Locke.

Whan þei had sene þat sight, þei come & teld our kyng,
Creature non myght be fayrer be no þing.
R. Brunne, p. 253.

——— And thou, virgine wemmeles,
Bare of thy body (and dwellest maiden pure)
The *creatour* of every *creature*.
Chaucer. The second Nonnes Tale, v. 15517.

But swiche a crie and swiche a wo they make
That in this world n'is *creature* living,
That ever herd swiche another waimenting.
Id. The Knightes Tale, v. 878.

CREATE.

In Joue his mighty name, this eight and twentith day,
Of frosted bearded Januar, the enemy to May:
Since Adam was *create*, fiue thousand yeeres I gesse,
Fiue hundreth, forty more and fiue as stories do expresse.
Gascoigne. Dan Bartholomew of Bathe. His last will and testament.

This therefore was the first time, when we entred into the emperour's tent in his presence, after he was *created* emperour.
Hakluyt. Voyage, &c. The Tartars.

As though he would sai, sith the bondman is no better then hys lorde, and I that am your *creatour*, am more highly lorde ouer you that are my *creatures*, than any earthly lorde is ouer his bondman, how should you disdayne to wesh your felowes feete, when I your highe lord haue not disdained, to wash yours.
Sir Thomas More. Workes, fol. 1317.

For the unvysible thingis of him that ben undirstondun ben biholdun of the *creature* of the world bi tho thingis that ben maad, ghe and the euerlastinge vertue of him and the Godheed, so that thei moun not be excusid.
Wiclif. Romaynes, ch. i.

So that hys inuisible thynges: that is to saye, hys eternall power and Godhead are vnderstande and sene, by the workes from the *creacion* of the worlde. So that they are without excuse.
Bible, 1551.

Therefore if ony newe *creature* is in Crist, the oolde thingis be passid, and lo alle thingis ben in God.
Wiclif. 2 Corynthians, ch. v.

Therfore if any man be in Christ he is a new *creature*, olde thinges are passed away behold al thinges are become new.
Bible, 1551.

As then Almighty God *created* all things of nothing by the power of his word. So doth hee still vphold them and will till the dissolution of all things in their essenses, faculties and operations, by the words of his power, reaching from one end to the other mightily, and disposing all things sweetely.
Hakewill. Apology, fol. 18.

To the best bride-bed will we,
Which by vs shall blessed be:
And the issue there *create*,
Euer shall be fortunate.
Shakspeare. Midsummer's Night's Dream, fol. 162.

For Chaos heard his voice; him all his traine
Follow'd in bright procession to behold
Creation, and the wonders of his might.
Milton. Paradise Lost, book vii. l. 223.

All and every title, every stroke, is no other than an inward living disposition of heart, like unto the divine life and nature of Christ, the son of the living God; and therefore requires the living power of the spirit of the living God, (as he is there styled,) to concur to the *creating* of it.
Goodwin. Works, vol. v. part i. fol. 114.

But to begin that which never was, whereof there was no example, whereto there was no inclination, wherein there was no possibility of that which it should be, is proper onely to such power as thine; the infinite power of an infinite *creator*.
Hall. Cont. The Creation.

Yet still with gentle countenance retained,
Enough to hold a foole in vain delight:
Him long she so with shadowes entertained,
As her *creatresse* had in charge to her ordained.
Spenser. Faerie Queene, book iii. can. 8.

Ah! who would loue a *creature?* who would place
His heart, his treasure, in a thing so base?
Which time consuming, like a moth destroyes,
And stealing Death will rob him of his joyes.
Beaumont. Against Inordinate loue of Creatures.

Self-moving substance, that be th' definition
Of souls, that longs to them in generall:
This well expresseth that common condition
Of every vitall centre *creaturall*.
More. On the Soul, part ii. book i. st. 25.

This sisterly relation and consanguinity betwixt them, would of the two, rather degrade and *creaturize* that mundane soul, which is their third God or divine hypostasis, than advance and deifie those particular created souls.
Cudworth. Intellectual System, fol. 594.

So was it a monstrous degradation of that third hypostasis of their Trinity, and little other than an absolute *creaturizing* of the same. *Cudworth. Intellectual System*, fol. 594. CREAT

——————— God was alone
And *creatureless* at first.
Donne. To the Countess of Bedford.

The state of elect and non-elect, afore or without the consideration of the fall, is that of *creatureship* simply and absolutely considered. *Goodwin. Works*, vol. ii. part iv. fol. 134.

But not only Timæus Locrus, but also Plato himself, calls it, θεὸν γενητὸν, that is, a created God, the word γενητὸν being here put for that, which after it once was not, is brought into being; which is the proper notion of a *creature*. So that the animated world is by Plato made to be only the chief of all the γενητοὶ θεοὶ, that is, the *creature-gods*.
Cudworth. Intellectual System, fol. 551.

I am assured that all that ever their sentence hath done, hath put mé in the way that I am going; from earth to heaven, from friends, and comfort, and *creature-relations*, that of necessity ere long must be left. *State Trials. Trial of John Gibbons.*

[These Platonists] did doubtless therein designedly lay a foundation for their polytheism and *creature-worship*, (now vulgarly called idolatry.)
Cudworth. Intellectual System, fol. 593.

This is plainly to make a breach upon the deity; to confound the *creator* and *creature* together; and to suppose a company of such *creaturely-gods*, as imply a manifest contradiction in the very notion of them. *Id. Ib.* fol. 568.

Whether this portion of the world were rent,
By the rude ocean, from the continent,
Or thus *created*; it was sure design'd
To be the sacred refuge of mankind.
Waller. To my Lord Protector.

By the poorest and most entire communication of being, God did not only produce, but *create* man. He gave him an existence out of nothing, and while he was yet but a mere idea or possibility in the mind of his eternal maker.
South. Sermon 1. vol. iii.

The bad treatment of those, who are suffered still to live in a society, is the *creating* of so many malcontents, who at some time or other may make those, who treat them ill, feel their revenge. *Burnett. Own Times. The Conclusion.*

And thus has this poor impotent *creature* been perpetually hanging upon the bounty of his great *creator*, and by a daily preservation of his precarious being, stands obliged to him under the growing renewed title of a continual *creation*.
South. Sermon 1. vol. iii.

The mind finds no great difficulty, to distinguish the several originals of things into two sorts: First, When the thing is wholly made new, so that no part thereof did ever exist before; as when a new particle of matter doth begin to exist, *in rerum natura*, which had before no being; and this we call *creation*.
Locke. On Human Understanding, book ii. ch. xxvi.

Notwithstanding there is such infinite room between man and his maker for the *creative* power to exert itself in, it is impossible that it should ever be filled up, since there will be still an infinite gap of distance between the highest *created* being, and the power which produced him. *Spectator*, No. 519.

[This] is apparently *creatrix* of the wound made by the fly, when she puts her eggs there.
Derham. Physico-Theology, book iv. ch. xv. (note m.)

Another practice Gainsborough had, which is worth mentioning, as it is certainly worthy of imitation; I mean his manner of forming all the parts of his picture together; the whole going on at the same time, in the same manner, as nature *creates* her works.
Sir Joshua Reynolds. The fourteenth Discourse.

The silent majesty of night
Excites to take a nobler flight;
With saints and angels to explore
The wonders of *creating* pow'r.
Wilkie. Fables. The Rake and the Hermit.

When man was first formed, *creation* was his book, and God his preceptor. The elements were so many letters, by means of which, when rightly understood and put together, the wisdom, power, and goodness of the great *creator* became legible to him.
Bishop Horne. Works. Discourse 30.

REATE.

All utt'rance, flowing from the god of love;
Seeking the *creaturely* and human will
To free it from captivity to ill.
Byron. A Poetical version of a Letter.

CREBROUS, Lat. *creber;* of uncertain origin. Frequent.

Which indeed supposeth (as their principles do) an imperfect inchoate power already in man's will to act graciously, which through assisting grace stirred up by *crebrous* and frequent acts, grows up into an habit or facility of working.
Goodwin. Works, vol. v. part i. fol. 175.

CRECY, or Cressi, the *Cariaiacum* of the Romans, an inconsiderable Town of Picardie, in the Department of the Somme, and chief place of a Canton in the District of Abbeville, 120 miles north from Paris, 36 north-west from Amiens. Crecy derives its celebrity from the great victory obtained by Edward III. over Philippe de Valois in 1346; and whoever prefers rhyme to plain prose, may obtain as circumstantial details of this celebrated battle as any history affords, from a Poem entitled *The Battailles of Crescey and Poictiers won by the fortitude and valor of King Edward III. of that name, and his sonne Edward Prince of Wales, named the Black*, by Charles Aleyn, 1633.

CRE'DIT, *v.*
Cre'dit, *n.*
Cre'ditable,
Cre'ditableness,
Cre'ditably,
Cre'ditor,
Cre'ditrix,
Cre'dulency,
Credu'lity,
Credu'lous,
Credu'lously,
Cre'dulousness.

Lat. *credo, itum;* of uncertain origin. Vossius prefers the Gr. χρῄζω, *mutuo do; ibi* (he observes) *mutuum damus, cum quid de meo fit tuum, aut de tuo meum;* an explanation which does not throw much light upon his Etymology.

"Fr. *croire;* to believe, to think assured; to trust, have confidence in; give *credit* unto; also, to lend, put in trust with, commit into the hands of." Cotgrave.

"Fr. *credit.* Credit; reputation, account, renown; esteem in, favour with, good opinion of, the world; also, trust, belief, affiance, faith." Cotgrave.

Credulity is now, though not formerly, restricted by usage, to what Minsheu calls, Lightnesse of belief. Fr. *crédulité;* It. *credulità;* Lat. *credulitas.*

The weightinesse thereof, and the expectation of others, seemeth of due and right to claime something too bee sayde by mee, whome your especiall trust and fauour hath *credited* and graced with this employment.
Hakluyt. Voyage, &c. M. Laurence Keymis.

Two eares that trust no trifling tales
nor *credit* blazing brute:
Yet such againe as readie are
to heare the humble suit.
Turbervile. In Prayse of Lady P.

If a vagabond would do what him lust, and call himselfe your seruante, and execute such offices of trust, whether ye would or no, as ye haue committed to another man's *credit*, what would euery one of you say or doe herein? Would ye suffer it?
Sir John Cheke. The Hurt of Sedition, D 2.

By such like wiles of Sinon the forsworne
His tale with us did purchase *credit:* some
Trapt by deceite, some forced by his terces.
Surrey. Æneis, book ii.

Watte Tyler answered hym and sayd, Frende, appease yourselfe, thou shalte be well payed or this day be ended; kepe the nere me, I shall be thy *credytour.* CREDIT.
Froissart. Cronycle, vol. i. ch. 384.

The spirite of God with man's owne towardnesse and good endeavour, woorketh in man the *credulitie* and belief, by which we both believe the church in teaching vs which is the scripture, and also by which we believe the thyngis that are written in the scripture. *Sir Thomas More. Workes*, fol. 579.

Saint Augustine was resolute in points of Christianitie to *credite* none, how godly and learned soeuer he were, vnlesse he confirmed his sentence by the scriptures, or by some reason not contrarie to them.
Hooker. Ecclesiastical Polity, book ii. fol. 61.

Mingle no matter of doubtful *credit*, with the simplicity of truth. *Ben Jonson. Discoveries.*

And there is an instance yet behinde, which is more *creditable* than either, and gives probability to them all.
Glanville. Vanity of Dogmatizing, ch. xxi.

Leaving also the more common and ordinary measure and proportions of beneficence, wherein the better sort think they quit themselves like Christians, and come off fair and *creditably:* he chose the more excellent way, and he devoted unto God and set apart the tenth of his yearly incomes for charitable and pious uses. *Mede. Works. Life*, fol. 42.

Yet so great was this execrable deed,
As men would scarce therein believe their eyes
Much less their ears: and many sought to feed
The easy *creditors* of novelties,
By voicing him alive.
Daniel. History of Civil Wars, book iii.

But should we signify no more than only this to your highnesses, that she is a widow, that she is in great want, the mother of many small children, which her *creditor* endeavours to deprive of almost all that little support they have in this world, we cannot believe we need make use of any greater arguments to your lordships.
Milton. R. Cromwell. To the States of West Friezland.

For were thy selfe iuror and iudge of the more offensiue, my *credulencie*, or thine inconstancie, the iuror could not but giue verdict for Elisa and the iudge sentence against Æneas.
Warner. Albion's England. Addition to book ii.

Devotion (mother of obedience)
Bears such a hand on their *credulity*,
That it abates the spirit of eminence,
And busies them with humble piety.
Daniel. History of Civil Wars, book vi.

Had Argiue Hellen knowne *credulity*
Would bring such plagues with it; and her againe
(As auctheresse of them all) with that foule stain
To her, and to her countrey; she had staid
Her loue and mixture from a stranger's bed.
Chapman. Homer. Odyssey, book xxiii. fol. 356.

I will not foul my mouth to speak the sorceries
Of your seducer, his base birth, his whoredoms,
His strange impostures; nor deliver how
He taught a pigeon to feed in his ear,
Then made his *credulous* followers believe
It was an angel that instructed him
In the framing of his Alcoran.
Massinger. The Renegado, act ii. sc. 3.

The city of York had too *credulously* believed King Edward's oath, not to disturb King Henry.
Baker. Edward IV. Anno 1471.

If the gospel and the apostles may be *credited*, no man can be a Christian without charity, and without that faith which works, not by force, but by love.
Locke. Works. Letter concerning Toleration.

He would have been ashamed for his own *credit-sake*, to have such *sophistries* pass under his hand, as are here offered.
Sharp. Works, vol. vii. *Appendix*, p. 317.

Though divers *creditable* witnesses deposed, that Gregory Bandan, who was common hangman, had confessed and owned to have executed the king; yet the jury found him [Captain William Howlet] guilty of the indictment.
Ludlow. Memoirs, vol. iii. p. 74.

Among all these snares, there is none more entangling than the *creditableness* and repute of customary vices.
Decay of Piety.

He who would act the destroyer, if he would do it effectually, should put on the reformer; and he who would be *creditably*, and successfully a villain, let him go whining, praying, and preaching to his work; let him knock his breast, and his hollow heart, and pretend to lie in the dust before God, before he can be able to lay others there. *South. Sermons*, vol. v. p. 207.

Many there are of the same wretched kind,
Whom their despairing *creditors* may find
Lurking in shambles; where with borrow'd coin,
They buy choice meats, and in cheap plenty dine.
Congreve. The eleventh Satire of Juvenal.

'Tis no less a truth than a paradox. That there are no greater fools than atheistical wits, and none so *credulous* as infidels.
Bentley. Sermon 2.

Beyond all *credulity* therefore is the *credulousness* of atheists, whose belief is so absurdly strong, as to believe that chance could make the world, when it cannot build a house; that chance should produce all plants, when it cannot paint one landskip; that chance should form all animals, when it cannot so much as make a lifeless watch. *Clarke. Sermon* 1. vol. i.

Cicero in his letters to Atticus often mentions the difficulty of penetrating into Pompey's real designs; but if Cælius may be *credited*, he was, it seems, one of those over refined dissemblers, who, as our British Horace observes, are

"——— So very close they're hid from none." *Pope.*
Melmoth. Cælius to Cicero, note 9. let. 25.

——— Th' unthrifty maid
Too *credulously* fond! who gave away
Her heart so lavishly, deserves to wed
The woes that from her indiscretion flow!
Smollet. The Regicide, act i. sc. 6.

CREED.

CREED, CRE'DENCE, *v.* CRE'DENCE, *n.* CRE'DENT, CRE'DENTIAL, *adj.* CRE'DENTIAL, *n.* CRE'DIBILITY, CRE'DIBLE, CRE'DIBLENESS, CRE'DIBLY, CEED-MAKER.

The *creed* or *beleefe*, *a* Lat. *credo*, i. to believe, *quod sit articulorum fidei nostræ symbolum*; G. *le credo, le symbole des Apostres*; It. *il credo, il symbole de gli Apostoli*; H. *el credo o symbolo des los Apostoles. Symbolum*, i. *collatio Apostolorum.* Minsheu. See the Miscellaneous article. Also CREDIT, above.

Credence is as common among our old writers as *credit.*

Shelton uses *credence* as a verb. And Warner,—*creed.*

Credential, that which gives or confers credence or credit.

Þis letter of *credence* Þei schewed in his present,
Here now Þe acordance, Þer saÿng ment.
R. Brunne, p. 258.

Trouth is a thing that I wol ever kepe
Unto the day in which that I shal crepe
Into my grave, and elles God forbede.
Beleveth this as siker as your *crede.*
Chaucer. The Chanones Yemannes Tale, v. 16515.

Salomon sayth, leveth me, and yeveth *credence* to that that I shall say. *Id. The Tale of Melibeus*, vol. i. p. 126.

For er I singe suche a *crede*,
I had leuer to be lewed.
Gower. Conf. Am., book iii. fol. 56.

Then is he swiftest to begyle
The woman, whiche that ilke whyle
Set vpon hym feith of *credence.*
Id. Ib. book i. fol. 12.

Who promised alwayes to be our wall,
And badde vs trust as truely as our *creedes*,
That all good wordes should be perform'd with deedes.
Gascoigne. The Fruites of Warre.

But well I wote that the redde worm and the menow ben good bayten for him [the carp] at all tymes, as I have herd saye of persones *credyble*, and also founde wryten in bokes of *credence.*
The Boke of St. Albans, printed at Westminster, by Wynkyn de Worde. Anno 1496.

Furste, after the king's cordial recommendation, and deliveraunce of his letters *credentials*, the king's said secretary shal say, that the king's highnes, calling to his remembraunce, &c.
Strype. Memorials. Instructions by the King, for Mr. Pace.

But when any man speaketh with aduisement and deliberation, the wordes are thē more *credible*; but yet if he sweare, it confirmeth the thing more. *Tyndall. Workes*, fol. 442.

And also I reporte me to all knyghtes and squyers of honour, bothe of Fraunce and of Englande, *credably* enfourmed of the hole mater. *Froissart. Cronycle*, vol. ii. ch. clxi.

So he dothe vndermynde
And such sleightes dothe fynde,
That the kynges mynde
By him is subuerted,
And so streitly courted
In *credensing* his tales,
That al is but nut shales.
Skelton. Why come ye not to Court.

Nor *creeded* be this love-tale of
This ladie and this knight.
Warner. Albion's England, book xi. ch. lxxvi.

With letters then of *credence* for
Himselfe, and marte for them,
He puts to sea for England, whome
The yse about did hem.
Id. Ib. book xi. ch. lxv.

And yet those very assemblies of bishops had no authority by their decrees to make a divine faith, or to constitute new objects of necessary *credence.*
Taylor. Liberty of Prophesying, sec. 6.

Lending soft audience to my sweet design,
And *credent* soul to that strong bonded oath,
That shall prefer and undertake my troth.
Shakspeare. A Louer's Complaint.

——— Then 'tis very *credent*
Thou may'st co-ioyne with something.
Id. Winter's Tale, fol. 278.

Having now shewed their *credential* letters on both sides, the Spaniards excepted in those of the queen's against the epithete of most illustrious in the archduke's title.
Camden. Elisabeth. Anno 1600.

The committee of estates excepted against the *credentials* of the English commissioners because they were directed to the parliament of Scotland, which did not then sit, but only the committee of estates. *Whitelock. Memoirs. Charles I. Anno* 1647.

Whereunto we answere, that albeit the name of faith being properly and strictly taken, it must needs haue reference vnto some vttered word, as the object of belief: neuerthelesse sith the ground of *credit* is *credibilitie* of things *credited*; and things are made *credible*, eyther by the knowne condition of the vtterer, or by the manifest likelihood of truth which they have in themselues; hereupon it riseth, that whatsoeuer wee are perswaded of, the same wee are generally said to beleeue.
Hooker. Ecclesiastical Polity, book ii. fol. 58.

Doubtlesse, they worshipped Juppitter and Mercurie, that were the Goddes of the Greekes; and had the Greeke sacrifice, as it manifestly appeareth by the woordes of St. Luke: and it may be *credibly* gathered, that Paule and Barnabas spake to them in Greeke. *Jewell. Replie to M. Hardinge.*

But this *creed-maker* is cautious, beyond any of his predecessors: hee will not be so caught by his own argument; and therefore is very shy to give you the precise articles that every sincere Christian is necessarily and indispensibly oblig'd to understand, and give his assent to.
Locke. The second Vindication of the reasonableness of Christianity.

CREED. The first is a faith of simple *credence*, or bare assent; acknowledging and assenting to the historical truth of every thing delivered in God's word. *South. Sermon* 2. vol. viii.

He some time since had left his frock for a petticoat, and insinuated himself so far in the Swedish court as to procure a commission (or *credence* at least) for a certain petty agency in England. *Sir William Temple. Memoirs*, vol. ii. p. 457.

And for this great dominion here,
Which over other beasts we claim,
Reason our best *credential* does appear,
By which indeed we domineer,
But how absurdly we may see with shame.
Buckinghamshire. Ode on Brutus.

One Mr. Benjamin Barker, a man that I have been long well acquainted with, and know him to be a very diligent and observing person, and likewise very sober and *credible*, told this Mr. Hill. *Dampier. Voyage. Anno* 1683.

No article of religion, though as demonstrable as the nature of the thing can admit hath *credibility* enough for them.
Bentley. Sermon 2.

The *credibleness* of a good part of these narratives has been confirmed to me by a practiser of physic in the East Indies.
Boyle. History of Firmness.

However, the preliminary ground of *credence* was the same, in both; namely, that the doctrines they taught were worthy of God. This worth consists in their truth, and in their importance.
Warburton. Works. Sermon 5. vol. ix.

He goes out the declared emissary of a faithless ministry. He has perfidy for his *credentials*.
Burke. On a Regicide Peace.

The present question, concerning the reality of the miraculous powers of the primitive church, depends on the joint *credibility* of the facts, pretended to have been produced by those powers, and of the witnesses, who attest them.——The *credibility* of facts lies open to the trial of our reason and senses, but the *credibility* of witnesses depends on a variety of principles, wholly concealed from us; and tho', in many cases, it may reasonably be presumed, yet in none, can it certainly be known.
Middleton. Miscellaneous Works, pref. ix.

They lay five or six large eggs, of a dirty whitish hue, sprinkled all over with minute deep rust-color spots; and we have been *credibly* informed that they will sometimes lay fourteen and more.
Pennant. British Zoology. The Common Coot.

CREED is a form of words comprising the substance of the Christian belief.

Origin of Creeds.

The Holy Scriptures, being the perfect revelation of Divine truth, and containing every thing necessary for a Christian to know and believe, may, in a more extended sense, be called our Creed: but since the Scriptures, besides the fundamental doctrines of Christianity, comprehend also a great variety of truths of comparatively less importance, it became necessary for the Church to frame a compendium of the Articles of indispensable belief, which might be easily learned, and understood by its members. It is highly probable, that such compendiums or summaries of faith have been in use ever since the Apostolic age; and that the *form of sound words* mentioned by St. Paul (2 *Tim.* ch. i. 13; 2 *Thess.* ch. iii. 6) was, in fact, a concise epitome of Christian doctrine.

Probably of Apostolic Origin.

In the commencement of the ministry of Jesus Christ, all professions of faith seem to have consisted of a single proposition: as, *We have found the Messiah, or Christ.* (*John*, ch. i. 41.) *We have found Him, of whom Moses in the Law, and the Prophets, did write.* (*Ib.* 45.) Afterwards we read of an Apostle confessing to his Master that *He had the words of eternal life*, and that *He was the Christ*, or Messiah, *the Son of God.* (*John*, ch. vi. 68, 69.) The subsequent declaration of St. Thomas, if more explicit, was in fewer words: *My Lord and my God.* (*John*, ch. xx. 28.) The Apostles were enjoined to baptize all nations *in the name of the Father, and of the Son, and of the Holy Ghost*, (*Mat.* ch. xxviii. 19;) yet the profession of the Ethiopian Eunuch, after Philip had interpreted to him the prophecies relating to Christ, and had instructed him in the history of our Lord's life, simply was, *I believe that Jesus Christ is the Son of God*, (*Acts*, ch. viii. 37;) because in that character of Christ, duly considered, was involved the whole system of the Gospel-dispensation; though there is no doubt, even if the authority of the ancient Fathers of the Church had been less direct on this point than we find it to have been, but that the general form must have expressed a faith explicitly in the Father, Son, and Holy Ghost, into whose names all persons were to be baptized. (Ld. King, *on the Apost. Creed*, p. 37.) CREED.

Saint Paul, writing to the Corinthians, supplies a form of words, which now constitutes part of what is called the Nicene Creed: *I delivered unto you first of all that which I also received, how that Christ died for our sins according to the Scriptures; and that he was buried, and that he rose again the third day, according to the Scriptures.* (1 *Cor.* ch. xv. 3, 4.) In the *Epistle to the Hebrews*, which was written some years later, he gives a summary, enumerating several distinct Articles, which he calls "principles of the doctrines of Christ;" as, *repentance from dead works; faith towards God; the doctrine of Baptisms; the laying on of hands; the resurrection of the dead; and a judgment to come.* (*Heb.* ch. vi. 1, 2.) And in his *Epistle to the Ephesians*, he charges them to live in the bond of peace, as they value the unity of their faith, and their common interest in the acknowledgment of *one Body and one Spirit, even as they were called in one hope of their calling; one Lord, one faith, and one Baptism; one God and Father of all.* (*Ephes.* ch. iv. 4—6.) In which expressions of the Apostle, we may obviously recognise, though in an inverted order, the leading Articles of all subsequent Creeds, viz. faith in one God and Father of all; in one Lord Jesus Christ; one Holy Spirit; one Body or Catholic Church; one Baptism for the remission of sins; and one Hope, or looking for a resurrection to everlasting life. (Bishop Cleaver's *Seven Sermons*, p. 129, 130.)

As the historical part of the *New Testament* is brought down only a few years subsequent to the ascension of Jesus Christ, we must have recourse, for the events immediately succeeding, to the works of the early Fathers of the Christian Church, and of the early writers of Ecclesiastical history, many of which are still extant. Now we learn from these, that the primitive Churches, which were founded by the Apostles, or by their immediate successors, for some time admitted new converts to Baptism, on the bare profession of the following simple form, taken from the words of Jesus Christ himself, when he instituted the Sacrament of Baptism. "I believe in God the Father, the Son, and the Holy Spirit." Justin Martyr, in particular, who wrote not many years after the death of the Apostle John, explicitly states, that Baptism was then administered "in the name of God the Father and Lord of all things; and of Jesus Christ, who was crucified under Pontius Pilate; and of the Holy Spirit, who foretold all things concerning Christ and the Prophets." (*Apol.* i. c. 79, 80.) In progress of time, as the number of converts from heathenism was multiplied, and

CREED.

heresies arose, these abstracts of Christian faith were enlarged by the addition of fresh Articles, in order to exclude novel and erroneous opinions.

Different appellations of Creeds.

These summaries of Christian belief were distinguished by various appellations. Thus, in the Western Church, they are termed *Creed;* but in the Eastern Church, they were variously called Μάθημα, or the *Lesson,* (because Catechumens were obliged to learn them,) Γραφη, or the *Writing,* and Κάνων, or the *Rule;* because the Creed was that standard or rule by which the orthodox faith was to be discriminated from the novel and erroneous inventions of false teachers. But the most common name in the Eastern Church was Σύμβολον, the *Symbol,* (from the Greek verb συμβάλλειν, to put together;) either because it was a collation or epitome of Christian doctrine, or, which is the more probable opinion, because the word Σύμβολον, and its Latin equivalent *Symbolum,* signify a watch-word or sign, like the *tessera militaris,* or military badge among the Romans; the object of Creeds having been to distinguish true Christians from heretics and infidels. (Bingham's *Origines Eccles.* book x. ch. iii.)

Early Creeds.

Numerous ancient formularies of faith are preserved in the writings of the early Fathers of the Christian Church, particularly Irenæus, Tertullian, Cyprian, Origen, Gregory Thaumaturgus, the author of the Apostolical Constitutions, and others. These have been collected by Bingham, (*Origines Eccles.* book x. ch. iv.;) and it is worthy of observation, that they all perfectly agree in substance, though there is a diversity of expression in them. But there are three Creeds, which have come down to our time; and which demand attention as having been adopted by the Anglican Church, which has declared that they ought thoroughly to be received and believed, for they may be proved by most certain warrant of Holy Scripture. (*Article* 8.) These are the *Apostles' Creed,* the *Nicene Creed,* and the *Athanasian Creed.*

Apostles' Creed.

I. Of the Apostles' Creed, an account has already been given in Vol. xvii. p. 700.

Nicene Creed.

II. The *Nicene Creed,* which is recited in the Communion Service of the Church of England, is so called because it was adopted by the Bishops convened at the Council of Nice, in Bithynia, which was held A. D. 325, to oppose the Arian heresy. This Creed, as far as the words "Holy Ghost," was drawn up and agreed to at this Council; and fifty-six years afterwards it was completed in its present form, at the Council of Constantinople, (held A. D. 381, or 382,) except the words "and the Son" which were inserted in 447, after the clause "who proceedeth from the Father." The addition, made at Constantinople, was caused by the denial of the Divinity of the Holy Spirit by Macedonius and his followers: and the Creed thus enlarged was immediately received by all orthodox Christians. The insertion of the words *Filioque,* "and the Son," was made by the Spanish Bishops; and they were soon afterwards adopted by the Christian Churches in France. The Bishops of Rome for some time refused to admit these words into the Creed: at length, however, they were allowed in the year 883, since which time they have stood in the Nicene Creed in all the Western Churches; but they have never been received by the Greek Church. (Bingham's *Origines Eccles.* book x. ch. iv.; Bishop Tomline's *Elements of Christ. Theol.* vol. ii. p. 218.)

Athanasian Creed.

III. The explanatory defence or Confession of the Christian doctrine of the Trinity, (for such in fact it is,) "commonly called the *Creed of Saint Athanasius,*" was framed in the century after the Nicene Creed; and, as the former summaries of faith then extant were found inadequate to keep heretical teachers and tenets out of the Church, it was drawn up with the utmost minuteness possible, as a defence of the Christian doctrine against all opponents, and as a condemnation of all existing heresies.

By whom composed.

Though it bears the name of Athanasius, this composition is now known not to have been written by him. It is wanting in almost all the manuscripts of his works; it is neither mentioned nor referred to in any of his genuine works; and its style and contexture bespeak it to have been the production of a Latin, and not of a Greek author. Indeed, it is not probable that Athanasius should have composed a Creed, since he and all the orthodox Divines of those times constantly refer to the Nicene Creed as the standard of their faith. No notice is taken of it by any writers who immediately succeeded Athanasius: it was never appealed to as an authority, for deciding the controversy between the Eastern and Western Churches, relative to the procession of the Holy Spirit, and it condemns the Macedonian, Nestorian, and Eutychian heresies. In fact, it was never heard of, as the Athanasian Creed, until the VIth century, that is, more than 100 years after the death of the learned Father whose name it bears, when it was published under his name, probably for the purpose of giving weight to it; and because it contained his doctrines. It is impossible now to ascertain who was its real author; but it is generally believed to have been written in Latin; and Dr. Waterland has, by a long and ingenious induction of particulars, shown that it was probably composed by Hilary, Bishop of Arles, for the use of the Gallican Clergy, especially those of his own diocese; that about the year 570 it had acquired sufficient celebrity to be commented upon; and that before the year 670 the name of Athanasius was added, to commend and adorn it, being in itself an excellent system of the doctrines of Athanasius concerning the Trinity, and the Incarnation of Christ, principally in opposition to the Arians, Macedonians, and Apollinarians. Before the close of the Xth century the Athanasian confession was generally received in the Western Church, though it is doubtful whether it was ever admitted into the Eastern Church: at the Reformation, it was received in its fullest extent by all Protestant Churches; Luther, Calvin, and Beza, made it their profession of faith. And, finally, it was received by the framers of the Liturgy of the Anglican Church, not upon the authority of its compiler, (for they have not determined any thing concerning either its age or author,) but simply because the truth of the doctrines contained in it may be "proved by most certain warrants of Holy Scripture;" and also as a bulwark of the Christian verity against the possible revival of similar errors. The history of our own times shows the prospective wisdom of this measure; the tenets of the Ebionites, Sabellians, and Arians, having been revived and maintained, under other denominations, to the present day. (Waterland's *Critical History of the Athanasian Creed;* Wheatley's *Sermons on the Nicene and Athanasian Creeds;* Dr. Nares's *Discourses on the Three Creeds;* Vincent's *Sermons on the Creeds.*)

Great objection has been made to the clauses of

EED. this Creed, which denounce eternal damnation against those who do not assent to, or believe every clause or verse of it: but this objection will be entirely obviated, when it is considered that the damnatory clauses do not extend to each of the explications given in the Athanasian Creed, but are intended only to secure the general doctrine against those who denied or impugned it. If *they* had not first innovated in the language, it would never have been necessary for those who defended the orthodox faith, to have had recourse to opposite terms. Further attention to the analysis of this explanatory defence of the Catholic faith, will show that it is not the reception of the *form of words* used in it, but the *belief* of the Catholic or Universal faith, which is represented as necessary to salvation; and that it is not the objecting to the mode of expression here employed, but the wilful and deliberate corruption of the Catholic faith, which is asserted to expose a man to the danger of condemnation.

ysis of This Confession of faith consists of an introduction, ıthan- and of two positions, with their several proofs, deduc- ın d. tions, and conclusions.

dinc- The *Introduction* simply states that which no orthodox Christian will deny, that "whosoever will be saved," (*quicunque vult salvus esse*, whosoever is willing or desirous to be saved,) and expects to be so upon the terms of the Gospel, must cordially embrace the doctrines which it reveals. "Above all things," or in the first place, as the foundation on which he must hereafter build a holy practice, "he must" embrace and "hold fast the Catholic faith; which faith," received from the beginning, and to be preserved to the end by the Universal Church, "except every one do keep whole," without rejecting any part of it that is clearly revealed, "and undefiled," (*inviolatam*,) without adding any thing to it which may corrupt its sense and defeat its tendency: "without doubt," that is, it is beyond all controversy, if the Scriptures be true, "he shall perish everlastingly." The Creed then proceeds to state and define the two primary Articles of the Catholic faith in two distinct positions, to both of which the Introduction is applicable.

part. The first part of the Catholic faith is stated to be this: "that we worship one God in Trinity, and Trinity in Unity, neither confounding the persons," (as the ancient Patripassians and Sabellians *did*, and the modern followers of Emanuel Swedenborg *do*,) "nor dividing the substance," (as the Ebionites, Cerinthians, Photinians, Arians, Macedonians, and all those among the ancient heretics *did*, who denied the Divinity of Jesus Christ and of the Holy Spirit; and as the modern Arians, Socinians, and Unitarians, or rather Humanitarians *do*.) The Catholic faith, thus generally stated in the third and fourth verses, (it is declared,) is necessary to be believed: but all that follows from the fifth to the twenty-sixth verse is only brought as a proof and illustration of the distinct personality of the Father, Son, and Holy Spirit, and of their Unity in the Godhead; and therefore requires our assent no more than a sermon does, which is written in order to prove or to illustrate a text of Scripture. The text is confessedly the divinely inspired word of God, and therefore is necessarily to be believed; but no one is obliged to believe, upon pain of damnation, every particular of the sermon deduced from it by an uninspired, and consequently fallible man. Now this is the case with respect to the Athanasian Creed. The Scripture makes necessary to salvation the belief of the Catholic faith above mentioned, and therefore we ought to believe it; but there is no such necessity laid upon us to believe the *illustration* there given of it. nor does the Creed itself require it. For, after drawing the inference or deduction in the twenty-seventh verse, it is expressly added in the conclusion of this first part, with reference to the importance of receiving and acknowledging the doctrine of the Trinity, "He therefore that will" (is willing or desirous to) "be saved, must thus think" (*ita sentiat*, let him thus think) "of the Trinity." CREED.

The Creed then proceeds, in the second part, to defend the doctrine of Christ's Incarnation, against the ancient Ebionites, Photinians, and Arians, (and, it may be added, against the modern Arians, Socinians, and Humanitarians,) by whom the Deity of Jesus Christ was (and is) denied; and also against the Docetæ, the Apollinarians, and the Eutychians who denied that he was man, and against other heretical notions which were then current respecting the nature and person of Christ. "Furthermore, it is necessary to everlasting salvation, that he also rightly believe the Incarnation of our Lord Jesus Christ." The Creed then proceeds, in the thirtieth and following verses to the forty-first, to similar proofs; in the forty-second, we have the deduction made,—"This is the Catholic Faith,"—and the conclusion drawn,—"Which except a man believe faithfully, he cannot be saved." Second part.

It is further to be observed, that the Athanasian Creed speaks only to those, to whom the Gospel has been fully set forth, and the importance of it fully explained. The state and condition of the heathen world are quite out of the question. They cannot be said, in a Christian sense, either to be saved or to perish, because they have not the means which professing Christians have, of attaining a just faith, or a just practice. They cannot make themselves Christians, nor be responsible for Christian duties. The condemnation, therefore, which is asserted to be contained in the second and concluding clauses or verses of this Creed, is to be understood solely in reference to the *doctrine* affirmed in it, and is not to be extended to those parts, which are adduced merely in confirmation of it. (Dodwell's *Athanasian Creed Vindicated, in three Charges*; Waterland's *Crit. Hist. of the Athanasian Creed*, ch. x.; Horne's *Scripture Doctrine of the Trinity briefly stated, &c.* p. 67—73. 163—173.) The principle, upon which these clauses are founded, is simply this,—that a belief of certain doctrines is essential to salvation; and this principle seems to rest upon the general tenour and express declarations of the New Testament. We find Jesus Christ and his Apostles equally anxious to establish a right faith and a correct conduct. Faith and good works are inculcated as equally necessary. *Without faith it is impossible to please Him.* (*Heb.* ch. xi. 6.) *He that believeth and is baptized, shall be saved; but he that believeth not*, (more correctly, he that disbelieveth,) *shall be damned*, or condemned. (*Mark*, ch. xvi. 16.) It is not the simple *un*believer that is here intended, but the obstinate *dis*believer, who will not examine the evidences of the Gospel, but perversely rejects the counsel of God against himself. "It is, indeed, impossible for any one to admit the Divine authority of the New Testament, and to doubt the necessity of faith in general; and surely the faith thus required must include the leading and characteristic doctrines of the

CREED. Christian Religion: and though the Gospel has not *expressly* enumerated these particular doctrines, none seem to have a stronger claim to be so considered, than those which relate to the three persons in whose names we are commanded to be baptized, to the incarnation of Christ, and to a future judgment. These are the doctrines of the Athanasian Creed: and therefore it would follow, that a belief in the doctrines of the Athanasian Creed is necessary to salvation." (Bishop Tomline's *Elements of Christ. Theol.* vol. ii. p. 220, 221.) The doctrine of this Confession consists of no more than is implied in the Apostles' and Nicene Creeds; but, if that "doctrine is branched out into more particulars, and abounds in repetitions, that offend the ear, and bewilder the understanding of plain men, let the fault lie where it ought to do; not with the Church who meant to teach nothing new, but with the opposers of the Catholic doctrine, who attacked the Church with such variety of opposite principles, such intricacy of argument, such metaphysical subtlety of disputation, such perplexity of contention, that it became impossible to express our own plain faith, without an explicit guard against all the observations, which awaited us on the one hand or the other." (Dean Vincent's *Sermons on Faith*, &c. p. 71.)

Other Confessions of faith. Besides the three Creeds, of which an account has thus been given, there are extant numerous Confessions of faith or summaries of Christian doctrine, which have been framed by different Churches, as the standards to which the Ministers in their respective communions are required to conform. These may be considered under four heads, viz. the Confessions of the Greek Church, of the Romish Church, of the Church of the Waldenses, and of the several Protestant Churches.

Of the Greek Church. I. The *Greek* Church has several important documents of her faith, subsequent to her separation from the Church of Rome; three of which are entitled to particular notice, viz.

1. *The Confession of the true and sincere Faith* was presented to Mohammed II., in 1453, by Gennadius, Patriarch of Constantinople, on the capture of that Metropolis by the Turks. It was favourably received, and Mohammed delivered into the Patriarch's hand the crosier or pastoral staff, as an emblem of his investiture with the Patriarchal see, and authorized him to assure the Greeks in his name, of their lives, their liberties, and the free exercise of their religion.

2. *The Confession*, drawn up in the name of the Oriental Church, in 1621, by *Cyril Lucar*, then Patriarch of Constantinople, was originally written in Latin; and, being delivered to C. Van der Haga, the Dutch Ambassador at the Porte, was by him published in 1629. It was afterwards translated into Greek, and enlarged by the addition of copious Scriptural authorities. It consists of eighteen short Chapters or Articles, and is remarkable for its almost entire conformity with the doctrines of the Reformed Protestant Churches, and for its avowed hostility to Popery, in condemning purgatory, transubstantiation, and the Apocrypha, and in reducing the number of Sacraments to two. In contradiction to this Confession,

3. *The Orthodox Confession of the Catholic and Apostolic Greek Church*, was composed by Peter Mogila, or Mogislaus, Metropolitan of Kiow, in the Ukraine, and was put forth, with the approbation of three Russian Bishops Suffragan: it was afterwards altered and enlarged by Michael Syrigo, a Cretan; and in 1643 it CRE was approved, with great solemnity, by the Patriarchs of Constantinople, Alexandria, Antioch, and Jerusalem, and by several Bishops and other chief officers of the Greek Church of Constantinople. This is considered to be the most authentic document of the modern Greek Church: it is written in the form of a catechism. There are several editions of this Confession, but the most correct is reputed to be that published at Wratislaw, in 8vo., in 1751, in the Greek, Latin, and German languages, by Carl Gottlob Hoffmann, who prefixed an interesting history of this Confession.

The Catechism or Confession of Mogila was for a long time the standard of the principles of the Russian Greek Church; and even now it is admitted as a work containing nothing repugnant to the dogmas of the Councils, and the doctrine of that Church. But it appears to have been superseded, first, by

4. *The Catechism of Theophanes*, Archbishop of Pleskoff, which was published by the Holy Legislative Synod, in 1766; and secondly, by

5. *The Orthodox Learning, or a Summary of Christian Divinity*, composed in 1765, in the Slavonian language, by the late Metropolitan of Moscow, Platon, for the instruction of the late Emperor Paul, then a youth. This last-mentioned Treatise has gone through numerous large editions, and has been introduced into almost every place of education in the Russian Empire: it has also been translated into French and German; and in 1814, an English version of it was published at Edinburgh, entitled *The Present State of the Greek Church in Russia; or A Summary of Christian Divinity*, by Platon, late Metropolitan of Moscow, translated from the Slavonian, by Robert Pinkerton. 8vo.

The Confessions of the other branches and sects of the Greek Church, which are scattered in Asia, and in Egypt, do not appear to have been printed; but the Rev. William Jowett has translated two Confessions of the Abyssinian Church, viz. 1. that of the Emperor Claudius, in 1555, which exhibits the faith of that Church in the XVIth century; and 2. *the Instructions of Mark, Patriarch of Alexandria, addressed to the Abyssinian Churches, on points of Religion at present controverted in Abyssinia.* This Confession is of recent date, and abounds with subtle distinctions and refinements, which are comparatively of little interest to enlightened European Christians: it is, however, important, as showing the state of religious opinions and feelings in Abyssinia. (Jowett's *Christian Researches in the Mediterranean*, p. 176—194.)

Of the Church of Rome. II. The Church of Rome has in every age received the Apostles', the Nicene, and the Athanasian Creeds; yet her faith has frequently changed, notwithstanding the strong assertions of her members to the contrary: nor was it ever fixed by any public authoritative Symbol until the Council of Trent. A succinct and explicit summary of the doctrine contained in the Canons of that Council, is expressed in the Creed published in 1564, by Pope Pius IV., in the form of a Bull, which usually bears his name. It is introduced with the Nicene Creed, to which it adds twelve Articles, containing those doctrines which the Church of Rome finally adopted after her controversies with the Reformers. To all and every one of the articles contained in this symbol of the Romish faith, every person who is admitted into the Romish Church, must publicly pro-

CREED.

fess his assent. A copy of this Confession is given in Butler's *Historical and Literary Account of the Confessions of Faith of the Roman Catholic, Greek, and Principal Protestant Churches*, p. 9—11.

Of the Church of the Waldenses.

III. The Waldenses, who inhabit the vallies of Piedmont, profess the Protestant faith, and have not inappositely been styled the *Protoprotestants*. They protested, indeed, against the errors of the Romish Church long before the term "Protestant" existed, in the sense in which it is now commonly used; their doctrines having been traced as far back as the year 1100, if not earlier. Two ancient Confessions of faith are extant, of these virtuous and persecuted Christians, one dated in the year 1120, and the other in the XIIth century: they are given by Paul Perrin in his *Histoire des Vaudois*, (Genève, 1619,) and are translated in Jones's *History of the Christian Church*, &c. vol. ii. ch. v. sec. 3. A third Confession was presented by them, in 1544, to the King of France, to remove the prejudices and calumnies which had been urged against them: this Confession is translated in the same work. Since the year 1630, when they lost all their Ministers except two superannuated men, by a pestilence that ravaged the vallies of Piedmont, (which in that year again became subject to the King of France,) the Waldenses having supplied the vacancies of their ministry by Frenchmen, and chiefly by Genevese, their Churches have conformed to the system of Geneva. (Miller's *Philosophy of Modern History*, vol. iv. p. 551.)

the testant urches.

IV. The Confessions of faith of the Protestant Churches are numerous. A copious abstract of their literary history and contents will be found in Butler's *Account of Confessions of Faith;* in Walch's *Bibliotheca Theologica Selecta*, vol. i. ch. iii. sec. 2, 3; and in Koecherid's *Bibliotheca Theologiæ Symbolicæ*. From these sources, as well as from the Confessions themselves, the following particulars relative to the religious belief of the principal Protestant Churches is derived.

the utheran urch.

1. *Confessions of the Lutheran Church.* The Lutherans call the standard books which contain their articles of faith and rules of discipline *Libri Symbolici Ecclesiæ Evangelicæ*, or the Symbolical Books of the Evangelical Church; and to these books all professors of divinity, and candidates for the sacred office, are required to subscribe. Besides the Apostles', the Nicene, and the Athanasian Creeds, they contain, first, the *Augustan Confession*, or the Confession of Augsburg; it is so denominated from the circumstance of the system of faith which it exhibits, having been presented to the Emperor Charles V. in 1530, at the Diet of *Augusta*, or Augsburg. This Confession is divided into two parts, the former of which, in twenty-one Articles, was designed to represent with truth and perspicuity the religious opinions of the Reformers; and the latter, in seven Articles, is employed in pointing out and confuting the seven capital errors and abuses which occasioned their separation from the Church of Rome, viz. communion in one kind, the constrained celibacy of the clergy, private masses, auricular confession, legendary traditions, monastic vows, and the excessive power of the Church. To the Augsburg Confession is subjoined an *Apology* for it, which was drawn up by Philip Melancthon, in reply to the attempted refutation of it by certain Roman Catholic Doctors. Next, follow the *Articles of Smalcald*, which were drawn up by Luther on occasion of a meeting of the Protestant Princes in that city, with the design of presenting them to the Council then convened at Mantua, and afterwards held at Trent. They state specifically what the Lutherans would receive or concede, and what they would neither accept nor give up. The *Smaller and Larger Catechisms of Luther*, though placed after the *Augsburg Confession*, and the *Articles of Smalcald*, were prior in point of date: both were first printed in the year 1529. To the preceding books most of the Lutheran Churches add the *Form of Concord*, also called the *Book of Torgau*, from the place where it was composed. The object of this was to effect an amicable adjustment of the differences among the Lutherans, and to preserve their Churches against the opinions of the Reformed (or Calvinistic) Churches on the subject of the Eucharist. The editions of the Symbolical Books of the Lutheran Church are numerous; one of the most recent, as well as most correct, is that published by Professor Tittmann at Leipsic, in 1817: and of the various commentaries upon it, those of Carpzov and Walchius may be mentioned as being among the most approved.

CREED.

The Saxon, Wirtemberg, Suabian, Pomeranian, Mansfeldtian, and Copenhagen Confessions generally agree with the Symbolical Books of the Lutherans, by whom they are greatly respected; but, except in countries or districts whence they are respectively denominated, they do not possess the authority of Symbolic Books. The Saxon Confession was composed by Melancthon, and that of Wirtemberg, by Brentius.

Of the Reformed (or Calvinistic) Churches.

2. *Confessions of the Reformed Churches on the Continent.* The Reformed Church, in the largest sense of that expression, comprises all the religious communities which have separated from the Church of Rome; but, having been used by the French Protestants to describe their Church, it afterwards became the appellation of all the Calvinistic Churches on the Continent. The following are the principal Confessions of these churches:

(i.) The *Helvetic Confessions* are three in number, viz. that of *Basle*, composed and printed in the German language in 1530, or according to some writers, in 1532, and subsequently translated into Latin; the *Summary and general Confession of Faith of the Churches in Helvetia*, or Swisserland, composed at Basle in 1536, for the purpose of being presented to the Council of Trent, and published in Latin, in 1671; and the *Confessio et Expositio Simplex Orthodoxæ Fidei et Dogmatum Catholicorum Sinceræ Religionis Christianæ, concorditer ab ecclesiæ ministris, qui sunt in Helvetid, Tiguri, Berni, Scaphusii, Sangalli, Curiæ Rhætorum, et apud confederatos, Mylhusii, item et Biennæ, quibus adjunxerunt se et Genevensis Ecclesiæ Ministri, edita.* This was published in 1566, and, according to Walch, was composed by the Elector Palatine, but others ascribe it to Bullinger: it has been translated into the Polish, Hungarian, French, Arabic, and other languages.

Tetrapolitan Confession.

(ii.) The *Tetrapolitan Confession* is generally attributed to Bucer; it derives its name from the four cities of Strasburg, Constance, Memmingen, and Lindau, by the deputies of which it was signed. It was published in Latin at Strasburg, in 1531, and also in German, in the same year, together with an apology or defence of it, in reply to the confutation which the Emperor Charles V. had commanded Faber, Eckius, and Cochlæus to write against it. This Confession differs from the Symbolical Books of the Lutheran

CREED. Churches, in the doctrine of the Sacraments, and especially in the exposition which it gives of the Eucharist.

Palatine or Heidelberg Confession. (iii.) The *Palatine*, or, as it is most commonly termed, the *Heidelberg Confession*, was framed by the order of John Casimir, Elector Palatine, and published at Heidelberg, in 1575, whence it derives its name. As the authors of it asserted that it was approved by Luther, the Wittemberg Divines denied their assertion, and an angry controversy was the result: which was carried on in the German language. Walch has given the titles of the publications which issued from the press in this unseemly contest.

Confession of the Gallic Churches. (iv.) Although the doctrines of Luther soon penetrated into France, yet the Creed and discipline of Calvin (after their establishment at Geneva) gradually made their way, and at length were almost universally adopted by the French Protestants. The *Confession of Faith of the Gallic Churches* was proposed and accepted at the first Synod held by the Reformed at Paris, in 1559. In the following year it was presented to Francis II., and in 1561 it was also presented to Charles IX. King of France, by Theodore Beza. This Confession has been repeatedly printed, and in various forms, both separately and together, with Bibles, Psalters, Catechisms, and other Ecclesiastical publications of the Reformed French Church.

Belgic Confession. (v.) The *Confession of Faith of the Reformed Churches in Belgium* was drawn up in 1559, by Guido de Bres, Adrian Saravia, and others, and does not appear to have been intended at first for public adoption; but it was approved in 1561 by several Protestant Divines, who did not think it advisable that they should go to Geneva for a Confession of their faith. In 1562 it was translated from the Walloon dialect into the Dutch language; and in the following year, being circulated through the Reformed Churches in the Netherlands, it began to be received as a standard of their doctrines. This Confession was subsequently translated into French and Latin.

Scottish Confession. (vi.) Under this class may be noticed the *Confession of Faith of the Kirk of Scotland*, a Church which acknowledges for its founder John Knox, a disciple of Calvin; and which, from the commencement of the Reformation in that country, adopted the Ecclesiastical polity and doctrine of the Church at Geneva. In 1581, King James, with all his family, and the whole Scottish nation, subscribed a "A General Confession of the true Christian Faith and Religion according to God's word," together with a solemn League and Covenant; in which they obliged themselves to maintain and defend the Protestant religion and Presbyterian government. During the Great Rebellion, the Scottish Covenanters adopted the "Westminster Confession," in the compilation of which, some delegates from their general assembly had assisted the English Divines, who had been appointed by the English Parliament to meet at Westminster for that purpose. At the Revolution in 1688, this Confession was received as the standard of the national faith; and the same Acts of the Scottish Parliament, which settled Presbyterian Church-government in Scotland, ordain that no person should be admitted, or continued as a Minister within that Church, unless he subscribed this Confession, and at the same time declared it to be the Confession of his faith. By the Act of Union with England in 1707, the same is required of all Principals, Professors, and other officers of the four Scottish Universities. The Westminster Confession, therefore, together with the larger and shorter Catechisms of the Assembly of Divines, (which are generally bound up with it,) contain the public and avowed doctrines of the present Kirk of Scotland; and these formularies are most decidedly Calvinistic.

CREED.

Confession of the Anglican Church. 3. *Confession of the United Church of England and Ireland.* In conformity with the practice of the Reformed Churches on the Continent, a Confession of faith was prepared for the Anglican Church, on the establishment of the Reformation in England. So early indeed as 1536, Henry VIII. had published Articles of religion, in which some Popish doctrines are disclaimed, but others are retained. Edward VI., the first Protestant Monarch of this country, caused to be published, by his Royal authority, forty-two "Articles, agreed upon by the Bishops and other learned and good men, in the Convocation held at London in the year 1552, to root out the discord of opinions, and establish the agreement of true religion." These Articles were repealed soon after the accession of Queen Mary to the English throne; but, in the beginning of her reign, Queen Elizabeth gave her Royal assent to "Thirty-nine Articles, agreed upon by the Archbishops and Bishops of both provinces, and the Clergy, in the Convocation holden at London in the year 1562, for avoiding diversities of opinion, and for the establishing of consent touching true religion." These Articles were revised, and some small alterations were made in them in the year 1571; since which time they have continued to be the criterion of the faith of the members of the Church of England. The Articles of 1562 were drawn up in Latin only; but in 1571, they were subscribed by the members of Convocation, both in Latin and English, and therefore the Latin and English copies are to be considered as equally authentic. The original manuscripts, subscribed by the two Houses of Convocation, perished in the fire of London, in 1666; but, from a collation of the oldest printed copies now extant, it appears that there are no variations of importance. It is generally believed that Archbishop Cranmer and Bishop Ridley were chiefly concerned in framing the forty-two Articles, on which the thirty-nine are founded; and they followed principally the Augsburg Confession; which was drawn up by Melancthon. Bishop Burnet has preserved these forty-two Articles in his *History of the Reformation*, (vol. ii. *Collections*, No. 55,) and has pointed out in what respect they differ from the thirty-nine Articles, which are now in force. Of both sets of Articles it may be truly said that "caution and moderation are no less conspicuous in them, than a thorough knowledge of the Scriptures, and of the early opinions and practice of the first Christians." (Bishop Tomline's *Elem. of Christ. Theol.* vol. ii. p. 35.) The thirty-nine Articles became the standard Confession of the Protestant Episcopal Church in Ireland in 1634, (which from 1618 until that year had had a Confession of its own.) In 1804, they were unanimously subscribed by the Bishops and Clergy of the Protestant Episcopal Church in Scotland, in a General Convocation convened for that purpose: and, in 1801, they were adopted by the Bishops, Clergy, and Laity of the Protestant Episcopal Church in the United States of America, assembled in General Convention, without material alteration, further than local circumstances

The thirty-nine Articles.

EED. — EEK. lysis of s.

required, excepting that the Confession "commonly called the Creed of St. Athanasius" is rejected from the eighth Article.

These thirty-nine Articles are arranged with great judgment and perspicuity, and may be considered under four general divisions: the first five contain the Christian doctrines concerning the Father, the Son, and the Holy Ghost; in the sixth, seventh, and eighth, the rule of faith is established; the next ten relate to Christians as individuals; and the remaining twenty-one relate to them, as they are members of a religious society. But, as all Confessions of faith have had a reference to existing heresies, it will be here found that not only are the positive doctrines of the Gospel asserted, but also that the framers of the Anglican Confession have rejected and condemned the principal errors and corruptions of the Romish Church, and most of the extravagances into which certain Protestant sects fell at the time of the Reformation. By the Law of England, all persons are required to subscribe these Articles previously to entering into Holy Orders, or to undertaking any Ecclesiastical cure or benefice; in order that those who are employed in the ministry of the Church should unfeignedly believe the truth of the doctrines which they contain. In this respect we only follow the practice of all Reformed Churches on the Continent; and, though it has been arraigned on various pretexts, the wisdom and propriety of the measure are abundantly justified by experience. A most satisfactory view and refutation of all the objections and pretexts, which have been urged against subscription, will be found in Dr. Waterland's *Case of Arian Subscription considered*, with the *Supplement*, (*Works*, vol. iii. p. 279—401,) and in Archdeacon Randolph's Charge delivered to the Clergy of the Diocese of Oxford, in the year 1771, on the *Reasonableness of requiring Subscription to Articles of Religion.*

A full account of the literary history of these Articles is given in Dr. Bennet's *Essay on the Thirty-nine Articles*; and for a sketch of the history of the controversy respecting the authentic edition of them, Butler's *Historical Account of Confessions of Faith*, (p. 75—80,) may be consulted. For the theological sentiments of the venerable authors of our national Confession, see Dr. (now Archbishop) Laurence's *Bampton Lectures* for 1804; Todd's *Declaration of our Reformers on Original Sin, Free-will, &c.* (London, 1818, 8vo.,) and Dr. Winchester's *Dissertation on the Seventeenth Article of the Church of England*, (London, 1773 or 1803, 8vo.) Of the numerous Commentaries and elucidations of the thirty-nine Articles, which have appeared at different times, the most valuable are those of Bishop Burnet, of Bishop Tomline in the second volume of his *Elements of Christian Theology*, and of Dr. Hey in the second, third, and fourth volumes of his *Norrisian Lectures in Divinity.*

All the Confessions of faith above enumerated, together with several others of minor importance, which are here necessarily omitted, are comprised in a volume entitled *Corpus et Syntagma Confessionum Fidei, quæ in diversis regnis et nationibus, Ecclesiarum nomine, fuerunt authenticè editæ.* Of this collection, two editions were printed at Geneva, in 1612, and again in 1654, 4to.; and from it the delegates of the Clarendon Press at Oxford published a selection of the principal Confessions, in 1804, entitled *Sylloge Confessionum sub tempus Reformandæ Ecclesiæ editarum*, in 8vo. There is also extant a *Harmony of the Confessions of Faith of the Christian and Reformed Churches*, both in Latin and English. The former appeared at Geneva, in 1581, and the latter at London, in 1643. Both publications are in quarto, and neither of them is of frequent occurrence.

CREEK. — CREEP.

CREEK, *v.* } CREEK, *n.* } CRE'EKY. } Minsheu thinks from the verb, to *creek*, from the noise made by the waters in so confined a spot.

Skinner prefers the Ger. *kriechen, repere, serpere*, to creep, to crawl; *quia*, sc. *mare seu fluvius inter littus proserpit, eique se ingerit.* Minsheu calls it

A nook or corner in a haven or river.

> He knew wel alle the havens, as they were,
> Fro Gotland, to the Cape de Finestere,
> And every *creke* in Bretagne and in Spaine.
> His barge ycleped was the Magdelaine.
>
> *Chaucer. The Prologue*, v. 411.

> But when they could not get into the *creeke*, as they had purposed, but by violence of the wyndes wer driuë into a place y^t hong a great way into the sea, there they pytched in the ship.
>
> *Udall. Acts*, ch. xxvii.

> As streams, which with their winding banks do play,
> Stopp'd by their *creeks*, run softly through the plain,
> So in th' ear's labyrinth the voice doth stray,
> And doth with easy motion touch the brain.
>
> *Davies. Immortality of the Soul.*

Willibourne (by the old name the author calls her Willy) derived from near Selwood by Warminster, with her *creeky* passage crossing to Wilton naming both that town and the shire.

Selden. Illustrations of Drayton. Poly-olbion, song 3.

They are the subsidings of valleys or low lands, that make dents in the shore and *creeks*, small bays, and harbours, or little coves, &c. which afford good anchoring, the surface of the earth being there lodged deep under water.

Dampier. Voyage. Anno 1687.

When the master returned, he reported that there was no passage into the lake by the *creek* which was fifty fathoms wide at the entrance, and thirty deep; farther in, thirty wide and twelve deep; that the bottom was every where rocky, and the sides bounded by a wall of coral rocks.

Cook. Voyage, vol. iii. book ii. ch. xi.

CREEP, *v.* } CRE'EPER, } CREE'PINGLY. } A. S. *creopan*; Dutch, *kruypen, repere*; applied to the slow motion of a short-legged animal, as the lizard. See to CRAWL, from which, metaphorically, it is scarcely distinguishable.

To move with a slow and low pace, sluggishly, lazily, lurkingly.

> So þycke hii come, þat þe lond ouer al hii gonne fulle,
> As þycke as ameten (i. e. emmets) *crepeþ* in an amete hulle.
>
> *R. Gloucester*, p. 296.

> To-morowe at night, whan men ben all aslepe,
> Into our kneding tubbes wol we *crepe*
> And sitten ther, abiding Goddes grace.
>
> *Chaucer. The Milleres Tale*, v. 3594.

> Amonge thy plaining wordes, me thought thou allegests thinges to be letting of thine helping, and thy grace to hinder, wherthrough me thinketh that wanhope is *crope* through thine herte.
>
> *Id. The Testament of Love*, book i.

Into which I lookyng biheelde and sighe foure footid beestis of the erthe and beestis and *crepinge* beestis and volatilis of heuene.
Wiclif. The Dedis of Apostlis, ch. xi.

Yee that in waters glide, and yee that walk
The earth, and stately tread, or lowly *creep*;
Witness if I be silent, morn or even,
To hill, or valley, fountain, or fresh shade
Made vocal by my song, and taught his praise.
Milton. Paradise Lost, book v. l. 201.

For many a time the fishers twitch up their hookes, and see a number of these skippers and *creepers* settled thicke about their baits which they laid for fishes.
Holland. Plinie, vol. i. fol. 264.

The soul of a righteous man is vexed and afflicted with the inroads of his unavoidable calamities, the armies of Egypt, the lice and flies, his insinuating, *creeping* infirmities.
Taylor. On Repentance, ch. iii. sec. 3.

Sad Cupid now despairs of conquering hearts,
Throws by his empty quiver, breaks his darts;
Eases his useless bows from idle strings
Nor flies, but humbly *creeps* with flagging wings.
Stepney. Elegy upon the Death of Tibullus.

We see, that as fish do live in the waters, (salt and fresh) so do many animals live in the earth, or under ground; not only worms and serpents, toads, frogs, and effs, but an innumerable host of *creepers*. *Boyle. Letters from several Persons*, vol. vi. p. 382.

How slily and *creepingly* did he address himself to our first parents! which surely his pride would never have let him do, could he have effected their downfall by force, without temptation. *South. Sermon* 4. vol. viii.

The entrance is made indifferently in the end or side, and is an oblong hole, so low, that one must rather *creep* than walk in.
Cook. Voyage, vol. vi. book iii. ch. xii.

Fire irons were called CREEPERS during the XVIth century, (Gage's *Account of Hengrave*, 27.) Minsheu *ad voc.* Cobirons, thinks they were so named from their form; in French, he says, they are known by the name "*Chenots dim. a chien*, a dogge, as it were little dogs, which forme in some sort they represent."

CREMASTOCHEILUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Scarabæidæ*. Generic character: first articulation of the antennæ very large; palpi with the terminal articulation oval; the labial palpi inserted at the sides of the mentum, which is very large, concave, and covers the whole of the mouth; anterior angles of the thorax dilated, in the form of tubercles; hooks of the tarsi equal.

Type, *C. castaneus*, Knoch.

CREMATION, Lat. *cremare, atum*, to burn.

And the Chinois without *cremation* or urnal interment of their bodies, make use of trees and much burning, while they plant a pine-tree by their grave.
Sir Thomas Brown. Urn Burial, ch. i.

CREMONA, an ancient City of Lombardy, the Capital of the Cremonesè, a district in the Duchy of Milan. The town stands on a beautiful plain, about a quarter of a mile from the Po, and was made a Roman colony in 291. It afterwards passed under the dominion of the Venetians, to whom it was subject for several centuries. The Imperialists, under Prince Eugene, made a sudden and unexpected attack upon Cremona, on the 2d of February, 1702, when Villeroi, the French General, and the whole of his staff, were taken prisoners. The circuit of Cremona is about five miles. Many of the best streets are wide and straight. It is also adorned with a few small squares and some palaces, but the houses in general are by no means distinguished for their architectural beauty. A Canal, which passes through the town, forms a communication between the Oglio and the Po; and a curious edifice, consisting of two octagonal obelisks surmounted by a cross, altogether 372 feet high, affords a beautiful view of the course of the Po, and the vast plains of Lombardy. Cremona is the See of a Bishop. Its Cathedral is a massy structure, with a façade of beautiful red and white marble. The interior contains many paintings, with a font of immense size, made of a single block of Verona marble. Besides this edifice, there are more than forty Churches and Chapels, with nearly an equal number of Monasteries and Convents. The population of the town is not more than 25,000 or 30,000, many of whom are supported by the manufacture of silk, for which it has long been noted, as well as for its superior violins. The Cremonesè is a very fertile district of nearly 660 square miles, peopled by about 204,000 individuals, and abounding in corn, wine, and fruit. Cremona was the birth-place of Hieronymus Vida, Bishop of Alba, but less known by his Episcopal, than by his Poetical fame. It is nearly forty miles south-east of Milan, in latitude 45° 44′ north and longitude 10° 2′ east.

CRENÆA, in *Botany*, a genus of the class *Dodecandria*, order *Monogynia*, natural order *Salicariæ*. Generic character: calyx pitcher-shaped, four-cleft; corolla, petals four; stamens fourteen; capsule acuminate, five-celled, many-seeded.

One species, *C. maritima*, native of the sea-shores of Guiana. Persoon, *Syn.*

CRENATULA, in *Zoology*, a genus of bivalve shells of the family *Malleaceæ*. Generic character: shell subequivalve, flattened, foliated, rather irregular; no particular opening or pit for the byssus; hinge lateral, linear, marginal, crenulate; crenulations serial, callous, slightly excavated, receiving the ligament.

Type, *C. modiolaris*, Lam.

These shells constitute a remarkable genus, having some affinity to *Mytilus*, but still more nearly allied to *Pernæ*. They form in fact a sort of osculant group connecting the *Mytilaceæ* with the *Malleaceæ*. They are generally thin, fragile shells, sometimes almost membranaceous, and foliated like the *Pernæ*, *Placunæ*, *Avicula*, &c. They are rare, and inhabit the seas of hot climates.

Ann. du Mus. iii. p. 25; Lam. *Anim. sans Vert.* tome vi. (I.) p. 136.

CREOLE, Sp. *criollo*; the descendant of an European father by a native American mother.

CREPIDULA, in *Zoology*, a genus of univalve shells, (*Testaceous Gasteropoda,*) of the family *Calyptraciana*, Lam. Generic character: animal with the head forked anteriorly; tentacula two, conical, with the eyes at the outer side of their base; mouth simple, without maxilla, placed at the bifurcation of the head; branchia solitary, subpenicillate, projecting beyond the branchial cavity, on the right side of the neck; mantle never extending beyond the shell; foot very small; anus lateral; shell oval or oblong, convex externally, concave within; spire much inclined towards the margin; aperture partly closed by a horizontal lamina.

Separated from the genus *Patella*, of Linnæus. The shell not only covers, but partly ensheathes the animal, by means of the lamina which partly closes the mouth. It is not operculated.

CREPIS, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic

CREPIS. — CRESCENT.

character: receptacle naked; calyx surrounded with deciduous scales; down simple, generally on a foot stalk.

Thirty-five species, mostly natives of Europe.

C. fœtida, *C. tectorum*, *C. biennis*, and *C. pulchra*, are natives of England. *Eng. Bot.*

CREPUSCULINE, Fr. *crepuscle*; Lat. *crepusculum*; of uncertain origin. The twilight.

He has made apertures to take in more or less light as the observer pleases, by opening and shutting like the eye, the better to fit glasses to *crepusculine* observations.

Sprat. History of the Royal Society, p. 314.

And if we consider the magnalities of generation in some things, we shall not controvert its possibilities in others: not easily question that great work, whose wonders are only second unto those of the creation, and a close apprehension of the one might perhaps afford a glimmering light, and *crepusculous* glance of the other. *Sir Thomas Brown*, book vii. ch. ii.

CRE'SCENT, *v.*
CRE'SCENT, *adj.*
CRE'SCENT, *n.*
CRE'SCENCE,
CRE'CIVE,
CRE'SCENT-FORMED,
CRE'SCENT-SHAPED.

Lat. *crescens*, present participle of *cresc-ere*, to grow, (perhaps *creas-ere*, from *cre-are*.)

Growing, enlarging. The noun is applied to the Moon in her state of growth, till she shows one half of her enlightened side; to any thing formed or shaped like the Moon in that state of growth.

The Christian crew came on in forme of battayle pight,
And like a *cressent* cast themselues preparing for to fight.
Gascoigne. Flowers.

This *cressant* was couered with frettes and knottes made of iue bushes and boxe braunches, and other thynges that longest would be green for pleasure. *Hall. Henry VIII.*

As lusty youths of *crescive* age
doe flourishe freshe and grow.
Drant. Horace. The Arte of Poetry.

The Amazon with *crescent-formed* shield,
Penthesilea leads into the field.
Ralegh. History of the World, book i. ch. iv. sec. 2.

——— With these in troop,
Came Astoreth, whom the Phœnicians call'd
Astarte, Queen of Heav'n, with *crescent* horns.
Milton. Paradise Lost, book i. l. 439.

As *crescent-like* the land her breadth here inward bends.
Drayton. Poly-olbion, song 5.

With these of Dartmouth, seven good ships there were,
The golden *crescent* in their tops that bear.
Id. The Battle of Agincourt.

And so the prince obscur'd his contemplation
Vnder the veyle of wildenesse, which (no doubt)
Grew like the summer grasse, fasteste by night,
Vnseene yet *cresiue* in his facultie.
Shakspeare. Henry V. fol. 70.

And I doubt we shall never leave off the rank humour of adding even to the oracles of God, till the *crescent* sword makes us more humble, and more reasonable.

Boyle. Letters from several Persons, vol. vi. p. 340.

For me imagination's power
Leads off insensibly my way,
To where at midnight's silent hour,
The *crescent* moon's slow-westering ray
Pours full on Redcliff's lofty tow'r,
And gilds with yellow light its walls of grey.
Scott. Ode 21.

The winds were pillow'd on the waves;
The banners droop'd along their staves,
And, as they fell around them furling,
Above them shone the *crescent* curling.
Lord Byron. The Siege of Corinth, 11.

To these adverse, the lunar sects dissent,
With convolution of opposed bent;
From west to east by equal influence tend,
And towards the moon's attractive *crescence* bend.
Brookes. Universal Beauty, book iii. l. 322.

One valve has three teeth the other two, and a *crescent-shaped* lateral thin plate. *Pennant. British Zoology. Venus Shell.*

CRESCENT. — CRESCENTIA.

The CRESCENT appears on early coins of Byzantium, with the legend, BYZANTINH ΣΩT. The Preserver of Byzantium. When Philip of Macedon besieged Byzantium, and was going to storm it in a cloudy night, the Moon shone out and discovered his approach, so that the inhabitants observed and repulsed him.

This story is related by Stephanus of Byzantium, (*ad voc. Bosporus.*) He calls the light which appeared, Ἑκάτης φωσφόρον, and hence he contends that *Bosporus* is a corruption, and ought to be *Phosphorus*. Eustathius, *in Dionys: Perieget.* uses much the same words as Stephanus; and Hesychius, (the Milesian,) in his *Orig. Constant.* contains the same history. In consequence of this deliverance, the Byzantines erected a statue to Hecate, before which a lamp was constantly kept burning.

The Turks upon entering Constantinople, when it was overthrown by Mohammed II., found this ancient badge of the Crescent in many places; and suspecting some magical power in it, assumed the symbol and its power to themselves; so that the Crescent is now their bearing. They no doubt believed that the Moon was the guardian planet of Byzantium. It was on the same principle that the Tatinute Khalif Mŏezz li-dĭni 'llah ordered his newly founded Capital of Egypt to be called Al-cáhirah, (the Victorious,) because it was begun under the ascendant of Mars, *el cáhir*, (the Victorious.) (See the Abbé Reinaud, in *Journ. Asiat.* iii. 347, 8.) It may also be observed that the Tátár princes had the figures of animals, which mark the years of their double cycle, painted or embroidered as insignia on their banners; and the poet Khácání, in his eulogium on Aláu-ddín Tukush, King of Khivárezm, says, "The Crescent which glitters above his pavillions, has already received the homage of the greatest Princes on earth." (D'Herbelot, iii. 370.) But Tukush died two hundred years before the commencement of the Othmán dynasty, and belonged to another branch of the Turkish nation.

CRESCENT ISLAND, a small Island about six or seven miles in circuit, situated in the Southern Pacific Ocean, in latitude 24° south, and about the middle of the 135th degree of west longitude. Its name is derived from its shape, and its shores are chiefly composed of grey coral sand, and stones thrown up by the violence of the waves; and in one part forming a kind of wall, twenty or thirty feet high. Crescent Island was discovered by Captain Wilson, in the ship Duff, on the 19th of May, 1797, while prosecuting his missionary voyage to the South Sea Islands. About twenty-five natives were seen, including women and children; and these, probably, constituted the whole population; but as they obstinately refused all intercourse with the strangers, nothing could be ascertained respecting them. They were of a light copper colour, and middle stature; but the dashing of the sea prevented their language from being understood.

CRESCENTIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Solaneæ*. Generic character: calyx two-parted, equal; corolla gibbous; berry on a foot-stalk, one-celled, many-seeded; seeds enclosed in a pulp.

Two species, natives of the West Indies. *C. cujete*, the Calabash Tree, bears a large seed-vessel, with a very hard thin exterior, which is formed by the natives

CRESCENTIA.

into a variety of bottles and drinking vessels beautifully carved.

CRESSET.

CRESSA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Convolvoli*. Generic character: calyx five-leaved, corolla salver-shaped, filaments fixed to the tube; capsule superior, two-valved, one to four-seeded, bursting at the base.

Two species, *C. Cretica*, native of Crete, and *C. Indica*, native of salt marshes in India.

CRESSES, A. S. *carse*, or *cerse*; Dutch, *kerse*; Ger. *kresse*; Swe. *krassa*; It. *crescione*; Fr. *cresson*. So called, says Menage, *a crescendo*. The Fr. *cresson*, Cotgrave calls, *kars*, *kerse* or *cresses*.

He can suffer his day's labour, and recompence it with unsavory herbs, and potent garlick, with water *cresses*, and bread colour'd like the ashes that gave it hardness.
Taylor. Sermon 15. part i.

See CARDAMINE, of which genus the common *water Créss* is the species, *Sisymbrium nasturtium*.

CRESSET, *n.* Minsheu calls it an old word used for a lanterne, or burning beacon; from the Dutch, *keerse, candela*. Skinner prefers the Fr. *croisset*, a little cross, because the sign of the *cross* was usually placed upon beacons.

The litell people, which he brought,
Was none of hem that he ne hath
A potte of erthe whiche he tath
A light brennying in a *cresset*.
Gower. Conf. Am., book vii. fol. 164.

The continuall light of lampes before the high aulters, the burninge *cressettes* at triumphes in the night.
Bale. Image, part ii. D d ii.

Than the knight retourned to therle as fast as he might, who was comyng out of his lodgynge a horsebacke with a great nōbre of *cressettes* and lightes with hym, and was going to the market place. *Lord Berners. Froissart. Cronycle*, vol. i. ch. 400.

That [*sc.* the music of the nightingale] (with the repercussion of the air)
Shook the great eagle sitting in his chair,
Which from the mountain (with a radiant eye)
Brav'd the bright *cressit* of the glorious sky.
Drayton. The Man in the Moon.

——— From the arched roof
Pendant by subtle magic many a row
Of starry lamps and blazing *cressets*, fed
With naphtha and asphaltus, yielded light
As from a sky.
Milton. Paradise Lost, book i. l. 728.

The CRESSET, though used as a beacon light, was occasionally portable. It consisted of a wreathed rope smeared with pitch, and placed in a cage of iron like a trivet, or in a hollow pan, which was suspended on pivots on a kind of fork; whence some have derived it, besides the etymologies given above, from the French *croisset*, an earthen pot. Stowe, in his *Survey of London*, 1618, p. 160, states, that the "marching watches" who paraded the streets, and whose beat extended over a space of "two thousand three hundred taylor's yards of assize," were furnished with 700 Cressets; besides which every one of the 240 constables of London had a Cresset, the charge for each of which was 2*s.* 4*d.* Two men accompanied every Cresset, one bearing it, the other carrying a bag with a light, and serving it. Each of these, amounting to nearly 2000, besides his wages "had a strawne hat, with a badge painted, and his breakfast in the morning." (Douce, *Illustrations of Shakspeare*, i. 429.) A Cresset was formerly a badge of the Admiralty. (Willement, *Regal Heraldry*, 33.)

CREST, *v.*
CREST, *n.*
CRE'STED, *adj.*
CRE'STLESS,
CREST-FALLEN,
CREST-FRONT.

Fr. *creste*; It. and Sp. *cresta*; Lat. *crista*; of uncertain Etymology. "Fr. *creste*; a crest, cop, comb; also a tuft or little plume, standing at the top of a Cotgrave. And see the Example from Camden.

To *crest*; to wear a *crest*; to adorn with a *crest*; to serve for, stand in the place or stead of a *crest*.

And on his heed there stont vp right
A *crest* in token of a knight.
Gower. Conf. Am., book v.

——— Turnus bright,
Displaies himself in armes, aboue all men with head vpright,
Whose triple crowned *creast*, and helmet hie, with vgly pawes
Chimera monster holdes, and sparkling flames she spoutes at iawes. *Phaer. Æneidos*, book vii. p. 176.

——— Ech one his hundred souldiers led
Carnation *creastid* youth in burnisht gold gay glittering red.
Id. Ib., book ix. p. 205.

Like as the shining sky in summer's night,
What time the dayes with scorching heat abound,
Is *creasted* all with lines of firie light,
That it prodigious seems in common people's sight.
Spenser. Faerie Queene, book iv. can. i.

CLEO. His legges bestrid the ocean, his rear'd arme
Crested the world.
Shakspeare. Antony and Cleopatra, fol. 365.

Creasts being the ornaments set on the eminent toppe of the healme, and called *tymbres* by the French, I know not why, were vsed auntiently to terrifie the enemy, and therefore were strange deuises or figures of terrible shapes.
Camden. Remaines. Armories, p. 194.

The first Christians vsed no other blazon in their shields then the name of Christ, & a crosse for their *creast*,—Wherevpon many yeares were these *creasts* arbitrarie, taken vp at euery man's pleasure, after they beganne to be hereditarie, and appropriated to families. *Id. Ib.*

Much he [Papirius] spake also as touching the present preparation and magnificent furniture of the enemies, more brave & goodly for shew and ostentation, than effectual and of importance in the end: For they are not the plumed *crests* (quoth he) that give the deadly wounds, but the Romaines speare and launce it is, that is able to pierce their guilded and damasked shields.
Holland. Livius, fol. 381.

His grandfather was Lyonel Duke of Clarence,
Third sonne of the third Edward King of England:
Spring *crestlesse* yoemen from so deep a root?
Shakspeare. Henry VI. First Part, fol. 104.

Thus when the *crest-faln* Israelites were to be redeemed from an Ægypt to a Canaan they cry out upon Moses and Aaron, *Exod.* 5, chide with their Saviours, abomine with their deliverers.
Hammond. Works. Sermon 7. vol. iv.

And on both sides marched a double ranke of armed men, with targuets and *crested* helmets, sending raies and beames from them of brandishing light, wearing upon them fine habergeons.
Holland. Ammianus, fol. 63.

The scalie back of that most hideous snake
Enwrapped round, oft fayning to retire,
And oft him to assaile, he fiercely strake
Whereas his temples did his *creast-front* tyre.
Spenser. Virgil. Gnat.

The time shall come when Chanticleer shall wish
His words unsaid, and hate his boasted bliss:
The *crested* bird shall by experience know,
Jove made not him his master-piece below;
And learn the latter end of joy is woe.
Dryden. The Cock and the Fox.

But if the poem suffers from delay,
Let the lines fly precipitate away,
And when the viper issues from the brake,
Be quick; with stones, and brands, and fire attack
His rising *crest*, and drive the serpent back.
Pitt. Vida. Art of Poetry.

r. ——————— No foe to man
Lurks in the serpent now: the mother sees,
E. And smiles to see, her infant's playful hand
Stretch'd forth to dally with the *crested* worm,
To stroke his azure neck, or to receive
The lambent homage of his arrowy tongue.
Cowper. The Task, book vi.

CRESTONA, a Town of Thrace, and most probably the Capital of *Crestonia*, a small district of that country to the east of Mygdonia. Herodotus (i. 57) speaks of the inhabitants of *Crestona* as being descendants of the *Pelasgi*, whose language they still spoke even in his time, and as dwelling in a country above the Tyrrhenians. Dionysius Halicarnassensis, (*Antiq. Rom.* i. 26,) and many of the translators of, and commentators on, Herodotus, have mistaken this passage, and confound *Crestona* with *Cortona*, a city of Umbria. Major Rennell wishes to substitute *Thermæan* (for *Therme*, afterwards *Thessalonica*, appears to agree in situation) for Tyrrhenian; "since," he says, "we have heard of no Tyrrhenians, but those of Italy." (*Geog. System of Herodotus Examined*, 45.) Larcher, however, in a learned note on the passage of Herodotus referred to above, shows from Thucydides, (iv. 109,) that this last historian, as well as the first, was acquainted with Thracian Tyrrhenians. It is only on account of this difference of opinion that we have mentioned *Crestona*, which in other respects has little importance.

CRETACEOUS, Lat. *creta*, chalk; chalky.

Nor from the sable ground expect success,
Nor from *cretaceous*, stubborn, and jejune.
J. Philips. Cider, book i.

CRETE, the ancient name of the Island of CANDIA. The etymology is extremely uncertain: by some the name is derived from the *Curetes*, the ancient inhabitants of the Island: Diodorus derives it from Crete, the wife of Jupiter Ammon, who reigned in the Island; and several writers derive it from Cres, one of the *Curetes*, who brought up Jupiter.

The obscurity, however, which hangs about the etymology of the name of Crete, extends in a tenfold degree to its history. There are few places more frequently mentioned in ancient authors; few nations to whose customs and laws more abundant allusions have been made in Greek and Roman literature; there are at the same time few countries of the history of which we possess less regular or less authenticated accounts. The falsehood of the Cretans was proverbial: Epimenides himself, who was so shocked at the outrageous mendacity of his countrymen, that he indited the proverb concerning them, which succeeding generations have faithfully circulated and perpetuated, did not hesitate about minor embellishments; declaring that he had enjoyed a slumber in a cave for forty years and more. This is sufficient evidence of the national propensity of the Cretans to deviation from the severity of sober history; and it is, in consequence, no matter of surprise, that their records present us, not only with dates and events which nothing short of Cretan ingenuity could harmonize, but also with transactions which the utmost licence of credulity must fail to believe.

This hopelessness of any successful investigation of the Cretan history is the more to be regretted, as the Cretans were acquainted, at a period so early as not to be precisely assignable, with the advantages of civilisation; and while the other nations of the Grecian stock were still existing by fraud or violence, the Cretans were in possession of a polity not only regular, but such as excited at all times the admiration and the emulation of the geatest sages of Greece, and became the model which formed all the most essential institutions of her most considerable States. A systematic account of the early population and civilisation of Crete would, therefore, be an object of considerable interest; but, in the absence of regular and credible testimony, we must content ourselves with setting down the few particulars which ancient authors have left us, (disguised as they are by allegory and fable,) of the history of this people. CRETE.

The ancient author who has treated the history of Crete most at length, and who professes to derive his account from the most respectable native sources, (a circumstance in this case not so favourable to the interests of truth as in some others,) is Diodorus of Sicily. The first inhabitants of Crete, according to this author, were the *Eteocretes*; a name simply signifying, native or genuine Cretans. The first settlers on the soil were the *Dactyli Idæi*, one hundred in number; or, according to others, who derive their name from δάκτυλοι, fingers, ten, five of each sex. The sanctity and magical powers of these persons are prolific themes of panegyric among ancient writers. They were, probably, adventurers from some civilized country, who were received with the wonder and deference which civilisation always commands among savages, and who secured and rivetted the esteem of the natives by living peaceably among them, and instructing them in the useful arts. That they first worked the mines of Crete, and taught the use of metals, is generally asserted. Ephorus, cited by Diodorus, affirms, that these strangers were colonists from Mount Ida, in Phrygia; but, as Diodorus himself elsewhere discredits the authority of Ephorus, small importance is to be attached to this assertion, especially on a subject so essentially obscure. It is much more probable that they were Phœnicians, since the early civilisation and enterprise of that people are matter of undeniable fact; and since it is morally impossible, that, in many of their voyages, they should not have touched on the shores of Crete. This opinion is confirmed by the story of Europa, who is fabled to have been borne into Crete by Jupiter, whither Cadmus, her brother, was sent to seek her. Nor is it at all impossible that they might have been Jews, who were confounded by the ancients with the Phœnicians, and that they thence derived their appellation *Idæi, quasi Judæi*. Certain it is, on the authority of Tacitus, (*Hist.* v. 2,) that tradition referred the origin of the Jews to Mount Ida in Crete; nor is it easy to imagine how an opinion so grossly unfounded could have arisen, had there not been some connection between the *Dactyli* and the Jews. However this may be, the *Dactyli* were in early possession of Crete.

Their successors were the *Curetes*, if these, indeed, are not rather to be considered identical with the *Dactyli*. They taught the natives farming and grazing, the treatment of bees, and the sports of the field. They also invented several military weapons. Contemporary with these were the Titans, Cronos, Hyperion, Cæos, Japetos, Crios, and Oceanos; and their sisters Rhea, Themis, Mnemosyne, Phœbe, and

 Tethys. Each of these conferred some remarkable benefit on mankind, and on Crete particularly, with which our classic readers are well acquainted. Cronos, better known under the name of Saturn, was King of the Island; to him succeeded his son Zeus, or Jupiter, who divided among his own progeny and that of the Titans the whole Civil government of the Island; assigning to each the department which he occupies in the Greek Mythology: appointing Vulcan his chief smith, and Apollo his chief musician. This part of Cretan *history* agrees entirely in substance with the general Mythology of the Greeks, and therefore the discussion of it does not belong to this place.

"Many generations,"* says Diodorus, "after the births of the Gods in Crete, various heroes are said to have flourished; the principal of whom are Minos, Rhadamanthus, and Sarpedon. The three here mentioned were the sons of Europa by Jupiter. Minos built the cities of Gnossus, Phæstus, and Cydonia; and was the founder of the Civil polity of the Cretans, which he pretended to derive from his father Jupiter, whom he visited once in nine years in a cavern of the Island." He was also conspicuous, according to Diodorus, for his naval successes, and the conquest of several of the Greek islands. In this respect, however, he has, probably, been confounded with another Cretan Monarch of the same name. Diodorus himself, indeed, in one part of his *History* contradicts his testimony on this subject in another. For in the 60th chapter of his IVth book he observes, "Minos, having assumed the government, married Itone, the daughter of Lyctius, by whom he had Lycastus; who, afterwards coming to the throne, and marrying Ida, the daughter of Corybas, became the father of Minos II. whom some relate to have been the son of Jupiter. This Prince was the first of the Greeks who collected a considerable naval force, and maintained an Empire at sea. He married Pasiphae, the daughter of the Sun and Crete," &c. In the 78th chapter of his Vth book, wherein he treats the story of the elder Minos, the historian refers us to the 79th chapter of the IVth book for the account of the war with Cocalus. The Minos who is the hero of that expedition is the husband of Pasiphae; so that here is a plain contradiction. Perhaps he thinks this sufficiently excused by his observation: "since the Cretan historians are inconsistent with each other, it is not to be wondered at, that this history should not be in all things consistent." There appear, however, to have been two Cretan Monarchs of the name of Minos; although it is quite impossible, from the narrative of Diodorus, to distinguish their respective histories. It was in the reign of one of these that the celebrated artist Dædalus, flying from Athens on account of the murder of his nephew Talos, who had raised his professional jealousy by the invention of the saw, exhibited his skill in Crete in the fabrication of the wooden cow for Pasiphae, and of the labyrinth which protected her unsightly progeny, the Minotaur. Driven from the Island by Minos, he took refuge with Cocalus, King of Sicily, whither he was pursued by the Cretan Prince, who perished in the expedition, through the treachery of Cocalus. One of these Princes named Minos was contemporary also with Theseus. For, during the reign of Ægeus, the father of Theseus, Androgeus, son of Minos, came to Athens, at the Panathenaic festival, and conquered all his competitors in the Games: in consequence of which he contracted so great an intimacy with Pallas, the King's brother, and his fifty sons, that Ægeus, judging his influence dangerous, procured his assassination. This act of cruelty Minos resented, by imposing on the Athenians an annual tribute of seven boys and as many girls, who, it was reported, were condemned to be devoured by the Minotaur. This tribute had been paid three years, when Theseus terminated it by the death of the monster.

Minos was succeeded by Deucalion, Creteus, Idomeneus, and Merion, who flourished in the times of the Trojan war. After these, we have no mention of Cretan Kings, until the time of Etearchus; and on his decease, but how soon after it is uncertain, the government of Crete was changed to a Republic. It was administered by a Council of thirty, on whose proceedings, however, the people had a *veto*. Under this was another Council of ten persons, called Κόσμοι, who might be elected from all ranks of the people, and who were probationers for the higher council, to which none but Κόσμοι could be admitted. How long this state of matters continued is uncertain; but Polybius informs us, that in the time of Philip III. of Macedon, the Gnossians and Gortynians had subdued the rest of the Island and divided their conquests.

In the war which the Romans maintained with Antiochus, King of Syria, the Cretans, in disregard of a treaty of alliance subsisting between themselves and the former, concerted measures with other powers, without consulting the Senate; and in the Mithridatick war, they were accused of holding correspondence with the Parthians, and of assisting the Pirates in the Mediterranean in their attacks on Roman property. These circumstances afforded the Romans colourable pretexts for a war, which they were not slow to employ: and after a three years' contest, between the Romans and the Islanders, and partly between Metellus and Pompey, each jealous of the other's victory, Crete shared the fate of the rest of the world.

The laws of the Cretans, so highly celebrated and admired by all antiquity, are referred by Mr. Mitford to two principles: 1. that freemen should all be equal; and 2. that they should be served by slaves. They did not, however, admit of any idleness or dissipation; agriculture or military service was enjoined to all. The children were educated together, and accustomed, almost from infancy, to the most laborious exercises, and the most painful privations; and the same diet was employed by all the nation, which the rich and poor partook at the same table promiscuously. It is easy to trace in these few particulars, the fountain of Grecian Legislation; and that, perhaps, which is no less remarkable in the fortune of Crete is, that the country which redeemed all Greece from barbarism, should be indebted to the very objects of her regeneration, for the scanty and obscure memorials of her history.

* These generations Eusebius thus supplies, by the specification of the names of the ancient Cretan Monarchs. Cres, who reigned 400 years before Tectamus; which last, according to Diodorus, brought into Crete a colony of Æolians and Pelasgians, and during whose reign Minos was born. Talus, Hephæstus, Rhadamanthus, 300 years; Cydon, 63; Apteras, 40. Other Kings are mentioned, as Melinus, Melisseus, Lapithas, &c.; but so far is it from possible to arrange their succession, that there are not small difficulties about their identity.

EVICE. — REW.

CRE'VICE, *v.* } Skinner says, *crevasse* or *crevis*,
CRE'VICE, *n.* } from the Fr. *crevasse, rima*, a chink, from the Lat. *crepare*, i. e. *dissilire, dehiscere*, to leap asunder, to yawn or gape. It. *crepatura*. The French have the verb,

"*Crevasser*, to chop, chawn, chap, chink, rive or cleave asunder." Cotgrave.

Or but it might out there passe
It gan out crepe at some *crevasse*
And flew forth fast for the nones.
Chaucer. The third Book of Fame, fol. 283.

Because so laid, they are more apt in swagging down, to pierce with their points, than in the jacent posture, and so to *crevice* the wall. *Reliquiæ Wottonianæ*, p. 20.

As the pulse declareth how the heart doth worke, so the verye thoughts and cogitations of man's mind, be they good or bad, doe no where sooner bewray themselues, then through the *creuesses* of that wall, wherewith nature hath compassed the cells and closets of fancy. *Hooker. Ecclesiastical Polity*, book v. fol. 348.

I thought it no breach of good manners to peep at a *crevice* and look in at people so well employed; but who should I see there but the most artful procuress in the town, examining a most beautiful country-girl, who had come up in the same waggon with my things. *Spectator*, No. 266.

Trickling through the *crevic'd* rock,
Where the limpid stream distils,
Sweet refreshment waits the flock
When 'tis sun-drove from the hills.
Cunningham. Day. A Pastoral.

Eyeless a huge and starv'd toad sat
In corner murk aloof,
And many a snake and famish'd bat
Clung to the *crevic'd* roof.
Mickle. Ballad 3.

Enchanting novelty, that moon at full,
That finds out ev'ry *crevice* of the head;
That is not sound and perfect, hath in theirs
Wrought this disturbance.
Cowper. The Task, book vi.

CREUSIA, in *Zoology*, a genus of the class *Cirripedes*, order *Acamptosomata*, family *Balanidii*, Leach. Generic character: body sessile, subglobose, enclosed in an operculated shell; three or four pairs of tentaculiform arms; mouth at the upper and anterior part of the body, not prominent; shell sessile, fixed, orbiculate, convexo-conical, four-valved; valves unequal, united; sutures distinct; operculum internal, bivalve.

Type, *C. Verruca*.

This genus was established by Dr. Leach, and excepting *Pyrgoma*, is the only one of the *Balanidii* with bivalve operculum.

CREW, *n.* written by some of our old writers *crue*, and said by Minsheu, (in his first Edition,) to be the Fr. *accrue*, (or *crue*,) i. e. a growth, rising or augmentation. See ACCREW. Skinner prefers the D. *kroegh-en, cauponari, potare, inebriare*; to carouse, to drink; and thus to denote,—an assembly or company of drinking, or jovial fellows. The word is applied to

A growing, increasing, number or assembly of persons; a *crew* of noble Knights; a ship's *crew*.

Aske Julius Cæsar if this tale be true,
The man that conquer'd all the world so wide,
Whose onely worde commaunded all the *crue*
Of Romayne knights at many a time and tide,
Whose pompe was thought so great it could not glide.
Gascoigne. The Fruites of Warre.

If she be one of Cresid's *crue*
and swerue her former best,
No Lucrece must I tearme hir then,
for that were but a iest.
Turbervile. The Louer finding his Loue flitted from wonted troth.

CREW. — CRIB.

The king's owne troupe came next, a chosen *crew*,
Of all the campe the strength, the crowne, the flowre,
Wherein each soldiour had with honours dew
Rewarded beene, for seruice ere that howre.
Fairfax. Godfrey of Boulogne, book xvii. st. 29.

Being sufficiently weary of this mad *crew*, we were willing to give them the slip at any place from whence we might hope to get a passage to an English factory.
Dampier. Voyage. Anno 1687.

What passions reign among thy *crew* Leontius?
Does cheerless diffidence oppress their hearts?
Or sprightly hope exalt their kindling spirits?
Do they with pain repress the struggling shout,
And listen eager to the rising wind.
Johnson. Irene, act ii. sc. 4.

CRE'WEL, *n.* } *Crewell* or *cruel*. Skinner thinks
CRE'WEL, *adj.* } from the Ger. *klawel, klewel*; Dutch, *klowen, glomerare filum*. See CLEW. And *klawel*, he believes to be a contraction, or corruption of the Lat. *globulus*; Wachter adds, or the Gr. κύκλεω, *volvere*, to roll. It is a kind of fine worsted.

As a piece of arras is composed of severall parcels, some wroght of silke, some of gold, silver, *crewell* of divers colours, all to serve for the exornation of the whole.
Burton. Anatomy of Melancholy, fol. 332.

And may Don Provost ride a feasting long
In his old velvet jirkin, and stain'd scarfes,
(My noble soveraigne, and worthy generall)
Ere we contribute a new *crewell* garter
To his most worsted worship.
Ben Jonson. The Alchemist, act i. sc. 1.

——The rest whom fate had plac'd
In honest mediocrity, content
With base materials, sat on well-tann'd hides,
Obdurate and unyielding, glassy smooth,
With here and there a tuft of crimson yarn,
Or scarlet *cruel* in the cushion fix'd.
Cowper. The Task, book i.

CRIB, *n.* A. S. *crybbe*; Dutch, *krippe, krebbe*; Ger. *krippe, kruppe*. Somner explains A. S. *crybbe*; a couch or bed, a stall or stable; a manger or *cribbe*. Junius says, he has never found the word in A. S. records, and thinks it was taken, *in honorem beati salvatoris* from κράβατος, *lectus*, a bed. Wachter considers the primitive to be *krippe, pecten*, a comb; deriving its application from the form of the bars or lattice-work, within which the fodder was placed.

To *cribb*; to put, place, enclose, confine, as in a *cribb* or any small place.

Where no oxen are, there the *cribbe* is emptye: but where the oxen labboure there is muche frute.
Bible, 1551. *Proverbs*, ch. xiv.

Let a beast be lord of beasts, and his *crib* shall stand at the king's messe. *Shakespeare. Hamlet*, fol. 279.

Neuer to seeke after God, sauing onely when either the *crib* or the whip doth constraine, were brutish seruilitie.
Hooker. Ecclesiastical Polity, book v. fol. 288.

But go to the *crib* thou glutton, and there it will be found that when the charger is clean, yet nature's rules were not prevaricated; the beast eats up all his provisions because they are natural and simple: or if he leaves any, it is because he desires no more than till his needs be served. *Taylor. Sermon* 16. part i.

Will the tall steer, which knows no lord but me,
Low at the *crib*, and ask an alms of thee?
Young. On part of the Book of Job.

CRIB-BAGE.

CRIBBAGE, a Game at Cards, the rules of which are laid down as follows, by the great Oracle Hoyle. It is played by two, three, or four persons, with five, six, or sometimes eight cards. In *Five-card Cribbage*, "the party cutting the lowest card deals; after which each player is first to lay out two of the five cards for the crib, which always belongs to the dealer; next, the adversary cuts the remainder of the pack, and the dealer turns up and lays on the crib the uppermost card, for which, if a knave, he marks two points. The card turned up is to be reckoned by both parties, whether in showing their hands or crib. After laying out and cutting as above mentioned, the eldest hand plays a card which the other endeavours to pair, or to find one, the points of which reckoned with the first will make 15; then the non-dealer plays another card, trying to make a pair, pair-royal, sequence, flush were allowed of, or 15, provided the cards already played have not exceeded that number, and so on alternately till the points of the cards played make 31, or the nearest possible number under that.

"When the party, whose turn it may be to play, cannot produce a card that will make 31, or come in under that number, he then says, *Go*, to his antagonist, who thereupon is entitled to score 1, and must play any card or cards he has that will make 31 or under; and if he can make exactly 31, then he is to take two points; and besides, the last player has often opportunities to make pairs or sequences. Such cards as remain after this, are not to be played; but each party having, during the play, scored his points gained, in the manner as directed before, proceeds, the non-dealer first, then the dealer, to count and take for his hand and crib as follows, reckoning the cards every way they can possibly be varied, and always including the turned-up card.

"For every 15 . . . . . 2 points.
"Pair, or two of a sort . . . . . 2 points.
"Pair-royal, or three of a sort . . . 6 points.
"Double-royal, or four of a sort . . 12 points.
"Sequence of any suits, according to the number.
"Flushes, according to the number.
"Knave, or noddy, of the same suit as turned up, 1 point; but when turned up it is not to be reckoned again, nor is any thing to be taken for it when played.
"*N. B.* Three cards of the same suit in hand, or four in crib, usually entitle the player to reckon that number as a flush, and also one more when the turn-up card happens to be of the same suit; but among professed gamesters it is not customary to allow flushes in crib, unless all the cards, including that turned up, are of a similar suit.

"In laying out cards for the crib, it is always requisite that every player should consider not only his own hand, but also to whom the crib belongs, as well as the state of the game; for what might be proper in one situation would be highly imprudent in another. When any player possesses a pair-royal, it is generally advisable to lay out the other cards for either crib, unless those others consist of two fives, a deuce and trois, five and six, seven and eight, fifth and any tenth card, or the crib belonging to the adversary, or the game almost finished. A player, when he does not thereby materially injure his hand, should, for his own crib, lay out close cards, in hopes of making a sequence, or two of a suit, in expectation of a flush, or any that of themselves amount to 15, or such as reckoned with others will make that number, except when the antagonist is nearly up, and it may be expedient to keep such cards that probably might prevent him from gaining at play. The direct contrary method should be pursued in respect of the adversary's crib, which each person should endeavour to baulk, by laying out those cards that are not likely to prove of advantage, unless at such a stage of the game, when it may be of consequence to keep in hand cards likely to tell in play, or when the non-dealer would either be out by his hand, or has reasons for judging the crib of little moment. A king is the best card to baulk a crib, as none can form a sequence beyond it, except in some companies where queen, king, ace are allowed as a sequence; and either a king, or queen, with an ace, six, seven, eight, or nine, are good ones to put out. Low cards are generally the most likely to gain at play. Flushes and sequences, particularly if they are also flushes, are for the most part eligible hands, as thereby the player is often enabled either to assist his own crib, or baulk that of the opponent; to whom a knave should never be given, if with propriety it can be retained. Sequences in play need not be laid down in order; it is sufficient that the cards on the table will form a sequence without any other one intervening: as for instance, suppose a six first played, then a four, and afterwards a trois, if a deuce follows, it will make sequence of three; then if a five, it will be a sequence of five; and if an ace or seven succeed the five, a sequence of six; though should a ten, or any other card that will not run on regular, be played as the fourth, the sequence will then be totally prevented.

"Twenty-nine is the greatest possible number that can be gained by the show of any hand, or crib, either in five or six card Cribbage, and is composed of three fives and a knave, with a fourth five, of the same suit as the knave, turned up; this very seldom happens; but twenty-four is not an uncommon number, and may be formed of four threes and a nine, or two fours, one five, and two sixes; and some other combinations that a little experience will point out.

"The almost endless variety in Cribbage renders it impossible to give, in a small compass, sufficient directions for learners to put out, retain, or play their cards to the best advantage in all the different situations of the game; experience and attention, combined with calculation, will soon do the whole. The chances are often so extraordinary and unexpected, that even between skilful gamesters it is possible at five-card Cribbage, when the adversary is 56, for a lucky player, who had not previously made a single hole, to be more than up in two deals, his opponent getting no further than 60 in that time; and in four-hand Cribbage a case may occur, wherein none of the parties hold a single point in hand, and yet the dealer and his friend, with the assistance of knave turned up, may make 61 by play in one deal, while their adversaries only get 24.

"*Three or Four hand Cribbage* differs only from the preceding, as the parties put out but one card each to the crib, and when 31, or near as can be, have been made, then the next eldest hand leads, and the players go on again, in rotation, with any remaining cards, till all are played out, before they proceed to show. For Three-hand Cribbage triangular boards are used.

"A sort of Three-hand Cribbage is sometimes played,

whorein one person sits out, not each game, but each deal in rotation. In this the first dealer generally wins.

"*Six-card Cribbage* varies from that played with five, as the players (always only two) commence on an equality, without scoring any points for last, retain four cards in hand, and all the cards are to be played out, as in Three and Four hand Cribbage with five cards. At this game it is of advantage to the last player to keep as close cards as possible, in hopes of coming in for 15, a sequence, or pair, besides the end hole or 31. The first dealer is reckoned to have some trifling advantage, and each player may, on the average, expect to make 25 points in every two deals. The first non-dealer is considered to have a preference, when he gains 10 or more the first hand, and the dealer not making more than his average number.

"*Eight-card Cribbage* is very rarely played."

The Rules commonly received, are added on the same high authority:

"The dealer may discover his own cards, though if he shows any of the adversary's, that adversary is entitled to mark two points, and also at liberty to call a fresh deal.

"Should too many cards be dealt to either party, the non-dealer may score two points, and likewise demand another deal, upon the error being detected previous to taking up the cards: but if he does not wish a new deal, in that case the extra cards must be drawn; and when any player is observed to have in hand more than the proper number of cards, then the opponent shall set up four points, and may also call a new deal.

"If any player shall meddle with the cards after dealing, till the period of cutting them for the turn-up card, then his opponent shall score two points.

"When any player scores more than entitled to, the other party should not only put him back as many points as are overmarked, but likewise score the same extra number for his own game.

"Should either party meddle even with his own pegs unnecessarily, the opponent may take two points, and if any one takes out his front peg, he must place the same back behind the other; though when any are misplaced by accident, a by-stander should replace the same according to the best of his judgment, but never otherwise interfere.

"When any player miscalculates, or neglects to set up what he is entitled to, the adversary is, in some companies, allowed to take the points so omitted; but in others that is not done, the inattentive person being only prohibited from afterwards scoring them.

"Each player may place his own cards, when done with, on the pack.

"In Five-card Cribbage, the cards are to be dealt one by one alternately, but when played with six cards, then it is customary to give three, and if with eight cards, four at a time.

"The non-dealer, at the commencement of the game in *Five-card Cribbage*, scores three points, called taking *three for last*, but in six and eight-card Cribbage that is not to be done.

"Some parties permit of flushes in play to be reckoned, when three or more cards of a suit are laid down successively, that is, the person playing the third card reckons three, and the player laying down a fourth of the same suit scores four, and so on if five, six or more can be played."

CRIB-BAGE.

CRICKET.

CRIBRARIA, in *Botany*, a genus of the class *Cryptogamia*, natural order *Fungi*, belonging to Persoon's section *Dermatocarpi*. Generic character: the plant consisting of reticulated hair-like fibres, including the fertile dust.

Eleven species, found on rotten trunks of trees. Persoon, *Syn. Fung.*

CRICK, CRI'CKET. } *Crick* or *creek* in the neck, Junius thinks, is from the A. S. *cricce*, (English, *crutch*.) A staffe; because the neck of one so afflicted is as stiff and immovable as a *staff*. Skinner, that it may be—to *creak* or *crack*, because the neck feels as if it would *crack* or burst asunder. In Sir John Davis, it seems to be no other than *creek*, (q. v.) a nook or corner.

Cricket, the insect, certainly from the noise or sound it utters. *Cricket*, the game, from A. S. *cricce*, a staff; with which the balls were struck.

> The *cryket* by kynde of fur, (i. e. fire.)
> *Piers Ploughman. Vision*, p. 255.

Forsooth because it goeth as it were reculing backward, it pierceth and boreth an hole into the ground, and never ceaseth all night long to *creake* very shrill. They take a flie and lie it about the middest at the end of a long haire of one's head, and so put the said flie into the mouth of the *cricket's* hole; but first they blow the dust away with their mouth, for feare least the flie should hide herselfe therein: the *cricket* spies the sillie flie, seaseth upon her presently, and claspeth her round, and so they are both drawne foorth together by the said haire.
Holland. Plinie, vol. ii. fol. 370.

> Of all their ways, I love Meander's path,
> Which to the tune of dying swans doth dance,
> Such winding slights, such turns and *cricks* he hath,
> Such *creaks*, such wrenches, and such dalliance.
> *Davies. On Dancing.*

With water, he giveth it for the dropsie; to those also that with a *cricke* or crampe have their necks drawne backward.
Holland. Plinie, vol. ii. fol. 40.

A screech owl at midnight has alarmed a family more than a band of robbers; nay the voice of a *cricket* hath struck more terrour than the roaring of a lion. *Spectator*, No. 7.

> ——— Far remote
> From Mirth's mad shouts, that thro' th' illumin'd roof
> Resound with festive echo, let me sit
> Blest with the lowly *cricket's* drowsy dirge.
> *Warton. Pleasures of Melancholy.*

As much as I delight in the honest country folks, they do now and then throw a pot of ale at my head, and sometimes an unlucky boy will drive his *cricket-ball* full in my face.
Johnson. The Rambler.

> England, when once of peace and wealth possess'd,
> Began to think frugality a jest,
> So grew polite, hence all her well-bred heirs
> Gamesters and jockies turn'd, and *cricket players.*
> *Jenyns. Horatii Epist.* 1. *Lib.* 2. *imitated.*

Strutt, in his *Sports and Pastimes*, (book ii. ch. iii. sec. 19,) holds that the game of CRICKET originated from the older game of *Club Ball*, in which a ball was struck from a straight bat. Two engravings of this game are given by him, one from a Genealogical Roll of the Kings of England to the time of Henry III., in the Royal Library, marked 14, *B* v.; the other from a MS. in the Bodleian, dated 1344, and marked Bodl. 264. In each of these are only two players. Little more is known about the game, and it does not appear by what laws it was regulated. Strutt cannot trace the name *Cricket* beyond the commencement of the XVIIIth century. The only great change which

CRICKET. seems to have been made in this game since its introduction, is the usage of three stumps and two bails in the wicket, instead of two stumps and one bail, which frequently allowed the ball to pass between them. Cricket is played by single and double wicket. The former usually requires five players on a side, the latter eleven. Hoyle gives the following:

"*Laws of the Game.*

"The ball must weigh not less than five ounces and a half, nor more than five ounces and three quarters.

"At the beginning of each innings, either party may call for a new ball.

"The bat must not exceed four inches and one quarter in the widest part.

"The stumps must be twenty-four inches out of the ground, the bails seven inches long.

"The bowling-crease must be parallel with the stumps, three feet in length, with a return-crease.

"The popping-crease must be three feet ten inches from the wickets, and parallel to them, and the wickets must be opposite to each other, at the distance of twenty-two yards.

"It shall not be lawful for either party during a match, without the consent of the other, to alter the ground, by rolling, watering, covering, mowing, or beating. This rule is not meant to prevent the striker from beating the ground with his bat near where he stands during the innings, or to prevent the bowler from filling up holes, watering his ground, or using sawdust, &c. when the ground is wet.

"The wickets shall be pitched within thirty yards of a centre fixed by the adversaries.

"The bowler must deliver the ball with one foot behind the bowling-crease, and within the return-crease; and shall bowl four balls before he changes wickets, which he shall do but once in the same innings, and he may order the player at his wicket to stand on which side of it he pleases.

"If the bowler tosses the ball over the striker's head, or bowls it so wide that the striker cannot play at it, the party that is in shall be allowed one notch, to be put down to the byes, and those balls not to be reckoned as any of the four balls.

"If the bowler bowls a *no ball*, the striker may play at it, and be allowed all the runs he can get, and shall not be put out, except by running out.

"The ball must be bowled underhand, and delivered with the hand below the elbow.

"In the event of a change of bowling, no more than two balls to be allowed in practice.

"The bowler who takes the two balls, to be obliged to bowl four balls.

"The striker is out if the bail is bowled off, or the stump bowled out of the ground: or if the ball, from a stroke over or under his bat, or upon his hands (but not wrists) is held before it touches the ground, though it be hugged to the body of the catcher: or if, in striking, or at any other time while the ball is in play, both his feet are over the popping-crease, and his wicket is put down, except his bat is grounded within it; or, if in striking at the ball he hits down his wicket: or, if under pretence of running a notch, or otherwise, either of the strikers prevent a ball from being caught, the striker of the ball is out; or, if he runs out of his ground to hinder a catch: or, if a ball is struck up, and he wilfully strikes it again; or, if in running a notch, the wicket is struck down by a thrown, CRI
or with the ball in hand, before his foot, hand, or bat is grounded over the popping-crease; but if the bail is off, a stump must be struck out of the ground by the ball: or if the striker touches or takes up the ball before it has lain still, unless at the request of the opposite party; or if the striker puts his leg before the wicket, with a design to stop the ball, and in the opinion of the umpire, actually prevents the ball from hitting his wicket by it.

"If the players have crossed each other, he that runs for the wicket that is put down is out; if they are not crossed, he that left the wicket put down is out.

"When a ball is caught, no notch to be reckoned.

"When a striker is run out, the notch they were running for is not to be reckoned.

"If a last ball is called, the striker shall be allowed four, but if more than four are run before *last ball* is called, then the striker to have all they have run.

"When the ball has been in the bowler's or wicket-keeper's hands, it is considered as no longer in play; the strikers need not to keep within their ground till the umpire has called *Play*; but if the player goes out of his ground with an intent to run, before the ball is delivered, the bowler may put him out.

"If the striker is hurt, he may retire from his wicket, and have his innings at any time in that innings.

"If a striker is hurt, some other person may be allowed to stand out for him, but not go in.

"If any person stops the ball with his hat, the ball is to be considered dead, and the opposite party to add five notches to their score; if any are run, they are to have five in all.

"When the ball is struck up, the striker may guard his wicket either with his bat or his body.

"In single-wicket matches, if the striker moves out of his ground to strike at the ball, he shall not be allowed a notch for such stroke.

"The wicket-keeper shall stand at a reasonable distance behind, and shall not move till the ball is out of the bowler's hand, and shall not by any noise incommode the striker: and if his hands, knees, foot, or head, be over or before the wicket, though the ball hit it, that shall not be out.

"The umpires shall allow two minutes for each man to come in, and fifteen minutes between each innings. When the umpires shall call *Play*, the party refusing to play shall lose the match: and the said umpires are the sole judges of fair and unfair play, and all disputes shall be determined by them, each at his own wicket: but in case of a catch, which the umpire at the wicket cannot see sufficiently to decide upon, he may apply to the other umpire, whose opinion is conclusive. The umpires, in all matches to pitch fair wickets, and the parties to toss for the choice of innings. They are not to order a player out, unless appealed to by the adversaries. But if the bowler's foot is not behind the bowling-crease, and within the return-crease, when he delivers the ball, the umpire, unasked, must call *No Ball*. If the striker runs a short notch, the umpire must call *No Notch*.

"The umpire at the bowler's wicket shall be first applied to decide on all catches.

"The umpires are not to be changed during the match, but by the consent of both parties."

CRIME, *n.*
CRI'MEFUL,
CRI'MELESS,
CRI'MINAL, *adj.*
CRI'MINAL, *n.*
CRIMINA'LITY,
CRI'MINALLY,
CRI'MINALNESS,
CRI'MINATE, *v.*
CRIMINA'TION,
CRI'MINOUS,
CRI'MINOUSLY,
CRI'MINOUSNESS.

Fr. and It. *crime*; Sp. *crimen*, Lat. *crimen*. *Quia*, (says Vossius,) *qui judicat, is litem* separat, *ac verum, a falso distinguit, hinc factum est, ut κρίνω*, (i. e. *dirimo, sejungo, separo,*) *secundario ponatur pro* judicare, *a quâ significatione est Græcum κρίμα, pro judicio, et Latinum* crimen *pro* delicto, *quia ob crimen aliquis* judicatur *ac* damnatur. For the common legal application, see the **Examples** from Blackstone.

An act contrary to some law, human or divine; a failure in the performance of that which is ordered; an opposition or resistance to that which is ordered; a doing of that which is ordered not to be done: *sc.* ordered by human or divine authority.

I shal him tellen which a gret honour
It is to be a flatering limitour,
And eke of many another maner *crime*,
Which nedeth not rehersen at this time.
Chaucer. The Frere's Prologue, v. 6877.

Therfore he seide, thei that in ghou ben myghti come down togidre, and if ony *cryme* is in the man accuse thei hym.
Wiclif. The Dedis of Apostlis, ch. xxv.

Also thirdly it is agreed that whosoever of Prussia is determined *criminally* to propound his *criminal* complaints in England: namely that his brother or kinsman hath beene slaine, wounded, or maimed by Englishmen, the same partie is to repayre vnto the citie of London in England.
Hakluyt. Voyage, &c. Richard II.

Consider also, good readers, that by the lawes afore made, there was not only foreboden to beare witnes, he that appeared to be once forsworn, but also many other maner of *crymynous* persons, for the generall presumpcion that they wer vnworthy credence. *Sir Thomas More. Workes*, fol. 1003.

Item, that an order may be taken for the bringing up of youth in good learning and vertue; and that the schoolmasters of this realm may be Catholick men, and all other to be removed that are sacramentaries, or hereticks, or otherwise notable *criminous* persons.
Burnett. Records. An Address by the Lower House of Convocation to the Upper House.

Great God it planted in that blessed sted
With his almighty hand, and did it call
The tree of life, the *crime* of our first father's fall.
Spenser. Faerie Queene, book i. can. 2.

SIL. *Crimes?* AFE. Patience, Silius. SIL. Tell thy moile [mule] of patience,
I am a Roman. What are my *crimes?* Proclaime them.
I am too rich? too honest for the times?
Have I, or treasure, jewels, land or houses
That some informer gapes for?
Ben Jonson. Sejanus, act iii.

——— But tell me,
Why you proceeded not against these feates,
So *crimefull*, and so capitall in nature.
Shakespeare. Hamlet, fol. 239.

And had I twentie times so many foes,
And each of them had twentie times their power,
All these could not procure me any scathe
So long as I am loyall, true and *crimeless*.
Id. Henry VI. First Part, fol. 129.

The ends [of drink] are digestion of our meat, cheerfulness and refreshment of our spirits, or any end of health; besides which if we go at any time beyond it, it is inordinate and *criminal*, it is the vice of drunkenness.
Taylor. Holy Living, ch. i. sec. 2.

The highest danger is not in every sin; offences and *crimes* must be distinguished carefully: for the same severe impositions are not indifferently to be laid upon *criminals*, and those whose guilt is in such instances from which no man is free.
Id. On Repentance, ch. iii. sec. 5.

Providing always, that this be not prejuditiall to the ordinary jurisdiction of judges; but that men may pursue their actions by order of law, civilly or *criminally*, as it pleaseth them.
Knox. History of Reformation. Anno 1560.

It being no undertaking of ours to confess first, and then excuse our schism, or avert the *criminalness* of it.
Hammond. An Answer to Schism Disarm'd, ch. vi. sec. 1.

As there is nothing that raises so deadly hostilitie as religion, so no *criminations* are so rife, or so haynous, as those which are mutually cast upon the abettors of contrary opinions.
Hall. Christian Moderation, vol. iii. book ii. sec. 10.

He perceived him to be more estranged than before time through the slaunders and *criminous* imputations which M. Lollius, companion and governour to the saide Caius, had put into his head. *Holland. Suetonius. Tiberius*, fol. 94.

For it seemed by their distemperature that it sounded very *criminously* on their trial, and therefore utterly denying all that was alledged, they protested themselves true and faithful subjects.
State Trials. Arraignment of Edmund Campion.

And to this I that did not really adhear to that, will not be so far concerned in it, as to make any reply, or at all to endeavour to defend it, or to add of it further than this, that the bare possibility that it might so signifie, supersedes all demonstrativeness of proof from this text, for the *criminousness* of will-worship.
Hammond. Works, vol. ii. fol. 178.

Murder may pass unpunish'd for a time,
But tardy justice will o'ertake the *crime*.
Dryden. The Cock and the Fox.

There are numberless little *crimes* which children take no notice of while they are doing, which, upon reflection when they shall themselves become fathers, they will look upon with the utmost sorrow and contrition, that they did not regard, before those whom they offended were to be no more seen.
Spectator, No. 263.

Suppose a civil magistrate should have a *criminal* brought before him, accused for instance, of murder, burglary, or the like, and the fact is proved, would you not have him in that case to pronounce the sentence that the law has awarded to all such malefactors. *Sharp. Works. Sermon* 6. vol. vi.

Being accused in the House of Commons, though they thought not convenient to proceed against him *criminally*; yet upon this, and divers other considerations, they removed him.
Ludlow. Memoirs, vol. iii. p. 116.

There is a great deal of difference as to the *criminalness* of false persuasions upon this account; the same error which one person may hold very pardonably, may be extremely dangerous in other persons that have better parts, and have had a better education, and enjoy more opportunities of informing themselves right in those points. *Sharp. Works. Sermon* 16. vol. iii.

From the (not long since mentioned) frequent repetitions to be met with in the Scripture, and from the unusual method, wherein the author of it has thought fit, that the divine truths and precepts should be extant there, divers have been pleased to take occasion to *criminate* the Bible, as if, its bulk considered, it were but a barren book.
Boyle. Touching the style of Holy Scripture.

The prophet Nathan scrupled not to deceive David, that he might reclaim him, and surprise him into a confession of the *criminousness* of his fault.
Id. Preface to Occasional Meditations.

Remember that my days have all been honourable; and that I now suffer not for my *crimes*, but my virtues.
Melmoth. Cicero. To Terentia, &c. book i. sec. 6.

A *crime* or misdemesnor, is an act committed or omitted, in violation of a public law, either forbidding or commanding it.
Blackstone. Commentaries, vol. iv. p. 5.

CRIME. — CRIMEA.

The discussion and admeasurement of which (the general nature of *crimes* and their punishment,) forms in every country the code of *criminal* law. *Blackstone. Commentaries*, vol. iv. p. 2.

When you have collected your audience, just at the moment when their minds are erect with expectation, let it be reported that a state *criminal* of high rank, is on the point of being executed in the adjoining square; in a moment the emptiness of the theatre would demonstrate the comparative weakness of the imitative arts, and proclaim the triumph of real sympathy.

Burke. On the Sublime and Beautiful, sec. 15.

Lord Coke, the oracle of the English law, conforms to that general sense, where he says, that "those things which are of the highest *criminality*, may be of the least disgrace."

Burke. Letter to the Sheriffs of Bristol.

CRIM — CRIM

It is no slight authority which shall persuade us (by receiving as proofs of loyalty the mistaken principles lightly taken up in these addresses) obliquely to *criminate*, with the heavy and ungrounded charge of disloyalty and disaffection, an uncorrupt, independent, and reforming parliament.

Id. Relative to the Speech from the Throne.

CRIMEA.

Name.

CRIMEA, or CRIM-TATARY, is the modern name of the Peninsula called *Chersonesus Taurica* by the Ancients; but since its annexation to the Russian Empire, it has received from its new masters the barbarous name of Tavrida. It lies between the parallels of 44° and 46° north latitude, and the thirty-third and thirty-sixth meridians east of Greenwich; has nearly the shape of a lozenge, and its longest diameter is from east to west. United at its northern extremity to the continent of Europe by the narrow isthmus of Pérekop, and separated from Asia, on the east, by the strait of Zení-calêh, (the *Cimmerian Bosporus*;) surrounded also on three sides by the Black Sea, (*Pontus Euxinus*,) and on the fourth by the Sea of Azov, (*Palus Mœotis*,) into which the Don (*Tanais*) pours its stream, its position is equally favourable to a commercial intercourse with either quarter of the globe. A line drawn from its eastern to its western extremity measures about 320 versts, (210 British miles;) but its diameter from north to south is only 180 versts, (120 British miles;) so that the whole area cannot be more than 6000 square miles. Of this space, nearly two-thirds are occupied by an almost unbroken level, similar in appearance to the vast steppes, or grassy plains, between the Dnépr and Volga, of which, geologically considered, it may be said to form a part. On the south-east, however, a chain of lofty mountains rising abruptly from the plain, diversifies the climate, soil, productions, and appearance of the country, and sending forth the numerous streams which fertilize the low lands, as well as the vallies on their sides, enrich no less than adorn this beautiful Peninsula, and render it a favourite subject with the Poets and Historians, of ancient as well as modern times. On the north and north-east it is bounded by a large lagune or inlet from the Sea of Azov, the *Putris Palus* of Strabo and Gniloe More (a name of similar import) of the Russian Geographers. It is shaped like the letter L, but variously indented at its edge, and cut off from the rest of the Peninsula by a narrow spit of sand, (Ptolemy's Chersonesus of Zeno,) seldom more than a mile broad, but upwards of seventy miles long, from the Fort of Arabát at its southern extremity to the narrow Strait of Yenī-cheh, which separates it from the Steppe of the Nogháïs. This shallow sea (Sukhoe Mortze as it has been called by the Poles and Russians,) is also named *Byce* by Ptolemy, and *Buges* by Pliny, and was well known to Strabo, but must have undergone considerable changes since his time, if his information as to its magnitude were correct, for he gives it a breadth of 4000 stadia, (400 miles,) and says that it communicated by a wide mouth with the *Palus Mœotis*.

Situation and boundaries.

Putris Palus or Sea of Zivásh.

On the southern coast, at the distance of about ten geographical miles, in a straight line from Arabát, stands the town of Kaffah, also called Theodosia, at one extremity of the Isthmus, which was the boundary of the minor Peninsula and Kingdom of the *Bosporus*. This is now called the Peninsula of Kerch, (the Kersh of the Turks,) and forms the eastern termination of the Crimean Mountains, which, to the west, end abruptly at the point of Phanari, (anciently *Lampas*,) in the Heracleotic peninsula. That part of the Crimea, it may be remarked, was better known to the Greeks than the Kingdom of the *Bosporus*.

Bosporan Kingdom.

The Greek colonies settled near the mouth of the *Palus Mœotis*, (Strabo, vii. 4,) at first independent settlements, were gradually united under one head, and thus gave rise to the Kingdom of the *Bosporus*, better known by its beautiful coins than by any memorials preserved in the Greek Historians. It comprehended the island of *Phanagoria* or Tamán on the Asiatic side, as well as *Panticapæum*, *Mymecium* and other less noted towns on the European side of the straits: and commanded the commerce of the *Palus Mœotis* then probably deeper and more extensive than at present. It was then also, as now, celebrated for the abundance of its fish, especially the sturgeon; to which it probably owed the appellation given to it by Europeans in the dark ages: for the *Mar delle Zabacche* of the Genoese seems to be only a translation of the Tátár phrase, *Ishabak denizi*, (Caviar Sea,) and closely resembles *Sivash*, one of the Russian names of the Gniloe More, or Stinking Pool. Its diameter from the mouth of the *Tanaïs* (Don) to the *Bosporus*, was 2200 stadia, (about 270 miles,) according to Strabo, (vii. 4;) and he adds, that its circumference was reported to be no less than 9000 stadia, (more than 1100 miles,) that is almost the double of its actual dimensions.

Territorial division.

The Crimea, since its incorporation with the Russian Empire, has formed the forty-first Government or Province of the Southern division, including the territories of the Noghái Tátárs, and a part of the Cúbán. It is subdivided into the Districts of, 1. Levkopol, (*Leucopolis*,) formerly *Acmechet*, the Tátár Capital, since called Symferopol, (*Sympheropolis*;) 2. Eski or Stara Crim, i. e. Old Crim, the Metropolis at a more remote period; 3. Evpatoria, (*Eupatoria*,) called Koslov by the Russians, and Guzlovah by the Tátárs; 4. Pérekop, (i. e. the trench, Przekop in Polish;) 5. Phanagoria on the Island of Tamán; 6. Dneprovsk on the Dnépr; 7. Melotopol on the Melochnyé.

Soil and climate.

The flatness of the northern part of the Peninsula, and its exposure to the north and north-east winds, while the breezes from the south are chilled in their passage over the southern mountains, make its winters very severe in comparison with those of other coun-

tries under the same parallel of latitude. Its summers, on the contrary, are often excessively hot; and the great moisture prevalent in the central and southern districts, during the autumnal months, occasions, as is always the case when it is combined with extreme heat, intermittent fevers, which are generally tedious and often fatal. The steppe or heath, which forms nearly two-thirds of the Peninsula, being, as was before remarked, a continuation of the vast level between the Dnestr and the Volga, consists of sand mixed with clay, strongly impregnated with saline particles, so that it abounds, especially near the sea, with salt lakes and pools, which, during the summer heats, are entirely dried up, and leave a thick crust of salt; affording an abundant supply for the wants of all the neighbouring countries, and furnishing no less than 200 cargoes annually for the port of Kaffah alone. Ten rubls (now not more than nine shillings,) was the duty paid on every waggon load in 1794; but as the whole of Russia and Poland is supplied from these natural salt works, the revenue thus accruing to the Crown is considerable.

Salt lakes.

Mountains. The mountainous region, formed by an elevated ridge, extending from Bálaclavah to Kaffah, (*Theodosia,*) at a small distance from the shore, and sending out smaller branches across the Peninsula of Kerch, is a mass of calcareous rock, the beds of which, on the north-western side, are inclined towards the horizon, like those of the slate on the south; but the latter is there below the former, while it is incumbent upon it on the north face of the chain. On that side the declivity is generally a gradual slope; but on the south it is exceedingly steep and precipitous. The views from the highest points in this country are magnificent, and well repay the labour of the traveller in toiling up their sides: the rich verdure of woody hills and fertile vales below; bold and broken crags of naked lime-stone, or gloomy trapp; and swelling summits of slate mountains, half concealing from the eye the vallies at their feet, and broken by torrents, the banks ofwhich are strewed with trunks of trees and fragments of rock, memorials of their wintry violence; all unite to form a prospect, the sublimity and beauty of which, can be surpassed only by the scenery of the Alps. The whole chain (called Yaïlà or Summer Quarters by the Tátárs,) is divided into two branches by the lofty summit of the Chádir-dágh, (i. e. Tent Mountain, from its conical form.) The south-eastern part or Bábúghán Yaïlà, is separated by a forest of pines from the vallies near the sea, where the villages of Lambàt, Parthenìt, Deremen-kóï, Dereh-kóï, Nikítà and Yattah are surrounded by rich meadows, shaded by groves of walnuts, poplars, chestnut-trees, and quinces. The singular appearance of the cliffs on this side of the mountains, so well described in a tract, (*Tableau de le Tauride*, p. 3—5,) ascribed to Pallas, (Clarke's *Travels*, ii. 127,) has been produced by the agency of springs undermining the beds of slate, already in part decomposed by the atmosphere. Large masses of rock are in this manner suddenly displaced, and the soil, trees, and even houses, are removed in a moment to a considerable distance, sometimes even without injury. The "land-slips" in the under-cliff, on the southern shore of the Isle of Wight, are probably instances of a similar agency on a small scale. The last of these *avalanches* on record, is that which in 1786 swept away the whole village of Kuchuk-kóï; the circumstances attending it are well related by Pallas, (*Voyages dans les Gouv. Meridionaux de la Russie,* ii. 123,) and may, as he observes, account for many of the singular appearances of the cliffs in several parts of this coast.

In the Demirjí Yaïlà, or north-eastern division of the mountains, the vallies as far as Súdác are much like those already mentioned. Curú Uzèn, Uskĭút and Capsokhór are the most fertile, and produce much flax, esculent vegetables, and fruit; woods of forest-trees replace the pines on the border of the higher region, and slate is the predominant rock. Between Súdác and Kaffah, a coarse sand-stone or brecia alternates with the lime-stone; and the spherical and columnar form of the mountains near the coast, renders this change in their structure perceptible even on a hasty and distant view. Of the vallies which are here narrower and less cultivated, the only remarkable ones are Tarac-tásh, Cós, Otúz, Súdác or Sú-dágh, and Jó-tepeh; but the two last produce the best wine in the Peninsula. M. Von Engelhardt, (*Reise,* i. 15,) thinks that, with care, the wines of Súdác might be made to rival those of Champagne and Burgundy.

The Chádir-dágh, the loftiest mountain in the whole range, is covered for three-fourths of its height with a forest of beech, beginning at the elevation of 451 toises and a half (=2889·6 feet,) and extending nearly to the summit, which forms a ridge running from south-west to north-east, for about three versts (rather less than two miles,) in length, and being in some places as much as a verst (=five furlongs,) in breadth. The surface is exceedingly uneven, and rises considerably at each extremity; of which the south-western is the largest, and its cliffs, attaining the height of 790·3 toises (=5057·9 feet,) above the Black Sea, form the true summit of the mountain; the north-eastern end of the peak being lower by 221 feet and a half.

The Bábúghán Yaïlà or western division of the range which rises nearly to the same, or perhaps in some places to a greater height than the Chádir-dágh, runs without any break as far as Bálaclavah, where it turns to the north-west, and then gradually descends into the plain. This, as the most elevated branch of these mountains, is that which would most distinctly show the progressive change of vegetation in this latitude, if its height were sufficient: but it is too far below the limit of perpetual snow to admit of any very decided inferences from the position or time of flowering of the plants which it bears; and nothing but long and repeated observation could distinguish accurately between what is invariable and what is merely accidental.

Vegetation.

The annexed Table gives the names of the principal plants observed on the north-eastern declivity of the Bábúghán Yaïlà in the beginning of May, ascending from the foot of the mountain 37 toises (=237 feet nearly) above the level of the sea. (*Reise,* i. 16.)

The reader will probably observe one circumstance, which appears to be inconsistent with the known decrease of temperature as the elevation above the sea increases, viz. that the vegetation on the summit of the mountain was in a more forward state than at the lower station; but this is easily accounted for, by its uninterrupted exposure to the sun, and the small height of the plants there produced, which makes the effect of the reflected heat more powerful: thus an aged yew-tree (*Taxus baccata*) was found among the cliffs on the summit of the Bábúghán Yaïlà, growing not, as usually, upright, but prostrate, and as it were creeping along the wall of rock.

The northern side of this range presents a very different prospect. For fifteen or twenty versts (from nine to twelve miles) along the woody declivity of the mountains, the lower range of slate-hills gradually sinks into the plain. An undulating outline, formed by the round and generally wooded summits of these hills, marks the course of the streams which cross them in their way to the sea, and have worn a passage through the wall of white calcareous rock, which forms the northern boundary of the elevated range; and, from its parallelism with the ridge, appears as if it had been anciently the bank of a mighty stream, the bed of which was formed by the slate-hills below.

The vallies become wider and more fertile as they approach the plain, and the whole aspectof the country wears a greater appearance of industry and comfort. Fields in a better state of cultivation, plantations and orchards more regularly planted, neater and more substantial cottages, are all indications of the superior condition of the inhabitants of this side of the mountains. Timber for shipping is cut down and carried to Sevastopol; waggons (*drabahs*) and various utensils, or articles of furniture, are constructed; and the various branches of agriculture already mentioned are carried on by the villagers on this side of the hills. They are not, therefore, deserving of Pallas's unqualified reprobation, (ii. 349;) though, from want of skill and judgment, they have made a great havoc in their forests, since the ship-builders at Kherson have discovered that their timber is more serviceable than that brought down the Dnépr. Stiléh, Uzembásh, Kók-kïos, and Baïdár, are among the largest; and Chórgunah, Buyuk-Uzèn, Carà Ilyás, Kermenchuk, Ayu Thodór, and Bághcheh-saráï, the most beautiful places in this part of the Peninsula.

The natives of Crimea are for the most part descen-

dants of those Tátár tribes who conquered it in the beginning of the XIIIth century. Hájí Giráï, the real or supposititious son of Bash Tímúr, a descendant of Jengìz was elected Khán of the Crim, about the middle of the XVth century; and became the parent of a Royal line not yet extinct, though their claim to the sovereignty of the Crimea was abandoned in favour of Russia by Sháhín Giráï, the last of the Kháns, in 1784.

From the Shepherd, (Chóbán,) to whom Hájí Giráï owed his preservation, (Langlès, *Notice des Khâns de Crimée*, p. 401,) there descended another branch, perhaps from the same stock, distinguished by peculiar honours, and called the Chóbán Giráïs; but, independantly of these, there were seven ancient families, who formed a sort of Aristocracy in the Crimea. They were,

Government.

1. The family of Shírím, settled between Carà-sú-bázár and Kerch; 2. Barun, near the former place; 3. Mansúr, around Koslov; 4. Sujuvut, to the east of Carà-sú-bázár; 5. Ardín, or Arghin, near Ac-mesjid, (Ak-metchet;) 6. Yashláú, about Bághcheh-saráï; and 7. Dáïr, near Pérekop, between the Sálghir and the Suya.

These families were, in a great measure, independent of the Khán, liable to no imposts, nor even to any military service; and they possessed an unlimited authority within their own territories, collecting for themselves the legal tenths, (*áshúr*,) and levying the capitation tax (*kharáj*) on infidels. There were also eight more families, or tribes, possessing peculiar privileges, though to a smaller extent.

1. Kipchác; 2. Oïrèt; 3. Merkít; 4. Ablán; 5. Burulchà; 6. Bitàc Bulghàc; 7. Subán ghází Oghlù; 8. Yedeï Oghlù.

The two latter were, properly, branches of the Nógháï tribes, established in the Steppes beyond the Isthmus.

Besides these, there was the Capí-khalkí, (People of the Gate, *i. e.* Confidential Servants of the Court,) a body of inferior Mírzás, or Nobles, holding feudal tenures under the Khán, generally for life only, and often possessed of nothing but an hereditary rank. The title of Chelebí seems to have been exclusively appropriated to persons descended from spiritual or legal dignitaries, such as the Muftí, (Lord Chancellor,) the Cází-âsker, (Judge Advocate General,) Efendí and five Ulemà, (Doctors of Law,) who formed the Supreme Court Spiritual and Civil, appointed the Cázís (Judges) of towns and villages; and the Imáms and Khatíbs (Readers and Preachers) of the mosques, and still enjoy the same honours and authority. All Law and Divinity form in every Mohammedan country the same branch of study; a Doctor of the one is therefore a Doctor of the other, and Mollà is the title which he receives here as elsewhere. As the Russians have not interfered with the religious or Civil laws of the Tátárs, their lawyers and divines have still plenty of employment; but the Russian Courts, to which appeals must lie, have also had abundance of intricate business on their hands, in consequence of the carelessness and precipitation with which, on the cession of the Peninsula, grants of lands, supposed to be vested in the Crown, were made to persons whom the Government wished to remunerate. As soon as tranquillity was restored, claimants arose who had before been overlooked, and whose claims could not be set aside: thus the valley of Baïdár, so unduely vaunted as an earthly paradise, was given to Admiral Mordvinov; but, when Mr. Heber visited it, the possession of it was contested by its Tátár proprietors, (Clarke, ii. 233;) and claims of this kind were some of the vexations to which Pallas alludes, (ii. *Pref.* 1) as "embittering the evening of his days." The only lands, indeed, of which the Russian Government could have any right to dispose, were those which formed the Khán's domain; these bore only a small proportion to the whole territory, the greater part of which had long been possessed by hereditary proprietors. In what manner the Russian troops were suffered or ordered to impress these Musulmáns with a proper respect for their Christian Sovereign, may be gathered from the facts recorded by Dr. Clarke, (ii. 173;) it will not, therefore, be a matter of surprise, that many of the Tátárs withdrew for a time, and few ventured immediately to assert their rights. Their lands, therefore, appeared to be unoccupied; and were sequestered or alienated before it was known that they were only liable to the tithe and quit-rent established by a Fermán of Sháhín Giráï, the last Khán. The heavy vassalage of the Russian Serfs was also imposed on the farmers and labourers resident on such estates, and another principle foreign to the habits of the Tátárs was acted upon. (Clarke, ii. 233.) According to their laws, peasants and mechanics were allowed to possess landed property, to buy and sell, and leave it to their children, as well as the nobles, a privilege with which such persons are not indulged by the enlightened code of Russia. When their estates therefore became an object of litigation, the Muscovite lawyers were at a loss how to decide. To admit such claims appeared subversive of established principles of law. These cases, therefore, were referred to the Imperial Senate at St. Petersburg; and they were determined by an Ukáz (dated 19 October, 1794,) decreeing that persons below the rank of Nobles should be allowed to hold and inherit lands already possessed by their families, but in no case be suffered to alienate them *except to Nobles*.

Population.

Such regulations are not likely to promote an increase of population; but the advantages of a regularly organized Government and fixed contributions are such, that even under these discouragements the number of the Tátárs in the Crimea has considerably augmented, since it became a Russian Province, if reliance can be placed on the accounts officially published. In the beginning of this century, the total of males returned was 120,000; and in 1820 it amounted to 186,000. If the proportions between the different classes are still the same as they were in 1793, the nobles form about $\frac{1}{50}$th, the Efendís or Divines $\frac{1}{17}$th, and the Commoners nearly $\frac{49}{50}$ths of the whole.

National character.

The national character of this people has been variously represented by different writers; but some, as for example Pallas, who had ample opportunities of observation, were not free from prejudices occasioned by personal irritation and disappointment. Under the sway of Russia they appear to have lost their martial spirit, and the ferocity by which it was often disgraced; their original kind-heartedness and hospitality, therefore, now appear unalloyed by any less pleasing characteristic, except it be the love of pilfering, in which, as in several other points, they differ from their kinsmen the Turks. Indolence, almost inseparable from the influence of a burning sun, is the most obvious feature in a Crim-Tátár's character; his

CRIMEA. wants and wishes are few and easily satisfied, and he thinks it folly to labour for more than his forefathers desired. He is temperate, sober, and peaceable, rarely exercising the privilege of a Musulmán, by taking to himself more wives than one; because he knows that two will not live in peace together. Richly embroidered dresses and a numerous stud are the chief luxuries in which the more wealthy indulge; but their native horses are a sorry breed, and few Mírzárs will be at the trouble of importing Circassian racers, the only good horses within their reach. Banquets of horse-flesh are quite out of fashion; and so, indeed, is the use of the bow and arrow, for which their great-grandfathers and great-great-grandfathers were in high repute. Their arts are as rude and simple as their habits; and when asked why they never grease the wheels of their groaning waggons, "We are no thieves," they say, "and have no need to be afraid of any body's hearing us coming." Their agriculture is of course highly defective; and having little disposition to turn their local advantages to account, they wanted nothing but such regulations as the Ukàz already mentioned, to check every thought of improvement which might ever enter the brain of any individual a little more active, industrious, and long-headed than his neighbours. Ignorance and superstition are inseparable companions in Crim-Tátary, as elsewhere. The fear of the evil eye, belief in the potency of amulets, faith in the sanative powers of an egg broken against an horse's forehead, and all the other articles of popular credulity commonly received among the Osmánlís, are religiously inculcated by every conscientious Crimean, not excepting the Ulemà themselves, whose learning is said rarely to extend to an acquaintance even with the Corán.

Colonies. The colonies established by the Russians in the Crimea have not succeeded, for the best of reasons, that the original plans, however wise and benevolent, have always been frustrated by the misconduct of the agents to whom the execution of them was intrusted, and by the operation of those unsalutary restrictions by which commercial men always find themselves shackled under a despotic Government.

Antiquities The Greeks and Genoese left many monuments of their establishments in the Tauric Chersonese; the latter curious only as historical memorials, the former often valuable as works of art; but the Russian soldiery, more barbarous than the Tátárs whom they dispossessed, have rarely spared any building, the materials of which could be used again; and have often knocked to pieces bas-reliefs, and stones bearing inscriptions, merely by way of recreation.

Kerch, Panticapæum. Near Kerch, the ancient *Panticapæum*, is a remarkable tumulus or mound, called by the Greeks the Tomb of Mithridates, by the Tátárs, Altín-óbò (Golden Hill) placed on the *vallum* or barrier of the Bosporian Kingdom, an ancient work still preserved entire, (Clarke, ii. 112; Pallas, ii. 241;) and from its summit the traveller enjoys one of the finest views in the Crimea. Kerch (called Kersh by the Turks) is now a wretched place, containing only a few miserable houses, a small church, and a jetty of piles; but it furnishes a larger fund for the amusement of the Antiquary, than perhaps any other place in the Peninsula. The third, or outer *vallum*, that of Asander, (Strabo, vii. p. 450, ed. Oxon. 1807,) is crossed in the last stage between Kerch and Kaffah. The remains of its towers are still very visible. CRIM

Kaffah Theod In the year 1800, fifty families and fewer houses formed the whole of Kaffah. "It presents a most dismal prospect," says Mr. Heber, "and is little better than a mass of ruins, presenting not a single vestige of its having been the ancient *Theodosia*," (Clarke, ii. 130.) The next eleven years, however, occasioned a very beneficial change; several neat new houses had been erected, and the prosperity of Kaffah was revived, when Messrs. Von Engelhardt and Parrot saw it in 1811.

Eski C Dr. Clarke (ii. 154) observes, that the site of Eski Crim (Old Crim) agrees much better with Strabo's position of *Theodosia* than any other place; the ruins, however, at that Tátár Capital do not contain any memorials of Grecian art.

Cara-su bazar. Carà-sú-bázár, or Black-water-market, though it has not suffered so much as other towns in the Crimea, has, notwithstanding, many *modern* ruins to mark the energy of its new masters. It corresponds well with its name, and is one of the best furnished and cheapest marts for the staple produce of the Peninsula, particularly the native manufactures, such as soap, candles, pottery, and morocco leather, in the preparation of which the Crim-Tátárs excel.

Ak-mesch et or Sympheropol. Ac-mechet (a Tátár corruption of Ac-mesjid, the White Mosque) new-named Sympheropol by order of the Empress Catharine II., is, though the Metropolis of the Crimea, and seat of the present Government, more remarkable for its narrow, crooked, dirty streets, than for any external or internal ornaments, and even in 1811 could not boast of an inn for the accommodation of travellers. (Engelhardt, i. 57-8.)

Baghchesarai. Bághcheh-saráï (the Garden Palace) the favourite residence of the Kháns or Sovereigns of the Crimea, is only thirty versts (eighteen miles and a half) from Ac-mechet. It is finely situated, occupying the craggy sides of a prodigious ravine between two high mountains. Its bubbling springs, running streamlets, gardens, terraces, vineyards, groves, kïosks, mosques, and minarets, scattered around in a wild irregularity, and seeming to soften the horror of the rocks and precipices, all combine to produce a powerful impression, such as cannot be felt in any other town in Europe. Every moving object which meets the traveller's eye, is strictly Asiatic. It still contains upwards of 1500 houses, and is the residence of the principal Mírzás or Tátár Noblesse, being exclusively appropriated to the Musulmáns, and the place where their best manufactures are carried on. But extensive ruins every where scattered around, and traditional records of the devastation which followed its military occupation by the Russian troops, sufficiently show what Ac-mechet must have lost when deprived of its native Princes. There is no place in the world, perhaps, where Christians can so easily witness the religious service of the Musulmáns; and it is remarkable, that both Dr. Clarke and M. Von Engelhardt were impressed with nearly the same feelings of respect and sympathy, by the earnest, but unostentatious, devotion of the worshippers in the mosques of Ac-mechet; so much so, that they have expressed themselves nearly in the same words, though neither appears to have seen the narrative of the other.

Kozlo Gezzl Crossing over to the western coast, the traveller comes to Kozlov, (Gúzloveh, perhaps Guzel-oveh,

CRIMEA. the Beautiful Plain,) once a flourishing commercial town, but not, as was at first supposed, the *Eupatorium* of the Ancients. It contained about 4000 inhabitants in 1794, according to the accounts given to Pallas, (ii. 433;) but its port, which is capable of receiving fifty vessels at the same time, and was once crowded with shipping, had nothing in it but a solitary Turkish brigantine, when Dr. Clarke was there six years afterwards; it has since that time been again more frequented on account of the timber which is exported to Kherson.

Next to the mountainous region, the southern and south-eastern coasts are the most beautiful and interesting parts of the Crimea. Between Sevastopol and Bálaclavah is the Minor Peninsula, so celebrated among the Ancients under the name of the *Heracleotic Chersonese*. The whole is full of vestiges of its former splendour, and has been excellently illustrated by Clarke and Pallas, (Clarke, ii. 199—229, 280—294; Pallas, ii. 39—81, 111—116.)

Heracleotic Chersonese

Sevastopol, (*Sebastopolis*) also called Aktiyár, from a Tátár village in its neighbourhood, (in latitude 44° 41′ 30″ north and longitude 33° 45′ 15″ east) was begun by order of Catharine II., immediately after the occupation of the Crimea in 1783, on account of the excellence of its harbour, (the *Ctenus* of Strabo, vii. p. 450, ed. Oxon.) By the fatality attending all establishments at a distance from the Capital, it now appears to be in a very languishing condition. Merchant ships were, at one period, prohibited from entering this port, except in case of extreme distress.

Sevastopol or Aktiárs.

The valley and excavated rocks of In-kirmán, the tomb of Theagenes, the picturesque site of the Monastery of St. George, and the remains of *Eupatorium* and *Chersonesus* are amply sufficient to occupy the traveller's attention for a considerable time; while the harbour of Bálaclavah, the *Symbolorum Portus*, of Strabo, (vii. p. 446, ed. Oxon.) at the other extremity of the Isthmus, is one of the most remarkable in the Crimea. It was a nest of pirates in 1800, inhabited by Greek refugees from every province, (especially from Maïna and the Ionian Islands,) whose predatory exploits had been of service to Russia in her contests with Turkey, and were too well remembered by the Turks to allow of their returning to their native country.

Antiquities of Inkerman.

From the beautiful valley of Baïdár, a rapid and dangerous descent, literally as its name (*merdvín*) implies; a stair-case in the rock; leads down to the beach. Between the craggy summits of naked rocks, rising perpendicularly to such an elevation above the sea which dashes its waves against their bases, that the roaring of its serge is unheard, and the sea itself appears insignificant from its distance beneath, this descent begins, and opens a vast and terrific prospect. It terminates in a sort of platform skirting the bases of the cliffs, and leading by "a perilous path," still at a great height above the sea, to the village of Kuchúk-koï, on the side of a lofty declivity, near the most southern point of the coast. The injury occasioned there by the fall of the masses of rock already mentioned, was repaired at the sole expense of the Empress, and the inhabitants received an indemnification for their losses.

e Merdven.

The route to the neighbouring village of Alúpcah presents a view of the boldest scenery in the Crimea. Immediately in front is the stupendous promontory called *Criu-metópon* by the Greeks; and at some distance to the eastward, is the Ayú-dágh, (Bear's Hill,) at the foot of which is the village of Parthenìt, a name which, combined with ancient columns found in the neighbourhood, reminds the Antiquary of *Parthenium*, the Temple of Diana, in which Iphigenia is said to have officiated as Priestess, (Procop. *De Bello Goth.* iv. 5;) but it is evident from Strabo, (vii. 446,) that the temple was within the *Heracleotic Chersonese*. Dr. Clarke's interpretation of the name Ayú-dágh, by which he endeavours to strengthen his conjecture, is unfortunately inadmissible.

der-cliff

CRIMEA. Criu Metopon.

The same road along the under-cliff, and crossing the beautiful vallies of Uskïút and Capsokhór, brings the traveller to the vale of Súdác or Sú-dágh, where a change in the order of the strata gives a new appearance to the mountains, which are here almost exclusively composed of slate and sand-stone. Sú-dágh, the Sudaco, Sogdaja, and Soldaja of the Genoese, and Sidagios of the Modern Greeks, is remarkable for the ruins of its fortress and churches, as well as the beauty of its site, and excellence of its wines, the best produced in the Crimea. The fortress was perched upon the summit of a conical rock, called Cúsh-cayà (Bird Rock) by the Tátárs, and particularly precipitous towards the sea. (Pallas, ii. 193.) The level surface on its summit, which inclines towards the north, can be approached only in one place at the north-west angle, and that was defended by very strong outworks. The whole construction was in the very best style of the architecture of the dark ages, and the inscriptions and sculptures, many of which have been removed, are well illustrated in the Abbate Oderico's *Lettere Ligustiche*. Many Gothic buildings, "*d'un style recherché pour le goût*," were extant when Pallas first visited the place, but were afterwards knocked down to supply materials for barracks. This beautiful valley was in a very neglected state when Pallas wrote his last volumes; the distilleries and other buildings erected by Prince Potemkin, had reverted to the Crown at his death, but had been allowed to fall into decay. The beauty and fertility of the place had some claim to the attention of its possessor, and it merited, as it received, the peculiar notice of that enlightened and excellent Minister the Duke de Richelieu.

Soodagh or Soodak.

The Isle of Tamán, on the eastern side of the Cimerian Bosporus, or Straits of Yení-calêh, is remarkable as the site of the ancient *Phanagoria*. Some of the most valuable remains of antiquity existing in these countries, were to be found on this spot, before the agents of the Russian Government ordered, or allowed, their workmen to break them up, as materials for the fort they intended to build about a mile from thetown. (Clarke, ii. 82.) But whatever be the fate of its antiquities, or the inutility of its fortress, the Isle of Tamán will always attract the notice of the Philosopher, on account of its volcanoes, which emit columns not of fire and smoke, but streams of greasy mud and stinking water. The isthmus to the north-east of the town, eight miles across the bay, and only ten from Kerch, is the site of these volcanoes, or rather the place where the eruption of 1794, so well described by Pallas, (ii. 277,) occurred. Nothing is now visible but pits of sulphureous mud, bubbling springs of black bilge water, and chalybeates like those at Harrowgate. (Heber, in Clarke, ii. 89.) But the whole Island bears evident marks of a volcanic origin, and is full of sources of

Isle of Tamán or Phanagoria

Mud volcanoes.

CRIMEA. mud and bitumen. (Von Engelhardt, i. 69.) The temperature of one examined by the Livonian travellers was 17·7° (=39·8 Fahrenheit) in the centre, and 23·5 (=52·4 Fahrenheit) in the surrounding quiescent part, while that of the open air was 23·8 (=53·8 Fahrenheit) in the sun, and 21·5 (=48·4 Fahrenheit) in the shade. The greatest depth of the bubbling part was eight Rhenish feet (=8¼ English feet.) The gas contained in the bubbles continually arising, was not inflammable. Every thing indicated the presence of bitumen, and a greater activity at some former period than at present. Pallas is of opinion, that the water of the superincumbent sea having oozed into cavities occasioned by former eruptions, is converted into gas, by the heat arising from deeply seated beds of ignited coal or bituminous schistus, and then exploding, throws up the mud and softer elements of the higher strata, being also accompanied by a deflagration which is soon repressed by the action of the atmospheric air. M. Von Engelhardt (ii. 75,) adds, that the bursting forth of new mud-springs is probably the forerunner of an eruption. There are also many sources of bitumen, especially on the south-eastern coast of this island; but whether the substance produced in these springs is like that found at Bákú, on the shore of the Caspian, is not distinctly mentioned.

Besides the remarkable objects, natural or artificial, already mentioned, the Crimea contains two other places which ought not to be passed by unnoticed. They are the ancient Citadel called Mankúp, and Jufút-calêh, or the Jews' Castle.

Mancup. "Mankúp," says Dr. Clarke, (ii. 276,) "is of very extraordinary magnitude, and may truly be described as being in the clouds. It covers the summit of a semicircular, insulated mountain, which, owing to its frightful aspect, its altitude, and its craggy perpendicular sides, independently of every other consideration, fills the mind with wonder, upon entering the romantic defile which leads to Shulu Clerkes-kirmán, (Circassian Castle) on its southern side, which, though in an equally commanding position, is not in so entire a state, and is therefore less remarkable. The road up to the fortress is much incumbered and extremely difficult. It was once a rude stair-case like that of the Merdvín. The summit of the hill is entirely covered with the ruins of the Citadel. Caverns and gloomy passages, hewn in the solid rock, every where remind the spectator of all the horrors of romance; but the view from the edge of the turfy plain, which forms the highest part of this 'cloud-capped' fortress, is truly terrific." It appeared to the traveller whom we have just named, "as lofty as the summit of the cliffs upon the Sussex coast near Beachy Head:" and "while with dismay and caution," he and his companion "crept upon their hands and knees to look over the brink of these fearful heights, an half clad Tátár, wild as the wilds of the north, mounted upon a colt equally unsubdued, without any saddle or bridle, except the twisted stem of a wild vine, gallopped to the edge of the precipice, and there as his horse stood prancing upon the borders of eternity, amused himself in pointing out to them the different places in the vast district which the eye commanded." 'On our left," continues Dr. Clarke, "a narrow passage conducted us to an open balcony, formed in the rock, upon the very face of one of the principal precipices, whence the depth below might be contemplated with less danger. Vultures far beneath were sailing over the vallies, not seeming to be larger than swallows. Below these appeared the tops of undulating hills, covered by tufted woods, with villages amidst rocks and defiles, but at a depth so intimidating, that our blood became chilled in beholding them. At length being conducted to the north-eastern point of the crescent, (which is the natural form of the summit whereon the Citadel of Mankúp was constructed,) and descending a few stone steps, we entered into a cavern called by the Tátárs, the Cape (Cave) of the Winds. The apertures, or windows, are large arched chasms in the rock; through which a most extensive view, over distant mountains and rolling clouds, form a sublime spectacle, the scenery of which in point of tremendous grandeur is not surpassed by any thing in Europe."

Their descent was by that which the Tátárs call the carriage road, beneath an old arched gateway of the Citadel, on the northern side of the mountain; and this is recommended as the best road for the ascent, since it affords the finest and most unexpected points of view, and will lead at least by as easy a path to the deserted city, which was still inhabited in summer-time by a few Jewish tanners from Jufút-calêh when Pallas visited it in 1794. (ii. 107.)

Jufoot-kale. That ancient Jewish fortress, (for such is the meaning of its name,) was situated at the summit of a very steep defile. In a recess on the right hand, below some cliffs, on the summit of which the walls of the town appear, a burial-ground is observed which seems peculiarly well calculated to inspire holy meditation. "It is a beautiful grove, filling a chasm of the mountains, which is rendered gloomy by the shade of lofty trees and overhanging rocks. A winding path conducts through this solemn scene. Several tombs of white marble present a fine contrast to the deep green of the foliage: and female figures, in white veils, are constantly seen offering their pious lamentations over the graves." The ascent from this cemetery is too steep for a man on horseback, though asses are driven up and down for water from the spring which supplies the town, and which is in the defile below. The population amounts to about 1200 persons, but there are not more than 200 houses, and all the inhabitants are Jews of the Caraite sect, or, as they call themselves, Caraïmes, as remarkable for their honesty and integrity as for their disregard of any but the *written* law. The two outer gates are carefully shut at night; and one in the middle of the town shows how much it has increased. The Tomb of a daughter of Toctamish Khán, one of the Tátár Kháns of the Crimea, and the Synagogue are the only remarkable buildings; and the streets, of which the bare rock forms the pavement, are extraordinarily clean. A large plain immediately behind the town is a sort of park inhabited only by a herd of stags, which devolved to the Crown with the other domains of the Khán. This level is capable of cultivation, and would be of great use to the Jewish colony, while as a park it is of no sort of value to the Emperor of Russia. It is therefore to be hoped that the fourteen head of deer, sole occupants, when Pallas saw it in 1794, have long since made way for more useful and industrious tenants. (Pallas, ii. 32.) The Jews of Jufút-calêh, though almost all engaged in some trade or manufacture are particularly attentive to the education

CRIMEA. — CRIMP.

of their children, and a public school is kept in their Synagogue, as it usually is in the Mosques of the Turks and Tátárs.

For the history of the Crimea, the student may consult, *L'Histoire des Rois de Thrace et de ceux du Bosphore Cimmérien, par* Felix Cary, Paris, 1752, 4to.; *L'Histoire de la Tauride, par* M. Stanislas Sestrenceurez de Bohusz, Metropolitain, &c., Brunswick, 1800, 2 vols. 8vo., most of the copies of which were accidentally destroyed; or *Istoria Zzarstva Khersonisa Tavricheskava, sochinennaya Prozvæshchennim Metropolitom Rimsko-katolicheskikh Tzerkvei v Rossi Sestrentzevichem Bohushem*, St. Petersburg, 1807, 2 vols. 8vo., which is the same work in the Russian language,—its author resided a long time in the Crimea; *Observations historiques et géographiques sur les peuples barbares qui ont habité les Bords du Danube et du Pont Euxin, par* De Peysonnel, Paris, 1765,4to.; A. O. Lindfor's *Dissertatio de Gothis veteribus eorumque ad Pontum Euxinum vestigiis*, Lundæ, 1802, 4to.; *Lettere Ligustiche ossia Osservazioni critiche sullo stato di Liguria sino ai tempi di Ottone il Grande con memorie storiche di Caffa, &c. dell'* Abbate Gasparo Luigi Oderico, Bassano, 1792, 8vo. For the modern history, Langlès, *Notice Chronologique des Khâns de Crimée*, in the third volume of his Translation of George Foster's *Journey from Bengal to Petersbourg*, Paris, an. x. (1802,) 8vo.; *Antiquités Grecques du Bosphore Cimmérien, par* M. Raoul Rochette, Paris, 1822, 8vo. Ample accounts of the commerce of the Crimea will be found in De Peysonnel's *Traité sur le commerce de la Mer Noire*, Paris, 1787, 2 vols. 8vo.; Formaleoni's *Histoire du Com. et des Colonies dans le Mer Noire, traduite de l'Italien, par le* Chev. d'Henin, Venise, 1789, 2 vols. 8vo.; Anthoine's *Essai sur le Com. de la Mer Noire*, Paris, 1821, 8vo.

Descriptions, more or less detailed, are found in Witsen's *Noord in Oost Tartarye*, Amst. 1692; Peter Simon Pallas's *Bemerkungen auf einer Reise in die südlichen Statthatterschaften des Russischen Reichs in die Jahre* 1793-4, Leipzig, 1799—1801, 2 vols. 4to.; Pallas's *Tableau Physique et Topographique de la Tauride*, Petersb. 1796, 8vo.; Hablizl's *Physikalische Beschreibung des Taurischen Statthatterschafts*, 1789; (far the most complete works on the subject.) Thunman's *Beschreibung der Krim* in A. F. Büsching's *Magazin für Historie et Geographie*, (Hamburg, 1767—1793, 23 vols. 4to.) vol. i. 1184; *Mémoires du* Baron de Tott, Paris, 1785, 12mo. i. 196—239, De Tott was in the Crimea in 1767-8, and gives a good account of the form of government under the Tátár Princes, and the Court of Crim Girái; J. Ch. Von Struve's *Reise eines jungen Russen über Jassy in die Krim in dem Jahre* 1793, Gotha, 1801, 8vo., and H. Von Reimer's *Reisen der Russischen Gesandschaft in Jahre* 1793, St. Petersb. 1803, 3 vols. 4to.; Reimer's *Hist. of the Russ. Embassy to Constantinople*, London, 1804, 3 vols. 4to., and *Voyage en Krimée traduite de l'Allemand, par* De le Marre, Paris, 1802, 8vo.; *A Tour through Taurida*, by Mrs. Maria Guthrie, in the years 1795-6, London, 1802, 4to., useful for the medallic history, but often incorrect; the names on the maps are almost all spelt wrong; Leon de Waxel's *Recueil d'antiquités trouvées sur les bords de le Mer Noire en* 1797-8, Berlin, 1803, 4to.; P. Sumarakov's *Reise durch die Krim und Bessarabien im Jahre* 1799, *aus dem Russischen von* J. Richter, Leipz. 1802, 12mo.; Clarke's *Travels in Europe, Asia, and Africa*, ii. c. 2—8, Dr. Clarke was in the Crimea in the middle of 1800; *Voyage en Crimée en* 1803, *par* J. Reuilly, Paris, 1806, 8vo.; Freiherrn Von Campenhausen's *Bemerkungen über Russland*, Leipz. 1807, 8vo.; and Von Engelhardt and Parrot's *Reise in die Krym und den Kaukasus*, Berlin, 1815, 2 vols. small 8vo. They were in the Crimea in the Spring and Summer of 1811, and their botanical and geological observations are highly deserving of attention. Their work, though brief, is very comprehensive, and has been undeservedly overlooked. About five years later Mrs. Holderness passed a considerable time among the Crim-Tátárs, and her *Notes relating to their Manners*, (London, 1823, 8vo.) is one of the most amusing, as well as the most modern, publications respecting that people.

The best Maps of the Tavrida are Schrämbl's Revision of Schmid's, published at Vienna in 1787; the country round Bender, &c., Weimar, at the Geograph. Institute 1806, copied from the *Podóbraja Karta* (Detailed Survey) of the Russian Empire; and the Russian Maps published by the Staff of the Corps of Engineers at St. Petersburg.

CRIMP, *v.* } Ger. *krumpen;* Dutch, *krimpen;*
CRIMP, *adj.* } Swe. *krimpa;* to cramp or crump;
CRI'MPLE. } (q. v.) *contrahere, arctare, coarctare;* to contract or draw together, to confine tightly or closely, and thus to wrinkle; and also to crisp, or cause to be crisp.

Lye has *ge-crympt*, crimped. *Calamistratus.*
Crimple or *crumple* is the diminutive. See CRUMP.

——— Now the fowler, warn'd
By these good omens, with swift early steps
Treads the *crimp* earth, ranging through fields and glades,
Offensive to the birds. *J. Philips. Cider*, book ii.

He passed the cautery through them, and accordingly *crimpled* them up. *Wiseman. Surgery.*

"To let your ladyship into a secret," said Mr. Barnet, "my brother Temple, although he is fond of fish, never will taste any thing that has been *crimp'd* alive; he insists upon it that all animals that are killed for our use, ought to be killed with the least pain possible, and for the same reason he will allow no eels at his table, but such as have not been skinn'd till they were dead." *Dr. Moore. Edward.*

CRI'MSON, *v.* } Fr. *cramoisi;* It. *cremisini;* Sp.
CRI'MSON, *n.* } *carmesi;* Dutch, *karmestin;* Arabice,
CRI'MSON, *adj.* } *kermez.* Commonly called *carmesinum*, because made from a worm, which in the Phœnician tongue is called *carmen.* Kilian.

For whom these purples come from Persia,
The *crimosine* and liuely red from Inde.
Gascoigne. The Steele Glas.

For God made neither purple nor *crimson* sheepe, nor taught to die with the iuyce of hearbs.
Vives. Instruction of a Christian Woman.

CRIMEA. — CRIMSON

CRIMSON. — CRINGE.

Than they passed forthe and came to the bridge of Parys, whiche was couered and richely besene; the couerynge of grene and *crimosyn* full of starres, and the stretes hanged to our ladyes churche. *Froissart. Cronycle*, vol. ii. ch. 157.

Pardon me, Julius! heere was't thou bay'd, braue hart;
Heere did'st thou fall; and heere thy hunters stand,
Sign'd in thy spoyle, and *crimson'd* in thy Lethe.
Shakspeare. Julius Cæsar, fol. 120.

With his rude touch my veil disorder'd then,
My face discovering, my delicious cheek
Tincted with *crimson*, faded soon again,
With such a sweetness as made death seem meek.
Drayton. The Legend of Matilda the Fair.

And as a *crimson* poppie flower, surcharged with his seed
And vernall humours falling thicke, declines his heavie brow;
So, of one side, his helmet's weight, his fainting head did bow.
Chapman. Homer. Iliad, book viii. fol. 110.

——— Mean-while the moon
Full orb'd, and breaking through the scatter'd clouds
Shows her broad visage in the *crimson'd* east.
Thomson. Autumn.

So spouts the living stream, and sprinkled o'er
The trees fair berries with a *crimson* gore,
While, sapp'd in purple floods, the conscious root
Transmits the stain of murder to the fruit.
Hughes. Pyramus and Thisbe.

(Weave the *crimson* web of war)
Let us go and let us fly,
Where our friends the conflict share,
Where they triumph, where they die.
Gray. The Fatal Sisters.

CRINGE, *v.* CRINGE, *n.* CRI'NGING.

Demisso corpore serviliter devenerari; Lye;—who resorts to the Hebrew. Skinner says, Perhaps from the Ger. *kriechen*, to creep or crawl. See the Example from Burnet. Applied to any

Act of servile submission or obedience; any fawning, flattering courtesy or compliance,

I went from England into France,
Nor yet to learn to *cringe* nor dance,
Nor yet to ride or fence.
Corbet. Journey into France.

MIR. Thou art not worth my anger, th'art a boy, a lump o'thy father's lightness, made of nothing but antick cloathes and *cringes*.
Beaumont and Fletcher. The Elder Brother, act iii. sc. 3.

Hee is the now court-god; and well applyed
With sacrifice of knees, of crooks, and *cringe*.
Ben Jonson. Sejanus, act i.

A small matter it was which turn'd him [Jehoash] from following the ways of God, in which he had made so good a beginning, he was moved only by the flatteries, bowings, and *cringings* of his wicked courtiers to him.
Goodwin. Works, vol. iii. part i. fol. 193.

The pope *cringed* (pulled downe his head to his shoulders after the Italian fashion, see Records, v. 3. p. 50) in the Italian way, but said, he had not time then to hear those papers.
Burnet. History of Reformation. Anno 1531.

For my kneeling down at my entrance, to begin with prayer, and after to proceed with reverence, I did but my duty in that; let him scoffingly call it *cringing*, or ducking, or what he please.
State Trials. Trial of Archbishop Laud.

At length leaving his opinion, became, after great seekings and *cringings*, a creature of Dr. Laud, archbishop of Canterbury.
Wood. Athenæ Oxon., vol. ii. fol. 118.

Knowing how to mask concerted guile
With a false *cringe* or undermining smile;
His manners pure, from affectation free,
And prudence shines through clear simplicity.
Fenton. To Thomas Lambard Esq.

You can be honest; but you cannot bow,
And *cringe*, beneath a supercilious brow:
You cannot fawn; your stubborn soul recoils
At baseness; and your blood too highly boils.
Philips. Epistle from Holland to a friend in England.

——— She that asks
Her dear five hundred friends, contemns them all,
And hates their coming. They (what can they less?)
Make just reprisals: and with *cringe* and shrug,
And bow obsequious, hide their hate of her.
Cowper. The Task, book ii.

CRI'NITE, *n.* CRI'NET.

Lat. *crinitus*, from *crinis*, a lock of hair, from the Gr. κρίν-ειν, *cernere*, to separate; from the custom of *separating* the hair into locks. See Vossius.

Crinet, is used by Gascoigne for *a lock of hair*.—For the citation below from Fairfax, see CAUDATE.

First for hir head, the heeres were not of gold
But of some other metall farre more fine,
Whereof eache *crinet* seemed to behold,
Like glistring wiers against the sunne that shine.
Gascoigne. Dan Bartholomew of Bathe.

* How comate, *crinite*, caudate, stars are formed.
Fairfax. Godfrey of Boulogne, book xiv. st. 44.

CRI'NKLE, *v.* CRI'NKLE, *n.* CRI'NKLING, *adj.* CRI'NKLING, *n.*

Dutch, *kronchel-en*, *crispare*, *intorquere*. See CRANKLE.

And for the house is *crencled* to and fro,
And hath so queinte waies for to go,
For it is shapen as the mase is wrought,
Thereto haue I a remedy in my thought,
That by a clewe of twine, as he hath gon
The same way he may returne anon.
Chaucer. Of Ariadne, fol. 207.

Her face all bowsy
Comely *crinckled*
Wonderously wrynkled.
Skelton. Elinour Rumming.

Her legs are two faint *crinkling* props, her feet
Already mouldring haste their grave to meet.
Beaumont. Psyche, can. 9. st. 30.

We come next of all vnto the Wiuer, than the which I read of no riuer in England that fetcheth more or halfe so many windlesses and *crinklings*, before it come to the sea.
Holinshed. Discription of Britaine, ch. xv.

Unless some sweetness at the bottom lie,
Who cares for all the *crinkling* of the pye?
King. Art of Cookery.

It is the *crinkles* in this glass making objects appear double, and representing each individual as two distinct things, which produces that distinction urged by some people between human prescience and divine, as if one might be compatible with human liberty, though the other were repugnant.
Search. Light of Nature, vol. ii. part iii. ch. 26. *On Freewill.*

CRINODENDRUM, in *Botany*, a genus of the class *Monadelphia*, order *Decandria*. Generic character: calyx none; corolla, petals six, bell-shaped; capsule one-celled, three-seeded, triangular, bursting at the top with an elastic force.

One species, *C. Patagua*, native of Chili, a large beautiful evergreen tree.

CRINUM, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Narcissi*. Generic character: corolla superior, funnel-shaped, half six-cleft, tube filiform, border spreading, recurved segments, subulate, channelled; filaments inserted in the tube; viviparous seeds at the base of the corolla.

Twenty-four species of this genus of bulbous plants have been described, natives of hot countries, they are beautiful plants, and in great esteem with the

cultivators of exotics. *C. amabile* is perhaps the most magnificent bulbous plant yet discovered.

CRIOCERIDES, in *Zoology*, a family of insects of the order *Coleoptera*, containing the genera *Megalopus, Orsodacna, Sagra, Donacia, Crioceris.*

CRIOCERIS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Criocerides*. Generic character; antennæ moniliform for the greater part of its length; basal joint globular; mandibles bifid or emarginate at the point; eyes emarginate; abdomen quadrate.

Type, *Lema merdigera*, Fabr.

The inseets of this genus, closely allied to the family *Chrysomelinæ*, are brilliant in their colours, and interesting in their habits. When taken they produce a sound similar to that of the *Cerambyces*, which is effected by means of an elongation at the back of the head, which enters beneath the shield of the thorax, against which it is rubbed. They are found principally on flowers, and the female deposits her eggs on the under surface of the leaves, to the number of eight or ten, which are fixed by means of a viscid fluid surrounding them. The larvæ appear in about fifteen days. For some time they keep constantly together, feeding in a regular line, on the parenchyma of the leaf. After a time, however, they separate, and the whole thickness of the leaf then forms their food, which they eat in a very peculiar manner, not as other insects advancing forwards, but taking portion after portion beneath their bodies, and thus retiring a step backwards at each morsel.

These larvæ are short, thick, the body soft, and the skin smooth. But one of their peculiarities renders them as disgusting, as the perfect insects are agreeable and beautiful. The very delicate structure of the skin renders some covering necessary to protect it from the heat of the sun, and nature has accordingly provided a most curious and ludicrous contrivance for this purpose. The anus, instead of being placed beneath the animal, is so disposed on the back, that the excrement when expelled does not fall to the ground, but remains on the back, and is by degrees thrust forwards towards the head by the expulsion of successive portions, and by the movements of the animal, until at last a perfect covering is formed to the whole body. In consequence of this the delicate black skin assumes at first sight the appearance of a shapeless bit of dried leaf, without the least appearance of life or of regular organization. This excrementitious parasol is not attached to the skin, and it appears that the larva has the power of disembarrassing itself of it, when it becomes so large as to be inconvenient.

Fourteen or fifteen days after its exit from the egg, the insect assumes the pupa form, under ground, forming a case, the internal surface of which is rendered bright and silvery by a coat of varnish, which exudes from the mouth. Fifteen days after this metamorphosis, it emerges from the ground in its perfect state. *C. merdigera*, to which the preceding account particularly belongs, is a British insect of a bright red colour, and is found on the white lily.

Latr. *Hist. Nat.* xi. p. 324.

CRI'PPLE, *v.* } Dutch, *kræpel*, from *krepen, ser-*
CRI'PPLE, *n.* } *pere*, to creep; *qui, manibus pro*
CRI'PPLE, *adj.* } *pedibus utens, humi serpit*, (creeps.) Skinner. Written *crepil* and *creeple* in old Writers.

To cause to *creep*; and thus, to lame; to injure or destroy the power of motion; to deprive of the use of the limbs. CRIPPLE. CRISP.

It is full hard to halten vnespied
Before a *crepil*, for he can the crafte.
Chaucer. Troilus, book iv.

As you see yourself so shamefully halt, that neuer lame *cripple* that lay impotēt by the walles in *creping* oute vnto a dole, halted half so sore. *Sir Thomas More. Workes*, fol. 1126.

Now may the *creple* stande vp, the blynde se their waye, the poor fede and be satisfyed. *Bale. Image*, S. 5.

I counsaile thus that may thee best aduise,
For that myselfe did serue a cruell dame;
The blinde recurde can iudge of bleared eies,
The *creple* healde, knowes how to heale the lame.
Turbervile. To his Friend T.

——— Thou cold Sciatica
Cripple our senators, that their limbes may halt
As lamely as their manners.
Shakspeare. Timon of Athens, fol. 90.

He who says that night is night,
That *cripple* folk walk not upright,
Believe him not, although he swear.
Drummond. The Character of an Anti-covenanter, &c.

The souls of women are so small,
That some believe they've none at all;
Or if they have, like *cripples*, still
They've but one faculty, the will.
Butler. Miscellaneous Thoughts.

That with their shoulders strove to squeeze,
And rather save a *crippled* piece
Of all their crush'd and broken members,
Than have them grillied on the embers.
Id. Hudibras, part iii. can. 3.

"Epictetus, who lies here, was a slave and a *cripple*, poor as the beggar in the proverb, and the favourite of heaven."
Johnson. Essay on Epitaphs.

A merry, gay, jocose companion boon,
Round whom the noisy crowd incessant laugh,
As to the bath the *crippled* wretch is borne.
West. Triumph of the Gout.

CRISIS, *n.* Fr. *crise*; It. *crisi*; Sp. *crisis*; Lat. *crisis*; Gr. κρίσις, from κρίν-ειν, to decide, to judge. *Dies* critici; i. e. *dies judiciales*, days for judgment, for decision. And thus, *crisis*,

The point, the moment or time of decision, of determination.

I understand by your last kind lines that you were to be at court as to morrow; so as I hope by your next foot post to hear the *crisis* of that day. *Reliquiæ Wottonianæ*, p. 574.

It is observed in all those actions or passages, which cause any great and notable change, either in the mind or life of man, that they do not constantly operate at the same rate of efficacy, but that there is a certain *crisis*, or particular season, which strangely provokes and draws forth the activity and force of every agent, raising it to effects much greater and higher than the common measure of its actings is observed to carry it to.
South. Sermons, vol. vi. p. 229.

First, I observe, that *crisises*, properly so called, do very seldom happen in other than fevers, and the like acute diseases, where according to the common course of things, the malady is terminated, in no long time, either by recovery or death, or a change into some other disease.
Boyle. A free Enquiry into the received notion of Nature.

CRISP, *v.*
CRISP, *adj.*
CRISPA'TION,
CRI'SPED,
CRI'SPING-IRON,
CRI'SPING-PIN.

Fr. *crespe*; It. and Sp. *crespo*; Lat. *crispus*, which Tooke considers to be from the A. S. *cirpsian*, crispare, *torquere*, to twist.

To twist, to curl, to wind about or along.

CRISP. — CRISTATELLA.

To twist, *sc.* into a state of stiffness; into fixed curls; to curl:—to cause to be stiff or unbending; and thus, consequently, to be frangible; brittle.

Her heere that was owndie [waving] and *crips*
As burned gold it shone to see.
Chaucer. The third Booke of Fame, fol. 281.

His *crispe* heere like ringes was yronne,
And that was yelwe, and glitered as the sonne.
Id. The Knightes Tale, v. 2167.

His mane then vp he liftes aloft and waaton runnes his way,
The *crispinge* curlinge lockes vpon his neck, and shoulders play.
Phaer. Æneidos, book xi. p. 264.

Our Lord hath made bald the heads of the daughters of Syon, and instead of the ornamēt they shall haue shame & for their *crispe* haire they shall haue bald pates.
Vives. Instruction of a Christian Woman, G 2.

And than men kytten hem, as men don the vynes, and than thei putten it upon an owven, and there it waxethe blak and *crisp*. *Sir John Maundevile. Travaile, &c.* ch. xv.

It hath a leafe like to the olive, but more *crisped* and curled, and withall it is in the end sharpe-pointed like a needle.
Holland. Plinie, vol. i. fol. 368.

But rather to tell how, if art could tell,
How from that saphire fount the *crisped* brooks,
Rouling on orient pearl and sands of gold
With mazie error under pendant shades
Ran nectar.
Milton. Paradise Lost, book iv. l. 237.

The sign of peace who first displays,
The olive wreath possesses;
The lover with the myrtle sprays
Adorns his *crisped* tresses.
Drayton. The fifth Nymphal.

So are those *crisped* snaikie golden locks
Which makes such wanton gambols with the winde.
Shakespeare. Merchant of Venice, fol. 274.

Heat causeth pilosity and *crispation*, and so likewise beards in men. *Bacon. Natural History, Cent.* 9.

For never powder, nor the *crisping-iron*
Shall touch these dangling locks.
Beaumont and Fletcher. The Queen of Corinth, act iv. sc. 1.

The costelle apparel and the vailes, and the wimpels, and the *crisping* pinnes. *Geneva Bible. Isaiah*, ch. iii. v. 22.

——————— Huge columns on their heads
The *crisped* foliage of Acanthus bore.
Glover. The Athenïad, book ii.

——————— His uncover'd head
Was bald, except where nigh the brawny neck
Short bushy locks their *crisped* terrours knit.
Id. Ib. book xxi.

——————— At the awful sound
The terrace sinks spontaneous; on the green
Broider'd with *crisped* knots, the tonsile yews
Wither and fall.
Mason. The English Garden, book ii.

The general colours of it are black and brown, growing to a tolerable length and very *crisp* and curly.
Cook. Voyage, vol. iv. book iii. ch. v.

If the cakes at tea eat short and *crisp* they were made by Olivia. *Goldsmith. Vicar of Wakefield*, ch. xvi.

CRISTARIA, in *Botany*, a genus of the class *Monadelphia*, order *Polyandria*. Generic character: calyx simple, five-cleft; petals five, unguiculate; styles numerous; fruit depressed, orbicular.

Three species, natives of South America. Persoon.

CRISTATELLA, in *Zoology*, a genus of *Fluviatile Polypi*, of which the following are the distinguishing characters: polypary globular, gelatinous, not attached, with short distinct scattered tubercles, which contain the Polypi; from each of these little tubercles appears a minute Polype, the extremity of which divides into two retractile arms, furnished with pectinated tentacula; the mouth is situated at the union of the arms. CRISTATELLA — CRITIC

Roesel discovered this animal, and gave a figure of it, but it is much to be doubted whether it be a true vaginated Polype.

CRISTELLARIA, in *Zoology*, a genus of *Polythalamous Cephalopoda*, (having chambered univalve shells,) of the family *Cristata*. Generic character: shell semi-discoidal, multilocular; whorls contiguous, simple, progressively increasing in size; spire excentric, sublateral; septa imperforate.

Type, *C. squammula*, Lam.

There are nine known species, all of which are recent.

CRITERION, Gr. κριτήριον, from κρίν-ειν, to discern, to decide, to judge.

That by or from which a decision or judgment is to be made.

Our knowledge therefore is real, only so far as there is a conformity between our ideas and the reality of things. But what shall be the *criterion?* How shall the mind, when it perceives nothing but its own ideas, know that they agree with things themselves?
Locke. Reality of Knowledge, book iii. ch. iv.

Their fortitude and philosophy I will not dispute, but humane, I am sure they are not; for it is the very *criterion* of true manhood to feel those impressions of sorrow which it endeavours to resist; and to admit, not to be above the want of consolation.
Melmoth. Pliny. To Paternus.

CRITHMUM, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferæ*. Generic character: involucres general and partial; fruit oval, compressed, striated, flowers regular; calyx entire.

Three species, *C. latifolium* and *C. Canariense*, natives of the Canary Islands, and *C. maritimum*, the Samphire, native of the cliffs on the sea-shores of England; it is well known as a pickle, but is not in such esteem as formerly in this country.

CRI'TICK, *v.*
CRI'TICK, *n.*
CRI'TICK, *adj.*
CRI'TICAL,
CRI'TICALLY,
CRI'TICISE, *v.*
CRI'TICISER,
CRI'TICISM,
CRI'TIQUE, *n.*
CRI'TIQUE-DAME,
CRI'TIQUE-HATERS.

Gr. κριτικὸς, from κρίν-ειν, to discern, to decide, to judge. One who is able, to discern, to distinguish, to decide, to judge. To *criticise*; to examine, investigate, or inquire into; pass sentence, give opinion upon, as a *critick*: as one able to discern, to distinguish, to decide, to judge.

Appe. Nay, if you begin to *critic* once, we shall never have done. *Brewer. Lingua*, act iv. sc. 9.

But, some will say, *criticks* are a kind of tinkers; that make more faults then they mend ordinarily.
Ben Jonson. Discoveries, fol. 129.

And therefore I am in good hope, that though the musick I have made be but dull and flat, and even downright plain-song, even your curious and *critical* ears shall discover no discord in it.
Chillingworth. Rel. of Prot. ch. vi. p. 1.

Then bee the foure decretorie or *criticall* daies, that give the dome of olive trees, either to good or bad: this is the soothesayer point of filthie, foule and glowmie weather, whereof wee have spoken before. *Holland. Plinie*, vol. i. fol. 500.

Herein exact and *critical* trial should be made by publike enjoinment: whereby determination might be setled beyond debate. *Sir Thomas Brown*, book ii. ch. v.

ITICK. And therefore whatever we want of either outward or inward accomplishments, secular or spiritual good successes, prosperities of kingdoms or souls, would we but look *critically* into ourselves, we should go near to find imputable to the want in us of one or both these ascending angels.

Hammond. Works. Sermon 5. vol. iv.

This I take to be the true and genuine meaning of this passage, upon which no charge of Pelagianisme can be fastened; nor needeth it any spinous *criticisms* for its explication.

Mede. Works. Discourse 4. book i.

I thought at first he would have plaid the ignorant *critique* with every thing, along as he had gone.

Ben Jonson. Cynthia's Revells, fol. 159.

In poets, as true genius is but rare,
True taste as seldom is the *critics* share.

Pope. Essay on Criticism.

Authors are partial to their wit, 'tis true;
But are not *critics* to their judgment too?

Id. Ib.

Like a confident dunce at school, that is highly pleased with mean performances of his own; but a true modest scholar, who knows better what he is to do, and understands the *critical* niceties of learning, is hardly satisfied with any thing that he does. *Stillingfleet. Sermon* 3. vol. iii.

These probationers are first appointed to preach practically on a text assigned them; next, *critically* upon another, the sense of which is controverted, and then a mixed sermon, of *criticism* on the text, and practical inferences from it is expected from them.

Burnet. Life, p. 8.

Nor shall I look upon it as any breach of charity to *criticise* the author so long as I keep clear of the person.

Spectator, No. 262.

Those therefore who are censorious enough to reflect with severity upon the pious strains, which are to be found in Saint Chrysostom, Bishop Beveridge, or Bishop Bull, may possibly be good judges of an ode or an essay, but do not seem to *criticise* justly upon sermons, or to express a just value for spiritual things. *The Life of Bishop Bull*, vol. iii. p. 397.

Others took upon them to be pert *criticisers* and saucy correctors of the original before them.

Blackwall. Sacred Classicks, vol. ii. p. 265.

The *criticisms* which I have hitherto published have been made with an intention rather to discover beauties and excellencies in the writers of my own time, than to publish any of their faults and imperfections. *Spectator*, No. 262.

Be silent always, when you doubt your sense,
And speak, though sure, with seeming diffidence:
Some positive, persisting fops we know,
Who, if once wrong, will needs be always so;
But you with pleasure, own your errors past,
And make each day a *critique* on the last.

Pope. Essay on Criticism, l. 571.

The *critick-dame*, who at her table sits;
Homer and Virgil quotes, and weighs their wits
And pities Didoes agonizing fits.

Dryden. Juvenal. Satire 6.

Why in this profession are we found such *critick-haters* and indulg'd in this unlearned aversion; unless it be taken for granted, that as wit and learning stand at present in our nation, we are still upon the foot of empiricks and mountebanks?

Shaftesbury. Advice to an Author, part ii. sec. 1.

We owe few of the rules of writing to the acuteness of *criticks*, who have generally no other merit than that, having read the works of great authors with attention, they have observed the arrangement of their matter, or the graces of their expression, and then expected honour and reverence for precepts which they never could have invented. *Johnson. The Rambler*, No. 158.

Poets, and orators, and painters, and those who cultivate other branches of the liberal arts, have without this *critical* knowledge succeeded well in their several provinces and will succeed.

Burke. On the Sublime and Beautiful.

Our circumstances are indeed *critical*; but then they are the *critical* circumstances of a strong and mighty nation.

Id. On a late state of the Nation.

They soon after, with great joy, saw the snow fall in large flakes from the trees, a certain sign of an approaching thaw; they now examined more *critically* the state of their invalids.

Cook. Voyage, vol. i. book i. ch. iv. CRITICK. — CROAK.

While manners, customs, usages of phrase
Well known of old, but not so in our days,
For many obvious reasons, must elude
The utmost force of *criticising* fend.

Byron. On the disposition of the mind, in a letter to Mr. Pouthieu.

Criticism, though dignified from the earliest ages by the labours of men eminent for knowledge and sagacity, and since the revival of polite literature the favourite study of European scholars, has not yet attained the certainty and stability of science.

Johnson. The Rambler, No. 158.

If I have been rather long upon this head, it is because I conceive this *critique* on the Hippolytus will let the reader, at once, into the true character of Seneca; which, he now sees is that of a mere declamatory moralist.

Hurd. Works. Notes on the Art of Poetry.

CROAK, *v.* } A. S. *cracettan, crocitare*, to
CROAK, *n.* } *croke* like a Crow. Somner. Fr.
CRO'AKING, *n.* } *croasser, croaquer*; It. *crocitare*;
CRO'AKING, *adj.* } Lat. *crocire*; Gr. κρώζ-ειν.—To *croke* like a Frog. Fr. *croasser*; Lat. *coaxare*; Gr. κόαξ-ειν. All from the sound.

Thou donghill crow, that *crockest* against the raine,
Home to thy hole, brag not with Phebe again.

Uncertaine Auctors. Against him that had slaundered a Gentlewoman with himselfe.

Ne let th' vnpleasant quyre of frogs still *croking*
Make vs to wishe their choking.
Let none of these their drery accents sing,
Ne let the woods them answer nor their eccho ring.

Spenser. Epithalamion.

Till flocks of ravens them with noise awake,
Over the army like a cloud that hung;
Which greater haste enforceth them to make,
When with their *croaking* all the country rung,
Which boded slaughter, as the most do say.

Drayton. Battle of Agincourt.

By the *croaking* of the frog;
By the howling of the dog;
By the crying of the hog,
Against the storm arising.

Id. The Court of Fairy.

They let down their nether lip somewhat under the water, that they gargle with their tongue levell to the water, which they received into their throate: and so while the tongue quiveretb withall they make that *croking* above said.

Holland. Plinie, vol. i. fol. 338.

Rebels were sainted, foreigners did reign,
Outlaws return'd, preferment did obtain,
With frogs, and toads, and all their *croaking* train.

Dryden. Tarquin and Tulla.

Their understandings are but little instructed when all their whole time and pains is laid out to still the *croaking* of their own bellies, or the cries of their children.

Locke. On Human Understanding, book iv. ch. xx.

From night to night she [Care] watches at his bed;
Now, as one mop'd, still brooding o'er his head,
Anon she starts, and borne on raven's wings,
Croaks forth aloud—"Sleep was not made for kings."

Churchill. Gotham, book iii.

The hoarse, deep, periodical *croak* of the corvorants serves as a base to the rest. *Pennant. Zoology. Puffin Auk.*

The notes of all birds of a superior size, being either screaming, *croaking*, or chattering, the pigeon kind excepted, whose slow plaintive continued monotone has something sweetly soothing in it. *Id. Ib. The Missel Thrush.*

The *croaking* of frogs is well known, and from that in fenny countries they are distinguished by ludicrous titles, thus they are stiled Dutch nightingales and Boston waltes.

Id. Ib. Common Frogs.

CROATIA. CROATIA, a mountainous Province of the Austrian Empire, bearing the title of Kingdom, and stretching from the river Drave to the Gulf of Venice. It was the ancient *Liburnia*, and formed part of *Illyricum*. It is bounded on the east by Sclavonia and Bosnia, and on the west by Carniola and Styria. Its length is about 160 miles, and breadth 100. The eastern part, included between the rivers Unna and Verbas, belongs to Turkey; the rest is usually considered as attached to Hungary. During the middle ages it was governed by Kings, who were nominally subject to the Emperors of the East. About the year 1087, it submitted to the King of Hungary, and was finally united to that Kingdom in 1102. At the peace of Vienna in 1809, the whole of this tract, lying south of the Drave, was ceded to France, and incorporated by Buonaparte with the Illyrian Provinces; but reverted to its former possessor at the Congress of Vienna, in 1815. Austrian Croatia is divided into Civil and Military. The Civil part includes the Countries of Agram, Warasdin, and Creutz, with an area of about 3650 square miles, and a population of 380,000 individuals. The Military department comprises a space of 3800 square miles, and 396,500 inhabitants. The Littorale, sometimes called Hungarian Dalmatia, which is the maritime part included between Fiume and Carlopago, formerly constituted a part of Croatia, but is now included in Illyria. The former of these divisions has a Constitution and Provincial States, similar to those of Hungary; the Government of the other is entirely Military. The Civil Province is usually called the Banat, and the Military division the Generalat.

Much of Croatia is a mountainous region, at once cold, rocky, and barren. In some places the mountains rise in abrupt and continued chains, in others in craggy and insulated peaks. The upper parts of these mountains often contain frightful precipices, and some of the summits are so difficult of access, that they have never yet been trodden by human foot. These ranges divide the southern part of the country into a series of detached vallies, some of which form natural basins, whence the waters that descend from the sides of the mountains find no visible outlet, but are either absorbed by the ground or else open subterranean passages for themselves. The principal rivers which flow through Croatia, or wash its borders, are the Save, the Drave, the Culpa, and the Unna, all of which are navigable. Most of them are subject to extensive inundations, that contribute to form the marshes which occupy a considerable part of the eastern districts of the Kingdom. Croatia abounds with lakes, but principally in the Military district of Carlstadt. In general their waters are clear, and abound with magnificent cascades, which, together with the rugged and precipitous scenery of the surrounding mountains, form some of the most picturesque views in Europe. In the northern part of the country, there are many tracts of rich and fertile soil. The climate necessarily varies with the situation and circumstances of the district. On the mountains it is cold and piercing, and these regions towards the south are subject to an impetuous wind called the Cora, which continues with little intermission from September to May. During this period the cold is often so intense as to prove fatal to persons of weak constitutions. The tract on the sea-coast, and the lower parts of the country enjoy a more mild and genial climate, allowing wine, silk, and fruits, common to the south of Europe, to be successfully cultivated. The most important of the fruits is the prune, and from this the Croat distils a kind of spirituous liquor, which constitutes his favourite beverage. Pears, plums, apples, and cherries, are also generally grown. Figs and olives are restricted to some favourable situations. The mulberry is likewise cultivated, particularly in the Military districts. Corn, maize, barley, buckwheat, and oats, are grown in most tracts; but on the sides, and near the bases of the mountains, they are frequently liable to be washed away by the torrents, or injured by the winds. Cultivation, however, is yet far from the perfection to which it is capable of being carried by the application of greater skill and industry. Pasturage is but little attended to. The number of sheep is small, and their meat of very inferior quality. The horses are also small and poor. Bees are objects of much attention; but the most valuable of the Croatian products is wood, a great part of the country being covered with forests of oak, beech, ash, elm, fir, pine, and some species of dye-woods. There are also various mines, chiefly of iron and copper, but these are but imperfectly worked. Croatia is partially engaged in commercial transactions with Turkey, other parts of the Austrian dominions, and Italy. The trade with the two former is principally by land, though sometimes facilitated by the rivers Save, Drave, and Culpa; with Italy it is chiefly by sea. The inhabitants of Croatia are composed of Sclavonians and Germans; but the former are the most numerous. They are principally Rascians, and may be considered as the aborigines. They occupy most of the villages and detached houses, and are engaged in agriculture, and other common branches of labour, while the Germans live chiefly in the towns, and are occupied in various trades, &c. The religion is either that of the Greek or of the Roman Catholic church; Protestants not being tolerated, and the number of Jews being but small. The principal Towns in Croatia are Agram, or Zagral, on the Save, the Capital and See of a Bishop, with a population of about 9000 inhabitants; Carlstadt, on the Culpa; Warasdin, on the Drave; and Fiume, a Seaport on the Adriatic.

CROATIA — CROCK

CROCISA, in *Zoology*, a genus of insects of the order *Hymenoptera*, family *Apiariæ*. Generic character: lateral divisions of the lip nearly of the same length as the palpi; maxillary palpi three-jointed; shield prolonged, emarginate.

Type, *Melecta Histrio*, Fabr.

CROCK, *v.* } A. S. *crocca*; Dutch, *kruycke*; Ger.
CROCK, *n.* } *krug*. Of uncertain Etymology. A vessel made of clay, and dried by heat.

> And when that dronken all was in the *crouke*,
> To bedde went the doughter right anon,
> To bedde goth Alein, and to bedde goth John.
> *Chaucer. Reves Tale*, v. 4156.

> Striue not as doth a *crock* against a wall,
> Deme first thyselfe, that demest others dede;
> And truth shall thee deliuer it is no drede.
> *Vncertaine Auctors. To leade a Virtuous and Honest Life.*

> Therefore the vulgar did about him flock,
> And cluster thick vnto his leasings vaine;
> Like foolish flies about an honey *crock*.
> *Spenser. Faerie Queene*, book v. can. 2.

As she was hurrying him away, his spurs takes hold of her petticoat, his whip throws down a cabinet of china: He cries, what! are your *crocks* rotten? *Tatler*, No. 37.

I then enquired for the person that belonged to the petticoat; and to my great surprise, was directed to a very beautiful young damsel, with so pretty a face and shape, that I bid her come out of the crowd, and seated her upon a little *crock* at my left hand.
Tatler, No. 116.

As he began to twist and sprawl,
The loosen'd stones break from the wall;
Down drops the rake upon the spot,
And after him an earthen pot;
Reeling he rose, and gaz'd around,
And saw the *crock* lie on the ground.
Somervile. The Happy Disappointment.

CROCKET, Fr. *croc*, a hook, a grapple; an ornament employed in Gothic architecture on the edges of gable ends, the angles of pinnacles, &c., often elaborately and beautifully carved to represent flowers. The use appears to have been originally intended to facilitate the ascent of workmen in repairs.

CROCODILE.

CROCODILE, *n.* Fr. *crocodile*; It. and Sp. *crocodilo*; Lat. *crocodilus*; Gr. κροκόδειλος, from κρόκος, and δειλός, *quia* κροκὸν δειλιᾷ, *crocum metuit*; because it fears or dislikes the *crocus* or saffron: whence the Egyptians place saffron before their beehives, to protect their honey from this animal. See Vossius. Pliny throws no light upon this Etymology; and Herodotus says, the name of *Crocodile* was first imposed by the Ionians, from their resemblance to Lizards, (so named by them,) which are produced in the hedges. *Euterpe*, c. 69. See the Example from Fuller.

As cursed *crocodile* most cruelly can tole
With truthlesse teares unto his death the silly pitieng soule.
Vncertaine Auctors. The Louer dreadding to moue, &c.

The river Nilus nourisheth the *crocodile*: a venomous creature, foure footed, as daungerous upon water as land. This beast alone, of all other that keepe the land, hath no use of a tongue. He only moveth the upper jaw or mandible, wherewith he biteth hard. *Holland. Plinie*, fol. 208.

——— Ambiguous between sea and land
The river horse, the scalie *crocodile*.
Milton. Paradise Lost, book vii. l. 200.

In a word, the soveraign power of genuine saffron is plainly proved by the antipathy of the *crocodiles* thereunto, for the *crocodile's* tears are never true, save when he is forced (where saffron groweth, whence he hath the name of κροκό-δειλος, or the saffron-fearer) knowing himself to be all poison, and it all antidote.
Fuller. Worthies. Essex.

The alligator is a creature so well known every where, that I should not describe it were it not to give an account of the difference between it and the *crocodile*; for they resemble each other so nearly in their shape and bulk, as also in their natures, that they are generally mistaken for the same species.
Dampier. Voyage. Anno 1676.

At Arsinoe the *crocodile* was adored; because having no tongue it was made in hieroglyphic writing the symbol of the divinity, elsewhere it was had in horror, as being made in the same writing the symbol of Typhon.
Warburton. The Divine Legation, book i. sec. 4.

Crocodilia, in *Zoology*, a family of animals belonging to the class *Sauria*, order *Reptilia*.

Crocodilus, Cuv.; *Crocodile*, Ray. In *Zoology*, a genus of animals belonging to the family *Crocodilia*, order *Sauria*, class *Reptilia*.

Generic character. Tail flat on the sides; hind feet entirely or partially webbed; tongue attached to the bottom of the mouth and not extensible; teeth numerous, pointed, and single; body covered above with strong hard scales, and below with soft, broad scales; the eyes protected with three eyelids.

The Crocodiles had been included in the great genus *Lacerta*, till Cuvier separated and formed them into a distinct genus under the name *Crocodilus*, the characters of which have been noted above; and from some minor circumstances he has divided them into three subgenera, *Gavials*, *Crocodiles*, and *Alligators*.

Crocodiles are both the largest and most powerful of the *Saurous* Reptiles; their body is better protected with scales, and the skin of the back especially, is so well guarded by numerous horny shields as to resist a musket ball; from it the Negroes are in the habit of making helmets. The scales on the back form a middle longitudinal crest, extending through its whole length, and the tail has the crest deeply denticulated, and double at its root; the anterior extremities have five, and the posterior four toes, of which the three inner only are provided with nails or claws, but all are more or less webbed; the eyes are placed near each other on the top of the head and above the face, are very movable, and protected by a nictitating membrane or haw, besides the eyelids; the tongue is short and thick, but cannot be protruded from the mouth, which led the Ancients to imagine that it was wanting; the body itself is of a pyramidal form and tapering, covered above with four or six rows of square tubercular scales, and below with smooth, soft, transverse, broad, horny bands, or scuta.

The motions of the Crocodile are usually very slow, but sometimes they move with great rapidity, particularly in swimming. They are generally found in large rivers and lakes, in both the Old and New Continent, but are occasionally taken at sea at a great distance from their customary haunts; and Captain Cook mentions that he met with Crocodiles in the great salt-water lakes of New Holland.

Crocodiles, particularly the Alligators, have a very strong musky smell, which is produced by glands situated in the groins and armpits; these, Dampier mentions, his men were accustomed to cut out, and after drying, to wear in their hats. They lay from thirty to sixty eggs, at two or three different periods, which they bury in the sand, and leave to be hatched by the sun; to these the Ichneumon is a very great enemy, and the great increase of Crocodiles is only kept down by the havoc which this animal makes amongst the eggs; and hence, perhaps, have originated the divine honours which were paid to it by the ancient Egyptians.

a Gavials.

Snout slender, very long, and rather larger at the tip; teeth almost of equal size, the fourth lower tooth on each side received into a notch or groove in the upper jaw; the hind feet webbed to the tips of the toes, and notched on their outer edge; two small holes in the skull behind the eyes.

C. Longirostris, Schneid.; *Lacerta Gangetica*, Gmel.; *Gangetic*, or *Indian Crocodile*, Shaw. This animal seems to have been first figured by Edwards, in the *Philosophical Transactions*, vol. 49, and since his time by other naturalists; but the best description has

CROCODILUS.

been given by Lacepede, from an animal measuring about twelve feet in length, and by him named *le Gavial*, which is its Indian name. Head very broad behind, and forming a rectangular figure, a third broader than its length; orbits very wide, and much separated from each other; the cranial holes larger than in any other species, and a little narrowed at the bottom; twenty-five teeth on either side above, and twenty-eight below; the length of the snout is about an eighth of that of the body; two little scales only behind the head, followed by four placed transversely, which are continued to those of the back. This animal is a native of the Ganges, and probably of the neighbouring rivers, but is not considered to be dangerous to man, living only on fish.

C. Tenuirostris, Cuv.; *Lit le Gavial*. The skull longer and not so broad as the last, with the snout in about the same proportion; the upper surface of the skull forming a square behind the orbits, which are longer than they are broad, and little separated; the back of the skull defended with two pairs of oval scales, followed by four carinated scales placed transversely, and eighteen dorsal bands. Country unknown, but presumed to be Africa.

β Crocodiles Proper.

Head oblong and flattened; teeth unequal, the fourth on either side below received into notches, but not into holes in the upper jaw; in other respects like the *Gavials*.

C. Vulgaris, Cuv.; *Lacerta Crocodilus*, Lin.; *Common Nilotic Crocodile*, Shaw. The head of the Crocodile is about twice as long as its breadth, and its sides being nearly straight give it a lengthened triangular appearance; the holes in the skull are broader than their length; the snout irregular and rough, particularly in the old animals, but has no peculiar crest; immediately behind the skull are four little crested scales placed transversely, and behind them, the neck-piece composed of six crested scales; next to them are two single scales, and these are followed by sixteen transverse dorsal rows, the anterior twelve of which are composed of six scales and crests, whilst the posterior three or four, which are situated between the thighs, have but four in each; besides these, on each side, is a row of seven or eight crested scales; the crested scales on the tail do not begin to be distinct till the sixth row, and then form two crests, which unite about the seventeenth or eighteenth row, which is the number of caudal rows always found. In consequence of the regularity of the scales, the ridges formed by them, and the two longitudinal lines in which they are disposed, Cuvier says that the back of the Nilotic Crocodile appears as if paved with quadrangular stones. The scales of the neck and back are broader than their length, and those of the belly have a pore which is more or less distinct; the colour of the back is a greenish bronze speckled with brown, whilst that of the belly is of a greenish yellow. The Crocodile lays at three or four times, not far distant from each other, about twenty eggs, in size nearly resembling those of the Swan, which it buries in the sand, and leaves to be hatched by the heat of the sun.

The Crocodile inhabits the Nile and Senegal, and probably the other rivers of Africa; but at present it is found in the Nile, only in Upper Egypt, where the temperature is very high, and where the animal never becomes torpid; when it comes down in the streams which water the Delta, according to Pliny's account, it passes the four winter months in the caverns without nourishment. CROCODILUS.

The length of the Nilotic Crocodile, according to Hasselquist and other travellers, is about thirty feet, and it is therefore the largest animal of the genus; the Ancients, however, make it as much as twenty-six cubits, (about thirty-six feet of our measure,) which is probably an exaggeration.

Amongst the ancient Egyptians the Crocodile was esteemed sacred, and had its temples and divine honours. The city Arsinoe was originally called the "City of the Crocodiles;" and, according to Strabo, the Arsinoites had a tame Crocodile, which they esteemed sacred, kept in a lake, and named *Suchis*. At Memphis the same divine honours were paid to the Crocodile; Priests were appointed, whose duty was to tend it; and by dint of management, it was so tamed as to walk in the religious processions: after death they embalmed and buried it in the Regal tombs. A fine example this, of the boasted superiority of human intellect, in, perhaps, the wisest nation the world ever produced; and a strong proof of the folly and wickedness into which man, when left to himself, will so easily slip. But though the Crocodile was so highly esteemed in some parts of Egypt, in others it met with very different treatment; in some it was killed, being considered as the animal into which Typhon, an evil Genius, the murderer of Osiris, was transformed; whilst, according to Herodotus's account, it was eaten at Elephanta, and also at Apollonopolis; in the latter place, indeed, this took place by a positive law, the daughter of Psammeticus having been destroyed by a Crocodile. From these sacred animals, omens were also drawn; if it fed readily from the hand, the augury was favourable; but if not, the reverse. It is probable that the Egyptians did not adore them for their docility, but for their utility in preventing the passage of the Arabs and the wild beasts across their rivers and canals. Thus much, indeed, is directly stated by Diodorus Siculus, book i. ch. lxxx. and may be implied also from a passage in the Tract *De Naturâ Deorum* of Cicero, (i. 37.) *Ægyptii nullam belluam, nisi ob aliquam utilitatem quam ex ed caperent, consecraverunt.*

We read in La Brue's *Travels*, that in St. Domingo, and on the western coasts of Africa, the Negroes are careful to supply the Crocodiles with food, and to tame them as playmates for their children. And in Timor, Java, Sumatra, and many of the isles of Sonda, they believe that whenever a child is born, the mother bears at the same time a little Crocodile, which the nurse carefully conveys to the river; to nourish which the family carry food, and, at certain periods, the child pays its devoirs to its twin-brother, to avoid being struck with death or illness. At Celebes and Bantan, Captain Cook mentions that many of the people bring up Crocodiles in their houses. It is a curious circumstance with respect to the familiarity of the Egyptian Priests with the sacred Crocodiles, that Aristotle should have observed, that the most ferocious animals are tame if they be not in want of food. Is it not more probable that the Priests were rather aware that by a gradual change of food, great improvement might be made in their habits, as was proved by the change in the carnivorous animals, which Mr.

 Hunter fed upon bread? Crocodiles have been brought alive into Europe, but they lose their vivacity and become very sluggish. Scaurus, the Ædile, exhibited five Nilotic Crocodiles at Rome, fifty-eight years before the Christian era; and Augustus Cæsar after him exhibited thirty-six at once. Within the last few years, a Crocodile about eight or ten feet in length, was shown at Exeter Change, and afterwards sold to some foreign menagerie, but it died before it reached its destination.

C. Biporcatus, Cuv.; *Double-crested Crocodile.* This animal is very similar to the Nilotic Crocodile, but differs from it in having two crests, which extend from the anterior edge of the orbit, nearly parallel along the snout, and are there gradually lost; the scales of the back are oval instead of square, and have their long axes from before backwards; in the young of this species, the dorsal scales are porous, and hence Schneider has given it the specific name *Porosus*. The Double-crested Crocodile is very common in the rivers opening into the Indian Seas; and it is said to be very bold and ferocious, herds of them attacking boats, for the purpose of upsetting them, and seizing the men.

C. Acutus, Cuv.; *Haytian Crocodile.* The snout of the Haytian is longer than that of any other true Crocodile, and prominent at its base; the scales on the back of the neck are very similar to those of the *C. Niloticus*, but on the back they form only four longitudinal ridges, of which the middle two are not much raised, whilst the outer are very prominent, and some of them scattered very irregularly, and there are not more than fifteen or sixteen transverse rows to the root of the tail. They lay their eggs in March, April, and May, and the young are hatched in a month's time, when they are about eight or nine inches long: when they are about to be hatched, the female digs up the sand in which the eggs are buried, and sets the young Crocodiles at liberty: she feeds and protects them, during the first three months, from the male, who at this time is anxious to devour them. They continue to grow for more than twenty years, and will attain the length of sixteen feet, and even more. They are natives of St. Domingo and called by the inhabitants Cäimans.

C. Rhombifer, Cuv.; *Lozenge-crested Crocodile.* The forehead of this Crocodile is very much arched laterally, more so than in any other species; from the anterior corner of each orbit, a soft straight crest passes, which quickly meets its fellow, and with the inner edge of the two orbits, forms a kind of lozenge, incomplete behind; the extremities are covered with very strong scales, the ridges upon which are very prominent. Country unknown.

C. Galeatus, Cuv.; *Siamese Crocodile.* Remarkable for two bony crests, one behind the other, on the middle of the skull; in other circumstances, resembling the Nilotic Crocodile. It is found in the rivers of Siam, and known only by the accounts of the French Missionaries.

C. Biscutatus, Cuv.; *Black Crocodile*, Adanson. The nape of the neck is provided only with two large pyramidal scales in the middle, and two small ones before them; the colour is black. It is a very ferocious species, and found in the rivers of Senegal.

γ Alligators.

Snout broad and obtuse; teeth unequal, of which the fourth on either side in the lower jaw enters into a hole in the upper, but not a notch; the feet are only half-webbed, and not denticulated.

C. Sclerops, Schneid.; *Spectacle Alligator.* This is the most common species in Guiana and Brazil, and is remarkable for a bony crest between the orbits; on the back of the neck are four very strong transverse bands, which touch each other and join the dorsal bands; of these nuchal bands, the two anterior consist of four scales, whilst the others have but two, and all of them are crested; the snout, although broad, has not its edges parallel; they come near each other throughout their whole length, and form a kind of triangle; the inner edges of the orbits are very much elevated; when the skin is removed, the surface of the skull appears full of holes, which give it a very irregular appearance, but only two very small holes behind the orbits pierce through the skull. The colour of this Alligator is greenish brown above, and spotted with green, and pale yellowish green beneath. This animal is probably the *Yacaré* of Azzara, or the *Jacaré* of Marcgrave.

Alligators grow to a large size, sometimes to the length of fourteen feet; they are natives of South America, where they were called Caymans by the natives; but when the Spanish sailors first saw them, observing their resemblance to the Lizard, they called them *Lagarto*, the Spanish name of that animal; after whom the English noticed them, and, upon hearing the Spanish name, called the animal *a Lagarto*, whence came the word *Alligato*, which has since been converted into Alligator.

These Alligators spend the greater part of night in the water; but during the day time bask in the sun upon the sands; and generally run to the water when they see either man or Dog: in the water they are not so timid, for, according to De la Borde's account, at Cayenne, they will often attempt to get into the boats which pass along the river. By some travellers, they are said to be very voracious, but Dampier, luckily for him, did not find that to be the case; he says, he never knew them to attack a man, but has often seen them run away from his sailors; that he has drank out of a pond where the Alligators were so numerous, that no water could be got but by coming within two yards of an Alligator's snout; but yet they were perfectly harmless. He also relates, that in passing with his men through a swamp, they perceived the musky smell of an Alligator, and soon after he stumbled over one; upon his crying out, the men ran off, and in attempting to get away, he fell over it a second and a third time, but escaped unhurt. It is said that these animals form a kind of hillock on the bank of the river, in which they deposit their eggs to the number of sixty, at two or three different periods, and having covered them with leaves, leave them to be hatched by the heat of the sun.

C. Lucius, Cuv.; *Pike-nosed Alligator.* The snout of this Alligator is very flat, its sides parallel, and rounded at the tip; the neck is defended by four large crested scales, with two smaller ones before, and two behind; the inner edges of the orbit are much elevated but not joined, as in the last species; the skull has in it two rather deep oval pits, the bottoms of which are pierced by numerous small holes; the back is of a deep brown green colour, the belly of a greenish white, and the sides striped alternately with both those

CROCODILUS. CROCUS.

colours. The Pike-nosed Alligator is a native of North America, and is found in Mississippi as high as the Red River; it attains to the length of fourteen feet, and is very ferocious; it lies in ambush amongst the woods, and seizes such animals as have carelessly strayed within its reach; it does not eat its prey in the water, but only drags it down to the bottom till it be drowned, and then retires into some by-place to devour it. In cold weather they bury themselves in the marshes, and become torpid; when they revive again, they make a horrible bellowing, which Catesby says resembles that of a Bull. When taken young, it is said they may be tamed to a certain degree, and Dr. Brickell states, that he saw one kept in a large pond near a house for six months, but which afterwards made its escape.

C. Palpebrosus, Cuv.; *Cayenne Alligator*. The snout of this Alligator is longer than that of the *C. Sclerops*; the upper eyelid is completely filled with bone instead of cartilage or gristle, and is divided into three pieces; the skull is not pierced with any holes; the space between the two outer toes of the hind feet are much less webbed than the preceding pieces, and therefore Cuvier considers them as less adapted to live in the water. They are natives of Cayenne.

CROC DILE CROI SADE

C. Trigonotus, Schneid.; *Bristly-necked Alligator*. The bony eyelids are found in this species; the second band on the back of the neck broader than the others, with two or three little scales, having irregular crests; the crests of the great scales of a triangular shape, giving the back of the neck a bristly appearance. According to Adanson, it is a native of Senegal.

See Cuvier, *Règne Animal*; Schneider, *Historiæ Amphibiorum Naturales et Litterariæ*; Dampier's *Voyages*.

CROCOTTA, a hybrid animal bred in Ethiopia, between a Dog and a Wolf, of most ravenous and ferocious habits, mentioned by Pliny, (viii. 30.) See also Strabo, xvi. and Diodorus, *Biblioth.* iii. Pliny, in the following chapter describes the *Leucrocota*, an animal of great swiftness, of the size of an ass, with the legs of a stag, the neck, tail and chest of a lion, the head of a badger, cloven hoofs, a mouth stretching from ear to ear, and, instead of separate teeth, one continuous bone. It possesses, moreover, the power of imitating the human voice. There is yet another fearful animal of the same kind, the *Crocuta*, begotten between the hyæna and the lioness, which mocks the tones of beasts as well as men. This never winks its eyes; and, if we understand the passage, in order that the solid bone which supplies the place of teeth may not be unnecessarily blunted, it is enclosed in a sort of sheath, (Pliny, viii. 45.) The reader need scarcely be told, that the above-mentioned animals do not belong to that genus which Herodotus (iv. 191,) aptly names *ἀκατάψηστα*.

CRO'CUS, CRO'KERS. } Of uncertain origin. See the Example from Holinshed.

A certaine young gentleman, called *Crocus*, went to plaie at coits in the field with Mercurie, and being heedlesse of himselfe, Mercurie's coit happened by mishap to hit him on the head, whereby he receiued a wound that yer long killed him altogither, to the great discomfort of his friends. Finallie, in the place where he bled, saffron was after found to grow, wherevpon the people seeing the colour of the chiue as it stood, (although I doubt not but it grew there long before,) adiudged it to come of the blood of *Crocus*, and therefore they gaue it his name.

Holinshed. England, ch. viii.

——————— Under foot the violet,
Crocus, and hyacinth with rich inlay
Broider'd the ground, more colour'd then with stone
Of costliest emblem.

Milton. Paradise Lost, book iv. l. 701.

The *crokers* or saffron-men do vse an obseruation a little before the comming vp of the floure, and sometime in the taking vp at Midsummer-tide, by opening the heads to iudge of plentie and scarcitie of the commoditie to come.

Holinshed. England, ch. viii.

CROCUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Irides*. Generic character: spathe radical; corolla funnel-shaped, tube long and slender; stigma deeply cut, crested.

Three species of which numerous varieties are cultivated in gardens. *C. Autumnalis*, the Saffron, is cultivated for its medicinal qualities; it gives name to Saffron Walden in Essex; Saffron is made from the stigmas of this species collected when ripe and dried; *C. vernus*, and *C. nudiflorus*, are natives of England and other parts of Europe.

CROFT, *n.* A. S. *croft*; a little farm, a close or little field enclosed. Somner. Spelman (in *v. Croftum*,) thinks from the Gr. *κρύπτ-ειν*, *tegere*, to cover, to protect; in which he is followed by other Etymologists. Minsheu says, a *Croft* is a little close joyning to a house, that sometimes is used for a *hempe-plot*, sometime for *corne*, and sometime for *pasture*, as the owner listeth. It seemeth to come of the old English word *creaft*, signifying *handiecraft*; because such grounds are for the most part extraordinarily dressed and trimmed by the labour and skill of the owner.

For þei comen to my *croft*. my corn to defoule
Piers Plouhman. Vision, p. 129.

Thre hundred they do adde, all issued out with one good will,
Such as Cerites house did keepe, or Mymon *croftes* did till.
Phaer. Æneidos, book x. p. 229.

A *croft* we esteem some little plot of ground, and both the name and the thing are yet in ordinary knowledge.

Verstegan. Restitution of Decayed Intelligence, ch. ix.

——————— This have I learnt
Tending my flocks hard by i' th' hilly *crofts*,
That brow this bottom-glade.

Milton. Comus, l. 531.

And Leinster's *crofts* beneath the pheasant's brake,
Long lay unnoted. *Dyer. The Fleece*, book ii.

CROI'SADE, or CRU'SADE, *v.* and *n.* CROI'SADO, CROI'SEZ. } Fr. *croisade*; It. *crociata*; Sp. *cruzada*, from Lat. *crux*, a cross. "An expedition of Christians assembled out of divers countreys (by preachings and the Pope's bulls,) against the Turks, and other infidels; tearmed so, because every one of them, when he undertakes his journey, accepts of, and wears on his cassock, or coat-armour, the badge of the *cross*." Cotgrave. Applied generally

To any war, any attack, any hostility; carried on with zeal. Fabyan uses the verb to *croysey*;—to wear the badge, to serve under the banner of the Cross.

The Fryday folowynge the feast of Penthecost, in y^t^ yere of xii. c. and xliii. and xxii. yere of the reygne of the sayd Lewys, he, with many of his lordes, departed from Parys vpon his iourney towarde the holy lande; in whiche was *croysed* also the Archebisshop of Bourges, &c. with many other noble men whiche were longe to reherse. *Fabyan. Anno* 1263.

And whan that Pope Innocent the Sixt, and the colledge of Rome, sawe how they were vexed by these cursed people, they were greatly abashed, and then ordeyned a *croysey*, agaynst these yuell Christen people, who dyde their payne to distroy Christendome, as other bandes had done before w'out tytell of any reason. *Froissart. Cronycle*, ch. 216.

This pope is decrepit, and the bell goeth for him. Take order, that when he is dead, there be chosen a pope of fresh years between fifty and three-score; and see that he take the name of Urban, because a pope of that name did first institute the *croisado*, and as with an holy trumpet, did stir up the voyage for the Holy Land. *Bacon. Of an Holy War.*

The *croisade* was not appointed by Pope Urban alone, but by the council of Clermont, consisting of more than two hundred bishops assembled for all the west; and so persuaded were all persons of the will of God concurring in this enterprise, that it was made the shout for battle.

Jortin. Remarks on Ecclesiastical History, vol. iii. p. 386.

The ecclesiastics took up the cross as well as others; but it should have been from a different motive, namely, to instruct the *croises*, to comfort them, to administer the sacraments to them, and not to buy off their own penances.

Id. Ib., vol. iii. p. 388.

The clergy, whose wealth and policy enabled them to take advantage of the necessity and weakness of the *croises*, were generally the purchasers of both.

Burke. Abridgement of English History.

Reason her logic armour quit,
And proof to mild persuasion sit;
Religion with free thought dispense,
And cease *crusading* against sense.

Green. The Grotto.

After this narrative of the expeditions of the Latines to Palestine and Constantinople, I cannot dismiss the subject without revolving the general consequences on the countries that were the scene, and on the nations that were the actors, of the memorable *crusades*. *Gibbon. Roman Empire*, ch. lxi.

Yet if, *crusaders* like, their zeal be rage,
They hurt the cause in which their arms engage:
On heav'nly anvils forge the temper'd steel,
Which fools can brandish, and the wise may feel.

Whitehead. On Ridicule.

CROISANT, i. e. *crescent*, so written after the French by some of our early Writers.

So often as she [the Moone] is seene westward after the sunne is gone downe, and shineth the forepart of the night onely, she is *croisant*, and in her first quarter. *Holland. Plinie*, vol. i. p. 607.

CROIX, St., or Santa Cruz, a Danish West India Island, the southernmost of the Virgin Isles, lying in latitude 17° 35′ north and longitude 64° 50′ west from Greenwich. It was discovered by Columbus in one of his early voyages; and the Spaniards, English, and Dutch, were occasional possessors of it for a long subsequent period. In 1651 it was bought for the Knights of Malta, who sold it in 1664 to the French West India Company, by whom it was disposed of to Denmark in 1696. St. Croix contains a surface of about 100 square miles; it is divided into 346 plantations, on which are about 4000 horses and mules, 115 wind-mills, and nearly 150 horse-mills. The soil is generally fruitful, and the principal productions are sugar, cotton, and rum; the value of the exports lately amounted to half a million sterling. The number of the inhabitants, according to the latest enumerations, was 31,387; viz. 2223 whites, 1164 free blacks and mulattoes, and 28,000 slaves. The Moravian Brethren have Missionary stations here. Christianstadt, the chief Town, and the Capital of all the Danish West India Islands, is on the north coast in latitude 10° 32′ north and longitude 64° 59′ west of Greenwich. It has a harbour, a fort, 660 houses, and about 5000 inhabitants. The whole value of public and private property in the Island of St. Croix is estimated at £3,728,640. sterling. The small islets of Bocken and Birdskey, or Round Island, lie immediately north of St. Croix, and are dependencies of it.

CROMARTY, a County in the northern part of Scotland, consisting of several detached parts, chiefly comprised in the County of Ross. The part called the *Old Shire*, which is situated between the Frith of Cromarty on the north, and Moray Frith on the south, contains less than twenty square miles, and was the whole of the original County. This is sometimes called the *Black Isle*. Towards the end of the XVIIth century, it was increased to nearly fifteen times its original extent, by the annexation of the vast estates belonging to George Viscount Tarbat, the first Earl of Cromarty, at whose instance this object was affected. The whole extent is now stated at 345 square miles; as no particular returns of the population are made, these being included with the returns for Ross-shire, the number of inhabitants is not exactly known; but they are supposed not to exceed 5000. The largest of the detached parts which constitute this County, lies on the western coast of Scotland, not less than fifty miles from the Old Shire. The surface of Cromarty is considerably varied; the parts towards the western shore being barren and mountainous, while those near the coast on the east, are more level and fertile; much of it, however, is but poor soil, as, with the exception of the Orkney and Shetland Islands, it yields the least proportional rental of any other county in Scotland. Towards the east it contains several fertile tracts, capable of producing wheat, and such other crops as are usually cultivated in Britain. About an eighth part of the whole is fit for tillage; the rest is either employed as indifferent pasturage, or considered as quite unproductive. Its climate is moist, particularly near the western shores, where the wind for nearly three-fourths of the year blows from that quarter, varying only between north-west and south-west. The average temperature of the year is about 46° of Fahrenheit.

Though the old Sheriffdom of Cromarty was so small, both in extent and value, it is of great antiquity; as the Urquharts were hereditary Sheriffs as early as the reign of Edward I. The whole, both of this County and of Ross are now under the jurisdiction of one Sheriff, who has two Deputies on the main land, and one in the Island of Lewis, which forms a part of Ross-shire. Cromarty and Nairn return a Member to the House of Commons, alternately. Cromarty, the Capital of this County, is but a small place, containing about 2000 inhabitants; but it has one of the best harbours in the Kingdom, which is not only well adapted for becoming the commercial depôt of that part of the Island, but is sufficiently capacious for a rendezvous for the Royal Navy when in the North Sea. This harbour was lately improved by the erection of a pier, towards the expense of which Government contributed £7000. The only manufactures

CRO-MARTY. — CROM-LECH.

carried on in the Town are those of hempen sacking and woollen cloth; there is also a brewery. The Town of Cromarty was a Royal Burgh prior to the Union; but the Magistrates finding it inconvenient to pay their Representative, petitioned to be relieved from sending one, and hence it was excluded from the Scotch Burghs.

CROMLECH, Welsh, *Crwmllech*; Cornish, *Cromléh*; is the Celtic name of a rude Monument, of which several specimens exist in different parts of Europe. It consists of several upright stones supporting a broad, flat, horizontal stone.

From the rudeness of their construction, and the utter absence, numerous as they are, of any credible ancient testimony concerning them, it is evident that the Cromlechs are of very high antiquity. To what purposes they were appropriated is entirely uncertain: some suppose them to have been landmarks; others, trophies; but the two most prevailing opinions have assigned them to sacrifice and sepulture. The word *llech*, in Welsh, signifies a stone; but as it has been found impossible to give a significant interpretation to the syllable *crwm*, which implies "bowed," the advocates of the separate theories have been equally successful in derivations favourable to their respective hypotheses. The point is of little consequence, and all knowledge connected with it must be purely conjectural; there are, however, some circumstances which seem strongly to combat the hypothesis which regards them as altars. If they were such, they must have belonged to the Druidical worship; yet we find the nations of the Teutonic race, among whom were no Druids, still possessing Cromlechs, the history of which is equally obscure with that of the Celtic, and therefore is referable to as early a period. Beside this, their construction is by no means adapted to the purpose of sacrifice; since they are generally raised about six feet from the ground, and not unfrequently very much more; and the flat tabular stone is often very thin, or of a porous or argillaceous quality, which would ill endure the action of fire. From the name "altar," which has been given them by many writers, and which, in some places, they retain among the vulgar, nothing is to be concluded. They have been called "altars," as they have been called "quoits" and "tables," from a resemblance in their shape. At the present day, we call a flat tombstone an altarstone; and for the same reason the Romans gave this name to a ridge of rocks standing out from the sea:

Saxa vocant Itali, mediis quæ in fluctibus, aras.
Virg. *Æn.* i. 113.

"The longing after immortality," we know, belongs as much to savage as to civilized life; monuments to the dead exist in all countries; and that the Cromlechs were such, is probable from several considerations. They are frequently found on Barrows, which we know were places of burial. They also frequently surround what is called a *Cist-faen*, which has been sometimes confounded with the Cromlech itself; a kind of rude box of stones, in which human remains have generally been found. The Cromlech therefore was, very probably, nothing but the covering of the *Cist-faen*, which last, in many instances, has perished. The Cromlechs, which are found in Scandinavia, are distinguished from those which most generally occur in our islands, not only by a more accurate horizontal position, but also by an excavation below, in most cases partially filled with human bones. Kit's Coty-house, near Aylesford, in Kent, which the best Antiquaries consider a monument of the Cromlech kind, is reported, by local tradition, to be the tomb of the Saxon Chief, Horsa; and although there may be little ground for this opinion, the tradition is certainly presumptive evidence that the monument is sepulchral. The name, which it has cost Antiquaries so much pains to investigate, is probably a corruption of Cist, coffin, or urn, (which the Welsh pronounce Kist,) and some proper name. The Cromlechs, therefore, both of the Celts and Teutones, appear to have been designed as depositories and memorials of the dead.

CROM-LECH.

Cromlechs are more common in the British Kingdom than in any other part of Europe: they are found, however, in France, Germany, Scandinavia, and Iceland; and at North Salem, New York, is a very fine one, eighteen feet broad, resting on the apices of seven conical pillars. The *Pierre levé* at Poictiers is the largest in Europe, being fifty feet in circumference. Ireland, Wales, Cornwall, and the Island of Jersey are rich in curious specimens. Of these, we shall mention the principal.

Those of Ireland are the Cromlechs of Coagh, in Tyrone. That of New Grange, in Meath, of which a minute description is given by Governor Pownall in vol. ii. of the *Archæologia*. Crom Cruach, which stands in the midst of a circle of twelve obelisks, on a hill in Brefin, in the county of Cavan, and which is said to have been covered with gold and silver. Bullrichan and Ballymascandlan Cromlechs, near Dundalk. Leaba Gallych, the Warrior's Bed, two miles from Castle Hyde, in the county of Cork. Lugna Clogh, near Sligo. Sliddey Foord, near Dundrum, an immense Cromlech, in periphery ten yards. A remarkably curious one at Killmeillie, near Dungannon, where are two tangent circles of stones, enclosing urns in holes, set round with six stones, and covered with flat and other stones on the top, like those described by Olaus Wormius in his *Monumenta Danica*. In the county of Tyrone, many Danish antiquities have been discovered; it is, therefore, probable that these Cromlechs were the work of that people. Danish Cromlechs are found also on other parts of Ireland, as two in the neighbourhood of Belfast.

Of the Cornish Cromlechs, the most remarkable are Môlfra, and Langon Quoit, both in the parish of Maddem; Zennor and Chûn; Carwynen, in the parish of Camborne; Trevethy, in that of St. Deer; and the Giant's Quoit, near St. Columb.

Of the Welsh Cromlechs, the following merit notice: Ty Iltud, or St. Iltud's Hermitage, in Llan Hammwlch, Brecon; Cerig y dyon, Trelech, Caermarthen; Arthur's Quoit, Merionethshire; Arthur's stone upon Cefyn Bryn, Glamorgan; Bachwen, near Clynogfawr, Caernarvon; and those at Bodowyn and Plasnewydd in Anglesea, the latter of which is the largest in the Principality. It consists of two cover-stones; the greater is twelve feet six inches by twelve feet. Its upper edge is two feet thick, and it is six feet high. It formerly rested on five stones, but one having been thrown down, and one having been detached, it is now supported by three only. Of these, one is five, one three, and one three and a half feet high. The smaller stone joins the narrow end

CROM-LECH. — CRON-STADT.

of the larger, and is six feet square, resting on three stones.

In the district of Caithness in Scotland, many Cromlechs are found. The most remarkable in England, beside those in Cornwall already mentioned, are Helstone, at Portisham, Dorset; Enstone, Oxfordshire, and the extraordinary remains at Stonehenge and Ambresbury, which may be referred to the class of Cromlechs.

Gough, *Sepulchral Monuments of Great Britain*; Toland, *History of Druids*; Borlase, *Antiquities of Cornwall*; Polwhele, *History of Cornwall*; Pennant's *Tour in Wales*; Smith's *Natural and Civil History of Cork*; Keysler's *Antiquitates Septentrionales*; Rowland, *Mona Antiqua*; *Archæologia*.

CRONE, *n.* } *Crone, croone, croen*; a decrepit,
CRO'NY. } crafty old woman, says Skinner. Verstegan derives from the A. S. *crone*, a ewe. Others from *κρόνος*, Saturn, or *κρόνιος*, lasting. But Dr. Jamieson leads us easily to the true Etymology. *Croyn, crone, crune*, or *croon*, in Scotch, is a hollow, continued moan; the moan of those who habitually utter heavy complaints under slight indisposition: it is also applied to the hollow murmuring sound with which old witches (i. e. the *croners*,) uttered their incantation; also, to the incantation itself; and further (without doubt,) to the incantatrix herself. From the Dutch, *kreunan*, to groan, (by the common interchange of C. and G.)

Cronies are those who *groan* or grumble over their grievances together.

> This olde Soudanesse, this cursed *crone*,
> Hath with hire frendes don this cursed dede.
> *Chaucer. The Man of Lawes Tale*, v. 4852.

> ——— That croked *croone*, although she be my make?
> Shee cloyes me with the cough, hir comfort is but cold,
> She bids me giue mine age for almes, wher first my youth was sold.
> *Gascoigne. The Diuorce of a Louer.*

> "But stormes" (thought Battus) "haue their steps,
> Not long the *croen* can line,
> Or if my kindness length her life,
> My kindness God forgive."
> *Warner. Albion's England.*

> In vain he sigh'd and oft with tears desir'd,
> Some reasonable suit might be required,
> But still the *crone* was constant to her note,
> The more he spoke, the more she stretch'd her throat.
> *Dryden. The Wife of Bath's Tale.*

> The frugal *crone*, whom praying priests attend,
> Still strives to save the hallow'd tapers end,
> Collects her breath, as ebbing life retires,
> For one puff more, and in that puff expires.
> *Pope. Moral Essays*, l. 243.

> Two-fac'd Janus, God of time!
> Be my Phœbus, while I rhyme;
> To oblige your *crony* Swift,
> Bring our dame a new-year's gift.
> *Swift. To Janus on New-Year's Day.*

CRONSTADT, or KRONOSHTAT, a Seaport of Russia, situated on the Island of Retusari, in the Gulf of Finland, and about twenty miles west of St. Petersburg, to which it forms a strong bulwark. This Town occupies the south-eastern extremity of the island, and is about two miles from the coast of Ingria. The island was taken from the Swedes by Peter I., and was then a complete desert; but in 1710, he undertook to render it the chief harbour for the Russian Navy, as well as a strong bulwark for his new Capital. For this purpose, he is said to have employed not less than 300,000 men, in the construction of the town, the harbour, and the works in its immediate vicinity. Many of the houses facing the harbour are built of brick, and stuccoed, which with the spacious magazines, at first excite more favourable ideas of the place than are afterwards realized; for the interior contains many dirty streets and bad wooden hovels. The principal building in Cronstadt is the Imperial Hospital for sailors, which is on a very extensive scale, and has had more than 25,000 patients in it during a single year. Besides this edifice, the Civil Hospital, the Barracks, with the English and German Churches, are all good buildings. The whole population is stated at 40,000; not less than 10,000 of whom, at certain seasons of the year, are sailors. The harbour of Cronstadt, upon which so much attention has been bestowed by the Russian Government, is spacious, and consists of three distinct parts. The largest of these is denominated Merchants' harbour, and is capable of admitting 600 vessels at once. Most ships going to St. Petersburg touch here in their passage; but it is exposed to the effects of the winds from the west. The middle harbour is also subject to the same inconvenience. The War harbour is the principal station for the Russian fleet. It is not very extensive, but adjoining to it are suitable docks for building and repairing ships of war. Near the docks there is a vast basin of granite, containing the water which is pumped into them by a steam engine. These docks are also faced and paved with granite, and are about forty feet deep, and more than 100 broad. This harbour lies at the entrance of the great canal, which extends to St. Petersburg, and was commenced by Peter I., in 1719, but not completed till the reign of Elizabeth, in 1752. The Man of War's Mole is a strong rampart of granite, built in the sea, under the superintendence of the late Admiral Greig. Cronstadt also contains founderies, rope-walks, and other requisites for equipping the Navy. It is fortified by works projecting into the sea on the one side, and by ramparts and bastions on the other. A fort has also been built on an islet at a small distance from the Town, for the defence of the narrow channel, which leads to St. Petersburg, and which is of sufficient depth for the largest ships. On the north or opposite side of the island, the channel is so shallow, that it has been filled up with hulks to prevent accidents. Guard ships are stationed in the vicinity of Cronstadt, to examine passports, and protect the revenue. Several kinds of Russian products are exported from Cronstadt, as iron, hemp, flax, tar, oil, and linseed. Latitude 59° 59′ 26″ north and longitude 29° 49′ 30″ east.

CROOK, *v.*
CROOK, *n.*
CROO'KED, *adj.*
CROO'KEDLY,
CROO'KEDNESS,
CROO'KEN,
CROO'KING,
CRO'OK-BACK,
CRO'OK-BACKED,
CROO'K-BRANCHES,
CROO'K-KNEED,
CROO'K-PAWED,
CROO'K-SHOULDERED,
CROO'K-LEGGED.

Dutch, *krook*; Ger. *kruycke*; Fr. *croc*. The family of this word, says Wachter, is in the possession of the Swedes, with whom *krokia*, is to *curve*, bow or bend;—*krock*, bowed; and *krykia*, a pastoral staff, and a staff for stooping old men, (i. e. a crutch.)

To bend or bow, to turn out of a straight line, to twist, thwart, warp or writhe out of the direct

CROOK. course. Met. *crooked* is,—perverse, obstinate, self-willed, bad-tempered, ill-natured.

No on *crokýd* kene þorne. kynde fýgýs were.
Piers Ploughman. Vision, p. 25.

And in hir walk this blinde man they mette,
Croked and olde, with eyen fast yshette.
Chaucer. The Manne of Lawes Tale, v. 4980.

For er the bishop hent hem with his *crook*
They weren in the archedeken's book.
Id. The Freres Tale, v. 6900.

So with his *croked* eloquence
He speaketh all.
Gower. Conf. Am., book iii. fol. 50.

My felowes made to shore, and downe their sailes they doe bestowe,
The port lieth in from estern seas, and *crokith* like a bowe.
Phaer. Æneidos, book iii. p. 80.

Nor wyll suffer this boke
By hooke ne by *crooke*
Prynted for to be.
Skelton. The Boke of Clout.

My wife ensued, through lanes and *crokes* and darknes most we past. *Phaer. Æneidos*, book ii. p. 62.

It is bettir to thee to entre to lyf feble either *crokid*, than havynge tweyne hondis or twey feet to be sent into everlastynge fier. *Wiclif. Matthew*, ch. xviii.

And if ought were attempted against his own person, or any *crooked* creature of his creation, in restraint of their extortionate claimes, (as there was nothing but they claimed to have authority upon) incontinent they bounced out their thunderbolts and cursing fulminations, with such intolerable force of unmerciful cruelty, that they made the greatest personages of the world to tremble and quake for fear.
Strype. Memorials. An Ambassiate and Declaration of King Henry VIII. to James V., King of Scots.

But the wickednesse of his wil and *crokednesse* or frowardnesse wherewith hee sleath vnrighteously, to auẽge him selfe & to satisfie his own lustes & the cause why he knoweth not the lawe of God and consenteth not to it, whiche law should have informed his wil, and corrected the *crokednesse* thereof, and haue taught him to vse his will & and his power right, is his blindnesses fault onely and not God's. *Tyndall. Workes*, fol. 301.

If the younge tree growe *croked*, when it is oulde a man shall rather breake it than straight it, and I thincke there is no one thing that *crokes* youthe more than such unlawful games.
Ascham. Works, p. 88.

For the life of the body is full of desires, and presages of satisfaction in obtaining of this or the other external thing, whether it be in honour, riches, or pleasure; and if they shake off the divine guide within them, they will have it by hook or by *crook*.
More. Defence of Moral Cabbala, fol. 171.

Hee is the now court-god, and well applyed
With sacrifice of knees, of *crooks*, and cringe.
Ben Jonson. Sejanus, act i.

To rectifie a *crooked* sticke, we bend it on the contrary side, as far as it was at first on that side from whence we draw it: and so it cometh in the end to a middle between both, which is perfect straightnesse. *Hooker. Ecclesiastical Polity*, book v.

His minde is peruerse, cam, and *crooked*, not when it bendeth itselfe vnto any of these things, but when it bendeth so, that it swarueth either to the right hand or to the left, by excesse or defect from that exact rule whereby human actions are measured.
Id. Sermon. Of the Nature of Pride.

——— On which horrid prise
Vlisses first charg'd; whom, aboue the knee
The sauage strooke, and rac't it *crookedly*
Along the skin, yet neuer reacht the bone.
Chapman. Homer. Odyssey, book xix. fol. 302.

My will hath been used to *crookedness* and peevish morosity in all vertuous employments, but greedy and fierce in the election and prosecution of evil actions and designs.
Taylor. On Repentance, ch. v. sec. 6.

Saint Augustine greatly alloweth Marcus Varro, affirming that religion is most pure without images, and sayth himselfe, images be of more force to *crooken* an unhappy soule, then to teach and instruct it. CROOK. — CROP.
Homilies. The Second Part of Sermon against Idolatry.

And where's that valiant *crook-back* prodigie
Dickie, your boy, that with his grumbling voyce
Was wont to cheare his dad in mutinies?
Shakspeare. Henry VI. Third Part, fol. 151.

RICH. For God's sake, take away this captiue scold.
PRINCE. Nay take away this scolding *crooke-back* rather.
Id. Ib., fol. 170.

The *crook-back'd* camel climbing to the deck,
Drawes up himself with his long sinewy neck.
Drayton. Noah's Flood.

The trees *crookt-branches*, gently bent, grow right,
When as the hands full vigor breaks them quite.
Feltham. Resolve 51.

——— Who (ere any heede
Was giuen to their approach) came crawling on
With anuiles on their backe; that beat vpon
Neuer so much) are neuer wearied, yet:
Crook-paw'd.
Chapman. Homer. Battaile of Frogges and Mice.

If I take a sheet of paper, and rub it over with oil, or even a fit kind of greese; that which the liquor apparently does, is only to pierce or soak into the pores of the paper, which before did, by their *crookedness*, or upon some other mechanical account, render the paper opacous.
Boyle. Of the Systematical or Cosmical Qualities of things.

There is but little labour of the muscles required, only enough for bowing or *crooking* the tail.
Derham. Physico-Theology, book v. ch. xi. note (rrr.)

For can any thing in nature incline a man to glory in his imperfections? to pride and plume himself in his deformities? was ever any one yet seen to boast of a blear eye, or a *crook-back*.
South. Sermons, vol. iv. p. 125.

A dwarf as well may for a giant pass;
A negro for a swan; a *crook-back'd* lass
Be call'd Europa.
Stepney. Juvenal. Satire 8.

Who such a foot and such a leg would hide;
When *crook-kneed* Phyllis can expose to view
Her gold clock'd stocking, and her tawdry shoe.
Gay. The Tea Table.

And it is reported of Plato, that being *crook-shouldered*, his scholars, who so much admired him, would endeavour to be like him, by bolstering out their garments on that side, that so they might appear *crooked* too.
South. Sermons, vol. vii. p. 190.

And in one of the Snowdon lakes is found a variety of trout, which is naturally deformed, having a strange *crookedness* near the tail, resembling that of the perch before described.
Pennant. British Zoology. River Trout Salmon.

For instance, those who are born *crook-backed*, have commonly a peculiar form of lips and expression in the mouth, that strongly denotes that deformity.
Reynolds. Notes on the Art of Painting, note 22. v. 175.

——— Load the broad-wheel'd wane,
The mules *crook-harnest*, and the sturdie crew
With sweet abundance.
Granger. The Sugar Cane, book iii. l. 129.

——— As two vultures fight
Bow-beak'd, *crook-talon'd*, on some lofty rock
Clanging their plumes, so they together rush'd
With dreadful cries.
Cowper. Homer. Iliad, book xvi. l. 504.

CROP, CRO'PFUL, CRO'PSICK, CRO'PSICKNESS. Dutch, *krop, kroppe*; Ger. *kropf*. The *crop* or craw of a bird. See CRAW. *Crop-full*; with a full stomach; *crop-sick*; sick at the stomach, surfeited.

CROSIER. — CROSS.

Our panther, though like these she chang'd her head,
Yet as the mistress of a monarch's bed,
Her front erect with majesty she bore,
The *crosier* wielded, and the mitre wore.
Dryden. The Hind and the Panther.

To gain by love, where rage and slaughter fail,
And make the *crosier* o'er the sword prevail.
Tickell. On the Prospect of Peace. To my Lord Privy Seal.

This had gone so far, that in the Roman pontifical it was declared, that the *crosier-staff* was to be worshipped with that supreme degree of adoration called *latria*.
Burnet. History of Reformation. Anno 1548.

The origin of the CROSIER has been traced to the *lituus* of the Roman Augurs, which in some degree it resembles. The Greek name is βακτηρία. In middle Latin, besides *Crocia*, it is occasionally termed *Cambuta*, *Pedum*, and *Baculus Pastoralis*, under which last head Du Cange may be consulted for many particulars relating to it. At first it appears to have been a simple staff, and then gradually was enriched and ornamented to the height of magnificence which may be seen in the Crosier bequeathed by William of Wykeham to New College, Oxford. From the excess of splendour lavished in later times upon this instrument, occasion was given for the following satirical lines.

Au temps passé du siecle d'or,
Crosse de bois, evesque d'or.
Maintenant changent les loix,
Crosse d'or, evesque de bois.

The form of the Crosier was that of a Shepherd's crook, curved at the upper end, and pointed at the foot, as thus described: CROS — CROS

Curva trahit mites, para pungit acuta rebelles.

Or

Curva trahit, quos curva regit para ultima pungit.

Or again,

Attrahe per curvum, medio rege, punge per imum.

It was borne before Archbishops, Bishops, Abbots, and Abbesses. An Archbishop was entitled to display his Crosier any where within his Province, a Bishop within his Diocese, and an Abbot within his Abbey; but as the spiritual jurisdiction of each of these, respectively, was confined within the above named limits, so was the badge of their authority: Abbots and Abbesses affixed a veil, fashioned like a pendant, and bore the crook inwards, to show that their authority was of a private nature.

The Pope does not use a Crosier, because (as Innocent III. has stated in his *Acta*, and as will be found in the I. Book *Decret. cap. de Sacr. Unct.* § *fin.*) St. Peter sent his *Baculus* to Eucharius the first Bishop of Treves, whom he destined to preach the Gospel to the Germans, conjointly with Valerius and Maternus. The last of these succeeded Eucharius in his See, and was raised to life by the touch of the *Baculus*, which is therefore preserved with great veneration in the Cathedral at Treves.

CROSS.

CROSS, *v.*
CROSS, *n.*
CROSS, *adj.*
CROSS, *prep.*
CRO'SSING, *n.*
CRO'SLET,
CRO'SSLY,
CRO'SSNESS,
CRO'SSWISE.

Sp. *cruzar*; Fr. *croiser*. To *cross*; to sign or mark with a *cross*; to set *cross*-wise; to lay overthwart, or one or*cross* another; also to cut or divide in form of a *cross*, like X; also to cancel or *cross* in writing. Cotgrave. The noun, Fr. *croix*; It. *croce*; Sp. *cruz*.

To pass over, so that the line of passage may form with the line passed over, the figure of, or resembling a *cross*; to move in such direction in relation to another moving body; and thus, to contravene, to hinder, to embarrass, to obstruct, to impede, to thwart, to counteract.

And *cross*, the adjective, metaphorically, is thwarting, counteracting, &c. the wishes of others; and thus perverse, ill-humoured, ill-tempered, uncomplying, peevish, fretful.

Cross-let, in Chaucer, is a crucible *cross*-shaped. And see CRUCIBLE.

Cross is much used in *Composition*.

Robert duc of Normandye þe *croys* nome atten ende;
And garked hym wyþ oþere to þe holy londe to wende.
R. Gloucester, p. 346.

——— He hadde an holy doȝter at Colchestre in þis londe,
þat Seynt Heleine was yclepud, þat þo holy *croys* fonde.
Id. p. 62.

Two of þe naȝles, þat war þorh Jhesu fete
Traced on þe *croyce*, þe blode þei out lete,
& som of þe thornes þat don were on his heued
& a fair pece þat of þe *croyce* leued. *R. Brunne*, p. 30.

And kulled [killed] him on *crosswyse*. to Calvarye on a Friday
Piers Ploughman. Vision, p. 373.

And this Chanon toke out a *crosselet*
Of his bosom, and shewed it to the preest.
Chaucer. The Chanones Yemannes Tale, v. 16585.

And foorth thei wenten in to shippe,
And *crossen* saile, and made hem yare,
Anone as thoughe thei wolden fare.
Gower. Conf. Am., book i. fol. 14.

And after of his owne choys
He toke his death vpon the *croys*.
Id. Ib. book ii. fol. 46.

And in like manner it is that thousands, while the priest pattereth St. John's Gospel in Latine ouer their heades, *crosse* themselues with, I trowe a legion of *crosses*, behynde and before.
Tyndall. Workes, fol. 274.

All these commodities would grow by following this our discouery, without iniury done to any Christian prince, by *crossing* them in any of their vsed trades, whereby they might take any just occasion of offence.
Hakluyt. Voyage, &c. North-west Passage, vol. iii. fol. 22.

And he that takith not his *cross* and sueth me is not worthi to me.
Wiclif. Matthew, ch. x.

And he that taketh not his *crosse* & followeth me is not mete for me.
Bible, 1551.

But Joue's will euer all law ouercomes;
No other God can *crosse* or make it void.
Chapman. Homer. Odyssey, book v. fol. 74.

——— How bravely you have borne
Your many *crosses*, as in fortune's scorn,
And how negleotful you have seem'd to be,
Of that which hath seemed terrible to me.
Drayton. To the Lady J. S. Of Worldly Crosses.

In whose memory, and as monuments of her vertue and his affection, King Edward caused *Crosses* with her statue to be erected in all chief places where her corpse in carrying to Westminster rested: as at Stamford, Dunstable, St. Albans, Waltham, Chepside, and lastly at the place called Charing *Cross*.
Baker. Edward I. Anno 1296.

——— These *crosse* points
Of varying letters, and opposing Consuls,
Mingling his honours, and his punishments,
Fayning now ill, now well, raising Sejanus
And then depressing him, (as now of late

CROSS.

In all reports we have it) cannot be
Emptie of practice; 'Tis Tiberius's art.
Ben Jonson. Sejanus, act iv.

We had little else left us, to have in a direct and open way recourse unto, but those exhortations and charges given to Elders in the Epistles of the Apostles, as lying apparently *cross* to this way of presbyteral government, as thwarting the rule of Christ, and directions of the Apostles.
Goodwin. Works, vol. iv. part iii. fol. 179.

Then farewell *crossing* ioyes, and ioyfull *crosses*,
Most bitter sweets, and yet most sugar'd sowers,
Most hurtfull gains, yet most commodious losses,
That made my yeares to flee away like howers;
And spent the spring-time of mine age in vaine,
Which now my summer must redeeme againe.
Stirling. Avrora, song 10.

And though the Phenicians and Carthaginians, the Tyrians and Sydonians, are much renowned in histories for great navigatours; yet it is thought by the learned, that those voyages they performed, was onely by coasting and not by *crossing* the ocean.
Hakewill. Apologie, fol. 268.

And so with vain and superstitious *crossing* of himself [Everard Digby] betook him to his Latin prayers, mumbling to himself, refusing to have any, but the Romish Catholicks.
State Trials. Of the Conspirators, &c. in the Gunpowder Plot.

And also by the law of king Ethelred, who about the thirtieth year of his reign, ordain'd, that every eight hides or plough-land through the whole kingdom, shall find a man with a *croslet* and helmet to the naval expedition.
Spelman. Of Feuds and Tenures, ch. viii.

——— If he have any child,
It shall be *crossly* matched: the Gods themselves
Shall sow wild strife betwixt her lord and her.
Beaumont and Fletcher. Philaster, act ii. sc. 1.

Thus much that the word fornication is to be understood as the language of Christ understands it, for a constant alienation and disaffection of mind, or for the continual practice of disobedience and *crossness* from the duties of love and peace.
Milton. Nullities in Marriage.

For, with his bill, which is thwarted *cross-wise* at the end, he will shave or cut an apple in two at one snap, eating only the kernels thereof, spoiling more than he doth devour.
Fuller. Worthies. Gloucestershire.

To make a good, a wise, and a virtuous man, 'tis fit he should learn to *cross* his appetite, and deny his inclination to riches, finery, or pleasing his palate, &c. whenever his reason advises the contrary, and his duty requires it.
Locke. On Education, sec. 52.

Ever since Christ ascended into heaven, he has been pursuing the great work begun by him upon the *cross*, and applying the virtue of his sacrifice to those for whom it was offered.
South. Sermons, vol. iii. p. 407.

Every man carrying a sabre by his side, a short pole-axe before him, and a skrewed gun hanging at his back by a leather belt that went *cross* his shoulder.
Sir William Temple. Memoirs, v. i. p. 247.

This argues false notions of religion; as though that consisted rather in *crossing* inclinations because they are natural, than because they are sinful. *Stillingfleet. Sermon* 11. vol. iii.

The loxia or *cross-bill*, whose bill is thick and strong, with the tips *crossing* one another, with great readiness breaks open fir-cones, apples, and other fruit to come at their kernels, which are its food, as if the *crossing* of the bill was for this service.
Derham. Physico-Theology, book iv. ch. xi. (28.)

But Russel was provoked by some letters and orders, that the Earl of Nottingham sent him from the Queen, which he thought were the effects of ignorance; and upon that he fell into a *crossness* of disposition.
Burnet. Own Times. William and Mary. Anno 1692.

If the latter should have *crossed* the Alps, I purpose to post a proper number of forces to guard the passes of those mountains.
Melmoth. Decimus Brutus to Cicero.

When by the winds of Autumn driven
The scatter'd clouds fly *cross* the heaven,
Oft have we, from some mountain's head,
Beheld th' alternate light and shade
Sweep the long vale. *Beattie. The Hares. A Fable.*

What improvements they have had in their passage (as it is said some liquors are meliorated by *crossing* the sea) I cannot tell. *Burke. On the Revolution in France.* CROSS.

He [Lord Chatham] made an administration so checkered and speckled; he put together a piece of joinery, so *crossly* indented and whimsically dove-tailed.
Id. Speech on American Taxation.

CROSS, in *Composition.*

Our captaine and master perceiuing their pretence, caused our gunners to make all our ordinance readie with *crosse-barres*, chaine-shotte, and baile-shot.
Hakluyt. Voyage, &c. M. George Fenner, vol. ii. part. ii. fol. 63.

And verily I suppose, that before *cross-bowes* and hand-gunnes were brought into this realme, by the sleight of our enemies, to thentent to distroy the noble defence of archery, contynuall vse of shotynge in the longe bowe made the feate so perfect and exacte amonge Englishemen, that they thā as surely and soone kylled such game, which they listed to haue, as they now can do with the *crosse-bowe* or gunne.
Sir Thomas Elyot. Governour, p. 94.

Diana deep, whose name by night al townes in *cros-pathes* crie,
And fends of vengeans fell, and Gods that Dido make to die,
Receiue my words, and turne from me the wreke of sinner's paine.
Phaer. Æneidos, book iv. p. 104.

As a man can by no meanes read, except he be first taught the letters of the *crosse-row*: euen so it is vnpossible.

Whose *cross-surmounted* spire o'erlooked the wood,
A venerable matron they ere-while
Discover'd have. *West. Education.*

He tied and *cross-tied* them all fast together from one end to the other, (as you would cord a trunk,) with such a multiplicity of round-abouts and intricate *cross-turns*, with a hard knot at every intersection or point where the strings met,—that Dr. Slop must have had three-fifths of Job's patience at least to have unloos'd them. *Sterne. Tristram Shandy*, vol. iii. ch. viii.

My father spun his, every thread of it, out of his own brain,—or had so reeled and *cross-twisted* what all other spinners and spinsters had spun before him, that 'twas pretty near the same torture to him. *Id. Ib.* vol. v. ch. xvi.

The two middle feathers of the tail are black, the two outmost entirely white; the rest black marked *cross-ways* with white.

Pennant. Hairy Woodpecker.

The Cross appears to have been used as a very general instrument of punishment among various nations, from the earliest times of which we have any record. The "hanging on a tree," in Scripture, has been interpreted by many Commentators of Crucifixion, (Sir Thomas Brown, *Enq. in. Vulgar Errors*, v. 21;) although again others have believed that the Cross was unknown among the Jews till the time of Alexander Jannæus, when the word *crucify* is expressly used by Josephus. (*Antiq.* iii. 22.) In Thucydides (i. 110) we read of Inarus, an African King, who was crucified by the Egyptians. The similar fate of Polycrates, who suffered under the Persians, is detailed by Herodotus, (iii. 125,) who adds also in the same book (159) that no less than 3000 persons were condemned to the Cross by Darius, after his successful siege of Babylon. Valerius Maximus (ii. 7) makes Crucifixion the common military punishment of the Carthaginians. That the Greeks adopted it is plain, from the cruel executions which Alexander ordered after the capture of Tyre, when 2000 of the captured sufferers were nailed to Crosses along the sea shore. (Q. Curtius, iv. 4; Justin, xviii. 3.) With the Romans it was used under their early Monarchical Government, and it was the death to which Horatius was adjudged, and by which he ought to have

CROSS. suffered for the stern and savage murder of his sister. (Liv. i. 26.) Though originally a punishment extending indiscriminately to every rank, it latterly, at least among the Romans, became the most dishonourable of all deaths, and was confined principally to the lowest orders and to slaves.

The Cross (σταυρὸν in Greek, *gabalus* or *patibulum* in Latin) was at first perhaps nothing more than a tree; and next, a plain upright stake. It afterwards assumed different forms, as ✕. T. ⊓. +. and it is on the last that our Saviour is uniformly believed to have died.

Before the sufferer was exposed upon the Cross, it was customary to scourge him, (Liv. *ut sup.*;) and the Column to which our Saviour was fastened during this cruel infliction, is stated by St. Jerome (*Epist. ad Eustochium*) to have existed in his time in the portico of the Holy Sepulchre, and to have retained marks of the blood of our Lord. Bede places this Column within the Church, where we believe it is still shown, and Gregory of Tours (iii. 3) dilates on the miracles wrought by it. The criminal carried the instrument of his punishment, or most probably only the transverse part of it, to the place of execution. Here he was fastened naked upon the Cross, (which occasionally was not raised from the ground till after his affixion,) by cords, or more frequently by nails, (and sometimes by both,) driven through the hands and feet. The number of nails by which our Saviour was thus fastened, has been a subject of very learned dispute. Nonnus affirms that three only were used, both feet having been confined by the same:

Ἀμετρήτῳ δε πεπαρμένον ἄζυγι τόμφῳ
Διπλόον ἦτορ ἔχοντα μιῇ τετορημένον ὁρμῇ,
Ποσσὶν ὁμοπλεκέεσσιν.

And in this notion he is followed by Gregory Nazianzen, in his *Christus Patiens*,

Γυμνὸν τρισήλω κείμενον ξύλῳ λαβὼν.

The more received belief, however, has always assigned four nails as the smallest number employed; and this opinion is supported at much length by Cornelius Curtius, an Augustine Friar, who wrote a Treatise, *de Clavis Dominicis*, in the beginning of the XVIIth Century.

The controversial powers of this advocate may be fairly estimated by the following specimens. He is combating an assertion of Joannes Westphalus, who appears to have thought it not impossible, that our Saviour might have been fastened by cords; and after terming the unhappy German, *Serpens, Python, Tartareum et ex Cerberi spumâ propagatum aconitum, et impurata bellua*, he proceeds, *O pestilens, blaspheme, Orco edite, non homo, cum obscœnis patriæ tuæ suibus in eandem haram includende; itane audes obgannire Ecclesiæ et rosas Evangelicas succerdâ olidissimâ conspurcare?* and again a little onward, *O Heraclite, O Democrite, cur numero estis mortui? tu, ut effusissimis lacrymis deplores insulsam bruti hominis ineptiam; tu verò, ut sonantissimis cachinnis pingue hujus Westphali ingenium irrideas*,—in conclusion his antagonist is assailed, as *rudis Grammaticus, talpa, addictus jurare in verba Dæmonis*, and *nugo*, and with these comparatively mild terms the second Chapter of this Treatise closes.

Some of the arguments of Curtius are well worth preserving in his own words. We will take one from a miraculous appearance discovered in the heart of a Nun, in an *examinatio post mortem*.

Primam conjecturandi ansam dedit Clara nostra, virgo inter Augustinianas monachas vitæ sanctitate, et miraculorum glorid inlustris. Hanc enim cùm ardentissimus in JESVM *crucifixum sympathiæ amor incenderet, et continuis ignibus velut Ætnam aliquam, cor penitum inflammaret atque depasceret; ne eo absumpto tandem cum vitâ incendium istud sanctum extingueretur, Servator qui ignem ardere vult, quem mittere in terram venit, hunc flagrantem Vesevum, cœlestem, inquam, istum divini amoris caminum visitare dignatus est, et luculentam, eamque immortalem vitalis flammæ materiam in eum immisit; seu, ut clariùs edisseram, sese mortemque suam et sacra mortis instrumenta in D. Virginis corde insculpsit. O rem stupendam, et antehac inauditam?* MARIA. CROSS.

Iam similem visa est et habere sequentem.

Ecce altera Theotocos comparet. Maria Christum in utero, Clara nostra in corde concepit. Ex illius sanguine purissimo sacratissimum JESV *corpus formatum est; hæc etiam carnem subministravit. illa puerum; hæc virum enixa est. blandidulum illa et ridentem: hæc crucifixum genuit, illa sine dolore peperit; hæc ipsa etiam doloris instrumenta produxit. utraque tamen*

Gaudia Matris habet cum Virginitatis honore.

Nescio, an nostra ideo infelix, quia post partum non vixit. certè dignitatem genitus majorem obtinet, et quia non nisi cæso corde natus est, Cæsaris nomen sibi vendicare potest. Sed puerperam nostram visitemus. Illa quidem seu majestate filii oppressa, seu doloribus, decessit: verùm extemplò cor ejus ab obstetricibus symmonachis exectum est, divinum gazophylacium apertum, repertus thesaurus mirabilis et memorabilis. Lætamne an tristem partitudinem hanc posthumam dicam, hæreo, apparet fœtus virilis, sed ille mortuus, recenti etiamnum manans sanguine, et cruci adfixus: pro secundinis omnia hinc inde jacent passionis instrumenta; pendent quoque ex tribus nerviculis tres velut ferrei CLAVI.

It was impossible that Curtius should doubt this marvel, for its history is faithfully recorded in two lives of Sta. Clara de Montefalco; the one by Isidorus Masconius, the other by Mutius Petronius; and moreover the good Father had seen the heart with his own eyes, and had paid it fitting worship, (*veneratus sum.*) That there were only three nails impressed on Clara's heart, was a circumstance eagerly seized by the favourers of that number; but Curtius dismisses their argument with much contempt. Such, he says, was the belief of Clara in her meditations, but it by no means follows thence that such were the facts of our Lord's Crucifixion.

The most ancient Crucifixes extant are adduced by Curtius, as testimonies in his favour, as to the four nails. Among them is one preserved at Lucca. It is made of cedar, and is said to have been carved by Nicodemus, who is believed to have taken down our Lord from the Cross with his own hands. In this our Saviour is represented crowned with a golden diadem, and clothed in a rich silk embroidered garment, which descends to the feet; his shoes also are covered with plates of gold, and concerning one of them the following legend is related. A man reduced to the lowest extreme of poverty sought relief from the image, and in return for his prayers was saluted with an inclination of the head, and presented with one of the sandals, with which he went away well pleased.

CROSS.

Minor exstat sacrilegus, qui
Radat inaurati femur Herculis, et faciem ipsam
Neptuni, qui bracteolam de Castore ducat.

The Church, to the guardianship of which the holy image was consigned, redeemed the sandal for its price in gold; but, even to the days of Curtius, it had not been possible to fit it again to the foot which it had once quitted, and it remained propped upon a cup.

The face of this image was not the work of Nicodemus, but *divinâ manu effigiatum*; and lest it should be argued, that the sculptor in all material points has wandered in his representation from the account given by the Evangelists, it should be borne in mind that the clothing was not on it originally, but has been since added by pious Christians, *jussu Dei, monitu Angeli,* (*de Clav. Dom.* 5.)

A second Crucifix, carved by St. Luke, is exhibited at Siroli near Ancona. It was buried for three centuries after the irruption of the Goths, and was then discovered by a Divine revelation. In all points essential to the argument of Curtius it agrees with that of Nicodemus. To these may be added a very ancient image in the Chapel at Loretto, and another constructed from the wood of the true Cross, and preserved in the *Sacrarium Apostolicum* at Rome. This was presented by Juvenalis, Bishop of Jerusalem, to Leo the Great, about the year 450, as may be determined from one of that Pope's letters. (78.) By some strange neglect, it lay for three centuries *in tetrico, olido et indignissimo sacelli angulo*; nor did it receive due honour till Pope Sergius, about the year 690, was supernaturally warned to bring it forward to be adored (*adorandam*) by the faithful. (*Id. ib.* where Bede, Anastasius, *in vitâ Sergii*, and Onuphrius Panvinius, are cited as authorities.) In like manner appears the Cross which a doe miraculously discovered to Thassilo, Prince Bishop of Bavaria while hunting; and for the reception of which he built the Convent of *Pollingen*; so named because the cry of his dogs while in the chase was *Pol, Pol, Pol*; a cry which, probably, has never been uttered by any other dogs before or since. In Bavaria, also, is a mountain called Ardechs, on which is a Religious house abounding in relics. Among these is found a Crucifix delivered by an Angel into the hands of Charlemagne; and this, in common with all the others which we have named, represents four nails. (*Id. ib.*)

But, it seems, that while some admit three nails only, others again greatly multiply this number. Calvin enumerates fourteen; they are respectively in Milan and Carpentras; two at Rome, (in the Church of *Sta. Helena*, and that of *Sta. Croce in Gerusalemme*;) one at Sienna, and Venice; three in Germany, (at Cologne, at the Church of the three Marys, and at Treves;) three at Paris, (in the Chapel Royal, at the Carmes, and in St. Dennis;) one at Draguigne, and another at Tenaille; but in this statement it is plain there are numerous blunders. The Churches of *Sta. Helena* and *Sta. Croce* are the same. It is positively denied that Sienna, Venice, Cologne, Draguigne, the Carmes, and the Chapel Royal at Paris make any such claim; the nail in St. Dennis is said only to have affixed the Title to the Cross; and no such place as Tenaille is known to exist. This heresy of Calvin affords Curtius another opportunity of indulging his vituperative talent. *Audio Calvinum, quo asino nullus in Arcadiâ asinus magè dignus est qui fœno pascatur: audio, inquam Calvinum rudentem et ridentem in* lib. de Reliq. *Non jam tres quatuorve, sed duodenarios aliquot rudi populo a sacrificulis præberi et probari, ut Clavorum, si quis numerum inire vellet, grandem sit numerum inventurus. Euge mi homo; more tuo facis, mentiri pergis: mendacia tegis mendaciis aliis ne perpluant*; and the alleged falsehoods are proved against the Reformer, by showing that there are only three places in the whole Christian world, Rome, Milan, and Treves, which claim possession of any of the nails. A few other places, it is admitted, may exhibit some relic which has been touched by one of the real nails, some splinter or filing, or some model of them; (such as those made by the Greek Church on Good Friday in the Holy Sepulchre;) but the true nails are found no where but as above, and their history is as follows. (*Id.* vi.)

Out of the four original nails, the Emperor Helena threw one into the Adriatic, when it was furiously raging, and thereby produced an instant calm. (Greg. of Tours, *de glorid Martyrum*, 6.) The second was inserted by Constantine either in his helmet, his crown, or one of his statues at Constantinople; for on this point authors differ. Ambrosius, in his *Oratio ad Theodosium*; Gregory of Tours, in his *de glor. Mart.* 1; Eusebius, in his *Hist.* x. 8; Ruffinus, ii. 8; and others, espouse the helmet; Baronius the crown; and Lipsius in his work *de Cruce*, (li. 9,) cites Zonaras, in behalf of the statue. Be this as it may, the nail wherever placed at first, was afterwards to be found (although considerably mutilated) in the Church *Sta. Croce in Gerusalemme* at Rome. This Church, indeed, is rich in relics of the Crucifixion if we may trust the Guide books. *Si custodiscono in detta Chiesa le seguenti insigni Reliquie. Tre pezzi della SS Croce; il Titolo della medesima; uno de' Chiodi che trafisse il Redentore; due spine della sua Corona; parte delle spugna con la quale fu abbeverato; uno de' denari coi quali fu venduto; e un dito di S Tomaso Apostolo, cioè quello ch'egli pone nel costato del medesimo Redentore.* (Roisecco, 111.)

In the *Duomo* of Milan is a third nail, which Eutropius affirms was fixed through one of our Saviour's hands; and which Constantine used as a bit, (Ruffinus, *Ecc. Hist.* iv.) thereby intending, as has been said, to verify the Prophecy of Zachariah, (xiv. 20.) "In that day shall be upon the bells," or *bridles*, as the margin of our Bible gives it, "of the horses, *Holiness unto the Lord.*"

Treves possesses the fourth and last nail, which is thought to have been driven through our Saviour's right foot. (Curtius, vii.)

Of the great sanctity of these nails, and of their preeminent claims to the worship and adoration of all true Christians, Curtius maintains that no one can cherish the least doubt; and he hurries on to this deduction with his accustomed charitable proscription of all recusant heretics. *Lutherum, Calvinum, Wiclefum, et totum impudentiæ atque blasphemiæ spurcissimum Magdeburgense colluviarium nihil moror: Aio, atque iterum aio, sacratissimos Redemptoris nostri Clavos cultum et eum summum mereri.* (xii.) His concluding Chapter cites the authority of Picus Mirandula, (an author known for his veracity from the Tagus to the Ganges, and perhaps even to the Antipodes,) for a miraculous rain of all the instruments of the Crucifixion, which occurred in Germany, A. D. 1500. The clothes, and even the bodies of those upon whom they fell, were marked with similar images, impressed in bloody,

CRO

CROSS. golden, or livid colours; and strange indeed must have been the effect produced, if it at all resembled the *icones* with which Curtius has obliged us. No washing could eradicate the marks from the clothes, no instrument could free the bodies from them for nine whole days, till they vanished of themselves. There could be little doubt of the intention of this portent. Four years afterwards a cruel pestilence ravaged the country, and the first victims to it were the very persons who had been thus supernaturally stamped. Mirandula wrote a poem, entitled *Staurostichos*, on the event, and it is from the dedication of it to Maximilian I., that our account of this extraordinary event is derived. (Curtius, xiv.)

Against the belief of Curtius are arrayed, besides Nonnus, and Gregory Nazianzen, cited before, the Ecclesiastical Historians Ruffinus, Nicephorus, and Zonaras; and to these authorities must be added the testimony of St. Ambrose, who brings forward a good reason for three nails only being in existence, namely, that three only were found. It is denied also, that there are *four* nails to be seen in the Crucifix at Loretto. An ancient volume preserved in the Library of *Ste. Marie de Grace* at Boulogne is appealed to, in which it is related that the soldiers had prepared four nails, but that our Saviour of his own accord placed his right foot over the left; and, in confirmation of this statement, it is said that in the *Sudaria* at Besançon and Turin, which are marked with the impression of his wounds, that of the left foot, which received only the point of the nail, is smaller than that of the right, through which it was driven up to the head. The maintainers of the three nails only, say moreover, that the one which Helena threw into the sea, was borne up like the axe of Elisha, and that the Empress esteeming it more than the rest, presented it to the Cathedral at Treves; the second she gave to the Lateran; and the third to Milan.

Lipsius, to whose Treatise *de Cruce* we have already been much indebted, very rationally supposes that the Cross of our Saviour was made from such wood as happened to be nearest at hand, and that this was Oak, which grew most plentifully in Judæa, and which it is said the relics now exhibited closely resemble. But on this point again a subtle controversy has arisen; and there have been some who maintain that four different woods were used in the composition of the Cross; viz. Cedar, Palm, Olive, and Cypress. (Gretserus, *de Cruce*, i. 5.)

> *Quatuor ex lignis Domini Crux dicitur esse.*
> *Pes Crucis est Cedrus; corpus tenet alta Cupressus*
> *Palma manus retinet; Titulo lætatur Olive.*

Durand, (in his *Rationale Divinorum Officiorum*, 151,) relates a tradition, that Adam sent his son Seth into Paradise, where he received from an Angel the branch of a Tree. Adam perceiving the great mystery contained in this branch, immediately planted it; it took root, and soon shot up into a large Tree. When wood was sought from all quarters of the globe for the Temple of Solomon, this Tree also was cut down and conveyed to Jerusalem; but happening not to be employed in the building, it was used as a foot-bridge across the city moat. The Queen of Sheba alone discovered its future destiny, and not only refused to pass over it with her feet, but even worshipped it. Afterwards it was thrown aside into a pool which chanced to be dry at the time of our Saviour's passion, and the wood being then seen, and lying near at hand, and being convenient for the purpose, was employed for the Cross of our Lord.

Another dispute has been agitated relative to the existence of a *hypopodium*, or tablet whereon the feet were supported. Gregory of Tours, who had seen the real Cross soon after its discovery, maintained that such a tablet was found upon it, (*De glor. Martyr.* 6,) but Gregory does not appear to have been accepted as a sound authority by the Church. It has been doubted whether the hands alone, without this prop beneath, would be able to support the weight of the body; and it has been also thought that a kind of seat was placed midway, across which the sufferer was set astride. The controversy is treated at length in the first of the four *Hypomnemata de Cruce* of Thomas Bartholinus, and in a letter addressed to that writer by Bartoldus Nihusius. This writer states, as his opinion, that there was neither a *suppedaneum*, nor a seat in the Cross of our Saviour. He adds, that it is reasonable to suppose that his Cross was of large dimensions, for that men of those days were of greater size than in his own, and that our Lord was taller than most others. To prove this assertion, he refers to the southern outer wall of the Church at Dissenbergh, on which is inscribed in old characters *Longitudo Christi*; and below it is a line, of which the one given here is the forty-eighth part.

Nicolaus Fontanus, a Physician to whom the question as to the capability of the hands to support the weight was proposed, decided in the affirmative, upon experiment.

The Martyrologies are full of extraordinary relations of the length of time, during which some of those condemned to the tortures of the Cross have continued to endure them, before they were released by death from their pangs. St. Andrew is said to have remained alive two days. Victorinus, who was crucified with his head downwards, under the reign of Nerva, for three; and Timotheus and Maura, no less than nine; a marvel which it is scarcely possible to exceed. Some who have been taken down while yet alive, are said to have recovered. Josephus mentions, that such was the case with one out of three of his friends, whose release he obtained from Titus.

At length, in the reign of Constantine, this horrible punishment was abolished in the Roman world, (Aur. Vict. *in Constantino*; *Hist. Trip.* i. 9.) *Postquam Vitam ipsam interfecit non diu illi vita*, is the no less untrue than quibbling observation of Lipsius; for more than three centuries had then elapsed since the death of our Saviour. The edict of Constantine, for the suppression of the Cross, is attributed to the holy vision which preceded his engagement with Maxentius; and henceforward that instrument, which had proverbially betokened infamy, was exalted on the standard by which the warriors of the Empire were wont to rally on the field of glory, and became the symbol of military honour in the *Labarum*.

The Invention or discovery of the true Cross by the Empress Helena, is assigned by the Ecclesiastical Historians to A. D. 326, the twenty-first year of the reign of her son Constantine, the thirteenth of the Pontificate of St. Sylvester, and the first after the Council of Nice. Eusebius alone is silent as to the event; yet he makes copious mention of the discovery of the Holy Sepulchre, and of the other transactions of Helena while at Jerusalem. By the remaining Annalists we are informed, that this devout Princess, in her seventy-ninth year, inflamed with holy ardour, resolved to visit the scenes of

CROSS. our Saviour's passion. The hatred which the Pagans bore against the Christian name, had induced them to obliterate, as much as possible, all those marks which might recal a memory of their great Master: Calvary had been heaped up with huge stones and piles of earth, and on the summit of this new formation had been erected a Temple of Venus. The Empress, however, heard of a Jew, curious in Antiquities, who had carefully treasured up such memorials of the holy spot as tradition had conveyed to him; and from him the desired secret was extorted, either by bribes or torture. Durand (*Rat.* 123) affirms that he bore the name of Judas; that he afterwards was converted to Christianity, and became Bishop of Jerusalem, under the name of Quiriacus. On his Baptism, the Devil remarked, that as by one Judas Christ had been betrayed to death, so by another Judas he was again exalted to life; "but in a short time," continued Satan, "my friend Julian shall be Emperor, who will gloriously avenge me." Julian accordingly put Quiriacus to death. The place of burial being once discovered, there could be little doubt that the Cross itself, and all the other instruments of punishment, would be brought to light at the same time; for it was customary with the Jews to inter all these together with the criminal's body, as they were held to be equally accursed with himself.

The spot to which the Jew pointed was carefully excavated, and within it were found three Crosses, and the Title which Pilate had written as the superscription for that of Jesus, apart by itself. St. Ambrose maintains, indeed, that this title was attached to one of the Crosses, which thereby was determined to be that which had borne our Saviour; but the other Historians state, that Helena had no guidance to the real Cross, till, by the suggestion of Macarius, at that time Bishop of Jerusalem, certain sick and infirm persons were touched by each of the three. One only produced miraculous cures. Ruffinus (x. 8) states that a woman, almost in the last agony, when placed upon it *alacrior multo quam cum sana fuerit totâ domo discurrebat;* and in some cases it resuscitated even the wholly dead, (Sulpitius Severus, ii.;) so that no doubt could be permitted to remain, that this was the so much coveted treasure. One of the fullest early accounts of the Invention of the Cross, is given by Paulinus in his XIth *Epistle* to Severus, on occasion of sending him a portion of the true wood; and Tillemont, *Mem. Ecclesiast.* vii., in his Chapter on St. Helena has concentrated all the authorities.

A Church was built by Helena over the hallowed spot, (see CALVARY,) and within it was deposited the real Cross. A large portion of it, however, was conveyed by the Empress to Constantinople; there a part of it was inserted by Constantine in the head of one of his own statues, (if this be not another version of the similar tradition relative to the holy nail;) and the remainder was transmitted to Rome, where the Church of *Sta. Croce in Gerusalemme* was erected for its reception. A festival to commemorate the *Invention of the Cross* was ordered to be celebrated annually, on the 3rd of May; and on Easter Sunday, the Bishop of Jerusalem exhibited to the longing eyes of uncounted Pilgrims, the great object of their devotion, which was intrusted to his charge. Small pieces, richly set in gold and gems, were presented to such as could afford to purchase them; and that no check might be imposed upon this profitable traffic, it was boldly asserted, and blindly believed, that the holy wood possessed a miraculous power of self reproduction, and therefore could never be diminished, however largely it was distributed. *Crux, in materiâ insensatâ vim vivam tenens, ita ex illo tempore innumeris penè hominum votis lignum suum commodavit, ut detrimenta non sentiret, et quasi intacta permaneret quotidie dividuam sumentibus, et semper totam venerantibus: sed istam imputribilem virtutem, et indetribilem soliditatem de illius carnis sanguine bibit quæ passa mortem non vidit corruptionem,* (Paulinus, *Ep.* xi. *ad Severus.*) St. Cyril also, who was Patriarch of Jerusalem, and an eye-witness, affirms the same miracle, and likens it to that of the five loaves which supplied 5000 persons. CROSS.

The capture of Jerusalem by the Persians in A. D. 614, placed the remains of the true Cross in the hands of the IId Chosroes, who bore them in triumphant mockery to his Capital. (Baronii *Annales*, A. D. 614—16; Eutychius, ed. Pococke, ii. 212.) Fourteen years afterwards, (on the murder of the Persian King by his son,) Heraclius, in the treaty which he imposed upon the invaders, whom he had then vanquished, stipulated for the restoration of the Cross, (Baronius;) and it was conveyed with all the pomp of Byzantine magnificence to Constantinople. The Emperor resolved to transport it once again to its original abode; and the same stately procession accompanied him in his progress. When arrived at that gate of the Holy City, which opened upon Mount Calvary, he found it, to his astonishment, impenetrably barred. A voice from heaven, (Durand, *Rationale*, 151,) or as others more modestly affirm, the voice of the Patriarch Zachariah, or of his deputy Modestus, at the same moment warned him, that it was not thus, nor arrayed in such temporal splendour that the King of Kings had entered Jerusalem. Heraclius understood the admonition. Dismounting, barefooted, and carrying the Cross on his shoulders, he once more approached the gate. The hinges then readily obeyed his touch, and he placed his holy burden once again beneath the dome of the Sepulchre. It was on this occasion that the Festival of the *Exaltation of the Holy Cross*, on the 14th September, was first instituted. Nicephorus, however, contends that the *Exaltation* and the *Invention* are both equally ancient; that the *Invention* commemorates the day on which the Cross was found; the *Exaltation*, the day on which it was first publicly exhibited; and that the latest date has been mistakenly assigned to this last, only because it was celebrated with additional pomp after the pilgrimage of Heraclius.

The evidence upon which the imposture of the discovery of the true Cross rests, is weighed by Jortin with his usual sagacity, (*Remarks*, vol. iii. *Works*, ed. 1805. ii. 219,) and from the time of Heraclius we hear no more of the Holy Cross. Perhaps it was destroyed by the Saracens, on their conquest of Jerusalem in A. D. 637. The wooden Title, however, is still safe at Rome. It is not entire; of the Hebrew part of the Inscription, a small portion only of fragments of letters remain, from which it is not possible to determine what the characters really were. The Greek and Latin (with the exception of Z in the latter,) are both written after the Eastern fashion from right to left; for which deviation from common custom, the following reasons have been assigned. Either that they were written by a Jew who followed his national habit, even

CROSS. in a foreign language; or else by a Roman soldier, who, for the convenience of the Jews, accommodated himself to their usage. The Jesuit Nicquetus, to whose *Titulus Sanctæ Crucis* we are indebted for this account, believes that it is not all the work of one hand, since the Roman letters are firmly and distinctly cut, the Greek very badly. He thinks that a Jew cut the Hebrew (or Syriac) and Greek, and a Roman the Latin, (12.) All that remains of the Greek and Latin, is, in the first, Ναζαρενυς β, and of the latter *Nazarenus*, (Plate XXIX. *Miscellanies.*) The substitution of ε for η, and of the accusative Ναζαρενῦς for the nominative Ναζαρήνος, has scandalized some unbelieving heretics; but Gretserus, (i. 29,) pleads antiquity in favour of ε, and says also, that Ναζαρενυς is, in fact, the nominative.

This Title, when sent by Constantine to Rome, was deposited, for the sake of security, in a leaden chest above the vaulted roof of the Church of *Sta. Croce*, in a little window, and then bricked into the wall. Its position was recorded in a Mosaic inscription without. This inscription had become almost illegible from lapse of time; and during some repairs of the Church in the Pontificate of Innocent VIII., A. D. 1492, by the carelessness of the workmen, the window was broken open and the holy Title was discovered. Such is the history recorded on a wall within the Church, encircling a staircase which leads to a subterraneous Chapel of Sta. Helena. The discovery and the verity of the Title were authenticated by a Bull of Alexander VI., four years afterwards. It appears that much more was remaining of the inscription when it first came to light, than was to be seen when Nicquetus wrote. (Bosius, *de Triumph. Cruce*, i. 2; Suaves, *Tract* iv. *in Evang. S. Marci.*)

It was not likely that this title should escape a mystical interpretation; accordingly Michaelis Stifelius, of Eslingen, discovered a hidden virtue in its numeral letters. M, D, X, four Vs, and two Is, if put together, will make 1532. This year he accordingly declared to be the termination of the world; and, like other prophets of the same kind, he had the misfortune to outlive his prediction.

The veneration which had been expressed for the Cross itself, was soon extended to every thing which bore relation to it; and marvellous effects were ascribed even to its sign. On the efficacy of this sign Severus Endelichius, whose precise date is uncertain, but who is supposed to have flourished about the IVth century, wrote a Bucolic, in which Tityrus exhorts his pastoral friend to its frequent usage. In the VIth Book of the *Historia Tripartita*, we learn, that the Apostate Julian, being in company with a Magician who had raised some Devils, (and these Devils, Durand (*Rat.* 123) assures us were all as black as Negroes,) became so terrified, that he involuntarily Crossed himself. The Devils vanished at the moment; and the Magician, fearing the effects which this manifestation of power in the Christian symbol might produce upon his disciple, assured him that the Devils fled not through fear but hate.

The *Dialogues* of Gregory the Great, (one of the richest collection of marvels with which we are acquainted,) afford numerous instances of the potency of the sign of the Cross. We shall subjoin a few of them, in the words of W. P., whose translation into "the English tongue" was printed at Paris in 1608. The first regards another unbeliever.

"A Jewe was travailinge from Campania to Rome, who, drawinge near to the city of Funda, was so overtaken with nighte, that he knewe not where to lodge, and therefore not findinge any better commoditye he retired himself into a temple of the God Apollo, which was not far off, meaninge there to repose him selfe; but muche affraide he was, to lye in so wicked and sacrilegeous a place; for which cause thoughe he beleaved not what we teeche of the Crosse, yet he thought good to arme him selfe with that signe. About midnighte, as he lay wakinge for very feare of that forlorne and desert temple, and looked suddenlie about him, he espied a troupe of wicked spirites walkinge before another of greater authority, and satt downe in the body of the temple: where he began diligētlye to inquire of those his servātes, how they had bestowed their tyme, and what villanye they had done in the world." One of the Devils here relates a temptation, in the shape of a handsome Nun, which he had thrown in the way of Andrew Bishop of Funda, whereat the Chief Devil rejoices greatly. "The Jewe, who al this while lay wakinge, and hearde all that which they saide, was wonderfully affraide: at length the Master Devill sent some of his followers to see who he was, and howe he durst presume to lodge in their temple: when they were come, and had narrowlye viewed him, they found that he was marked with the mystical signe of the Crosse, whereat they marvailed and saide, Alas, alas, here is an empty vessel, but yet it is signed; which newes the rest of these helhoundes hearynge suddenly vanished awaye." CROSS.

In justice to the Jew it should be added, that he went straightway to the Bishop, and taxed him with his inclination to the Nun. The Bishop was shamefaced, and peremptorily denied the charge. But the Jew knew too much, and asked him, to his confusion, whether yesternight he had not struck her merrily on the back. Whereupon the Bishop, perceiving that the matter was revealed, confessed forthwith, and "discharged out of his house not only that Nunne, but all other women that attended upon her." After this he was no more troubled by temptation, and he converted and baptized the Jew.

Fearful is the omission of this sign, as we may learn from the same author, (i. 4.) "Upon a certaine daye one of the Nunnes of the same monasterye (in the Province of Valeria) goinge into the garden sawe a lettice that liked her, and forgettinge to blesse it before with the signe of the Crosse, greedily did she eate it: whereupon she was suddenly possessed with the Devill, fell downe to the grounde, and was pitifully tormented: worde in all hast was carried to Equitius, (the Abbot,) desiringe him quickly to visit the afflicted woman, and to helpe her with his praiers: who, so sone as he came into the garden, the Devill that was entred began by her tongue, as it were to excuse him selfe, saying: What have I done? What have I done? I was sitting there upon the lettice, and she came and did eat me." We need not add, that the exorcisms of Equitius succeeded in delivering the incautious Nun.

The sign of the Cross succeeded also in taming a mad horse, (*Id.* i. 10.) It was impressed by Martinius, a Monk in the Province of Valeria, upon some hearth-cakes, (which some of his brethren had forgotten so to mark,) while they were on the coals, by faith only, without any corporal touching. St. Bennet, by the sign of the Cross, broke a drinking glass, containing poison, which had

CROSS. been presented to him by some envious Monk, (ii. 3.) Sabinus, Bishop of Camisina, drank poison harmlessly after having Crossed the cup, (iii. 5.) Cassius, Bishop of Nercy, by the sign of the Cross only, expelled a Devil in the presence of King Totilas, who ever afterwards did in his heart much reverence the good Bishop, having before utterly contemned him because his face was high coloured, thinking that it proceeded not from any other cause than drinking, (iii. 6;) and Amentius, a Prince in the Province of Tuscania, by the sign of the Cross despatched serpents and snakes, so that their bowels did suddenly break, and if the snake got into any hole he died, (iii. 35.)

One more adventure we shall relate in the original words of Gulielmus Neobrigensis, *de rebus Angliæ*, (ii. 21.) *Contigit Ketellum aliquando eorundem pene hostium, dæmonum sevitiam experiri. Fessus ex agrario opere domum reversus, dum somno gravaretur, sacri se signaculi nequaquam impressione munivit: Dormienti loco solito soli, ustiterunt duo dæmones, sævi nimis atque terribiles; et excitatum apprehendentes: Surge, inquiunt, Ketelle, incidisti in manus hostias; infestos sentire habes, quos provocare minimè timuisti, quorum mysterias toties prodidisti. Ille subito casu attonitus nomen Christi invocare, et signare se volsit, nec valuit; manus enim ejus ac lingua tenebantur, ne sacri vel signi, vel nominis munimine tueretur. Noli, inquiunt, Ketelle, frustra conari, manum linguamque tuam ligavimus ut nihil tibi adversum nos valeat suffragari. Cumque de illo ita triumphare viderentur, et malum quod ei facere cogitabant verbis minacibus atque insultatoriis præveniunt, repente juvenis splendidus bipennem manu ferens introit, stansque in medio, bipenni molliter digito tacto sonitum ingentem dedit. Quo sonitu exterriti Dæmones, relicto de quo triumphare cœperunt homine, diffugerunt. Tunc accedens juvenis quem ejusdem hominis credo fuisse Angelum, Ketelle inquit, negligentia tua pene te nunc periclitari fecit, cave ne ulterius te inveniant insidiantes tibi hostes inermem. Inermem proculdubio eum dixit quia sibi Crucis, signum non impresserat.*

Such were some of the futile and ridiculous legends, which Superstition created and believed in darker times; and such the Romish Church has adopted and inculcated even to the present hour, disgracing thereby rather than honouring that symbol in which we all should glory. The practice of using the sign of the Cross no doubt is harmless in itself; and while employed only as a memorial of our blessed Master, without a vain belief of any hidden efficacy in the mark, may assist in awakening holy thoughts. It is only its abuse, and the mistaken reliance which has been placed upon it, that is to be condemned; and if it were not held to be a badge of Popery, no fault could be found with him who regarded it in the same view as Prudentius must have done, when he wrote the touching lines below:

Hæc cum vocante somno
Castum petis cubile,
Frontem locumque cordis
Crucis figura signet,
Crux pellit omne crimen,
Fugiunt Crucem tenebræ,
Tali dicata signo
Mens fluctuari nescit.

Cathemerin. hymn vi.

A Cross is always borne before the Pope, wherever he goes. Patriarchs, in like manner, had them borne every where, save in Rome. So also Primates and Metropolitans, within their own Provinces. Gregory XI., however, forbad these last to carry them in the presence of a Cardinal. The Cross of the Pope has three bars, that of the Patriarch two, and that of the Archbishop one only. From the distinction between the two last, most probably is derived the architectural difference between the forms of the Greek and Latin Cross. Fivizinus, Sacristan to the Pope, who published in 1592 a Treatise, *De ritu SS Crucis Romano Pontifici præferendæ*, states that these three orders, as well as the Pope's Legates, who, representing the person of the Pope, are treated with the same honour as himself, have the Cross borne with the face of the image upon it turned towards them; the inferior Clergy, who were entitled to bear it more privately, had the face turned from them; and for this he assigns several mystical reasons, (ii. 14.) He also combats the received notion that the triple Cross, belonging to the Pontiff himself, is assumed as any mark of superior dignity. He rather understands it, that the higher any one is elevated in the Church the more *Crosses*, or *labours*, must he take upon himself. Fivizinus may also be consulted, respecting the use of the Cross in the signature of public instruments; a form which appears to have arisen as much from the want of literature among the subscribers, as from reverence to the Cross. Few of these were acquainted with the art of writing, and they therefore adopted the Cross, as the ignorant among our own poorer classes still do at present.

The Cross was adopted very early as a favourite form in Architecture. Wherever Druidical monuments were found, they were supposed to be purified from the contamination of Heathenism by being carved with the figure, or altered in the shape of the Cross. We find, that in England Crosses were sometimes erected, before the Conquest, previous to a battle or great enterprise, as an anticipatory offering to Heaven. Thus, in the VIIth century Oswald, King of Northumberland, before he fought with Cadwallo, set up a Cross of wood, himself holding it till it was fixed in the earth, while his soldiers kneeled around. (Bede, *Eccl. Hist.* iii. 2.)

Of *Preaching Crosses*, a beautiful specimen is left among the remains of the Blackfriars Monastery, at Hereford. It is a hexagon open on all sides, and approached by a flight of steps around it. In the centre is a hexagon base, from which branch trefoil arches, forming the roof of the pulpit. St. Paul's Cross was probably erected for the same purpose; though in many great occurrences of our history it was abused to secular ends. It stood on the north of the churchyard. Stowe acknowledges that its antiquity was unknown to him; and it was not demolished till the revival of Iconoclasm, in the fanatical and miserable times of the Great Rebellion; when the Lord Mayor, Sir Isaac Pennington, willingly assisted in its destruction with his own hands, in 1643. Spitalfields had also a Preaching Cross, the memory of which remains in the Annual *Spital Sermons*, still preached before the Corporation of London at St. Bride's Church.

Market Crosses were to be found in most towns possessing the privilege of a market; the tolls of these markets generally belonged to some neighbouring monastery, and the Crosses were erected by the Friars as a token of their right.

Weeping Crosses were those before which a penance was performed. A penance termed *creeping to the* CROSS

Cross, will be found described in a very ancient volume cited by Bishop Percy, in one of his notes on the *Northumberland Household Book*, (436.)

Crosses of Memorial were built wherever the bier of a distinguished person rested on its way to the place of interment. The most celebrated of these Crosses in England, were erected by Edward I. in memory of his Queen, Eleanor, in 1290. This Princess is believed to have died in Herdeby, in Nottinghamshire; and between this village and Westminster fifteen Crosses, according to Gough, (*Vet. Mon.* iii.) were raised by the affection of her husband. There are only three of them remaining; at Geddington, near Kettering; at Northampton; and at Waltham. Another at Tottenham has perished long since; but the spot on which it stood still supports a modern plaster patch of pseudo Gothic. West Cheap and Charing are the others best known. The first of these stood a little westward of Bow Church, in the middle of the street; and was rebuilt in 1441. It escaped destruction at the Reformation, but the Puritans voted its fall in 1643. The second has left its name to the most frequented thoroughfare in London. The original authority for Queen Eleanor's Crosses is Thomas of Walsingham, who wrote in the XVth century, *Historia brevis Angliæ ab Eduardo I. ad Henricum V.* (anno 1291.)

Crosses of Memorial also commemorated battles, murders, and other events of note.

Stump Crosses were used as landmarks. Among these may be numbered the Shire Cross Stone, dividing Cumberland and Westmoreland, on the Wrynose mountain, near the river Duddy; Stainmore Cross, dividing Yorkshire and Cumberland; Mugdrum Cross, near Landoris in Fifeshire, dividing Fife and Strathern; and numerous others, especially in Cornwall, where they abound, concerning which even tradition, in many cases, is silent.

Crosses are also to be met with in Churchyards, and as stations on the highways, which last had the privileges of Sanctuary, (*Archæol.* viii. 28.) These were erected, doubtless, by the piety or the remorse of individuals. Two other causes may be mentioned, for which Crosses of a less durable nature were sometimes placed on the roofs of houses; first, to claim the privileges of Templars, to defend themselves against their rightful Lords, a practice condemned by the *Stat. West.* (ii. 37;) and again to mark a family infected with the plague, (Nares's *Glossary, ad voc.*) Much information relative to stone Crosses may be gathered from vol. xiii. and xiv. of the *Archæologia*; and also from Britton's *Architectural Antiquities of Great Britain.*

The Cross Row, or as it is corrupted *Cris Cros*, an abbreviation of *Christ Cross Row*, in French *Le Croix de par Dieu*, is the alphabet; so called, either because in old primers a Cross was prefixed to the Alphabet, or because the alphabet was sometimes written in the shape of a Cross, (Nares's *Glossary, ad voc.*)

Cross and Pile, a boyish game, is the Οστρακίνδα (Pollux, ix.) of the Greeks, in which a shell smeared with pitch on one side and left white on the other, was thrown up by one party while the opponent cried *νὺξ* or *ἡμέρα* (black or white) at pleasure;—the *Capita vel Navim* of the Roman children, who in a similar manner threw up a piece of money, bearing the head of Janus on one side, and the ship which brought him to Latium (Ovid, *Fasti*, l. 139) on the other;—the German *Müntz oder Ohnmüntz*,—the *Head and Tail* of modern English boys. Strutt (*Sports and Pastimes*, iv. 2) cites from the *Antiquarian Repertory*, (ii. 38,) a wardrobe roll of Edward II., from which it appears, that his Majesty was much addicted to this rational pastime: "Item, paid to Henry, the King's barber, for money which he lent to the King to play at Cross and Pile, five shillings. Item, paid to Pires Bernard, Usher of the King's Chamber, money which he lent to the King, and which he lost at Cross and Pile to Monsieur Robert Wawtteville, eight pence." The name is derived from the ancient impress of the coinage of the second race of French Kings; on one side was a Cross, on the other one or more Columns, (*Pilæ.*)

CROSSANDRA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Acanthi*. Generic character: calyx five-leaved, imbricated; corolla of one petal, tube slender, swelling at the insertion of the stamens; anthers subsessile; stigma two-cleft; cells of the seed-vessel two-seeded.

One species, *C. undulæfolia*, a shrub, native of the East Indies.

CROSSOSTYLIS, in *Botany*, a genus of the class *Monadelphia*, order *Polyandria*. Generic character: calyx four-parted; corolla of four petals, inserted into the calyx; nectaries twenty, inserted between the pitcher-shaped filaments; berry one-celled, many-seeded.

One species, *C. biflora*, native of the Society Islands. Forst. *Prod.*

CROTALARIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: standard of the corolla large, cordate, keel acuminate; filaments joined, having a dorsal fissure; style curved; seed-vessel a legume on a foot-stalk.

This genus contains sixty species, mostly natives of the Cape of Good Hope; the ripe seeds rattle in the pods, similar to the tail of the Rattle Snake; the genus is named from this circumstance.

CROTALUS, from the Greek *κρόταλον*, a rattle, Lin.; *Rattle Snake*. In *Zoology*, a genus of animals belonging to the family *Serpentes*, order *Ophidia*, class *Reptilia*.

Generic character. Single transverse scaly plates, extending along the belly and tail, the extremity of the latter furnished with a rattle, composed of numerous rings of horn received within, and movable upon each other; poison-fangs on each side of the upper jaw.

Of this venomous genus, fortunately there are but few species, and these are all provided with a kind of rattle, whence they derive their name, the noise of which gives warning of their proximity to those who may accidently come within their haunts. The structure of this rattle is very curious; it does not consist, as is generally supposed, of a number of bones loosely contained in a horny case, the agitation of which produces the noise; but it is made up of a number of semitransparent rings received upon each other, the first only beng firmly attached to the last vertebra of the tail, whilst the others are very movable upon one another. Each piece consists of two quadrangular pyramids, which are joined together by their points and flattened

CROTALUS.

laterally; that nearest the tail is much the largest, hollow within and convex externally, whilst that which is towards the tip is nearly flat, and receives upon it the hollow pyramid of the next ring, the base of the former making a projection, over which the second ring cannot slip; in this mode the larger pyramid only, which is rather of an oval shape, with its long axis from above downwards, is seen, except at the tip of the rattle, where both are visible, and show the formation of each ring, and the shape of the last caudal vertebra, upon which each is formed as upon a mould; on either side of the rattle is a groove, which extends throughout its whole length from the tip of the tail. The number of rings depends upon the age of the Snake, a new one being formed every time the skin is cast; and these are said sometimes to amount to as many as thirty; their usual number however is from five to thirteen. The size of the rings depend upon the size of the last caudal vertebra, and as that increases so does the last formed ring, in consequence of which the tip of the rattle is always smaller than the base. The noise is produced by the Snake agitating the tail, which shakes the rings upon one another; and the noise is greater or less, according to the quickness with which the tail is moved: if the animal be irritated it shakes the rattle so violently that it can hardly be seen, and the noise is very loud, resembling that which would be produced by any loose substances shaken in a tube closed at both ends with parchment. The noise is said by some persons to be audible at the distance of a hundred feet, whilst others state that in the ordinary motions of the animals it is so indistinct, that a person may come close upon the animal before observing it.

The body of the Rattle Snake is of a lengthened cylindrical form, diminishing in size towards the tail, and covered above with numerous carinated scales, whilst the belly is defended with narrow, single, transverse scales, extending from below the neck to the tip of the tail. The head is large and flat, of a triangular shape, and covered from between the edges with scales similar to those on the back, whilst those on the muzzle and those which cover the eyes are larger, and in the form of plates: the mouth is wide, and the upper lip pierced by a little groove behind each nostril; in the upper jaw on each side is placed the poison-fang, which is curved and sharp, about an inch in length, with a hole about the eighth of an inch from its point, through which the poison is ejected; the poison-fangs are contained in a sheath, and thrown out with considerable violence at the pleasure of the Snake.

The poison of the Rattle-Snake is very virulent, particularly if the Snake be in health; opportunities of seeing such cases in this country are extremely rare. Sir Everard Home has given (*Phil. Trans.* for 1810, part i. p. 75,) the account of a man who was bitten by a Rattle Snake, of which the following is a short extract.

Thomas Soper, a spare man, about twenty-six years of age, whilst teazing a Rattle Snake with a foot rule, dropped it into the cage, and incautiously opening the door to remove it, the Snake struck out and bit him once on the thumb, and a second time on the fore finger. This occurred about half-past two o'clock, October 17, 1809. He immediately went to a chemist, who imagining him to be intoxicated, from his language and conduct, gave him a dose of jalap, and made some trifling application to the bites, but the hand at this time had not swelled. In about half an hour the swelling had extended half way up the fore arm, and he was admitted into St. George's Hospital; the parts were very painful, skin cold, pulse quick, conversation incoherent, and he complained of sickness; æther and ammonia were given in camphor mixture, but did not remain on his stomach; the wounds were bathed with *aq. ammon. pur.* and the extremity covered with camphorated spirits; in two hours after, the ammonia and æther were repeated and retained, and the same medicine was given three times in the course of that evening; at a quarter after nine the pain had become excessive, and he was attacked with fainting fits every fifteen minutes; in the course of the night his pulse became very quick, and he began to talk indistinctly; the medicine was given every hour. On the following day the pulse had risen to 132, and was very feeble; the swelling had not extended beyond the shoulder into the neck, but there was a fullness down the side, and blood extravasated in the cellular membrane, as low as the loins on the right side; the hand and arm very cold, painful when pressed, and vesicated just above the elbow on the inside of the arm; the warmth of the body had returned, but the patient was very low; and as there was recurrence of vomiting, so that the stomach would not retain even brandy, two grains of opium were ordered to be taken every four hours; the faintings still recurred; the vesications and red spots continued to increase in size.

The opium was left off on the following day, (October 19,) and he was ordered to take as much wine and brandy as could be got down. Two days after he was occasionally delirious, and the irritability of the stomach continued, so that the brandy and jelly only were retained. On the 22d his pulse having become full and strong, wine was ordered instead of brandy. Six days after a slough formed on the arm, and he was attacked with purging. On the 29th his pulse became quick and feeble, and an abscess above the outside of the elbow being opened, discharged half a pint of reddish brown pus, mixed with sloughs of cellular membrane; bark was ordered, but given up on the next day, in consequence of the recurrence of purging. He continued gradually to sink, vomiting still continued, mortification took place at the axilla, and he died in the afternoon of the 4th of November. Upon examination it appeared, that there was death of the cellular membrane throughout almost the whole extremity, with a quantity of ill-formed pus beneath the skin. The viscera were healthy. Such is the account of Sir E. Home's case; but in common cases where the bite is inflicted by a healthy Snake, the poison is so violent that the person will die in a few hours, the local irritation being very violent; but on examination there is little change except in the immediate neighbourhood of the bite, where the cellular membrane is destroyed, and the muscles are much inflamed.

An account has been given by an American writer of a farmer, who, whilst mowing, accidentally trod upon a Rattle Snake, which bit him through his boot, and he died very soon after. A few days subsequently one of his sons put on the same boots, was seized with the same symptoms on pulling them off in the evening, and died on the following day. His effects were disposed of by sale, and a neighbour bought the boots; after wearing them he also was attacked with the same symptoms, but under medical treatment recovered. In consequence of this, it was thought right to examine

CROTALUS. the boots carefully, and in one of them was found the fangs of the Snake with the poison-bags still adhering to them, and it appeared that these three persons had scratched themselves in pulling off the boots. Dr. Brickell mentions, that he saw a fight between a Dog and a Rattle Snake, in which after two bites, the Dog died in less than half an hour, as did also the Snake, which had bitten itself in the second encounter. Captain Hall relates, that a Dog which was exposed to the bite of a Rattle Snake died in fifteen seconds; a second Dog was destroyed in two hours; and a third, died after three hours. After four days, he had a Dog bitten by the same Snake, and it died in thirty seconds; another was destroyed in four minutes. Three days after, a Frog was killed by the same Snake in two, and a Fowl in three minutes. And some time after, the animal having bitten itself died in twelve minutes. These are examples sufficient to show the power of the poison, and the danger to which persons bitten by the Rattle Snake are exposed. With respect to the remedies employed in these cases, several have been proposed; of these suction is considered as the most efficacious, if it can soon be had recourse to; and the application of a ligature immediately above the wound is very advisable, to prevent the absorption of the poison into the system. Escharotics have also been recommended, but these are of doubtful success. Father Gumilla, however, states, in his *Natural History of Orinoco*, that after the wound has been scarified, the explosion of gunpowder upon it is very beneficial.

Sir E. Home recommends the employment of ligature immediately above the tumified part, to compress the cellular membrane, and set bounds to the swelling, into which deep scarifications should be made, that the serum may escape, and the pus be discharged as soon as formed. The Indian mode of cure, according to Catesby, in his *History of Carolina*, is by sucking the wound, which in slight cases he states is sometimes successful; they also use roots: viz. that of the Heart Snake Root, and St. Anthony's Cross, and some others, which they chew, and apply to the wound. He further states, that from his observation the danger more materially depends on the severity of the bite than on any other cause; that he has known persons bitten survive for many hours, but where the fang had pierced an artery or vein, inevitable death ensued in less than two minutes.

With respect to the power of fascination which Rattle Snakes possess, much has been said and written, both for and against that opinion. In the *Philosophical Transactions* for 1723, in a paper giving *An Account of the Rattle Snake* by Paul Dudley, will be found the following narration, which has reference to this point. "I dare not," says he, "answer for the truth of every story I have heard of their charming or power of fascination; but yet I am abundantly satisfied from many witnesses, both English and Indian, that a Rattle Snake will charm Squirrels and birds from a tree into his mouth. A man of undoubted probity sometime since told me, that as he was in the woods, he observed a Squirrel in great distress, dancing from one bough to another, and making a lamentable noise, till at last he came down the tree and ran behind a log; the person going to see what was become of him, spied a great Snake that had swallowed him. And I am the rather confirmed in this relation, because my own brother being in the woods opened one of these Snakes, and found two stript Squirrels in his belly, and both of them head foremost. When they charm they make a hoarse noise with their mouths and a soft rattle with their tails, the eye at the same time fixed on the prey." Le Vaillant also mentions, that he saw a species of Shrike, upon which a Snake had fixed its eyes, in a violent tremor; and when the Snake was killed, the Shrike was found dead also, merely as he supposed from the excess of fear, as no wound could be found. On the contrary, Dr. Barton, of Philadelphia, in his *Memoir concerning the Fascinating Faculty which has been ascribed to various species of Serpents*, states, that he believes the story of fascination has arisen from the fears and cries of birds and other animals, in protection of their nests and young; and those who have ever seen the anxiety and terror of a Hen with a brood of chickens whilst a Hawk is in sight, will think that Dr. Barton's idea of the matter is far from unsatisfactory. CROTALUS.

All the Rattle Snakes which are known are natives of America; and it has been observed, that in proportion as that country is peopled, the Snakes decrease in number; this is easily accounted for, because the civilized part of the community destroy them, whilst on the other hand the Indians, from some superstitious motive, were accustomed to consider the death of a Snake as a public calamity.

M. Chateaubriand, in the *Journal du Commerce*, mentions, that the Rattle Snake is affected by music, and relates a case in which he saw a Canadian appease the rage of one of these animals by playing on a flute, and induce it to follow him by the same means.

Rattle Snakes are viviparous; and it is related by M. de Beauvois, that he had seen the young ones run into the mouth of the parent for safety, when disturbed; and this has been confirmed by other travellers.

In North America during the cold season, the Rattle Snakes become torpid, and are often found in the same hole with torpid Toads; they retire to their hiding places after changing their skins, and before the autumnal equinox; nor do they leave them till after the vernal equinox; during this time their bite is said to be innocuous; whilst, on the other hand, they are very dangerous when the weather is stormy, and the atmosphere much charged with electricity.

The Indians are accustomed to eat these Snakes; they watch them when asleep, and then pinning down their neck with a forked stick, irritate them to bite a piece of leather, which they forcibly pull from them till they have jerked out the poison-fangs, and having done that, they skin the animals, and cook them as we do Eels.

Rattle Snakes have been divided into two subgenera, from the head being covered either with scales, like those on the back, or with scuta or broad plates.

a Scales on the head like those on the back.

C. Horridus, Lin.; *Banded Rattle Snake*, Shaw. From five to six feet in length; general colour greyish, with a number of black lozenge-shaped spots, edged with yellowish white on the back; tip of the tail black; belly yellowish white, and not spotted; rings of the rattle from one to thirteen. It is a native of South America.

C. Durissus, Lin.; *Striped Rattle Snake*, Shaw. Of a yellowish grey colour, with between twenty and thirty

CROTALUS. — CROTCH.

irregular transverse black bands; tail entirely black; this Snake easily swims across the lakes, as by inflating its lungs its specific weight is very little. Catesby mentions, that he saw one about eight feet long, which weighed between eight and nine pounds, which was very near making its way into a house, had it not been discovered by a servant. This disposition to get into houses, he says, is not uncommon; and that soon after leaving his bed a Snake was found coiled up between the sheets. The animal is not prone to mischief unless disturbed, but is very inactive, and slow in its motions. It is a native of the United States.

These are the two principal species, the others are the *C. Atricaudatus*, Bosc.

C. Strepitans, Daud.

C. Simus, Latreille.

C. Rhombifer, Latr.; *Water Rattle Snake* of the Americans. The back, which is of a greyish brown, is formed into lozenge-shaped spots by yellowish bands, which are near each other, and very regular; the belly of a greyish white; tail short and brown. It is a native of the United States, and lives in marshes, whence it has derived its name Water Rattle Snake. Its bite is considered more dangerous than that of the Striped Rattle Snake. From twelve to eighteen inches in length.

β Head covered with scuta.

C. Miliarius, Lin.; *Louisiana Rattle Snake.* The nose and forehead are covered with nine broad scales, placed in four rows; the back is of a reddish grey, marked with a longitudinal stripe of red, which is broken by several black spots edged with white; the belly white, and the sides and belly spotted with black. This little Snake has been described by Catesby under the name of the *Viper of Louisiana*; its small size and colour prevent it being readily seen, and its rattle can scarcely be heard when the animal is held in the hand. It lives upon Frogs and other little animals; is found in marshy places, and is very prolific. The people of Louisiana consider its bite as most venomous and dangerous.

See Linnæi *Systema Naturæ*; Daudin, *Histoire des Reptiles*; *Dictionnaire des Sciences Naturelles*; Catesby's *Carolina*.

CROTCH, *n.* } *A Crotchet*, for a humour or extra-
CRO'TCHET, *v.* } vagant fancy: from the Fr. *peindre*
CRO'TCHET, *n.* } *à la Crotesque* or *Grotesque*; to paint in a strange, ridiculous, rude, and inartificial manner. An elegant metaphor, Skinner adds, derived from the art of Painting; for absurd fancies or ideas are very similar to absurd and foolish forms of things. It is more probably the diminutive of *Crotch*: Fr. *crochet*, diminutive of *croc*, a *hook*, (see CROOK,) applied to any short turn, sudden quirk.

Crotchet is applied by Dryden to the *crooked* props of a cottage; furcas *subiere columnæ*. See also the usage in Boyle.

——— And bellyche ycorued
With *crotchetes* on corneres.
Piers Ploukman. Crede, book iv.

Enformacion drane a *crochet* that past al my song.
Skelton. Trouth and Information.

There is a tradition of a dilemma, that Bisbop Morton the Chancellor vsed, to raise vp the beneuolence to higher rates; and some called it his forke, and some his *crotch*.
Bacon. Henry VII. fol. 101

As a good harper stricken far in years,
Into whose cunning hands the gout doth fall,
All his old *crotchets* in his brain he bears,
But on his harp plays ill, or not at all.
Davies. Immortality of the Soul, sec. 32.

His fantacie still working
Finds out another *crotchet*;
Then runs he to the bishop
And rides upon his rotchet.
Corbet. An Answer to the former song.

Afterward the Rodneie comming out of the same quarter (but not out of the same shire) which runneth by Estridinodoch, a *crotched* brooke.
Holinshed. The Description of Britaine, ch. xiv.

Drawing his breath as thick and short as can
The nimblest *crocheting* musician.
Donne. Elegy 1. *Jealousy.*

Every device, every fancy of our own (especially in matters of religion) is straight of divine authority; and having resolved ourselves the children of God, every *crotchet* we fall upon must be necessarily *Theopneust*, and inspired, and others accused for irreligious, or singular, that will not as soon give homage to it.
Hammond. Works. Sermon 14. vol. iv.

But, before I leave the reader, I must give him this single advertisement, that the passages included within the parentheses or *crochets*, as the press styles them, that is, between any two such marks as these [ ] were inserted long since the writing of these essays. *Boyle. The Publisher to the Reader*, vol. ii. p. 3.

A stately temple shoots within the skies:
The *crotchets* of their cot in columns rise.
Dryden. Ovid. Metamorphoses. Baucis and Philemon.

But airy whims and *crotchets* lead
To certain loss, and ne'er succeed:
As folks though inly vex'd and teas'd
Will oft seem satisfy'd and pleas'd.
Wilkie. Fables. The Ape, the Parrot, and the Jackdaw.

CROTCHET, in *Music*, is a note = half a Minim, and one-fourth of a Semibreve; its resemblance to a *hook* probably occasioned the name. *Crotchet* is also a curved instrument employed in laborious births to open the head of the fœtus, and extract it in a collapsed state.

CROTON, in *Botany*, a genus of the class *Monœcia*, order *Monadelphia*, natural order *Euphorbiæ*. Generic character: male flower, calyx cylindrical, five-toothed; corolla of five petals, sometimes none; stamens ten to fifteen: female flower, calyx five or many leaved; corolla none; styles three, two-cleft, capsule, three-celled, three-seeded.

A genus of more than eighty species, natives of the Tropical climates. *C. lacciferum*, native of the East Indies, produces the Gum Lac used in Dyeing, and the manufacture of Sealing-wax. *C. tinctorium*, native of the South of Europe, yields a blue colouring matter called Turnsole, an excellent chemical test. The bark of *C. cascarilla* is the drug called Cascarilla bark.

CROTONOPSIS, in *Botany*, a genus of the class *Monœcia*, order *Pentandria*, natural order *Euphorbiæ*. Generic character: male flower, calyx five-parted; corolla, petals five: female flowers as the male, with three stigmas, doubly bifid; capsule one-seeded.

Two species, natives of Carolina. Persoon, *Syn.*

CROTOPHAGA, from the Greek κρόταν, a tike, and φάγω, I eat, Lin.; *Ani*, Lath. In *Zoology*, a genus of animals belonging to the order *Scansores*, class *Aves*.

Generic character. Beak large, compressed, much arched above, and surmounted with a sharp edge; tail cuneiform, composed of ten feathers; toes two before and two behind.

The birds which compose this genus are natives

of the hot and damp parts of America; their legs are long; they live on insects and grain; congregate, and many pairs lay their eggs in the same nest, upon which they sit close to each other in order to hatch them; and it is said that the parent birds feed the young indiscriminately. The nest is very large, composed of dry twigs, and lined with leaves, with which when the parents leave the nest they are observed to cover the eggs. They are easily caught, and may be taught to speak. The flesh is very rank. Of the *Ani* there are three species; the *C. Ani*, Lin.; *Lesser Ani*, Lath.; which is the *Chattering Crow* of Dampier; *C. Major*, Lin.; *Greater Ani*, Lath.; *American Keel Bill*, Shaw; and *C. Varia*, *Variegated Crow*, Lath. Latham has also mentioned another species, *C. Ambulatoria*, but this is a doubtful one.

See Linnæi *Systema Naturæ*; Cuvier, *Règne Animal*; Latham, *General History of Birds*.

CROUCH, *v.*
CROUCH, *n.*
CROUCH-BACK,
CRO'UCHED, *adj.*
CRO'UCHING, *adj.*
CRO'UCHING, *n.*

Skinner says, from the Fr. *crochu*, crooked; or Ger. *kauchen*. It is probably by the common change of *k* into *ch*, merely

To *crook*, to cower, to bend or bow down, to stoop.

Crouch-back, see CROOK-BACK.

Thanne comen cursed freres, and *croucheth* ful lowe.
Piers Ploughman. Crede, D 4.

I cannot *crouch* nor kneell to such a wrong;
To worship them like God on earth alone,
That are as wolves these sely lambes among.
Wyat. The Courtier's Life.

He will not creepe, nor *crouch* with fained face,
But walks vpright with comely stedfast pace,
And vnto all doth yeeld due curtesie.
Spenser. Mother Hubberd's Tale.

Did seem in great disdain the bold affront to take
That any petty hill upon the English side
Should dare, not (with a *crouch*) to veil unto their pride.
Drayton. Poly-olbion, song 12.

For they whose minds should be exhal'd and high
As free and noble as clear poesy,
In the slight favour of some lord to come,
Basely do *crouch* to his attending groom.
Id. The Owl.

As then there was no punishment nor feare,
Nor threatning lawes in brasse prescribed were,
No suppliant *crouching* prisoners shooke to see
Their angry judge, but all was safe and free.
Hakewill. Apologie, fol. 322. *From Ovid, &c.*

They knew not how to hide their slavish approach to God's behests by them not understood, nor worthily receiv'd, but by cloaking their servile *crouching* to all religious presentments, sometimes lawful, sometimes idolatrous, under the name of humility, and terming the py-bald frippery, and ostentation of ceremonies,—decency. *Milton. Of Reformation in England.*

We were received from the boat by some hundreds of the inhabitants, whose looks at least gave us welcome, though they were struck with such awe, that the first who approached us *crouched* so low that he almost crept upon his hands and knees.
Cook. Voyage, vol. i. book i. ch. viii.

The cause of treason never was confin'd
To deeds of open war; but still adopts
The stab of *crouching* murder.
Smollett. The Regicide, act i. sc. 4.

CROUCH;—to *crouch*, in Chaucer, is to sign with the *cross*. Tyrwhit. Hence Crutched or Crossed Friars. See the Example from Pennant.

I *croucke* thee from elves, and from wightes.
Chaucer. The Milleres Tale, v. 3479.

And sayd his orisons, as is vsage,
And *crouched* hem, and bade God shuld hem blesse,
And made all siker ynow with holinesse.
Chaucer. The Marchantes Tale, v. 9582.

On the west side of this portion of the walls, stood the house of the *Crutched* or *Crossed* Friars, or *Fratres sanctæ Crucis*. The order was instituted, or at least reformed, about the year 1169, by Gerard, Prior of St. Mary de Morello, at Bologna.
Pennant. London, p. 347.

CROUP, *n. croupe, crouper* or *crupper*. "Fr. *croupe*; the top or knop of a bill; also the rump or crupper piece." Cotgrave. See CROP.

This carter thakketh his hors upon the *croupe*.
Chaucer. The Freres Tale, v. 7141.

A male tweifold on his *croper* lay,
It seemed that he caried litel array,
Al light for sommer rode this worthy man.
Id. The Chanones Yemannes Prologue, v. 16034.

Him at the first encounter downe he smote,
And ouer bore beyond his *crouper* quight,
And after him another knight, that hote
Sir Brianor, so sore, that none him life behote.
Spenser. Faerie Queene, book iv. can. 4.

But now it brake and both gane strokes so sound,
As made both horses *cruppers* kisse the ground.
Harrington. Orlando, book xlvi. st. 100.

ELDER LO. Thou hast but one, and that's in thy left *crupper*, that makes thee hobble so.
Beaumont and Fletcher. The Scornful Lady, act iv. sc. 1.

But Ralpho (who had now begun
T' adventure resurrection,
From heavy squelch, and had got up
Upon his legs with sprained *crup*.)
Butler. Hudibras, part i. can. 1.

CROUP, from the Scotch *croup, crope, crupe, crowp*, from the Moes. G. *hrop-jan, clamare*; Isl. *hrop-a*. In England and Scotland, especially on the eastern coast of the last named Kingdom, Croup is the name given to a disease of children, (*Cynanche trachealis*,) accompanied with a hoarse croaking noise in breathing, and often proving fatal. In the West of Scotland it is called the *Chock* or *stuffing*.

CROUSE, Dr. Jamieson says, is brisk, lively, bold, apparently brave. He considers the word to have descended from Dutch, *kroes*; Ger. *kraus*; Sw. G. *krus, krusig*, signifying Crisp, curled, frizzled. The primary allusion, he adds, seems to be to a cock, who is said to be *crouse*, when he bristles up his feathers, so as to make them appear as if *curled*.

And now of late Duke Humphry's old allies,
Which banish'd Elenor's base accomplices,
Attending their revenge, grow wond'rous *crouse*,
And threaten death and vengeance to our house.
Drayton. England's Heroical Epistles.

CROW, *v.*
CROW, *n.*
CRO'WING, *n.*
CROW'S-FEET,
CROW-KEEPER.

A. S. *crawan*; Ger. *kraehen. Galli more cantare*, and this, *parum detorto sensu*, from the noun—in A. S. *crawe*; Dutch, *kraye*; Ger. *krae*, a *crow*. Skinner. All formed from the sound.

The noun is applied to the sound, and to the bird.

To *crow*, is to utter the sound; to make the noise; *sc.* of a *cock*, in triumph or defiance: and thus, consequentially,

To triumph over, to vaunt, to brag or boast over, to insult.

Vor he vel of is palefrey, & brec is fot bi cas.
So suart so eni *crowe* amorwe is fot was.
R. Gloucester, p. 490.

CROW. — CROWD.

As blake he lay as any cole or *crow*,
So was the blood yronnen in his face.
Chaucer. The Knightes Tale, v. 2669.

The king's foole is wont to cry loud
Whā yᵗ he thinketh a woman bereth her hie
So long mote ye liue, and all proud
Til *crowes-fete* grow vnder your eie
And send you then a mirrour in to prie.
Id. The seconde Booke of Troilus.

There is no cocke to *crowe* daie.
Gower. Conf. Am., book iv. fol. 80.

Ihesus seide to hym treuli I seyde to thee, for in this nyght bifore the cok *crowe* thries thou shalt denie me.
Wiclif. Matthew, ch. xxvi.

Jesus sayde vnto hym: verelye I saye vnto thee, that this same night before the cocke *crowe*, thou shalt denye me thrise.
Bible, 1551.

Let hir go hide hir head
in lothsome lurcking mue,
For crabbed *crow-foote* marres her face
and quite distaines hir hue.
Turbervile. The Louer against one that compared his Mistress with his Ladie.

If one of them happen to be conqueror, presently upon victorie hee *croweth*, and himselfe soundeth the triumph. Hee that is beaten, makes no words, nor *croweth* at all, but hideth his head in silence. *Holland. Plinie*, vol. i. fol. 279.

I saw myselfe a *crow* belonging to a certaine knight of Rome, who brought him out of the realme of Grenado in Spayne, which was a very strange and admirable bird, not onely for the exceeding black colour of his feathers, but also for that he could pronounce and expresse so perfectly many words and sentences together, and learned still new lessons every day more than other.
Id. Ib. vol. i. fol. 294.

This good champion of our Saviour, as a lyon that is reported to be daunted with the *crowing* of a cock, is stricken out of countenance and quite amazed with the voyce of a silly damsel.
Hale. Rem., part i. p. 106.

Or if thou'lt not thy archery forbear,
To some base rustic do thyself prefer,
And when corn's sown, or grown into the ear,
Practise thy quiver, and turn *crow-keeper*.
Drayton. Ideas, 48.

We will be with you ere the *crowing* cock
Salutes the light, and struts before his feather'd flock.
Dryden. The Epithalamium of Helen and Menelaus.

In the tragedy of Hamlet, where the ghost vanishes upon the cock's *crowing*, he takes occasion to mention its *crowing* all hours of the night about Christmas time, and to insinuate a kind of religious veneration for that season. *Tatler*, No. 111.

Shrill *crows* the cock, the dogs give dismal yell;
And with the whirlwind's roar full comes the swell.
Mickle. Almada Hill.

CROWD, *v.* CROWD, *n.* CRO'WDING. "A. S. *cruth*; *turba confertissima*. A crowd, a prease or throng of people." Somner. Dutch, *kruyden*, to thrust. To thrust or press together, to flock or swarm together. *Croud*, in the second Quotation from Chaucer, is explained by Mr. Tyrwhit;—to shove together. But Skinner translates the line;—*qui diurno sono perpetuo Citharam pulsas.* See CROWD, following.

But in the same ship as he hire fond,
Hire and hire yonge sone, and all hire gere
He shulde put, and *croude* hire fro the lond
And charge hire, that she never eft come there.
Chaucer. The Man of Lawes Tale, v. 5221.

O firste moving cruel firmament,
With thy diurnal swegh that *croudest* ay,
And hurtlest all from est til occident,
That naturally wold hold another way;
Thy *crouding* set the heven in swiche array
At the beginning of this fierce viage,
That cruel Mars hath slain this marriage.
Id. Ib. v. 4716.

I muste be *crowded* in the throng,
and staie, when I woulde walke
What ayles this foole? how shoues he on?
suche is their angrie talke.
Drant. Horace. Satyre 6.

Who will, and dare retche forthe his hande,
and man the throughe the *croude*,
Beare of the heuie multitude,
cracke this and crye aloude.
Id. Ib. Epist. to Numitius.

There sees his *crowded* wharfs, and people-pest'red shores,
His bosom over-spread with shoals of labouring oars.
Drayton. Poly-olbion, song 17.

But it may be another [folly] will intervene, and a third will steal in upon you, or you are surpriz'd in another instance; or you are angry with yourself for doing so, and that anger transports you to some undecent expression, and as a wave follows a wave, we shall find instances of folly *croud* in upon us.
Taylor. On Repentance, ch. x. sec. 7.

So in Judæa, where a *crowd* of people would have been very troublesome in the heat of the day: we are told, That they brought their sick to Jesus to be healed, when the sun was set.
Grew. Cosmo Sacra, book v. ch. ii.

They also pass'd a declaration against the *crowding* of soldiers and others at the doors of both houses.
Whitelock. Memorials. Anno 1647.

Therefore the communication of vital impresses (and all impresses here are vital, though not all perceptions, nor any of them motions) is not made by the jogging or *crouding* of parts, but by spiritual sympathy, which is more loose and free from those restrictions that are in the mechanical laws of matter.
Henry More. Preface, fol. xiv.

What is a man's whole life but the inconsiderable measure of a span? and yet the vast business of eternity is *crowded* into this poor compass. *South. Sermon* 15. vol. vii.

But he did rise after three days, according to his prediction, and conversed upon earth with his followers for forty days together, showing himself not only to a few particular disciples, but to great *crowds* of them, five hundred at a time.
Sharp. Works. Sermon 6. vol. i.

All thronging and listening, they gap'd for the blessing
No presbyter sermon had more *crowding* or pressing.
Rochester. A trial of the Poets for the Bays.

It would not have entered into their thoughts to have *crowded* together so many allusions to time and place, and to other little occurrences, which nothing besides the presence of the objects could suggest.
Jortin. Discourses concerning the Christian Religion, dis. 6.

I come from empty noise, and tasteless pomp,
From *crowds* that hide a monarch from himself,
To prove the sweets of privacy and friendship,
And dwell upon the beauties of Irene.
Johnson. Irene, act i. sc. 4.

CROWD, *v.* CROWD, *n.* CRO'WDER. Spelman says; *crotta. Fidicula Britannica. Cambris hodie a* croud. *Numquid a fidibus Hispan.* Cuerda *vel Græc.* κροταλίζω *strepo, plaudo.* Skinner prefers the A. S. *cruth*, a crowd or multitude, *q. d.* a *crowd* of fidlers. See CROWD, *ante*, the second Example from Chaucer.

But his eldre son was in the feeld, and when he cam, and neighede to the hous he herde a symfonye and a *croude*.
Wiclif. Luke, ch. xv.

GNOTH. Fiddlers, *crowd* on, *crowd* on; let no man lay a block in your way. *Crowd* on, I say.
EVAN. Stay the *crowd* awhile; let's know the reason of this jollity. *Massinger. The Old Law*, act v. sc. 1.

Warble upon a *crowde* a little.
Ben Jonson. Cynthia's Revells, act i. sc. 1.

That keep their consciences in cases
As fidlers do their *crowds* and bases.
Butler. Hudibras, part ii. can. 2.

I never heard (says the accomplished Sir Philip Sidney) the old song of Percy and Douglas, that I found not my heart moved more than with a trumpet; and yet is it but sung by some blind *crowder*, with no rougher voice than rude stile: which being so

CROWD. — CROWN.

evill apparalled in the dust and cobweb of that uncivill age, what would it worke trimmed in the glorious eloquence of Pindare. *Ritson. A Historical Essay on National Song.*

In Leland's *Collectanea*, (iv. 135,) CRUTH is the word by which *liticen* is rendered. The Crowd is sculptured among the outside ornaments of Melrose Abbey, which was erected in the reign of Edward II., and it probably continued in use till the introduction of the Violin in that of Charles I. (*Life of Ant. Wood, by himself*, in Hearne's *Caii Vindiciæ*, 501.)

Mr. Daines Barrington sent a Paper to the Antiquarian Society, containing a description of this instrument. (*Archæologia*, iii. 30.) At the time at which he wrote, (May 3, 1770,) there was but one person in the Principality of Wales who could play upon it; this was John Morgan, of Newburgh, in Anglesea, and he was fifty-nine years of age, so that it was probable the art would soon be lost. We have copied Mr. Barrington's Plate, (Plate XXI. fig. 7, *Miscellanies*,) and his description is as follows: The Cruth has six strings, two of which project beyond the finger-board, and one, touched by the thumb, is placed under them. The bridge is perfectly flat, so that all the strings are necessarily struck at the same time, and afford a perpetual succession of chords. The Bow resembles that of a Tenor fiddle. See also Hawkins's *Hist. of Music*, b. iii. 3.

CROWEA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Rutaceæ*. Generic character: calyx five-parted; petals five, sessile; filaments of the stamens cohering at their base by a fringe of dense hairs, anthers sessile, about the middle of each filament; capsules five, coalescing, two-valved, one-seeded.

Two species, natives of New Holland. *Trans. Linn. Soc.* vol. iv.

CROWN, *v.*
CROWN, *n.*
CRO'WNER,
CRO'WNET,
CRO'WNING, *n.*
CRO'WNLESS,
CROWN-DUTY,
CROWN-LANDS,
CROWN-RIGHT,
CROWN-SHORNE.

Dutch, *kroone*; Ger. *kron*; Fr. *couronne*; It. and Sp. *corona*; Lat. *corona*. See CORONAL, above. Applied as well to, That which is placed upon or surrounds the head; as to the head itself, the top of the head, the top or summit of any thing. As *crown* is a mark, sign or badge of rank and dignity; it is used, met. for

Dignity, honour, glory, ornament, perfection, completion.

To *crown*; to put on, or cover with, a *crown*; *sc.* in token of honour or dignity; and thus, consequentially, to honour, to dignify, to adorn, to bestow a prize or reward; to accomplish, to perfect, to complete.

Crownet, see CORONET.

Some of ys conselers hym gonne þus bi se,
þat he schulde nyme ys neuew, þat hatte Conan,
And *crowne* hym kyng of þis lond.
R. Gloucester, p. 89.

þo was þoru þe kyng arerde þe abbey of Redynge,
In tuo & tuentyþe zer of hys *crouning*.
Id. p. 440.

þe duke wrote to þe kyng, in luf withouten loth,
Bisout him ouer alle þing, þat he wild hold his oth,
& zelde him þe *coroun* of Inglond ilke adele.
R. Brunne, p. 69.

And whan this worthy duk had thus ydon,
He toke his host, and home he rit anon,
With laurer *crouned* as a conquerour.
Chaucer. The Knightes Tale, v. 1029.

For he that fightith in a battel schal not be *crowned* but he fighte lawfulli. *Wiclif.* 2 *Epistle of Tymothy*, ch. ii. CROWN.

And though a mā striue for a mastery, yet is he not *crowned*, except he stryue lawfully. *Bible*, 1551.

I that in Dauides seate sit *crowned*, and rejoice,
That with my septer rule the Jewes and teach them with my voyce,
Have searchid long to know all things vnder the soune,
To see how in this mortal lyef a surety might be wonne
Surrey. Ecclesiastes, ch. i.

Be thou feithful to the deeth, and I schal gyue to thee a *crowne* of lyf. *Wiclif. Apocalips*, ch. ii.

Yea though he gaine and cram his purse with *crounes*,
And herewith scape the foemen's force in fielde,
He nought foreseeth that treasons dwell in towns,
Ne what mishappes his yll got goods may yeeld.
Gascoigne. The Fruites of Warre.

Disdaine him not: for shal I tel you what?
Such clime to heauen, before the shauen *crownes*
But how? forsooth, with true humilytie.
Id. The Steele Glas.

Himself with garland freshe, and *crownet* greene of oliue bandes,
Aduancing stood in ship. *Phaer. Æneidos*, book v. p. 130.

I likewise must have power to *crown* my works with wished end;
Because I am a Deitie, and did from thence descend,
Whence thou thyself.
Chapman. Homer. Iliad, book iv. fol. 52.

All lik't his speech, and on their hands, the herald's water shed:
The youths *crownd* cups of sacred wine, to all distributed.
Id. Ib. book ix. fol. 120.

O thou mother of delights,
Crowner of all happy nights,
Star of dear content, and pleasure,
Of mutual loves the endless treasure,
Accept this sacrifice we bring.
Beaumont and Fletcher. Mad Lover, act v. sc. 1.

Mean while (whose actiue life had lawd)
Did John of Gaunt decease:
So to the banisht duke his sonne
Fiue *cronets* did increase.
Warner. Albion's England, book v. ch. xxviii

Sometimes a lovely boy in Dian's shape,
With air that gilds the water as it glides,
Crownets of pearl about his naked arms
And in his sportful hands an olive-tree,
Shall bathe him in a spring.
Marlow. Edward II., act i. sc. 1.

Secondly, our popish parliaments, peirs and prelates, have oft translated the *crown* from the right heirs, and setled it on others, who had no lawful right or title to it, electing and acknowledging them for their onely soveraigne lords, in which actions the popish prelates and clergy were commonly the ringleaders: witnesse their electing and *crowning* of Edward who was illegitimate, and putting by Etherald the right heire after Edgar's decease, Anno 975.
Prynne. Treachery and Disloyalty of Papists, part i. p. 9.

Our excellent Edgar for increase of his benefits towards the isle, join'd with preservation of his *crown-duties*, converted the tribute of the Welch into three hundred wolves a yeare.
Drayton. Poly-olbion, song 9.

The king, well perceiuing, how vnable he should be eyther to recouer those his trans-marine dominions, or almost to maintaine his owne royall estate at home, if such, as by the vnrulynes of former times hauing gotten possession of *crown-lands*, might still with-hold them, resolued to resume them.
Spede. Henry III. book ix. ch. ix. sec. 16.

To whom, from her, the *crowne-right* of
Lancastrians did accrewe.
Warner. Albion's England, book vii. ch. xxxiv.

We haue been so inured with the like & so manie, that such wilie practices cannot be to vs inuisible, though this *crowne-shorne* generation thinke themselves to danse in a net.
Fox. Martyrs, fol. 132.

Whom God has placed upon the throne, shall any human power presume to drag to the bar? or shall royal heads be *crowned* and annoynted only to prepare them to be sacrificed upon a scaffold? *South. Sermon*, vol. iii. p. 490.

CROWN. — CROY-LAND.

From hence he does that antique pile behold,
Where royal heads receive the sacred gold:
It gives them *crowns*, and does their ashes keep,
These made like Gods, like mortals there they sleep.
Waller. On St. James's Park.

An ounce of silver, whether in pence, groats, or *crown* pieces, silvers or ducatoons, or in bullion, is and always eternally will be of equal value to any other ounce of silver, under what stamp or denomination soever.
Locke. Considerations of the lowering of Interest, &c.

And orders ten porters to bring the dull reams
On the death of good Charles, and *crowning* of James.
Stepney. On burning the Duke of Monmouth's Picture, 1685.

Whence dwells such syren music in a word,
Or sounds not Brutus noble as my lord?
Though *crownets*, Pult'ney, blazon on thy plate,
Adds the base mark one scruple to its weight.
P. Whitehead. Honour.

The Niobe of nations! there she [Rome] stands,
Childless and *crownless*, in her voiceless woe;
An empty urn within her wither'd hands,
Whose holy dust was scatter'd long ago.
Lord Byron. Childe Harold's Pilgrimage, can. 4. st. 79.

CROYLAND, or CROWLAND, so called, according to Minsheu, from Crow, *cruda* and *cænosa*, and land, *terra*; a very ancient Town in the County of Lincoln, distinguished principally by an Abbey, which owes its first remote origin to St. Guthlec. The building of the founder was little more than a hut, and the Monastery itself must date from Ethelbald, King of Mercia, A. D. 716. Such was the marshy nature of the ground on which he built, that Bede (iii. 2) relates, that when he reared of stone that pile which Guthlec had formerly constructed of wood, he drove piles of oak, and brought solid earth in boats from the uplands, nine miles distant. In his Charter the lands belonging to the Abbey comprise the whole *Island* of Croyland, bounded by the four waters; Shepishes on the east, Nene on the west, Southie on the south, and Asendyk on the north; in length four leagues, in breadth three. In 870 the Monks were massacred by the Danes; about the middle of the following century the Abbey was rebuilt, and was destroyed by an accidental fire in 1091, but arose from its ruins with increased splendour, so that it became one of the most magnificent religious structures in England. The ruins still show its former grandeur, and an ample account of it will be found in Gough's *History and Antiquities of Croyland*, and in Holditch's *History of Crowland Abbey, digested from the materials of Mr. Gough*, 1816. A horn given to the Abbey by Witlaf, King of Mercia, is described in *Archæologia*, iii. 9; and Papers on a remarkable boundary stone, *St. Guthlec's Stone*, in its neighbourhood, will be found in the same work; two by Governor Pownall, iii. 96, vi. 395, and one by Mr. Pegge, v. 101, (to which last Paper is annexed a print of the stone itself, and of its conjectured restoration.) This stone will be found between Spalding and Croyland, near Brother-house, almost buried in the earth, on the side of a bank. It has now stood nearly 900 years on the same spot on which it was originally placed, and its history is as follows: In the Xth century under the reign of Athelstan, five Brethren alone were left remaining in the Monastery, whose names were Clarenbald, Swartiz, Thurgas, Brun, and Aio. This last was brother of Turketul, Athelstan's Chancellor, who in a fit of devotion became Abbot of the Convent. Through his interest with the King, the lands and possessions of the Monastery were afresh confirmed to it (after a surrender to Athelstan) by royal Charter; and in order to comply with the necessary previous form of law, the existing Brethren were obliged to walk the boundaries. On this occasion, the stone in question was set up, (Ingulphus, *ed. Gale.* p. 39.) It is now a fragment, upon which the following words may be distinctly traced:

Aio hanc petram Guthlacus habet sibi metam,

which Gibson has rendered, (Camden, *Britannia*, 551.)

This rock, *I say*, is Guthlech's utmost bound;

and Philemon Holland, in his translation of the same work,

I say that Saint Guthlake
This stone his bound doth make;

but Governor Pownall with much ingenuity contends, that *Aio*, here is not the Latin verb, but the name of the above mentioned Monk; and that, in the lost part of the stone, those of his four Brethren were similarly recorded, since it was necessary before the surrender to determine who the persons were in whom the possession was legally vested. Mr. Pegge disputes this interpretation, but by no means on sufficient grounds. The Arms borne by the Abbey of Croyland were three of St. Guthlec's whips, and three of the knives with which St. Bartholemew was flayed. Hence on St. Bartholemew's-day, knives were presented to all visitors to this Abbey. The custom at length became so expensive, that it was abolished during the reign of Edward IV.; but a great number of knives of different sizes have been found among the ruins.

The curious triangular Bridge in this Town has been already briefly mentioned. (See BRIDGE.) An ancient Statue which remains upon it has excited much doubt among Antiquaries, who cannot decide whether it is St. Guthlec, King Ethelbald, or Henry II. Croyland from its marshy neighbourhood, is accessible only on the north and east, by artificial embankments. The Town consists of four streets, separated by water courses; its chief trade consists in wild fowl, caught in decoys. Distance eleven miles from Peterborough; eighty-six north from London. Population in 1821, 2113.

CRUCIANELLA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Rubiaceæ*. Generic character; corolla of one petal, funnel-shaped; tube filiform, border unguiculate; calyx two-leaved; seeds two, linear.

Eight species, natives of the south of Europe.

CRU'CIATE, *v.* } Lat. *cruciare, atum*, to torture,
CRU'CIATE, *adj.* } to inflict severe or excessive
CRU'CIATION. } pains; as if transfixed upon a *cross*, q. v.

I perceyue thy manyfolde tribulacyons, how thou art outwardlye afflicted by continuall persecution of enemies, and inwardly *cruciated* in conscience to behold the dãnable errours, frowardnes, blindnes, and vtter contempte of God's trueth, which reygneth in the wycked. *Bale. Image*, D v.

Thei shal be smyten downe with swerde and fyre, and some *cruciated* in captiuitie. *Joye. Exposicion of Daniel*, ch. xi.

Immediately I was so *cruciate*, that I desired, & in all that I mought prouoked deth to take me
Sir Thomas Elyot. Governour, book ii. p. 145.

Thus thinking like a foole with my selfe, whie God of his goodnesse would suffer his children and seruants so vehementlye to be *cruciated* and afflicted.
Fox. Martyrs. The ten first Persecutions, fol. 90.

Since we know we have to do with a God that delights more in the prosperity of his saints, than in the *cruciation*, and howling of his enemies.
Hall. The Soul's Farewell to Earth, sec. 7. vol. iii.

CRUCIBLE. CRUCIFY.

CRUCIBLE, *n.* Barb. Lat. *crucibulum*; It. *crosolo*; Fr. *croiset*; a cruit, *crucible* or little pot, such as goldsmiths melt their gold in." Cotgrave. So called from being made in the shape of a cross or from having a cross impressed upon it. See *Crucibulum*, in Du Cange. Chaucer uses *Crosslet*, q. v.

So it is in the chrystal powdered, and so it is also before; for if it be made hot in *crusible*, and presently projected upon water, it will grow dim. *Sir Thomas Brown*, book ii. ch. i.

The emperour had bore before hym, a brennynge brande: The consulle an axe of armes, the priestis haue in maner of a coyfe; the senatours a tongue in maner of a *crusible* on their armes.
Golden Boke, C. iii.

Some that deal much in the fusion of metals inform me, that the melting of a great part of a *crucible* into glass is no great wonder in their furnaces. *Boyle. The Sceptical Chymist.*

Then must thy gates fly open, and reveal
The mines that lay long forming under ground,
In their dark cells immur'd: but now full ripe
And pure as silver from the *crucible*,
That twice has stood the torture of the fire
And inquisition of the forge. *Blair. The Grave.*

The Hessian CRUCIBLES are among the most esteemed for resisting fusion. Those employed in glass-houses are made of a mixture of burnt and unburnt clay; and plumbago improves such as are intended for the fusion of metals. Wedgwood's ware is well fitted for retaining saline fluxes; and silver, iron, and platina are occasionally used in the formation of them.

CRU'CIFY, *v.* CRU'CIFIER, CRU'CIFIX, CRU'CIFIXION, CRU'CIFORM, *adj.* CRU'CIFYING, *n.* CRU'CIGEROUS. Fr. *crucifier*; It. *crocifiggere*; Sp. *crucificar*; Lat. *crucifigere*. To fix upon a cross; and thus, generally, to torment or torture, to afflict with severe, with excessive pains, with agony, with anguish.

But whanne the bisshopis and mynystris hadden seien hym, thei crieden and seiden, *crucifie*, *crucifie* him. Pilat seith to hem, take ghe hym and *crucifie* ghe, for I fynde no cause in him.
Wiclif. Jon, ch. xix.

When the hye preestes and ministers saw him, they cryed sayinge: *crucifye* him, *crucifye* him. Pilat sayd vnto thē, take ye hym and *crucifye* hym: for I find no cause in him.
Bible, 1551.

Thou must be meke and patient, and let euery mā goe ouer thee, and tread thee vnder foote and do thee wrong: and yet loue them, and pray for them, as Christ did for his *crucifiers*.
Tyndall. Workes, fol. 210.

Howe be it, we nede not much to marnayl though Tindall, and Luther, and frere Huskin, and theyr felowes, sette litle by the signe of the *crosse* made by a man's hande in y^e^ ayre, sith we see that they sette so little by an ymage of the *crucifixe*, and also by Chrystes holy cross itselfe, whereof Luther wryteth that if he had all the pieces, he would cast them all there as neuer sūne should shyne vpon them.
Sir Thomas More. Workes, fol. 398.

Other prayers he can allow for the world, the veriest incarnate devils in it, the very *crucifiers*, Father forgive them: but this prayer for perseverence, for keeping, is only for the believers there. *Hammond. Works. Sermon* 9. vol. iv.

Then to her wofull seruants did
She passe a kind adew;
And kissing oft her *crucifix*,
Vnto the block she drew.
Warner. Albion's England, book x. ch. lvi.

For to hang a man, as in our northern countries, is meant and done; is to hang him, *sub ligno*, and not *super ligno*, whereas the Hebrew expresseth it to be done, *super ligno*, that is, by *crucifixion*. *Grew. Cosmo Sacra*, book iv. ch. viii.

By these, I say, and many other arguments, 'tis plain that the Gentiles had their part and guilt in the *crucifying* of Christ, and so by slaying the Son, as it is in the parable, provoked and deserved the implacable revenge of the Father.
Hammond. Works. Sermon 13. vol. iv.

The *crucigerous* ensigne carried this figure, not transversely or rectangularly intersected, but in a decussation, after the form of an Andrian or Burgundian cross which answereth this description. Whereby the way we shall decline the old theme, so traced by antiquity of crosses and *crucifixion*.
Sir Thomas Brown. Cyrus Garden, ch. i.

CRUCIFY. CRUDE.

What person of sobriety and recollection would not *crucify* his sin rather than damn his soul. *South. Sermon* 6. vol. viii.

I cannot think of any thing that can be farther objected upon this argument, unless it be this: that though it was not fit our Saviour should vouchsafe that kindness to his enemies and *crucifiers*, as to appear to them; yet at least, he ought to have chosen some other witnesses besides his own disciples, of his resurrection.
Sharp. Works, vol. ii. p. 163.

The sight of Christ in glory, with his saints, will, in an inexpressible manner, torment the *crucifiers* of the one and the persecutors of the others; as it will shew them the hopes and wishes of their adversaries all granted to the full, and all their own "desires" and designs for ever at an end.
Bishop Horne. Commentary on Psalm cxii.

The Earl of Kent observing that in her devotions she made frequent use of the *crucifix*, could not forbear reproving her for her attachment to the popish trumpery as he termed it.
Hume. History of England. Elizabeth. Anno 1587.

CRUD, see CURD.

CRUDE, CRU'DELY, CRU'DENESS, CRU'DITY. Fr. *crud*; It. and Sp. *crudo*; Lat. *crudus*; (*adhuc in* cruore,) from *cruor*, gore. Cruor *dicatur postquam effusus venis, ac jam frigefactus; unde et nomen. Nam κρύος, frigus; unde κρυερὸς, frigidus.* Vossius.

Raw, in a raw state, undressed, unprepared, unfinished, indigested; austere, harsh, unripe, immature.

Wyne is not to be forboden, for vnto wyne vneth any thynge may be compared that so well dygesteth *crude* humours.
Sir Thomas Elyot. The Castel of Helth, book iv.

The meate remaininge raw, it corrupteth digestion & maketh *crudenes* in the vaines. *Id. Ib.* book ii.

Cruditie is a vycious concoction of thynges receyued, they not beinge holly or perfitely altered. *Id. Ib.* book iv.

Whereby he [Virgil] would insinuate that there is an igneous, luminous, or æthereal vehicle alwaies intimately adhering to the soul, though it be much slaked or damped with the gross and *crude* moisture of the body during this earthly peregrination.
More. Appendix to Defence of Philosophical Cabbala, fol. 134.

John Hus, for the *crude* delivery of this truth was sentenced by the council of Constance. *Taylor. Sermon* 6. part i.

This is to be done not *crudely*, by returning to them as they are, submitting our necks to our former yoke, but by taking away at once the division, and the causes of it, on which side soever. *Hammond. Works*, vol. ii. part ii. fol. 47.

They are opprest with this very learning, as a stomach with *crudities*, and thereby fall many times εἰς στρόφους καὶ καταβόλας, into vertigoes and catarrhes.
Hammond. Works. Sermon 13. vol. iv.

Now tardier fruits of *cruder* kind are lost,
But tam'd with fire or mellow'd by the frost.
Dryden. Ovid. Metamorphose, from the fifteenth Book.

We may say, wisdom and power in God are absolutely necessary, because God himself is absolutely necessary: but we cannot *crudely* say, the curing in men their aversion to the true religion, is absolutely necessary, because it is not absolutely necessary that man should be saved. *Locke. A third Letter of Toleration.*

No architect took greater care than he [Vanburgh] that his work should not appear *crude* and hard: that is, that it did not abruptly start out of the ground without expectation or preparation. *Sir Joshua Reynolds. Discourse* 13.

The strong-built pedant who both night and day
Feeds on the coarsest fare the schools bestow,
And *crudely* fattens at gross Burman's stall;
O'erwhelm'd with phlegm lies in a dropsy drown'd,
Or sinks in lethargy before his time.
Armstrong. The Art of Preserving Health, book iv.

May we not ask such prefacers, if what they allege be true, what has the world to do with them and their *crudities*.
Harris. Hermes. Preface, p. viii.

CRUDELITY. — CRUENTATE.

CRUDELITY, Lat. *crudelitas*; cruelty; q. v.

By your workes we iudge you and your zeale to righteousnes, & not by your sophisticall suttle reasons, with which ye would claw our eares, bleare our eyes, & beguile our wittes, to take your tyrannous couetous *crudelitie* for the zeale of righteousnes.
Tyndall. Workes, fol. 195.

CRUDIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosa*. Generic character: calyx one-leaved, border four-cleft; corolla none; filaments expanded at the base; seed-vessel a Samara, usually two-seeded, orbicular.

Two species, natives of the woods of Guiana. Persoon, Syn.

CRU'EL, *adj.*, **CRU'ELLY**, **CRU'ELNESS**, **CRU'ELTY**. Fr. and Sp. *cruel*; It. *crudele*; Lat. *crudelis*, from *crudus*; and *crudus* from *cruor*, gore. See CRUDE, above. Blood-thirsty, eager or desirous for blood; bloody-minded;—hard-hearted, savage, barbarous, inhuman, unrelenting.

Þat in tyme of warre as a lomb ys boþe meke & mylde,
And in tyme of pes as a lyon boþe *cruel* and wylde.
R. Gloucester, p. 57.

Alas (quod he) the day that I was bore!
How longe, Juno, thurgh thy *crueltee*
Wilt thou werreien Thebes the citee.
Chaucer. The Knightes Tale, v. 1545.

That other Nabuzardan hight
Whiche of his *crueltee* behight
The temple to distroie and waste;
And so he did in all haste.
Gower. Conf. Am., book v. fol. 122.

By reason therof, there is nother Englysshe nor Frenche, nor robbers, nor reyuers, y^t^ dothe them any hurte to the value of one pẽy: and so his countre is in sauegarde and iustice truely kepte; for in doyng of iustyce he is right *cruell*.
Froissart. Cronycle, vol. ii. ch. xxiv.

Then fall thei to railing and reprouing the justice of God and sai that himself he wrought their euil workes, and wrongfully punished them, & *cruellye* treated them to wretchednes.
Sir Thomas More. Workes, fol. 375.

And you with her, of *cruelnesse*,
Did set your foote upon my necke,
Me, and my welfare to oppresse.
Wyat. The Louer complaineth himselfe forsaken.

Ones have the windes the trees dispoyled clene,
And ones again begin their *cruelnesse*,
Sins I have hid under my brest the harme,
That neuer shall recouer healthfulnesse.
Surrey. Description of the restless state of a Louer.

An. 1320 there was a sect of whippers in Germany, that to the astonishment of the beholders, lashed, and *cruelly* tortured themselves. *Burton. Anatomy of Melancholy*, fol. 655.

Soone as the knight she there by her did spy,
Standing with empty hands all weaponlesse,
With fresh assault vpon him she did flie,
And gan renew her former *cruelnesse*.
Spenser. Faerie Queene, book v. can. 5.

——— My people's daughters live,
By reason of the foe's great *cruelness*,
As do the owls in the vast wilderness.
Donne. Divine Poems, ch. iv.

Abont three hundred persons were condemned to the galleys and treated most *cruelly* in them, upon no other pretence, but because they would not change their religion, and had endeavoured to make their escape out of France.
Burnet. Own Times. Queen Anne. Anno 1707.

This man [Jefferies] who wantoned in *cruelty*, had already given a specimen of his character in many trials where he presided; and he now set out with a savage joy, as to a full harvest of death and destruction.
Hume. History of England. James II. Anno 1685.

CRUENTATE, *adj.* Lat. *cruentatus*, past participle of *cruento*; from *cruor*, gore; gory, bloody.

For the reason of this wonder, he attempts it by mechanism, and endeavours to make it out by atomical aporrheas, which passing from the *cruentate* cloth or weapon to the wound, and being incorporated with the particles of the salve carry them in their embraces to the affected part.
Glanville. The Vanity of Dogmatizing.

CRUISE, *v.*, **CRUISE**, *n.*, **CRUI'SER**, **CRUI'SING**. Skinner says, to *cruise* up and down, *huc illuc discursare, cursum obliquare.* To *cross* up and down. To pass and repass, to rove or wander.

He feigned a compliance with some of his men, who were bent upon going a *cruise* to Manilla, that he might have leisure to take some favourable opportunity of quitting the privateer trade.
Dampier. Voyage, &c. Anno 1686.

In all my *cruisings* among the privateers, I took notice of the risings of the tides; because by knowing it, I always knew where we might best hale ashore and clean our ships.
Id. Ib. Of Tides and Currents, vol. ii. part iii. p. 97.

Thy thoughts are vagabonds; all outward-bound
Mid sands, and rocks, and storms, to *cruise* for pleasure;
If gain'd, dear bought; and better miss'd than gain'd.
Young. The Complaint. Night 8.

About the same time thirty frigates were appointed to be built, as well to increase the fleet, as to secure the trade of the nation by *cruising*. *Ludlow. Memoirs*, vol. i. p. 369.

Your sentence, sweet or bitter, soft or sore,
Floats his frail bark, or runs it bump ashore,
Ye wits above, restrain your awful thunder:
In his first *cruise*, 'twere pity he should founder.
Smollett. Epilogue to the Reprisal.

While at the bow the watch Arion keeps,
To shun what *cruisers* wander o'er the deeps.
Falconer. The Shipwreck, can. 3.

CRUSE, *n.*, **CRUET**. Ger. *krug*; Fr. *cruche*. An earthen pot or pitcher. See CROCK.

No brawler in his familie
nor angry for a *crewse*
Breakinge, no crafte of man, or place
could him in ought abuse.
Drant. Horace. Epistle to Julius Florus.

And Dauid toke the speare and the *crewse* of water that were at Saul's head, & they gat thẽ away, and no man saw or wist it or awoke. *Bible.* 1 *Samuel*, ch. xxvi.

You thinke it to be one of the chiefeste pointes of godlines to wash your handes, your cuppes, your *cruces*, and to observe manye other lyke thynges. *Udall. Mark*, ch. vii.

Within thy reach I set the vinegar!
And fill'd the *cruet* with the acid tide,
While pepper-water worms thy bait supplyd. *Swift.*

His hours of study clos'd at last,
And finish'd his concise repast,
Stoppled his *cruise*, replac'd his book
Within its customary nook.
Cowper. The Moralizer Corrected.

CRULL, see CURL.

CRUM, *v.*, **CRUM**, *n.*, **CRU'MBLE**, *v.*, **CRU'MMY**. "A. S. *crymman*; *friare, in micas frangere*, to crumme or crumble. Kiliano. *Kruymelen.*" Somner. Dutch, *kruyme.* A small part or portion; a little bit; that part, (*sc.* of bread) which separates into *crums*; which *crumbles*.

Thinke on the woman Cananee, that saide
That whelpes eten som of the *cromes* alle
That from her lordes table been yfalle.
Chaucer. The Second Nonnes Tale, v. 15528.

Bere hem none *cromes*.
Piers Plouhman. Vision, p. 143.

For he, whiche had his full paunche
Of all lustes at borde,
Ne deigneth not to speake a word,
Onliche a *cromme* for to yeue,
Wherof this poure might leue
Upon the yefte of his almesse.
Gower. Conf. Am., book vi. fol. 134.

And sche seide, yhis lord, for whelpis eten of the *crummes* that fallen down fro the boord of her lordis.
Wiclif. Matthew, ch. xv.

She aunswered and sayde: truth Lorde, neuerthelesse the dogges eate of the *crommes*, which fall frome their master's table. *Bible*, 1551.

Nay God forbide, that in the frendshyppe of Lysippus and Titus shoulde happen any suspition; or that any fantasye shulde perce my hedde, wherby that honourable loue betwene vs shulde be the mountenaunce of a *crumme*, peryshed.
Sir Thomas Elyot. Governour, p. 141.

At the foot of this mountain, the vally is a great slimy ground, and so rotten, that it is not able to bear a man, but being trodden on, *crummeth* like white lime, and turneth to dust under his feet.
Sir Thomas North. Plutarch, fol. 493. *Sertorius.*

Thither came a she-wolf and gave them suck, and certain birds that brought little *crums* and put them in their mouthes, until a swine-heard perceiving them, and wondering at the sight, did boldly go to the children and took them away with him.
Id. Ib. fol. 16. *Romulus.*

Thank God I have pass'd the brunt of it, and am recovering and pecking up my *crums* apace.
Howell. Letter 1. book i. sec. 2.

Which things, the most part of our old martyrs rather then they would doe, or once kneel or offer up one *crumbe* of incence before an image, suffered most crewell and terrible deaths, as the histories of them at large do declare.
Homilies. Sermon against Perill of Idolatry. The third Part.

The whiter that salt is, the more brittle it is, and readier to *crumble* and fall to pouder. *Holland. Plinie*, vol. ii. fol. 416.

——————— The once,
The libbard, and the tyger, as the moale
Rising, the *crumbl'd* earth above them threw
In hillocks.
Milton. Paradise Lost, book vii. l. 468.

In these last three weeks, I have almost forgot what my teeth were made for · last night, good Mrs. Bibber here took pity on me, and *crumm'd* me a mess of gruel, with the children, and I popt and popt my spoon three or four times to my mouth, before I could find the way to 't.
Dryden. The Wild Gallant, act i. sc. 1.

He sows the teeth at Pallas's command,
And flings the future people from his hand,
The clods grow warm, and *crumble* where he sows.
Addison. Ovid. Metamorphoses, book iii. *The Story of Cadmus.*

When I've my master's leave to stand
Cooing upon his friendly hand;
When I can be profusely fed
With *crumbs* of his ambrosial bread.
Cunningham. The Dove. Ode 9.

Proclaim the truth, say what is man!
His body from the dust began;
And when a few short years are o'er,
The *crumbling* fabric is no more.
Cotton. Visions in Verse.

Can despots compass aught that hails their sway?
Or call with truth one span of earth their own,
Save that wherein at last they *crumble* bone by bone.
Lord Byron. Childe Harold's Pilgrimage, can. 1. 62.

CRUMENALL, Lat. *crumena*, a purse;—*dicta creditur ἀπὸ τοῦ κρεμᾶν*, that is, *pendere*, to hang; because it *hung* or depended from the arm or neck. Vossius.

Thus cram they their wide-gaping *crumenall*:
But now to Ida hill me lists my feet recall.
More. On the Soul, part i. book i. st. 19.

The fat oxe that woont ligge in the stall,
Is now fast stalled in her *crumenall*.
Spenser. Shepheard's Calendar. September.

CRUMP, *adj.*
CRUMP, *n.*
CRU'MP-SHOULDERED,
CRUMPLE.
} A. S. *crumb, crump*; Ger. *krumm*; Dutch, *krom*, *crooked*. See CRIMP, above. *Crumple*; a diminutive of *crump*. To crook or bend into small creases or folds; to wrinkle.

Crump, (is said) of some defect of body, as having some member crooked or withered. CRUMP.
Verstegan. Restitution of Decayed Intelligence, ch. ix. CRUST.

Vlysses revileth not Thersites with these termes: Thou halting and lame squire, thou bald pate, thou art camell-backt, or *crump-shouldered*; but rather reproacheth him with his vain babbling and undiscreet language. *Holland. Plutarch*, fol. 39.

My fleshe is clothed wyth wormes, fylthynesse and dust: my skine is wythered, and *crompled* together.
Bible. Job, ch. vii.

AYM. We doubt the cause and will not disparage you so much as to take your lordship's quarrel in hand. Plague on him, how he has *crumpled* our bands.
Massinger. The Fatal Dowry, act iv. sc. 1.

It [*aqua-vita*] keepeth the sinues from shrinking, the veins from *crumpling*, the bones from aking, and the marrow from soaking. *Holinshed. Ireland*, vol. vi. ch. ii.

My friend Sir Roger alighted from his horse, and exposing his palm to two or three that stood by him, they *crumpled* it into all shapes, and diligently scanned every wrinkle that could be made in it. *Spectator*, No. 130.

She found his eyes full in the indolent, with his lips *crumpled* up in the posture of one whistling. *Tatler*, No. 145.

CRUSADE, see CROISADE.

CRUSH, *v.*
CRUSH, *n.*
CRU'SHING.
} Fr. *ecraser*, from Goth. *ga-hris-yan*; A. S. *ge-risan, contundere, conterere, collidere.*

To press or squeeze into a mass, so as to dissolve the pre-established continuity of the parts.

To press or beat down, to subdue, over-power; to get the better of, or mastery over.

And a great part of them were *crusht* against the rocks, and those other that landed, being very many in number, were, notwithstanding, broken, slaine, and taken, and so sent from village to village, coupled in halters, to be shipped into England.
Hakluyt. Voyage, &c. Sir Richard Greenuill, vol. ii. part ii. fol. 170.

She at my state with her proud hornes did push,
In hope my fame being yet but yong to *crush*.
Mirrour for Magistrates, fol. 573.

Lizards that have hanged up a long time a drying, with their mouths downward, if they bee punned with salt, serve to heale the eares that have caught some hurt either by bruise, *crush*, or stripe. *Holland. Plinie*, vol. ii. fol. 369.

——————— Pitious amends, unless
Be meant, whom I conjecture, our grand foe
Satan, who in the serpent hath contriv'd
Against us this deceit: to *crush* his head
Would be revenge indeed.
Milton. Paradise Lost, book x. l. 1035.

Besides the regaining of many places possess'd by the Illyrians, the *crushing* of all those kings his neighbours, &c.
Ralegh. History of World, book iv. ch. ii. sec. 9.

My maister is the great rich Capulet, and if you be not of the house of Montague's, I pray come and *crush* a cup of wine.
Shakspeare. Romeo and Juliet, fol. 55.

Scaliger, *Exercit.* 186, relates, that in Gascony, his country, there are spiders of that virulency, that if a man treads upon them to *crush* them, their poison will pass through the very soles of his shoes. *Boyle. Of the strange Subtilty of Effluviums.*

As, for instance, he [Omai] told them that our country had ships as large as their island; and on board which were instruments of war, (describing our guns) of such dimensions, that several people might set within them; and that one of them was sufficient to *crush* the whole island at one shot.
Cook. Voyages, vol. v. book ii. ch. ii.

CRUST, *v.*
CRUST, *n.*
CRU'STACEOUS,
CRUSTA'TION,
CRU'STILY,
CRU'STINESS,
CRU'STY, *adj.*
} Fr. *crouste*; It. *crosta*; Lat. *crustum, ἀπὸ τοῦ κρύος, hoc est, a frigore*, from cold or frost. *Crusta*, in Virg. *Geor.* iii. 360, is the ice, or the surface of the water congealed, hardened by frost. *Crust* is applied to Any hardened surface, coat, or case. And

CRUST. CRUTCH.

To *crust*; to cover with, or draw over, any hard surface, coat or case.

Howe shalt thou please him, when thou lackest thy painting? except thou wilt neuer wash out the *crust*, but goe so with a *crust* of paynting to bedde, and so rise, and be so within and abroade among folks. *Vives. Instruction of a Christian Woman*, F. 3.

Seekanauk, a kinde of *crusty* shel-fish, which is good meat, about a foot in bredth, hauing a *crusty* taile, many legges like a crab, and her eyes in her back. They are found in shallowes of waters, and sometime on the shore.
Hakluyt. Voyage, &c. M. Thomas Hariot, vol. iii. fol. 274.

Our mere-learn'd mē; and modern wise
Taste not poor poesies ingenuities,
Being *crusted* with their conetous leprosies.
Chapman. Homer. The Battaile of Frogs and Mice. Epistle Dedicatorie.

Some be covered with *crusty* or hard pills, as the locusts.
Holland. Plinie, vol. i. fol. 242.

I have been since with all your friends and tenants,
And, on the forfeit of your favour, charged them,
Though a *crust* of mouldy bread would keep him from starving,
Yet they should not relieve him.
Massinger. A New Way to pay Old Debts, act ii. sc. 1.

Wasps and hornets will fly about, and use their wings, a good part of an houre after they have lost their heads; which is to be imputed to the residence of their soul in them still, and the intireness of the animal spirits not easily evaporating through their *crustaceous* bodies.
More. The Immortality of the Soul, book ii. ch. xi.

They rub the frozen parts with snow, or else cast the whole body into water, by which means the whole body is *crusted* over with ice. *Boyle. An Account of Freezing, made in* 1662.

Pretending, that the face of nature may be now quite changed from what it was; and that formerly the whole collection of waters might be an orbicular abyss, arched over with an exterior *crust* or shell of earth, and that the breaking and fall of this *crust* might naturally make a deluge. *Bentley. Sermon* 3.

The *crustation* of the building was changed to what it now is.
Pegge. Anecdotes of the English Language.

The 7th of December I put some very strong French brandy into a China cup, such as they drink coffee out of, and exposed it to the air: in three hours time it was turned into a *crusty* ice all about the sides of the cup, as if some cold blast had forced it abroad.
Boyle. Appendix relating to History of Cold.

And first, the egg itself deserves our notice. Its parts within, and its *crusty* coat without, are admirably fitted for the business of incubation. *Derham. Physico-Theology*, book vii. ch. iv.

The food of the cod is either small fish, worms, *crustaceous* animals, such as crabs, large whelks, &c. and their digestion is so powerful, as to dissolve the greatest part of the shells they swallow. *Pennant. British Zoology. The Common Cod-fish.*

CRUTCH, *n.* A. S. *cricce*; Ger. *krucke*. See CROOK.
A staff for *crowching*, *crooking*, or stooping old men; &c. to support or uphold them.

For age with stealing steps,
Hath clawed me with his *crowch*,
And lusty life away she leapes,
As there had been none such.
Vncertaine Auctors. Thassault of Cupide, &c.

CORIS. Ill news, madam,
Are swallow-wing'd, but what's good walks on *crutches*.
Massinger. The Picture, act. ii. sc. 1.

And hasten Og and Deog to rehearse
Two fools that *crutch* their feeble sense in verse.
Dryden. Absalom and Achitophel.

Full in the entrance of the dreadfull doors,
Old age half vanish'd to a ghost, deplores:
Propp'd on his *crutch*, he drags with many a groan
The load of life, yet dreads to lay it down.
Broome. On Death.

Halting on *crutches* of unequal size,
One leg by truth supported, one by lies;
They sidle to the goal with awkward pace,
Secure of nothing—but to loose the race.
Cowper. Progress of Error.

And Circumstance, that unspiritual God
And miscreator, makes and helps along
Our coming evils with a *crutch-like* rod,
Whose touch turns hope to dust—the dust we all have trod.
Lord Byron. Childe Harold's Pilgrimage, can. 4. 125.

CRUZITA, in *Botany*, a genus of the class *Tetrandria*, order *Digynia*. Generic character: calyx double, the outer cup three-leaved, the inner cup four-leaved; corolla none; capsule one-seeded.
One species, *C. Americana*, native of Cumana. Willd.

CRY, *v.* CRY, *s.* CRY'ING, *n.* CRY'ER, or CRI'ER.

The Gothic *greit-an*, is used about a dozen times in the Goth. Version of the Gospels, and is always rendered *flere, deplorare*. (See Lye.) Fr. *crier*; It. *gridare*; Sp. *gritar*; Dutch, *krüten*; Ger. *kræchen, schreien*; A. S. *grǽt-an*, or *græd-an*; Goth. *greit-an*. *Greit* is still a common Scotch word. See Jamieson.

The primary application may have been to the noise or sound of one weeping, lamenting, bewailing, deploring; then to any noise or sound of distress; to any sudden and loud expression of passion; of surprise, of fear or terror, of joy or gladness, blame or praise, complaint or congratulation; to any loud call to gain or keep attention; any acclamation, or exclamation, or declamation, or proclamation.

To *cry*; to utter the sounds of lamentation or distress; to call out, speak out, loudly, noisily, clamourously, importunately; to shout, to exclaim, to proclaim, to declaim; to declaim against, to decry.

Cry, the noun, is sometimes applied to the *Cryers*, collectively; in Shakspeare, Ye common *cry* of curs; and in Milton, A *cry* of hell-hounds barked.

Hes *cryede* and wep with sorwe ynow, and ofte yswoone lay.
R. Gloucester, p. 13.

To þe kyng Cadwan þe quene wende þo,
And *cryde* on hym, þat he ssolde helpe hyre in yr wo.
Id. p. 237.

Whan þis was set & stabled, & pes *cried* on hii,
Henry þe gong kyng gede to Normandie.
R. Brunne, p. 139.

——— William with chartre bond him tille Henrie,
& of alle his heires, and com to þer *crie*. *Id. Ib.*

But swiche a *crie* and swiche a wo they make,
That in this world n'is creature living,
That ever herd swiche another waimenting.
Chaucer. The Knightes Tale, v. 902.

His eyes red sparcling as the fire glow
His nose frounced full kirked stood
He came *criand* as he were wood.
Id. The Romant of the Rose, fol. 130.

And Jhesus *cryngde* with a gret vois seide, fadir into thi hondis I bitake my spyrit, and he seyinge thes thingis gaf up the gost.
Wiclif. Luk, ch. xxiii.

And Jesus *cryed* with a greate voyce and sayde: Father, vnto thy handes I commende my spirite. And when he thus had sayde, he gaue vp the goost. *Bible*, 1551.

Whiles the housbonde taried, all thei nappiden and slepten; but at midnight a *cry* was maad: lo the spouse comith, go ye out to meete with him. *Wiclif. Matthew*, ch. xxv.

While the brydegrome taryed, all slombred and slepte. And euen at midnight, there was a *crye* made: behold the bridegroom commeth, go out agaynste hym. *Bible*, 1551.

CRY. And God schal wipe aweie ech teer fro the ighen of hem, and deeth schal no more be neither mournyng neither *criyng* neither sorewe schal be ouer, which thingis firste wenten awei.

Wiclif. Apocalips, ch. xxi.

And God shall wipe away al teares frō their eyes. And ther shal be no more death, neither sorow, neither *crying*, neither shall there be anye more payne, for the olde thynges are gone.

Bible, 1551.

He seyde I am the vois of a *crier* in the desert, dresse ye the way of the Lord, as Isaye the profete seide.

Wiclif. Jon, ch. i.

He sayde: I am the voyce of a *criar* in y^e^ wyldernes, make strayghte the waye of the Lorde, as sayde the prophet Esaias.

Bible, 1551.

SERV. Are you the gentleman? *cry* you mercie, sir: I was required by a gentleman i' the citie as I rode out at this end o' the towne, to deliver you this letter, sir.

Ben Jonson. Every Man in his Humour, act i. sc. 2.

And all his host had standing in their lookes,
The paleness of the death that was to come,
Yet *cried* they out like vultures, and urg'd on
As if they would precipitate our fates.

Id. Catiline, act v.

Then fast'ning ropes, drag them [statues] along the streets,
Crying in scorne, this, this was that rich head
Was crown'd with garlands and with odours, thus
That was in Rome so reverenced.

Id. Sejanus, act v.

That, when the sodaine thaw comes we may break
Upon 'hem like a deluge, bearing down
Halfe Rome before us, and invade the rest
With *cryes*, and noyse able to wake the urnes
Of those are dead, and make their ashes feare.

Id. Catiline, act i.

Wherefore her father promised by *crye* that noble young men should meate at Peverell's place in the Peke, and he that provid hymself yn feates of armes should have Mellet his doughter, with the Castel of Whitington.

Leland. Thinges excerpted owt of an old English Boke, &c. vol. i. p. 23.

Good folk for gold or hire
But help me to a *cryer*;
For my poor heart is run astray
After two eyes, that pass'd this way.

Drayton. Odes. The Cryer.

Far am I from disparaging the gift of voluntary and extemporary prayer, or *crying* down the use of it.

Sharp. Works. Sermon 5. vol. iv.

Nor long before the loud laments arise,
Of one distress'd, and mastiff's mingled *cries*:
And first the dame came rushing through the wood,
And next the famish'd hounds that sought their food.

Dryden. Theodore and Honoria.

The person and office of this *cryer* in the wilderness was there more exactly described, than in any other part of the sacred volume. *Atterbury. Sermon* 11. vol. iii.

The female senate was assembled soon,
With all the mob of women of the town;
The queen sate lord chief justice of the hall,
And bade the *crier* cite the criminal.

Dryden. The Wife of Bath's Tale.

And accordingly, they, the most turbulent of mankind, who never make a scruple to shake the tranquillity of their country to its center, raise a continual *cry* for peace with France.

Burke. On a Regicide Peace.

From the beginning, and even whilst the French gave the blows, and we hardly opposed the *vis inertiæ* to their efforts, from that day to this hour, like importunate guinea-fowls *crying* one note day and night, they have called for peace. *Id. Ib.*

So among the Romans, when in a cause all the pleaders had spoken, the *cryer* used to proclaim *dixerunt*, i. e. they have done speaking. *Harris. Hermes*, book i. ch. vii.

There is no wonder, now one sees the fountain Milton drew from, that, in admiration of this poetical philosophy, (which nourished the fine spirits of that time, though it corrupted some,) he should make the other speaker in the scene *cry* out, as in a fit of extacy, CRY. — CRYPT.

How charming is divine philosophy.

Hurd. Works. On the Marks of Imitation.

CRYPSIS, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx two-valved, oblong, one-flowered; corolla two-valved, longer than the calyx, stamens two or three; spike leafy, or the flowers are collected in a leafy head.

Four species, two natives of the South of Europe, and two of North America. Nuttal, *N. A. Pl.*

CRYPT, CRY'PTICK, CRY'PTICAL. } Gr. κρύπτ-ειν, to hide, to conceal, to cover.

Loe, unto the time of Constantine, by the space of above three hundred yeeres after our Saviour Christ, when the Christian religion was most pure, and indeed golden, Christians had but low poore conventicles, and simple oratories, yea caves under the ground, called *cryptæ*, where they for feare of persecution assembled secretly together.

Homilies. The third Part of Sermon against Idolatry.

The students of nature, conscious of her more *cryptick* ways of working, resolve many strange effects into the near efficiency of second causes. *Glanville. Apology.*

All Scriptures are either manifest, or *cryptical* and obscure; matters that are absolutely necessary to salvation, are expresst in the first of these; other truths, whether historical, doctrinal, or practical, may be sometimes involved in doubtful difficult expressions. *Wilkins. The Gift of Preaching*, sec. 2.

Could we have any light why the stellary part of the first masse, separated into this order, that the girdle of Orion should ever maintain its line, and the two stars in Charles's wain never leave pointing at the Pole-star, we might abate the Pythagorical musick of the spheres, the sevenfold pipe of Pan; and the strange *cryptography* of Gaffarel in his Starry Book of Heaven.

Sir Thomas Brown. Cyrus Garden, ch. iii.

To resume the pinner's rows, all the operations is a trifle; neither have I any zeal for the character, as *cryptographal* or universal.

Letters from several persons to Mr. Boyle, vol. vi. p. 339.

In consequence of the ardour which he expressed on this subject, it was thought proper to deposit his body in the *crypt* of that magnificent church.

Malone. Life of Sir Joshua Reynolds, cxvii.

Speakers, whose chief business is to amuse or delight, do not confine themselves to any natural order, but in a *cryptical* or hidden method, adapt every thing to their ends. *Watts.*

CRYPTS are sometimes called *Crofts*; the most remarkable in Britain are, that at Canterbury Cathedral, still used by the descendants of the French and Walloon refugees, who came over to England in the time of Edward VI. and Elizabeth; that of St. Faith, under St. Pauls; and that of the Cathedral at Glasgow. From their position, for the most part under the eastern extremity of the nave, it has been conjectured that their original purpose was, by an additional elevation, to keep that portion of the Church, near which the high altar was placed, more than usually dry.

A CRYPTOPORTICUS, in Roman *Architecture*, was not always (as the name seems to imply) a subterraneous gallery. Such underground constructions may, indeed, frequently be found, as in the *Villa Adriana* at Tivoli, and in the house of Clodius, on the Alban hill; but Pliny describes the Cryptoporticus in his *Laurentinium*, (xi. 17,) as having windows on both sides; and again in his Tuscan Villa, (v. 6,) he speaks of a Cryptoporticus *in edito positus*; and of another *subterraneæ similis*.

CRYPTA. CRYSTAL.

CRYPTA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*. Generic character: calyx two-leaved, inferior; corolla, petals two or three, closed; styles none; stigmas two or three, very minute; capsule two or three-celled, two or three-valved; cells four or five-seeded; seeds sub-cylindric, striated.

One species, *C. minima*, native of North America. Nuttal.

CRYPTANDRA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Rhamnæ*. Generic character: calyx five-leaved; corolla tubular, border five-cleft, five hood-shaped scales between the segments; stamens inserted into the tube under each scale; stigma three-cleft; capsule superior, three-valved, three-celled; seeds solitary, compressed.

Three species, natives of New South Wales. *Linn. Soc. Trans.* iv.

CRYPTICUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Tenebrionites*. Generic character: antennæ filiform, the articulations generally obversely conical; the last subglobose; clypeus entire; labrum transverse; maxillary palpi securiform at the apex.

Type, *Pedinus glaber*, Latr.

CRYPTOCEPHALUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Chrysomelinæ*. Generic character: antennæ simple, filiform, nearly the length of the body; palpi thicker in the middle; last joint conico-cylindrical.

Type, *C. sericeus*, Fabr.

Of this genus, there are several British species. They are small insects, inhabiting flowers, and the plants growing in fields and lanes. Like many other Coleopterous insects, they simulate death on the approach of danger. The larvæ differ but little from those of the *Chrysomelæ*.

CRYPTOCERUS, in *Zoology*, a genus of insects of the order *Hymenoptera*, family *Formicariæ*. Generic character: pedicle of the abdomen formed of two knobs, first joint of the antennæ lodged in a lateral notch in the head.

Type, *C. atratus*, Fabr.

Of the habits of the Ants which form this genus, nothing is known. The species are foreign.

CRYPTOSPERMUM, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: common calyx, six-leaved; florets four-cleft; receptacle globular, chaffy; capsules one-celled.

One species, *C. Youngii*, native of New Holland. Persoon.

CRYPTOSTOMUM, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: corolla funnel-shaped, inserted into the calyx; nectary one-leaved, closing the corolla; berry dry, three-celled; seeds solitary.

C. laurifolium, a shrub, native of Guiana. Aublet, *Guian.*

CRY'STAL, *n.*
CRY'STAL, *adj.*
CRY'STALLINE, *n.*
CRY'STALLINE, *adj.*
CRY'STALLIZE,
CRYSTALLIZA'TION,
CRY'STAL-COVERED,
CRY'STAL-CRUSTED,
CRY'STAL-STREAMING.

Frequently, but improperly, written *chrystal*. Fr. *crystal*; It. *cristallo*; Sp. *cristal*; Lat. *crystallus*; Gr. κρύσταλλος, by which both ice, and the (*crystal*) stone are signified: from κρύος, i. e. cold or frost. See the Quotation from Pliny.

First when I saw those *christal* streames,
Whose beauty made my mortall wounde,
I little thought within her beames,
So swete a venom to have found.
Surrey. The Louer describes his restlesse State.

The *crystall* yse, which lent mine eyes their light,
Doth now waxe dym, and dazeled all with dread,
My senses all, wyll now forsake me quite,
And hope of health abandoneth my head.
Gascoigne. Dan Bartholomew of Bath.

As touching *crystall*, it proceedeth of a contrary cause, namely of cold; for a liquor it is congealed by extreame frost in manner of yce; and for proofe hereof, you shall find *crystall* in no place else but where the winter snow is frozen hard: so as we may boldly say, it is verie ice and nothing else, whereupon the Greeks have given it the right name *Crystallos*, *i.* Yce.
Holland. Plinie, vol. ii. fol. 604.

I throw my *chrystal* arms along the flowry vallies,
Which lying sleek and smooth as any garden allies,
Do give me leave to play, whilst they do court my stream,
And crown my winding banks with many an anadem.
Drayton. Poly-olbion, song 26.

Rules and precepts doe then help after they have bin laboured and polisht by practice; but if those rules may be made cleere and *chrystalline* afore-hand, it would be the more excellent, because they would lesse stand in need of diligence, labour and exercise after.
Bacon. On Learning, by G. Wats, fol. 277.

Aqua-fortis, or any mineral solution, either of vitriol, alum, salt-petre, ammoniac or tartar, which although to some degree exhaled and placed in cold conservatories, wil *chrystallize* and shoot into white and glacious bodies.
Sir Thomas Brown, book ii. ch. i.

In the midst of dinner, calling the ambassador up to him, he drank the king's health, who receiving it from his hand, return'd to his place, and in the same cup being of fair *crystal* pledg'd it with all his company. *Milton. A Brief History of Moscovia.*

Seek we then ourselves in ourselves? for as
Men force the sun with much more force to pass,
By gathering his beams with a *crystal* glass,
So we (if we into ourselves will turn,
Blowing our spark of virtue) may out-burn
The straw which doth about our hearts sojourn.
Donne. Letters. Letter to Mr. Rowland Woodward.

The sight-confining, *crystall*-covered skies,
The mirrour cleare through which in every part
The heaven (as jealous) lookes with many eyes,
To mark men's actions, and to weigh each heart.
Stirling. Doomes-day. The twelfth Houre.

Cold Capricorn hath pav'd all Juda twice
With brittle plates of *crystal-crusted* ice,
Twice glased Jordan.
Du Bartas. The Decay, fol. 234.

The *crystal-streaming* Nid, loud-bellowing Clyde,
Tweed which no more our kingdoms shall divide.
Drummond. The River of Forth feasting.

When lo! the torrent, the fleet-hurrying flood
So clear and perfect *crystaline* at hand,
As a black lake or settled marish stood,
At the extensure of the Hebrew's wand.
Drayton. Moses his Birth and Miracles, book ii.

CLORIS. O that their hoofs were ivory, or some thing
Than the purest ivory far more *crystalline*,
Fill'd with the food wherewith the Gods do dine,
To keep thy youth in a continual spring.
Id. The Fourth Nymphal.

Merely by blowing fine *crystal*-glass, at the flame of a lamp, to a very extraordinary thinness, we have made it to exhibit, and that vividly, all the colours (as they speak) of the rainbow.
Boyle. Experiments. Notes, &c.

If you dissolve copper in aqua-fortis, or spirit of nitre (for I remember not which I used, nor do I think it much material) you may, by *crystallising* the solution, obtain a goodly vitriol.
Id. The Sceptical Chymist.

CRYSTAL. In the falling of a stone to the ground, in the rising of the sea towards the moon, in cohesion and *chrystallization*, there is something alike, namely an union or mutual approach of bodies.
Berkeley. Of the Principles of Human Knowledge, part i.

For thee too, Goddess, o'er that hallow'd spot,
Where first thy fount of *crystal* bubbles bright,
These hands shall arch a rustic grot,
Impervious to the garish light.
Mason. Ode 5. *To a Water Nymph.*

Or when the shower forsakes the sable skies,
Haply the cold in secret ambush lies,
Couching awaits in some inferior space,
And chills the tempest with a quick embrace;
The *crystal* pellets at the touch congeal,
And from the ground rebounds the rattling hail.
Brooke. Universal Beauty, book ii. l. 189.

——————The Naiad train,
Alike obsequious, from a thousand urns
Shall pour their *crystaline* tide.
Mason. The English Garden, book i.

In the barren part of the island, which runs out towards Nevis are several ponds, which in dry weather *crystalise* into good salt. *Granger. The Sugar Cane*, book i.

When the cane-juice is granulated sufficiently, which is known by the sugar's sticking to the ladle, and roping like a syrup, but breaking off from its edges; it is poured into a cooler, where its surface being smoothed, the *crystalization* is soon completed.
Id. Ib. book iii. v. 428. note.

CRYSTAL, in common acceptation, is a transparent variety of Quartz.

A *Crystal* is any symmetrically formed mineral, solid, transparent or opaque, contained or bounded by plane surfaces.

Pliny (xxxvii. 2) represents Crystal to be the produce of cold climates only, and to result from the concretion of water by cold. In this opinion he is supported by Isidorus, (*Orig.* xvi. 13;) by Seneca, (*Quæst. Nat.* iii. 25;) and by Diodorus Siculus, (*Bib.* ii. 134,) who, however, admitting the concretion, differs as to its cause; it takes place, he says, not through cold, but through the virtue and efficacy of divine fire. The countries which produce it are, India, which sends the best; Alabanda, Orthosia, and the neighbouring mountains, in which the worst is found; Cyprus, where it is ploughed up; the Alps; an island called Necron, on the Arabian side of the Red Sea; and Lusitania; some of which, it may be remarked, are not by any means cold climates.

A piece of Crystal weighing about fifty pounds, offered by Livia Augusta in the Capitol, was extant in the time of Pliny; and a drinking vessel of Indian Crystal, which held three pints, is mentioned by Xenocrates.

The luxury of the Romans in these articles is well known; we are told (Pliny, *loc. cit.*) of a Lady, by no means rich, who gave 150,000 *sestertii* (£12,108. 12*s.*) for a single Crystal basin; and Nero, when infuriated by the arrival of some news of a mutiny, dashed two vases against the ground, as a punishment to his own times and to posterity, in order that no one hereafter might have the enjoyment of drinking out of them. Suetonius, who tells the same story, (*Nero*, 47,) does not state that these vases were Crystal; but that, on account of their beautiful carvings from subjects in the works of Homer, they were called *Homeric*. These, therefore, could not have been of the purest Crystal, which was never carved; and the vessels of which, on that account, were called *acenteta*, (*ἀκέντητος*, *aculeo non punctus.*)

The opinion of Pliny, as it is given in the words of Sir Thomas Brown, "that Crystal is nothing else but ice or snow concreted, and by duration of time congealed beyond liquation," met with staunch support from the Fathers of the Church; and no less names than Basil, Isidore, Austin, Gregory the Great, and Jerome, have lent themselves to this hypothesis. Sir Thomas Brown himself, however, denies the Philosophy of the Fathers, and concludes, that all those who have supposed that Crystal was formed in a different way from other mineral substances, have adopted their false notion, first, from its resemblance to the "stirious or stillicidious dependencies of Ice;" and, secondly, from the name, which in Greek expresses both Ice and Crystal; but this he shows, in language which we are little inclined to alter, to be "a fallacy of æquivocation, from a society in name inferring an identity of Nature." (*Enquiry into Vulgar and Common Errors*, ii. 1.) CRYSTAL. CUB.

CTENOPHORA, in *Zoology*, a genus of insects of the order *Diptera*, family *Tipulariæ*. Generic character: antennæ filiform, pectinated in the males, serrated in the females; the second joint short, the third elongate. Type, *C. atrata*, Fab.

CTESIPHON, *hod.* Soliman-Pak, a Town of the ancient *Assyria*, on the left bank of the Tigris, opposite to *Seleucia*. The Parthian Kings wintered in this place, both on account of the mildness of the climate, and to relieve *Seleucia* from the vast train which accompanied them. (Strabo, xv.)

CUB, *v.* } Perhaps, says Minsheu, from the Lat.
CUB, *n.* } *cubo*, because it lies (*cubat*) in its den or hole, and goes not out for prey as the elder animals do. Applied to

The young of the bear or fox. Also, of the whale.

A *Cub*, or *Cribb* for cattle. *Glouc.*, Grose.

To *cub*; to bring forth *cubs*; also to confine, as *cubs* are, in a den or hole; (if not a corruption of *Coop*, q. v.)

If it be so great a delight to live at liberty, and to enjoy that variety of objects the world affords, what misery and discontent must it needs bring to him, that shall now be cast headlong into that Spanish inquisition, to fall from heaven to hell, to be *cubbed* up upon a sudden, how shall he be perplexed, what shall become of him. *Burton. Anatomy of Melancholy*, fol. 153.

There was another young lad, unto whom certaine mates and fellowes of his (in that season wherein young lads were permitted freely to filtch whatsoever they could handsomely come by, but reputed it was a shameful and infamous thing for them to be surprized and taken in the manner) brought a young *cub* or little fox to keep alive, which they had stolen: those who had lost the said *cub* came to make search; now had this lad hidden it close under his cloathes, and the unhappy beast being angred, gnawed and bit him in the flank, as far as to the very bowels, which he endured resolutely, and never quelched at it, for fear he should be discover'd.
Holland. Plutarch, fol. 388.

Art thou of Bethlem's noble college free?
Stark staring mad; that thou would'st tempt the sea?
Cubb'd in a cabbin, on a mattrass laid,
On a brown George.
Dryden. Persius. Satire 5.

The *cubs* of bears a living lump appear
When whelp'd, and no determined figure wear,
The mother licks them into shape, and gives
As much of form as she herself receives.
Id. Ovid. Metamorphoses.

On the approach of our boats towards the ice they [the whales] all took their *cubs* under their fins and endeavoured to escape with them into the sea.
Cook. Voyage, vol. vii. book vi. ch. iii.

CUBA.

CUBA. CUBA, the largest and most western Island of the West Indian Seas, and supposed by many Geographers to have been originally a portion of the continent of Mexico, as Cape Catoche in Yucatan, and the western headland of Cuba, have every appearance of being the termination of an isthmus, gradually worn down by the pressure and action of the waters, which now form the Gulf of Mexico, impelled by the trade winds: whence has been formed that singular and impetuous current called the Gulf Stream, distinguishable even as far north as the higher latitudes of the European continent.

Boundaries Cuba extends from 74° 2′ to 84° 56′ 7″ west longitude, from east to west, in the form of an irregular crescent, having the superior portion of the curve in 23° 15′, and its most southern point in latitude 19° 48′ north; embracing a length of above 760 miles, but with no greater medial breadth than 70, its extreme breadth being 134.

Discovery. Columbus discovered this fine Island during his first voyage, in the year 1492 on the 28th of October, and gave it the name of *Johanna*, in compliment to the Royal family of Spain. It has been doubted by many writers whether the discoverer ever knew that Cuba was insular; to satisfy the reader on this point, it is only necessary to give the following extracts from the *Decades* of Peter Martyr, who drew up his *History of the Voyages of Columbus*, from the Admiral's papers and by his desire, during his life time. "*Patefecit nauigatione hâc primâ, sex tantùm insulas, atque ex iis duas inauditæ magnitudinis; quarum alteram Hispaniolam, Joannam alteram vocitavit: sed Joannam esse insulam, nõ pro certo habuit.*" *De Orbe Novo*, Parisiis, MDLXXXVII. He proceeds to state, that Colon afterwards sailed along the coasts from the north point to west, "lyttle lesse than eight hundred miles, and was obliged to return, owing to storms." In his second voyage, not dismayed by all these perils, "he determyned to proceade vntyl he had certaine knowledge whether *Cuba* was an Ilande or firme Lande," and accordingly sailed along the southern shore till he had very nearly completed the discovery, but was againe obliged to return, on account of the distressed state of his vessels, and want of provisions. Soon afterwards he "discovered, in the yeare of Christe 1520, the land over ageynste the weste corner of *Cuba*, distant from the same aboute a hundrethe and thirtie leagues." (Translation of Peter Martyr by Richard Eden, London, 1555.)

Herrera, whose general adherence to truth is conspicuous throughout his well written work, asserts that Columbus had every reason to suppose Cuba an Island on his first attempt to discover it, because he found several things which were not its own produce on it, and which were afterwards known to have reached it from the Continent of Mexico or Yucatan. *Historia de las Indias Ocidentales*, dec. i. cap. xv. lib. i.

Historical sketch. About 1508, one Sebastian, under the orders of Nicolas Ovando, proved it to be an Island by circumnavigation. In 1511, Don Jago de Velasquez landed with 300 men from Hispaniola, near a port which he called after his patron Saint: the natives terrified by the European fire-arms made but a slight resistance, and Hatney, their leader, suffered at the stake after having indignantly refused baptism; the other Caciques soon submitted, and the conquest of this valuable Island did not cost the Spaniards a single man: but when from the little value of the mines, the inhabitants were found to be useless to the conquerors, their gradual extermination was ruthlessly carried into effect. The city of the Havannah was soon settled, on account of the protection afforded by the harbour to commerce; and except a few piratical attempts on this town, the history of Cuba presents nothing remarkable, until the unsuccessful expedition against the Island under Admiral Vernon in 1741, who landed at St. Jago de Cuba, and gave the name of Cumberland Harbour to that port, by which it continues to be known to English navigators. In 1762, the Havannah was attacked by a formidable English expedition, from the beginning of June to the 12th of August, on which day the garrison surrendered after a heroic resistance: the Spaniards are said to have been taken by surprise; and the officers, with the exception of Don Luis Velasquez, a naval Captain, who defended the Moro Castle, were charged with neglect of duty, and were visited by the Spanish Government with severe punishment. The plunder obtained by the British on this occasion amounted to three millions sterling, independent of military stores, nine sail of the line, and a number of valuable merchant vessels. Cuba was restored to Spain by the treaty of 1763, in exchange for the Floridas, and has since remained with that power. The commotions which arose in Spanish America, after the occupation of the Peninsula by the French, were felt only in a slight degree in Cuba, which has throughout adhered to the Royal cause, for which Ferdinand VII. lately bestowed on the Island the distinction of "Loyal."

CUB

Cuba may be said to form the frontier of Mexico, as the peninsula of Florida approaches as near to its northern limits as that of Yucatan does to its western points, both creating the great entrance and exit of the immense basin or Gulf of Mexico. It also commands the navigation of the windward passage and channel of the Bahamas, whilst its harbour, perhaps one of the finest in the world, (the Havannah,) and its numerous other ports give it the preeminence over all the other islands in the West Indian Seas, and will probably render it hereafter an object of contest amidst the powers of Europe and America.

Face coast A chain of mountains with some short interruptions extends from east to west, through the whole length of Cuba; the most elevated points of this range are between Cape Cruz and Cape Maize, known under the names of Cuchilla and Torquinas, from whose summits on a clear day the shores of Jamaica may be perceived. At the feet of the mountains extensive meadows open to the lower country. The greater part of the Island is very irregular and broken; the south coast is in general marshy, and subject to the dreadful maladies consequent upon such grounds in these warm latitudes: from Lake Cortez to Xagua Bay the Mangrove Swamps

CUBA. extend with a breadth of eight or nine miles. The Island is surrounded by shoals, which present difficulties to a free entrance to most of the harbours.

Climate. The climate of Cuba is dry and warm, but rendered more temperate and healthy than that of St. Domingo, by the rains and breezes from the north and east, particularly on the northern coast, where a few hours' rain falls almost every evening from June to September, which in the winter months occasionally become storms of hail. The mean temperature of the Island is about 78° of Fahrenheit; the greatest ordinary degree of heat being about 86°, and of cold 61½°. The barometer seldom ranges beyond 30½ inches; and on the approach of hurricanes rarely falls belows 29¼ inches. On the towns of the coast the autumnal endemics and yellow fever prevail, particularly at the Havannah; but the mountains of Cuba have been extolled for their salubrity.

Rivers. The rivers of Cuba are 148 in number, abounding with varieties of delicious fish; but none of the streams are of importance: Rio Cauto, coming from the mountains near St. Salvador to the Bay of Bayamo, is one of the largest. The most remarkable capes are, Cape Cruz at the southern extremity, Cape Yeacos at the northern, Cape Maize at the western, and Cape St. Antonio at the eastern, Cape Buenavista on the northern point of the gulf of which Cape St. Antonio forms the southern horn; and Point Mulo on the north coast, to the west of Nipa Bay. The largest bay is that of Bayamo on the south coast; Xagua Bay, on the same side, but more to the north-west, has a very fine and commodious anchorage; the Harbour of Cumberland, or Bay of St. Jago de Cuba already mentioned; Bay Honda, west of the Havannah; Matanzas Bay east of that port; Nipa Bay on the north-east. The indentation of land between the south shore of Cuba and the Isle of Pines, is sometimes called the Bay of Batabano.

Capes.

Bays.

Soil and produce. The soil of Cuba is of the most fertile kind; the trees are never stripped of their foliage, and the fields are always covered with flowers and odoriferous plants; many grains yield two harvests, one of which the mildness of the climate allows to be gathered in mid-winter. The principal productions are sugar, coffee, and tobacco; wax is also a great article of export; indigo, cotton, cacao, maize or Indian corn, and yams, are likewise produced in abundance; and an infinite variety of herbs and vegetables. Very few European fruits are cultivated; but those of the Tropics are plentiful and delicious, particularly the pines; the plantains also rival in flavour the forty varieties of that fruit which are found among the Philippine Islands.

Sugar. The sugar of Cuba, or as it is called in the market the Havannah, and sometimes Lisbon sugar, is, in an equal stage of refinement, far superior to that from the English, French, or Dutch Islands. In 1781 the exports from the Havannah alone, were 62,500 boxes. In 1810 they amounted to 230,000 boxes, averaging each 400 lbs. weight, and each worth forty dollars. In 1821, 236,669 boxes were exported. Upon these an export duty equivalent to 4½ per cent. is paid.

Coffee. The culture of coffee in Cuba did not receive encouragement until the destruction of the St. Domingo plantations in 1791. In 1778 the crop was scarcely known. In 1803, eighteen millions of pounds were produced; and in 1821 nearly 100 millions of pounds were exported from the Havannah. The cultivation of this berry is daily increasing.

Tobacco. The tobacco of Cuba is well known for its fine flavour, and the perfection in which it is grown; it is exported in the leaf, as snuff, and manufactured into cigars, being accounted superior to that of other parts of the world. If the culture and trade of this production were free, it would be the greatest source of prosperity to the Island; but from the restrictions imposed, the crop, which in former years amounted to 600,000 *arrobas*, was in 1810 reduced to only 200,000; it has since revived, and by the latest estimates is supposed to yield 400,000 *arrobas*, a quantity infinitely smaller than it is capable of yielding from the lands at present in cultivation.

Wax. In 1763 a few hives of bees were brought from St. Augustine, in East Florida; and in 1776 they had so multiplied, that there were exported from the Havannah 10,540 *arrobas* of wax, each valued at eighteen dollars, besides the consumption of wax-lights in every genteel house in the Island, and in many of the dwellings of the lower class of country people, and the appropriation of a very large portion to religious purposes. The wax, which is equal in quality to that from Venice, had increased its exports to 41,650 *arrobas*; but in 1821, scarcely one-third of that quantity came to market. Honey also is an article of some account in the Cuba exports.

Agricultural establishments. The agricultural establishments of Cuba were by the census of 1817 returned as follows:

1193 Farms for raising horned cattle.
623 Sugar estates.
830 Establishments for breeding swine.
460 Farm-yards for fattening domestic animals.
1762 Cultivated estates in fields.
5933 Arable farms with attached settlements.
1601 Tobacco plantations.
354 Bee-houses.
17 Cacao plantations.

Gold. Considerable quantities of gold were formerly procured in the beds of the small rivers which rush down with impetuosity from the mountains, and small portions of this precious metal are still occasionally found. Herrera states, that at the first settlement of the Island there was discovered at Xagua and at the town of Trinidad, veins of gold larger than those of Cibao in the Island of St. Domingo. There are very abundant mines of loadstone and copper; from the latter, pieces of artillery were formerly cast; and there is a mine of excellent iron in the western hills.

Loadstone, copper, and iron.

Rock-crystal. The polished rock-crystal of Cuba is more brilliant than the celebrated stones of St. Isidore.

Bitumen. So late as 1817 there have been discovered extensive lakes of bitumen, of which 1 lb. avoirdupois has been found to contain 3420 cubic inches, or nearly two cubic feet of inflammable gas, according to an analysis made by order of the Government of Cuba. The bitumen is found particularly in the vicinity of Puerto Principe, and of the Havannah; it is said to be very similar, in appearance, to the Canal coal of Wigan, in Lancashire. The gas evolved appears to be carburetted hydrogen, and by the foregoing analysis would seem to be double the quantity produced from the English coals. The residuum is coke of excellent quality for domestic purposes, and for the fusion of metals, having lost by this process less

than one half, and having increased in bulk thirty per cent.

Mineral springs. Salt ponds.

Medicinal and sulphureous springs are numerous in Cuba; and there are several very productive salt ponds.

Bayamo stones.

Among the most remarkable curiosities of the Island are the stones found on the road from Bayamo to St. Jago de Cuba, which are of all sizes, and as perfectly spherical as if they had been turned by the most skilful mechanic.

Fish.

The rivers and coasts abound with fish; and fine turtles frequent the shallows, the abundance of them is mentioned by Peter Martyr, who also thus describes the remora or sucking-fish. "Nowe shal zow heare a newe kind of fysshinge. Lyke as we with greyhoundes doo hunte hares, in the playne fieldes; so doo they as it were with a huntynge fysshe, take other fysshes. This fysshe was of shape or fourme unknowen vnto us: but the body therof, not muche unlyke a greate yele; having on the hynder parte of the heade, a very rowgh skynne, lyke unto a greate bagge or purse. This fysshe is tyed by the syde of the boate with a corde lette downe soo farre into the water, that the fysshe may lye close hyd by the keele or bottom of the same, for shee may in no case abyde the sight of the ayer. Thus when they espie any greate fysshe or tortoyse (wherof there is greate abundance bygger then greate targettes) they let the corde at lengthe. But when shee feeleth her selfe loosed, shee enuadeth the fysshe or tortoyse as swifty as an arrowe. And when she hath once fastened her howlde, she casteth the purse of skynne wherof wee spoke before, and by drawyng the same togyther, soo graspeleth her pray, that no man's strength is sufficient to unloose the same, excepte by lyttle and lyttle drawynge the lyne, shee be lyfted sumwhat aboue the brymme of the water. For then, as sone as shee seeth the brightness of the ayre, shee lettethe goe her howlde. The praye, therefore, beinge nowe drawen nere to the brymme of the water, there leepeth soondenly owte of the boate into the sea soo many fysshers, as may suffice to holde faste the praye untyll the rest of the company haue taken it into the boate. Which thinge doone, they loose soo much of the corde, that the huntynge fysshe may agen returne to her place within the water: whereby an other corde, they let downe to her a piece of the praye, as we use to rewarde greyhoundes after they haue kylled theyr game. This fysshe they caule *Guaicanum*, but oure men caule it *Reuersum*."

Birds.

As the rivers abound in fish, so the woods produce multitudes of birds, which being of the most lively colours, parrots, humming-birds, flamingos, &c. surprised the crews of the vessels from Europe who accompanied Columbus when he discovered the Island. "To get some knowledge of its people," says Don Fernando Colon, in the history of his father's actions, "the Admiral came to an anchor in a large river, where the trees were very thick and tall, adorned with fruit and blossoms, differing from ours, and where there were abundance of birds, the place most delicious, and a great variety of birds far differing from ours, but that among them there were partridges and nyghtingales." "They harde nyghtingales synge in the thycke woodes," observes Martyr, "in the month of November." The birds of Cuba are, however, principally the parrot, anciently called the Popinjay, and so much spoken of by all the early writers on the voyages of Columbus; the paroquet, the American partridge, turtle dove, and great varieties of aquatic birds.

Beasts.

The quadrupeds are not a numerous family in any of the West India Islands. A dog, that could not bark, was the only four-footed animal seen by Columbus in Cuba; but this deficiency has been amply supplied by the introduction of cattle and swine from Europe. Cattle have multiplied so much in Cuba, that they have returned to their original state, and roam wild in immense droves through the forests and savannahs or marshy plains; they are hunted for their hides and tallow, which, with *tasago* or dried meat, are exported to a great amount. From the vast numbers of wild cattle in Cuba and Hispaniola, arose that society which was first instituted for the purpose of hunting them, the persons composing it living on the flesh smoke-dried or *boucan'd* over a wood fire. From this food these hunters were styled *Boucaniers*, a name which afterwards was adopted by their successors, who lived on meat so prepared whenever they could not procure better, but who, instead of confining themselves to hunting the wild cattle, became pirates of the most lawless kind, and struck terror through the world.

The forests also abound with swine, which have multiplied in a similar manner; and the inhabitants possess large stocks of horses, mules, fine black cattle, and sheep, all of which thrive very much. 10,000 or 12,000 hides are annually exported. Only five sorts of quadrupeds, excluding reptiles, are now known to be natives of the West Indies. The opossum, Javari or American hog, tatou, agouti, and musk-rat. The first two are now rare in the Islands. The tatou or armadillo is occasionally found, the agouti is more common, resembling the rabbit and the squirrel in its form and habits. The musk-rat is similar to the common rat, but much larger; it has a peculiar file-shaped tail, and is common throughout the New World.

Reptiles.

Reptiles are very numerous in the West Indies. Serpents and snakes prevail in the humid tracts, whilst lizards are to be found every where; *Iguanas*, or the edible kind, being the largest of the tribe, and very hideous; whilst the beautiful little flycatchers are found in the houses, and cherished by the inhabitants; their delicate forms being covered with a fine skin which seems a net-work of gold, or of silver, of gilded green, or of a variety of other splendid and changing colours. Scorpions of a large size are found in Cuba; but all these venomous creatures are probably more dreaded than dreadful.

Insects.

The insect tribe are so very numerous in this Island, that it would take more than the limits of this description to name the genera correctly. Fire-flies of the most splendid brightness light up the savannahs during the dark nights of the Tropic climates. Centipedes and large wood-spiders are amongst the venomous sorts, and the ant amongst the most destructive.

Commerce.

The commerce of the Island of Cuba consists in the exportation of its natural productions, which we have enumerated; in return for which, are imported all descriptions of manufacture, whether articles of necessity, or works of fancy and luxury; and England, France, and the United States of America divide the profits of the extensive trade, which exceeds that of any part of Spanish America. There are but very

CUBA.

factures in Cuba, the climate deprives the inhabitants of the energy and industry necessary for their establishment, and they will probably ever remain dependant on the natives of a less fruitful part of the globe.

Govern-ment.

By the ancient Spanish Constitution, the Island of Cuba and Porto Rico were integral parts of the Monarchy, and were governed like the Provinces of Old Spain. At present they are commanded by an officer, resident at the Havannah, who holds the rank of Captain-General. The Viceroy of the Havannah, in addition to his other employs, has the title of second in command of the whole Island, and succeeds *pro tempore* to the supreme command upon the vacation of the offices of the Captain-General. In all the cities and towns there are Municipal Councils, Alcaldes in ordinary, Proctors, and other Civil officers; for each town and district the Captain-General nominates a petty Magistrate, who exercises a limited jurisdiction. In the cities of the Havannah and St. Jago de Cuba, the Lieutenant-Governors exercise the functions of Alcaldes in Chief. In Civil and criminal suits, under the cognizance of the Governors and Alcaldes, there is an appeal from their decision to the Supreme Court of Puerto Principe, which before the revolution in St. Domingo was held in that island, and had concurrent jurisdiction in Porto Rico.

Religion.

The religion of Cuba is Roman Catholic, and no foreigners are allowed grants of land in the Island who do not profess that faith. The Island is divided into two Dioceses. The Archbishopric or Metropolitan See of St. Jago de Cuba, and the Episcopal See of the Havannah. The first Cathedral was built in 1518, at Boracoa, by Diego Velasquez; the See was translated to St. Jago in 1522. The Cathedral Church of the Havannah was thirty-four years in erecting.

Revenues and expenditure.

In 1778 the revenues of the Island of Cuba were 400,000 dollars, and the disbursements amounted to 1,200,000. In 1810 the incomes exceeded two millions and a half, but the charges were upwards of three millions of dollars.

Civil division.

The Island of Cuba is portioned into two grand divisions, the Province of the Havannah, and the Province of St. Jago de Cuba, or as the Spaniards usually designate it, Cuba; the dividing line runs from north to south across the Island, between Espiritu Santo and Puerto Principe, twenty-five leagues from each. These two grand Governments or Provinces have each a Civil and military jurisdiction, and are subdivided into various minor departments.

Province of the Havannah.

The Province of the Havannah includes the Districts of Havannah, Matanzas, Trinidad, Espiritu Santo, San Juan de los Remedios, and Villa Clara. The Capitals of the Provinces created by the Provincial College, are the cities of Havannah, Bepical, Matanzas, and Trinidad; and the towns of St. Jago, St. Antonio, Abad, Guanjay, Guanabacoa, Filipinas, Guines, and Santa Clara.

Province of Cuba.

The Province of St. Jago de Cuba, or Cuba, comprises the Districts of Cuba, Holguin, Baracoa, and Puerto Principe. The capital Cities are, St. Jago de Cuba, Holguin, Baracoa, Puerto Principe, Bayamo or San Salvador, and Guinza. The capital Towns are, Higuani, Caney, Cobre, Ziguabos, Manzanillo, and Nuevitas. This Province was constituted as an Archbishopric in 1804.

Population.

The population of the Island of Cuba has increased with great rapidity within the last half century, as the following comparative view will exhibit. CUBA.

There were in

	Inhabitants.	
1775.....	171,628	
1778.....	179,514	
1791.....	254,821	
1792.....	272,141	besides 16,000 troops.
1804.....	432,000	according to Humboldt.
1810.....	500,000	
1812.....	600,000	nearly one half of which were whites.
1817.....	671,079	according to a Census.

The mean annual increase of population from 1804 to 1807 was upwards of 19,000; and it may be computed to have augmented since at a ratio which would make the present number of inhabitants (1825) at the least 770,000, which is a population of twenty-two individuals to the square mile.

Havannah.

The City of the Havannah, the Capital of the Island, is situated in latitude 23° 8′ 16″ north and in longitude 82° 21′ 30″ west of Greenwich. The first houses were erected on the south side of the bay, by Velasquez and Las Casas, in 1515, when it was called Puerto de las Carenas. In 1536 it was pillaged by French pirates, when the place was so insignificant as to be ransomed from fire for 700 dollars only. Enormous sums have been expended on its fortifications, commensurate with the political importance of the situation as the key of New Spain. The first fortress built was the Town Fort, finished in 1544; the Moro Castle, the principal defence, is situated on the east point of the entrance to the harbour; it is of an irregular figure, built upon a rock, and flanked by bastions; the Moro was completed in 1584. The fortress of San Salvador de la Puerta was constructed at the same time on the opposite side of the channel, which is thus, with the outworks of these posts, bristling with heavy artillery; this channel is only half a mile in length, and so narrow that but a single vessel can enter at once. The redoubts of Coximar and Clurrera were built in 1646, the Castles of San Carlos, of the Cabana, and of St. Domingo, were commenced in 1763, after the restoration of Havannah to Spain. In 1744 were laid the foundations of the Prince's redoubt on Mount Arrostegui. The City is entirely surrounded by walls, which were begun to be built in 1633. The port of the Havannah is one of the best harbours in the New World, being sufficiently deep for ships of the largest class, and capable of receiving at once a thousand vessels, which lie land-locked within the bay. The site of the Havannah is very pleasant; the shape of the City is semicircular, the diameter being formed by the shore; two gates, one of entrance and one of departure, afford communication between the town and the suburbs. The public buildings are numerous, and though not erected in the first style of architecture, are neat and commodious. They consist of eleven Churches, all richly ornamented, several Monasteries and Convents, a Foundling and three other Hospitals, two public Seminaries, a large Tobacco Depôt and Factory, a spacious building used as the Post Office, the best piece of architecture in the whole Island; a handsome Theatre, the superb Palace of the Captain-General, a Chapter-house, a Medical School, Prisons, &c. Havannah also contains a Botanical Garden, lately

Fortifications.

Harbour.

Public buildings.

CUBA. established, and not yet completely finished. There are two public promenades, aqueducts constantly supplied, and a market abundantly furnished with all the products of the West Indies. The houses are of stone, not very high, nor remarkable for their architecture; but in the interiors, spacious and well arranged, with court yards and piazzas, to which the apartments open; many of them are splendidly furnished, and there is to be found an appearance of opulence and well-being, not generally the case in Spanish colonies. The luxury of this city has perhaps arrived to its greatest height, and aided by all the relaxations of a warm climate, a momentary charm is spread around it in the eyes of the young traveller; but a decided want of European cleanliness, added to the malignant effects of tropical fevers, render the Havannah the grave of the stranger, hundreds of whom annually fall victims. The commerce of the Havannah is the most extensive of any part of Spanish America.

Population. In 1792 the population of the Havannah was 51,307
1812 98,009
1817 149,613

Imported Negroes. The number of African slaves entered in the port of the Havannah from 1800 to 1821 was 172,054; the detailed account as follows may not be uninteresting:

	Slaves.		Slaves.		Slaves.
1800....	1,145	1807....	2,565	1814....	4,321
1801....	1,659	1808....	1,607	1815....	9,111
1802....	13,832	1809....	1,162	1816....	17,733
1803....	9,671	1810....	6,672	1817....	25,841
1804....	8,923	1811....	6,349	1818....	19,902
1805....	4,999	1812....	6,081	1819....	17,194
1806....	4,395	1813....	4,770	1820....	4,122

Shipping. The number of vessels annually entering the port of the Havannah in 1810 were about 1200; in 1817 the number exceeded 1300, of which about 365 were Spanish, and the remainder foreigners; and of the whole about 70 were vessels of war.

Chief towns. Besides the Havannah, the chief Towns of the Island of Cuba, ranking according to population, are St. Jago de Cuba, Puerto Principe, Bayamo or San Salvador, Matanzas, and Guanabacoa.

St. Jago de Cuba. St. Jago de Cuba is within Cumberland Harbour, on the south side of the Island, near the eastern extremity; the bay is defended by a castle. This city was formerly the capital of the Island, but has now fallen into decay. Population 70,000, but with the surrounding district 110,000. Latitud 19° 47′ north, longitude 75° 20′ west of Greenwich.

Puerto Principe. Puerto Principe is chiefly remarkable for being the seat of the Supreme Court of Appeal or *Audienza* for Cuba and Porto Rico. Population 70,000.

Matanzas. San Carlos de Matanzas is situated about twenty leagues east of the Havannah, at the bottom of a fine bay and harbour. The trade of this place with the different sea-ports of the United States has latterly very much increased; and the intercourse between Matanzas and the Havannah is such as to give full encouragement to a steam-boat, which runs continually between them. Population 18,000. Latitude 23° 2′ north, longitude 81° 33′ west.

CUBA. Bayamo or San Salvador is situated among the high mountains of that district. Population 12,000. Latitude 20° 19′ north, longitude 76° 28′ west. Bayamo

Guanabacoa. The population of Guanabacoa is 10,000.

Batabano. Batabano is on the south-western end of Cuba, nearly opposite to the Pinos Islands, near a very large bay, and fifty miles south-west of the Havannah.

Barocoa. Barocoa is a sea-port on the north-eastern shore of the Island, with an excellent harbour for vessels of small tonnage; it is situated in latitude 21° 4′ north and longitude 76° 16′ west, about seventeen leagues north-east of Cuba or San Jago.

Santa Cruz. Santa Cruz is a large Town on the north coast, thirty miles east of the Havannah, and 115 north-west of Cadiz.

Cadiz. Cadiz is situated in a bay of the same name, on the north coast, 164 miles east of the Havannah, in latitude 23° 2′ north and longitude 79° 55′ west, and about ten miles west of Cadiz River.

Islands. The shoals which encompass the Island of Cuba, are studded with small islands or keys, lying principally in groups. On the northern shore, between Point Hicacos and the Port of Manatto, the cluster has been designated as the King's garden (*El Jardin del Rey*:) and between Trinidad and Cape Cruz, a less compact Archipelago, is called the Queen's garden (*El Jardin del Reyna.*) The three islands of Caymen lie off the Queen's garden to the south. The Isle of Pinos is without the Bay of Batabano, on the south of Cuba; it is about seventy miles in circumference; mountainous, and covered chiefly with pines, and inhabited only by a few fishermen.

These islands and keys afford secure retreats to the numerous pirates who keep watch near them, to attack unarmed trading vessels. To the disgrace of the Government of Cuba, piracy appears to be established upon so systematic a footing, that it is dangerous for any merchant-vessel to navigate the coast. These banditti, enriched by their plunder, and organized by active leaders, make themselves dreaded, independent of the covert protection afforded them by the subaltern authorities in the distant parts of the Island. Nor will they, notwithstanding the British and American cruizers, ever be effectually broken up, until the Government of Cuba banishes all those who own, or who protect the piratical vessels, or who now openly receive and sell property pillaged on the high seas.

The Works of Humboldt; Alcedo's *Geographical Diationary*; *La Aurora*, or *Correo Politico economico de la Havanah*; *El viagero Universal*, by Estalla; Herrera; Raynal; Girolamo Benzoni's *Giro del Mondo*; Jeffreys on the *Spanish West India Islands*, 4to., London, 1743, may be consulted respecting the history of Cuba. Several other Authors might be cited, who have written on this Island; but, in general, their works include little more than a hasty notice of the Havannah, where most of those, who have visited Spanish America, stopped for a few days only; and it remains, therefore, still a desideratum to have a good Statistical and Zoological work on the Island of Cuba.

CUBÆA. CUBÆA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx top-shaped, five-parted; corolla, petals five, nearly equal; stamens inserted into the calyx, long, all fertile, three upper ones shorter; seed-vessel a legume.

CUBIT.

Two species, *C. paniculata*, and *C. trigona*, natives of the woods of Guiana. Aublet. *Guian.*

CUBAGUA, a small Island on the coasts of Colombia, and in the vicinity of Margarita, in the Caribbean Sea, noted for the pearl-fishery formerly carried on there. It was first discovered by Columbus, and soon afterwards settled by Ojida, who founded a town on it, called Nueva Cadiz, no vestiges of which now remain. At that time, the coast from Paria to Cape de la Vela, was called *Costa de las Perlas*, the Coast of Pearls; the first Spaniards who landed on its shores, finding the natives every where decorated with these valuable jewels. At the conquest, the trade was so active, that the King's fifth was annually above 15,000 ducats; and until the year 1530, the fishery averaged yearly £173,000.; while the American mines furnished during the same period only £434,000: sterling. But this profitable branch of commerce diminished rapidly afterwards, and was entirely at an end before 1683. It is conjectured that this decay arose from the destruction of the pearl fish, as well as from the arts of cutting and setting diamonds having become common in the XVIth century. During Humboldt's visit to Caracas, the Indians were the only persons concerned in reviving this traffic, but they were unsuccessful, inasmuch as they generally procured only a few small seed pearls, which were sold at Cumana for five shillings a dozen. An English Company has lately embarked in this enterprise.

Cubagua is full of small deer, some of which are of a brownish red on the back, white under the belly, and beautifully spotted, others are quite white; the Guayqueria Indians frequently land on the Island to kill them, for the venison and skins.

Coche, Los Testigos, and Los Frayles, in the same neighbourhood, are in the other isles, from which the fishery of pearls is carried on; but they are small, and were uninhabited very lately.

CUBICULAR, Fr. *cubiculaire*; belonging to the bed-chamber: from Lat. *cubare*, to lie down.

> At the breking up of the counseille ther entrid into this reaulme a *cubicular* of the popes; which broght to the kyng a suerde and a cappe, whiche for honnor of the pope was honnourably receyvid by the king's commaundement. *Leland*, vol. iv. p. 244.

> As also for being the inseparable *cubicular* companion the king took comfort in, in the height of his troubles.
> *Howell. Letter* 14. book iv.

> And so that custom by degrees changed their *cubicularly* beds into *discubitory*, and introduced a fashion to go from the baths unto these. *Sir Thomas Brown*, book v. ch. vi.

> He firste made hym frendes secretely, and after hyryd one of the *cubyclers* of the pope, that he in the deed nyght, shulde speke in a rode [reed] and saye, "Celestyne, if thou wylte be sauyd and be partyner of my blysse, renounce this pompe of y^e^ worlde, and serue me as thou before dyd."
> *Fabyan. Philip IV. The seventeenth Yere.*

CUBIT, Lat. *cubitus*; Gr. κύβιτον, from κύπτ-ειν, *curvare*, to bend. *Est enim curvatura brachii.* Martinius.

> But who of you thenkynge, may putte to his stature o *cubit*?
> *Wiclif. Matthew*, ch. vi.

CUBIT. CUCKING-STOOL.

> Whiche of you (thoughe he toche thought therfore) coulde put one *cubit* vnto his stature. *Bible*, 1551.

> On the top grow the fruit whiche are called plantanes: they are crooked, and a *cubite* long, and as bigge as a man's wrist, they growe on clusters.
> *Hakluyt. Voyage, &c. Job Ortep.*

> And thus th' Almighty taught just Noah the same,
> Three hundred *cubits* the whole length to be,
> Fifty the breadth, the height (least of the three)
> Full thirty *cubits*; only with one light
> A *cubit* broad, and just as much in height.
> *Drayton. Noah's Flood.*

> Hereof Forerius hath a singular exposition, conceiving the watchmen of Tyre might well be called pigmies, the towers of that city being so high, that unto men below, they appeared in a *cubital* stature. *Sir Thomas Brown*, book iv. ch. xi.

> But Theseus, with a club of harden'd oak,
> The *cubit-bone* of the bold centaur broke,
> And left him maim'd; nor seconded the stroke.
> *Dryden. Ovid. Metamorphoses*, book xii.

> It warm'd my veins with youthful fire,
> And rais'd my heart a *cubit* higher,
> To hear your own kind words express
> Your competition and success.
> *Blacklock to Dr. Evans.*

According to Arbuthnot, one of the Jewish CUBITS = one English foot 9·888 inches; the other = 1·824 feet. The Roman Cubit = one foot, 5·406 inches. See also a *Dissertation on the Cubit of the Jews*, in Greaves's *Miscellaneous Works.*

CUBOSPERMUM, in *Botany*, a genus of the class *Decandria*, order *Monogynia*. Generic character: calyx five-cleft; corolla, petals six, emarginate; capsule five-celled, many-seeded

One species, *C. palustre*, native of Cochin-China. Loureiro.

CUCKING-STOOL, called by Spelman, (*Gloss. Arch.* in *v. Terbichetum*,) a *Coke-stoole*. Minsheu says, rather, *ducking-stoole*, an engine for the punishment of scolds and unquiet women; called also a Tumbrel.

> And because this vice is so much hurtfull to the society of a common-wealth, in all well ordred cities, these common brawlers and scolders be punished with a notable kind of paine: as to be set on the *cucking-stole*, pillory, or such like.
> *Homilies*, 1. *The third Part of Sermon against Contention.*

> ——————— Let 'em, let 'em,
> We'll ship 'em out in *cuck-stool*, there they'll sail
> As brave Columbus did, till they discover
> The happy islands of obedience.
> *Beaumont and Fletcher. The Tamer Tamed*, act ii. sc. 1

> These, mounted in a chair-curule,
> Which moderns call a *cucking-stool*,
> March proudly to the river side,
> And o'er the waves in triumph ride.
> *Butler. Hudibras*, part ii. can. 2.

A Woman, says Lord Coke, indicted for being a common Scold, if convicted, shall be sentenced to be placed on a certain instrument of correction, called the *trebucket, tumbrel, tymborella, castigatory*, or *Cucking-stool*, which, in the Saxon language, signifies the scolding-stool; though now it is frequently corrupted into *ducking*-stool, because the residue of the judgment is, that when she is so placed therein, she shall be plunged into the water for her punishment, (3 *Inst.* 219. 4 *Comm.* 169.) *Goginstole, cokestole, and choaking-stool, (quia hoc modo demersæ aquis ferè suffocantur,)* are other corruptions. By the Saxons it was called *Scealfing-stole*; and in Domesday Book it is *cathedra*

CUCKING-STOOL.

CUCKOLD.

stercoralis, being anciently employed to duck fraudulent Brewers and Bakers *in stercore*.

Minsheu is unusually facetious on the name *Turbacetum*. "*Fortassis quia* turbas sedat, *et pacem conciliat, licet non amore virtutis, tamen formidine pœnæ. Mulieribus enim quæ rixando et altercando et contumeliis afficiendo vicinos suos in fervore sanguinis sui lacerant, et pacem publicam disturbant, refrigerationis gratiâ hæc pœna constituta est, tali morbo peculiare remedium.*

Morgan, the Editor of Jacobs's *Law Dictionary*, mentions that he had seen the remains of an instrument of this kind in Warwickshire. It consisted of a long beam moving on a fulcrum, (*tolleno*,) with the stool at one end, suspended over the centre of a large pond. Banbury is, perhaps, the last place in which it was used, and then more for women of light than of bitter reputation. A pool in that town is still known as the *Cucking-pool*. A print of a Cucking-stool will be found annexed to Gay's Pastoral, *The Dumps*; and another as a frontispiece to the penny History of The old Woman of Ratcliffe Highway; but the fullest description is given as follows, in Misson's *Memoirs and Observations in his Travels in Engand*. *On attache une Chaire à bras à l'extremité de deux especes de Solives, longues de douze ou quinze pieds et dans un eloignement parallèle, en sorte que ces deux pieces de bois embrascit par leur deux bouts voisins la chaire qui est entre deux et qui y est attachée par le côté comme avec un essieu, de telle manière, qu'elle a du Jeu, et qu'elle demeure toujours dans l'etat naturel et horizontal auquel une Chaire doit etre afin qu'on puisse s'asseoir dessus, soit qu'on l'eleve, soit qu'on l'abaisse. On dresse un poteau sur le bord d'un Etay ou d'une Riviere, et sur ce poteau on pose presque en equilibre la double piece de bois à une des extremités de laquelle la Chaire se trouve au dessus de l'eau. On met le Femme dans cette Chaire et on la plonge ainsi, autant de fois qu'il a été ordonné, pou refraichir un peu sa chaleur immoderée*, (55.)

CU'CKOLD, *v.*
CU'CKOLD, *n.*
CU'CKOLDLY,
CU'CKOLDOM,
CU'CKOLD-MAKER.

Fr. *cocu*; Dutch, *kochoer*; Ger. *kuckuck*; Lat. *curruca*; Angl. a *cuckold*, and also a Hedge Sparrow, *quia ut illa* cuculi *pullum pro suo educat, sic et ille alienos pro suis.* Cuculus *apud Plautum.* Angl. A *Cuckold-maker, qui sicut* Cuculus, *ponit et parit ova in nido alterius.* Minsheu. Tooke seems to have settled the Etymology of this word very clearly and satisfactorily, though it has escaped the notice of Mr. Nares.

"The Italian *cucolo*, a *cuckow*, gives us the verb to *cucol*, (without the terminating D,) as the common people rightly pronounce it, and as the verb was formerly and should still be written.

"I am *cuckolled* and fool'd to boot too.
Beaumont and Fletcher. Women Pleas'd.

"If he be married, may he dream he's *cuckol'd*.
Id. Loyal Subject.

"To *cucol*, is, to do as the *cuckow* does: and *cucol-ed, cucol'd, cucold*, its past participle, means *cuckow-ed*, i. e. served as the *cuckow* serves other birds.

"The whole difficulty of the etymologists and their imputation upon us of absurdity [see the Quotation from Howell's *Letters*, and also Skinner,] are at once removed by observing, that, in English, we do not call them *cuculi*, but *cuculati*, (if I may coin the word on this occasion,) i. e. we call them not *cuckows*, but *cuckowed*."

Tooke. Diversions of Purley, iii. 21, and 23 n.

Jalouse he was, and held hire narwe in cage,
For she was wild and yonge, and he was old,
And deem'd himself belike a *cokewold*.
Chaucer. The Milleres Tale, v. 3226.

Guenhera, a Cornish woman, (whom some wryters call fayre Eline,) that made Kyng Arthur a *cuckold*, was after his death deuoutly receiued into Ambesbury nõdry, as a penitẽt to their spiritual vse. *Bale. English Votaries*, part i. p. 53.

Coquage, God of *cuckolds*, as one merrily said, accompanies the godesse Jealousie, both follow the fairest, by Jupiter's appointment, and they sacrifice to them together.
Burton. Anatomy of Melancholy, fol. 627.

TIB. Nay, I will go. Ile see an you may be allow'd to make a bundle o'hemp, o' your right and lawfull wife thus, at every *cuckoldly* knave's pleasure.
Ben Jonson. Every Man in his Humour, act iv. sc. 10.

And you, young apple-squire; and old *cuckold-maker*,
Ile ha' you every one before a justice:
Nay, you shall answer it, I charge you goe. *Id. Ib.*

So in French, *cocu* is taken for one whose wife is light, and hath made him a passive *cuckold*, whereas clean contrary, *cocu*, which is the *cuckow*, doth use to lay her eggs in another bird's nest. *Howell. Letter* 19. book iv.

JAGO. If you are so fond ouer her iniquitie, giue her pattent to offend, for if it touch not you, it comes neere no-body.
OTH. I will chop her into messes: *cuckold* me?
Shakspeare. Othello, fol. 330.

She acts the jealous, and at will she cries.
For woman's tears are but the sweat of eyes
Poor *cuckold-fool*, thou think'st that love sincere,
And suck'st between her lips the falling tear.
Dryden. Juvenal. Satire 7.

On the contrary, *cuckoldom* is the basis of most of our modern plays. If an alderman appears upon the stage, you may be sure it is in order to be *cuckolded*. *Spectator*, No. 367.

No doubt but your fool's-cap has known
His highness obligingly kind,
Odzooks I could knock the fool down,
Was e'er such a *cuckoldy* hind?
Lloyd. Songs. Air 24.

Tooke's Etymology sufficiently explains the English and French application of CUCKOLD and *Cocu*; yet notwithstanding this, it must be admitted that a little violence is used to obtain it, and the Romans took a plainer course. The adulterous husband, (he who dropped his eggs in another bird's nest,) was called by them *Cuculus*, a Cuckoo; hence Artemona, in the *Asinaria* of Plautus, (v. 2,) when she detects her husband Demænetus in an illicit amour, attacks him thus: *Etiam cubat* Cuculus; and again he is addressed *Cano capite te* Cuculum *uxor ex lustris domum rapit*; on the other hand, the suffering husband, whom we term Cuckold, they named *Curruca*, Hedge Sparrow, (the bird which educates the suppositious nestlings.) Juvenal, (vi. 276,) describes the Cuckolded and contented spouse.

Tu tibi nunc Curruca *places, fictumque labellis*
Exsorbes.

Pausanias (ii.) tells a story of Jupiter's transforming himself into a Cuckoo in order to obtain the favours of Juno. This incident is assigned by Girac, somewhat strangely, *Reponse à la defense de Voiture*, sec. 26, 194, as the origin of the word Cuckold, (*Cocu*,) and he believes that from the *horns*, with which Jupiter Ammon, and other Deities, out of complaisance to him, were invested, a similar bearing was adopted by those married men who are unfortunate in the fidelity of their wives. Costar (*Suite de la Defense des Ou-*

CK-D. C-AN.

rages de Voiture, 380, &c.) contests this opinion, and the reader will be much edified by reading Bayle's arch summary of the controversy, (*Junon. Note* E.) Menage also may be referred to in the words *Cornes*, *Cocu*, (*Origines Françoises.*)

The two Chapters on Cornuti and Cuckolds, in Brand's *Observations on Popular Antiquities*, ii. 101, &c., contain almost all the lore on this subject. Explanations (not very explanatory it must be confessed,) of the proverbial Horns are there given from *Elysius jucundarum quæstionum campus*, 1661, and from *Horne exalted* of the same date; and a Greek Epigram is cited allusive to the Horn of Amaithea.

CUCKOO, Ger. *kuck-gauck*, *cuckuck*; Dutch, *kuyck-kuck*; Fr. *coucuo*; It. *coculo*; Lat. *cuculus*; Gr. κόκκυξ; all manifestly from the sound uttered by this bird.

> And thus I sing, with harmelesse true intent,
> Like Philomene, when as percase (meane while)
> The *cuckowe* suckes mine egges by foul deceit,
> And lickes the sweet, which might have fed me first.
> *Gascoigne. The Steele Glas.*

> The merry *cuckowe*, messenger of spring,
> His trumpet shrill hath thrice already sounded;
> That warnes all louers waite vpon their king,
> Who now is comming forth with girland crowned.
> *Spenser. Sonnet* 19.

> When daisies pied, and violets blue,
> And lady-smocks all silver white,
> And *cuckoo-buds* of yellow hue,
> Do paint the meadows with delight.
> *Shakspeare. Spring. A Song.*

How unknowingly, how weakly is the using of set forms attributed here to constancy, as if it were constancy in the *cuckoo* to be always in the same liturgy.
Milton. Answer to Eikon Basilikè.

> Thy liquid notes that close the eve of day,
> First heard before the shallow *cuckoo's* bill,
> Portend success in love.
> *Id. Sonnets*, song 1. l. 6.

They have no more notes in their song than the *cuckow*; though, far from the softness of that harbinger of summer and plenty, their voice is as harsh and as ominous as that of the raven.
Burke. Reflections on the Revolution in France.

CU'CQUEAN, *v.* } *Cuck*, *cuculus*, a Cuckold-
CU'CQUEAN, *n.* } maker; and *quene*, wife, the Cuckold-maker's wife. Minsheu.

> Came I from France Queene Dowager,
> Quoth she, to pay so deere
> For bringing him so great a wealth
> As to be *cuckqueau'd* here!
> *Warner. Albion's England*, book viii. ch. xli.

> Queene Juno, not a little wroth
> Against her husband's crime,
> By whom shee was a *cockqueene* made,
> Did therefore at the time
> In which Alcmena cride for helpe
> To bring her fruit to light,
> Three nights and dayes inchaunt her throwes.
> *Id. Ib.* book i. ch. iv.

> ——— Nay, madam, which is more
> He loves variety, and delights in change.
> And I heard him say, should he be married,
> He'd make his wife a *cuckqueen*.
> *Heywood. Foure Prentices of London.*

CUC-QUEAN. CUCUL-LATED.

CUCUBALUS, in *Botany*, a genus of the class *Decandria*, order *Trigynia*, natural order *Caryophyllæ*. Generic character: calyx inflated; corolla, petals five, furnished with claws, not crowned at the mouth; capsule three-celled.

Nine species, natives of the Northern hemisphere, *C. Behen*, the Bladder Campion, is a common English plant. *Eng. Bot.* 164.

CUCUJIPES, in *Zoology*, a family of insects of the order *Coleoptera*, containing the genera, *Parandra*, *Cucujus*, *Uleiota*.

CUCUJUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Cucujipes*. Generic character: antennæ moniliform, shorter than the body; labrum projecting beyond the mandibles, very conspicuous; palpi terminating in an obconical truncated joint; tarsi very short.

Type, *C. depressus*, Fabr.

CUCULLÆA, in *Zoology*, a genus of bivalve shells of the family *Arcacea*. Generic character: shell equivalve, inequilateral, trapezoidal, ventricose; beaks distant, separated by the area of the ligament; posterior muscular impression projecting, with the margin angular or auriculated; hinge linear, straight, with very small transverse teeth; and from two to five ribs at the extremities, parallel to the hinge.

Type, *Arca Cucullus*, Gmel.

A genus considerably allied to *Arca*, but sufficiently distinct in the peculiarities of the hinge and the general form of the shell.

CUCULLANUS, in *Zoology*, a genus of the intestinal worms, belonging to Lamarck's second order "*Vers rigidules.*" Generic character: body elongate, cylindrical, obtuse at the anterior extremity, attenuated behind; mouth terminal, covered by a striated hood.

Found in the intestines of fish.

CUCULLARIA, in *Botany*, a genus of the class *Monandria*, order *Digynia*. Generic character: calyx four-parted; corolla of four unequal petals, furnished with a spur; filaments petal-formed; cells of the anthers parted.

One species, *C. excelsa*, a lofty tree, native of the woods of Guiana. Willd.

CUCULLATED, Lat. *cucullus*. Part of the dress, hanging behind, with which the head is covered or protected against the weather. Perhaps from the Gr. κύκλος, *circulus*.

Between the cicada and that we call a grasshopper, the differences are very many, as may be observed in themselves, or their descriptions in Matthiolus, Aldrovandus, and Muffetus. For, first, they are differently *cucullated* or capuched upon the head and back, and in the cicada the eyes are more prominent.
Sir Thomas Brown, book v. ch. iii.

CUCULUS, from the cry *cou-cou*," Lin.; *Cuckoo*, Pen. In *Zoology*, a genus of animals belonging to the order *Scansores*, class *Aves*.

Generic character. Beak more or less arched, and slightly cleft; nostrils generally surrounded by a naked skin; tail cuneiform, consisting of ten feathers, and in some species of twelve; toes two before and behind.

Of this genus there is but one species found in Europe, and from this the facts concerning the true Cuckoos have been collected; the others being natives of Africa and America. Some of them neither build nests nor tend their own eggs, but deposit them in the nests of other birds, and leave them to be hatched by their foster parent; whilst others build nests, and sit on their own eggs, according to the usual habits of birds. From this difference in their manners, Dr. Latham seemed to think, that the Cuckoos might be divided into two great families; but he made no division of the genus. Cuvier, however, has divided them into six subgenera, of which the first alone can be considered as belonging to the true Cuckoos, or those which do not hatch their own eggs. They are insectivorous.

a *Cuckoos Proper.*

Beak slightly arched; the upper mandible smooth; wings long and pointed; legs short, and covered with long feathers, extending on the tarsi, which are also feathered below the knees; tail composed of ten feathers, and more or less cuneiform.

C. Canorus, Pen.; *le Coucou vulgaire d'Europe*, Buff.; *Common Cuckoo*, Pen. The Cuckoo is about fourteen inches long; the bill black, strong, and curved; irides yellow; head, nape, wing coverts, and rump, dove-coloured, darkest on the head: throat and upper part of the neck greyish; breast and belly white, and crossed with black wavy bars; wings very long, reaching nearly to the tip of the tail, and the first quill feather shorter by three inches than the others, the inner webs of which are barred with oval white spots; feathers of the tail of unequal lengths, like those of the genus *Lanius*, the two middle black, and tipped with white, the others marked with white spots on each side of their shafts. The young birds are brown, mixed with ferruginous and black.

This bird is the only one of the Cuckoo genus which is met with in England, or indeed in Europe, and is but a bird of passage; it makes its appearance early in the Spring, and leaves us about the middle of July; but Pennant seems to think that all the Cuckoos do not leave this country during the winter, as he knew of two instances in which they were met with as early as February. To what countries they go to on leaving us is not well ascertained, but it is certain that part of them visit Africa, as they are met with twice in the year at Malta, in their journey backwards and forwards. They are rare in Italy, but common at Aleppo, and even in India.

The Cuckoo is silent for a short time after his arrival; by some the female is said to be mute, whilst others assert that the note is alike in both sexes; and it has been remarked, that early in the season, the note begins with a minor third, ascends to a major third, next to a fourth, then to a fifth, after which his voice breaks, and he does not attain to a minor sixth. The note of the Cuckoo is a call to love; and he sits on the bare bough of a tree, repeating his song, which he loses when the amorous season is over.

This note is so uniform, that the name seems to have been derived from it; and thus we have in the English *cuckoo*, in the French *cou-cou*, in the Italian *cuculo*, in the German *kuckuk*, the Latin *cuculus*, and the Greek κόκκυξ.

That the Cuckoo does not hatch its own eggs, but deposits them in the nests of other birds is well known; and various reasons, depending on the structure of the animal, have been assigned for this peculiarity, but all of them without warrant; as other birds which are formed nearly in the same manner, tend their own eggs during the process of incubation. Dr. Jenner, however, states in a Paper in the 78th volume of the *Philosophical Transactions*, that Cuckoos do not pair, but that the female is frequently attended by two or three males, which contend for her favours. The egg is seldom met with in any nest till the beginning of May, and then usually in that of the Hedge Sparrow; it is also found in those of the Wagtail, Titlark, Yellow Hammer, Greenfinch, and Whinchat It was for a long time supposed that Cuckoos laid their eggs in the nests in which they are found; but this would be impossible in many instances, where the entrance to the nest is very narrow; and it therefore appears probable, that the bird lays her egg on the ground, and afterwards carries it, either in her claws or beak, to the nest in which she intends it should be hatched. This notion is confirmed by the observations of a Naturalist, quoted by M. Vieillot, who accidentally saw a hen Cuckoo lay her egg upon the ground, afterwards take it up with her beak, and carry it into the nest of a Chatterer, which was in a neighbouring bush.

Dr. Jenner observed that during the time the Hedge Sparrow was laying her eggs, which took up three or four days, the Cuckoo continued to deposit one of hers among them, and left it to the care of the Sparrow. This addition to her charge rather disturbs the Sparrow's arrangements, and during the time of incubation she occasionally either throws out her own eggs, to make room for that of the Cuckoo, or she so injures, as to addle them; but it is a curious circumstance that she never throws out or injures the egg of the Cuckoo. After the usual time of sitting, when some of her own eggs and that of the Cuckoo are hatched, the young Cuckoo manages to turn out both the young Sparrows and the remaining eggs, and gets the whole nest to itself. The mode in which this is effected is described by Dr. Jenner, who witnessed it very frequently, as follows: "On the 18th of June, 1778, Dr. Jenner examined the nest of a Hedge Sparrow, which then contained a Cuckoo's and three Hedge Sparrow's eggs. On inspecting it the next day, the bird had hatched, but the nest then contained only a young Cuckoo and one young Hedge Sparrow. The nest was placed so near the extremity of a hedge, that he could distinctly see what was going forward in it; and, to his great

CULUS astonishment, he saw the young Cuckoo, though so lately hatched, in the act of turning out the young Hedge Sparrow. The mode of accomplishing this was curious; the little animal, with the assistance of its rump and wings, contrived to get the bird upon its back, and making a lodgement for its burden by elevating its elbows, clambered backwards with it up the side of the nest till it reached the top, where, resting for a moment, it threw off its load with a jerk, and quite disengaged it from the nest; after remaining a short time in this situation, and feeling about with the extremity of its wings, as if to be convinced that the business was properly executed, it dropt into the nest again."

Dr. Jenner made several experiments on this point, and the young Cuckoo invariably acted in the same manner. Occasionally two Cuckoo's eggs are deposited in the same nest, and when they are hatched, a contest takes place as to which shall be the possessor of it, which terminates in the ejectment of the weaker bird. It is a curious circumstance that Nature seems to have provided for this business, by making the back, at the time of hatching, very broad from the scapulæ downwards, with a considerable depression in the middle, apparently for the more secure lodgement of the burden; but when the Cuckoo is about twelve days old, the cavity is filled up, and the inclination to turn out its companions ceases. Dr. Jenner probably was led to pay particular attention to these circumstances, from a Paper read by Mr. Daines Barrington before the Royal Society, in which he doubted the probability of the Cuckoo's egg being hatched by the Hedge Sparrow, and gave four instances in which young Cuckoos were found in nests and tended by the parents; one of them in the neighbourhood of London, another in Merionethshire, a third in Herefordshire, and a fourth in Derbyshire. The last, taken from a MS. of Dr. Derham's, was to the following effect: "The Rev. Mr. Stafford was walking in Blossopdale, and saw a Cuckoo rise from its nest, which was on the stump of a tree that had been sometime felled, so as to resemble the colour of the bird. In this nest were two young Cuckoos; one of which he fastened to the ground, by means of a peg and line: and very frequently for many days beheld the old Cuckoo feed these her young ones." Dr. Jenner's observations, however, are decisive; and the other cases may, perhaps, be considered as the effect of accidental circumstances, which will occasionally produce great change in the habits of animals.

There is a popular notion, that the Cuckoo devours its foster-parent on quitting the nest, whence the French proverb, "*ingrat comme un Coucou;*" and also that it changes into a Hawk. The latter idea originated in the resemblance between the plumage of the Kestril and that of a Cuckoo of the first year; but the latter may be distinguished from the Kestril, in not having the lower mandible notched, as all the Hawks have.

C. Capensis, Le Vaill.; *Cape Cuckoo*, Lath. Is probably merely a variety of the Common Cuckoo.

C. Clamosus, Cuv.; *le Criard*, Le Vaill.; *Noisy Cuckoo*, Lath. Bill dusky black; general colour of the plumage fine blue black; greater quills deep brown; tail cuneiform, black, and tipped with white. It is known to the Europeans under the name of *Criard*, from its constantly singing; the sounds are very various, and as it passes whole hours in singing without interruption, leads the sportsman to its nest. It CUCULUS is a native of Caffraria.

The following differ in their plumage:

C. Glandarius, *C. Flavus*, *C. Solitarius*, *C. Radiatus*, *C. Coromandus*, *C. Americanus*, Lath. The *C. Serratus* and *C. Melano leucos*, Lath., are considered by Temminck to be the same species as the *C. Edolius*, Lath.; the former being the male, and the latter the female.

The three following species have very beautiful plumage, and the beak more flattened than the others, such are

C. Auratus, Gmel.; *le Didric*, Le Vaill.; *Gilded Cuckoo*, Lath.

This species is about half the size of the common Cuckoo; its general colour a rich gilded glossy green above, and white below; the head marked with five white stripes, one across the forehead, and one above and below each eye; the bill of a greenish brown; irides orange; legs yellow. In young birds the white stripes are scarcely perceptible. They are natives of the parts far inland from the Cape of Good Hope, where they are found in so great numbers that Le Vaillant and his companion killed 200 males and 130 females in three journies. M. le Vaillant was surprised at finding the egg of this bird in the nest of the Great-tailed Warbler and some others, to which there was only a small hole of entrance, and imagines that it puts the egg in with its beak.

C. Claasii, Le Vaill., Is very similar to the last, but the tail is more rounded.

C. Lucidus, Lath. *Shining Cuckoo*. Is a very beautiful species, about the size of a small Thrush; the bill bluish, irides hazel, upper parts of the body rich gilded green, under parts white, waved transversely with golden green; tail short and dusky; legs bluish. Native of New Zealand.

Other species in this genus have the beak deeper, and curved at the top, viz.

C. Punctatus, Buff.; *Rufous Spotted Cuckoo*, Lath.

C. Scolopaceus, Buff.; *Indian Spotted Cuckoo*, Lath.

C. Maculatus, Buff.; *Chinese Spotted Cuckoo*, Lath.

These three Cuvier is inclined to consider as the same species, the two last being varieties; but according to Latham, the beak of the *C. Punctatus* differs from the others in having a kind of notch near the tip, which is hooked.

C. Mindanensis, Buff.; *Mindanao Cuckoo*, Lath.

C. Taitensis, Sparrman; *Society Cuckoo*, Lath.

C. Honoratus, Lath.; *Sacred Cuckoo*, Lath.

β. Couas,

Differ only from the true Cuckoos in having the legs longer, but they are remarkable for not laying their eggs in other nests than their own.

C. Madagascariensis, Buff.; *Madagascar Cuckoo*, Lath. About a third larger than ours; bill black; irides orange; the upper part of the body deep olive, waved with brown; throat light olive, tinged with yellow; breast and upper parts of the belly fulvous, the lower belly and under tail coverts brown; wings reaching beyond the tail. Native of Madagascar.

C. Cristatus, Lin.; *Madagascar Crested Cuckoo*, Lath. The feathers of the head long, and forming a crest.

C. Nævius, Lin.; *Spotted Cuckoo*, Lath.

C. Seniculus, Buff.; *Mangrove Cuckoo*, Lath. It makes a nest like that of a Pigeon, and lays three greenish white eggs.

CUCULUS

C. Cærulens, Lin.; *Blue Cuckoo*, Lath.

C. Cayanus, Lin.; *Cayenne Cuckoo*, Lath. About the size of our Cuckoo; plumage purplish chestnut, paler beneath than above; tail tipped with brown, and very cuneiform. This bird inhabits Cayenne; it goes by the name of *Piaye*, or Devil, and is considered as an ill-omened bird; in Paraguay it is also called the Sorcerer's Bird, *Guira Paye*. It lays two eggs, and rears its own young.

C. Vetula, Lin.; *Long-billed Rain Cuckoo*, Lath. Same size as the last; bill curved at the tip; the upper mandible black, the lower white; head brown; the feathers soft and silky; upper parts greyish olive; throat and neck white; the chest and belly rufous; tail very cuneiform, the feathers dusky black, tipped with white, except the two middle, which are ashy olive; legs blue black. Native of Jamaica, where it is called *Tacco*, from its cry; but when alarmed its note is altered to "*qua qua qua*:" it lives upon small Snakes and other reptiles, is easily tamed, and leaps in its gait like a Magpie. It retires into the woods to make its nest, which is composed of sticks covered with moss, and lined with dead hiccory blossoms, and it lays five eggs of a blue colour.

γ *Coucals.*

Claw of the outer toe very long, and the outer hind toe capable of great motion; nostrils covered with feathers; wings rounded; feathers of the neck and upper parts of the body rough, and shining on the side.

The birds in this subgenus form Illiger's genus *Centropus*, from the length of the claw of the outer toe. They live in the woods, build in the holes of trees, and themselves hatch and bring up their young. They feed upon Grasshoppers, among which they make great destruction.

C. Senegalensis, Lin.; *le Coucal Houhou*, Le Vaill.; *Senegal Cuckoo*, Lath. This is the same bird as the *C. Ægyptius*, Gmel. It is rather larger than our Cuckoo; the wings not extending beyond a fourth of the length of the tail, which is cuneiform; the beak strong, and very thick at the base; tarsi large, and covered with broad scales; the head and upper parts of the neck of a dusky green, with a bright steel gloss; the back, rump, and upper tail coverts, green, of different hues, according as the light falls on them; wings and tail a mixture of red and green; neck and chest white; belly and legs of a greenish black; feet black; eyes red. These birds, like the Goatsuckers, are accustomed to perch upon the lower branches of trees; they fly badly, and but short distances at a time; they do not fear being in the neighbourhood of habitations, and live in couples, building their nests in hollow trees. Native of Africa and India.

C. Philippensis, Cuv.; *le Coucal des Philippines*, Le Vaill.; *Philippine Cuckoo*, Lath. According to Montbelliard, this is the male of the preceding species; but with the exception of the wings, which are red, the rest of the plumage is a bright black. Native of the Philippine Islands.

C. Nigrorufus, Cuv.; *le Coucal Noirou*, Le Vaill.; *Reddish Black Coucal*. This bird is very remarkable for the length of its spurs, which in the male are as long as two inches. The size of the male is a fourth greater than that of the female, and about that of the European Raven; the tail is cuneiform on the edges, and rounded below; the body entirely black, excepting the great wing feathers, and part of the coverts, which are of a deep red. CUCU

C. Tolu, Gmel.; *le Coucal Tolu*, Le Vaill.; *Long-heeled Cuckoo*, Lath.; *Tolu Coucal*. In colour resembles the preceding, but in size not bigger than a Blackbird, although it is about fourteen inches in length. Native of Madagascar, where it was found by Brisson, and named by him *C. Madagascariensis*; it lives upon reptiles.

C. Gigas, Cuv.; *le Coucal Géant*, Le Vaill.; *Gigantic Coucal*. This bird is a native of New Holland, about thirty inches long; a third belonging to the head and neck, one to the body, and the other third to the tail; the tarsi very long, and covered with scales; the spurs two inches in length; the wings reach as far as the upper tail coverts; the plumage of the upper parts is of a reddish brown tinged with olive, with a longitudinal reddish white stripe in the centre, and transverse blackish brown bands; the outer webs of the wing feathers marked alternately with reddish brown and yellowish red; the tail feathers barred with reddish grey on a brown ground, and edged with white; the throat and chest varied with brown and bright yellow; the lower parts of the same colour, marked with transverse black bands.

C. Phasianus, Lath.; *le Coucal Faisan*, Dumeril; *Pheasant Coucal*. About eighteen inches in length; spurs long and straight; head, neck, and lower parts of the body, black; back and wings varied with yellow, black, and red; tail crossed with marks of the same colour. Native of New Holland.

The other species in this subgenus, are the

C. Rufinus, Cuv.; *Red Coucal*. Native of Africa.

C. Benghalensis, Gmel.; *Ferruginous Coucal*. Native of Bengal.

C. Æthiops, Cuv.; *Caffrarian Coucal*. Native of Caffraria.

δ *Courols.*

Beak large, pointed, straight, compressed, and the upper mandible slightly curved at the tip; tail composed of twelve feathers.

C. Afer, Gmel.; *le Vouroug driou*, Le Vaill.; *African Cuckoo*, Lath. About the size of a Pigeon; the head, throat, and neck cinereous; crown blackish, glossed with green and copper; a narrow black line extending from the bill to the eye; back, rump, scapulars, upper wing and tail coverts grey; tail copper and green gold above, black beneath. Native of Africa.

The subgeneric name was made by Le Vaillant, from the feet of the bird resembling those of the Cuckoo, whilst its habits are similar to those of the Rollers. Temminck has made a distinct genus of this single species.

ε *Honey Guides.*

Beak short, thick, and conical, like that of the Sparrow; tail cuneiform, and slightly forked; skin very tough.

C. Indicator, Gmel.; *Honey Cuckoo*, Lath. About seven inches long; bill thick, brown at the base, where there are a few bristles, yellowish towards the tip; eyelids naked and black; irides reddish grey; head grey; chin and breast dirty white, the latter tinged with green; belly and vent white; back grey;

CUCULUS — CUCUMBER.

thighs white, each feather marked with a longitudinal black stripe; upper wing coverts greyish brown, some of them tipped with yellow, forming a spot on the shoulders; tail cuneiform and brown. Native of the interior of Africa.

Cuvier only gives another species, the *C. Minor*, but Latham describes a third, as the *C. Major, le Grand Indicateur* of Le Vaillant; it is not, however, improbable that the latter may be the same species as the *C. Indicator*.

The habits of these birds are extremely curious; they are great enemies to the Bees, whose nests they rob of their honey. They feed in the morning and evening; and their shrill note directs the hunters, who answer them till they get within sight, and then follow the birds till they discover the Bee's nest, which they take, leaving, however, some of the spoil for their guides. Dr. Sparrman mentions, that he was present at several of these hunting parties, and that the birds are held in great veneration by the Hottentots. Their skin is extremely thick, so that when fresh it cannot be pierced by a pin; but it is said that the Bees, who seem to be aware of this circumstance, destroy them by stinging their eyes.

Barbacous.

Beak conical, long, slightly compressed, curved at the tip, and furnished at the base either with silky feathers or rough hairs.

C. Tranquillus, Gmel.; *Bucco Calcaratus*, Lath., *Red-beaked Cuckoo*. This bird and the next species resemble the Barbet, in having the nostrils covered with reflected bristles, whence Le Vaillant has compounded the subgeneric name. It is about the size of a small Blackbird; the colour of the bill is that of fine red sealing-wax, from which circumstance Latham has named it the *Wax-billed Barbet*, in which genus he places it; the head and neck, and upper parts are of a dusky greenish black; at the bend of the wing a whitish horn coloured spine; breast and belly cinereous; legs black with a membrane between the toes. Native of Cayenne; is a solitary silent bird, and for the most part found on a tree by the water side.

C. Tenebrosus, Gmel.; *le Barbacou à croupion blanc*, Dumeril; *White-rumped Cuckoo*, Lath. Not so large as the last species; its tail but slightly cuneiform; does not extend much beyond the wings; the upper parts of the body are black with a blue gloss; the rump covered with long white downy feathers; the throat, neck, and upper part of the sides of a greyish black; the lower parts of the sides and belly of a reddish brown. It is a native of Guiana.

See Linnæi *Systema Naturæ* à Gmelin; Pennant's *British Zoology*; Le Vaillant, *Histoire Naturelle des Oiseaux d'Afrique*; Latham's *General History of Birds*.

CUCUMBER, Fr. *concombre*; It. *cocomero*; Sp. *cohombro*; Lat. *cucumis*, so called, *à curvatura*. Virgil, see the Quotation from Dryden, applies to it the epithet *tortus*.

Of the cartilage and pulpous kind (such I meane onely whereof there is nothing good but that which is above ground) I reckon the cucumber; a fruit that Tiberius the Emperour much loved and affected: for he tooke such a wonderous delight and pleasure therein, that there was not a day went over his head, but he had them served up at his table. *Holland. Plinie*, vol. ii. fol. 14.

How cucumers along the surface creep,
With crooked bodies, and with bellies deep.
Dryden. Virgil. Georgic 4. l. 182.

——— There are, whose blood
Impetuous rages thro' the turgid veins,
Who better bear the fiery fruits of India
Than the moist melon, or pale cucumber.
Armstrong. The Art of Preserving Health

——— Pardon then,
Ye nape dispensers of poetic fame,
Th' ambition of one, meaner far, whose pow'rs,
Presuming an attempt not less sublime,
Pant for the praise of dressing to the taste
Of critic appetite, no sordid fare,
A cucumber, while costly yet and scarce.
Cowper. Task, book ii.

CUCUMIS, in *Botany*, a genus of the class *Monœcia*, order *Monadelphia*, natural order *Cucurbitaceæ*. Generic character: male flower, calyx five-toothed; corolla five-parted; filaments three: female flower, stigmas three, thick, two-parted; seed-vessel a fleshy fruit, (*Pepo*, Gaertner,) containing compressed sharp-edged seeds.

This genus of Tropical plants contains seventeen species, several of which are of considerable importance. *C. colocynthis*, producing the medicine called *Colocynthida*, is a native of Africa. *C. sagaria*, the round prickly Cucumber, native of the West Indies, where it is used with other vegetables in soups. *C. melo*, the common Melon, is supposed to be a native of Persia; it was cultivated in Europe in the XVIth century. The great facility with which the stigma of the female flower may be impregnated with pollen, has occasioned numerous varieties in our gardens; those that have the colour nearest scarlet have the highest flavour. *C. sativus*, the Cucumber, native of the East Indies; the varieties are as easily produced as those of the Melon; those with the smoothest rind and fewest seeds are most esteemed. *C. anguinus*, the Snake Cucumber, bears fruit sometimes from three to four feet long; it is only grown as a curiosity, the flavour being bitter. Several other species produce fruits that are eaten by the inhabitants of the countries of which they are natives.

The Cucumber was among the luxuries of which Tiberius was especially fond; and by the dexterous management of his beds, (*pensiles horti—specularia*,) he procured one every day at all seasons of the year. (Pliny, xix. 23; Columella, xi. 3.) Pliny (*ibid.*) recommends, that the seeds before they are sown should be saturated with boiled milk, (*lacte mulso*,) as also say Theophrastus and Columella; he allows also two days for the digestion of Cucumbers, though he does not consider them unwholesome. The Physician, Diphilus of Carystus, was of a different opinion: [illegible] bitter. Dioscorides of Cilicia gives still stronger reasons for abstinence from the Cucumber: [illegible]

CUCUMBER. CUDDIN.

διείλων τὲ ἐφεκτικὸς. In the last part of this *dictum*, he differs essentially from an etymology given by Demetrius Ixion, who perhaps, however, was rather a Grammarian than a Physician, and whose opinion, therefore, on a medical point, must be admitted with caution. He derives σικυὸς, ἀπὸ τοῦ σεύεσθαι καὶ κύειν, ὀρμητικὸν γὰρ ὑπάρχειν. (Athen. iii. 2.)

Fosbrooke (*Enc. of Ant.* xvii. 741) says the Cucumber was very common in England in the reign of Edward III., but was lost during the wars of York and Lancaster, and reintroduced under Henry VIII.

For the culture of the Cucumber, see Aiton's *Brief Practical Observations on the Cultivation of the Cucumber in the Royal Gardens at Kew, during the Autumn and Winter Months*; in the *Trans. of Hortic. Soc.* ii.; Collins's *Paradise Retrieved*; and Macphail's *Treatise*.

CUCURBITA, in *Botany*, a genus of the class *Monoecia*, order *Monodelphia*, natural order *Cucurbitaceæ*. Generic character: male flower, calyx five-toothed; corolla five-cleft; filaments three: female flower, calyx five-toothed; corolla five-cleft; stigma three-cleft; the seeds swelled at their margin.

Of this genus Willdenow describes seventeen species, natives of warm climates.

C. lagenaria, native of Arabia and the West Indies, possesses the same medicinal qualities as *Coloquintida*; a variety of this plant is of great use for its woody coat, which is used as bottles, and for preserving the drug called Bitter Aloes. *C. pepo*, the Pumkin, is of but small value as a fruit, but is frequently cultivated on account of the large size it attains. *C. citrullus*, the Water Melon, the fruit is much esteemed in all warm climates, and is brought to market in great quantity, but should be eaten with great caution by Europeans.

CUCUYE, a marvellous creature, which Minsheu has described in the following words: "A strange bird, and admirable in Hispaniola, no bigger than a Wren or Titmouse, having two eies in her head, and foure under her wings, a greater and a smaller paire, so shining in the night (in which only she flies) that five or six of them tied together, give as much light as a linke or torch."

CUD, Honeywood (in Skinner) thinks it so said, *quasi* chew'd, *quia cibus ruminando quasi* bis masticatur. And Skinner has no doubt, that A. S. *cud* is from *ceowan, mandere*. Tooke adopts this Etymology. J. Taylor writes "Chew the *Chud*." *Sermon. The House of Feasting.*

Neuerthelesse, these shall ye not eate of thē that chewe *cud* and haue hoofes. *Bible*, 1551. *Leuiticus*, ch. xi.

Of wild beasts the red and fallow deere both doe chew *cud* when they be made tame and fed by hand: but all choose rather in so doing, to lie than to stand, and in winter more than summer, for seven months ordinarily.
Holland. Plinie, vol. i. fol. 307.

Because half a dozen grasshoppers under a fearn make the field ring with their importunate chink, whilst thousands of great cattle, reposed beneath the shadow of the British oak, chew the *cud* and are silent; pray do not imagine that those who make the noise are the only inhabitants of the field; that, of course, they are many in number; or that, after all they are other than the little shrivelled, meagre, hopping, though loud and troublesome insects of the hour.
Burke. Reflections on the Revolution in France.

CUDDIN, *n.* This word has only been found in Dryden, and was probably formed from the preceding *cud*; as if slavering while he *chew'd*; Serenius refers to the Islandic, *kutte, nanus, pumilio*, a dwarf.

The slavering *cuddin*, propp'd upon his staff,
Stood ready gasping with a grinning laugh,
To welcome her awake, nor durst begin
To speak, but wisely kept the fool within.
Dryden. Cymon and Iphigenia.

CUDDLE, *v.* Dr. Jamieson thinks it may be from the Ger. *kudd-en, coire, convenire*; to come together.

Or have you mark'd a partridge quake,
Viewing the tow'ring falcon nigh?
She *cuddles* low behind the brake,
Nor would she stay, nor dare she fly.
Prior. The Dove.

They hopp'd from spray to spray,
They bill'd, they chirp'd all day,
They *cuddled* close all night.
Somervile. Fables, &c. Fable II.

CUDDY, in *Naval Language*, is a sort of cabin or cook-room in the forepart, or near the stern of a barge of burden.

CU'DGEL, *v.*
CU'DGEL, *n.*
CU'DGELLER,
CU'DGELLING,
CU'DGEL-PLAY,
CU'DGEL-PLAYER,
CU'DGEL-PLAYING,
CU'DGEL-PROOF.

From the Dutch, *kudse, kodse*. Skinner and Junius. A knotty stick, or stake, or staff. Scotch, *cud*.

To *cudgel*; to beat or strike with a *cudgel*, stick or staff; to beat, to batter; and, metaphorically, to *cudgel* the brains, —to force them to exertion.

A mile off the island there is a rocke in the sea, whereis do breede many foules like vnto barnacles: in the night we went out in our boates, and with *cudgels* we killed many of them, and brought them with many of their egs aboord with vs.
Hakluyt. Voyage, &c. Job Hortop, vol. iii. fol. 488.

He deserveth the bastanado, to be drie beaten and well *cudgeled*, that forsaketh his colours, or departeth from his guard or quarters. *Holland. Livius*, fol. 183.

Do I not know thou hast been a *cudgel'd* coward,
That has no cure for shame but sleath of silver,
And think'st the wearing of a gaudy suit
Hides all disgraces?
Beaumont and Fletcher. The Captain.

The baron, who had given him the blow, did kneel before him on both knees, holding in his right hand a sword, with the point towards himself, and in his left hand the like *cudgel*, or bastinado, wherewith he had stricken M. de Plessis; both which weapons he delivered into Plessis' hands, submitting himself to such revenge, as it should please him to take with either of those weapons.
Ralegh. History of the World, book v. ch. iii. fol. 681.

Was it such a dissolute speech, telling of some politicians who were wont to eaves-drop in disguises, to say they were often liable to a night-walking *cudgeller*, or the emptying of a urinal.
Milton. Apology for Smectymnuus.

JAC. Fabricio, we two have been souldiers
Above these fourteen years, yet o' my conscience,
All we have seen, compar'd to his experience
Has been but *cudgel-play*, or cock-fighting.
Beaumont and Fletcher. The Captain, act ii. sc. 1

As bones of Hectors, when they differ,
The more they're *cudgell'd*, grow the stiffer.
Butler. Hudibras, part iii. can. 2.

Some have been beaten till they know,
What wood a *cudgel's* of by the blow.
Id. Ib. part ii. can. 1.

As to his ancestors, we have searched with great diligence, but little success; being unable to trace them farther than his great grandfather, who, as an elderly person in the parish remembers to have heard his father say, was an excellent *cudgel-player*. *Fielding. Joseph Andrews*, vol. vi. p. 14.

I must confess, when I see princes and states fighting and quarreling, amidst their debts, funds, and public mortgages, it always brings to my mind a match of *cudgel-playing*, fought in a china shop. *Hume. Essays*, part ii. *Of Public Credit, Essay* 9.

He wore a broad stiff hat, *cudgel-proof*, with an edging three fingers deep, trussed up into the fierce trooper's cock.
Guardian, No. 143.

CUE, *v.* In a note upon *Richard the Third* (quoted below) Johnson says, "The expression is borrowed from the theatre. The *cue*, *queue* or *tail* of a speech, consists of the last words, which are the token for an entrance or answer. To come on the *cue*, therefore, is to come at the proper time." And in this Mr. Steevens appears to acquiesce. Fr. *cue*, or *queue*, a tail, from the Lat. *cauda*. Minsheu says, that *anti* or rather *ante-loquie*, is a term that stage-players use, called their *qu*.

Tell him, wee could haue rebuk'd him at Harflewe, but that wee thought it not good to bruise an iniurie, till it were full ripe. Now we speake vpon our Q. and our voyce imperiall.
Shakespeare. Henry V., fol. 81.

He comes like the catastrophe of the old comedie: my *cue* is villainous melancholly, with a sighe like Tom o'Bedlam.
Id. Lear, fol. 286.

PET. Ninus toombe man: why, you must not speake that yet: that you answere to Piramus, you speak all your parts at once, *cues* and all. Piramus enter, your *cue* is past; it is neuer tyre.
Id. Midsummer Night's Dream, fol. 152.

BUCK. Had you not come vpon your *Q* my lord,
William, Lord Hastings, had pronoune'd your part;
I meane your voice, for crowning of the king.
Id. Richard III., fol. 189.

They separate it into small locks which they woold or *cue* round with the rind of a sleader plant, down to about an inch of the ends; and, as the hair grows the woolding is continued. Each of those *cues* or locks is somewhat thicker than common whip-cord, and they look like a parcel of small strings hanging down from the crown of their heads
Cook. Voyage, vol. iv, book iii. ch. vi.

The servant takes his *cue*, and flies,
While consternation marks her face,
He mounts his steed, and quits the place.
Whitehead. The Dog.

Archdeacon Nares (*Gloss. ad voc.*) explains another usage of CUE, which has often been a source of infinite vexation and suspicion to the Undergraduates of our Universities; and he cites the two following appropriate illustrations:

——— Hast thou worn
Gowns in the Universitty, lost Logick,
Suckt Philosophy, eat *cues*, drank *cees*.
First Part Jeronimo. Old Plays, iii. 81.

Hee [the college butler] domineers over freshmen, when they first come to the hatch, and puzzles them with strange language of *cues* and *cees*. *Earle's Micro-cosmographie, Char.* 17.

"*Cue*," continues Mr. Nares, "is a small portion of bread or beer; a term formerly current in both the English Universities, the letter *q* being the mark in the Buttery books to denote such a piece. *Q* should seem to stand for *quadrans*, a farthing; but Minsheu, who finished his first edition in Oxford, says it was only half that sum, and thus particularly explains it. 'Because they set down in the battling or buttery bookes in Oxford and Cambridge, the letter *q* for half a farthing; and in Oxford, when they make that *cue* or *q* a farthing, they say *cap my q*, and make it a farthing thus *q*. But in Cambridge they use this letter, a little ſ; thus ſ, or thus *s*, for a farthing.' He translates it in Latin, *calculus panis*. Coles has, 'a *cue* (half a farthing) *minutum*.' *Cues* and *cees* are generally mentioned together, the *cee* meaning a small measure of beer; but why is not regularly explained." In the second edition of Minsheu the passage relative to the Universities does not occur.

CUE is also an instrument used in the game of BILLIARDS.

CUENCA, a District and City of Colombia, in the State of Quito, to the east of the Province of Guayaquil. It is divided into the Departments of Cuença and Alausi; the former including ten villages, and the latter, which borders on Riobamba, four.

It produces sugar, cattle, cotton, and grain, and a great quantity of cloth is manufactured in it. The mines are represented as being very numerous, they are, however, not worked, for want of capital: but this District is principally famed for the many remains of Peruvian architecture which it contains; the ruins of the fortress of Atuncanar, or Great Canar, being amongst the most curious and considerable.

The unfortunate inhabitants of the District of Cuença were inhumanly massacred by Atabalipa, on account of their taking part with his brother Huascar; it is stated that he caused 60,000 to be slain, after the victory he gained over that Prince.

The City of Cuença was founded by Gil Ramirez Davalos, in 1537, in latitude 2° 53′ 49″ south and in longitude 79° 14′ 20″ west, on a spacious plain at a short distance from the river Machangara; on its south side is another river, called Matadero; and at about a quarter of a league distant are two others, the Yanuncay and Banos. They are fordable in summer, but in winter can be crossed only by bridges. The plain is about eighteen miles in length, and in it these four rivers unite, and form a large stream. Cuença.

The climate of this City is mild, cold being little felt, and heat very moderately, whilst the environs are extremely fertile and pleasant; but it is subject to dreadful storms of rain, thunder, and lightning.

The streets are straight and broad, the dwellings, however, are mostly constructed of *adobes* or unburnt bricks, and in the Indian suburbs consist of nothing but low mean huts. The place is well supplied with good water, and contains three Churches, two being appropriated for the Indians. There are also four Convents, two Nunneries, and a College formerly belonging to the Jesuits, with an Hospital, Chamber of Finance, and the City offices, the taxes and tithes of the Provinces of Lexa and Jaen being collected here.

The inhabitants are said to be very indolent, the chief part of the manufacture of baize and cottons being carried on by the women, who transact most of the business. Its resident population exceeds 20,000.

Alausi, the chief place of its second Department, is an inconsiderable Town, inhabited by a few Spaniards or whites, with some Meztizoes, and many Indian families. It is built in latitude 2° 19′ north and in longitude 78° 39′ west; has a good Church, and a Franciscan Convent; but its territory is subject to earthquakes, being full of crevices and chasms caused by these dreadful events. In this part of Cuença the climate is also cold, on account of the neighbourhood of the Snowy Mountains. Alausi.

CUFF, *v.* } Lye thinks from the Goth. *kaupat-*
CUFF, *n.* } *yan*, *colaphos ingerere*, to inflict
CU'FFING, *adj.* } blows. Junius and Minsheu from the Gr. κολαφος, from κολαπτ-ειν, *percutere*, to strike. Skinner from κοπτ-ειν, which, he says, signifies not only to cut, but to beat, to strike

CUFF. CUJO.

The childe as he can speake and go
furthewith as glad of play,
Amongst his mates, and gathers hart
to *cuffe*, and learnes to fraye.
Drant. Horace. The Arte of Poetry.

He brake into the heat of fight: as when a tempest raves,
Stoops from the clouds, and all on heaps, doth *cuffe* the purple waves. *Chapman. Homer. Iliad*, book xi. fol. 148.

The Sarazin sore daunted with the buffe,
Snatcheth his sword, and fiercely to him flies;
Who well it wards, and quiteth *cuff* with *cuff*.
Spenser. Faerie Queene, book i. can. 2.

Those pillars first they pass, which Jove's great son did rear,
And *cuffing* those stern waves, which like huge mountains roll,
(Full joy in every part possessing every soul)
In Aquitain at last the Ilion race arrive.
Drayton. Poly-olbion, song 1.

——— The inward man,
And outward, like a clan and clan,
Have always been at daggers-drawing,
And one another clapper-clawing;
Not that they really *cuff* or fence,
But in a spiritual mystic sense.
Butler. Hudibras, part ii. can. 2.

And still behav'd themselves as resolute
In waging *cuffs* and bruises, as disputes.
Id. Satyr on Human Learning, part ii.

CUFF, *n.* Junius and Skinner think is *coif*, q. v. though *valde detorto sensu*, is the opinion of the latter.

He cast on hym hus clopes. of all kyn craftes.
Hus cockres and hus *cuffes*.
Piers Ploukman. Vision, p. 131.

Ripe statesmen, ripe: they grow in every street;
At sixe and twenty, ripe. You shall 'hem meet,
And have 'hem yeeld no savour, but of state.
Ripe are their ruffes, their *cuffes*, their beards, their gaite,
And grave as ripe, like mellow as their faces.
Ben Jonson. The New Cry. Epigramme 92.

Neatness he [Dr. W. Butler] neglected into slovinlyness; and, accounting *cuffs* to be manacles, he may be said not to have made himself ready for some seven years together.
Fuller. Worthies. Suffolk.

CUJAVIA, an ancient Province of Poland bordering on the Vistula, which separates it from the Palatinate of Culm. It comprised the Palatinates of Wladislaw and Brzesc, as well as the territory of Dobrzyn. Its whole length exceeded seventy miles, the surface is diversified with hills and lakes, the soil fertile, and the climate among the mildest in Poland. In the partition of this Kingdom among the adjoining powers, part of this Province was assigned to Russia, and part to Prussia. It yields most of the usual products of the country, and contains the towns of Inowroclaw, Brzesc, and Wraclaweck. The first of these is situated nearly 100 miles south of Dantzic, and contains about 2700 inhabitants. It has a small trade in woollens, and a board for the superintendence of the saltpetre works in the neighbourhood. BRZESC has already been noticed; and Wraclaweck, which stands on the banks of the Vistula, contains a population of more than 2000 individuals.

CUJO, or CUYO, formerly a Chilian Province, now belonging to the State of Buenos Ayres, or Rio de la Plata; bounded on the north by Tucuman; east by the Pampas or plains; south by Patagonia; and on the east by the Andes, which separate it from Chili; it is comprehended between the twenty-ninth and thirty-fifth degrees of south latitude, and extends upwards of 300 miles from north to south, its breadth being as much. Boundaries. CUJO.

The early history of this extensive country is not very interesting; it was first explored by Aguirre, who was sent into it from Chili by Valdivia, but returned without effecting any thing of importance. A few of the aborigines, who are called *Guarpes*, still remain; they were conquered by the Peruvian Incas; and on the road over the Andes to Chili, are still to be seen some of the *tambos* or military stations of the Inca Yapanqui. In 1560, Mendoza sent Pedro Castillo to conquer this country; he subdued the Guarpes, and founded two cities. History.

The climate of Cujo is very variable; during summer, those portions of it which do not lie on the higher Andes, are excessively hot, and the winter is exceedingly cold. Storms of thunder and hail are very common, and in the districts near Chili very violent, though not of long continuance. Climate.

The soil is generally fertile in the vallies, arid in the plains, and unproductive in the desert high lands; but those parts which are the most barren, soon become very fertile, if irrigated by the numerous streams with which this territory abounds. Fruits and grain of Europe arrive at perfection much sooner in Cujo than in Chili, and its vines produce a rich and delicious wine. Soil.

The eastern parts of Cujo are watered by several rivers, but little is yet known concerning them. as they flow through immense plains, in which the herbage is so luxuriant, that it conceals the cattle and animals which feed on them. Unlike the vast savannahs of the La Plata and Orinoco, these plains produce lofty and beautiful trees; and of these, a species of cocoa palm is the most singular; its leaves and branches commence from the ground, and though somewhat like those of the cocoa-nut tree, they are armed and hard as aloe leaves, whilst the fruit, resembling a cocoa-nut, has no kernel or edible substance. It never exceeds eighteen feet in height, but the trunk is very large, and consists of several concentric layers, each of which are finer as they approach the centre, and decrease by shades from yellow to perfect white. Of these fibrous coats, the natives make a strong and flexible cloth. The other trees of Cujo are chiefly those peculiar to the warm climates of Chili and La Plata, and as the *Cactus* family bears a large proportion, the cochineal insect is abundant. Vegetable productions.

The northern parts of Cujo furnish gold and silver, but the mines, until lately, have been neglected, owing to poverty and want of population. The mountains yield also lead, sulphur, coal and gypsum, whilst the coast and plains produce abundance of salt. In the neighbourhood of Juan de la Frontera, the hills are wholly composed of strata of white marble of a beautiful grain, used only by the inhabitants for lime, and in the construction of the small bridges over their field canals. Mines.

The principal rivers of Cujo are the San Juan, the Mendoza, and the Tunujan; the first and the second rise in the Chilian Andes, and each after receiving several smaller rivers, and running, the one twenty, and the other thirty-five leagues, loses itself in the chain of lakes, called Guansache, which extend more than fifty leagues from north to south, and also receive the Tunujan. In these lakes it is supposed the great river Rivers.

CUJO. Colorado takes its rise, which flows into the southern Atlantic in about 40° south latitude.

Antiquities. In the country through which the road from Buenos Ayres to Chili passes, besides the military stations of the Incas, there are several other monuments of a far more ancient date. These are unfortunately but little known; one of them has, however, been visited; it lies on a low range of hills, between Mendoza and La Punta, and consists of a large stone pillar or obelisk, 150 feet in height, and twelve feet in diameter, on which are some curious marks, resembling Eastern characters. Near a river is another stone, containing the same characters, the figures of several animals, and the print of a foot, of which the Spanish Priests have availed themselves, to impress their converts with an idea that these monuments were the work of one of the Apostles, who left this mark as a token of his mission. We have no doubt, that the opinion which we have hazarded, in mentioning the antiquities of Southern America in a former part of this work, will prove well founded whenever their remains shall be more closely examined, and that the Asiatic derivation of the ancient nomades of the New World will one day be fully established.

Commerce. The commerce of Cujo is not at present of much importance, consisting chiefly in wines, brandy, and dried fruits, which it sends to Buenos Ayres, Cordova, &c. Its European fruits, such as grapes, figs, pears, and apples, are much sought after; and the wool of the vicuña is sent to the La Plata for exportation, its beautiful fawn colour, gloss, and softness, rendering it of great value in Europe. If ever commercial relations are established between Buenos Ayres or the La Plata and the State of Chili, the goods must be carried through Cujo, the pass over the Andes being in this Province; and this, although an exceedingly difficult route, most probably will hereafter render Cujo a country of great importance, especially should the trade of China, and of the East, embrace the southern and western shores of America.

Animals. The animals of Cujo are similar to those of Buenos Ayres and Tucuman, as jaguars, congouars or pumas, wild swine and deer, together with the vicuña and many other species. The jaguars or tigers grow to a great size, even as large as an ass, whilst their skin, like that of the African tiger, is beautifully variegated with white, yellow, and black. The natives, armed with hunting lances, seek these formidable animals for the sake of their skins; but they seldom dare to attack them singly, three Indians usually composing the hunting party, and having even then need of all their proverbial address and courage to kill them. Alligators, and various other species of the lizard race, as well as numerous amphibia, frequent the lakes and rivers of Cujo, which are well supplied with fish.

Birds. Birds are as numerous in Cujo as in Paraguay, from the giant condor to the minute and beautiful little *Picaflor* or humming-bird. Ostriches, or rather cassowaries, frequent the plains, and are so fleet in their half-running, half-flying motion, that the swiftest horse is soon tired of the pursuit.

Insects. The insect tribes are as numerous as in the other warm regions of the New World, and disappear only in Cujo as the land rises towards the cold atmosphere of the higher Andes. Large grasshoppers or locusts are so abundant in the plains, that they frequently cover several miles of the country, and destroy every vegetable on which they settle. The reader who is desirous of obtaining full information concerning the animals of this territory, may consult the Work of Azara on those of Paraguay, which may be had in French and English, but is scarce in the Spanish original. The French edition is in 2 vols. octavo, Paris, 1801. In Faulkner's *Patagonia*, published at Hereford in a quarto volume, but now rather scarce, there is also some account of the rarer species, together with an old map of the country, and some intelligent notices of it. Unfortunately, however, there exists very little information which can be depended upon concerning any part of the southern continent from the Amazons down to Cape Horn, excluding the coast tracts of Brazil on the east, and the strips of land confined between the Pacific and the Andes on the west.

Mendoza. Mendoza is the Capital of Cujo, and is situated in latitude 33° 25′ south and in longitude 69° 47′ west, on a plain at the foot of the Andes, adorned by plantations watered by numerous canals. It contains four Convents, a College, formerly belonging to the Jesuits, and a Church. Its population has been computed at 6000; but it is continually increasing, as the richest mine of silver in this part of America, that of Uspallata, has recently been reopened in its vicinity. The inhabitants are chiefly employed in its works, or in carrying on a productive trade with Buenos Ayres, in fruits, wool, and wine. The river Mendoza flows by this City, which is only fifty leagues from Santiago the Capital of Chili; and as the district around it is known to contain two silver, one copper, and one lead mine, Mendoza will very soon be a place of considerable importance. Uspallata is in the 33° of south latitude, eight leagues from Mendoza, towards the north-west, and yields from forty to sixty marks per quintal.

San Juan de la Frontera. San Juan de la Frontera is the next town of note in Cujo; it is forty-five leagues north of Mendoza, and in latitude 33° 25′ south and longitude 68° 55′ west. From being near the Andes, it is also called De la Cordillera. San Juan contains about 6000 inhabitants, whose chief support is in the trade of wine, brandy, fruits, and vicuña wool. Of its fruits, the pomegranate is principally sought after in Buenos Ayres. There are some gold washings in the River San Juan, which flows near this city.

Other Towns. The Towns of Loyala, Jachal, Vallofertil, Mogua, Concorto, Leonsito, Calingarta and Pismanta are those best known amongst the rest of the inhabited places in Cujo; but these, however, generally, are not better than large villages, with the exception of San Juan de Loyola or De la Punta, which, although with a very small population, is the great thoroughfare for the commerce between Chili, La Plata, and Cujo; it is sixty-two leagues east of Mendoza.

CUI'RASS, *n.* } Armour for the breast or back.
CUI'RASSIER. } Fr. *cuirace*; It. *coraccia*, from *cuir*; (Lat. *corium*,) i. e. leather, because in times past they were made of leather. Minsheu. Junius adds to this etymology, in confirmation of it, that *lorica* was so called *a loris*, from thongs of leather.

The Earl of Montgomery unfortunately breaking his lance upon the king's *cuirass*, a splinter thereof (his beaver being somewhat open) struck him so deep in the eye that within a few days he ended his life. *Baker. Elizabeth. Anno* 1559.

CUIRASS. — CULDEES

The picture of Saint George, wherein he is described like a *curassier* or horseman completely armed, &c. is rather a symbolical image than any proper figure.

Sir Thomas Brown, book v. ch. xvii.

——————— His angry lance did glide
Quite through his bright orbicular targe, his *curace*, shirt of maile,
And did his manly stomack's mouth with dangerous taint assile.

Chapman. Homer. Iliad, book vii. fol. 101.

If death be not more formidable to you than hell, you are fit for a reserve, or forlorn hope, for the cannon's mouth, for *cuiraisiers*, for fiends to duel with.

Hammond. Works. Sermon 8. vol. iv.

The oldest CUIRASS mentioned in History, is the θώρηξ λίνεος, presented by Amasis, King of Egypt, to the Lacedæmonians; it was interwoven with patterns in gold and cotton, and so delicate was the texture, that each separate thread, however slender in itself, was composed of 360 other threads, still more minute. (Herod. iii. 47.) Amasis dedicated a similar Cuirass in the Temple of Minerva at Lindus, (ii. 182.) Meyrick, in his *Dissertation on Ancient Armour*, has thus distinguished the Cuirasses of different nations. 1. Leathern, with a belt of the same material, belong to the *Medes* and *Persians* before the reign of Cyrus the Great. 2. Plumated or scaled *loricæ* of steel, of which the fore part covered the breast, outside of the thighs, and fore parts of the hands and legs; the posterior part, the back, neck, and whole of the head; both parts being united by *fibulæ* on the sides, mark the *Parthian Cavalry*. 3. Scales made of horses' hoofs sewed together with the sinews of horses and oxen, were worn by the *Sarmatians*. 4. The μίτρα, padded with wool, covered with flat rings or square pieces of brass, fastened at the sides, and cut round at the loins, the θώρηξ, or gorget, the ζωστὴρ, or girdle, to which was appended the ζῶμα, a kind of petticoat, are the arms of the *Homeric Chiefs*. 5. The *Etruscans* wore plain, scaled, laminated, ringed or quilted cuishes, with straps (*lambrequins*, in French) depending from them, either solely of leather or plated with metal; and these straps as well as the Cuirasses, were adopted by 6. the *Romans*, who termed them *loricæ*. On the Trajan column, the *loricæ* of the *Hastati* and *Principes* (the two first ranks) consist of several metal bands, wrapping half round the body, and fastening before and behind, on a leathern or quilted tunic; sometimes the Roman Cuirass bore all the corresponding marks of the body, and was enriched with embossed figures; the *loricæ* of the *Triarii*, (third rank) was of leather only. Domitian, according to Martial, (vii. 1, 2) adopted the *Sarmatian* Cuirass, which he framed of the hoofs of boars. The Roman Cavalry of the early period did not wear *loricæ*; but even before the *Cataphractes* of Constantine, (who wore flexible armour of scales and plates, and rings held together by hooks and chains, the *Lorica hamata* which Virgil teaches us was itself of more ancient date, *Loricam consertam hamis auroque trilicem. Æn.* iii. 467,) we read of horsemen who were *Loricati*.

Among the Moderns, the Anglo-Saxons wore leathern Cuirasses, (*Corieta*,) which, towards the end of the IXth century, were formed of hides, fitted close to the body, and jagged or cut into the shape of leaves below. The leathern Cuirass covered with rings, was appropriated to the Royal Blood, or Chiefs of high rank; it was borrowed from the Gauls, and called *Mael*, whence our Coat of *Mail*. For the minute distinctions of the Cuirass, in the reigns following the Conquest, the Reader must turn to the work of Meyrick, or to the *Section* on *English Arms and Armour* in the XVIIIth Chapter of Fosbrooke's *Enc. of Ant.* The Cuirass appears to have been disused by our soldiers in the time of Charles II., when bullet-proof silk was introduced; but the lance having of late years again become an offensive weapon, the Cuirass also has been revived for our Cavalry.

CUISH, Fr. *cuisse*; It. *coscia*; Lat. *coxa*, a thigh. Armour for the thigh.

I saw young Harry with his beuer on,
His *cushes* on his thighs, gallantly arm'd,
Rise from the ground like feathered Mercury.

Shakspeare. Henry IV. First Part, fol. 66.

But what reason had our author to wound Æneas at so critical a time? And how came the *cuisses* to be worse temper'd than the rest of his armour, which was all wrought by Vulcan and his journeymen. *Dryden. Virgil. Dedication.*

CULDEES.

CULDEES, an Order of religious persons, who, at one period, occupied considerable establishments in almost every part of Great Britain and Ireland. There continues to be some difference of opinion, indeed, in regard to the derivation of the name, and particularly whether its origin be Latin or Celtic. Bishop Lloyd, who was well acquainted with the language of Ancient Britain, was disposed to think that it came from *Cylle*, which in the Welsh, Irish, and Gaelic, signifies a cell; and hence, from the addition of *Dee*, which in the same dialects is the word for a house, we have the term Kyldee or Culdee, as used to denote a building composed of cells. It is on the same principle that, from *Mynach*, a Monk, we have in the Welsh, *Mynachdee*, a Monastery or House of Monks; and it was on the ground of a similar analogy that Columba, the founder of the Convent at Iona, was denominated by his countrymen *Columbcylle*, or Columba of the Cell. It would seem, therefore, that about the IXth and Xth centuries, every Monk in those parts of the Kingdom wherein the Celtic tongue continued to be spoken, was called a Culdee or Inhabitant of the Cell-house.

But we must not conceal that the account here given of this appellation, has not every where been deemed satisfactory. Several Church Historians, whose works are written in Latin, have preferred a Roman etymology, and conceive that the term Culdee is composed of the words *cultor Dei*, and literally signifies a Worshipper of God. For this reason the more ancient orthography was changed; and thus, instead of *Kyldee* or *Kylledee*, it became customary to write *Colidei* or *Culdei*. It is worthy of remark, that the expression in its Latinized form, is met with for the first time in the narrative of Giraldus Cambrensis; and that even the term *Kyldee* is not to be found in any author of an earlier date than the end of the Xth century.

The history of the Culdees has, in modern times,

 acquired a degree of importance which does not naturally belong to it, from the two following circumstances. In the first place, some writers have claimed for that Order of holy persons an antiquity much higher than the annals of Christianity in Britain can be made to support; and, secondly, it has been maintained that the Culdees were Presbyterians in their Ecclesiastical policy; and, of consequence, that the Episcopal form of Church government was not introduced generally into this island by the pious Missionaries, who converted to the faith of Christ the rude ancestors of the Picts, Scots, and Britons, who afterwards submitted to the See of Rome. We shall make a few remarks on these two heads in their order: and

First, on the Antiquity of the Culdees. It has been asserted, on the authority of John of Fordun, who wrote in the XIVth century, that, long before the beginning of the Vth century, when Palladius was sent from Rome to minister among the Scots, there was a class of men in Scotland who presided over the affairs of religion, none of whom ranked higher than Presbyters; the office of a Bishop being quite unknown amongst them. This statement, (at least in regard to the fact that there were Christians in the country called Scotland, before the mission of Palladius,) derives some colour from a passage in Prosper, who says, that the Bishop now named, was sent by Pope Cælestin, to the Scots who believed in Christ. The reading of this passage, as given by Nennius, is not *ad Scotos in Christum credentes*, but *ad Scotos convertendos ad fidem Christi*; and the import is, of course, considerably different, as affecting the religious condition of the people to whom Palladius was sent. But the remark of Prosper, according to either of the two versions, cannot be made to bear in favour of the hypothesis, that there was among the Scots, long before the time of Palladius, an Order of Monks who taught and governed the Church, without the knowledge or authority of Bishops. For, first, there was no such thing as Monachism in the Christian communities of the West, at the period in which those Culdees are supposed to have ruled in Scotland; and, secondly, that denomination of Monks is not once mentioned by any writer who lived within five hundred years of Palladius, and is not even said to have existed in his days, by any author within a thousand years after his death. It was not till the beginning of the Vth century that the Monastic rule was introduced by St. Martin of Tours into the Church of France; whence it slowly extended into Britain, gaining converts among the English, subsequently among the Scots and Picts, all of whom acknowledged the authority of the Bishop we have just named. But before any Monastery was founded in Scotland or Ireland, Palladius had finished his labours in those countries, and taken his place in the Chronicle of departed worthies; a fact which affords the most decisive refutation of the very groundless opinion, that the Culdees presided over a Christian Church in Scotland long before his mission.

Bishop Lloyd was at great pains to trace the history of the Culdees, in the works of all the ancient authors, whether Civil or Ecclesiastical, who might, in the course of their narrative, have any occasion to mention their Order, names, or functions. There is not, he assures us, the most distant allusion to them in Bede, nor in Nennius, who wrote 180 years after that venerable Annalist. Even in regard to Scotland, no notice is taken of their existence at Iona, nor in any district of the country which the Scots (Hibernian Scots we always mean) are known to have inhabited. They are first spoken of as constituting the Dean and Chapter at St. Andrews; and that not till many years after this had become the See of a Diocesan Bishop; or, in other words, long subsequent to the year 854, when Kenneth II. died, by whom the transference was accomplished. There is mention made of them again in the year 943, when Constantine III., King of the Scots in Caledonia, is said to have resigned his Kingdom, and become Abbot of the Kildees of St. Andrews. There is another notice of them in the year 1108, when Turgot, Prior of Durham, was made Bishop of that northern See; and we may add two or three later references, which extend down towards the close of the XIIIth century. But we repeat that the Culdees are not alluded to by any author who lived within 500 years of the time of Palladius; and that they are not even said to have existed in his days, by any writer who lived within 1000 years of his death. The opinion, therefore, of their great antiquity has no foundation whatever; being, as the Bishop of Worcester calls it, an arrant Monkish dream; an assumption made for the mere uses of theological controversy, and for attacking, with some semblance of ancient authority, the venerable and Apostolical form of Church government which subsists in England and Ireland.

We proceed, accordingly, in the second place, to examine the argument in support of the Presbyterian mode of discipline and ordination, which has been founded upon the supposed practices of the Culdees, in matters of Ecclesiastical policy; and to ascertain, as far as we can, what were the opinions of that class of Monks, in regard to the ceremonies which prevailed in their times, as well as to the distinction and authority of the clerical offices; and also, what was their own actual usage in the instruction and appointment of Ministers to serve in the Church. This investigation, which appears, when taken by itself, to possess very little importance, assumes a considerable interest in the estimation of those who are aware what stress was laid upon it by such men as Selden, Baxter, Blondell, Sir James Dalrymple, and Dr. Lloyd the Bishop of Worcester. Baxter, in his *Five Disputations of Church Government*, proceeding on the authority of Fordun and Hector Boece, thinks himself warranted to draw the following inferences:

That there was a sort of men called Culdees, who first guided the affairs of religion in Scotland, long before the coming of Palladius; and yet were no Bishops, but Monks and Presbyters.

That these Culdees chose some few among themselves to be as Governors to the rest, whom writers call *Scotorum Episcopos*, Bishops of the Scots; but that they were Bishops only in name.

That afterwards, Palladius began a higher sort of Bishops, but the Culdees still kept the greater part against him.

Lastly, That the Monastery of Columba, in the Island of Iona, restored the strength of the Culdees; and the Monks out of that island were the most prevailing Clergy of Scotland, who had no proper Episcopal ordination, but bare election and ordination of Presbyters.

Sir James Dalrymple, in his *Historical Collections*,

CULDEES advances a step farther, and maintains, that "the Scots of old differed exceedingly from the Roman Church, both in doctrine, discipline, and Church government; that before the middle of the Xth century they had no Bishops, but that their Church was governed by Presbyters and religious Monks called Culdees, who were no friends to Bishops, and kept themselves pure from all innovations and corruptions of the Church of Rome; that it appears by writings still extant, that there were Colleges or Convents of these Culdees at St. Andrews, Abernethy, Dunkeld, Dumblane, Brechen, Lochleven, Monymusk, and elsewhere throughout the kingdom, who were at perpetual variance with the Roman Clergy; and therefore the Churchmen presently established among us (in Scotland) are the only right and lawful successors of these ancient Culdees, and thus have the sole right to possess all churches, church-lands, and benefices, because they were the restorers of the Christian religion as anciently professed in this Kingdom; for that Bishops among us were only innovators, schismatics, and intruders: on which account they were justly pillaged and set aside at the time of the Reformation, deposed at the beginning of the Grand Rebellion, and abolished, as far as Acts of Parliament can go, at the Revolution."

Bishop Lloyd, again, admits, that "among all the arguments that have been used of late times against Episcopal government, there is none that hath made more noise in the world, or that hath given more colour to the cause of our adversaries, than that which they have drawn from the example of the ancient Scottish Church. And indeed it would be of very great force if they could prove what they say,—that in the IId century, or beginning of the IIIrd, there was a Church formed without Bishops, and that it continued so for some hundreds of years. There may be some farther improvement of this, by suggesting, that at last, when the Government changed, it was by means of one Palladius, who was the first that brought Episcopacy into that nation. For this Palladius, having had his ordination at Rome, the very mention of this may make it seem as if he brought in Popery with it. But that the Church of Scotland was so early and so long without Bishops, is a thing which seems to have passed without dispute; being acknowledged, as it were, with one consent, by all the now extant Scottish Historians."

It must, in fact, be acknowledged, that if it could be proved, on sound historical evidence, that there was a Church in any part of Christendom, at so early a period, formed and governed without the ministry of Bishops, a strong argument would be thence obtained in favour of the Presbyterian polity; and it is, therefore, not at all surprising, that authors, who wrote with the object which Baxter, Blondell, and Sir James Dalrymple had in view, should have availed themselves, as they did, of the dreams of Fordun, and of the numerous fictions which crowd the pages of Hector Boece. As this latter historian is the chief authority for the statements given above, respecting the ancient Scottish Church, we shall transcribe all that he says on the subject, in order that the reader may be enabled to form an estimate of its real value and amount. Alluding to the times of Decius and Aurelian, the persecuting Emperors, he says, "Our people began at that period (260) most studiously to embrace the doctrine of Christ; and this they did by the conduct and authority of certain Monks, who, because they applied themselves diligently to preaching, and were frequent in prayers, were called *Cultores Dei*; and that name took so among the common people, that all Priests, till almost our times, were commonly called *Culdei*, that is, *Cultores Dei*, without any distinction. They chose by common vote among themselves a Chief Priest, who had power in things pertaining to God; and he, for many years, was called Bishop of the Scots, as it is delivered in our annals." He adds, that "Palladius was the first of all that were in holy magistracy among the Scots, being created by the Pope; whereas before, by the votes of the people, Chief Priests were taken out of the Monks or Culdees." CULI

To expose the groundlessness and absurdity of this statement, it is only necessary to observe, that there were no Monks in the Western Church for more than a hundred and fifty years after the period which Boece assigns for the Culdee regimen in Scotland; that the name of the Culdees is not once mentioned in any historical work for more than six hundred years after that epoch; that Palladius was commissioned by the Pope to convert the Scots of Ireland, and not the people of North Britain; and, finally, that it remains extremely doubtful whether he ever commenced his labours among either, while it is perfectly certain that he had been only a few months in the country when he died in the kingdom of the South Picts.

The first Monastic institution which was formed in Scotland proper, was that which was established by Columba, in the Island of Iona, about the year 560. Before this time, indeed, there were numerous convents in Ireland, founded by St. Patrick, who was the nephew of St. Martin; but history contains no mention of any communities of that description, in the northern division of Great Britain, at an earlier date than the middle of the VIth century. When the term Culdee came into use, it was applied to the disciples of Columba, in common with all other Monks; and, at present, this epithet, whatever may have been its original import, is confined almost exclusively to the Order of Iona, insomuch that a Culdee and a follower of Columba are, in our days, become synonymous expressions. We shall, therefore, not reject the conveniency of using them indiscriminately, in the remarks which we are about to make on the practices of the Colombian Monks, in respect to Church government, as well as the rites and ceremonies which distinguished the early times, to which our attention is thereby directed. We begin with the important article which respects their Ecclesiastical constitution.

When, then, it is considered that these Culdees first present themselves to our notice on the page of authentic history in the attitude of maintaining their right to elect, or, at least, to confirm the election of the Bishops of the several Sees where they had establishments; it may appear surprising that their practice as Churchmen should ever have been adduced in the form of an argument against the antiquity of Episcopal government. It has, indeed, been maintained by those who think they perceive in the system pursued in the Columban Monastery at Iona the model of Presbyterian discipline, that the Culdees had departed from their better principles long before they consented to occupy the place of Dean and Chapter to

 any Diocesan Bishop; and we are reminded, that if we wish to ascertain their primitive doctrine in relation to Ecclesiastical polity, we must examine their proceedings while as yet they followed the institution of their founder, and acted under the inspection of his immediate successors. The words of the venerable Bede are quoted, wherein he tells us, that "the Island (Iona) is always wont to have for its Governor a Presbyter-Abbot, to whose authority both the whole Province, and even the Bishops themselves, by an unusual Constitution, are bound to be subject; after the example of their first teacher, who was not a Bishop, but a Presbyter and Monk." Next, we are supplied with a case from the same author, who narrates, that, "when Oswald, King of Northumberland, sent to the Island Hy (Iona) for a Bishop, to instruct his people in the doctrines of Christianity, the Council of Seniors, or Elders, elected Aidan, one of their own number, as being worthy of the Episcopate; and, having ordained him, sent him forth to preach." Then comes the inference, which we give in the words of a modern writer, who has revived at once the arguments and the zeal of Baxter and Dalrymple: "Nothing can be more clear than that, according to Bede, the very same persons who found him worthy of the Episcopate, both *ordained* and *sent him*. And who were these? Undoubtedly, if there be any coherence in the language of the venerable Historian, they were *all who sat there*, or who constituted that Conventual meeting. As we have not a vestige of proof from the record that so much as one Bishop was present, if all this was done by a Council of Seniors or Presbyters, how can the inference be avoided, that Aidan received *Presbyterial* ordination?"*

This inference has, indeed, a very plausible appearance, and may satisfy those readers who are more willing to be convinced than to inquire. Others will be inclined to ask, for what reason the Monks of Iona gave the title of Bishop to the brother whom they sent forth; and why they went through the form of declaring him worthy of the *Episcopate?* Did the words Bishop and Presbyter mean the same thing in those days? Or was the venerable author who narrates the occurrence ignorant of the distinction which is implied in these terms? It will not be affirmed, either that the words were synonymous, or that Bede was not aware of their difference; for, besides that, in his works at large, he observes the common distinction between Presbyter and Bishop; he marks it with particular emphasis in regard to Iona itself; telling his readers, that the head of that establishment was always a Presbyter, and not a Bishop; and, conveying, too, with no small surprise, the additional information, that the Bishop there was held under a species of subjection to the Abbot of the Monastery. That the Presbyter-Monks should acknowledge the authority of their Presbyter-Abbot, was regarded quite as a matter of course, and could excite no astonishment in a Church Historian: it follows, therefore, that the Office-bearer, who is called a Bishop, and who is said to be subject, in an unusual manner, (*more insuitato,*) to the Rector of the Monastery, must necessarily have been of a different and higher Order than that of Presbyter.

If this be admitted, it will next be asked, how could a College of Presbyters consecrate a Bishop? On what principle could they confer upon one of their brethren a rank, a power, and an authority which themselves did not possess? There is only one way of restoring probability to the narrative of Bede, and consistency to the proceedings of the Columban Convent, which is, to admit that the Bishop, who it is evident had some connection with the Monastic establishment at Iona, to whose Abbot he was in certain respects subordinate, officiated at the consecration of the Episcopal Missionaries who were sent into Northumberland. This is the theory which Lloyd and most other writers on the same side have adopted; and though it is very violently opposed and contemned by Presbyterian authors, it appears, notwithstanding, to be both reasonable in itself, and also capable of such a degree of proof, as may convince all those who have not determined to sacrifice truth to the love of system.

In the first place, we find that it was customary in other parts of the Christian world, at the very period, too, when the Columban establishment at Iona was in its greatest prosperity, to have Bishops, either actually resident in Monasteries, or specially attached to them, for the very purpose of performing those official duties to which Clergymen of a lower Order were not held competent; and, in particular, the office of ordaining young men, when duly qualified, to the service of the holy ministry. In the early times of the Church, Monastic establishments were at once the Schools and the Colleges in which the Clergy received their education; and as Religion and Learning were thought to be very much advanced by the discipline of Convents, the Monks were everywhere greatly encouraged, and in some places were put in possession of such immunities and privileges as to be almost wholly free from Episcopal jurisdiction. "They governed," says the Bishop of Worcester, "all within themselves, and kept some kind of authority over those that were ordained and sent forth from their body. This gives colour enough to them that are to seek for examples in those times for the depressing of the authority of Bishops. But this will do them no service, when it appears, that, notwithstanding all their exemptions, those Abbots and Seniors could not ordain without a Bishop, and that many of them were not in Orders themselves, even those that had Bishops subject to them in their Monasteries.

"The most ancient privileges of this kind that I have observed in the Western Church, were those that were enjoyed by the African Monasteries. They were for one while so exempt, that the Bishop, in whose Diocese they were, had nothing to do with them, except when they were pleased to make use of his assistance.*

"About the year of Christ 500, they might choose what Bishop they pleased in the whole Province, to ordain and do other Episcopal acts in their Monastery. It appears that whomsoever they once chose, they were tied to: he was their Bishop as long as he lived, but when he died they were not tied to his successor, but might choose either him or any other whom they pleased; for, as they pleaded in the Council of Carthage, they were not under any Bishop out of

* See *Historical Account of Ancient Culdees of Iona*, by the Rev. Dr. Jamieson, Edinburgh, 1811.

* *Concil* Edit. Labbe, tom. iv. Col. 1649 and 1785. B.

CULDEES duty, but out of choice, except only the Archbishop of Carthage, who was their Primate.* Afterwards they were confined to the Bishop of the Diocese; so that he and no other might ordain when they desired it, any whom they chose out of their number, or might administer Confirmation, or might consecrate a new oratory.

"In France and Spain, how this matter was ordered, it appears in the Canons of their Councils of Agatha and Lerida.† There was none to be ordained in any Monastery but by the Bishop, in whose Diocese it was. But then it must be at the desire of the Abbot, or at least with his leave, and not otherwise. But, besides, we find that some greater Monasteries had Bishops in them of their own, who were elected by the Abbots and Monks, and were ordained by the adjacent Bishops, to the end that they might preach and do Episcopal offices in their Monasteries. Of this kind we have examples at St. Martin's, near Tours, and the Monastery of S. Dennis, near Paris, which had real Bishops in them from ancient times; and we have an account of their successions for some ages. *The like we have of the Bishops that were in St. Columba's Monastery, in the Isle of Hy,* (Iona,) *of whom there is mention in the Ulster Annals.* So that in either case, of exempt or non-exempt Monasteries, there were Bishops to be had for the ordaining of Monks; and no pretence to have it done by the Abbot, who was no Bishop, though his leave or consent was needful to the ordination."

These facts prove incontestably that the ordinations in Monasteries were performed by Bishops, who either belonged to the establishments themselves, or were chosen by the heads of Convents for that very purpose. It is proved that Councils were held to regulate the relations which subsisted between the Bishops and the Monasteries in which they were invited to act, and to limit the power of choice, in this respect, on the part of the Abbot and his brotherhood; that they were tied, as Bishop Lloyd expresses it, to the Bishop whom they fixed on as long as he lived; and that, at length, they were in some places restricted to the Bishop of the Diocese. The Superior and his Monks, it is clear, who were the best judges of the character and acquirements of those under their care, pointed out, from time to time, the persons who were to be ordained; upon which the Bishops, whose services were engaged for the particular Monastery, proceeded to the act of ordination, and gave to the candidates for the Deaconate or Priesthood, as it might happen, authority to Minister in the Church of Christ.

Our adversaries, to use the words of Bishop Lloyd, would have it, that the Abbots and the Senior Monks did ordain those that were sent out of their Monastery; and that not only into the lower Orders, but into the Order of Bishops, as they show us in the example of Aidan, and his successors Finan and Colman. But this is so far from being true, that we dare challenge them to point out a single instance in which the Abbot and Monks, without a Bishop, ordained so much as one individual Presbyter. We can show, on the contrary, by many instances, that, as it was necessary to have Orders conferred in the Monasteries, (without which there could be no administration of Sacraments,) so Bishops were held indispensable on this very account, that they might confer Orders on those that were judged fit to be ordained. CULD

We therefore maintain, that the practice of other Monasteries which existed at the same time with that at Iona, removes all obscurity from the history of those consecrations which are mentioned by Bede. There was a Bishop attached to the Columban establishment, as there was to most others in that age; and as we find that he was employed everywhere else in performing Episcopal offices, we are assuredly entitled to conclude, that the residence of such a Clergyman at Iona must have been associated with similar objects. If he were not retained for discharging the duties peculiar to his office, why was he there?

But, taking it for granted that the Presbyters of Iona would not be guilty of the impious mockery of ordaining a brother to an Order or office in the Church higher than that which they themselves possessed; and knowing as we do, from the best authority, that when Aidan and Finan were pronounced worthy of the Episcopate, they were, by means of ordination invested with that higher degree, are we not compelled to infer, that this ordination must have been conducted by Bishops? If this inference be not allowed, we may then be permitted to ask, what the venerable Historian could mean, when he tells us, that a member of a Presbyterial College was judged by his brethren worthy of the Episcopate, and forthwith ordained to it? Were Aidan and Finan, after their ordination to the Episcopate, exactly in the same order of Clergy that they were before such ordination? If they were Priests before, what were they afterwards?

An attempt has been made to evade the force of this argument, by insinuating that the persons so ordained may not have been Priests, prior to their elevation to the Episcopate, but simply laymen; and, consequently, that the Order denoted by the term so often used, may have been merely the Priesthood, and not that of Bishops. But those who suggest this alternative are ready to admit the historical evidence, that, "as twelve *Priests* accompanied Columba from Ireland and settled with him in Iona, they afterwards retained this number, in imitation of the conduct of their founder;" and, moreover, that at all times, so far as the practice of that institution is known, the Monks of Iona were "mostly Presbyters." For our part, we see not the slightest reason for imagining that any laymen were ever admitted into the sacred College of Twelve; but, contenting ourselves with the view of this matter which is given by our adversaries, we may remark, as being somewhat unaccountable, that, in selecting persons from their number for the very important office of a Bishop, and at the request, too, of a Sovereign Prince who wished to found a Church in his dominions, the Columban Monks should *always* have fixed on laymen; individuals of no experience in their profession; whose qualifications could be but imperfectly known; and whose characters were still in a great measure to be formed. Proceeding even on the concession that the Monks of Iona were *mostly Presbyters*, must it not appear very probable, that at least one of the three, Aidan, Finan, or Colman, was a Presbyter? And if it be granted that any one of them was of this rank before his ordination to the Episcopate, it must follow that the

* *Concil. ubi suprà*, Col. 1648. A.

† *Concil. Agath.* c. 27. *Concil. Lerid.* c. 3.

 second ordination was to a higher Order than that of Priest, or that the whole was a ridiculous and most contemptible farce. Presbyterian writers ought to be cautious how they use the argument which we are now endeavouring to expose; for they may find, that, instead of the edifying spectacle of a Monastic College, consisting of the second rank of Ministers, and ordaining one another, they shall have no greater authority for their boasted model of discipline than a club of lay Monks sending forth their brethren to preach.

But that Aidan, Finan, and Colman were in part raised to the rank of Bishops, even as that word is usually understood in our times, is rendered manifest by their proceedings as soon as they entered upon their new office. Aidan, says the venerable Bede, was sent from Hy to convert the Angles, having received the degree of a Bishop (*accepto gradu Episcopatûs*) at the time when Segenius, Abbot and Priest, was over that Monastery.* And, as Bishop Lloyd remarks, that this ordination was into a higher Order than that of Presbyter, sufficiently appears by divers things that we read of in the same history; namely, "*that he chose the place of his Episcopal See in the Isle of Lindisfarn; there he was with his Clergy, and there was the Abbot with his Monks, who all belonged to the care of the Bishop.*"† For his Clergy he had divers persons that came with him from Hy; of them, probably, were his Chaplains who went about with him, of whom one is called *Presbyter suus*; and one or two *clerici sui, his Presbyters* in King Alfred's translation. Besides these, there were many Presbyters who came out of Ireland, who preached and baptized; and so Churches were built in many places throughout his Diocese.‡ Bede relates a great many other circumstances respecting the proceedings of Aidan among his Northumbrian converts; he tells us, at considerable length, of the lands and possessions which he received from the King, for the founding of Monasteries and other religious houses; and how at one of these, which was called Heorta, he consecrated Hern Abbess.

But the history of Finan, who succeeded Aidan in the See of Lindisfarn, affords the strongest, the most direct, and the most unimpeachable evidence that human testimony can supply, that the persons whom the Monks of Iona pronounced worthy of the Episcopate, were, in fact, Bishops in the ordinary sense of the term. "Having," says Bede, "arrived in his Diocese, he built a church fit for an Episcopal See; and having shortly afterwards baptized Peada, King of the Middle Angles, with all his Court, he gave him four Priests, one Scotch and three English, to instruct and baptize his people. In process of time, the Scottish Priest, whose name was Diuma, was ordained by Finan to be Bishop of that nation, as well as of the Province of Mercia." The words of the venerable Historian are as follows: *Factus est Diuma, unus ex præfatis quatuor sacerdotibus, Episcopus Mediterraneorum Anglorum, simul et Merciorum, ordinatus à Finano Episcopo.*§

At a subsequent period, Sigebert, King of the East Angles, with his friends, was baptized by the same Bishop; and received at the same time two Priests to convert and baptize his subjects. One of these, whose name was Cedd, having, with the assistance of his colleague, gathered together a great Church to the Lord, returned to the establishment of Lindisfarn, to acquaint Finan with their remarkable success in evangelizing the Saxons; with which account the Northumbrian Prelate was so much gratified, that, in order to enable the zealous Priest to prosecute his pious objects with still greater advantage, he determined to raise him to the Order of Bishops. "Finan," says the Historian, "seeing his success in the furtherance of the Gospel, *and having called to him two other Bishops for the ministry of ordination,* (*vocatis ad se in ministerium ordinationis aliis duobus Episcopis,*) made him Bishop over the nation of the East Angles." Bede adds, that Cedd, "having received the degree of the Episcopate, (*accepto gradu Episcopatûs,*) returned to the Province; and, with increased authority, (*majore auctoritate,*) fulfilled the work which he had began; erected churches in different places; *ordained Presbyters and Deacons,* (*Presbyteros et Diaconos ordinavit,*) who might assist him in the word of faith and ministry of Baptism."*

The author of the *Historical Account of the Ancient Culdees of Iona,* is a good deal perplexed with these Episcopal transactions of Finan, which it is impossible to distinguish from those of a real Diocesan Bishop. "It must be admitted," he observes, "that, according to Bede's narrative, there is something in the conduct of Finan which does not seem entirely consonant to the account given of the ordination of Iona. Whether this should be ascribed to some greater attachment, on the part of the Saxons, to the model of the Roman Church, I shall not presently inquire. But, unless we suppose that Finan renounced the tenets of his mother Church, we cannot here conclude that he viewed the office of a Bishop as essentially distinct from that of a Presbyter."

That Finan viewed the office of a Bishop as essentially distinct from that of a Presbyter, cannot, we think, be doubted for a moment by any individual who has read with candour the foregoing passages; and taking this conclusion in connection with all that Bede relates concerning him, during the ten years that he presided over the Northumbrian Clergy, the natural inference is, that he did not renounce the tenets of his mother Church, but, on the contrary, that those tenets were in strict accordance with the principles upon which his whole public conduct was regulated. It is allowed that Finan requested the attendance of two other Bishops to join with him in giving canonical consecration to the Presbyter Cedd; and farther, that this Presbyter, when raised to the Episcopate, returned to his district with greater authority, and forthwith proceeded to ordain Priests and Deacons to assist him in the word of faith and ministry of Baptism; from which facts the only conclusion that can be drawn, and it is one which forces itself upon our conviction with a power almost irresistible, is, that the tenets held at Iona in regard to Church government were decidedly Episcopal, and, consequently, that Aidan, Finan, and Colman were Episcopally ordained. If in any circumstances we are permitted to form a judgment concerning the principles entertained by a community,

CULDEES from the public and uniform conduct of its members, when called to fill responsible situations under the eye of the world, we are certainly warranted to conclude, that the Monks of Iona were not dissenters from the form of Ecclesiastical polity which was universally established in their age; for it admits not of a reasonable doubt, that Aidan, Finan, and Colman, acted as Diocesan Bishops; and it is worthy of remark, that these are the only disciples of the Columban Abbot, of whom authentic history has preserved any account.

Had Finan held no higher rank than that of a Presbyter, he would not assuredly have pursued the line of conduct which Bede ascribes to him as Bishop of the Northumbrian Saxons. If we suppose that he possessed no other commission than a license from the Presbyter-Abbot of Iona, we must then admit, that he coolly planned for himself a predicament which could not fail to expose his deceit, and to hold up all his pretensions to ridicule; inasmuch as he, although only in Priest's Orders, resolved to exalt a brother Presbyter to the Episcopate, and for this purpose invited two Bishops to concur with him in the ministry of consecration. Did Cedd not know what kind of Orders were given at Iona? Did not the two Bishops, who are said to have been Scots, know the rank which Finan must have held, if he were ordained in that Monastery? And yet this nominal Prelate of Lindisfarn invited them to attend a consecration, at which he himself was to preside, that is, to assist a mock Bishop in making a real one. How could he presume to make such a proposal to Cedd, the person to be consecrated? Must not such a burlesque proceeding have been contemplated on all hands with indignation and contempt? And yet we find that Cedd was in fact consecrated a Bishop; that he returned with greater authority to the Province whence he came, of which London was the Capital; built churches, and ordained Priests and Deacons. Unless, therefore, we are determined to give a gratuitous preference to absurdity, we must admit that Finan was clothed with the Episcopal character, and that he acted honestly and consistently in the discharge of his high duties as a Christian Bishop.

Still it is objected, that in the narrative of Bede we find not a single vestige of evidence, that a Bishop was present at the ordinations of Iona. We are merely informed by the Historian, that when Oswald, King of Northumberland, sent to the island of Hy for a Bishop to instruct his people in the doctrines of Christianity, the Council of Seniors elected Aidan, one of their number, as being worthy of the Episcopate; and having ordained him, sent him forth to preach. It is perfectly clear, we think, that all the difficulty which has been felt by those who are determined to see in the practice of the Columban Monks, the model of a Presbyterian Church, arises from not giving its proper meaning to that very common form of speech, which attributes to those who order a thing to be done, the credit, and sometimes even the very act of doing it. In the brief account given by Bede, no mention is made either of Bishop or Abbot; and, accordingly, if we must confine our inferences to the limits of the bare statement with which alone we are furnished, we have no alternative but to believe that all the members of the Convent, lay and clerical, proceeded on the very moment that they had fixed on a person worthy of the Bishopric, to invest him, with the sacred character, and dismiss him to his charge. Let those, however, who have any difficulty in satisfying themselves CULDEES how matters were really conducted on such occasions, consult the practice of other Monasteries at the same period; and they will find from the uniform tenour of History, that no ordinations were performed without the ministry of Bishops; and also that the relations of Bishops to those Monastic Establishments had been a subject of public regulation by the judicatories of the Church, both in Europe and Africa. We repeat, that as far as the literal expression of Bede's narrative is to be our guide, we have no better authority for concluding that the Abbot was present at the ordination of Aidan or Finan, than we have for asserting that the sacred office was performed by a canonical number of Prelates. And if the question is still to be repeated, why the Church Historian did not tell his readers that Bishops were really employed in conferring Orders, and more especially the Order of the Episcopate, in the Monastery of Iona, we beg leave in answer in the words of Bishop Lloyd, namely, that Bede was not likely to imagine *that such a question would ever be asked.*

Having said all that seems necessary on the subject of Church government, the main point for which the authority of the Culdees is quoted by Presbyterian writers, we proceed to make a few cursory remarks on certain other peculiarities, which are supposed to have distinguished that Order of Monks from the great body of the Romish Church. It has been alleged, for example, that the Christians in Britain and Ireland were not converted by Missionaries from Rome, or, at least, did not receive the doctrines which were taught by them; because, as is well known, the former had a rule for keeping Easter different from that which was observed by the latter. But this argument proves nothing to the purpose. It is true that the calculation according to which Easter Sunday was determined, when the Romans first planted Christianity in this Island, was different from that which was afterwards introduced at Rome by Dionysius Exiguus; and as during a considerable time, after the withdrawal of the legions from England, scarcely any intercourse subsisted between the Capital and this distant part of the Empire, the Scots and Picts in the north, and the Britons in the south, continued to observe the festival of the Resurrection, agreeably to the cycle which they had originally received. When the mother Church, at length, in the course of the VIth century, renewed once more her attention to the state of the Christians in Britain, she was amazed to find that one of the most solemn of her periodical solemnities was kept there in an uncanonical manner; and imagining that in this irregularity, they symbolized with the heretics of the East, and even with the Jews themselves, she used all her influence to make them adopt the new rule, and thereby to join with the great body of the Western Church in the observance of this annual feast. The Clergy here defended their practice on the ground that they had derived their Paschal cycle from the followers of the good St. John: and thus both parties, already entirely ignorant of the real nature of the controversy which they were pleased to maintain with each other, were equally resolute in supporting the canonical authority of their respective usages. But after a few years of disputation, the arts or the eloquence of the Roman Priests prevailed; and the Pope then found in the Abbot of Iona him-

 self a sedulous and devoted convert to the improved calendar.

Can such a controversy as this be considered as a proof, that the primitive Christians of the British Islands differed in point of doctrine from the Church of Rome? The question, it ought to be remarked, was not whether Easter should or should not be observed as a stated festival of the Church; but simply whether it should be kept according to the ancient method of calculating the Paschal season, or according to a scheme that was somewhat more modern. It was, in short, altogether a matter of order and not of faith: it might be connected with a problem in Astronomy, but could not possibly be viewed as having any affinity to a theological tenet, whether speculative or practical.

Another point in which the Culdees are supposed to have exhibited a want of conformity to the practice of the Romish Church, was the shape or size of the tonsure used by the Priests. Every one knows that Augustine was exceedingly nice in this particular, and that he even employed the most eloquent of his Monks to recommend in their sermons, the superior sanctity and decorum of the new pattern, which he had brought from Rome. But the native Clergy had a prepossession in favour of their ancient method of clipping and shaving; and it was not until their minds were enlightened on the subject, by several ingenious interpretations of Holy Writ, that they were induced to confess their error, and to have their hair cut after the Canterbury fashion. It is, moreover, maintained that the ancient Scots, or Irish, had a dislike to Auricular Confession; but the evidence adduced in support of this opinion is absurd and inconclusive. It has likewise been found out, greatly to their credit, that those barbarians were neither very zealous nor regular in attending to the rite of *Confirmation*; that they were sceptical in regard to the *real presence*; and that they Baptized by immersion without the consecrated chrism.

And these are the arguments which have been brought forward to establish the purity of faith, which is supposed to have characterized the Culdees, and to prove their systematic opposition, in respect of rites and ceremonies, to the Church of Rome! They were doubtful in regard to Transubstantiation, several centuries before that doctrine became a subject of discussion or of heresy, in any part of Christendom! Except in the disputed article of the Easter calendar, and the affair of the tonsure, it is impossible to fix on any one thing in which, at the end of the VIth century, the Christians of Britain and Ireland differed from those of Italy; and it is well known that these points of difference were not confined to the British Churches, but were agitated with equal zeal in other parts of Europe; and, moreover, that the Scots yielded their assent to the dogmas of Rome, on these very heads, and adopted both the tonsure and the new cycle, long before the Britons, in the southern division of the Island, would depart from their ancient practice. Wherefore, then, are the followers of Columba decorated solely and exclusively with the praise of firmness, purity, and sound views? why are they extolled as the only Clergy in ancient times, who had sense enough to perceive what was wrong, and courage enough to oppose it? why are they held up to the admiration of the world as prototypes of all the wisdom and zeal, which are so justly ascribed to most of the leading men who, at a later period, brought the reformation of Religion to its full accomplishment? and all this, too, in the face of the notorious fact, that they succumbed and complied, long before the great body of Christians in their immediate neighbourhood were in the least shaken from their steadfastness? The answer is obvious: there have been authors in this country, within the last two centuries, who were determined to find in the early annals of the Church, a model and a warrant for the things which had become popular in their own days; and for this reason, they laboured against the current of all ancient History, and in defiance of the strongest and best authenticated facts, to make out that our ancestors neither believed nor acted like the rest of the Christian world, but were Puritans and Separatists from the first hour of their conversion.

From a similar motive, it has been maintained, that the Bishops in Scotland were always hostile to the Culdees, and exerted all their power to put them down. But there is no truth whatever in that averment. On the contrary, the Bishops founded several Monasteries for the disciples of Columba, and invested them when resident at the Episcopal seat, with the official rank of Dean and Chapter; and, as we have already observed, the first view that we obtain of the Culdees in the page of authentic history, presents them in the attitude of protecting their rights in that capacity, and claiming the privilege of confirming the election of Bishops. "Whereas," says Mr. Goodall,* "it has been alleged and maintained, that the disputes which the Culdees had with some Bishops and Canons were on account of differences about religious tenets, it will appear by examining into the instances alleged, that it was not so; but merely such disputes as the Bishops and Canons had pretty frequently among themselves, about money, land, and privileges. Yea," he adds, "they differed no more in Religion from the rest of the Church of Rome, than Black Friars do from White. Who would ever have expected these pleas, about church lands and tithes, insisted on as evidences that the parties were of different sentiments in religion, when there is not one word about Religion in them! Surely the debate, whether the Culdees at Monimusk could transform them into Canons-regular, contrary to the will of the Bishop of St. Andrews, their patron and founder, is so far from supporting any insinuation of their differing in Religion from the Church of Rome, that it supposeth the very contrary; as the contest betwixt the Culdees and Canons of St. Andrews doth most manifestly, and to such a degree, that to those who are not sufficiently acquainted with the usual methods by which controversies of this kind have been carried on amongst us for about the two hundred years by-past, it must be astonishing to hear such notions invented, propagated, and maintained from topics which so evidently refute them, by any person who regards his own character."

We cannot close these observations, without adverting for a moment to the litigated point which respects the subjection of the Bishop to the Abbot of Iona. It is admitted by all who have read the passage in Bede, with a due reference to the practice of the times, that the superiority of the Abbot must have consisted in some of his Monastic attributes, as the

* See *Preliminary Dissertation on the Culdees*, prefixed to Keith's *Catalogue of the Scottish Bishops*, Edin. 1824.

CULDEES — CULEX.

head of a parent establishment; and that it could have no respect to the spiritual functions of a Presbyter, as opposed to those of a Bishop. Within the walls of a College, the Master or Provost is superior, *quoad omnes res Academicas*, to the highest Prelate in the land; and at Christ Church, Dublin, as well as at Christ Church, Oxford, the Dean uniformly takes rank (*more inusitato*) of the Bishop of the Diocese. These, it is clear, are matters of special compact or particular institution, and will never be adduced by those who have any confidence in the goodness of their cause, to invalidate a general principle, or to weaken a conclusion drawn from long and almost universal practice.

We are happy to find that the arts of controversy on this subject are at length fully detected, and exposed to just contempt. The research of Selden, the zeal of Baxter, the bigotry of Dalrymple, and the plausible sophistry of Jamieson, have made no impression on the public mind, in favour of Culdean purity or Presbyterian antiquity. "System has concurred with ignorance," says Mr. Chalmers, in his *Caledonia*, "in supposing that the Culdees were peculiar to the United Kingdom of the Picts and Scots; and that they actually possessed rights and exercised powers, which were inconsistent with the established laws of the Universal Church in that age. A retrospective view of Ecclesiastical history, from the epoch of the introduction of Christianity into North Britain, would show to a discerning age, that the doctrines, liturgical forms, and the Monkish discipline of the Britons, the Irish, the Scots, and the Picts, were extremely similar."*

CULDE — CULI NAR

Mr. Pinkerton, too, that very learned Antiquary, when speaking of the Culdees, is led to remark, that "it is clear from ancient charters, that far from being enemies to Episcopacy, they were the very men who chose the Bishops. Doubtless he who expects to find in Scotland matters not to be found in any neighbouring country, only shows his own credulity; and that from the IVth century, every Christian country had its Bishops, is too well known to be insisted on. When St. Martin first brought Monks into Europe, about the year 380, their rigid life acquired them high esteem. In a short time the Bishops were chosen chiefly from their Order; and afterward, usurping the right of the people, they began to choose the Bishops from among themselves. Hence, in the middle ages, *almost every Monastery had its Bishop, almost every Bishopric its Monastery.* Nay, the Abbot or chief of the Monastery was sometimes esteemed superior in dignity to the Bishop; that is, in every thing not immediately belonging to the Episcopal function. Of this, the Monastery of Hyona, the seminary of Christianity in North Britain, affords a noted instance."†

CULEX, in *Zoology*, a genus of insects of the order *Diptera*, family *Tipulariæ*. Generic character: antennæ filiform or setaceous, very hairy; in the males plumose, longer than the head; ocelli none; eyes large; rostrum tubular and long.

Type, *C. pipiens*, Auct.

The insects of this genus, to which belongs the common Gnat, are excessively troublesome and vexatious little animals, annoying by their sharp punctures, which frequently occasion considerable swelling and uneasiness. During the summer, even in this temperate climate, they are sufficiently teazing; but in some of the warmer, and during the summer even in more northern countries, they become a pest of no inconsiderable consequence. The manner in which these minute creatures suck the blood upon which they live, is very curious. The little tube or sucker, through which they draw the blood, contains five excessively fine pointed organs, like needles, the outer side of which is in some beset with small teeth, directed backwards. When the puncture is made, these are protruded from the end of the sheath, and as they enter the skin, the tube becomes bent till the head nearly touches the surface. It is not to the mere puncture, that the consequences are to be attributed, which are frequently severe, but to a venomous fluid, which is expelled at the same time from the tube, and which has been supposed by some authors to be supplied for the purpose of rendering the blood more fluid, so as to pass more readily through the tube. It is asserted that the females only have the power of piercing the skin.

During the day they remain quiet upon the trees, but towards evening they swarm in innumerable myriads, dancing in the last beams of the sun, and producing a humming sound, which would be rather soothing and agreeable, were it not associated with the dread of their little implements of annoyance.

The eggs are laid in the water, in which element the larvæ and pupæ live, both swimming about with great agility. There are several generations of these insects in the course of a year, so that the multitudes which are produced are almost inconceivable.

See Latr. *Hist. Nat.* xiv. p. 284; Kirby and Spence, *Intr.*

CULICOIDES, in *Zoology*, a genus of insects of the order *Diptera*, family *Tipulariæ*. Generic character: wings deflexed; rostrum conical, longer than the head; antennæ of fourteen articulations, hairy; the second and six following cylindrico-ovoid; the four or five subsequent ones elongate, and nearly cylindrical; the last larger, cylindrico-ovoid.

Type, *C. punctata*, Lat.

CU'LINARY, CU'LINARILY. Fr. *culinaire*; Lat. *culina*, (of uncertain Etymology.) A kitchen. Of or pertaining to a kitchen, to the arts of cookery practised in a kitchen.

A rudimental resemblance hereof there is in the cruciated and rugged folds of the reticulum, or net-like ventricle of ruminating horned animals, which is the second in order, *culinarily* called the honey-comb.

Sir Thomas Brown. Cyrus' Garden, ch. iii.

The opinion of Leucippus, Democritus, and other prime anatomists of old, is in our days revived by no mean philosophers; namely, that our *culinary* fire, such as chymists use, consists of swarms of little bodies swiftly moving, which by their smallness and motion are able to permeate the solidest and compactest bodies, and even glass itself.

Boyle. The Sceptical Chymist.

CULINARY. — ULLEN.

There are, however, some things in the *culinary* science too sublime for the youthful intellects, mysteries into which they must not be initiated, till the years of serious maturity, and which are referred to the day of marriage, as the supreme qualification for connubial life. *Johnson. The Rambler*, No. 51.

Hard fare! but such as boyish appetite
Disdains not; nor the palate, undeprav'd
By *culinary* arts, unsav'ry deems.
Cowper. The Task, book i.

CULL, Fr. *cueillir*; It. *cogliere*; from the Lat. *colligere*, to collect or gather together. Skinner and Junius. It is more commonly used as *Seligere*,

To select, pick or choose; to take out from choice or preference.

Nowe shaketh my hande, my pen waxeth dulle,
For weryd and tyred; seyage this werke so longe:
The auctours so rawe, and so ferre to *culle*.
Fabyan, vol. i. ch. 218.

For nowe, who lookes to beare the bel,
his doynge he muste *cull*,
At home with hym, and better adde,
then he dyd erst out pull.
Drant. Horace. Satyre 10.

For as once it was an argument, that only Jury was God's people, because they only received his commands, and the Heathen had not knowledge of his laws; so now was it as evident a proof, that the Heathen were received into his church, (i. e.) into the number of those whom he had *culled* out for salvation, because he made known his ordinances to them, entertained them in his service, and commanded them every one every where to repent. *Hammond. Works. Sermon* 13.

Amongst the rest a small unsightly root,
But of divine effect, he *cull'd* me out.
Milton. Comus, l. 630.

If there be any vice that sullies and takes off from the lustre of his other good qualities, that shall be sure to be *cull'd* out, and writ upon their lives and behaviour.
South. Sermon 9. vol. vii.

To talk of looking out, and *culling* of places, is nonsense, where the whole Scripture alone can make up our belief, and render it entire and consummate: which no one, I think, can hope for in this frail state of ignorance and error.
Locke. Works. A second vindication of the reasonableness of Christianity, &c.

CULLEN, a maritime Town and Parish of Scotland, in the County of Banff, situated at the junction of a small stream with Murray Frith. The Town is but badly built, and it has yet derived but little advantage from its vicinity to the sea. The place chiefly belongs to the Earl of Seafield, at whose expense a new harbour was commenced a few years ago, and a new town projected near it on the north of the old Town. Some vestiges of fortification are to be seen on a mound, called Castle-hill, near the extremity of the Town; which from its situation appears to be capable of being made a place of great strength. The north side is an inaccessible rock, and all the rest is encompassed by a deep ditch. No record of its history remains; but the edifice is supposed to have been destroyed by fire, as vitrified stones have occasionally been dug up. Cullen-house, the seat of Lord Seafield, stands near this place, on the banks of the Cullen, which flows under its walls in a deep rocky channel, the bottom of which is about twenty yards below their foundation. In the vicinity of this house, there are also vestiges of a building still visible, in which Elizabeth, the Queen of Robert de Bruce, is said to have died. Cullen joins with Elgin, Banff, Kintore, and Inverary, in sending a Member to the British Parliament; and has some manufactures of linen yarn and damasks; bleaching and fishing also are both successfully prosecuted. Population in 1821, 1452. Distant thirteen miles from Banff; fifty-eight north-west from Aberdeen.

CULLEN. — CULLICE.

CULLENDER, see COLANDER.

Thou that of faces honeycombes dost make,
And of two breasts two *cullenders*, forsake
Thy deadly trade; thou now art rich, give ore,
And let thy curses call thee forth no more.
Corbet. Elegy. Upon the death of Lady Haddington, who died of the small-pox.

CULLICE, from the Fr. *coulis, jus* colatum. Broth *strained* through a *colander, a colando*. Fr. *coulis*, Cotgrave explains, Broth of boiled meat strained, fit for a weak or sick body.

For whom a *cullice* had more fitter been,
Than in a golden bed a gallant queene.
Drayton. England's Heroical Epistles.

They live in *cullises* like rotten cocks
Stew'd to a tenderness, that holds no tack:
Give me a thing I can crush.
Beaumont and Fletcher. Bonduca, act i. sc. 1.

When I am excellent at cawdles,
And *cullices*, and have enough spare gold
To boil away, you shall be welcome to me.
Id. The Captain, act i. sc. 3.

Then by my cawdle, and my *cullice*, I set
My daughter on her feet, about the house here.
Ben Jonson. The Magnetick Lady, act iv. sc. 7.

He who needs a savoury jelly, for such in fact is a CULLIS, may borrow his receipt from two cited by Archdeacon Nares (*ad. voc.*) The first is from Browne's *British Pastorals*, book ii. s. 3; it consists of

Ambergreece
Phesant and Partridge into jelly turn'd,
Grated with gold seven times refin'd and burn'd,
With dust of orient pearle.

The second is not quite so costly, and we think must be more richly flavoured:

"If you list to still [distil] a cocke for a weak body, that is in a consumption from long sicknesse or other causes, you may doe it well in this manner. Take a red cocke, that is not old, dresse him, and cut him in quarters, and bruse all the bones, then take the rootes of fennell, parcely and succory, violet leaues and borage, put the cocke in an earthen pot which is good to stew meates in, and between every quarter lay of the rootes and herbes, coraus, whole mace, anise seeds, liquorice being scraped and slyced, and so fill up your pot. Then put in halfe a pint of rose-water, a quart of white wine or more, two or three dates made clean and cut in pieces, a few prunes and raysons of the sunne, *and if you put in certain peeces of gold, it will be the better, and they never the worse*, and so cover it close, and stop it with dough, and set the pot in seething water, and let it seeth gently for the space of twelve hours, with a good fire kept still under the brasse pot that it standeth in, and the pot kept with liquor so long. When it has stilled so many houres, then take out the earthen pot, open it, streine out the broth into some cleane vessell, and give thereof unto the weake person, morning and evening, warmed and spiced, as pleaseth the patient. In like manner you may make a COLLYSS of a Capon, which some men like better." *Haven of Health*, ch. 157.

CULLY. — CULMINATE.

CU'LLY, *v.*
CU'LLY, *n.*
CU'LLY, *adj.*
CU'LLIAN,
CU'LLYISM,
CULLIBI'LITY,
CU'LLION, *n.*
CU'LLIONLY.

It. *coglione*; Fr. *couillon, couille*; Lat. *coleus*; Gr. κολεὸς, *vagina*. Cotgrave in v. *Coulle*, after explaining the word agreeably to the Etymology, adds, "Also a long, lank, and lubberly coward; a heartless, faint-hearted or white-livered slimm."

The great Priapus of Rome, is alwaies proued by his *cullions*, an able cocke & no hen, ere he be admitted to y^e^ seate of antichrist.
Bale. Apology, p. 113.

When as the *cullian*, and the viler clown,
That like the swine on draff sets his desire,
Feeling the tempest, sadly lays him down
Whilst that blind strumpet [Fortune] treads him in the mire.
Drayton. Pastorals. Eclogue 8.

Ile make a sop o'th' moonshine of you, you whoreson *cullyenly* barber-monger, draw. *Shakspeare. Lear*, fol. 292.

——— And all the sacred rules
Religion teaches, tricks to *cully* fools:
Justice would strike th' audacious villain dead,
But mercy boundless, saves thy guilty head.
Pomfret. Upon the Divine Attributes. Goodness.

To us y' apply, to pay the scores
Of all your *cully'd* past amours.
Butler. Hudibras, part iii. can. 1.

Yet banish'd from the realms by right her own,
Passion, a blind usurper, mounts the throne:
Or, to known good preferring specious ill,
Reason becomes a *cully* to the will.
Fenton. Epistle to Mr. Lambard.

O why should you, whose mother-wits
Are furnish'd with all perquisites,
B' allow'd to put all tricks upon
Our *cully* sex, and we use none?
Hudibras. To his Lady.

Providence never designed him [Gay] to be above two and twenty, by his thoughtlessness and *cullibility*.
Swift. Letter 33. *To Pope.*

What is this but being a *cully* in the grave! Sure this is being hen-peck'd with a vengeance! But without dwelling upon these less frequent instances of eminent *cullyism*, what is there so common as to hear a fellow curse his fate that he cannot get rid of a passion to a jilt, and quote an half-line out of a miscellany poem to prove his weakness is natural.
Spectator, No. 486.

CULM, Minsheu says *a* culmine *quoniam semper summa petit et* culmina *domus*; smoke or soot.

CULM (Welsh, *Culm*) is also a variety of Coal, the *Bitumen Oxygenatus* of Linnæus, and the *Glanz kohle* of Werner. It is found principally in Wales; it is not easily kindled, but when once it is so it burns a long time, without flame or smoke; it does not cake, and it leaves but few ashes. Dr. James Hutton published in 1777 a small Pamphlet, *Considerations on the nature, quality, and distinction of Coal and Culm*, which occasioned some controversy.

CULMIFEROUS, *adj.*, Lat. *culmus*, a stalk, and *ferre*, to bear.

Culmiferous plants [so call'd of *culmus*, Lat. straw or haulm] are such as have a smooth, joint stalk, and usually hollow, and at each joint wrapp'd about with single, narrow, sharp pointed leaves. *Miller. Gardener's Dictionary.*

CULMINATE, Lat. *culmen*, the top or summit. To reach the top or summit; the meridian height.

Here matter new to gaze the Devil met
Undazl'd, far and wide his eye commands,
For sight no obstacle found here, nor shade,
But all sun shine, as when the beams at noon
Culminate from the æquator.
Milton. Paradise Lost, book iii. l. 617.

On that unhabitable shore,
Expose me all alone,
Where I may view without a shade,
The *culminating* sun.
Pitt. Horace. Ode 22. book i.

——— While above
T' embow'ring branches *culminate*, and form
A walk impervious to the sun.
Smart. The Hop Garden, book i.

CU'LPABLE, *adj.*
CU'LPABLENESS,
CU'LPABLY,
CU'LPE,
CU'LPRIT,
CU'LPATE,
CU'LPATORY.

Fr. *coulpable*; It. *colpevole*; Sp. *culpable*; Lat. *culpabilis*; from *culpa*, a fault. Some Etymologists think from *collabi*; to slip, to fall: others from κλοπὴ, itself from κλέπτειν, to take privately, to steal. Vossius prefers the Hebrew *chataph*, to pass beyond, to transgress; and he adds, that properly *culpa* is transgression of the laws, and the bounds of virtue. Cicero in his IIId Paradox, says, that *peccare*, is *lineas transilire*, to leap over the bounds, and when this is done, *culpa commissa est*, a fault has been committed.

Blamable; that may, that ought to be blamed, censured or condemned.

Culpe is used by Hall, from the Fr. *coulpe*.

Culprit, appears merely to be a compound, and contraction of *culpe*, a fault, a crime, a transgression of the law; and Fr. *pris*, part. of *prendre*, to take; one taken, a *prisoner*; for a transgression of the law.

This facte was adiudged of all the nobilitie to be vnlawful, vniust and vngodly, to depriue a man beyng banished out of the realme without deserte, without *culpe*, and wythout cause, of his inheritaunce and patrimony.
Hall. Henry IV. Introduction, fol. 4.

Of Inglis and Frankis who was most *culpable*.
R. Brunne, p. 302.

For thy my sonne in all waye
Be wel auised, I the preie
Of slaught, er that thou be *culpable*
Withoute cause reasonable.
Gower. Conf. Am., book iii. fol. 61.

Anon after the king sent for the sayd Lord Cobham; and as he was come, he called him secretly, admonishing him betwixt him and him, to submit him selfe to hys mother the holy churche, and as an obedient chyld to acknowledge himself *culpable*.
State Trials. Trial of Sir John Oldcastle.

Meet and reason it is, that every one of you according to his place and calling, quit himselfe well in whatsoever shall be imposed and laid upon him: and especially to endevour and prevent, that no danger or mutinie arise by the maliciousness of those that are *culpable* and offenders.
Holland. Livius, fol. 1033.

The truth is, when all is said, every man in doubtful cases is left to his own discretion; and if he acts according to the best reason he hath, he is not *culpable*, tho he be mistaken in his measures. *Sharp. Sermons*, vol. ii. p. 257.

The great thing to be attended to in this case, of a man's following a mistaken judgment, is the *culpableness* or inculpableness, the faultiness or innocence of the mistake upon which he acts.
Id. Ib. vol. ii. p. 199.

Dauntless as death, away he walks;
Breaks the doors open, snaps the locks;
Searches the parlour, chamber, study;
Nor stops till he has *culprit's* body.
Prior. An English Padlock.

The learned, the judicious, the pious Boerhaave relates, that he never saw a criminal dragged to execution without asking himself, "Who knows whether this man is not less *culpable* than me?" *Johnson. The Rambler*, No. 114.

LPA-LE. Like other *culprit* youths, he wanted grace;
But could have no self-interest in the case.
Whitehead. Epilogue to the Roman Father.

PONS. The indulgence of the public ought to imprint respect, not presumption; and instead of trespassing anew on that lenity, the author has long feared he should be reproached, that

Detinuit nostras numerosus Horatius aures;

a quotation he should not dare to apply to himself, if adjectives, in *osus*, as *famosus*, &c. were not most commonly used by Latian authors in a *culpatory* sense; and thus *numerous* only means too voluminous. *Walpole. Catalogue of Engravers*, vol. v. *Postscript.*

CULPRIT, in *Law*, a term used by the Clerk of the Assize, or Clerk of the Arraigns, on behalf of the Crown when a person is indicted for a Criminal matter. After the indictment is read in the Court, which is the charge of the Crown against the prisoner at the bar, he is asked if he is, Guilty, or Not Guilty? If he answer, Not Guilty, the Crown replies by continuing the charge of guilt upon him, which is expressed by pronouncing the word "Culprit." Etymologists have been much puzzled to explain this obscure expression; since besides that given above, *Cul* has been said to be an abbreviation of the Latin word *culpa*, guilt, or *culpabilis*, guilty, and *prit*, (now *prêt*,) the old French word for ready, or as others think, the Latin *apparet*, appears, or rather *qu'il paroit*, let it appear so, i. e. Not Guilty. Again, it has been conjectured that *prit* was a corruption of *pr̄t*, written for *ponit* by the Clerk, as a minute that issue was joined; so that *ponit se super patriam*, or *pr̄t se* might be converted into *prist* or *prest*, as it was sometimes written. *Cul* was probably intended to denote the plea, and *prit* the issue; and these syllables being pronounced by the Clerk aloud, to give the Court and prisoner an opportunity of hearing the accuracy of the minute, and being immediately followed by the question, How wilt thou be tried? naturally induced the ignorant to suppose, that Culprit was an appellation given to the prisoner. Blackstone, in the following passage, appears to favour some such derivation as this:

"It may perhaps, however, be accounted for by supposing, that these were at first short notes, to help the memory of the clerk, and remind him what he has to reply; or else it was the short method of taking down in the court, upon the minutes, the replication and averments; '*cul. prit*;' which afterwards the ignorance of succeeding clerks adopted for the very words to be by them spoken." Blackstone, *Commentaries*, vol. iv. p. 431.

CULPIN, Minsheu says, "a taking away from the floure." It is a word used in the west parts of England.

CULPONS, *tum cumuli, acervi, tum particulæ*; piles, heaps, and also parts or particles, from Fr. *coupon*, a segment, a part; and this from the verb *couper*, to cut, to sever. Skinner.

Mr. Tyrwhit says, that Culpons in the first example from Chaucer signify *shreds*, in the second *logs*. Drant uses the verb;—To cut in pieces. *Diram qui contudit Hydram.*

Bytnces heng his lokkes that he hadde,
And therwith he his shulders overspredde,
Ful thinne it lay, by *culpons* on and on.
Chaucer. The Prologue, v. 681.

And lete anon commande to hack and hewe
The okes old, and lay hem on a row,
In *culpons*, wel araied for to brenne.
Id. The Knightes Tale, v. 2869.

He that did crowse, [crush] and *culpon* once
Hydra of Hellish spyte.
Drant. Horace. Epistle to Augustus.

CULROSS, a small Royal Borough of Perthshire, on the north shore of the Frith of Forth, of considerable antiquity. The harbour is dangerous from the rocks at its mouth, and the town therefore employs only a few vessels in the coal trade, although formerly it was the most considerable mart of coal in Scotland, and by an Act of Parliament in 1663, the Culross chaldron was ordained to be the standard measure of the Kingdom. The coal works, as late as James VI. (I. of England) were wrought considerably under the high water mark, and conveyed thence by a moat subterraneously communicating with the pit. The parish abounds in freestone, ironstone, ochre, and a clay valuable for potteries and glass-works. A Cistercian Abbey was founded here by Malcolm I. Thane of Fife in 1217, the Chapel of which still forms the Parish Church. To the westward near the Forth is the site of Dunnemarle Castle, anciently a fortress of the Macduffs. Culross joins with Stirling, Dunfermline, Inverkeithing, and South Queensferry in returning a Member to Parliament. Population in 1821, 1434. Distant five miles west from Dunfermline, and twenty-three west by north from Edinburgh

CULROSS — CULTIVATE.

CULTER, see COULTER.

CU'LTIVATE, CULTIVA'TION, CU'LTIVATING, *n.* CULTIVA'TOR. CU'LTURE, *v.* CU'LTURE, *n.* Fr. *cultiver*; It. *coltivare*; Sp. *cultivar*; Lat. *colere, cultum*, to till. Vossius prefers an Hebrew origin. Lennep considers that κολ-ω, must have existed in Greek as the root of κολάζω, *punio*, and of other words; and Scheidius that κολ-ειν, was the same as κέλλ-ειν, and meant *pellere, impellere, impellendo agere*; and further, *vehementiùs tractare, tundere*. And thus *col-ere*, will signify, consequentially,

To labour earnestly; *sc.* for the improvement of any thing;

As to cultivate the land,—to till it, to plough, to manure it; to cultivate the mind,—to strive, labour or endeavour to improve, or better it, strengthen or enlarge it.

This is a very deadly & monstrous perswaciō, which hath entred the mindes of men, beleuing that the studies of philosophie are of estates and princes, either vtterly not to be touched: or at lest wise with extreme lippes to be sipped, and rather to the pomp and ostentacion of their wit, then to the *culture* & profit of theyr myndes to be litle & easily tasted.
Sir Thomas More. Workes, fol. 14.

Your highness may assure your self, that the same offices of good-will towards your highness never shall be wanting in us; such as may be able to demonstrate how firmly we are resolv'd to *cultivate* both long and constantly, to the utmost of our power, that friendship which is between your serenity and this republic.
Milton. To the Grand Duke of Tuscany.

But that we may returne to Alexander, he having put over the river Arbis or Arabius, and having the very night following marched through a great part of the sandy country, came the next morning into places well inhabited and *cultured*.
Usher. Annals. Anno Mundi 3679.

Whom [Lacedæmonians] also both in other things, and especially in the *culture* of their bodies, the nobility observed the most equality with the commons. *Hobbes. Thucydides*, book i.

The mind of man hath need to be prepared for piety and virtue; it must be *cultivated* to that end, and ordered with great care and pains. But the vices are weeds that grow wild and spring up of themselves. *Tillotson. Sermon* 10.

Even man hath an innate principle of reason, but it is use and *cultivation* of reason that must enable it actually to do that, which nature gives it only a remote power of doing.
South. Sermons, vol. vi. p. 383.

CULTIVATE. — CULVERIN.

I have had a large, a fair, and a pleasant field; so fertile, that, without my *cultivating*, it has given me two harvests in a summer, and in both oppressed the reaper.

Dryden. Letter to Sir Robert Howard.

Physicks being a science, whose large extent invites and warrants its *cultivators* to search into the nature and phenomena of things corporeal, indefinitely, it must often happen, that the medicinal art, and this science will be conversant about the same subject though in differing ways, with differing scopes.

Boyle. Of the Reconcilableness of Specific Medicines, &c.

The mind that lies fallow but a single day, sprouts up in follies that are only to be killed by a constant and assiduous *culture*.

Spectator, No. 10.

Depend upon my sincerity, when I assure you, that I shall not only always honour you as man in the first rank in letters, but shall be heartily disposed to *cultivate* your acquaintance, and to merit your good opinion.

Warburton, vol. xii. p. 462. *Let. from Dr. Leath to Dr. Warburton.*

Being asked, whether the rajah is not bound to furnish the *cultivators* of land with seed for their crops according to the custom of the country? he said, the king of Tanjour, as proprietor of the land, always makes advances of money for the seed for the *cultivation* of the land.

Burke. Appendix, No. 7, *to Speech on the Nabob of Arcot's Debts.*

But happiest they, who drooping realms relieve!
Whose virtues in our *cultur'd* vales appear!
For whose sad fate a thousand shepherds grieve
And fading fields allow the grief sincere.

Shenstone. Elegy 25.

——— From their tenements,
Pleas'd and refresh'd, proceeds the caravan
Through lively spreading *cultures*, pastures green,
And yellow tillages in opening woods. *Dyer. The Fleece.*

CULTUROSTRES, in *Zoology*, a family of the order *Grallæ*, class *Aves*.

CULVER, *n.* A. S. *culfre, columba*, a dove, a pigeon. *Wud-culfre, palumbus*, a stock-dove. Somner.

Or as the *culver*, that of the eagle is smitten.

Chaucer. Of Philomene, fol. 208.

And anoon he went up of the watris and syghe heveues opened, and the Holy Gost comynge doun as a *culvere* and dwellynge in him. *Wiclif. Mark*, ch. i.

As too the whyte, and lately lymed house
The doues do flock in hope of better fare,
And leaue their home of *culuers* cleane and bare.

Turbervile. To one that vpon surmise of adversitie, &c.

Like as a gosh-auke, that in foot doth beare
A trembling *culuer*, hauing spide on hight
An eagle, that with plumy wings doth sheare
The subtile syre, stouping with all his might,
The quarrey throwes to ground with full despight;
And to the battell doth herself prepare.

Spenser. Faerie Queene, book iii. can. 7.

——— Whence borne on liquid wing
The sounding *culver* shoots; or where the hawk,
High in the beetling cliff his aery builds. *Thomson. Spring.*

CULVERIN, Fr. *coulevrine*; It. *colubrina*; Sp. *culebrina*. A bombard, long and thin, which is now also called *serpentina*, from the shape of a serpent, (*colubri vel serpentis.*) Junius.

They haue faire ordinance of brasse of all sorts, bases, faulcons, minions, sakers, *culuerings*.

Hakluyt. Voyage, &c. Description of Russia, vol. i. fol. 316.

As there great *culuerings* for battery bent,
And leuel'd all against one certaine place,
Doe all attonce their thunders rage forth-rent,
That makes the wals to stagger with astonishment.

Spenser. Faerie Queene, book v. can. 10.

Captain Zanchy, who took in Marsey Fort and Island, found there two *culverins*, two sacres, and one drake.

Whitelock. Memorials. Anno 1648.

In the *Table of Ordnance* in the time of Elizabeth, given by Dr. Meyrick, (iii. 70,) the CULVERIN carried 17½ lbs. shot in a bore of 5½ inches; the demiculverin 9½ lbs. in 4 inches; the bastard Culverin 5 lbs. in 4 inches. Elsewhere, says Fosbrooke, (*Enc. of Ant.* 823,) we have the large Culverin 20 lbs.; ordinary Culverin 17 lbs.; smallest Culverin, called in Captain Crusoe's *Art Militarie* (118) the great Culverin, 15½ lbs.; the large demiculverin or whole Culverin 12 lbs.; the demiculverin or small Culverin 6 lbs.; the bastard Culverin 8 lbs.

CUMÆ, otherwise CYME, a Town of Campania in Italy, on the sea shore, in latitude 41°, and eight miles north-west from Naples.

Cumæ was founded by a colony from Chalcis in Eubœa, under Megasthenes and Hippocles. The time of its foundation lies beyond the records of authentic history; it has, however, the reputation of being the most ancient Greek settlement in Italy, and was, according to Velleius Paterculus, (lib. i. ch. iv.) founded not long after Chalcis itself. Its history is involved with some of the most ancient fables of classical antiquity; it was here that Dædalus rested after his flight from Crete, and is said to have founded the magnificent Temple of Apollo and Diana, of which Virgil gives a most brilliant description in the beginning of the VIIth Æneid; here was the abode of the most celebrated of the Sibyls, and here Æneas landed when he came to Italy.

The beautiful situation of Cumæ rendered it a favourite place of resort with distinguished Romans. To its neighbourhood Sylla retired after his resignation; and Cicero, Pompey, Varro, and Catullus had seats there called *Cumana*. But the neighbouring coasts of Baiæ, Puteoli, and Naples, were more attractive, because more salubrious; in the time of Juvenal, Cumæ is described by the Satirist as deserted and empty, (*vacuæ*;) and in the VIth century it was reduced to a barren military position. Even this was destroyed before the end of the XIIIth. A cavern is still shown as the grotto of the Sibyl; and Eustace (ii. 423) thinks probably did form part of it. The grotto is described by Justin Martyr, A. D. 105, as existing in all its original splendour; and though perhaps disfigured and despoiled by Constantine, it was not ruined till the war between Justinian and the Goths in 550. Nerva then undermined the fortress above it, and its ruins partly choaked up the cavern. Two only of its many branches (the *lati aditus centum* and *ostia centum*) are now visible. Information on the Antiquities of Cumæ will be found in Anton. Ferro, *Apparato delle Statue ritrovate in Cuma*, 1606; and Sarnelli, *Guida de' Forestieri per Pozzoli*, &c. 1685.

CUMANA, NUEVA ANDALUSIA, or PARIA, a Province of the Department of Caracas, in the Republic of Colombia, bounded on the north by the Carribbean Sea, eastward by the Atlantic, to the west by Barcelona, and southward by the Orinoco and Spanish Guiana. Barcelona is also included by some writers in the territories of this extensive Province, in which case, the western boundary is Venezuela, or Caracas Proper. The great extent of Cumana and Barcelona, their being washed on two sides by the ocean, and by the Orinoco on the third, render them a most important portion of the Republic.

Columbus discovered Paria during his third voyage. In 1499 Ojeda followed the coast as far as Cape de la Vela; and Cristoval Guerra with Pedro Nino obtained a license to explore the country. Vincente Yanez Pinzon, in 1500, traced the estuary of the

Orinoco, and expeditions were fitted out in every port of Spain for the Coast of Pearls. In 1521 Bartolomeo de las Casas, the Protector of the Indians, obtained a grant of the whole coast of Cumana, Barcelona, Venezuela, Coro, and Maracaibo, and sailed with 200 men to take possession of it; but was repulsed by the natives, who had been goaded to madness by their former oppressors. Juan de Ampues landed in 1527, and adopting mild measures, conquered the country, the chief Cacique taking the oath of allegiance to Spain on the 26th of July 1527. Ampues founded the city of Coro. Charles V. most unjustly assigned part of this country in payment of a debt to a German company, the Welsers, from which it suffered much; but their power did not last long, as Juan Perez de Tolosa was appointed Captain-General of Caracas, and the Council of the Indies promulgated laws for the government of the afflicted natives. Since that time Captain-Generals have governed Caracas without interruption, until the recent enfranchisement of the country.

Climate, &c.

In treating of COLOMBIA we have already given an outline of the features and climate of this portion of the State.

Productions.

The productions of the country have also been noticed, but of the singular peninsula and point of Araya in latitude 10° 36′ north and longitude 64° 20′ west, which has produced immense quantities of salt ever since the discovery, no relation was given. This spot used to be clandestinely visited by the colonists of every nation which possessed establishments in the West Indies; nor was it until the expulsion of the Dutch, in 1605, that the Government of Caracas took absolute possession of it. The great mere or lake of which the salt works consisted, was, however, overflowed in the dreadful hurricane of 1726, which converted it into a gulf several miles long; but pits and reservoirs have since been dug, so that vast quantities of salt are now again procured. The consumption of this article in forming *tasago* or salted provisions, amounts in Barcelona and Cumana to 9000 or 10,000 *fanegas* (each of 400 lbs.) annually, of which the salt grounds of Araya furnish 3000 *fanegas*, and the sea the remainder. Araya is also noted as being the first place in which the Spaniards began to found a town, and it contains springs and masses of petroleum, this substance existing also on its coasts at Cape de la Brea, Punta Soto, and Guararitto. A stream of naphtha issues from the bed of the sea near these shores, and forms a visible spot, 100 feet in diameter, among the weeds with which the beach is covered.

Population.

The Provinces of Barcelona are chiefly peopled with Indians, who are supposed to exceed the Spaniards, Negroes, and mixed races in a proportion considerably above one-half, without including the Guaraounoes of the Islands of the Orinoco, who, as it were, command the mouths of that river, which extend along the sea coast for more than sixty leagues.

Rivers.

Besides the Orinoco, the coast of Cumana and Barcelona is pierced by numerous rivers, of which the Unara separates Venezuela Proper from Barcelona, and is navigable from San Antonio de Clarimas, eighteen miles in the interior; it receives the Ipire at about forty-five miles from its source in the mountains, and runs about the same distance thence to the sea. Barcelona is built on the Neveri, which serves as a communication with the interior for the trade in cattle and hides. 8000 mules alone having been embarked in 1809 for the West India Islands. The City of Cumana stands on the small river Manzanares; the next stream of any importance is the Guarapiche, which flows into the Atlantic by a very broad estuary just above the first mouth of the Orinoco. The Mamo, the Pao, and the Suara are the largest rivers of this country which flow into the Orinoco.

Capital.

CUMANA, or NEW TOLEDO, the chief City of these Provinces, is situated in latitude 10° 27′ 52″ north and longitude 64° 9′ 47′ west; a mile from the mouth of its harbour, between which and the Town is the great plain El Salado. To the east is another extensive plain, and on the north is a rocky mass, on which the Castle of San Antonio is built. The City occupies the space between this citadel, the river Manzanares, and another stream, called Santa Catalina. Cumana is one of the oldest cities on the continent, having been founded by Ocampo in 1520. It is now the chief City of the Department of the Orinoco, and the residence of the Governor.

No very remarkable buildings are seen here, owing to the frequency of earthquakes; but it may be styled a fine town, and is noted for the purity and healthiness of its climate; the great heat incident to its situation being moderated by the sea breezes, so that Fahrenheit's thermometer ranges between 93° and 70°. A large suburb is called the Town of the Guayguericas, being inhabited by a tribe of Indians of that name, who principally cultivate the adjoining fertile plains, and whose neat cottages and gardens filled with sapotes, mamies, plantains, &c. give a very beautiful appearance to Cumana. Humboldt observes, that the entrance of the harbour of Cumana is highly picturesque; the City rising out of the plain backed by the citadel, its rocks and groves; the plantations of cocoa-nuts, cassias, capers, and arborescent mimosas; the shores covered with pelicans, egrets, and flamingoes; the beauty of the river, and the clear blue of the sky, contrasted with the dark and gloomy appearance of the interior, conspire to afford a landscape of the most captivating character. The port is formed by the Gulf of Cariaco, which has good anchorage, and is usually smooth and unruffled. The principal danger being a shoal called Morro Roxo.

Earthquakes.

Cumana has suffered dreadfully from earthquakes; the natives having a tradition, that the Gulf of Cariaco was formed by an earthquake just before the visit of Columbus. The shocks on record which have done the greatest injury to Cumana, were those experienced in 1530, and frequently towards the end of the XVIth century, the sea rose from fifteen to twenty fathoms. On the 21st of October 1766, the City was overthrown, many persons perished, and the shocks continued hourly for fourteen months, till in 1767, when they happened only once a month. In this memorable convulsion of nature, the earth opened and threw out hot water. In 1794 another tremendous visitation occurred, and on the 14th of December 1797, four-fifths of Cumana were utterly destroyed, the earth heaving up with loud subterraneous noises; but the people, excepting a few who sought refuge in the churches, escaped. Flames are frequently seen at night on the plains near this City, which neither burn the herbage, nor issue from any apparent crevices. They were observed, half an hour previous to the last mentioned earthquake, to rise from the banks of the

CUMANA. river. The people call them "the soul of the tyrant Aguirre," whose history has been related recently by Mr. Southey.

CUM-BENT.

The population of Cumana is about 19,000 or 20,000, occupied principally in commerce, navigation, and agriculture. The fisheries give subsistence to a great portion, and large shipments of salted provisions are exported to Caracas and the Windward Islands.

Population.

Nueva Barcelona.

The next place of consequence is NUEVA BARCELONA, which is the chief Town, and the seat of Government of the Province of that name, and has been described in a former part of this work. It is the emporium for the contraband trade with Trinidad, the value of which has been computed at 400,000 dollars annually. It also carries on a trade with the West Indies in hides, tallow, horses, oxen, mules, salted and dried provisions to a great amount, from the produce of those immense plains which spread over the surface of the district to the Orinoco, in which the fertility of natural pasturage will long operate as a drawback to the spirit of agricultural exertion.

Cumanacoa.

Cumanacoa, with a population of nearly 2000 souls, is the next town of importance, fourteen leagues south-east of Cumana, in a very rich plain surrounded by lofty mountains, and although only 630 feet above the level of the sea, possessed of a mild, and even cold climate. Its environs supply the Province with tobacco, and a great quantity of indigo is raised. Near it is the highest mountain in this part of Colombia, the Tumeriquisi, more than 6500 feet above the Carribbean Sea; and the peaks of which are covered with forests of mahogany, javillo, and cedar trees of enormous size, which are the haunts of tigers and other wild animals.

Cariaco.

Cariaco, in latitude 10° 30′ north and longitude 63° 59′ west, at the extremity of the Gulf of the same name, is a small place, in the middle of a plain filled with plantations, huts, and groupes of cocoas and palms, and near a hill called Buenavista, the summit of which presents the most extensive view on the coast of Cumana. This Town is unhealthy, as it has a shallow lake in its vicinity; but its population exceeds 6700, engaged in a trade with fine cotton, having furnished no less a quantity than 7000 quintals in 1800. The sugar-cane has of late also become an object of much speculation in Cariaco, where considerable quantities of it are now grown.

Concepcion del Pao.

Concepcion del Pao, in latitude 8° 42′ north and longitude 65° 10′ west, and fifty-five leagues south of Cumana, has lately been raised to the rank of a city; its population is near 3000, and most of its inhabitants are proprietors of cattle and land in the northern plains of the Orinoco.

Settlements are now constantly forming along the coasts of Cumana, in the fertile vallies of the interior, and on the shores opposite the Island of Trinidad; but the greater portion of the interior is yet covered with forests, tenanted by serpents of immense size, and by the wild animals peculiar to the climate.

CUMBENT, *adj.* Lat. *cumbens*, from *cumbere*, to lie down.

Lying down, reclining.

> Too cold the grassy mantle of the marle,
> In stormy winters long and dreary nights,
> For *cumbent* sheep. *Dyer. The Fleece*, book i.

Bishops in *cumbent* attitudes and cross-legged Templars admitted no grace, nor required any.

Walpole. Anecdotes. Statuaries in the Reign of George II.

CU'MBER, *v.* Cu'MBER, *n.* Cu'MBERSOME, Cu'MBRANCE, Cu'MBROUS.

More commonly written by our older writers *Comber*, q. v.

To overload, to oppress with a load or burthen; with toil or trouble; with vexation; to embarrass, to harass.

> But lightly treading thereupon, doth shift,
> Out of the bog his *cumber'd* feet to lift,
> When they the peril that do not forecast,
> In the stiff mud are quickly stabled fast.
> *Drayton. The Moon Calf.*

Howbeit some seeking out the troth more eagerly, did *cumber* sore and trouble the Patricians, accusing them, that they abused the common people with vain and fond perswasions, whilst themselves in the mean time had murdered the king with their own hands. *Sir Thomas North. Pluturch. Romulus*, fol. 29.

> A *cumber-world* yet in the world am left,
> A fruitless plot with brambles overgrown:
> Of all those joys that pleas'd my youth bereft,
> And now too late my folly but bemoan.
> *Drayton. The second Eclogue.*

I pray then let me only by this bearer know it, that I may provide you some fit lodgings at a good distance from Whitehall, for the preservation of liberty, and avoidance of the *cumber* of kindness, which in troth (as we have privately discoursed) is no small one. *Reliquiæ Wottonianæ*, fol. 429.

As dreames come through a multitude of businesse, *Eccl.* v. 3, so doe a multitude of thoughts from a *cumber* of businesse.

Goodwin. The Vanity of Thoughts.

The worde of God is a two-edged sword: as for the weapons of naturall reason, they are as the armour of Saul, rather *cumbersome* about the souldier of Christ then needful.

Hooker. Ecclesiastical Polity, book iii. fol. 98.

> For this great bus'ness eas'ly setting out,
> By due proportion measuring ev'ry pace,
> T' avoid the *cumbrance* of each hindering doubt.
> *Drayton. The Barons Wars.*
>
> ——— Then Corin up doth take
> The giant 'twixt the grains; and voiding of his hold,
> (Before his *cumberous* feet he well recover could)
> Pitch'd headlong from the hill. *Id. Poly-olbion*, song 1.

Blessed be God, you are all admitted into his church, and so planted in his vineyard; but you serve only to *cumber* the ground, and therefore will be cut down ere long, and cast into the fire, unless you bear fruit. *Bishop Beveridge. Sermon* 39.

And yet by the knowledge of the double progression, beginning from the unit as 1, 2, 4, 8, a great deal of *cumber*, and sometimes of charge may be saved. *Boyle. Usefulness of Natural Philosophy.*

The outward forms of worshipping the Deity wanted a reformation. Stately buildings, costly ornaments, peculiar and uncouth habits, and a numerous huddle of pompous phantastical *cumbersome* ceremonies, every where attended Divine worship.

Locke. The Reasonableness of Christianity.

> Black ants in teams come dark'ning all the road,
> Some call to march, and some to lift the load;
> They strain, they labour with incessant pains,
> Press'd by the *cumbrous* weight of single grains.
> *Parnell. The Flies. An Eclogue.*

This it is to soar above the rest of mankind; and this representation I lay before you, that I may be informed how to divest myself of the laurels which are so *cumbersome* to the wearer, and descend to the enjoyment of that quiet, from which I find a writer of the first class so fatally debarred.

Johnson. The Rambler, No. 17.

I am afraid that whether married or unmarried, we shall find the vesture of terrestrial existence more heavy and *cumbrous*, the longer it is worn. *Id. Ib.* No. 45.

CUMBERLAND, a County at the north-western extremity of England, bounded on the north by Scotland and the Solway Frith, on the east by Northumberland and Durham, on the south by Westmoreland and Lancashire, and on the west by the Irish Sea. The length from north to south is about fifty miles, and its medium breadth thirty; its bounding line exceeds 220 miles, and its surface includes 1478 square miles, with

Situa bound and e

MBER-AND. a population of 159,300 individuals. The following statement shows the rate of increase during the last and present centuries:

ulation.

Years.	Population.	Increase.
In 1700	62,300	40 per cent.
1750	86,900	39 per cent.
1801	121,100	14 per cent.
1811	138,300	15 per cent.
1821	159,300	

face. Cumberland presents every variety of surface to be found in other parts of Great Britain. In some places tracts of flat country extend with but little interruption, in others stupendous rocky masses rise abruptly to the clouds, and are separated by narrow vallies or extensive lakes, not unfrequently accompanied by majestic water-falls. The northern part, called the Vale of Carlisle, is generally level; the south-west district is
ntains. particularly distinguished for its mountains and lakes, its narrow vallies, and its precipices. The following are some of the highest summits in this range, as determined by the trigonometrical survey of England and Wales: viz.

	Height in feet.
Black Comb	1919
Bow Fell	2911
Cross Fell	2901
Dent Fell	1115
Grasmere Fell	2756
Helvellin	3055
High Pike	2101
Pillar	2893
Saddleback	2787
Sea Fell, low point	3092
Sea Fell, high point	3166
Skiddaw	3022

es. Many beautiful lakes are embosomed among these mountains, and often break upon the view of the traveller with singular effect, as he looks from their summits, or winds round their craggy bases. The
went- principal of these are Derwent-water, Bassenthwaite,
r. Crummock-water, and Buttermere. Derwent-water, which is frequently called Keswick Lake, from being near that town, is about three miles long, and two broad, of an oval shape, and adorned with several islands. Its size and figure allow it all to be seen at once, and its waters frequently experience great agitations without any apparent cause; and islands sometimes rise to the surface, and float for
enth- various periods, and then disappear. Bassenthwaite
e. lies a few miles north of Derwent-water, and is about four miles long, and one broad in the widest part, but not more than half a mile in the narrowest. The majestic Skiddaw rises with towering sublimity from one margin of this lake, while rugged mountains, half shrouded with wood, descend abruptly to the water's edge on the other, and a fertile vale, watered by the Derwent, gives a spacious opening on a third. The prospect from the adjacent mountains is variegated and romantic in the extreme. On one part of the descent towards Keswick, which commands a view of both these lakes, the view is scarcely to be equalled.
nmock Crummock-water, on the north-west side of the
r. mountains which bound the preceding lake, is nearly four miles long, and half a mile broad, and is only separated from Buttermere by a beautiful valley about a mile in length. Few lakes are more picturesque than this. Barren mountains border the eastern margin, while the opposite banks are indented and varied with low bogs, curious promontories, little coppices, and trees scattered among small farms, the whole terminating in a rich scene of woodland, impending in a beautiful manner from the superior eminences. Some of the surrounding mountains are verdant, some rocky and heathy, and some covered with red shiver, which streams down their furrowed sides, exhibiting a singular appearance. The whole beauty of the scene is greatly enhanced by vivid reflections from the smooth glassy surface of the lake. CUMBERLAND.

Buttermere is still smaller than any of the former, but Buttermere.
is not less prolific in romantic and pleasing scenery. It is about a mile and a half long, and half a mile broad. One side is bounded by a range of abrupt mountains, on the other the ascent is more gentle, and is in several places adorned with wood. The prospects, however, which are most attractive to the numerous visitors by which it is annually frequented, are cataracts near its lower extremity, and the waterfall a little to the west. Cumberland also contains several other lakes of less note, but each distinguished Small lakes.
by some particular beauty. Among these are Leathes-water, Lows-water, Ennerdale-water, and Wast-water. Ulls-water lies between Cumberland and Westmore- Ulls-water.
land, is about nine miles long, and seldom more than one broad. The surrounding scenery is grand, and the general characteristic of the lake is awful sublimity, in which it surpasses any other in the north of England.

The mountains give rise to numerous streams, Rivers.
which intersect the County in various directions, but few of them deserve the appellation of rivers. The principal of these are the Eden, the Derwent, the Caldew, and the Esk. The first of them rises in Westmoreland, near the confines of Yorkshire, and pursues a north-west course, through a beautiful vale, in which the high grounds sometimes approach the water's edge, till it passes Carlisle, and enters the Solway Frith by a large estuary. This river is chiefly noted for its salmon fisheries. The Derwent originates among the frightful rocks at the head of Borrowdale, which is, perhaps, the most rugged and chaotic region in Great Britain; and after descending that vale, it passes through Derwent-water and Bassenthwaite, and being joined by the Cocker, near Cockermouth, it falls into the sea near Workington. The Caldew issues from the flank of Skiddaw, and joins the Eden near Carlisle, after a course of twenty-four miles, through a beautiful and well-wooded vale. The Esk enters Cumberland from Scotland, and afterwards falls into the Solway Frith. The Liddal is another Scotch river, which has its termination in this County.

Cumberland necessarily presents great variety of Climate.
climate. In the level tracts it resembles that of other places in the north of England; except as bordering on the Western Ocean, it is less exposed to frost, and more subject to rain. The mountains of the southern part arrest the clouds in their progress, and render it one of the most rainy districts in the Kingdom. This is fully verified by observation; for the mean annual quantity which fell at Keswick, on an average of seven years, was 67·5 inches; while that which fell at Carlisle did not amount to half that quantity. In winter the mountains are consequently subject to intense cold, and the snow lies during the greater part of the year upon some of the highest.

CUMBERLAND. Soil, culture and products.

Most of the elevated parts are covered with a black peat earth, which is also met with in some of the lower tracts of the County. Much of the cultivated grounds consist of a dry sandy loam, easy to work, and well adapted to the growth of all the common kinds of grain, though the nature of the climate sometimes renders them very late in ripening. Cold wet clays in some places appear on the surface, and in many form the subsoil. The light red soils are well adapted to the growth of potatoes, which are more extensively cultivated in this County than in most others in proportion to the average of tillage. The land, in most parts of the County, is divided into small parts, and frequently occupied by the proprietors, as customary tenants to the Lords of the Manors, to whom they pay fines, heriots, and services. There are, however, a few large estates, but not many large farms. The horses are in general small, and the cattle almost uniformly of the long-horned kind. The sheep are chiefly of the heath breed, with black faces and coarse wool, and are often rented with the farms. The agriculture of this County has lately experienced considerable improvements. It is not, however, from the surface of the soil alone, that the wealth and support of the County are derived, its

Minerals.

mineral treasures contribute largely to this end. The most valuable of these are coal, lead, blacklead, copper, iron, slate and limestone.

Coal.

Coal has been found in various parts, but the most extensive beds appear to be in the vicinity of the Western Ocean, where they are principally worked in the neighbourhood of Whitehaven, Workington, and Maryport. A great number of mines have long been worked in this district, particularly near the two former places. In one place near Whitehaven, the principal entrance to the mines is at the bottom of a hill, whence a steep descent leads to the lowest vein of coal which has yet been worked, and which is 130 fathoms deep, and sometimes much deeper. In what is called the King-pit, it is said to be 160 fathoms deep. The seam is about three yards thick, and is worked into large galleries, the ground above being supported by large pillars of coal about twelve yards square at the base. These seams usually have a dip of one yard in ten or twelve towards the west, and the workings are extended under the sea, frequently to a depth of water sufficient to float large vessels. One of the shafts is even sunk in the sands, on the north of Whitehaven harbour, and a large wall erected to keep out the water at high tide. The coals are chiefly exported to Ireland, and the western districts of Scotland, and amount to about 90,000 chaldrons annually. The principal lead mines are at Aldstone Moor, near the south-east extremity of the County, where the ore is found mixed with a portion of silver. Copper has been met with in several parts, but little of it now appears to be worked to much advantage. Iron also is much diffused. Large quantities of ore were exported from the vicinity of Egremont, as well as from the more southern peninsula.

Blacklead.

But blacklead is the most celebrated of its mineral products. The mine of this ore is at the head of Borrowdale, in the south-west range of hills, and not far from Keswick. The produce is superior to any other in Europe; and the mine is only worked at certain times, when the demand renders a fresh supply necessary. At other periods the entrance of the mine is walled up, and carefully guarded. Slate and lime are likewise among the exports of this County, and both are found in several places.

CUMBERLAND. Manufactures and commerce.

Few manufactures are carried on in Cumberland, except those required for the immediate supply of the inhabitants. There are, however, a few calicoes and other cotton fabrics produced in some places, with sail-cloth, cordage, checks, and some coarse linens for exportation. These, with a few paper-mills and breweries, and a soap-work at Carlisle, are all that deserve enumeration. As this County is but thinly peopled, and its manufactures neither numerous nor extensive, the number of considerable Towns is but small. Carlisle, Penrith, Whitehaven, Workington, Wigton, and Maryport, with Cockermouth, Egremont, and Keswick, are the principal. Some trade is carried on with foreign parts, particularly at Whitehaven; and coals, lime, butter, bacon, salmon, and potted char, are exported both from that and some of the other sea-ports. Since the trade has been thrown open to the East Indies, Whitehaven is engaged in this branch also.

Historical sketch.

Cumberland, being one of the border Counties, was often a scene of plunder and contention between the Scots and English during the early history of the two Countries. In the Xth century it was possessed by the Scots, but it does not appear whether they obtained it by conquest or by other means. Henry III. assigned certain lands in this County and in Northumberland, to satisfy the Scots. These were then to amount to the yearly value of £200., if such could be found without the limits of the towns wherein castles were erected. After this arrangement, however, there remained a considerable district between the two Kingdoms, which became the resort of the worst characters from both, who frequently made encroachments upon the borders of each, till the union of the two Crowns put a period to their depredations in 1700.

Burn, *History and Antiquities of Westmoreland and Cumberland*, 1771—7; Hutchinson's *History of the County of Cumberland*, 1800; Bailey's *General View of the Agriculture of Cumberland*; Clarke's *Survey of the Lakes*, 1789; Gilpin's *Observations relating to the Picturesque Beauty of the Mountains and Lakes of Cumberland*, 1786; Warner's *Tour*, 1802; Hutton's *History of the Roman Wall*, 1802.

CUMBRAY, Great and Little, two Islands of Scotland, near the coast of Ayrshire, belonging to the County of Bute, situated in the Firth of Clyde, and separated from each other by a narrow channel. Great Cumbray, or Cimbraes Meikle or More, is about two miles and a half long, comprising a surface of 2500 acres, nearly half of which is productive of the common crops raised in the neighbouring districts. The centre of the Island is about 400 feet above the level of the sea, but gradually sloping towards the shore. Pines and firs have lately been planted in some parts of this Island; on the east side of which there are some basaltic rocks, similar to those of Staffa, except that they are not columnar. The village of Milnport is pleasantly situate on the south-west shore, with a good harbour, and a small manufactory of thread. Limestone and freestone abound in the Island. Population in 1821, 657.

Little Cumbray, or Cimbraes Beg, is less than a mile from the preceding Island, and is not more than half its size. It is chiefly used as pasturage, and pro-

CUMRAY. — CUNILA.

sents a singular appearance, from the strata of its rocks being nearly horizontal, and rising above each other like stairs, as they recede from the shore. It likewise contains several curious caves, some of which are extensive. An ancient castle adorns the south coast, and a lighthouse was built a few years since as a direction for navigating the Frith. A few families constitute the whole population.

CUMINUM, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferæ*. Generic character: fruit ovate, striated; umbells four; involucre four-cleft; leaflets simple and three-cleft.

C. Cyminum, producing the seeds called Cummin, is a native of Egypt and the adjacent countries; its cultivation is of very great antiquity:

"For the fitches are not threshed with a threshing instrument, neither is a cart-wheel turned about upon the Cummin; but the fitches are beaten out with a staff, and the Cummin with a rod." *Isaiah*, xxviii. 27.

Cummin seed appears to have been used to attract pigeons to a dove-cote. Nares's *Gloss.* Culver-house.

CU'MULATE, CUMULA'TION, CUMULA'TIVE. Lat. *cumulus*, a heap; of unknown origin. To heap together; to pile into a heap; to collect or gather together. More usually written *Accumulate*, q. v.

The defender denies any such custom; but, by the contrary, defences have severally, and without *cumulation*, been proponed and discussed, as in Ochiltry's process.

State Trials. Trial of Sir Robert Spotiswood.

As for the knowledge which is infused by instruction, that is, *cumulative*, not originall; as it is in waters, which besides the head-springs, are increased by the reception of other rivers that fall into them.

Bacon. On Learning, by G. Wats, book iii. ch. 1.

Though the tongue spoke not, yet did his thoughts discourse, and had leisure afforded them to contemplate, part by part, all the extremes of worth and beauty, that were *cumulated* in Camilla.

Shelton. Don Quixote, ch. vi.

They said, according to a distinction much used among them, that the king's power of calling synods and assemblies was *cumulative*, and not privative; that is, he might call them if he would; and appoint time and place.

Burnet. Own Times. King William and Queen Mary. Anno 1692.

CUNCTATION, Lat. *cunct-ari, atum*, to tarry, to delay. From *cunctus*, (i. e. *conjunctus*,) all together, is *cunctari*, which properly denotes *cuncta aggredi, sive per* cuncta *ire*; but because it is not possible to do so without length of time; hence *cunctari* came to signify *morari*, to take time, to tarry, to delay. Vossius.

The swiftest animal conjoyned with that heavy body, implying that common moral, *festina lente*, and that celerity should alwayes be contempered with *cunctation*.

Sir Thomas Brown, book v. ch. ii.

CUND. *Cundeth* or *cunneth*, from the A. S. *cunnan*, to know, or cause to know; to give notice.

They are directed by a balker or huer on the clif, who, discerning the course of the pilchard, *cundeth*, as they call it, the master of each boat. *Carew. Survey of Cornwall.*

CUNILA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*. Generic character: calyx cylindrical, striated, five-toothed; corolla ringent, with the upper lip erect, flat, and emarginate; stamens, two sterile, two fertile, with the style exserted, nearly twice the length of the corolla; stigma unequally bifid; seeds four.

Two species, natives of North America. Nuttal.

CU'NNING, *adj.* Cu'NNING, *n.* Cu'NNINGLY, Cu'NNINGNESS, Cu'NNING-MAN. See to Con. *Cuning*, or *conning*, is,—knowledge, science. *Cunning* is now applied to that knowledge or skill, to that craftiness or subtilty, which is employed to deceive, to trick, to outwit, to evade CUNNING.

And we ben clerkes ycnowen *cunnyng* in schole.

Piers Ploukman. Crede, C. 2.

And eschewe thou foltische questiouns and withouten *kunnynge* witynge that tho gendren chidynges.

Wiclif. 2 *Tymo.* ch. ii.

Wherefore these articles of belefe, and all other bothe of the olde lawe and of the newe, which after the commaundment of God any man oughte to beleue, I beleue verely in my soule, as synnefull deedly wretche, of my *cunnynge* and power ought to beleue, prayenge the Lord God, for his holye name, for to encrease my belefe, and help my unbelefe.

State Trials. Trial of Master William Thorpe.

If I in fine may force
hir pittie by my plaint,
I shall in *cunningste* verse I may
hir worthie prayse depaint.

Turbervile. The Louer declareth how first he was taken, &c.

Who souer is desirous to reade this proposicion more at large and *cunningly* handled, let him but peruse the prouerbe or adage it selfe in the first centurian of the fourth chylliade of that famouse Clarke Erasmus Roterodamus. *Gascoigne. Hearbe.*

Yow y^t can so *cõingly* dymynysh & adde, cut of & set on, pull out & put in, as ye haue done afore in your Augustynes allegacyons, are able ynough to shewe your conueyaunces here.

Bale. Apology, p. 55.

Which tooles I openlie confesse, be not of myne owne forging, but partlie left unto me by the *cunningest* master, and one of the worthiest jentlemen, that ever Englande bred, Syr John Cheke.

Ascham. The Schole-master.

Admired match! where strives in mutual grace
The *cunning* pencil and the comely face;
A task which thy fair goodness made too much
For the bold pride of vulgar pens to touch.

Donne. Anatomy of the World.

——— A carpenter's desert
Stands more in *cunning* than in power.

Chapman. Homer. Iliad, book xxiii. fol. 315.

For all wise, in all thinges, if it be not stayed by *cunning*, will very easely bring a man to do that thing, whatsoever he goeth about, with much ilfavorednesse and deformitye.

Ascham. The Schole for Shooting.

I am a little world made *cunningly*
Of elements, and an angelic spright;
But black sin hath betrayed to endless night
My world's both parts, and, oh! both parts must die.

Donne. Holy Sonnets, son. 5

——— The rest, in giggots cut, they spit,
Roast *cunningly*, draw, fit, and feast: nought lackt to leave alaid
Each temperate appetite.

Chapman. Homer. Iliad, book ii. fol. 25.

Sans How *cunningly* the sorceress displays
Her own transgressions to upbraid me mine?

Milton. Samson Agonistes, l. 819.

You may easily guess what motions of mirth this mistake rais'd, but the Doctor by this oversight (or *cunningness* rather) got a supply of money. *Howell. Letter* 2. book iv.

Whatever the matter was, soon after the consecration his parts sunk so fast, that in a few months he, who had passed his whole life long for one of the *cunningest* men in Scotland, became almost a changeling.

Burnet. Own Times. Charles II. Anno 1661.

All the weighty consequents
Depend upon more blind events,
Than gamesters, when they play a set
With greatest *cunning* at piquet.

Butler. Hudibras, part iii. can. 1.

CUNNING. — CUP.

This deplorable estate could not be more feelingly expressed than it is here, by making sin (which still remain'd in man under the law) a person, who, implacably aiming at his ruin, *cunningly* took the opportunity of exciting concupiscence in those to whom the law had made it mortal.

Locke. On Romans, ch. vii. *Notes* (8.)

When great policy and craft do effect nothing, but are blasted of themselves, or baffled by simplicity: when *cunningly-laid* designs are soon thwarted and overturned, &c.

Barrow. Sermon 11. vol. i.

Where leafy branches form'd a secret shade
The painted birds their *cunning* fabrics made.

Fawkes. Description of May.

The fox in deeper *cunning* vers'd,
The beauties of her mind rehears'd,
And talk'd of knowledge, taste and sense,
To which the fair have vast pretence!

E. More. Fable 2.

Yet well he knew them always vain
Of what they strive not to attain
And play'd so *cunningly* his part
That pug was rivall'd in his art. *Id. Ib.*

CUNONIA, in *Botany*, a genus of the class *Decandria*, order *Digynia*, natural order *Saxifragæ*. Generic character: calyx five-leaved; corolla, petals five; capsule two-celled, acuminate, many-seeded; style longer than the flowers.

One species, *C. Capensis*, native of the Cape of Good Hope. Persoon.

CUP, *v.*
CUP, *n.*
CU'PBEARER,
CU'PBOARD, *v.*
CU'PBOARD, *n.*
CU'PBOARD-KEEPER,
CUP-SHOTTEN,
CUP-WAITER,
CU'PPING-GLASS

A. S. *cuppe*; Dutch, *kop*. Ger. *kopf*; Fr. *coupe*; It. *coppa*; Sp. *copa*. Wachter thinks it so called, *a notione cavitatis*. *Cupping-glass*, so called, says Minsheu, because made of glass, and deepe and hollow like a *Cup*.

Drink hayl, quoþ þys kyng agen, & bid hire drinke anon.
Þe *coupe* he nom seþþe of hire among hem echon
And custe hire, & sette hire adoun, & glad dronk hire hail.

R. Gloucester, p. 118.

——— And gaf hem echone
Couppes of clene gold. and *coppes* of selver.

Piers Plouhman. Vision, p. 39.

At feyres and at full ales. fyllen the *cuppe*.

Id. Crede, B. 2.

Hire over lippe wiped she so clene,
That in hire *cuppe* was no ferthing sene
Of grese, whan she dronken hadde hire draught.

Chaucer. The Prologue, v. 134.

The *cup* is all that euer him pleaseth,
And also that hym most diseaseth.
It is the *cup* whom he scrueth,
Whiche all cares from hym kerueth,

Gower. Conf. Am. book vi. fol. 128.

And he took the *cuppe* and dide thankyngis and gaf to hem and seide, drynke ye alle therof. *Wiclif. Matthew*, ch. xxvi.

And he toke y^e *cup*, and thanked, and gaue it them, saying dryncke of it euery one. *Bible*, 1551.

I trust to see the time, when they that nowe are vp:
May feele the whirle of fortune's wheele and taste of sorrowes *cup*.

Gascoigne. Flowers.

The Erle of Arrondel was chiefe butler on whō xii. citizens of London did giue their attendaunce at the *cupbord*. The Earl of Darby *cupberer*. *Hall. Henry VIII. The twenty-fifth Yere.*

Then hastely the clerke tooke out, and leide forth on a *cupborde* diverse rollis and writings.

State Trials. Trial of Master William Thorpe.

Where were prouided for him two chambers richly hanged and decked, ouer and aboue the gallant furniture of the whole house, together with an ample and rich *cupboord* of plate of all sortes, to furnish and serue him at all meales.

Hakluyt. Voyage, &c. Ambassador from Russia, vol. i. fol. 287.

Howbeit at length Stoslaus was slayne by his foe, who making a drinking *cup* of his skull, engraved thereupon in golden letters this sentence: "Seeking after other mens, he lost his own."

Hakluyt. Voyage, &c. Treatise of the Duke of Muscouia, vol. i. fol. 221.

In thy fattes our cares be drown'd,
With thy grapes our haires be crown'd,
Cup vs till the world go round,
Cup vs till the world go round.

Shakspeare. Antony and Cleopatra, fol. 351.

MEN. There was a time when all the bodies members
Rebell'd against the belly; thus accus'd it:
That onely like a gulfe it did remaine
I'th midd'st a th' body, idle and vnactiue,
Still *cubbording* the viand, neuer bearing
Like labour with the rest. *Id. Coriolanus*, fol. 2.

And next unto them went other that carried plate, made and wrought after antick fashion, and notable *cups* of the ancient kings of Macedon: as the *cup* called Antigonus, and another Seleucus: and to be short, all the whole *cubboord* of plate of gold and silver of King Perseus.

Sir Thomas North. Plutarch, fol. 219. *Paulus Æmylius.*

Thus Alexander VI. and his darling Borgia, the only monster of that age, were poisoned by error of the *cupboard-keeper*, out of the bottles that were kept in store, and by Cæsar's own appointment, against supper for the destruction of certain cardinals.

State Trials. Trial of Henry Garnet.

For Archias and Philippus, so soon as they herd that I was come upon their sending for me, being already *cup-shotten*, and half drunk with wine, so as both their mindes and bodies were very far out of tune; with much adoe they rose from the boord, and came forth to the dore unto me.

Holland. Plutarch, fol. 997.

The maior to attend in his own person as chiefe *cup-waiter* (charged with the *cupbord-royall*) as well in the hall at dinner, to serve the king in a *cup* of gold with spices, and for his fees to haue the said *cup*, and a water-spout pot of gold thereunto belonging, when he took his leave at night.

Speed. Richard II. book ix. ch. xiii.

They are the secretaries of the stars, sir,
Still at their books, they will not be pull'd off,
They stick like *cupping-glasses*.

Beaumont and Fletcher. The Bloody Brother, act iv. sc. 2.

And to the torturers (her doctors) say,
Stick on your *cupping-glasses*, fear not, put
Your hottest causticks to.

Ben Jonson. Underwood, fol. 251.

It cometh at length to fall upon the flesh which the ventose sticketh fast unto, and by heating and inchafing, it expresseth the humour that is within, unto the ventose or *cupping-vessel*.

Holland. Plutarch, fol. 817.

The clotted blood lies heavy on his heart,
Corrupts, and there remains in spite of art,
Nor breathing veins, nor *cupping* will prevail.

Dryden. Palamon and Arcite, book iii.

In their practice they do not let blood (as the learned Varenius tells us, that neither do the Japonian doctors) or set *cupping-glasses*.

Boyle. The Usefulness of Natural Philosophy, part ii. ess. 5.

Him, the damn'd doctors and his friends immur'd,
They bled, they *cupp'd*, they purg'd, in short they cur'd.

Pope. Horace. Epistle 2.

With other victual which anon
We further shall dilate upon,
When of his hose we come to treat,
The *cupboard* where he kept his meat.

Butler. Hudibras, part i. can. 2.

When the ava is ready, *cups* of it are handed about to those who do not join the song, which they keep in their hands until it is ended; when, uniting in one loud response, they drink off their *cup*. *Cook. Voyages*, vol. vii. book v. ch. viii.

Where is the dappled pink, the sprightly rose?
The cowslip's golden *cup* no more I see:
Dark and discolour'd every flower that blows,
To form the garland, Elegy! for thee!

Shenstone. Elegy 8.

JP. — PID.

May heav'n (its all I wish for) send
One genial room to treat a friend,
Where decent *cupboard*, little plate,
Display benevolence, not state. *Green. The Spleen.*

CUPANIA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*. Generic character: calyx five-leaved; corolla, petals five, hooded; style three-cleft; capsule three-celled, three-valved; cells usually one-seeded, seeds arillate.

Five species, natives of warm countries.

CUPAR or Coupar *of Fife*, to distinguish it from *Cupar of Angus*, a Royal Borough of Fifeshire, of which it is the County town, on the north bank of the river Eden, at its junction with the Maryburn. Though an ancient Borough, it has few remains of antiquity to distinguish it at present; for of its Castle (*Arx munitissima Cuprensis*, as Buchannan styles it,) no vestige remains; and of the Dominican Convent at its foot, only a part of the Chapel. The steeple of the Parish Church, which was begun by the Prior of St. Andrews in 1415, is its principal architectural beauty. The manufactures are coarse linens and tanneries. Cupar returns one Member to Parliament, jointly with St. Andrews, Dundee, Forfar, and Perth. Population in 1921, 5892. Distant from St. Andrews nine miles west, from Edinburgh twenty-nine north-east.

CUPES, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Malacodermi*. Generic character: antennæ simple; palpi equal, terminated by a truncated articulation; mandibles divided at the point; last joint but one of the tarsi bilobate; body depressed, linear.

Type, *C. capitata*, Fab.

CUPHEA, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*, natural order *Salicariæ*. Generic character: calyx ventricose, tubular, six to twelve toothed, unequal; petals six, generally unequal inserted upon the calyx; capsule bursting longitudinally, one-celled; seeds few, lenticular, imbricated.

Eleven species, natives of America. Nuttal.

CUPID, a God of various parentage notwithstanding Plato's assertion to the contrary, τούτου γονεῖς γὰρ Ερωτος ἔτ' εἰσὶν, ἥτε λέγονται ὑπ'ἄδενὸς ἥτε ἰδιώτᾳ ἥτε ποιητῇ. (*Symp.*) Hesiod assigns him to *Chaos* and *Terra*; Simonides to *Mars* and *Venus*; Arcesilas to *Æther* and *Nox*; Sappho to *Cœlum* and *Venus*; Alcæus to *Contentio* and *Zephyrus*; Orpheus to *Saturn*; Aristophanes to an Egg laid by *Nox*, (ὑπηνέμιον ὠον, *Aves*;) Theocritus to divine parents, but whom he knows not; and Seneca to *Vulcan* and *Venus*. Plato indeed contradicts himself soon after his first statement, for he cites a legend, that when the Gods were once celebrating the birth-day of *Venus*, *Porus*, the God of Wealth, having drunk too much Nectar, obtained the favours of *Penia*, the Goddess of Poverty, and that Cupid, the fruit of this amour, was presented as a Page to *Venus*, and henceforth accredited as her Son.

Ovid (*Fasti*, iv. 1) calls *Venus*, *geminorum Mater Amorum*; and in another place (*Met.* i. 470) he ascribes to two different shafts, one golden, the other leaden-pointed, the different effects which others assign to two different Gods; so also Seneca, (*Hippolytus*, 275,) and Chæremon, in a fragment preserved by Athenæus, (xiii. 2.) One of these was honest, the other mischievous. Cicero (*de Nat. Deorum*) makes the first the son of *Mercury* and *Diana*, the second of *Mercury* and *Venus*, and to these he adds *Anteros*, a child of *Mars* and *Venus*. However many Cupids there really were, and whatever may be the separate attributes of each, all have at times been transferred to the single Boy of whom *Venus* is the reputed mother; and he has been termed good or bad, as the votary who described him has been successful, or has failed, in the peculiar art over which the little God presides. CUPID.

The Greeks, indeed, occasionally made a nice distinction between Ἔρως and Ἵμερος, *Amor* and *Cupido*. Thus Hesiod, (*Theog.* 201,) speaking of the train of Venus, says,

Τῇ δ' Ἔρος ὡμάρτησε καὶ Ἵμερος ἕσπετο καλὸς

Scopas, the Sculptor of the tomb of Mausolus and of the Ephesian Temple of Diana, was still more subtle, and created a third Deity, Σκόπα δὲ Ἔρωτι καὶ Ἱμέρῳ, καὶ ΠΟΘΟΣ εἴδη διάφορα ἐστὶ καὶ ταῦτα τοῖς ὀνόμασι καὶ τὰ ἔργα σφίσι. (Pausan. *Attica.*)

The reader who wants a full description of Cupid, must turn to the IId book of the *Daphnis and Chloe* of Longus. He has been as variously represented by Sculptors and Painters as by Poets. In one gem of Phrygillus, he is a youth with large eagle wings; so in a collection which once belonged to the King of Sardinia at the *Venerè*, near Turin, was a statue mentioned by Spence, (*Polymetis*, vii.) in which Cupid appeared *nec adhuc juvenis nec jam puer*, and he is about the same age in Raphael's groupe with Psyche. More usually, however, he is infantine, and engaged in some sport jointly emblematical of his trifling and his power; carried on a lion, with a lyre in his hand; sailing on a dolphin; riding on a Chimæra, or a Centaur with his hands tied behind him; armed with the club and lion-skin of Hercules; employed in childish pastimes; fondling or burning the wings of a butterfly; or breaking Jove's thunderbolt. His blindness, says Mr. Douce, (*Illustrations of Shakspeare*, i. 223,) does not seem to rest on any classical authority, but may be ascribed to the middle ages, probably to Boccaccio, from whose *Gen. Deorum* he goes on to cite a pretty passage: *Oculos autem illi fascid tegunt, ut advertamus amantes ignorare quo tendant, nulla eorum esse judicia nullas rerum distinctiones, sed sold passione duci*, (ix. 4:) or as Shakspeare himself has well accounted for it,

Love looks not with the eyes, but with the mind
And therefore is wing'd Cupid painted blind.
Midsummer Night's Dream, i. 1.

This assertion of Mr. Douce, however, does not appear to be by any means correct. Exclusive of the numerous instances in which metaphorical blindness is ascribed to Cupid by the classical writers, we met with the following passage of Theocritus, in which the blindness is physical:

τυφλὸς δ' ἀκ αὐτὸς ὁ Πλοῦτος
ἀλλὰ καὶ ὠφρόντιστος Ἔρως. *Idyll.* x. 19.

Gallus also has the line below:

Plurima cæcus *Amor lumina semper habet.*
El. v. 66.

But the Elegies which pass under the name of Gallus have been ascribed, not to the Augustan Poet, but to Maximus Etruscus, who flourished in the IVth century. Marullus also, who lived in the century following, has an Epigram on the attributes of Cupid, in which the following lines occur:

Quæ sors eripuit lucem? immoderata libido.
Cur macies? vigiles cura dolorque facit.
Quis cæcum *præit?*

It must be admitted, notwithstanding, that Mont-

CUPID. CUPOLA.

falcon, who has a very full chapter on Cupid, gives no sculptural example of his blindness.

Athenæus (xiii. 2) has cited a passage of much elegance from the *Phædrus* of Alexis, to show the impossibility of any adequate representation of this God to the eye:

Καὶ μοι δοκοῦσιν ἀγνοεῖν οἱ ζωγράφοι
Τὸν Ἔρωτα, συντομώτατον γ' εἰπεῖν, ὅσοι
Τῶν δαίμονος τούτου ποιοῦσιν εἰκόνας.
Ἔστιν γὰρ ἔτε θῆλυς, ἔτ' ἄρσην, πάλιν
Οὔτε θεὸς, ἔτ' ἄνθρωπος, ἔτ' ἀβέλτερος
Οὔτ' αὖθις ἔμφρων· ἀλλὰ συννενηγμένος
Πανταχόθεν, ἐν ἑνὶ τύπῳ πολλ' εἶδη φέρων.
Ἡ τόλμα μὲν γὰρ ἀνδρὸς, ἡ δὲ δειλία
Γυναικὸς, ἡ ἄνοια μανίας, ὁ δὲ λόγος
Φρονοῦντος, ἡ σφοδρότης δὲ θηρὸς, ὁ δὲ πόνος
Ἀδάμαντος, ἡ φιλοτιμία δὲ δαίμονος.
Καὶ ταῦτ' ἐγὼ, μὰ τὴν Ἀθηνᾶν καὶ θεοὺς,
Οὐκ οἶδ' ὅτ' ἐστὶν, ἀλλ' ὅμως ἔχει γέ τι
Τοιοῦτον ἔγγιστ' εἰ μὴ τοῦ ὀνομάτος.

Thus translated by Cumberland:

Methinks these painters misapply their art,
And never knew the being which they draw;
For mark! their many false conceits of Love.
Love is nor male nor female, Man nor God,
Nor with intelligence, nor yet without it,
But a strange compound of all these, uniting
In one mixt essence many opposites;
A manly courage with a woman's fear,
The madman's phrensy in a reasoning mind,
The strength of steel, the fury of a beast,
The ambition of a hero.—Something 'tis,
But by Minerva and the Gods I swear!
I know not what this nameless something is.
Observer, No. 143.

Plutarch informs us that Cupid was the appropriate bearing which Alcibiades blazoned on his shield. Rhodes possessed in the Temple of Bacchus at Acragas, a distinguished groupe of Cupids by Mys, (Plin. xxxiii. 25.) Thespiæ boasted of a statue of the God by Praxiteles, (*id.* xxxvi. 4,) which Tiberius pillaged from that city; it was restored by Claudius, and having been again transported to Rome by Nero, was in the end destroyed by fire. (Pausanias, ix.)

CUPIDITY, *n.* Fr. *cupidité*; It. *cupidità*; Sp. *cupididad*; Lat. *cupiditas*, from *cupere*, to covet; *plus est* cupere, *quam* velle. Vossius. To *covet*, is more than to wish.

An eager desire, covetousness.

For that tyraunt blynded and glutted with the *cupiditie* of rulynge and souereigntie commanded Edward my brother and me to be slaine and dispatched oute of this mortall lyfe.
Hall. Henry VII. The eleventh Yere.

O though this be not your actuall crime, yet it is an aptitude thereunto, for while you are thus amused, the serpent covertly windeth into your heart, first by blandishments he intangleth your reason, and then by fallacies he diverteth your fear, affirming you shall not surely die, and thus sharpens the curiosity while he suggesteth the *cupidity*, and by these degrees presenteth the fruit, and putteth you out of the garden.
Mountague. Devoute Essayes, Treat. 13. sec. 6.

CU'POLA, CU'POLARD. It. *cupola*; Sp. *cupula*; Lat. *fornix*, *testudo*. Diminutive of It. *cupo*, *concavus*, *profundus*. Menage. *L'Origini della Ling. Ital.* Skinner calls it, *Turris rotunda fornicata*. The word, he considers to be pure Italian.

Now hast thou chang'd thee, saint; and made
Thyself a fane that's *cupola'd*. *Lovelace. Luc. P.* p. 16.

The famous *cupola* painter of these times, to show the grandeur and boldness of his figures, hath a horn in his mouth, which he seems to wind with great strength and force.
Tatler, No. 153.

Here they meet a cave of about ten yards deep, and fifteen broad, being in shape like an oven or *cupola*, having a hole at the top, which is near eight yards over.
Boyle. The general History of the Air.

CU'PPEL, CUPELLA'TION. Fr. *coupelle*. The little Ashen pot or vessel, wherein Goldsmiths melt, or fine their metals. Cotgrave.

In the assay-master's trade, the quick melting down of ore, and *cupelling* of them, or at least of metals, in a trice, without bellows or furnace.
Boyle. That the Goods of Mankind may be much increased, &c.

We took a drachm of filings of zinck or spelter, and having put it upon a *cupel* under a muffler, we kept it there in a *cupelling* fire about three hours (having occasion to continue the *cupellation* so long for other trials;) then taking it off the *cupel*, we found it to be caked into a brittle and dark coloured lump, which looked as if the filings had been calcined.
Id. New Experiments to make fire and flame stable, &c. ex. 11.

CUPREOUS, Lat. *cupra*, copper; coppery. See COPPER.

You will have the steel almost in a trice, overlaid with a reddish substance, which, by its colour and other signs appears manifestly to be *cupreous*.
Boyle. Of the Reconcileableness of Specific Medicines to the Corpuscular Philosophy, prop. 4.

CUPRESSUS, in *Botany*, a genus of the class *Monoecia*, order *Monodelphia*, natural order *Coniferæ*. Generic character: male flower, catkin imbricated; calyx scaly; corolla none; anthers four, sessile: female flower, catkin a cone; calyx scaly, one-flowered; corolla none; stigmas two; nut angular.

Fourteen species are now known of this beautiful genus, natives of the Northern hemisphere. *C. sempervirens*, the Evergreen Cypress, native of the Levant and the eastern parts of Europe, has been cultivated in England since the year 1551. This tree lives to a very great age; Pliny speaks of trees in his time at Rome as old as the city. Several other species are generally cultivated, and are considered among the most ornamental of forest productions.

CUR, *n.*, CU'RRISH, CU'RRISHLY, CU'RRISHNESS, CU'RLIKE, CU'RSHIP. Dutch, *korr*; perhaps from the Ger. *kirren*, to snarl. A snarler, a growler; a mere snarler, *sc.* without courage to bite, applied to Any snarling, angry-minded, yet cowardly, person.

As *curres* from careyne. that is cast in diches.
Piers Ploukman. Crede, D. 4.

Who though be be a periurde man
of *currishe* kyndred borne,
All gored in his brother's blood,
a runagate forlorne. *Drant. Horace. Satyre* 5.

No savage beast doth force a man a whit,
That loues him not: we see the dogged *curre*
Fawns not on him that with the whip doth smite,
The horse hates him that pricks him with the spurre.
Turbervile. To his friend T.

These tidyngs were ioyfull to the Duke of Burgoyne, as to hym whiche (according to the old prouerbe) hated the Earl of Warwycke, worse than the *curre* dogge, or serpent.
Hall. Edward IV. The ninth Yere.

Thus curst *curres* after they have spent and discharged their choler and anger upon the cudgels or stones, which have been thrown at them, become thereby more gentle and tractable to men. *Holland. Plutarch*, fol. 171.

——— But at last, when their *cur-like* presumes,
More urg'd, the more forborne; his spirits did ratifie their fumes,
And he revokt his active strength; turn'd head, and did repell
The horse troopes that were new made in: twixt whom the fight grew fell.
Chapman. Homer. Iliad, book ii. fol. 152.

O lawlesse paunch! the cause of much despight,
Through ranging of a *currish* appetite,
When spleenish morsels cram the gaping maw,
Withouten diet's care or trencher-law. *Hall. Satire* 4.

Bishop Bonner being restored againe, would not suffer the brother and natural sister of Bishop Ridley, and other his friends, not onely not to enjoy that which they had by the sayd their brother Bishop Ridley, but also *currishly* without all order of law or honesty, by extort power wrasted from them all the liuings they had.

Fox. Martyrs. Life, &c. of Bishop Ridley, fol. 1559.

Diogenes though he had wit, by his *currishness* got him the name of dog; and coming once to a feast, the company called him so, and threw him bones. *Feltham. Resolve* 69.

This worthy knight being then but a stripling had occasion to enquire which was the way to St. Ann's Lane, upon which the person whom he spoke to, instead of answering his question called him a young popish *cur*, and asked him who made Ann a saint. *Tatler*, No. 125.

Therefore men usually deal with such *currish* sharp natures as they do with mastiffs, they are fain to stroak them, tho' they deserve to be cudgelled. *South. Sermon* 8. vol. vii.

How durst th', I say, oppose thy *curship*
'Gainst arms, authority, and worship.
Butler. Hudibras, part i. can. 2.

At Bruin flies the slavering, snarling *cur*,
But only fills his famish'd jaws with fur.
Falconer. The Demagogue.

CURACOA, a West India Island, situated immediately off the Province of the Caracas, in the Republic of Colombia, on the northern shore of South America. Curaçoa is the westernmost Island of the groupe classed as the Lesser Antilles; it belongs to the Government of the Netherlands, and was first settled about the year 1600. It lies upon the twelfth degree of north latitude and the sixty-ninth degree of west longitude from Greenwich: this Island is long, in respect to the breadth, extending from north-west to the south-west; it contains an area of six hundred square miles, and a population of 8500, of whom but 1200 are whites. Curaçoa is little better than a bare rock; it produces, however, sugar, tobacco, wool, and leather; and it is celebrated for a *liqueur* bearing its name. Its chief value therefore is as a convenient mart. The principal towns are Curaçoa and Williamstadt. At the south-east extremity lies the small island of Little Curaçoa.

CU'RATE, *n.* } t. and Sp. *curato*; Mid. Lat.
CU'RATESHIP. } *curatus*; a *curate*; one to whom the *cure* and healing of souls is committed. And see the Quotation from Blackstone.

Hee would as Sait Peter byddeth, that euery man should be able to gyue a reason of hys fayth and hope vnto euerye man that woulde ask him, and that the *curate* shoulde be ready to teach the ignoraunt y^t^ that is yet vntaught.

Sir Thomas More. Workes, fol. 831.

In the meane time to live in good estate,
Louing that loue and hating those that hate;
Being some honest *curate* or some viker,
Content with little in condition sicker.
Spenser. Mother Hubberd's Tale.

Such was her concern for the souls of her neighbours, that when her husband's infirmities made him, upon occasions, unable to visit the sick, and that the *curate* was accidentally from home, she would procure this assistance, when to be had, from others.

Nelson. The Life of Dr. George Bull.

But now should fortune shift the scene,
And make thy *curatcship* a dean.
Swift. The Parson's Case.

A *curate* is the lowest degree in the church; being in the same state that a vicar was formerly, an officiating temporary minister instead of the proper incumbent.

Blackstone. Commentaries, book i. ch. xi.

What man alive can e'er suppose,
Who marks the way preferment goes,
That she should ever find her way
To this poor *curate's* house of clay?
Lloyd. A Familiar Epistle to J. B. Esq.

N. B. never to transcribe any more from Calamy; Mrs. Pilcocks, at my *curacy*, having one volume of that author lying in her parlour window. *Johnson. The Idler.*

CURATE is a word variously applied, sometimes, and most properly, to the Incumbent in general, who hath the cure of souls; but more frequently to the person of lowest degree in the Church, being the officiating temporary Minister, representing the Incumbent of a Church, and taking care of Divine service in his absence. By a Canon, James I. 1603, it was provided, that if a Bishop ordain a person not having Ecclesiastical preferment, unless he is a Fellow or Chaplain of a College, or a Master of Arts of five years standing, who lives at the University at his own expense, the Bishop shall support him till he prefer him to a living. Bishops, therefore, require before they confer Orders, either proof of such a title as is described in the Canon, or a certificate from a Rector or Vicar promising to employ the candidate for Orders, *bond fide* as a Curate at a salary. It was also provided by the same Canon, that no Curate should be permitted to serve in any place without examination and admission of the Bishop of the Diocese, or Ordinary of the place having Episcopal jurisdiction; and that if he remove from one Diocese to another, he must have testimonials from the Bishop or Ordinary of his honesty, ability, and conformity to the Ecclesiastical laws of the Church of England; and that none should serve more than one Church or Chapel upon one day, except that Chapel be a member of the Parish Church, or united thereto, and unless such Church or Chapel where such Minister should serve in two places be not able, in the judgment of the Bishop or Ordinary to maintain a Curate. Curates are the objects also of particular Statutes, namely, 28 Henry VIII. ch. 11, by which it was enacted, that such as serve a Church during its vacancy, should be paid such stipend as the Ordinary thought reasonable, out of the profits of the living, during such vacancy, and, if those profits should be insufficient, by the successor within fourteen days after he took possession. By the 12 Anne, ch. 12, the Bishop or Ordinary had the power of appointing the Curate's stipend at the time of granting his license, (that is admission to the Curacy,) such stipend not to exceed £50. per annum, or to be less than £20. By the 36 George III. ch. 18, the sum was increased to £75. per annum; and in certain cases the Curate was allowed the use of the Parsonage-house, or an allowance of £15. per annum, in lieu of it. By the 53 George III. ch. 149, the powers of the Bishops or Ordinaries were much enlarged; they were authorized to appoint and license Curates with salaries, in the event of non-resident Incumbents neglecting to appoint, and the salary so made payable was not limited, as theretofore, to the sums of £50. or £75. per annum, but was to be in proportion to the value of the Benefice and population of the Parish. Other regulations were also made as to Curates having possession of the Parsonage-house. Besides the Curate who officiates for a Rector or Vicar, there is the Perpetual Curate, wherever there is in a Parish neither Spiritual Rector or Vicar, but a Clerk is employed to officiate there by the Impropriator.

CURATE. — CURB.

The origin of Perpetual Curacies was this: by the Statute 4 Henry IV. ch. 12, it is enacted, that in every Church appropriated there shall be a secular person, ordained Vicar Perpetual, canonically instituted and inducted, and covenably endowed by the discretion of the Ordinary. If the Benefice was given *ad mensam monachorum*, and so not appropriated in the common form, but granted by way of union *pleno jure*, it was served by a temporary Curate belonging to the Religious House; when, however, such appropriations, together with the charge of providing for the Cure, were transferred (after the dissolution of the Religious Houses) from spiritual societies to single lay persons, who were not capable of serving them by themselves, and who, consequently, were obliged to nominate some particular person to the Ordinary, for his license to serve the Cure, the Curates by this means became so far perpetual, as not to be wholly at the pleasure of the appropriator, nor removable but by due revocation of the license of the Ordinary. Gibs. 819.

For the duties of a Curate (that is one who has the care of Souls) in the Roman Catholic Church, the reader may be referred to the following very curious volume:

Liber qui manipulus Curatorum inscribit in quo pernecessaria officia eorum quibus Animarum cura cōmissa est breviter pertractant. The Colophon is as follows: *Celeberrimi Viri dñi Guidonis de mōte Rocherii liber qui manipulus Curatorum inscribit una cū tabula ejusdē finit feliciter exaratusq; Parisiis per Magistrum Udalricum Gering et G. Maynyal Anno dñi* 1480, 22 *Aprilis.*

CURATELLA, in *Botany*, a genus of the class *Polyandria*, order *Digynia*, natural order *Magnoliæ*. Generic character: calyx five-leaved; corolla, petals four; styles two; capsule two-parted; cells two-seeded.

One species, *C. Americana*, native of South America.

CURB, *v.* } Fr. *courbe*; Sp. *corbar*; Lat. *curvare*, to *curve*; bow or bend. See the Quotation from Holland's *Plutarch*.
CURB, *n.*
CU'RBING, *n.*
CU'RBED, *adj.*

To bend or bow; to bend or bow, *sc.* to the will; to guide or regulate, to manage, to controul, to check, to restrain.

He *curbeth* and restraineth persons of ambitious and aspiring mindes, who (as he coniectureth) after his death might worke some innouations in the common wealth, or disturb the kingdomes. *Hakluyt. Voyage, &c. Lezi Tartari*, vol. iii. fol. 861.

I know your nature's sweet enough, and tender,
Not grated on, nor *curb'd*: do you love your mistress?
Beaumont and Fletcher. Monsieur Thomas, act i. sc. 2.

OLD K. I'll *curb* her for't, can he be but recover'd,
He shall have her, and she shall be dutiful,
And love him as a wife too
Id. Wit at several Weapons, act v. sc. 1.

The steed was tam'd and fitted to the field,
That serves a subject to the rider's laws,
He that before ran in the pastures wild,
Felt the stiff *curb* control his angry jaws.
Drayton. The fourth Eclogue.

Now by right lines we behold things, some in the air, and others thorow transparent stones and horns; for that all these consist of very subtle parts: by crooked and *curbed* lines, we look within the water. *Holland. Plutarch*, fol. 678.

As bodies that are crooked, disdain not to be brac'd in steel, that they may become straight: so the mind that is warping to vice, should not think much to be kept upright by the *curbings* and the stroaks of adversity. *Feltham. Resolve* 57.

For though the course of the sun be *curbed* between the tropicks, yet are not those parts directly subject to his perpendicular beams, either unhabitable, or extremely hot, as the ancients fancied *Ray. On the Creation*, part ii.

He had the will of his maid before he could speak or go, he had the mastery of his parents ever since he could prattle; and why, now he is grown up, is stronger and wiser than he was then, why, now of a suddain must he be restrained and *curbed*?
Locke. Works. Of Education.

For who but a poltroon, possess'd with fear,
Such haughty insolence can tamely bear?
Command thy slaves: my freeborn soul disdains
A tyrant's *curb*; and restiff breaks the reins.
Dryden. Homer. Iliad, book i.

It [Collier's attack upon the stage] obliged the succeeding dramatic poets to *curb* that propension to indecency, which had carried some of their predecessors so far beyond the bounds of good taste and good manners. *Beattie. On Truth.*

CURB is used in *Farriery* to express a tumour upon the back part of a horse's hock. The hock in its natural state is nearly straight, but becomes distorted and *curved* by this tumour; which generally arises from a strain. If the Curb become hard, it seldom affects the horse's going; but if it continues tender and inflamed, it is a painful disorder, and produces lameness. Cold bathing, physicking, and blistering, are applications used, according to the urgency of the case. The cruel, and generally useless, process of firing, is now almost wholly exploded.

CURCULIGO, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*. Generic character: corolla six-petalled, spathe of one-valve; style very short, diverging; capsule one-celled, four-seeded.

One species, *C. orchioides*, native of the East Indies. Roxb. *Corom.* i. p. 14. t. xiii.

CURCULIO, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Curculionites*. Generic character: antennæ inserted near the middle of the rostrum, formed of eleven articulations, of which the three last compose the club, which is of an oval form; rostrum not applied to the thorax.

Type, *Rhynchœnus nucum*, Fab.

CURCULIONITES, in *Zoology*, a family of insects of the order *Coleoptera*, comprising the genera *Brentus, Cylas, Apoderus, Attelabus, Rhynchites, Apion, Brachycerus, Brachyrhinus, Lixus, Liparus, Curculio, Cryptorhyncus, Cionus, Rhynchœnus, Rhamphus, Rhina, Calendra, Cossonus.*

The insects of this family, forming the genera *Curculio* and *Attelabus* of Linnæus, are known at the first glance by the remarkable elongation of the head into the form of a proboscis. The mouth is extremely small, there is no upper labium, and the palpi are very short and conical. These circumstances separate them from the *Bruchelæ*, to which in many respects they are considerably allied.

It is not only in the beauty of the colours and form, which characterises many of the species, that they become an object of interest to us; unfortunately the injury they do to the most valuable of our vegetable treasures claims our attention in a much more important point. At the same time it is a family which presents to the Zoologist considerable difficulty in the study of the species. The smallness of their size in general, the immense number of species, and their similarity, with the difference of colour in the sexes, are all so many obstacles in the way of obtaining an accurate individual knowledge of them. They are for the most part inhabitants of warm countries, though almost every climate produces them.

These insects present many remarkable forms, some of which are particularly elegant, and the colours of many of the species are highly beautiful, and frequently of a metallic brilliance. This beauty is, however, evanescent, for it is produced only by a slight covering of powdery scales over the elytra, which are very easily rubbed off, and which resemble exactly those of the *Lepidoptera*. One of our most common native species, which is found almost on every bank, illustrates this very strikingly. It is of a most beautiful deep blue or a bright metallic green, according to the sex, yet a slight rubbing will deprive the elytra of their beauty and leave them of a dull blackish colour.

They are timid, and as to any direct injury, harmless. As many of the species possess no wings, and as those which have them rarely use them, they have recourse to another and very common mode of escape amongst insects; that of contracting the legs and head, counterfeiting death, and suffering themselves to fall to the ground.

In the larva state these insects are amongst the most injurious of our little pests. The larvæ are soft and of an elongated form, narrowed towards the head, which terminates almost in a point, where it is firm and horny. In some species the teeth are so strong, as to enable them to attack the hardest wood; others feed on grain, on fruit, flowers, leaves, &c. But the species which is most to be dreaded, on account of its devastations, is *Calandria granaria*, the pest of our granaries, in which it often multiplies to an almost inconceivable extent, each individual occupying a single grain, of which it often leaves nothing but the husk; and this destruction goes on within, whilst no external appearance of injury leads to its discovery. In fact, the loss of weight, only, evidences the destruction that has taken place. No means that have hitherto been attempted have proved sufficient to remedy the evil, as their multiplication is so rapid and numerous, that it seems only to be limited by the limits of their food. Other species of the family are well known by their frequent occurrence in our fruits, as the *Attelabi* in our pears and apples, *Apoderus coryli* in the hazel-nut, &c. It is said that in some parts of Sweden, horses feeding on the *Chellandrium aquaticum*, on which a species of this family, *Lixus paraplecticus*, is found, if the plant happens to be infested by this insect, become affected with paraplegia. There have been some strange assertions respecting the efficacy of a species of *Curculio* in curing tooth-ache. Wilhem declares, that if a certain number be bruised, and rubbed between the thumb and fore-finger, until all moisture is evaporated, the finger retains for a year afterwards the power of relieving the most excruciating tooth-ache, by merely touching the tooth. It is unnecessary to say, that this is an idle assertion, but it is probable that it originated from some anti-odontalgic virtue which the insect itself may possess.

Perhaps no tribe of insects possesses more interesting species, on account of their relations to mankind, than the *Curculionites*, though unfortunately that interest is principally derived from their injuries rather than their benefits.

See Latr. *Hist. Nat.* xi.; Kirby and Spence, vol. i.

CURCUMA, in *Botany*, a genus of the class *Monandria*, order *Monogynia*, natural order *Scitamineæ*. Generic character: calyx two-cleft; corolla four-parted; nectary three-lobed; anthers with spurs at their base.

Three species, natives of the East Indies and China. *C. longo* produces the dye called Turmeric, it has a long creeping root, jointed, somewhat similar to the root of Ginger, this yields the colouring matter.

CURD, *v.* CURD, or CRUD, *n.* CURDY, CU'RDLE, or CRU'DLE, *v.* See CRUDE. To form into coagulated masses, (*cruores*) of *gore*, of blood; and then, generally, to concrete or coagulate. *Curdle* or *Crudle*, is the diminutive. Some Editors of Shakspeare have altered *curdied* in *Coriolanus*, to *curdled*; but not Mr. Steevens.

Hast thou not milked me, as it were milcke: and turned me to *cruddes* like chese. *Bible*, 1551. *Job*, ch. x.

Yet I express to you a mother's care,
(God's mercie maiden) do's it *curd* thy blood
To say I am thy mother?
Shakspeare. All's Well, fol. 233.

CORIO. The noble sister of Publicola;
The moone of Rome: chaste as the isicle
That's *curdled* by the frost, from purest snow,
And hangs on Dian's temple: deere Valeria.
Id. Coriolanus, fol. 27

Being put into milke, it will not suffer it to turn or soure, it keepeth it from quailing & *curding*: which is the reason that they who use ordinarily to drinke milke, take mints therewith, for fear it should coagulate or *crudle* in their stomacke, and put them in daunger of suffocation. *Holland. Plinie*, vol. ii. fol. 59.

Now by my sheephook, here's a tale alone,
Learn me the same, and I will give thee hire;
This was as good as *curds* for our Joan,
When at a night we sitten by the fire.
Drayton. The fourth Eclogue.

——— With a crew
Of hungry whelpes, his battailous bold brood,
Whose clawes where newly dipt in *cruddy* blood.
Spenser. Faerie Queene, book iii. can. 3.

Then *curds* and cream, the flower of country fare
And new-laid eggs, which Baucis' busy care
Turn'd by a gentle fire, and roasted rare.
Dryden. Ovid. Metamorphoses, book viii.

To day a mighty hero comes, to warm
Your *curdling* blood, and bid you, Britons, arm.
To valour much he owes, to virtue more;
He fights to save, and conquers to restore.
Garth. Prologue designed for Tamerlane.

There are divers things, that seem to argue spirit of wine, as inflammable as it is, to abound with a piercing salt, and that such saline corpuscles may suffice to *curdle* whites of eggs, our freshly-mentioned experiment of *curdling* the white of an egg with spirit of salt does sufficiently declare. *Boyle. History of Firmness.*

CURDISTAN.

CURDISTAN, (*Kúrdistan*, either with or without a long vowel in the first syllable,) signifies the land of the Curds, whose name, character, and country, recall to our recollection the *Cardúchi* of Xenophon, (*Cyri Anab.* iv. 3,) the *Gordyæi* of Strabo, (xvi. 1;) and the *Cordueni* of Pliny, (v. 15;) not to mention the Chaldæans or *Kasdím*, whose name seems to indicate a community origin.

CURDISTAN. Position.

The Country now inhabited by the Curds, forms a part of the Persian and Turkish Empires; for few, if any, of their Tribes refuse to pay a nominal obedience to the Sultán or the Sháh; though, when unrestrained by motives of policy, they proudly assert their entire independence, and acknowledge no Sovereign but the hereditary Chief of their clan.

Hence the apparent discordance between the accounts of Curdistán given by different Travellers, according as their information was derived from the Curds themselves, or from their Turkish and Persian neighbours.

Boundaries

The extent and boundaries of the Territory occupied by the Curds, are thus defined by M. Jaubert, (*Voyage en Perse*, 75,) who was long a prisoner in their country. Its greatest length from north to south, he says, is from Mount Ararat to the point where the Hamerín chain joins the Tágh Ayághì, (part of the ancient Zaghros;) and its breadth, from east to west, is greatest between the mountains which separate the lakes of Ván and Ormiyyah and Hisn Keïfà on the Tigris. A line drawn from Mount Ararat, through Diyadín, Topràc-calêh, Músh, Sert, and Jezíreh, and thence along the eastern banks of the Tigris, till that river forces its way through the Hamerín mountains, marks the western boundary: and the same line continued across the flat country, (anciently the plains of Assyria,) to Tágh Ayághì (i. e. the foot of the mountains,) and thence bending round to the north-east by the Jebel Tác, (i. e. Táki Bostán, a part of Mount Bísutún,) as far as Kengáver or Casru'l-lusús, the easternmost town of the Curds, forms their boundary to the south. If proceeding northwards, it be then drawn to the sources of the Kizil Uzen, on the east of Sìneh, (Senna in Mr. Kinneir's map,) and from thence by the fountain of Takhti Suleïmán, across the River Sarókh and the mountains between the lakes of Ván and Urmiyyah, to Cotúrah and Zevah (or Záviyeh, spelt Zauvick by an error of the Engraver, in Mr. Kinneir's map,) it will again reach Mount Ararat, and thus complete the circuit of Curdistán.

The Curds, however, as was before observed, do not form a separate State, but are included in the Páshálics of Erz-rúm, Ván, Mósul, Shehr-zúl, and Baghdád in Asiatic Turkey, and in the province of Irác Ajemí in Persia. Hence the two leading divisions of their country into the Western and Eastern, Turkish and Persian Curdistán. The line of demarcation betweeen which divisions, says M. Jaubert, (78,) begins with the chain of mountains separating the lakes of Ván and Ormiyyah, continues along the Khelesín branch of the same range till it reaches the hills near Chihil-cheshmeh, and thence follows the course of the River Mehriván, leaving the little lake of Zerebár on the east, and terminating in the Jebel Tác.

The Turkish part of Curdistán is divided, according to the same writer, (79,) into eight Sanjáks or Provinces, the Chiefs of which assume the title of Páshá. These Provinces are Báyazíd, Músh, Ván Júlamerk in the Páshálic of Ván, and Zákhú Amádiyyah, Suleïmániyyeh and Cará Iólán in the Páshálic of Baghdád. Sìneh or Sinah, is the Capital of the Persian Curds; who, like their brethren in Turkey, acknowledge the Sovereign in whose dominions they live, as their only Lord paramount; but they are more effectually curbed by the vigilance of Fet'h Alí Sháh's government, than those who are subject to the Grand Signior. The country of the latter is divided, according to Mr. Kinneir, (*Geograph. Memoir*, p. 295,) into the Upper and Lower Curdistán; but his account of the former, (called Seliván by the Curds,) is not so distinct as that of Lower Curdistán, the latter, which is bounded on the north and east by the lofty range of Mount Zagheros, and on the south by a line drawn from the Táki Kesrá to the Tigris, which forms its western boundary. It is divided into eight Districts, Amádiyyah, Kerkúk, Erbil, Suleïmániyyeh or Shehr-zúl, Shehribán or Shehri-ván, (the ancient Appollonia,) Zoháb, on Mount Holván, Bedrí, and Mendelí. Each of these districts (*hukúmat*) is governed by a different Chief, (*Hákim*,) and as Suleïmániyyeh (*Shehr-zúr*) is the most powerful and extensive, its Hákim assumes the title of Páshá of Curdistán.

CURDISTAN. Division according to Mr. Kinneir.

The Persian or eastern division of this Country, forming a part of the Persian Province of Al-jebà (*Irák Ajém*) is called *Erdilán* by the Curds, and extends (Kinneir, *Geog. Mem.* 142,) from the river Sharúkh (the Surakh of Jaubert's map) to the Turkish district of Zoháb, 200 miles in length by 160 in breadth. Its capital Sìneh or Sinah is in latitude 35° 12′ north and longitude 47° east.

According to Garzoni.

Father Maurizio Garzoni, who resided eighteen years as a Missionary in Curdistán, says, (*Gramm. Kurda*, pref. p. 3,) that it is divided into five large Principalities; Betlís, Jezíreh, Amádiyyah, Júlamerk and Cará Cholán, the natives of which are respectively named Betlísí, Bottán, Bádinán, Shambó and Sórán or Bábán.

These accounts, though apparently discordant, may be easily reconciled: it is only the eastern and south-western parts of Curdistán, of which Mr. Kinneir speaks, while M. Jaubert gives the subdivisions of the northern and central provinces, the parts of the Country with which he was best acquainted, and Garzoni, the mountainous region only. It is also not improbable that, among so turbulent a race of men, the petty Principalities, into which their territory is divided, may frequently change their masters, and be sometimes comprehended under one, sometimes under another of the neighbouring Provinces. Tribes of Curds are also dispersed here and there, over a much wider extent of country than Curdistán, properly so called, from Khorásán on the north-east to the plains of Urfah on the south-west.

Productions.

The mountains afford pasture for vast flocks and herds, which form the most important part of the wealth of this people, the greater number of whom are shepherds, living in tents, and changing their abode as the inclemency of the season or want of fodder for their cattle may make it expedient. The hills are also, in many places, well wooded, and produce an abundance of the gall-nuts, so valuable to our manufactures, and exported in large quantities from Aleppo and Skanderún. The vallies in these mountains are highly productive, and besides the grain of various sorts which they yield, the plains in southern Curdistán return large crops of flax, cotton, tobacco, sesamum and other vegetables peculiar to a warm climate. Manna also, the substitute for sugar in this part of Asia, is produced in great quantities in southern Curdistán.

Predatory habits.

The Curds have likewise another, but more precarious source of wealth,—the plunder of caravans travelling in their neighbourhood; for they are

URDISTAN.

most determined robbers, and their Chieftains enrich themselves not only by the *forays*, occasioned by their intestine feuds, but by lying in wait for the strangers who venture into their Country. They are plunderers by profession, and delight in boasting of their predatory exploits, a natural result of their political condition, which closely resembles that of the border-countries of Europe, during the prevalence of the feudal system.

ern-
it.

Each Tribe or Clan, on the demise of its Chief, nominates one of the same family as his successor, and applies to the Sovereign, whose paramount authority is acknowledged for the investiture of the Chief so elected; but, as the law of primogeniture is unknown, the successor is always the most popular and powerful among the many sons of the deceased Beg; and the succession is rarely, if ever, obtained without much bloodshed.

Excepting the tradesmen established in their towns and villages, every Curd is a soldier, ready to join the army of his Chief whenever he unfurls his banner. This, together with their wandering life, fosters their love of plunder, and they are taught from their infancy to consider every passenger through their Country as a lawful object of prey, except he boldly approaches

pitality.

their camp, and claims the hospitality on which he knows they pride themselves: in that case he receives every attention and accommodation which their means afford. He is conducted to the best furnished tent, entertained by the oldest and most venerable of the clan, and sees the women preparing bread for his repast, whilst others spread the carpets or go in quest of milk and honey, and the sons of his host are taking care of his horses. But had he accidentally met his host on the road, or had the expectation of his arrival allowed them time to lie in ambush for him, in his journey through the mountains, the very same men would have scarcely left him a rag to protect him from the sun by day or the frost by night

osed
n.

The Curds believe themselves to be the offspring of the Moghóls Uzbegs, who desolated the western parts of Asia in the XIIIth and XIVth centuries; but "their fine large eyes, aquiline nose, fair complexion, and lofty stature," says M. Jaubert, (80,) "contradict this assertion." (See Garzoni's *Gram. Kurda.*) Their language, he might have added, affords strong grounds for assigning to them a Persian origin. It is, in fact, a Pahlaví dialect, and contains scarcely a word derived from the Moghól or Tátárs.

our
ress.

Their dress and manners, as well as their language, differ from those of the Turks. Instead of a turban, they wear a large cap of red cloth, something like that of the Grand Signior's Bóstánjís, round which is twisted a shawl of striped silk, as gay as gaudy colours can make it, with one of its ends hanging down upon the shoulder, and adorned with a profusion of silk buttons. As among the Turks, none but old men allow their beards to grow, but all shave their heads, and encourage the growth of their whiskers, (Jaubert, 80.) "They delight in arms," says Mr. Kinneir, (*Journey in Asia Minor*, 390,) "more than any other race of men I have ever met with, and pride themselves on the beauty of their horses and value of their accoutrements. When a Koordish Chief takes the field, his equipment varies but little from that of the Knights in the days of Chivalry; and the Saracen who fought under the great Salah-ed-deen (*Saladin*) was probably armed in the very same manner as he who now makes war against the Persians. His breast is defended by a steel corslet, inlaid with gold and silver; whilst a small wooden shield, thickly studded with brass nails, is slung over his left shoulder, when not in use. His lance is carried by his page, or squire, who is also mounted; a carabine is slung across his back; his pistols and dagger are stuck in his girdle, and a light scymitar hangs by his side: attached to the saddle, on the right, is a small case, holding three darts, each about two feet and a half in length; and on the left, at the saddle-bow, you perceive a mace, the most deadly of all his weapons; it is two feet and a half in length, sometimes embossed with gold, at others, set with precious stones. The darts have steel points, about six inches long, and a weighty piece of iron or lead at the upper part, to give them velocity when thrown by the hand."

CURDISTAN.

These Chieftains, as may be supposed, resemble our feudal Barons as much in their habits and accomplishments, as in their political condition. Many of the Hákims, and even Páshás of the Curds can neither read nor write. Military exercises and horse-manship, in which they excel, form the whole of their education; and, in after-life, their business and amusement. When Sir John Malcolm entered Sīneh, he was met by the Válí's eldest son, at the head of three hundred horsemen, admirably mounted; and the young Prince, although not ten years of age, rode and managed a large and high spirited charger with inimitable address. (Kinneir's *Memoir*, 145.) Music and Poetry are the only intellectual arts with which they are acquainted; but their music is confined to singing and playing on the guitar, and their poetry to ballads celebrating their battles and amours. Their music, like that of the Turks, was derived, in all probability, from Persia; it is expressive and melancholy, abounding in lengthened notes, variously modulated, interrupted by sighs and tears, and often terminated by shrieks and howlings. The highest compliment which can be paid to a singer, is to tell him that he can be heard at the distance of a *farsang*, and the merit of his execution is measured by his success in deafening his hearers

Amusements.

Some of their Chiefs, however, are not illiterate; their palaces possess the splendour, and themselves the polish of an Asiatic Court; and they are as observant of the hospitality always held in esteem by a pastoral people, as the wilder inhabitants of their plains and mountains. "The Válí of Sīneh, says Mr. Kinneir, *Memoir*, 144, "resides in a sumptuous palace, where he maintains a degree of state and splendour superior to any thing seen in Persia, except at Court. His house is ever open for the entertainment of strangers, and he always retains about his person a chosen body of horse. In short, it was impossible to contemplate this Chief, sitting at the head of his hall, surrounded by his friends and relations, without calling to mind the Percys and Douglases of our own country."

Courts.

The religion of the Corán, which has been embraced by the Kurds, is, in many points, favourable to their turbulent and predatory habits. By sanctioning the law of retaliation, established from time immemorial among the Arabs of the Desert, Mohammed perpetuated the feuds and warfare existing between their Tribes and families; and furnished the avaricious, turbulent, and aspiring, with an additional plea for refusing to listen to any terms of accommodation, and thus gra-

Religion.

CUR-DISTAN

tifying their favourite passions. The Mohammedan Curds are all Sunnis; and Pietro della Valle was probably misinformed when he charged them (ii. 6, 4to ed.) with changing their sect as often as they changed their master. But they are not rigid in their observance of the law, and are considered as little better than infidels by their stricter neighbours. One of their Tribes, inhabiting Mount Sanjár, (the Shinear of Scripture,) between Mósul and the river Khábúr, professes the strange religion of the Yazídís, who actually worship the Devil, and never mention his name without adding some term indicative of profound respect. There are also in Curdistán, according to the account of Father Maurizio, "*moltissimi Christiani.*" (Garzoni, *Gram.* 6.) The greater part are Nestorians, who have two Patriarchs, one resident at Kochanisi, near Júlamerk; the other in the Monastery of Rabán Hormez, (*St. Hormisdas,*) near El-cósh. The first has five, the second thirteen suffragan Bishops. Few, even of their Priests, says Garzoni, can read or write; the condition of the Laity may therefore be easily imagined. There are also Jacobites and Armenians; the former have their own Bishops, and use the Syriac language in their church service, while the Nestorians (called Chaldeans by the Italian Missionaries) use the Chaldee; a dialect still current, according to P. della Valle, (ii. 7, *Lett.* 1, *de Sphahán,*) in Jezíreh and Mount Tór, (the ancient Masius:) but probably this was nothing more than the corrupt Syriac, still used by the Nestorians, which ignorant persons had represented to him as the Chaldee. (Niebuhr's *Reise,* ii. 352.) The Hakkárí mountains, (the chain called Haterash or Karaish by Mr. Kinneir, *Journey, &c.* 384,) are almost exclusively inhabited by Nestorians; and their Patriarch, who is always styled Már Shemúún, has 300 villages under his jurisdiction.

Yazeedys.

Christians.

Tribes.

The Curds are subdivided into many Tribes or clans, respecting the number and names of which there is much discordance among our best authorities. Hájí Khalífeh in one place, *Jehán-numà,* p. 449, says that "there are four divisions of Curds, differing in manners, customs, and language; the Kurmánj, Lor, Kelhorán, and Kúrán." Of these words the first, as appears from Garzoni's *Vocabulary,* (125,) is the term by which the Curds generally designate themselves; the last the name of one of their largest Tribes; the second belongs to the people of Loristán; and the third to a Tribe of Laks, who are mentioned by Mr. Kinneir, (*Mem.* 138,) as if they were a branch of the same race, though erroneously, according to M. Rousseau, (*Notice Historique sur le Perse,* and *Magasin Encyclopedique,* 1813, vol. ii. p. 382.) The Curds, Laks, Lors, and Bakhtiyáris will perhaps, when better known, all prove to be relics of the original inhabitants of Persia, driven by foreign invasion to fastnesses in the mountains, from which their foes have never been able to expel them. In another passage Hájí Khalífeh, (445; Otter, *Voyage,* ii. 236,) speaks of the Kúráns and Sehráns as the principal tribes of the Curds; the former established in the Páshálic of Shehr-zúl on the eastern frontier; the latter about Harír, a little farther to the south. Their language, which in its structure as well as its elements, closely resembles the modern Persian, has several peculiarities derived from the Pahlaví, now extinct as a spoken dialect, and only extant in a few inscriptions, and the sacred books of the Párs'ís or followers of Zoroaster. We are indebted for our knowledge of this singular dialect of the Persian language to the labours of Father Garzoni, whose Grammar and Vocabulary were printed at the Propaganda Press, in 1787. He has unfortunately neglected to mark the correspondence between the Latin character which he uses and the original Persian, with sufficient clearness and precision; so that the difficulty of tracing the affinities between this and the cognate dialects is greatly increased. M. de Klaproth (*Mines d'Orient,* iv. 312) has given a short vocabulary collected at Tiflís; and in the same volume of that work (p. 246) there are a few words and phrases in the dialect of Betlís, extracted by M. de Hammer from the *Travels* of Evliyá Efendí. As that writer is almost the only Asiatic who has furnished any details respecting Curdistán, and his account, though in some points savouring of exaggeration, is in a great measure drawn from his own observations, it is here subjoined, having at least the merit of novelty, as it has never been published before in any European language. It may also be considered as giving a tolerably accurate view of that country in the middle of the XVIIth century.

Evliyá first cites the Historian Mocaddesí, as his authority for deriving the language of the Cúrds from Kúrdíam or Kúrdím, a Prince of the family of the Prophet Núh, (Noah,) who after reigning in the city of Júdí (where they believe the ark rested) six hundred years, came into Curdistán, and was so well pleased with its air and water that he fixed his abode there. He then adds, that the numerous descendants of this Prince by degrees corrupted their language till it became a jargon neither Hebrew, Arabic, Parsí, Derí, nor Pahlaví, and that jargon is now called Kúrdím. "Curdistán," he continues, "is an extensive tract of rocks and mountains, inhabited by twelve different tribes of Curds, whose languages differ so much that they cannot understand each other without an interpreter. Their country extends from the Province of Erz-rúm, its northern extremity, through Ván, the country of the Hakkárí, Jezreh, Amádiyyah, Mosúl, Shehr-zúl, Jezíreh, Erdilán, Baghdád, Derneh, and Der-teng, as far as Basrah, seventy days journey, (about 1500 miles.) But for the formidable barrier presented by the six thousand Tribes and clans of these Curds established in the lofty mountains, between the Province of Irác Arebí and the territories of the House of Osmán, (the Ottoman Empire,) the invasion of Asia Minor (Dyári Rúm) would be an easy enterprise for the people of Persia. The width of Curdistán, however, is not equal in extent to its length. From Harír and Erdilán on the confines of Persia, its eastern boundaries, to the borders of Irác Arebí. Aleppo, (Haleb,) and Damascus, (Shám,) the distance varies from twenty-five to fifteen days journey, (500 to 300 miles nearly.) These territories possess 500,000 Fufengche's (Matchlock men) of the sect of Muhammed Sháfií, and 776 fortresses, which, with the blessing of God, shall be described in their proper places. May the Kingdom of Curdistán, on the confines of the dominions of the House of Osmán and the Sháh of Persia (Ajem) be preserved to the consummation of all things! Amen."

"The languages current in this extensive region are various, and are as follows: 1. Zárch; 2. Lúlú; 3. Holví, or Hakkárí; 4. Auníkí; 5. Mahmúdí; 6. Shirvání; 7. Jezírehví; 8. Yasáví; 9. Sinjárí; 10.

Harírí; 11. Erdilání; 12. Súrání, or Savrání; 13. Háletí; 14. Chekvání; 15. Amádí; 16. Ruzhígí.

"The ancient languages are the Arabic, Persian, and Derí, (i. e. Pahlaví and Derí, the common and Court languages of Persia,) and in the *Dacáyicu l' hacayic* of Kemál Páshá Zádeh, (May his Grace be sanctified by the Almighty!) we find this saying of the Prophet, (May God be merciful unto him and save him!) The tongue of the inhabitants of the Garden (Paradise) is the Arabic, the Fársí, and the Derí. The language of the Curds, however, is that here described." (*Tárikhí Sayyáh* of Evliyá Efendí, vol. iv.)

nbers. It is almost impossible to form any conjectures approaching to the truth, respecting the number of the Curds. Those in the Turkish dominions have been estimated at 140,000 men capable of bearing arms, and the Persian Curds are said to amount to between 30,000 and 40,000; it is therefore evident, that as far as this irregular soldiery is concerned, the preponderance is greatly in favour of Turkey. (Malte Brun, *Précis de Geogr.* iii. 109, 287.)

CURE, *v.*
CURE, *n.*
CU'RABLE,
CU'RABLENESS,
CU'RATION,
CU'RATIVE,
CU'RATOR,
CU'RATRIX,
CU'RER,
CU'RING,
CU'RELESS.

Fr. *curer*; Sp. *curar*; It. *curare*; Lat. *curare*. Vossius thinks, certainly from κῆρ, the heart. Tooke from the "A. S. *kar-ian, curare, advertere, accurare*, to take care or heed, to regard, to mind, to attend." Somner. By Chaucer, Joye, and other older writers, *cure* and *care* seemed used indiscriminately. *Cure* is now used consequentially,

To heal, to recover, to restore to a sound or healthy state.

For clergie is Cristes vikerȳ. to comfort and to *curen*.
Piers Ploukman. Vision, p. 233.

Constrewe that as you list, I doe not *cure*.
Chaucer. Prol. to the Legend of Good Women, fol. 198.

Of studie toke he moste *cure* and hede.
Id. Prologue to Canterbury Tales, v. 306.

But I may not endure that thou dwell
In so vnskilful an opinion
That of thy wo nis no *curacion*.
Id. Troilus, book i. fol. 156.

Of surgerie he knewe the *cures*.
Gower. Conf. Am., book vi. fol. 135.

Phisike hath done the besines
Of sondry *cures* many one
To make hym holle. *Id. Ib.* book v.

And a womman that hadde a flux of blood twelve yeer, and hadde spendid al hir catel in lechis, and sche myghte not be *curid* of ony. *Wiclif. Luke*, ch. viii.

Though these and other like
by processe are procurde,
Yet naythelesse my festred wonde
can not in time be *curde*.
Turbervile. That time conquereth all things.

And eke the balefull blowe
so grieuous that was thought,
Full quickly *curde* by surgion's sleight,
if he were quickly sought.
Id. That it is hurtfull to conceale, &c.

This counsell of Daniel geuen to the kyng declareth, God straightly to require of the kyngs and princes not onely the obedience of his ten commandemẽts but also princely iustice, that is, the diligent *cure* and charge of his chirche.
Joye. Exposicion of Daniel, ch. iv.

——— My glasse presented vnto me,
The *curelesse* wound, that bledeth day and night.
Surrey. Bonum est miki, &c.

Wherfore in the night when he was asleepe, his wife loosed the bandes of the wound, first her husband not perceiuing, and afterward dissembling, and so by little and little sucked & spitted out the poyson and prepared the wound *curable* & ready to the phisicion.
Vives. Instruction of a Christian Woman, O. 8.

All other thinges concernynge thys matter, partayn to the part *curatiue*, whiche treateth of healynge of sycknes.
Sir Thomas Elyot. The Castel of Helth, book iii.

He that by easie prayers and a seldom fast, by the scattering of a little alms, and the issues of some more natural vertue thinks to *cure* his evil nature, does fortifie his indisposition, as a stick is hardned by a little fire, which by a great one is devoured.
Taylor. Sermon 10. part i.

By these books and resolutions of the judges it is clear, that the appropriator was the incumbent parson, and had the *cure* of the souls of the parishioners. *Spelman. Preface*, fol. 10.

And so did [Galerius] swarme with wormes, that being not *curable* neither by surgerie nor physicke, he confessed that it happened for his crueltie toward the Christians, and so called in his proclamations against them.
Fox. Martyrs. The difference between the Church of Rome, &c. fol. 28.

That nature of Hippocrates, that is the *curatrix* of diseases, *al φύσιες τῶν νουσέων ἰητροὶ*, and that Archeus of the chymists or Paracelsians, to which all medicaments are but subservient, as being able to effect nothing of themselves without it.
Cudworth. Intellectual System, book i. ch. iii.

But if with too much braine, and too little blood, they do [run mad] I'le be a *curer* of madmen.
Shakspeare. Troylus and Cressida, fol. 100.

I can be content to be let blood in the arme or foot, for the *curing* of the head or heart.
Hale. Heaven upon Earth, sec. 22. vol. i. fol. 80

None else there is gives comfort to my grief,
Nor my mishaps amended with my moan,
When heaven and earth have shut up all relief,
Nor care avails what *cureless* now is grown.
Drayton. The tenth Eclogue.

If Peter and John *cured* the lame man by the strength of imagination; why have no persons ever since *cured* those whose welfare they have as heartily desired as ever they could do his.
Stillingfleet. Sermon 9. vol. i.

CURE. CURFEW.

It is a great misfortune to a young clergyman, when he is confined to a country *cure*, to be destitute of such books as are necessary to enable him to make any considerable advance in his studies of divinity, to which other parts of learning contribute their aid and assistance, and therefore consequently are not to be neglected.

Nelson. The Life of Dr. George Bull, vol. iii. p. 33.

I shall now only tell you in general, than on the one side I think the arguments, which Helmont and others draw from the providence of God, for the *curableness* of all diseases, are not very cogent and somewhat irreverent, so on the other side, I am not much convinced by the grand argument alleged against Paracelsus, and the chymists that hold all diseases to be in their own nature *curable*, namely, that they themselves many of them, (no nor even their very master) lived not to the age attained by many strangers to chymistry.

Boyle. The Usefulness of Natural Philosophy. Essay 3. part ii.

Seeing the above mentioned strangers are like to continue here yet a while, at the least some of them, the society shall much stand in need of a *curator* of experiments.

Id. Letters from several Persons to Mr. Boyle, vol. vi. p. 147.

Satire throws by her arrows on the ground,
And if she cannot *cure*, she will not wound.
Churchill. The Candidate.

For the proper *cure* of such prejudices, as I take it, is to be made by application of those truths that are common to all climes; not by the partial manners or opinions which arise out of them in this or that more polished society.

Hurd. Works. On the Uses of Foreign Travel. Dialogue 8.

CURETES, ἀπὸ τῆς κουρᾶς, because they shaved the fore-part of their head that the enemy might not have any hold of them in battle, (Strabo, x.; Eustat. *in Iliad*, xxiii.) or as others say, ἀπὸ τῆς κουροτροφίας, because they educated Jupiter, (Lucret. ii. 633; Virg. *Georg.* iv. 151.) Their obscure mythology is comprehended in that of the Cabiri, and there seems to be no end to the variety and absurdity of the discordant legends with which they are connected. The reader may find more about them, if he think it worth while to inquire more, among the following authorities: Apollodorus, i. 3; Tzetzes, *ad Lycoph.* 19; Servius, *ad Virg.* ii. 132; Diod. Sic. v. 64, &c.; Herod. v. 58; Vossius, *de Idololat.* The name is most commonly applied to the early inhabitants and Priests of Jupiter in Crete, and to the Priests of Rhea in Phrygia; although Lampe, *de Cymbalis Veterum*, (ii. 14,) contends that the Curetes are the first only, being στεοκρηνές.

CU'RFEW, *n.* Cu'rfew-bell, Cu'rfew-time. } From the Fr. *couvrir le feu*; cover the fire. Minsheu. Extinguish it, put it out.

The dede slepe, for wery besinesse,
Fell on this carpenter, right as I gesse,
Abouten *curfew-time*, or litel more.
Chaucer. The Milleres Tale, v. 3643.

Duke. The best, and wholsomst spirits of the night,
Inuellop you good prououst: who call'd heere of late?
Pro. None since the *curfew* rung.
Shakspeare. Measure for Measure, fol. 76.

Who ever gives a paire of velvet shooes
To th' Holy Rood, or liberally allowes
But a new rope to ring the *couvre-feu-bell*,
But he desires that his great deed may dwell,
Or graven in the chancel-window-glasse,
Or in his lasting tombe of plated brasse.
Hall. Satire 4.

In that coarse age were princes fond to dwell
With meagre monks, and haunt the silent cell:
Sent from the Monarch's to the Muse's Court,
Their meals were frugal, and their sleeps were short;
To crouch at *curfew-time* they thought no scorn,
And freeze at matins every winter morn.
Tickell. On Queen Caroline's rebuilding, &c. at Queen's College, Oxford.

The forest laws totally restrained all rural pleasures and manly recreations, and in cities and towns the case was no better; all company being obliged to disperse, and fire and candle to be extinguished, by eight at night, at the sound of the melancholy *curfew*.

Blackstone. Commentaries, vol. iv. p. 419. book iii. ch. xxxiii.

The ringing of the Curfew, *Curphour*, *Couvre-feu*, *ignitegium*, or *piritegium* Bell, prevailed generally in Europe during the middle ages as a precaution against fire, (Du Cange;) and the imputation of tyranny against William the Conqueror for introducing this custom into England, probably rests upon no other foundation, than that by its usage he sought indirectly to suppress any nightly meetings of the discontented, which might have been dangerous to a power won by arms, and not yet firmly established. This Bell was rung at eight in the evening, when all persons were expected to extinguish their fires and lights, and to go to bed. (Stow's *Survey*, i. 15.) Lord Lyttelton, in his *History of Henry II.* (i. 473,) expresses much doubt whether the Conqueror ever issued the edict with which he is reproached; and the passage in William of Malmsbury, which implies that such an edict was abolished by Henry I., is far too vague to be admitted as establishing its previous existence. It may be that the Conqueror only more strictly enforced, for the reasons stated above, a practice which, before his invasion, was as much used in England as in neighbouring countries.

The following notice is found in the *Statuta Leichefeldensis Ecclesiæ*:

Est autem Ignitegium qudlibet nocte per annum pulsandum horâ septimâ post meridiem exceptis illis festis, quibus Matutinæ dicuntur post Completorium, in quibus Ignitegium ex consuetudine non pulsatur. In the *Statuta Massiliensia*, v. 4, all persons are forbidden from going out without a light after the sounding of the Bell called *Salvaterra*, (*qud a furtis nocturnis salvarentur*,) and a still harder injunction is given in a Parisian Statute, *ann.* 1291. *Nul ne traite Vin, plus que Cuevrefeu sera sonnez.*

In the notes on Brand's *Pop. Ant.* ii. 136, many instances are given of a partial retention of the Curfew Bell in modern times. The nightly tolling of St. Mary's Bell, and that of Carfax, must be remembered by all the sons of either English University. It would not be easy to decide, whether this usage is retained in our seats of learning out of respect to the ordinance of Pope John XXIII., *de dicendo ter Ave Maria, tempore seu horâ ignitegii*, or from a kind indulgence to those Spirits who we are told "rejoice to hear the solemn Bell," and have so long been accustomed "to break their magic chains," to "begin at Curfew and walk till the first cock."

CURIA, a division of the Roman people. According to the distribution of Romulus, the whole people formed three Tribes, and each Tribe ten *Curiæ*. Although the number of Tribes was at different times changed, and at last amounted to thirty-five, that of the *Curiæ* remained the same. The members of a *Curia* were determined by the particular quarter of the city to which they belonged; and this, perhaps, was the reason why the number of the *Curiæ* under-

CURIA. CURIOUS.

went no alteration in the subsequent reformation of the Tribes. Each *Curia* was superintended by an officer called *Curio*; and the whole body by another called *Curio Maximus*. They had a public assembly called *Comitia Curiata*, concerning the powers and objects of which see COMITIA.

Curia was also the name given to the Chapel where each *Curia* met for the performance of religious ceremonies. And any place where the Senate met was called *Curia*; but those more especially which were set apart for this purpose, as the *Curia Hostilia*, built by Tullus Hostilius, afterwards rebuilt by Julius Cæsar, and named the *Curia Julia*; and the *Curia Pompeia*, in which Julius Cæsar was assassinated.

CURIALITY, Fr. *curial*; Lat. *curialis*, from *curia*, the court.

Of or pertaining to the Court.

I come to the last of those things which I propounded, which is, the Court and *Curiality*.

Bacon. Advice to Sir George Villiers.

CU'RIOUS, *adj.*
CU'RIOUSLY,
CU'RIOUSNESS,
CURIO'SITY,
CURIO'SO.

Fr. *curieux*; It. and Sp. *curioso*; Lat. *curiosus*; from *cura*. See CURE, above. *Curious* is used by old writers as equivalent to *Care*-ful, heed-ful, full of *care*, of anxiety, of nicety; *sc.* in the performance or execution of any thing; and thus, accurate, exact, nicely, highly finished.

Careful, or anxious, *sc.* to know, to learn, to understand; and thus, inquisitive.

Yf he ne haue rent or such a thing
Although he be religious
And God to seruen *curious*
Thus mote he done, or do trespas.
Chaucer. The Romant of the Rose, fol. 147.

And craft of mannes hond so *curiously*
Arrayed had this gardin trewely,
That never was ther gardin of swiche pris,
But if it were the veray paradis.
Id. The Frankeleines Tale, v. 11231.

And thus he went forth his weie
Alone, as a knight auenturous,
And in his thought was *curious*
To witte, what was best to do.
Gower. Conf. Am., book i. fol. 16.

Also thei idel lernen to go aboute housis, not oonli idil but ful of wordis and *curiouse* spekynge thingis that bihoueth not.
Wickif. Tymothy, ch. v.

I maruell then why he is so *curious* to cause vs to worship the saintes yᵗ are aslepe. *Frith. Workes*, fol. 103.

For we han herd, that summe among ghou goen in reste and no thing worchen but doen *curiousli*.
Wickif. 2 Thessalonians, ch. iii.

Curiously I haue regarded, that Rome beginneth to declyne, when our senate fayleth of meke and wise senatours, and multiplieth with these serpentines. *Golden Boke*, E 1.

It is not therefore your part to knowe, what yeare, what moneth, or what houre, that kingdom of Israel shal cum, which thyngis yᵉ foolysh calkers *curiously* seke for.
Udall. Actes, ch. i.

And therewithall came *curiousnesse* and carped out of frame,
The audience laught to hear the strife, as they beheld the same.
Vncertaine Auctors. A prayse of Mrs. R.

Be diligent therfore that those be not deceaued with *curiousnes*. For mē of no small reputation haue bene deceaued with their owne sophistry. *Tyndall. Workes*, fol. 63.

But alas, it euer was and shall be that ye greater nōber receaue the wordes for a newneese and *curiositie* (as they say) and to seme to be somewhat and that they haue not gone to schole in vayne.
Tyndall. Workes, fol. 238.

Many other *curiosities* may be required, which for the nonce I did not set downe, as well for that the intent I had principally was to satisfie your doubt touching the spicerie, as for that I lack leasure and time.
Hakluyt. Voyage, &c. Mr. Robert Thorne, vol. i. fol. 220.

Man is read in his face: God in his creatures, but not as the philosopher, the creature of glory reads him: but, as the diuine, the servant of humility: yet even he must take care, not to be too *curious*. *Ben Jonson. Discoveries*, fol. 95.

And each one had a little wicker basket,
Made of fiue twigs, entrayled *curiously*,
In which they gather'd flowers to fill their flasket:
And with fine fingers cropt full feateously
The tender stalkes on hie.
Spenser. Prothalamion.

It is better in all cases to submit, than *curiously* to enquire and pry into the mystery under the cloud, and to hazard our faith by improving our knowledge: if the Nicene fathers had done so, possibly the church would never have repented it.
Taylor. Liberty of Prophesying.

Therefore seigne perfectnesse itself is an example for us, let everye man studye how he may come nye it, which is a point of wysedome, not reason with God why he may not attaine unto it, which is vaine *curiosity*.
Ascham. Works. The Schole-master.

First granting, as I do, it was a weakness
In me, but incident to all our sex,
Curiosity, inquisitive, importune
Of secrets, then with like infirmity
To publish them, both common female faults.
Milton. Samson Agonistes, l. 775.

Desire, to know why, and how, *curiosity*; such as is no living creature but man: so that man is distinguished, not only by his reason, but also by this singular passion, from all other animals; in whom the appetite of food, and other pleasures of sense, by predominance, take away the care of knowing causes; which is a lust of the mind, that by a perseverance of delight in the continual and indefatigable generation of knowledge, exceedeth the short vehemence of any carnal pleasure.
Hobbes. Of Man, part i. ch. vi. fol. 119.

Ah *curiousnesse*, first cause of all our ill,
And yet the plague which most torments us still!
Stirling. Doome's-day. The first Houre.

In suffering such a crew of riotous gallants,
Not of the best repute, to be so frequent
Both in your house and presence, this, 'tis rumour'd
Little agrees with the *curiousness* of honour,
Or modesty of a maid.
Massinger. The Parliament of Love.

It standeth north north-east and by east from the west corner of thy *curious-knotted* garden.
Shakspeare. Love's Labour Lost, fol. 124.

The remarkable smoothness of that language, I confess, might excite some people to learn it out of *curiosity*; but the Tonquinese are not so *curious*. *Dampier. Voyage. Anno* 1688.

I shall now add, that having enquired of one of the *curiousest* and most observing makers of steel tools, whether he did not find a difference in the employing of pump-water, or river-water in giving them their temper, he satisfied me that he did so.
Boyle. The Usefulness of Experimental Philosophy.

It is true our bodies are made of very coarse materials, of nothing but a little dust and earth, yet they are so wisely contrived, so *curiously* composed, so neatly, so artificially, so admirably ordered and put together, that we cannot but acknowledge and admire the wisdom and power of him that made them, in every part of them. *Bishop Beveridge. Sermon* 107.

CURIOUS. — CURL.

What a ridiculous question would this be to him, who knows that, in what we call spoil, he pursues the rational purposes of his own art; that, to the excellence of the metal, he may also add the *curiousness* of the figure.

South. Sermon 11. vol. viii.

——— The spacious west,
And all the teeming regions of the south
Hold not a quarry, to the *curious* flight
Of knowledge, half so tempting or so fair,
As man to man.

Akenside. Pleasures of Imagination, book iii.

Instead of striving which shall produce the brightest tint, or *curiously* trifling, shall give the gloss of stuffs, so as to appear real, let their ambition be directed to contend, which shall dispose his drapery in the most graceful folds, which shall give the most grace and dignity to the human figure.

Sir Joshua Reynolds. The first Discourse.

He has, likewise, a complete service of Corinthian metal, which though he admire as a *curiosity*, is far from being his passion.

Melmoth. Pliny to Calvisius.

CURL, *v.*
CURL, *n.*
CU'RLING,
CU'RLY,
CURL-FACED,
CURL-PATE, *n.*
CU'RLED-PATE,
CU'RLING-IRONS.

Skinner suspects, that there formerly existed in A. S. the verb *cyrl-an, crispare*; formed from the verb *cyrr-an, vertere*, to turn. Chaucer writes it, *Crulle*.

To turn, to writhe.

Now was ther of that chirche a parish clerk
The which that was ycleped Absolon.
Crulle was his here, and as the gold it shon.

Chaucer. The Milleres Tale, ver. 3314.

Behold, behold, they neuer stand content,
With God, with kinde, with any help of arte,
But *curle* their locks with bodkins and with braids.

Gascoigne. Epilogue.

Thy *curling*, and thy cost, thy friesling and thy fare,
To court to court with al those tois, and there set forth such ware.

Id. A Challenge to Beautie.

Her lords and ladies all this while deuise
Themselues to setten forth to stranger's sight;
Some frounce their *curled* haire in courtly guise,
Some pranke their ruffes, and others trimly dight
Their gay attire: each others greater pride does spite.

Spenser. Faerie Queene, book i. can. 4.

Shee as a vail down to the slender waste
Her unadorned golden tresses wore
Dishevel'd, but in wanton ringlets wav'd
As the vine *curls* her tendrils.

Milton. Paradise Lost, book iv. l. 307.

——— At the full bagged cow,
Or at the *curl-fac'd* bull, when venting he doth low,
Or at th' unhappy wags, which let their cattle stray,
At nine-holes on the heath, whilst they together play,
He never seems to smile.

Drayton. Poly-olbion, song 14.

——— And himselfe he threw upon the shore,
Lay, as laid out for funerall. Then tumbl'd round, and tore
His gracious *curles*.

Chapman. Homer. Iliad, book xviii. fol. 254.

——— Who the purple beakes
Of ships did neuer see: nor that which breakes
The waues in *curles*, which is a fan-like oare,
And serues as wings, with which a ship doth soare.

Id. Ib. Odyssey, book xxiii.

No shining eyes, no locks of *curling* gold,
No blushing roses on a virgin face,
No outward show, no, nor no inward grace,
Shall power have my thoughts henceforth to hold.

Drummond. Sonnet 16. part ii.

When not his combes, his *curling-irons*, his glasse,
Sweet bags, sweet powders, nor sweet words will passe
For lesse securitie?

Ben Jonson. Under-woods. Epistle to a Friend, &c.

If you please to compare the Roman names that seeme so stately, because you vnderstand them not, you will disdaine them in respect of our meanest names; for what is Crispus but *curle-pate*.

Camden. Remaines. Surnames, p. 153.

And better yet than this a bulchin two years old,
A *curl'd-pate* calf it is, and oft could have been sold.

Drayton. Poly-olbion, song 21.

——— Make *curl'd-pate* ruffians bald
And let the vnscarr'd braggerts of the warre
Derive some paine from you.

Shakspeare. Timon of Athens, fol. 92.

Seas would be pools, without the brushing air,
To *curl* the waves: and sure some little care
Should weary nature so, to make her want repair.

Dryden. The Flower and the Leaf.

Its motion is not lost, but communicated to the parts of the water it first strikes against, and by those to others, till at length *curls* or waves produced on the surface of the water spread themselves, till they arrive at the brinks, and would perhaps be farther expanded if these did not hinder the progress.

Boyle. On the great Effects of even Languid Local Motion.

Their hair is black, straight, and strong, commonly cut short on the hind part, with the rest tied on the crown of the head: but some have it of a *curling* disposition, or of a brown colour.

Cook. Voyage, vol. v. book i. ch. viii.

As the fair offspring of the sylvan grace
With matchless swiftness speeds along the race,
His golden tresses wav'd; his *curls* behind
Flow loosely down, and dance upon the wind.

Hart. The sixth Thebaid of Statius.

I looked round me half frightened, and quite bewildered: till at last, finding that her literature was thrown away upon me, she bid me, with great vehemence, reach the *curling-irons*.

Johnson. The Idler, No. 46.

The general colours of it are black and brown, growing to a tolerable length, and very crisp and *curly*.

Cook. Voyage, vol. iv. book iii. ch. vi.

CURL, a disease in Potatoes producing a *curled* appearance in the leaves. It is more common in lands which have been long tilled than in *novalia*, and in marshy than in dry lands. See a Paper by Knight, in Nicholson's *Journal*, ii. 64; Holt's *Essay on the Curl in Potatoes*, and *Communication to the Board of Agriculture*, ii.

CURLING, a winter amusement practised in Scotland, by sliding stones along the ice to a particular mark, of which Dr. Brewster gives the following account:

"The stones employed in it are of a spherical form, flattened above and below, so that their breadth may be nearly equal to twice their thickness. The upper and under surfaces are made parallel to one another, and the angles of both are rounded off. The under surface, or *Sole*, as it is called, is polished as nicely as possibly, that the stone may move easily along. The blocks from which they are made are of whinstone, or granite, of a close texture, free from cracks, and capable of taking a fine polish. Those whinstone nodules, called *Yolks*, on account of their toughness, and never breaking into large fragments, are reckoned the best. They have bent iron or wooden handles, and are from thirty to sixty pounds avoirdupois weight, according to the strength of the person who uses them.

"The place where the stones move is called the *Rink*, the chief property of which is that the ice be level, smooth, and free from cracks, particularly such as are in a longitudinal or oblique direction. A mark or hole is then made at each end, called a *Tee*, *Toesee*, or *Witter*. Round this two circles of different diameters are drawn,

 that the relative distances of the stones from it may be calculated at sight; as actual measurement is not permitted till the playing at each end be finished. These circles, in the technical language of the game, are called the *Broughs*. A score drawn across the rink at each end, distant from the tee about a sixth part of the length of the rink, is called the *Hogscore*. The length of the rink, from tee to tee, varies from thirty to fifty yards. The breadth is about ten or twelve feet. When the ice is covered with snow, it must be cleared to that extent, and also ten or twelve feet beyond the tee, at each end, that the stones, when impelled with too much force, may have room to get far enough not to be of any use.

"The number of players upon a rink is eight or sixteen; eight when the players use two stones each, and sixteen when they use one stone each. There may be one or more rinks according to the number of Curlers. The game may also be conducted by one person against another, by two against two, or three against three, each using one or more stones, as it may be agreed upon.

"He who is reckoned the best Curler has generally the power of arranging the order of the players; and whoever is last in order, gives directions to all the rest of his party. He is called the *Driver*, and the first the *Lead*.

"The game at first is remarkably simple. The lead endeavours to lay his stone as near the tee as possible. If it be a little short of it, upon the middle of the rink, it is reckoned to be fully better laid than if it touched it. The object of the next in order is nearly the same as that of the lead. The next attempts to guard the stone of his partner, if it be near the tee, or to strike off that of his antagonist if it be nearer. The one who follows, if a stone belonging to his own party lie nearest the tee, tries to guard it; if one of the opposite party, to strike it off; or if no stone be near the tee, *to draw a shot*, that is, to make his stone rest as near the tee as he can.

"As the game advances, it becomes always the more intricate. Sometimes the stone nearest the tee, which is called the *Winner*, is so guarded, that there is no possibility of getting at it directly. It then becomes necessary, in order to get it removed, to strike another lying at the side in an oblique direction. This is called *Wicking*, and is one of the nicest parts of the game. But when the winner cannot be reached even in this way, the last in order but one or two must endeavour to remove the opposing stones, by striking them with great force. Sometimes the stones are so situated, that the driver, to avoid the risk of losing any shots which his party may have gained, throws away his stone without attempting any thing. When the stones on both sides have been all played, the one nearest the tee counts one; and if the second, third, fourth, &c. belong to the same side, all these count so many shots, thirty-one of which for each side is the number usually played for."

Curling is a comparatively modern amusement in Scotland, and does not appear to have been introduced till the beginning of the XVIth century, when it probably was brought over by the emigrant Flemings. It was originally known under the name of *kuting*, which perhaps is a corruption of the Teutonic *kleuyten, kalluyten*, rendered by Kilian, in his *Dictionary, ludere massis sive globulis glaciatis, certare discis in æquore glaciatâ*. In the climate of Britain the opportunities for this exercise are not frequent; so little so, that on an average of the last twenty years, not more than eight days favourable to it have occurred in each; but since its naturalization in Canada, it has become a favourite amusement in that country from the greater length of the winters.

CURMUDGEON, *cœur*, the heart, and *mechant*, or *meschant*, have been suggested. "*Meschant*," Cotgrave explains, "wicked, paltry, curst, harsh, froward." *Cur-mudgeon* may be a corruption of *curr*, and *manger*, from the story of the dog or *cur* in the *manger*. And thus applied to

One who is covetous to acquire, covetous to keep, what he cannot enjoy.

A soldier is in peace a mockery, a very town-bull for laughter; unthrifts, and landed babies are prey, *curmudgeons* lay their baits for. *Ford. The Lady's Trial*, act v. sc. 1.

Now wilt thou find him a *curmudgin*
If thou dispatch it without grudging.
Butler. Hudibras, part ii. can. 2.

They'll think me grown a meer *curmudgon*.
Dryden. The Kind Keeper, act iv. sc. 1.

CU'RRENT, *n.*
CU'RRENT, *adj.*
CU'RRENTLY,
CU'RRENTNESS,
CU'RRENCY.

Fr. *courant*; It. *corrente*; Sp. *corriente*; Lat. *currens*, present participle of *currere*, to run. *Current*, the noun, *running* water; the stream of a river; any passage, course or progression.

The adjective,—flowing, passing like a stream, in an uniform, uninterrupted course; passing generally, commonly, without hinderance or opposition.

Brown uses *Curricle*; a small or short course.

Like the *currant* fire, that renneth
Upon a corde as thou haste sene.
Gower. Conf. Am. book vii. fol. 143.

Also if there commeth any whale within the *current* of the same, they make a pitifull crie.
Hakluyt. Voyage, &c. M. Anth. Jenkinson, vol. i. fol. 311.

It was desyryd of the sayd prouoste that he shuld suffre the foresayd money to ronne and be *currañt* through the cytie.
Fabyan. John. The seventh Yere.

The coyne both of gold and of siluer, whiche yet at this daie is *curraunt*, he newly deuised and diuided: for the gold he named royals and nobles, and the siluer he called grotes and halfe grotes. *Hall. Edward IV. The third Yere.*

Which such disgrace unto the queen appears,
That (all incens'd with an ambitious rage)
She doth conspire to have him made away,
As one that staid the *current* of her sway.
Daniel. History of the Civil War.

——— Sometimes, she stood cleare
He was her husband; sometimes, the ill weare
His person had put on, transform'd him so,
That yet his stampe would hardly *current* go.
Chapman. Homer. Odyssey, book xxiii. fol. 352.

And thus when substantialnesse combineth with delightfulnesse, fullnesse with finenesse, seemelinesse with portlinesse, and *currentnesse* with stayednesse, how can the language which consisteth of all these, sound other than most full of sweetness.
Camden. Remaines. The excellencie of the English tongue, p. 43.

All truth is sweet; it is indeed God's, not ours, wheresoever it is found; the king's coyne is *currant*, though it be found in any impure channell. *Hall. The Old Religion*, ch. i. fol. 3.

We have found out favourable interpretations, and glosses, restrictions, and evasions, to wind ourselves out of them, to shift them all off and put them by, and yet pass for sound and *currant* Christians. *Hale. Rem.* p. 77.

CURRENT. — CURRY

If by public law the mint were ordained to be only supplied by our stasseries, how *currently* would they pass for more precious than silver mines?
Hall. Select Thoughts, vol. iii. fol. 708.

Like Egypt's Nile the bounteous *current* shows,
Dispersing blessings wheresoe'er it flows.
Yalden. To Sir Humphry Mackworth.

But besides that this seems to have a more harsh and forced sense, the other interpretation is more consonant to the stile and *current* of the sacred Scriptures.
Locke. Works. Ephesians, ch. i. note (b) 14.

For the form of the passports, let me but bring one drawn up as we desire it, and in terms *current* with the forms of their state, and it shall be immediately agreed to.
Sir William Temple. Works, vol. ii. p. 10.

On the contrary, words are offered to the publick by every private man, coin'd in his private mint, as he pleases; but 'tis the receiving of them by others, their very passing, that gives them their authority and *currency*, and not the mint they come out of.
Locke. Works. Second Reply to the Bishop of Winchester.

Upon a *curricle* in this world depends a long course of the next, and upon a narrow scene here an endless expansion hereafter.
Brown. Christ. Mor. vol. ii. p. 23.

It is extremely vexatious to a man of eager and thirsty curiosity to be placed at a great distance from the fountain of intelligence and not only never to receive the *current* of report till it has satiated the greatest part of the nation, but at last to find it muddled in its course, and corrupted with taints or mixtures from every channel through which it flowed.
Johnson. The Rambler, No. 61.

Good and bad money is offered to them, and they ought to beware of the coin which will not pass *current* in the republic of letters, and in the critical world, and of that which is found light when weighed in the balance of the sanctuary.
Jortin. Remarks on Ecclesiastical History.

"Indeed!" replied the other; "well, I do not know him myself, being a Cambridge man; but it is *currently* reported at Norwich that he is a methodist." *Jones. The Life of Dr. Horne.*

It cannot at this time be too often repeated; line upon line; precept upon precept; until it comes into the *currency* of a proverb, to innovate is not to reform.
Burke. To a Noble Lord.

CU'RRY, *v.*
CU'RRIER,
CU'RRYING, *n.*
CU'RRYING, *adj.*
CURRY-COMB.

Fr. *coroyer*; to *curry*, taw or dress, as leather. Cotgrave. Lat *corium*, the hide. To *curry* a horse, i. corium *equi et dorsum fricare strigili*; to rub the hide of a horse with a *curry-comb*.

To *curry* the hide, to rub it with a *curry-comb*; to scratch, scrub or use roughly: and, consequentially, give a good thrashing or drubbing.

The word *favour*, in the common expression, "to *curry* favour," has been supposed by Mr. Douce to be a corruption of *favel*, (see the Quotation from Chaucer, and Udall,) a name given to yellow coloured horses, as *bayard*, *blanchard*, to bay or brown and grey. We yet, however, use in common speech, "To smooth him down," met. for to soothe his anger; calm his passion; to ingratiate by acts of obsequiousness or flattery. Skinner thinks from the old Fr. *querir* · Lat. *quærere*, to seek after.

At Japhet was slain *fauell* his stede.
R. Brunne, fol. 175.

As though he had lerned *cury favel* of some old frere.
Chaucer. The Marchantes Second Tale.

And it was maad that many daies he dwellide in Ioppe at oon Symount a *coriour*. *Wiclif. The Dedis of Apostlis*, ch. ix.

Nether yet let any manne *curry fauell* with himselfe after this wise. The faute is but light, the lawe is broken in nothing but in this part. *Udall. James*, ch. ii.

Yea when he *curried* was, and dusted slicke and trimme,
I causde both hey and provander to be allowde for him.
Gascoigne. The complaint of the Grene Knight.

MAX. Your short horse is soone *curried*.
Beaumont and Fletcher. Valentinian, act ii. sc. 1.

We see that the very *currying* of horses doth make them fat and in good liking *Bacon. Natural History*, Cent. i.

Now for matters of government, the noblemen and honest citizens did hate Alcibiades manner of rule in the commonweal, as a man most dissolute, and given to flattery, because he ever studied by all device he could, to *curry favour* with the common people.
Sir Thomas North. Plutarch. Alcibiades and Coriolanus, fol. 205.

Also there was a new act deuised and made, the old being abrogated (by the appointment of the king) for the creation of the Scottish kings in time to come, manie of the nobles rather consenting with silence, then greatlie allowing it either in hart or voices, though some *currifauours* among them set forward the matter to the best of their powers.
Holinshed. Scotland, vol. v. p. 247. *Kenneth.*

He call'd to mind th' unjust foal play
He would have offer'd him that day,
To make him *curry* his own hide,
Which no beast ever did beside.
Butler. Hudibras, part iii. can. i.

Till warn'd by frequent ills, the way they found,
To lodge their loathsome carrion underground.
For, useless to the *currier* were their hides.
Dryden. Virgil. Georgic 3. l. 882.

And no doubt so he would have of *strigil* and *sistrum*, if instead of a *curry-comb* and cymbal, which are the English names dictionaries render them by, he could see stamped in the margin small pictures of these instruments, as they were in use among the ancients.
Locke. Of Human Understanding, book iii. ch. xi. sec. 25.

For this purpose [in cleaning and dressing their horses] and to remove the sweat, they [the Germans] made use of a piece of wood, formed to the shape of a sword, and known to us under the name of a scraper; and, instead of a *curry-comb* they put a covering upon their hands, of a rough grain, and composed of the bark of the palm-tree, with this they rubbed the coats of their horses, to give them a polish, and make them sleek and shining.
Berenger. The History and Art of Horsemanship, vol. i. p. 27.

The CURRYING of hides is performed in two different ways, which are technically styled on the *flesh* or on the *grain*.

In Currying on the *flesh*, the first operation is soaking the leather in water until it be thoroughly wet; then the flesh side is shaved on a beam, that is a sort of wooden block fixed on the ground, to which the Currier stands to his work, with a knife of a peculiar construction. The knife used for this purpose is of a rectangular form, with two handles, one at each end, and a double edge. After the skin is properly shaved, it is thrown into water again, and scoured upon a board or stone appropriated to the use. Scouring is performed by rubbing the grain or hair-side with a piece of pumice-stone or some other stone of a good grit, by which means a white sort of substance is produced out of the leather, called the *Bloom*, generated in the operation of tanning. The hide is then conveyed to the shade or drying-place, when the oily substances are applied, which are put on both sides of the leather, but in a greater and thicker quantity on the flesh side than on the hair side; this is called *Stuffing* or *Clubbing*. Whitening or paring succeeds, which is performed with a fine edge on the knife already described. The hide is then *boarded up*, or grained again, by applying the graining board first to the grain side, and then to the flesh side. It is now fit for sewing,

RRY-NG. — RSE.

which is performed by rubbing it with a brush dipped in a composition of oil and lamp black, on the flesh side, till it is thoroughly black; it is then *sized*, called Black sizing, with a brush or sponge, dried and tallowed. After undergoing some other operations, this sort of leather, called Waxed leather, is Curried. In Currying on the *grain* or hair, termed Black on the grain, the first operation is the same with that already described, till it is scoured. Then the Black to it while wet is applied, which is a solution of copperas in water; this is first put upon the grain, after it has been rubbed over with a brush dipped in urine, and when it is dry it is *seasoned*, that is, rubbed over with a brush dipped in copperas water on the grain, till it is perfectly black; after this the grain is raised with a fine graining-board, and the leather is oiled with a mixture of oil and tallow; when it is finished and fit for the shoemaker, &c.

The Curriers' *Company* in London is of considerable antiquity as a Guild, having been founded in 1367. It was incorporated by James I. in 1605.

Currier was also a portable fire-arm, formerly used in sieges. It was of the same calibre and strength as a harquebuss, but had a longer barrel. Meyrick, *on Ancient Armour*, iii. 27.

CURSE, *v.*
Curse, *n.*
Cu'rsed, *adj.*
Cu'rsedly,
Cu'rsedness,
Cu'rser,
Cu'rsing, *n.*

Somner has A. S. *curs-an, plectere*, to torment or punish; and hence, *curs-ian*, to doom to punishment, to torment or torture. Skinner thinks, from the Lat. *cruciare*.

Curst is applied as an epithet to any ill-quality in excess; as ill-temper, malignity or maliciousness, vexatiousness, quarrelsomeness.

þe gode bisshop of Chestre *cursed* þis lik Geffray
His lif out of þis estre [i. e. estate] in *curying* went away.
R. Brunne, p. 123.

After þat Caÿin þe *cursede*. hadde cullede Abel.
Piers Ploukman. Vision, p. 179.

And dey they gonnen to dispise all new
Calling it traitour, enuious and worse
And bitterly the daies light they *corse*.
Chaucer. Troilus, book iii. fol. 175.

——————I trowe that he, that all his lif
Wifes hath ben, though that men woulde him rife
Into the herte, ne coude in no manere
Tellen so much sorwe, as I you here
Coud tellen of my wive's *cursednesse*.
Id. The Marchantes Tale, v. 9115.

Of *cursing* ought eche gilty man him drede
For *curse* wol ale right as assoiling saveth.
Id. The Prologue, v. 662.

This pope tho by all weye,
That he maie worthe of violence,
Hath sent the bulle of his sentence,
With *cursinge*, and enterdite.
Gower. Conf. Am. book ii. fol. 44.

The *curst* and crabbed carle that posies flings away
By this (perhaps) may find some cause with prettie floures to play.
T. C. H. in prayse of Gascoigne's Posies.

For alle that ben of the werkis of lawe ben undir *curs*. For it is writun, ech man is *cursid* that abidith not in alle thingis that ben writun in the book of the lawe to do tho thingis.
Wiclif. Galathies, ch. iii.

For as many as are under ye dedes of the law are under *malediction*. For it is wrytten *cursed* is euery man that continueth not in all thynges whych are wrytten in the boke of the lawe.
Bible, 1551.

In like maner sayth Solomon euen as a bird flying to an vncertayne place, and as any sparow flying in the ayer, so a *curse* in vayne cast out cometh on him who sent it. CURSE.
Barnes. Workes, fol. 375.

In the which time wee indured extreme stormes, with perpetual snow, where many of our men died with *cursed* famine, and miserable cold.
Hakluyt. Voyage, &c. M. Th. Candish, vol. iii. fol. 843.

Neither speke you *cursedly* vnto men that punysh you throughe ignoraunce, but rather glorifie you the Lorde God in your heartes, whiche to his seruauntes turneth all thynges into the best, whethersoeuer chaunseth loye or aduersitie.
Udall. 1 *Peter*, ch. iii.

And the more to shew his *cursednesse*, when the wyse men, that were banish, went out at one gate, there entered in at another gate all unthriftes, the whiche by Tytus his brother, had been banyshed and exiled. *Golden Boke*, D. 4.

But no man of you suffre as a mansleer, either a theef, either a *curser*, either a desirer of othere mennes goodis.
Wiclif. 1 *Peter*, ch. iv.

That is, he that keepeth them shall haue his life glorious according to all the promises and blessings of the law, and shall auoyde both all temporal punishments of the law & all the threatnynges and *cursinges* also. *Tyndall. Workes*, fol. 9.

Then after he [Anniball] had *cursed* the person of Prusias and his own realme, and called upon the Gods, protectors of the law of hospitalitie, to bear witnesse how hee had violated his faith and broken promise with him, he set the cup of poysone to his mouth, and drank it of. *Holland. Livius*, fol. 1056.

Suf. A plague vpon them: wherefore should I *curse* them?
Would *curses* kill, as doth the mandrakes grone,
I would inuent as bitter searching termes,
As *curst*, as harsh, and horrible to heare,
Deliver'd strongly through my fixed teeth,
With full as many signes of deadly hate,
As leane-fac'd Enuy in her lothsome caue.
Shakspeare. Henry VI. Second Part, fol. 136.

I will, I will, if your courageous force,
Dareth so much as it can well performe,
Teare out his *cursed* heart without remorse,
The nest of treason false and guile enorme.
Fairfax. Godfrey of Boulogne, book viii. st. 71.

He [God] is perpetually destroying it [sin] and will at last make that it shall be no more at all but in the house of *cursing*, the horrible regions of damnation.
Taylor. On Repentance, sec. 2. ch. v.

Beat. Too *curst* is more then *curst*. I shall lessen God's sending that way: it is said, God sends a *curst* cow short hornes, but to a cow too *curst* he sends none.
Shakspeare. Much Ado about Nothing, fol. 104.

I pray you master parson (quoth he) how goeth crowns now with you, whereat the priest was abashed, and would rather have lost a crowne indeede, then that his crowne should have beene so *curstly* and in such wise taunted.
Wilson. Arte of Logike, fol. 8.

The rather for I earnestly beseech,
Touch you the sowrest points with sweetest tearmes,
Nor *curstnesse* grow to th' matter.
Shakspeare. Antony and Cleopatra, fol. 345.

Some wish a husband-fool; but such are *curst*,
For fools perverse of husbands are the worst.
Dryden. The Wife of Bath's Tale.

As rash swearing, so all *cursing* also, is a part of that prophanation of the name of God, which is forbidden in the text. For when men in common conversation, use *curses* and imprecations against their brethren; as passionate and profane men are frequently apt to do; it is either with an intention and desire that mischief might befall them; which is both malicious towards men; and also irreligiously thinking light of the *curse* of God: or else it is without any such desire or intention; and then it is profanely supposing God to have no regard to their behaviour.
Clark. Sermon 125. vol. ii.

It now remains for you to school your child,
And ask why God's anointed he revil'd;
A king and princess dead? did Shimei worse?
The *curser's* punishment should fright the *curse*.
Dryden. The Hind and the Panther.

If this toil was inflicted as a *curse*, it is as might be expected from the *curses* of the Father of all Blessings; it is tempered with many alleviations, many comforts.

Burke. On a Regicide Peace.

CU'RSORY, *adj.* } Low Lat. *cursorius*, from *cur-*
CU'RSORILY, } *rere*, *cursum*, to run.
CU'RSELARIE. } Running; running over without stop or stay, hastily, swiftly; and thus, superficial, careless, heedless.

The regard I have ever borne in my mind towards men of eminency, in times past born and bred among us, led me at my leisure hours to make *cursory* collections out of my books and papers of their lives and actions.

Life of Sir Thomas Smith. Epis. Ded., p. 3.

FRANCE. I haue but with a *curselarie* eye
O're-glanc't the articles.

Shakspeare. Henry V. fol. 93.

After having cast a *cursory* glance over it, and shook my head twice or thrice at the reading of it, I twisted it into a kind of match and litt my pipe with it. *Spectator*, No. 46.

You must not read or hear them, as people are apt to do, so carelessly and *cursorily*, as if there was no great matter in them; but ye must attend to them with the same care and diligence, as if you heard them at the same time uttered by a voice from heaven, or published as the law was upon mount Sinai, with thundering and lightning. *Bishop Beveridge. Sermon* 38.

It is an advantage to all narrow wisdom and narrow morals, that their maxims have a plausible air; and on a *cursory* view, appear equal to first principles. They are light and portable.

Burke. On the present Discontents.

CURT, *adj.* } Fr. *cour*, *courte*, short; Fr. *court-*
CU'RTAIL, *v.* } *ault* or *courtaut*. *A curtal*, from
CU'RTAL, *n.* } the Lat. *curtatus*, shortened, from
CU'RTAIL, *adj.* } *curtus*; Gr. κύρτος, cut short. The
CU'RTAILER, } termination *al* in English, appears
CU'RTAILING, } to have been borrowed from the
CU'RTLY. } Fr. *ault*; and this completely discountenances the idea that *tal* is *tail*. Menage renders *courtaut* by *curtaldus*.

"Fr. *cour*; short, brief, succinct, cutted." Cotgrave.

To *curtail*, to shorten, to cut off; to lop off; to abridge, to abbreviate.

FLY. Old Peck.
TIP. *Maestro del campo*, Peck! his name is *curt*,
A monosyllable, but commands the horse well.

Ben Jonson. The New Inn, act iii. sc. 1.

Here Mr. Licenciat shew'd his art; and hath *curtly*, succinctly, and concisely—epitomiz'd the long story of the captive.

Gayton. Notes on Don Quixote, iv. 15.

CLOT. When a gentleman is disposed to sweare; it is not for any standers by to *curtall* his oathes. Ha?

Shakspeare. Cymbeline, fol. 376.

I that am *curtail'd* of this faire proportion,
Cheated of feature by dissembling nature.

Id. Richard III. fol. 173.

PIST. Hope is a *curtall*-dog in some affairs.

Id. Merry Wives of Windsor, fol. 44.

OLD LAF. I'd giue bay *curtall*, and his furnature,
My mouth no more were broken then these boyes,
And writ as little beard.

Id. All's Well that Ends Well, fol. 237.

But matters of this moment, as they were not to be decided there by those divines, so neither are they to be determin'd here by essays and *curtal* aphorisms, but by solid proofs of Scripture.

Milton. An Answer to Eikon Basilikè.

This conduct of theirs—served to shew that the Latins had not been interpolators of the creed, but that the Greeks had been *curtailers*.

Waterland. On the Athanasian Creed, ch. x. sec. 21.

Scriblers send us over their trash in prose and verse, with abominable *curtailings* and quaint modernisms. *Swift.*

Have the burthens of the war compelled them to *curtail* any part of their former expenditure, which I have before observed, affords the only standard of estimating property as an object of taxation? *Burke. On a Regicide Peace.*

CURTAIL, says Archdeacon Nares, in the Forest laws was the dog of an unqualified person, the tail of which must be cut short, both as a mark, and because it (the tail) was considered to assist the beast in running. When applied to a horse it was more usually spelt *Curtal*. Bancks, a celebrated Juggler in the time of Elizabeth and James I., had a celebrated horse of this name, which was otherwise known as *Morocco*. He appears to have been trained to the performance of numerous tricks; and if we may judge by the frequent mention of him by contemporary Wits, his docility excited no little wonderment. Shakspeare (*Love's Labour Lost*, i. 2) mentions him as "the dancing horse." Sir Walter Raleigh (*History of the World*, part i. 178) says Bancks, "would have shamed all the inchanters of olden times, for whosoever was most famous among them, he could never master or instruct any beast as he did his horse." Sir Kenelm Digby (*A Treatise of Bodies*, xxxviii.) observes, that he "would restore a glove to the due owner, after the master had whispered the man's name in his ear; would tell the just number of pence in any piece of silver coin, newly shown him by his master," and perform other achievements too natural to be viewed with pleasure. Hall (*Satire*, iv. 2) notices his "dumbe arithmeticke." One of his exploits is said to have been an ascent to the top of St. Paul's. (Decker's *Gul's Hornbooke*; Gayton's *Festivous Notes*, 289;) and Archdeacon Nares, (*Gloss. Bancks's Horse*,) has ascertained the date of this feat from the *Owle's Almanack*, (1618, p. 6,) to be 1601. Ben Jonson, who more than once alludes to this horse, has a passage in his 134th Epigram relative both to him and his master, which we trust is not to be understood literally:

Both which
Being beyond sea burned for one witch
Their spirits transmigrated to a Cat.

The *Double* CURTAIL was an ancient Bass instrument.

CURTANA, or CURTEN, (*Curtus ensis*,) a pointless Sword, which makes part of the Regalia used at the Coronation of the English Kings. It is considered as the principal of the three Swords which are borne before the Sovereign. The Sword of Spiritual Justice is placed on the right, and that of Temporal Justice on the left. The length of the blade is thirty-two inches, the breadth two; the handle, which is covered with fine gold wire, is four inches long; the pommel one inch and three-fourths, this, with the cross, is of gilt steel; the length of the cross being nearly eight inches. The scabbard is covered with a rich brocaded cloth of tissue, with a gilt ferrell, hook, and chape.

It is scarcely necessary to observe, that in real History, as well as in Romance, there were few heroes who did not bestow on their Swords a distinctive name. Like many other of the Royal ornaments of England, this is pretended to be derived from the Confessor; and the Sword of so pacific a Prince is very properly typified as that of Mercy. It does not appear that a similar usage prevails in the ceremonial of any other Coronation, though the Sword of Power and of Justice is in most considered as an essential ornament. The Emperors of Constantinople were preceded by a sword and a lamp, which were considered types of their

RTANA — RTAIN.

power and their good works. There are two Swords which are used at the Imperial Coronations in Germany; one of them, kept at Nuremberg, which is said to have been presented by an Angel to Charlemagne; the other, distinguished as the ordinary Sword of Charlemagne, kept at Aix la Chapelle. It appears that in creating Knights at his Coronation, the Emperor is content to employ that Sword which does not pretend to a celestial origin. There is a yet more celebrated Sword of Charlemagne, the famous *Joyeuse*, used in the French Coronations, the gift of Leo III. to that Emperor, and hence sometimes called the Sword of St. Peter. The Constable of France holds this in his hand during part of the Coronation, on the return from the church, and at the feast. Its common name of *Joyeuse* seems merely to be given to it, as it is used only on days of rejoicing.

Curtana was borne at the Coronation of Henry III. by the Earl of Chester; and the reason for the selection of this Nobleman, is that given by Matthew Paris, (*Ann.* 1236, vol. ii. 421, ed. 1640,) *in signum quòd Comes est Palatii et Regem si oberret habet de jure potestatem cohibendi.* At the Coronation of George III., it was borne by the Earl of Lincoln; and at the last Coronation, by the Duke of Newcastle. In these, as on former occasions, the three Swords followed St. Edward's Staff, the Spurs, and the Sceptre with the Cross.

CU'RTAIN, *v.* / Cu'RTAIN, *n.* / Cu'RTAIN-LECTURE, / Cu'RTAIN-SERMONS. } Fr. *courtine*; It. and Sp. *cortina*. Skinner suggests that *curtain* may be from *court*; as the Lat. *aulæum*, from *aula*. Applied, in *Fortification*, to the work which joins the flank of one bastion or demibastion to another.

To *curtain*, to surround with *curtains*; i. e. something placed or hung, or suspended for ornament, shade or shelter.

They [our foes] came in time, but cursed time for mee,
They came before the *curtaine* raysed were,
One onely foote aboue the trenches there.
Gascoigne. The Fruites of Warre.

On the Frenche kynge's right hand, was another trauerse siled, and *cortened* all of white satten.
Hall. Henry VIII. The twenty-fourth Yere.

——— Now o'er the one halfe world
Nature seemes dead, and wicked dreames abuse
The *curtain'd* sleepe.
Shakspeare. Macbeth, fol. 136.

So when the sun in bed,
Curtain'd with cloudy red,
Pillows his chin upon an orient wave.
Milton. Ode 24.

So soon as day forth-dawning from the east,
Night's humid *curtain* frō the heauens withdrew,
And early calling forth both mā and beast,
Commanded them their daily works renew.
Spenser. Faerie Queene, book v. can. 5.

The other [Parrhasius] had drawn onely a *curtaine* such as they use to have before pictures to keep them from the dust; which *curtaine* looked so like a true *curtaine*, that Zeuxis being proud of the judgement of the birds, bad him now to remove his *curtaine* to show his picture; but being quickly aware of his errour, with a kind of noble bashfulnesse granted the prise to his adversary, confessing it was more to deceive a workman than a bird. *Harrington. Orlando*, book xxxiii. note.

Thus boasted he, but in their trenches deepe
The bidden squadrons kept themselues from scath,
The *curtaine* made of shields did well off keepe
Both darts and shot, and scorned all their wrath.
Fairfax. Godfrey of Boulogne, book xi. st. 37.

Nor letted she [Duchess of Orleans] (as who can let a woman to speake) to tell him his faults on both sides of his head, the duke could not hide what she too-well knew, and therefore sought to satisfie her with complements of kinde words, but the *curtaine-sermons* nightly enlarged vpon the same text, made him many times to lye awake with little deuotion (God wot) to heare, and often to rise when hee would faine have slept.
Speed. Henrie V. book ix. ch. xv.

CURTAIN — CURVE.

But in her temple's last recess enclos'd,
On Dulness' lap th' anointed head repos'd,
Him close she *curtains* round with vapours blue,
And soft besprinkles with Cimmerian dew.
Pope. The Dunciad, book iii.

And for my beauty, that, as time shall try;
But draw the *curtain* first, and cast your eye:
He look'd and saw a creature heavenly fair
In bloom of youth, and of a charming air.
Dryden. The Wife of Bath's Tale.

Though some, we find, are more discreet,
Before the world are wondrous sweet,
And let their husbands Hector:
But when the world's asleep they wake,
That is the time they choose to speak;
Witness the *curtain-lecture.*
Swift. Palinodia. Horace, book i. ode 16.

My best instructor, Sickness, shuts the eye
From vanity; she draws the *curtain* round
The couch, nor gives admittance to the world.
Thompson. Sickness, book i.

CURTISIA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-cleft; corolla, petals four; germen inferior; berry one-seeded.

One species, *C. faginea*, a lofty tree, native of the South of Africa. Thunberg.

CU'RTSY, / Cu'RTEOUS. } See Courtesy, in v. Court. *Courteous* or *curteous*, Chaucer writes *Curteis*; and applies it peculiarly (says Junius) to our Saviour Jesus Christ, *unus in omni vitâ mansuetus ac mitis, laborantibusque passim obvius atque expositus.*

At þe last he com & mad þe kyng homage,
Egbriht for his *curteisie* gaf him his heritage.
R. Brunne, p. 15.

For I have moche to say behinde,
How priestis han the peple pinde,
As *curteis* Christe yhath me kinde,
And put this matter in my minde.
Chaucer. The Plowman's Tale, part ii.

And thus the *curteis* Lord Jesu Crist ne woll that no good werk that men don be loste, for in somwhat it shal availe.
Id. The Persones Tale,

He was not onely *curteous*, wise and gentle, beyng daylie attendaunt at the *court*, but forward and fortunate in seruice abroade. *Hall. Edward VI. The sixth Yere.*

But that I read her life, do finde therein by fame
How cleare hir *curtesie* dyd shine in honour of her name.
Gascoigne. In prayse of a Gentlewoman, &c.

The homely villain *curt'sies* to her low,
And blushing on her, with a stedfast eye
Receives the scroll.
Shakspeare. Rape of Lucrece.

——— Old Nestor seeing it,
Rose and receiv'd him by the hand, and faine would have him sit.
He set that *curtesie* aside, excusing it with hast.
Chapman. Homer. Iliad, book ii. fol. 154.

CURVE, *v.* / Curve, *n.* / Curve, *adj.* / Curva'tion, / Cu'rvature, / Curvili'neal, / Curvili'near, *adj.* / Cu'rvity. } Lat. *curvus*, bowed; which Vossius thinks has the same origin as *curtus*, i. e. *κυρτὸς*. Æol. *κυρπὸς*. And *κυρτὸς*, Lennep deduces from *κεκύρται*, 3 per. perfect passive of *κύρ-ειν*, *incidere, impingere*. To curve, is To bow, to arch, to bend, to crook, to inflect, to reflect.

CURVE. A free body does naturally recede from a *curve* in the tangent.
Clarke and Leibnitz. Third Paper.

CURVET. And a line meeting the *curve* in one point, that produced does not fall within the *curve* is called a tangent to the *curve* in that point.
Maclaurin. Sir Isaac Newton's Philo. Discoveries, book ii. ch. v.

As for his session we must not look upon it as determining any posture of his body, corresponding to the *curvation* of our limb. *Pearson. On the Creed*, art. 6.

The power which acts on a planet that is nearer the sun is manifestly greater than that which acts on a planet more remote; both because it moves with more velocity, and because it moves in a lesser orbit, which has more *curvature*, and separates farther from its tangent, in arcs of the same length, than a greater orbit.
Maclaurin. Sir Isaac Newton's Philo. Discoveries, book iii. ch. iii.

Thus Sir Isaac Newton saw that the *curvilineal* motion of the moon in her orbit, and of any projectile at the surface of the earth, were phenomena of the same kind.
Id. Ib. book iii. ch. ii.

The gravity of the moon suggested to him the universal gravitation of matter; and so successful an account of her motion led him to explain all the *curvilinear* motions in the solar system, from the same principle. *Id. Ib.* book iii. ch. iii.

The joined ends of that bone and the incus receding, make a more acute angle at that joint, and give a greater *curvity* to the posture of the cesicles. *Holder. On Speech.*

But other Thracians, who their former name
Retain'd in Asia, fulgent morions wore
With horns of bulls in imitating brass,
Curv'd o'er the crested ridge.
Glover. Leonidas, book iv.

They have no furniture, except a few little blocks of wood, the upper side of which is hollowed into a *curve*, and which serve them for pillows. *Cook. Voyage*, book i. ch. xvii. vol. i.

CU'RVET, *v.* } Fr. *courbette*; It. *corvetta, corvet-*
CU'RVET, *n.* } *tare*. To leap as a horse does when drawn by the *curb*. See CURB.

Himself he on an earwig set,
Yet scarce he on his back could get,
So oft and high he did *curvet*,
Ere he himself could settle.
Drayton. The Court of Fairy.

Sometimes he trots, as if he told the steps,
With gentle majesty, and modest pride;
Anon he rears upright, *curvets* and leaps,
As who would say, "Lo, thus my strength is try'd."
Shakspeare. Venus and Adonis.

When on sporting it [a lamb] is set,
It will beat you a *curvet*,
And at every nimble bound
Turn itself above the ground.
Drayton. The second Nymphal.

Now I behold the steed *curvet* and bound,
And paw with restless hoof the smoaking ground.
Gay. Rural Sports.

Again I put him to make *curvets* backwards; I use then my outward rein, and keep my hand near my body; at each cadence that the horse makes, I make him feel a time, and mark one, and every time he comes to the ground I receive or catch him as it were in my hand.
Berenger. The History and Art of Horsemanship, vol. ii. p. 75.

The last Citation from Berenger explains something of the nature of a CURVET, which is considered the most difficult *air* in the *manege*. It is a leap up and a little forward; in which the horse raises both his fore legs at once, equally advanced, and as they are falling, raises his hind legs also in the same manner; so that all his legs are in the air at once, and as he sets them down, he marks but twice with them. Curvet has been derived, besides the Etymology given above, from the Sp. *corva*, a hock; because the horse bends his hocks, and throws his weight upon them in performing it. The old Italian masters called it *Ursata*, from its resemblance to the motion of a dancing bear.

CURULE, *adj.* a *curule* chair. A chair, so called because it was placed in the *chariot* (*currus*) of the Consul, and other Magistrates.

Uppon the very calands of Januarie, when he had sitten awhile upon his *curule* chaire of estate before the Temple of Jupiter Capitolinus, he resigned up the office, and substituted another in his place.
Holland. Suetonius. Octavius Cæsar Augustus, fol. 49.

No rods, nor chairs *curule* adorn the place
Nor purple magistrates the assembly grace.
Rowe. Lucan. Pharsalia, book iii.

The Roman Magistrates entitled to the SELLA CURULIS, were Dictators, Consuls, Censors, Prætors, and Ædiles Curules. These were termed *Noti*; their descendants *Nobiles*. Tarquinius Priscus introduced this Chair from Etruria. (Liv. i. 8.) Aulus Gellius (iii. 16) furnishes the derivation which we have given above; Lipsius is inclined to draw another from the Sabine City *Cures*. The Curule Chair is termed *δίφρον ἀφυλλόπους* by Plutarch, (*in Mario*;) in form it very much resembled the modern closing tray-stands; it was made to open and shut at pleasure; and it was the loosing of one of the bands, with which it was furnished for this purpose, which once occasioned a severe fall to Augustus, in the Theatre of Marcellus. Suet. *Octav.* 43. During the period of the Republic, no person was permitted to occupy two Curule Magistracies at the same time. Liv. xxxix. 39.

CUSCUTA, in *Botany*, a genus of the class *Tetrandria*, order *Digynia*, natural order *Convolvuli*. Generic character: flowers nearly sessile; corolla without scales; stigmas simple.

This genus of curious parasitic plants contains nine species. *C. Europæa*, and *C. epithymum*, are natives of England. *Eng. Bot.* 55 and 378.

CU'SHION, } Dutch, *kussen*; Ger. *keussen*;
CU'SHIONED, *adj.* } Fr. *coussin*; It. *coscino*. All, Skin-
CU'SHIONET, } ner thinks, from the Lat. *coxa*,
CU'SHION-DANCE, } *quia coxis*, i. e. *natibus substernitur*.
CU'SHION-SIDE. } Menage would prefer the Ger. verb *keussen*, but of the origin of that word he is ignorant; and Wachter confesses himself in the same predicament.

Chaucer writes, *Quisshen*.

She shette it, and to Pandare into gone
There as he sat, and looked into strete,
And downe she set her by him on a stone
Of iasper, vpon a *quisshen* of gold ibete.
Chaucer. Troilus and Creseide, book ii.

Then said the cardinal [Wolsey] what maister doctour, had you not a sufficient scope in the Scriptures to teach the people, but that my golden shooes, my pillers, my pollaxes, my golden *cusheons*, and my crosses did so sore offende you, that you must make us *ridiculum caput* amongst the people.
Barnes. Life, fol. 3.

The marchantes are carried in a closet which they call *delog*, in the which a man shall be very well accommodated, with *cushions* vnder his head, and couered for the defence of the sunne and raine, and there he may sleepe if he haue wil thereunto.
Hakluyt. Voyage, &c. M. Cæsar Frederich, vol. ii. part ii. fol. 237.

But when the said Otho began to be so saucy to dispossesse the bishops of their cities and lands which they had incroched into their hands, they could not beare that, but incontinent they put him besides the *cushion*.
Fox. Martyrs. Bishops of Rome advaunced by Emperours.

Hope and patience are two soveraigne remedies for all, the surest reposals, the softest *cushions* to lean on in adversitie.
Burton. Anatomy of Melancholy, fol. 331.

When a friend of his reprehended him for dancing beside his dignity (belike at some *cushen* dance) hee told him againe, *quid sapit interdiu, vix unquam noctu desipit*, he that is wise in the day, may dote a little in the night. *Id. Ib.* fol. 299.

Couchant upon these precious *cushonets*
Were thousand beauties and as many smiles,
Chast blandishments, and modest cooling heats,
Harmless temptations, and honest guiles.
Beaumont. Psyche, can. 6. st. 228.

A prude, at morn and evening prayer,
Had worn her velvet *cushion* bare;
Upward she taught her eyes to roll,
As if she watch'd her soaring soul.
Gay. The Mad Dog.

Suppose him now a dean complete,
Demurely lolling in his seat;
The silver verge, with decent pride,
Sunk underneath his *cushion-side*.
Swift. Horace. Epistle 6. book i.

The plump convivial parson often bears
The magisterial sword in vain, and lays
His reverence and his worship both to rest
On the same *cushion* of habitual sloth.
Cowper. The Task, book iv.

How many and doughty monarchs, in later and more polite ages, would have slept in cottages, and have worked in stalls, instead of inhabiting palaces, and being *cushioned* up in thrones, if this rule of government had continued in force.
Bolingbroke. Works. A Dissertation upon Parties.

CUSP, Cu'SPIDAL. } Lat. *cuspis*, a point, *ut a cæsu, cæspes, sic a* cusu, cuspis. Vossius. From *cudere, cusum*, to strike, to form or fashion by striking. Cocheram has "*Cuspedate*, to sharpen."

Full on his *cusp* his angry master sate,
Conjoyn'd with Saturn, baleful both to man.
Dryden. The Duke of Guise, act iv.

This enters and raiseth up into life and beauty the whole corporeal world, orders the lowest projection of life, viz. the real *cuspis* of the cone infinitely multiplied, awaking that immense mist of atoms into several energies, into fiery, watery, and earthly; and placing her magic attractive points, sucks hither and thither to every centre a due proportion, and rightly disposed number of those *cuspidal* particles.
More. Notes on Psych. p. 346.

In the citation given above from Dryden, CUSP is used in its Astrological sense, which is thus explained by Phillips in his *World of Worlds*; "The entrance of any House, or first beginning, which is the line whereon the figure and degree of the Zodiac is placed, as you find it on the Table of Houses."

CUSSONIA, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Araliæ*. Generic character: involucre none; calyx one-leaved, truncated, crenate; corolla, petals five, oblong, acute; fruit double, two-celled.

Two species, natives of the Cape of Good Hope. Thunberg.

CU'STARD, Cu'STARD-APPLE, Cu'STARD-COFFIN. } *Quasi gustard*; perhaps from *gustare*, to taste; because of the sweetnesse in taste. Minsheu. Skinner thinks it may have had the same origin as *Costard* (q. v.) namely the Dutch *kost, cibus*, and *aerd, natura*. Junius confesses that he once suspected it to be compounded of *cowes* and *tart!*

LAF. You have made shift to run into 't, bootes and spurres and all: like him that leapt into the *custard*.
Shakspeare. All's Well that Ends Well, fol. 240.

PET. Why thou saist true, it is a paltrie cap,
A *custard-coffen*, a bauble, a silken pie.
Id. Taming of the Shrew, fol. 224.

The inside of the fruit is full of a white soft pulp, sweet and very pleasant, and most resembling a *custard* of any thing, both in colour and taste: from whence probably it is called a *custard-apple* by our English.
Dampier. Voyage. Anno 1699.

She has no desire to be praised but for her cookery; nor wishes any ill to the rest of mankind, but that whenever they aspire to a feast, their *custards* may be wheyish, and their pie-crusts tough.
Johnson. The Rambler, No. 51.

CU'STODY, Cu'STODIAL. } Lat. *custodia*; also It. and Sp. A guard or watching, from *curo*, as Perottus thinks;—Vossius; who adds, or rather from *con*, and *adsto*, q. d. *Coastes*.

Guard or safe-keeping, (and, consequently, imprisonment,) preservation, security, care, charge.

It neither was reason nor is any wise to be suffered, that the young king their master and kinesmanne, shoold bee in the hands and *custodye* of his mother's kinred, sequestred in maner frō theyr companie & attendance.
Sir Thomas More. Workes, fol. 40.

Beg thou, or borrow, to make vp the summe,
And line: if no, then thou art doom'd to die:
Taylor, take him to thy *custodie*.
Shakspeare. Comedy of Errors, fol. 88.

OTH. I'le know thy thoughts.
IAGO. You cannot, if my heart were in your hand,
Nor shall not, whilst 'tis in my *custodie*.
Id. Othello, fol. 824.

CIC. ——————— Fathers
Is it your pleasures they shall be committed
Unto some safe, but a free *custody*,
Untill the senate can determine farder?
Ben Jonson. Catiline, act v.

Lest memory unused might so fail, they permitted not commission of their lectures and instructions to the *custody* of writing, but delivered all in a multitude of verses and Pythagorean precepts, exactly imitating the Cabalists.
Selden. On Drayton. Poly-olbion, song 10.

Which business being over, the house ordered the sergeant at arms to deliver those of the king's judges who were in his *custody*, into the hands of the lieutenant of the Tower.
Ludlow. Memoirs, vol. iii. p. 39.

Ecclesia commendata, so called in contradistinction to *ecclesia titulata*, is that church, which for the *custodial* charges and government thereof, is by a revocable collation concredited with some ecclesiastical person, in the nature of a trustee.
Letter to the Bishop of Rochester, (1772,) p. 2.

Nor is it more difficult to apprehend why the representation of his being made unto us sanctification and redemption is particularly directed to the Jews; for in their *custody* were deposited the living oracles, which explain that state and condition of man, from whence arises the necessity of sanctification and redemption.
Warburton. Works. Sermon 5. vol. ix.

CU'STOM, *v.* Cu'STOM, *n.* Cu'STOMABLE, Cu'STOMABLY, Cu'STOMARY, Cu'STOMARILY, Cu'STOMARINESS, Cu'STOMED, Cu'STOMER, Cu'STOM-HOUSE, Cu'STOM-SHRUNK. } Fr. *coustume*; It. *costume*; Sp. *costumbre*; Lat. *consuetudo*, from *consuere*, (*con* or *cum*, and *suere*,) which Martin conjectures is, *usu ire*, to go by use, to pass usually; and thus, to do any thing usually, habitually, regularly, constantly. The verb to *Accustom* is now commonly used.

Certain taxes, tributes or imposts usually demanded and paid; certain laws established by long continued use. Any usual dealing, any regular or habitual practice. "Fr. *coustume*; *custom*, use, usage, wont, guise, habit, manner; continual, fashion or order; also, an ancient law or *custom* in a country; also, a *custom*, imposition, tax, toll, service or tenure." Cotgrave.

CUSTOM.

And he wuste, that vr Louerd in the Gospel tolde,
That he himsulf was sothnesse, & *costume* nout,
Ther wore luther *costumes* he nolde graunti nouzt.
R. Gloucester, p. 470.

And every night and day was his *custume*
(Whan he had leiser and vacation
From other worldly occupation)
To reden in this book of wikked wives.
Chaucer. The Wif of Bathes Prologue, v. 6264.

This Nero had eke of a *custumaunce*
In youth agains his maister for to rise.
Id. The Monkes Tale, v. 14429.

That to doen euill is *customere*
And of naught els taketh hede.
Id. The Romant of the Rose.

Pluto these othes ouer all
Swore of his common *customance.*
Gower. Conf. Am., book v. fol. 90.

Now leie thy conscience in weight,
My good sonne, and shriue the here,
If thou were euer *customere*
To fals semblant in any wise.
Id. Ib. book ii. fol. 38.

What wise man, I pray you, would euer counsaile this thing, knowing that ill is not to be done, that good may come thereof? and especially where the ill is euident inough, and the good neither certaine nor *customed* to followe commonly vpon the deed.
Vives. Instruction of a Christian Woman, M. 7.

And if it bee found, that any goods, wares, or merchandises whatsoeuer be arrived and discharged in the countries aforesaid, belonging to our saide subiectes, not lawfully *customed* and acquited towarde vs of our right and *custom* for which, &c.
Hakluyt. Voyage, &c. Edward IV. Patent, vol. i. fol. 210.

But it is a *custom* to ghou that I delyure oon to ghou in Pask, therfore wolen ghe that I delyuere to ghou the King of the Iewis?
Wiclif. Jon, ch. xviii.

Ye haue a *custome*, that I should delyuer you one louse at Easter. Wyll ye that I louse vnto you the Kyng of the Jewes?
Bible, 1551.

Marke wel and remẽbre that we spake here of belief, & faith, not of workes and deedes, lest, after hys *customable* fashion, letting the beliefe go by, he answere vs with rayling vpon mannes maners, and so leade yᵉ reader more than a mile frō the matter.
Sir Thomas More. Workes, fol. 389.

Manny tymes of wyse yonge men cometh olde fooles. And of younge fooles *customably* commeth wise old men.
Golden Boke, G. 9.

Moreouer also of late, the *customers* of the smal or petty *custome* & of the subsidie doe demand of them *custome* for kersey-clothes equal vnto the *custome* of those clothes, that be ful assize.
Hakluyt. Voyage, &c. Henry IV. Prussian Ambassador, vol. i. fol. 172.

Further, as he passed by the *custome-house*, he espyed sitting there a certayne publicane, called Matthewe, whiche also was named Leuy, the sõne of Alpheus.
Udall. Matthew, ch. ix.

Those ships which when you went, put out to sea,
Both to our Greenland, and Virginia,
Are now return'd, and, *custom'd* have their freight,
Yet you arrive not, nor return me aught.
Drayton. Of his Lady's not coming to London.

Now Morn her rosie steps in th' eastern clime
Advancing, sow'd the earthe with orient pearl
When Adam wak't, so *custom'd*, for his sleep
Was aerie light.
Milton. Paradise Lost, book v. l. 3.

No common winde, no *customed* euent,
But they will plucke away his naturall cause,
And call them meteors, prodigies, and signs.
Shakspeare. John, fol. 13.

Certaine priuate cittizens, farmers of the *custom-house* in December, 1607, lent the K. one hundreth & twenty thousand pound for one whole yeare, which som his Maiestie most graciously & carefully repaid in December 1608, with full royall consideration for the same.
Stow. James. Anno 1609.

Now *custom* differeth from use, as the cause from the effect: in that *custom* is by use, and continuance established into a law.
Ralegh. History of the World, book ii. ch. iv. sec. 14.

The Lord Scales horse by chaunce or by *custome*, thrust his pike into the nosethrilles of the horse of the Bastard, so that for very paine he mounted so high, that he fell on the one syde with his mayster.
Grafton. Edward IV. The seventh Yere.

His *customable* and watchful care of the king and the state still boiling within him, and having, with the blessed virgin Mary, laid up in his heart the king's so strange judgment and construction of it, he could not be at rest, till he had acquainted the foresaid lords what had passed between the king and him in private.
State Trials. Of Conspirators in the Gunpowder Plot.

And to these temples have the Christians *customably* used to resort from time to time, as unto meete places where they might with common consent praise and magnifie God's name.
Homilies. Part 2. Sermon of the Place and Time of Prayer.

And afterwards continuallie for the space of six weeks, about the middest of the daie, clouds *customablie* rose, and sometimes they continued both daie and night, not vanishing awaie at all.
Holinshed. Richard II. Anno 1391.

Whereas he [Hippias] retained the same with abundant security, both for the *customary* fear in the people, and diligence in the guard; and was not to seek, like a younger brother, to whom the government had not continually been familiar.
Hobbes. Thucydides, book vi.

But to call God to witness to an untruth or a lye perhaps, or to appeal to him on every trivial occasion, in common discourse, *customarily*, without any consideration of what we say, is one of the highest indignities and affronts that can be offered him, being a sin to which there is no temptation.
Ray. On the Creation, part ii.

Taylor, bestow thy absence upon us; and be not prodigall of this secret, but to a deare *customer*.
Ben Jonson. Cynthia's Revells.

And first, let me call you to this mart, which holds both now, and ever; if ye love yourselves, be ye *customers* at this shop of heaven; buy the truth.
Hall. The Best Bargain, vol. i. fol. 473.

So the Normans, whose terms were once not so much differing from ours, might not hold their assizes, or times of law, but after Easter and harvest; (that is after the times of holy Church and public necessity) as appeareth by their *customary*.
Spelman. Part 2. The Originals of the Terms, ch. xiv. fol. 85.

Such precedents are numberless, we draw
Our right from *custom; custom* is a law
As high as heaven, as wide as seas or land;
As antient as the world is our command.
Lansdown. Beauty and Law.

Where I enforce the conjunction of prayer with fasting, people must not think, that by prayer is meant a formal *customary* attendance upon the offices of the church, undertook only out of a sordid fear of the eye of man, and then performed with weariness and irreverence, with seldom access, and more seldom devotion.
South. Sermon 5. vol. ix.

If we use the same sincerity and industry, in recommending ourselves to God, and our Lord Jesus and procuring our own everlasting salvation, that men ordinarily and *customarily* do, in prosecuting any great affair in the world, that they have set their hearts upon: I say, whosoever is thus far sincere as to his spiritual concernments, shall undoubtedly go to heaven.
Sharp. Works. Sermon 6. vol. iii.

A vice, which for its guilt may justify the sharpest, and for its *customariness* the frequentest invectives which can be made against it.
Government of the Tongue.

This fellow had an admirable knack of fishing out the secrets of his *customers*, as they were under his hands. He would rub and lather a man's head, till he had got out every thing that was in it.
Guardian, No. 71.

About the same time, Mr. Fortrey, a gentleman of our king's privy chamber, computes from the *custom-house*, (*et multa cadunt inter calices, &c.*) that besides all commodities, we export for France, the overplus of our expences for their wines amounted to £1,600,000. sterling yearly.
Boyle. Letters from several Persons.

One morn I miss'd him on the *custom'd* hill.
Gray. Elegy. Written in a Country Churchyard.

The influence of *custom* is indeed such, that to conquer it will require the utmost efforts of fortitude and virtue; nor can I think any men more worthy of veneration and renown than those who have burst the shackles of habitual vice.
Johnson. The Rambler, No. 155.

As to the *imperfectum*, it is sometimes employed to denote what is usual and *customary*. The reason of this is, that whatever is *customary*, must be something which has been frequently repeated. *Harris. Hermes*, book i. ch. vii.

To conclude the account of sales, their great *customer*, the Nabob of Arcot himself and his lawful succession, has been sold to his second son, Amir ul Omrah, whose character, views, and conduct, are in the accounts upon your table.
Burke. On Mr. Fox's East India Bill.

The ancient staple of our island in which we are clothed, is very imperfectly to be traced on the books of the *custom-house*.
Id. On a Regicide Peace.

It was drawn from the old Germanick or Gothick *custumary*; from feudal institutions which must be considered as an emanation from that *custumary*; and the whole has been improved and digested into system and discipline by the Roman law.
Id. Ib.

CUSTOS, the name of several English Law Officers, &c.

Custos Brevium, an Officer belonging to the Court of Common Pleas, originally appointed by letters patent, 14th of March, 29 Charles II., to Henry Earl of Litchfield, and Charlotte Countess of Litchfield, his daughter. The general business of the Office is to record and file all original and judicial Writs and inquisitions, taken by virtue of any such Writs; all *Posteas* after verdicts and fines, with the Concords signed by the parties acknowledging the same, and the Writs of *Dedimus Potestatem*, issued for taking the acknowledgment of such fines, with the transcripts thereof, and which fines are entered in a book of the same term. The respective Writs of Covenant are returnable, and the proclamations of such fines are indorsed upon the Captions, according to the Statute; to record and file all Writs of Entry and Summons, Writs of *Dedimus Potestatem*, for taking Warrants of Attorney thereupon and Writs of Seisin, to support recoveries suffered in the Court; to make copies and exemplification of the Writs and Records when required, and to return Writs of *Certiorari*, directed to the *Custos Brevium*, or removing any Writs or other Records into the Court of King's Bench. There is also in the Court of King's Bench a *Custos Brevium*, who is the Keeper of the Writs and Records of that Court.

Custos Placitorum Coronæ, an Officer who seems to be the same with him now called *Custos Rotulorum*. Brac. lib. ii. ch. v.

Custos Rotulorum, an Officer to whose custody the Records or Rolls of the Sessions of the Peace are committed; he is always a Justice of the Peace and Quorum in the County wherein he hath his office; and being the principal Civil officer in the county, as the Lord Lieutenant is the chief in Military command, he is generally chosen on account of his wisdom, countenance, or credit. The appointment of *Custos Rotulorum* was originally vested in the Chancellor; but by the 37 Henry VIII. ch. i., it was enacted, that no person should be nominated *Custos Rotulorum*, but such as should have a bill signed with the King's hand for the same. By the 3 and 4 Edward VI. ch. i. the appointment was taken from the King, and again vested in the Chancellor; but by the 1 William and Mary, ch. xxi., the power of appointment, as given to the King by the 37 Henry VIII. ch. i., was restored. The *Custos Rotulorum* appears to be rather a Ministerial than Judicial officer. The situation of Clerk of the Peace is in his gift.

Custos Spiritualium, the person who exercises Spiritual or Ecclesiastical jurisdiction in any Diocese, during the vacancy of the See; by the Canon law, the appointment is vested in the Dean and Chapter; but by prescription, in the Archbishop of the Province. If the Archiepiscopal See is vacant, the Spiritual jurisdiction is committed to the Dean and Chapter; the Guardian of the Spiritualities may be either Guardian in law, *jure magistratûs*, as the Archbishop is of any Diocese in his Province, or Guardian by delegation, being the person whom the Archbishop or Vicar General doth for the time appoint. The *Custos Spiritualium* hath full Ecclesiastical jurisdiction in the Courts; power of granting licences and dispensations, probate of Wills, &c. during the vacancy; and of admitting and instituting Clerks presented, but cannot consecrate, ordain, or present to any Benefice.

Custos Temporalium, the person to whose custody a vacant See or Abbey was committed by the King as supreme Lord, who, as a steward of the goods and profits, was to give accounts to the escheator, and he into the Exchequer; his trust continued till the vacancy was supplied by a successor, who obtained the King's writ, *De Restitutione Temporalium*, which was commonly after, though sometimes before, Consecration.

CUT, *v.*
CUT, *n.*
CU'TTEDLY,
CU'TTINGS,
CU'TLER,
CU'TLERY,
CU'TLET,
CU'TTER,
CU'TTING, *n.*
CU'TTING, *adj.*
CUT-GLASS,
CUT-PURSE,
CUT-TAIL,
CUT-THROAT, *n.*
CUT-THROAT, *adj.*
CUT-WORK.

The French have *couper*, which Cotgrave explains "to *cut*, hack, slash, hew; to cleave, slit, launce, make an incision; also, to carve, grave, intail; also, to prune, lop or fell trees, mow corne or grasse; also, to divide, sunder, separate." The French *couteau* or *cousteau*, also, is "a knife or whittle; also, any such *cutting* instrument." *Couper* is derived by French Etymologists from the Gr. κόπτ-ειν, to *cut*, and *couteau*, from the Lat. *cultellus*; and from one of these, Skinner thinks the English verb, to *cut*, (written by Wiclif to *kit*,) may have been formed; it is generally applied when the separation is made by a keen or sharp instrument, as a knife, a sword, scissars; to cleave or separate by swift motion, to wound sharply, keenly, deeply.

To draw *cuts*, is an expression familiar to our oldest Writers, (see the Example from Lord Berners's Froissart,) and means to draw lots, being papers cut of unequal length; a custom still preserved in some of our public schools, when a whipping is to fall on only a portion of the offenders out of a mass.

Cut and long tail is explained by Archdeacon Nares as meaning to include all kinds, curtail dogs, sporting dogs, and others. See CURTAIL.

A *Cutter* is explained by Coles as a *Cuttor* (a Robber,) *gladiator, latro.* Thus the Hero of Cowley's *Cutter of Coleman Street* is a town adventurer; or, as he is aptly expressed in the *Dramatis Personæ*, "a merry, sharking fellow about the town, pretending to have been a Colonel in the King's Army."

A kind of vessel is called *Cutter*, perhaps because it *cuts* swiftly through the water. Du Cange gives

CUT. the word *Cota, navis species*; but in the only passage which he quotes, he decides that the reading should be *coca seu cocca*, and not *cota*.

His wiif walked hym with, with a long gode
In a *cuttede* cote *cutted* ful heyghe.
Piers Ploukman. Crede, D. 1.

By Crist quath a *kitte pors*. ich have no kyn here.
Id. Vision, p. 125.

Wherefore I rede, that *cut* among us alle
We drawe, and let see wher the *cut* woulde falle.
And he that hath the *cut*, with herte blith,
Shal rennen to the toun.
Chaucer. The Pardoneres Tale, v. 12727.

Sire knight, (quod he) my maister and my lord,
Now draweth *cutte*, for that is min accord.
Id. The Prologue, v. 840.

And now the axe is put to the roote of the tree, therfor every tre that makith not good fruyt schal be *kit* down and schal be cast into the fyr. *Wiclif. Matthew*, ch. iii.

And now an axe is sett to the roote of the tre, and therfore every tre that makith not good fruyt schal be *kitt* doun, and schal be cast into the fier. *Id. Luke*, ch. iii.

Christ and his apostles warne vs that such shall come, and commaund vs to turne our eyes from their visures, and consider their frutes, and *cut* them vp and loke within whether they be sound in the core and kernell or no, and gene vs a rule to try them by. *Tyndall. Workes*, fol. 245.

Thou wilt graunt me that euery asse hath two eares; nay mary will I not maister, quod the boye, Why so boye, quod he, Marye, mayster, quod he, for some asse maye happe to haue neuer one, for they may be *cutte* bothe.
Sir Thomas More. Workes, fol. 264.

Therefore Symound Petir hadde a swerd and drough it out, and smoot the seruaunt of the bisschop and *kittide* of his right eere. *Wiclif. Jon*, ch. xxvi.

Simon Petir had a sweard and drue it, and smoote the hye preestes seruaunte and *cut* off his right eare. *Bible*, 1551.

And ther they were at a longe stryf whiche of them shulde go, and so at last they acorded and sware, and made promyse before all the company, that they shulde drawe *cuttes*, and he that shulde haue the longest strawe shulde go forthe, and the other abyde.
Froissart. Cronycle, vol. i. ch. 288.

And beholde, I sente for thy seruantes, the *cutters* and hewers of tymbre. *Bible*, 1551. 2 *Chronicles*, ch. ii.

And suche thynges, although the euangelists foreknew them by the spirite of prophesie, yet certes vnder the persones & names of the apostles, they cannot be reported, but both coldly and also *cuttedly*. *Udall. Preface of Erasmus*, fol. 18.

Anon he remembered hys chaste vow they saye, and so turned his face to the dore dismembering himselfe with a sharpe *cuttle* in her presence. *Bale. English Votaries*, part ii. p. 18.

We haue brought before you, my lords, into this place of iudgement, not a theefe, but an extortioner and violent robber, not a common ruffine, but a most cruell *cut-throte*, such as if a man should rake hell for one, he could not finde the like.
Wilson. The Arte of Rhetorike, fol. 189.

This *cut-throte* life (me seems) thou should'st not like,
And shunne the happie hauen of meane estate.
Gascoigne. The fruite of Reconciliation.

And neuer carde, for silks or sumpteous cost,
For cloth of gold, or tinsel figurie,
For baudkin, broydrie, *cut-works*, nor conceits.
Id. The Steele Glas.

TIM. I haue a tree which growes heere in my close,
That mine owne vse inuites me to *cut* downe,
And shortly must I sell it.
Shakspeare. Timon of Athens, fol. 97.

——— If he had so offended
He would haue waigh'd thy brother by himselfe,
And not haue *cut* him off.
Id. Measure for Measure, fol. 80.

GRU. Error, i'th bill sir, error i'th bill? I commanded the sleeues shoulde be *cut* out and sow'd vp againe, and that I'le proue vpon thee, though thy little finger be armed in a thimble. CUT.
Shakspeare. Taming of the Shrew, fol. 224.

But the contention between these two persons, was as a deep *cut*, which divided the city into two factions; of which the one was called the nobility, and the other the commonality.
Sir Thomas North. Putarch, fol. 137. *Pericles.*

——— And then the justice
In fair round belly, with good capon lin'd
With eyes seuere, and beard of formall *cut*.
Shakspeare. As You Like it, fol. 194.

There oft the Indian herdsman shunning heate,
Shelters in coole, and tends his pasturing herds
At loopholes *cut* through thickest shade.
Milton. Paradise Lost, book ix. l. 1110.

But cloud instead, and ever-during dark
Surrounds me from the chearful ways of men
Cut off, and for the book of knowledg fair
Presented with a universal blanc
Of Nature's works to me expung'd and ras'd,
And wisdome at one entrance quite shut out.
Id. Ib. book iii. l. 47.

——— Never saw I figures
So likely to report themselves; the *cutter*
Was as another nature dumbe, out-went her,
Motion and breath left out.
Shakspeare. Cymbeline, fol. 379.

ROS. Indeed, there is fortune too hard for nature; when fortune makes nature's naturall the *cutter*-off of nature's wit.
Id. As You Like it, fol. 186.

The weedes of heresie being growne vnto such ripenesse as that was, doe, euen in the verie *cutting* downe, scatter oftentimes those seeds which for a while lie vnseene and buried in the earth, but afterward freshly spring vp againe no less pernicious then at the first. *Hooker. Ecclesiastical Polity*, book v. fol. 273.

Secondly, by imposing continual taxes and tallages, worse then Irish *cuttings*, being sometimes the tenth, sometimes the fifteenth sometimes the third, sometimes the moiety of all the goods both of the clergy and laiety.
State Trials. The case of Parmentre in Ireland.

By this wine, I'le thrust my knife in your mouldie chappes, if you play the sawcie *cuttle* with me.
Shakspeare. Henry IV. Second Part, fol. 88.

GRA. Aboute a hoope of gold, a paltry ring,
That she did giue me, whose poesie was
For all the world like *cutler's* poetry
Vpon a knife; 'loue mee, and leaue mee not.'
Id. Merchant of Venice, fol. 183.

When as Dorilus arose,
Whistles *cut-tail* from his play,
And along with them he goes.
Drayton. The Shepherd's Sirens.

At the town of Hala, likewise another preacher, named M. George, for ministring in both kinds, was martyred and slaine of a like sort of *cut-thrates*, set up by monks and friers to murther him.
Foxe. Martyrs. Henry Stutphen, George of Hala, &c., Martyrs.

You call me misbeleeuer, *cut-throte* dog,
And spet vpon my Jewish gaberdine
And all for vse of that which is mine owne.
Shakspeare. Merchant of Venice, fol. 166.

LAP. My surplus, with one sleeve, you shall find here,
For to that dearth of linnen you have driven me;
And the old *cut-work* cope, that hangs by geometry.
Beaumont and Fletcher. The Spanish Curate, act iii. sc. 2.

Brewers Straights are sometimes passed by small ships that sail from Batavia to Malacca, because for them it is a nearer *cut*, than to run so far as Pulo Timaon, or the Straights of Sincapore.
Dampier. Voyage. Anno 1688.

I am apt to think that the poesy was written originally upon the ax, like those which our modern *cutlers* inscribe upon their knives. *Spectator*, No. 58.

CUT. — TICLE.

I cannot express to you with what indignation I behold the noble spirit of gentlemen degenerated to that of private *cut-purses*. *Tatler*, No. 65.

I remember inquiring of a skilful *cutter* of diamonds and polisher of gems, whose customer I had been, about some conjectures I had concerning things belonging to his profession.
Boyle. Supplement to the Essay of the great effects, &c.

The other teeth (the *cutters* and dog teeth) have usually but one root. *Id. On the final causes of Natural things.*

And, as in some countries of bigotry, *cut-throats* and murtherers find a place of security in the churches and altars; so, in others, the impious and perjured have as sure a refuge in the bosom and friendship of the pious and devout.
Hoadly. Letters signed Britannicus, &c. Letter 28.

The ruffian robbers by no justice aw'd,
And unpaid *cut-throat* soldiers are abroad.
Dryden. Juvenal. Satire 3.

Others, I think, more significantly make it [1 *Tim.* iv.] an allusion to the practice of surgeons and physicians, who use *cuttings* and burnings for the healing of corrupt flesh: which being once thus cauterized, or seared, becomes afterwards insensible. *South. Sermon* 2. vol. ix.

I hoisted out the *cutter*, and manned her with an officer and seven men, with orders to keep as far a-head of the ships, with a light at her mast-head, as a signal could be distinguished, which she was to make in case she met with any danger.
Cook. Voyage, vol. iii. book ii. ch. ix.

One of our best London workmen was ordered, by one of the first *cut-glass* manufacturers in the kingdom, to *cut* a similar cup; he did so, and he charged five shillings for the workmanship alone.
Anecdotes of the Life of Bishop Watson, vol. i. p. 285.

From the Miller of Trompington of whom we are told

A Shefeld thwitil bare he in his hose.
The Reves Tale, 825.

England may claim a manufactory of CUTLERY, as far back as the time of Chaucer; yet, for more than two centuries after his days, knives continued to be largely imported from Flanders. In the fifth year of Elizabeth, Richard Matthew, the first person who established the trade of a Cutler in London, obtained a prohibition against this importation from the Queen, and dismayed the Company of Cutlers by procuring a power under the Great Seal, "to make daggers and knives with new invented hafts." This Company was incorporated by Henry V. "They of this Company," says Stow, (*Survey*, 195, ed. 1597,) "were of olde times divided into three artes or sortes of workmen, to wit, the first were Smithes, forgers of blades, and therefore called Bladers, (divers of whom proved welthie men;) the second were makers of haftes, and otherwise garnishers of blades; the thirde sort were sheath makers, for swordes, daggers, and knives: in the fourth of Henry VI. all the three Companies were drawne into one fraternitie or brotherhood, by the name of Cutlers." On a dispute between the Cutlers and the Goldsmiths, in the year 1405, the adjusting of which was referred by the King to the Mayor of London, it was determined, that, according to the ancient immunities of the city, the Cutlers had a right to work in gold and silver, but that all things made by them were to be assayed by the Goldsmiths.

CU'TICLE, Cu'TICULAR, Cu'TANEOUS. } Lat. *cuticula*, diminutive of *cutis*, the skin. Gr. *σκύτος, corium, pellis*; the hide, the skin.

When we consider so many constituent parts in the bodies of men, all admirably compacted into so noble an engine; in each of the very fingers, for example, there are bones, and gristles, and ligaments, and membranes, and muscles, and tendons, and nerves, and arteries, and veins, and skin, and *cuticle*, and nail, &c. *Bentley. Sermon* 3. *A Confutation of Atheism.* CUTICLE. — CUZCO.

A specific medicine may cure by discussion, or resolving the morbific matter, and thereby fitting it for expulsion through the greater outlets of the body and *cuticular* pores.
The Life of the Honourable Robert Boyle.

Some of them may contain other juices and discharge their recrements by sweat or insensible transpiration, at the *cutaneous* outlets. *Boyle. Of the Reconcileableness of Specific Medicines.*

An unguent made of it [arsenick] with oils of any sort is an effectual remedy for some *cutaneous* disorders, and mixed with rose-water, is good for cold tumours and for the dropsy.
Sir William Jones. Works. On the cure of the Elephantiasis.

Among the bulk of the people, the skin is more commonly of a dull hue, with some degree of roughness, especially the parts that are not covered; which, perhaps, may be occasioned by some *cutaneous* disease. *Cook. Voyage*, vol. v. book ii. ch. x.

CU'TLASS, *n.* CU'RTELASSE, CU'RTLAX. } Fr. *coutelas*; It. *coltellacio, sica, ensis brevior*, q. d. *cultelliacus, vel cultellaceus*. Skinner. From the Lat. *cultellus*, a knife. (See CULTER or COULTER.) This word is variously, and apparently very corruptly written in old Authors, *Curtax, Curtleax, Cutelaxe, &c.*

Unto another, who demanded why the Lacedæmonians fought with such short *cutelasses*: to the end (quoth he) that we might cope and close more neerely to our enemies.
Holland. Plutarch, fol. 347.

Others do write, that Darius seeing himself convicted by manifest proofs brought in against him, he fell down at his father's feet, and besought him to pardon him: and then that his father being angry, rose up, and drew out his *curtleax* and wounded him in so many places withall that at length he slew him.
Sir Thomas North. Plutarch, fol 798. *Artaxerxes.*

With *curtaxe* vsed Diamond to smite,
And Triamond to handle speare and shield
But speare and *curtaxe* both vs'd Priamond in field.
Spenser. Faerie Queene, book ii. can. 2.

But he refusing to dismiss you so,
On that proud king I'll execute such force,
As never yet came from the sling, the bow,
The keen-edg'd *curt'lax* or the puissant horse.
Drayton. Moses his Birth and Miracles.

The sword is a piece of wood shaped like a *cutlass*.
Dampier. Voyage. Anno 1688.

His European weapons consisted of a musket, bayonet, and cartouch-box; a fowling piece; two pair of pistols; and two or three swords or *cutlasses*.
Cook. Voyage, vol. vi. book iii. ch. vi.

CUTTRY-COO, a word formed from the sound, which has been found only in Drayton.

Draws in his head, and thrusteth out his breast
Spreadeth his tail, and swelleth up his crest,
And turning round and round with *cuttry-coo*
As when the female pigeon and he woo.
Drayton. Noah's Flood.

CUTTY-STOOL, a *low* stool, the stool of repentance, a small gallery in the Scottish Kirks placed near the roof, and painted black, in which offenders against chastity sit during service, professing repentance and listening to the Minister's rebukes.

CUZCO, or Couzco, the ancient Capital of Peru, situated in latitude 13° 25′ south and in longitude 71° 15′ west, on uneven ground, watered by the small river Guatanay. Its north and west sides are bounded by the mountains of Sanca, and the south borders on a plain, in which are several beautiful walks.

The modern City is composed of houses built of stone, and covered with red tiles; their apartments

CUZCO. being generally spacious, and those of the richer classes highly decorated.

The Cathedral is a noble, rich, and finely wrought edifice of stone, built on the spot on which the Spaniards rescued the City from the Inca Manco Capac the Second; it is served by three Priests, one for the Indians, and two for the whites. Cuzco also contains six parish Churches and nine conventual Churches; that of the Dominicans having been erected on the spot on which the ancient centre of Peruvian worship, the great Temple of the Sun, formerly stood; the stones of that building having served for the Christian Church, the altar of which is placed on the same ground whereon the golden image of the great luminary was formerly worshipped. These convents contain hospitals for the sick Indians and whites. There are also four Nunneries, and many public buildings, of which four great Hospitals, two Universities, a College for the children of the Caciques, or Indian Chiefs, and the High Court of Justice, are the principal. The City contains 32,000 inhabitants, of whom three-fourths are Indians. These are very industrious in the manufacture of baize, cotton, and leather; and many of them are said to have a great taste for Painting. It formerly contained numerous Spanish families, but at present the Indians and Castes prevail.

Cuzco is the Capital of a large Province lying on the west of the great river Apurimac, and on the eastern Cordillera of the Andes; bounded on the north by the Apurimac, and the Andes of Cuzco; on the west by unconquered countries; on the east by Tarma, Guancavelica, and Guamanga; and on the south by Arequipa and the Vice-royalty of La Plata; the boundary line of which runs between Lake Titicaca, or Chucuito, and along the chain of Vilcanota, and bounds the district of Paucartambo on the south.

Besides this Province, the City has a peculiar District around it, over which its Magistrates exercise a particular jurisdiction; and this District, though only two leagues in extent, has, with Carahuasi, which adjoins it, no less than nineteen known mines of silver. Its climate is very various, on account of the highlands, in which the cold is extreme; but in general it is mild and salubrious. The valley of Cuzco itself is cold.

Manco Capac, says Herrera, (book iv. *Decado* 5,) divided his new Town into two portions, Hanan and Urin, or High and Low Cuzco; the former he peopled with those Peruvians on whom he had prevailed to quit their nomadic life, and the latter with those who had followed his consort Mama Oello. The first tract forms the northern, the latter the southern division of the present City; here he founded a Temple of the Sun, and appointed his daughters to serve as Priestesses.

The Spaniards who took possession of this City of the Sun, under Pizarro, in October 1534, were astonished at its extent and splendour, the magnificence of the temples and palaces, and the pomp and riches which were every where displayed. Benzoni observes, that the walls and public buildings were formed of a light durable tuffa. On the north, in the highest and most rugged portion of the mountain which overhangs the Town, are the remains of the fortress of the Incas; and on the Cerro Carmenza, towers were built at intervals, for the purpose of observing the apparent motion of the Sun. In the centre of the City was a grand square, from which four royal roads took their course to the four parts or Kingdoms into which Peru was divided; and over the river which flowed through Cuzco were several bridges. The great streets of the City bordered the four roads, and represented the four Kingdoms. Besides these, there were many other fine streets, the houses of which, says Herrera, were *Labrada de puza piedra con maravillosas junturas y bien assentadas.* The great Temple of the Sun, *Curacanche,* called by Acosta the Pantheon of Peru, was a superb edifice, containing immense riches; the walls being incrusted with gold and silver, and adorned with all the various figures and idols of the nations subdued by the Incas, each idol having its particular chapel or oratory. The four quarters of the City were inhabited by those races which were peculiar to the four parts of the Empire; and as the language of Cuzco was the only one recognised, the Caciques from all the Provinces were obliged to send their children to learn it.

Cuzco was besieged, after it fell into the Spanish power, by Capac the Second, who took it, but was soon driven out again; he, however, blockaded the place for eight months, and in this and the subsequent contests between the followers of Pizarro and Almagro, the splendid City was nearly destroyed.

Enough, however, still remains, to attest its ancient grandeur. The ruins of the fortress of the Incas show, that it was the intention of these Princes to encompass the mountain on which it stood with a wall easily defensible, and rendering the ascent impracticable. It was strongly built of freestone; and is remarkable not only for the immense size of the stones, but for the art with which they are joined. Great part of this wall is now standing, but the internal works of the fortress have been destroyed. The Inca's Palace was in the middle of a mass of works, which resembled three forts disposed in a triangular form. A subterraneous passage, of tortuous figure and singular construction, led to the Palace and Forts; and proceeding from these ruins the remains of a paved causeway to Lima are still to be traced.

One of the stones designed for the wall lies on the ground near it, and is so large that it has obtained the name of *Cansada,* (the weighty,) in allusion to the impracticability of bringing such a mass from the quarries, which are at some distance, by a people unacquainted with machinery, or even by those who are accustomed to use its assistance. Coreal, in the French edition of his *Voyages,* says, *Toute la Citadelle pouvoit être regardée comme imprenable, etant bâtée de quartiers de pierres quarrées, d'une grandeur si extraordinaire, qu'à peine plusieurs bœufs pouvoient tirer une de ces lourdes masses: de sorte qu'on pouvoit regarder ce bâtiment comme un chef d'œuvre de l'industrie humaine. Nos gens ont détruit cet edifice superbe; mais n'aiant pû remuer ces pierres enormes, ils ont été obligés de laisser subsister la plus grande partie des murailles. Ce qu'ils en ont pris a servi à bâtir plusieurs belles maisons de la Ville.*

These vast and irregular masses are knit together and fitted with such nicety, that neither mortar nor any kind of cement was necessary; and it is to be regretted, that no scientific traveller has yet published a minute account of ruins which are, perhaps, amongst the most extraordinary in the world.

Four leagues from Cuzco is the valley of Yucay, romantically embosomed in mountains, the summits of which are generally covered with snow. This vale is full of beautiful gardens, country-houses, and

ZCO. orchards; and lies in so temperate an air, that it has
INEA. frequently been proposed to rebuild the City in it. Here the Incas retired from the cares of sovereignty; and here are therefore many vestiges of their power, and, amongst others, a large fortress built on precipices which a very small garrison could defend. Some of the rocks have been scarped, so as to render the fort inaccessible; and, from the foot of it, many shelves or pathways are cut out, which look like walls one above another. On the walls are figures of lions and other animals, cut with much nicety. In these Royal edifices, particularly in the Palace, gold has been found mixed up with the bituminous paste which was sometimes used in placing the stones over each other; and it is supposed by Herrera, that this was done in memorial of the greatness of the Prince who founded them, as we, in Europe, place medals and coins in the first stone of our public buildings.

The spoil of Cuzco, which Pizarro divided equally amongst his soldiers, was immense; it is said, that one man received the *Pinchao*, or Idol of the Sun, for his share. This was of the finest wrought gold, covered with jewels. The soldier, with characteristic improvidence, lost his prize at a game of hazard; whence, says Acosta, is derived the proverb in Peru, *Pour les grands joueurs, disant qu'ils jouent le Soleil autant qu'il naisse.*

The reader who is desirous of perusing what little satisfactory intelligence can be obtained concerning this extraordinary City, and the remains of Peruvian architecture, may consult Herrera's *Historia de las Indias*; Garcilasso de la Vega Inca, *Comentarios Reales de los Incas*; *Cronica del Peru por* Pedro de Cieça de Leon, Madrid, 1554; Cosme Bueno, *Descripcion del Peru*; Ulloa y Juan, *Viage a la America Meridional*, 1748; Zarate, *Historia de la Conquista del Peru*; Coreal's *Voyages to South America*, (in French,) Amsterdam, 1772; Acosta, *Histoire des Indes*, Paris, 1600; Benzoni, *Historia del Mondo Nuevo*, Venice, 1565; and Humboldt, *Monuments of the Ancient Americans.*

CYAMUS, in *Botany*, a genus of the class *Polyandria*, order *Polygynia*. Generic character: calyx petaloid, four or five leaved; petals many; fruit turbinate, with a truncated disk excavated with numerous cells, each containing a single seed; seed an ovate nut crowned with the persistent style.

This is the most magnificent genus of water plants, the flowers are very large, rising with a stalk considerably above the surface of the water; natives of North America and the East Indies. Nuttal.

Cyamus, in *Zoology*, a genus of the class *Crustacea*, order *Malacostraca*, family *Gammarinæ*. Generic character: antennæ four-jointed, the lower ones very thick; body and feet short, four of them without claws.

Type, *C. ceti*, Latr.

These are parasitical animals, living on the Whale, and on the branchiæ of certain fishes, and sucking their blood. On the Whale they generally fix themselves on the lips, the fins or other soft parts where the skin is most tender.

CYANEA, in *Zoology*, a genus of *Medusary* animals, belonging to the *Radiaires Medusaires* of Lamarck, and the *Acalèphes libres* of Cuvier; referable to the genus *Medusa* of Linnæus. It includes all the species which have a central mouth and four lateral cavities.

CYANELLA, in *Botany*, a genus of the class *Heandria*, order *Monogynia*. Generic character: corolla six-petals, the three lower ones pendent; style and lower stamen declining; capsule roundish, three-celled. CYANELLA. CYBELE.

Four species, natives of Southern Africa.

CYANITE, a Mineral, the name of which is derived from its beautiful blue colour. (Κύανεος.) It is sometimes transparent, and would resemble the Sapphire if it could be cut and polished; but it is too soft and fissile to be submitted to the operations of the Lapidary. It is found near Banchary in Aberdeenshire, and Bacharm in Banffshire; and generally occurs in the Granite and Mica slate of primitive mountains.

CYATHEA, in *Botany*, a genus of the class *Cryptogamia*, natural order *Filices*. Generic character: fructifications scattered, roundish, growing out of an hemispherical calyx, which bursts at the top with a cover.

A genus of small sized Ferns common to both hemispheres, *C. fragilis*, *C. incisa*, and *C. dentata*, are natives of England. *Eng. Bot.*

CYBELE, otherwise known as *Ops*, *Rhea*, *Vesta*, *Berecynthia*, *Dea Syria*, *Dindymene*, *Idæa Mater*, *Magna Mater*, *Mater Deorum*, *Bona Dea*, and *Tellus* (by which last Goddess she was also said to have been born to *Cœlum*,) the wife of Saturn; so called, according to Hesychius, from *Cybela*, a Phrygian mountain, on which she was first worshipped; or, according to Festus, ἀπὸ τοῦ κυβιστεῖν τὴν κεφαλήν, from the antics of her Priests, the *Galli*, (so named from the Phrygian river *Gallus*, the waters of which produced insanity,) which are thus described by Apuleius, (*Miles*, viii.) *Diu capite demisso cervices lubricis intorquentes motibus, crinesque pendulos rotantes in circulum, et nonnunquàm suos incursantes musculos; ad postremum ancipiti ferro quod gerebant sua quisque dissecabant brachia.* The interminable and inextricable Mythology of this manifold Goddess may be found in Natalis Comes, (ix. 3.) Her jealousy of the unhappy Atys has been the theme of the most impassioned Poem of ancient literature, and has furnished Lucian also with materials for his history of the *Dea Syria*. Her ill-used lover was changed into a Pine, which afterwards became a distinctive symbol of the Goddess. Her car was drawn by lions, because she is believed to have tamed those animals.

The version which Diodorus Siculus gives of the tale of Atys, differs in many particulars from that which is commonly received. Cybele, he says, was the daughter of a Phrygian King; she first instructed men in the art of fortification, and hence she is represented with a crown of towers. Atys, of whom she was enamoured, was of birth unequal to her own; and he was put to death by her father for his ambitious pretensions. His death occasioned the loss of Cybele's senses, and she wandered furiously through her father's dominions, weeping and beating a drum. On her decease a plague and famine ravaged Phrygia, till an Oracle instructed the natives to deify their departed Princess; and they accordingly raised for her a superb temple and statue at Pessinus.

In the year of Rome 547, some heavy showers of stones (which were always considered to be portentous) led to an inspection of the Sibylline Books. The second Punic war was still raging, and a remarkable prediction, appearing to bear upon the calamity, was read in the oracular pages, "that whenever a foreign

CYBELE. — CYCLADES.

enemy should invade Italy, he might be expelled and conquered, if the *Mater Idæa* were transported from Pessinus to Rome." The Pythoness at the same time uttered a response, which seemed to agree with this monition. An embassy, accordingly, was despatched to King Attalus; and the Delphic Oracle again warned the envoys on their passage, that they should obtain the wished-for image, which, on its arrival, must be intrusted to the custody of the best man in Rome. P. Scipio Nasica was selected by acclamation for this honourable charge. Accompanied by a procession of all that was dignified in Rome, he received the holy image at Ostia, and conveyed her to the Capitol; not, however, before she had exercised her miraculous powers, by refusing to advance in the ship which bore her up the Tiber, in spite of the united efforts of hosts of seamen, till the single touch of Claudia Quinta removed suspicion from her own injured fame, and released the spell-bound Goddess. The whole city poured out to greet her approach; the streets smoked with censers; and every where was heard the sound of voices invoking the *Great Mother* to enter the gates of Rome willingly and propitiously. On the day before the Ides of April she rested in the Temple of Victory, and the Megalesian Games were instituted in her honour. (Liv. xxix. 11, 14; Suet. *Tib.* 2; Herodian, i. 11; Ovid. *Fasti*, iv.) The last named Poet may be referred to as explaining many of the attributes of Cybele.

Herodian (*loc. cit.*) informs us that this statue was a windfall from heaven, (Διοπετὴς) and that no one knew either the substance of its material, or the name of the artist by whom it was made. The Roman State, whatever might be the advantage derived at first from the introduction of the worship of Cybele, found it in the end a fruitful source of contamination; and it is not necessary here, to do more than to refer generally to the indignant expressions of the great moralist of Aquinum, for the depraved and detestable enormities which were perpetrated by the Ministers of this Goddess.

CYCAS, in *Botany*, a genus of the class *Dioecia*, order *Polyandria*, natural order *Palmæ*. Generic character: male flower, catkin imbricated; scales of the calyx spoon-shaped; corolla none; anthers globose, sessile: female flower, spathe compressed, two-edged; calyx none; corolla none; style one; drupe one-seeded.

A genus of fine Palms of low growth. *C. revoluta* is figured in *Trans. Linn. Soc.* vol. vi.

CYCHRUS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Carabici*. Generic character; palpi with the fourth joint spoon-shaped; lip with the tooth of the notch simple; labrum bilobate, anterior tibiæ not notched within; elytra entire, covering the whole abdomen, deflexed; wings none, or very short.

Type, *C. rostratus*, a British insect.

CYCLADES.

CYCLADES, or the Encirclers, is the name given by the Greeks to a cluster of Islands in the Ægean Sea, falling nearly in the circumference of an imaginary circle, of which *Delos* is the centre. Their number was originally twelve, but more were afterwards added; and the Ancients differ as to their names as well as their number. The following were mentioned by Artemidorus, a Geographer and Historian, who flourished a hundred years before Christ, (Strabo, x. p. 485, ed. Casaub. Par. 1620,) *Helena, Ceos, Cythnus, Seriphus, Siphnos, Melos, Cimolus, Paros, Naxos, Syros, Myconos, Tenos, Andros, Prepesinthus, Oliaros*, and *Gyaros*. The three last are excluded by Strabo, on account of their insignificance; and *Helena* as well as *Melos*, with the adjoining Islet, *Cimolus*, are beyond the limits usually assigned to the *Cyclades*.

Delos and Rhenea. 1 Dhili.

The most memorable, though the smallest of them all, is DELOS, the supposed birth-place of Apollo and Diana, and therefore an object of the greatest veneration among the Pagans. It is separated by a strait, barely three miles wide, from *Myconos* on the north-east, and by another not half that width from *Rhenea*, on the west. According to the fabulous history of the Greeks it floated beneath the surface of the sea, till Jupiter, on account of Latona, who was about to give birth to her divine twins, commanded Neptune to render it immovable, and make it visible above the water. (Δῆλος; Lucian, *Dial. Irid. et Nept.*) It has been conjectured that it was suddenly thrown up by volcanic agency; and that supposition is countenanced by one of its ancient names, *Pyrpilé*; and, according to Spon, (i. 134,) by the authority of Aristotle: but the total absence of volcanic matter on the Island, (Olivier, ii. 108,) and its freedom from earthquakes, (Herodot. vi. 98,) militate very strongly against such an opinion.

A rocky hill of gneiss and schistus (Mount *Cynthus*,) with a small plain at its foot, forms the whole of this celebrated Island, which is barely three miles long, not half that number in breadth, and only seven or eight in circumference. (Tournef. i. 287.)

The plain, which is on the western side of the hill, was once covered by a city occupying nearly two-thirds of the Island, and probably surpassing in magnificence the most splendid that can be now seen. Its Temples were crowded with worshippers from every part of Greece at the annual Festivals of Apollo and Diana, when the surrounding Islands, and many States on the continents of Europe and Asia used to send solemn legations (Θεωρίας) to offer sacrifices on their behalf. That deputed by Athens was peculiarly magnificent. It was instituted by Theseus, in commemoration of his victory over the Minotaur, (B. C. 1323,) and during its absence from Athens no criminal could be executed. A crown of gold was placed by the Envoy (the *Architheórus*) on the head of the God, and the choirs of youths and virgins, who accompanied him, performed a *figure-dance* round the altars, to represent the wanderings of the Island before it became stationary, and the mazes of the Cretan Labyrinth, from which Theseus had so happily extricated himself. Nicias even threw a splendid bridge across the strait between *Delos* and *Rhenea*, that his procession, as *Architheórus*, to the holy shrines might not be interrupted. Such was the supposed sanctity even of

CY-ADES.

the soil of this Island, that it would have been desecrated by the touch of a dog, a corpse, or a woman in labour; no dogs therefore were allowed to exist in it. The sick and pregnant were removed to *Rhenea*, which was a sort of hospital and charnel-house to *Delos*. In time of war, the neutrality of this privileged place was never violated; and it was spared even by the Persians, when they polluted the other sanctuaries of Greece; the treasure therefore contributed by the confederate States, during the Persian invasion of Greece, was deposited in *Delos*; and its amount, as fixed by Aristides, (Corn. Nepos, iii. 3,) was 460 talents, (about £90,000.) Not only the persons, but the property of those who came into this port, was inviolate, for no duty was levied on the goods imported; so that it became the emporium of the Ægean Sea. Hence, Cicero speaks of it (*Pro Lege Manilia*, sec. 13,) as *referta divitiis,—quo omnes undique cum mercibus atque oneribus commeabant.*

merce. The cloths of *Cos*, (Hor. *Od.* iv. 13,) the alum of *Melos*, (Plin. xxxv. 15,) and the copper of its own mines and forges, either in bars or manufactured, were exchanged in its *Agora* for corn, wine, and oil, from larger and more fertile islands; strangers were hospitably entertained, and gratuitously supplied with water, (Athenæus, iv. 22;) and few objects escaped the keen eye of the Delian traders, who even carried the art of fattening poultry to such perfection, that they knew from the size, shape, and colour of an egg, the breed of the pullet which had laid it. (Cic. *in Lucull.* c. 18.)

The decline of *Delos* may be dated from its spoliation by the army of Mithridates, under the command of Menophanes, B. C. 88, (Strabo, x. 5, p. 485;) from which it had not recovered when Strabo wrote several years afterwards; and in the IId century it remained almost depopulated, notwithstanding the sacred legation from Athens had not been yet discontinued. (Pausan. iii. 23.) The triumph of Christianity completed its ruin, and it was scarcely known, even by name, except to a few studious Hellenists, when the Franks made themselves masters of the Eastern Empire, in A. D. 1204. It appears to have been afterwards abandoned to the pirates, almost always infesting this sea, till the XIVth century, when it was made a military post by the Knights of Malta. (Cantacuzen. *Hist.* ii. 11.) For the last two hundred years, at least, it has been entirely uninhabited, and valued merely as a quarry by the people of the neighbouring islands. *Tous les maçons des isles voisines*, says Tournefort, (i. 314,) *y viennent comme à une carrière, choisir les morceaux qui les accommodent; on casse une belle colonne, pour faire des marches d'escalier, des appuis de fenêtres, ou des linteaux de portes: on brise un piédestal, pour en tirer un mortier ou une salière. Les Turcs, les Grecs, les Latins y rompent, renversent, enlèvent tout ce qui leur plaît; et ce qu'il y a de singulier, c'est qui les habitans de Mycone ne payent qui dix écus de taille au Grand Seigneur, pour posséder une isle, où l'on tenoit le trésor public de la Grèce, le plus riche pays de l'Europe dans ce tems-là.**

odern te.

* A pretty close translation of this passage, in a style more nearly resembling the language of the Greeks as actually spoken, than the erudite paragraphs even of the Ἑλλήνικος Τηλέγραφος or other Newspapers, will, perhaps, amuse those who delight in comparing new things with old. Μαστέροι ἀπὸ τὰ γείτονα νησιὰ ἔρχονται συχνὰ σὰν εἰς μιὰ λατομία, καὶ διαλέγουν μάρμαρα, ἐδὲ

The spectacle indeed presented by the shores of *Delos* when flourishing can be more easily imagined than described. Stately porticoes, long avenues of columns, and sumptuous buildings in the most finished style of architecture, overshadowed by groves of majestic palms, followed in rapid succession on either side of the narrow strait, which separates the two Islands now bearing that name; and the whole area between Mount *Cynthus* and the sea, as well as the declivity of the hill, was crowded with buildings, many of them of the whitest Parian marble. The Great Temple itself, with the colossal statue of Apollo in front of it, barely an hundred yards from the beach, terminated the view, and gradually unfolded its countless beauties as the vessel approached the landing place, which was crowded with strangers from every part of Greece or Asia Minor; and, at the great Festivals, was filled by processions of youths and virgins crowned with wreaths of flowers, and singing hymns in honour of the Gods. Except, perhaps, the Temple of *Delphi* itself, none was more calculated to animate the devotion of the Greeks than this. The sanctity of the place, consecrated by the peculiar favour of Heaven; the venerable antiquity of its Temple, begun by Erysicthon, son of Cecrops, more than fifteen centuries before the Christian era; the richness of its decorations; and above all the inimitable expression of its statues, some of which were considered as master-pieces, (Plut. *Op.* ii. p. 1136, ed. Ruald. Par. 1624,) by those to whom the works of Phidias and Praxiteles were familiar; all contributed to fill the mind with sentiments of delight and admiration never before experienced. An altar made entirely of twisted horns, which Plutarch (*Ibid.* p. 983,) calls one of the wonders of the world, may possiblp have owed much of its fame to the legends by which it was consecrated; but the palm tree cast in bronze by order of Nicias, (Plut. *Vita Nic.* i. p. 525,) must have possessed merit of a superior order.

CY-CLADES. Contrast with its ancient magnificence.

Even the wreck of these minor works of art has long since perished, but the traveller who visits *Delos*, may still trace out the line of splendid porticoes, a large Naumachia, wherein mock sea-fights were exhibited for the instruction as well as amusement of the people, vast reservoirs, a spacious Theatre, columns, friezes and architraves of colonnades and Temples, and especially those of the Great Temple, and of the colossal statue of Apollo. The trunk of that statue was entire in the middle of the XVIIth century; and its lower limbs were measured by Spon, Wheeler, and Tournefort, who infer from their dimensions, that its height, when perfect, was not less than twenty-four feet. The words ΦΙΛΙΠΠ. ΒΑΣΙΛΕΩΣ and ΜΑΚΕΔΟΝΩΝ inscribed on some fragments of an architrave lying near the shore, make it probable that the portico to which it belonged, was erected by Philip, the father of Alexander.

Antiquities.

κ'ἐκεῖ εἰς τὰ χαλάσματα διασκορπισμένα· τζαιζοῦν μιὰ κολόνα διὰ νὰ κάμουν σκαλοπάτια καὶ παραστάδας εἰς ταῖς θύραις καὶ στὰ παραθυρα· χαλνοῦν ἕνα στηλοπόδι διὰ νὰ φκιάσουν ἕνα γαβάθι, ἕνα ἀλατηρὸ· συντρίβουν, ἀνασοδογυρίζουν, σημάνουν δ, τι τοὺς ἀρέσκει· μὰ ἐκεῖνο ὁπού ἀποδείχνει μεγάλα τὴ μεγάλη μεταβολὴ τῶν ἀνθρωπίνων, εἶναι αὐτὸ ὁπού οἱ Μυκωνιάται τώρα πληρόνουν μιὰ μπαγατέλλα διὰ νὰ ἔχουν εἰς τὴν ἐξουσία τους ἕνα νησὶ ὁπού ἐστάθηκε μιὰ φορὰ ὁ πλουσιώτερος τόπος τῆς Εὐρώπης. The Thessalian Abbés (Ἱερομονάχοι) Daniel and Gregory, to whom we are indebted for this paragraph, (Γεωγραφία Νεωτερική, Vienna, 1791, p. 295,) would have acted more honestly if they had told their readers whence they borrowed it.

CY-CLADES.

A little further on, a pedestal, fifteen feet by ten, bears an inscription (ΝΑΞΙΟΙΑΠΟΛΛΩΝΙ,) which shows that the statue anciently placed upon it was a monument of the devotion of the Naxians to Apollo. (Tournef. i. 301; Riedesil, 254.) The Theatre, 250 feet in breadth, was built of Parian marble, (Wheeler, i. p. 58; Spon, i. 142; Tournef. i. 306,) partly against the declivity, partly in an excavation from the side of Mount *Cynthus*. That hill, which is termed lofty (ὄρος ὑψηλὸν) by Strabo, (x. 5, p. 485,) has in reality a very moderate height, not quite 200 feet perpendicular, according to Spon, (i. 134.) It crosses the Island, running obliquely from north-east to south-west, and consists, says Tournefort, (i. 307,) of a mass of common grey granite, containing pieces of black shining talc, some as big as one's thumb; i. e. gneiss, as Mr. Hawkins has incidentally observed, in speaking of the mountains of *Naxos*. (Clarke, vi. 112.) The place of the river *Inopus*, the only stream in *Delos*, is more disputable. Tournefort, who visited the Island in autumn and winter, saw nothing like a running stream; neither did Spon and Wheeler, who were there in August, and were in danger of being choked with thirst, (Spon, i. 143;) Tournefort therefore fixes on a passage in Pliny, (ii. 101,) who seems to call the *Inopus* a spring, and hence he concludes that a copious and perennial well at the north-eastern extremity of the Island, is the ancient *Inopus*: that well, however, is not only remote from the town, but has no outlet, and cannot therefore be the small stream mentioned by Strabo, (x. 5, p. 485.) On looking into the ground plan of *Delos* given by the same Traveller, the difficulty appears to be removed, for the bed of a stream is marked as terminating in the Port of Furni. It was dry when Tournefort saw it in December, but it is probably full of water in March and April; and it is possible that the bed of the stream may have been filled up in a series of years, or that some of the springs supplying it may have been exhausted.

Among various names given at different periods to *Delos*, we find *Chlamydia*, *Cynæthus*, *Asteria*, *Lagia* (Steph. Byzant.) from its abundance of hares, since dispossessed by rabbits, (Tournef. i. 313;) and *Ortygia*, from the quails which settle upon it in their annual migrations. Its mouldering walls and mounds of rubbish afford a comfortable shelter to thousands of the lizard tribe, so prolific in the Levant, and among them to the *Lacerta cordylus* of Linnæus, which by a slight alteration of its name has been converted into a crocodile (κοκόρδειλος) by the Modern Greeks. (Tournefort, i. Plate, p. 313.)

Animals.

Delos is too insignificant in the estimation of the Turks to be noticed by them, and they have transferred its name to *Tinos*, which they call Istindil, (Εἰς τὴν Δῆλον.) The Grecks themselves call *Rhenea* and *Delos*, I Dhili (Οἱ Δῆλοι;) corruptly written *Sdilus* and *Sdiles* by the Venetians and Genoese. (Spon, i. 131.) The centre of *Delos* is nearly in longitude 37° 22′ north and latitude 25° 18′ east of Greenwich.

Naxos, Axià, or Naxià, Nacshah.

The largest and most productive of the *Cyclades* is Naxos, called the Queen of the *Cyclades*, and The Little Sicily, (Agathem. i. 5,) on account of its rich, well-watered vales, and its mountains abounding in valuable minerals. Of an elliptical and nearly circular form, about sixty miles in circumference, with a diameter of eighteen miles one way, and twelve the other, (Clarke's *Trav.* vi. 112, 8vo. ed.) it is crossed by a ridge of mountains, running obliquely from north-northeast to south-southwest, and dipping gradually towards the southern shore. The vallies on the western side are wider than those on the east, where the declivity is more abrupt. Trimalia, nearly in the centre of the Island, is the widest and most fertile district; but the many bluff headlands on the coast, give the Island a dreary, forbidding aspect, as has been observed by almost every traveller from Tournefort (i. 213, ed. Par. 1717,) to Dr. Clarke, (vi. 90.) It was at first called *Strongyle*, or Circular, from its form, (Diod. Sic. v. sec. 50—52;) then *Dia* (Schol. *in Apollon. Argon.* iv.) by the Thessalians, who wrested it from the Thracians; the Carians subsequently named it after one of their Kings, whence it has received its modern names, both Greek and Turkish, Naxià, or Axià, and Nacshah. (Meletii *Geog.* iii. 20; Γεωγρ. Νεωτ. 292.) It was also called *Dionysias*, from its being sacred to Bacchus, (Dionysus,) or from the excellence of its wines. (Plin. *Nat. Hist.* iv. 12.) The vineyards, especially on the banks of the *Biblinus*, (*Etymol. Mag.*) its largest river, were noted for producing the richest wines and sweetest figs in the world. The ancients seem to have thought sweetness indispensable in good wine, and none possesses that quality in a higher degree than the produce of the Naxiote vineyards; these hospitable islanders delight in regaling their guests with wines twenty or thirty years old, and yet as rich and luscious as the most racy Malmsey or Cyprus. To the pomegranates, almonds, and olives of their forefathers, so much celebrated by the ancients, (Athen. ii. 12, p. 52, ed. Casaub.) the present race of Naxiotes have added oranges, lemons, and citrons, besides the fruits common in Europe. Their citrons are cultivated, as Dr. Clarke observes (vi. 95,) principally for their skins; and their orange trees are among the finest in the Levant. At a village called Engarès, about ten or twelve miles north of the town of Naxià, there is a garden on a declivity, formed into neat terraces, and planted with orange-trees, which are from twenty to thirty feet high, a size rarely attained in these latitudes. They were said to be upwards of a century old, and if so, they must have been introduced about the time of Tournefort, who speaks of the Levantine oranges as being very inferior to those of Portugal, which is far from being now the case. Barley is the grain most cultivated; oil of a moderate quality is made to the value of about £1000. annually. Cotton and flax are only raised in very small quantities for domestic uses; and a few silkworms are reared with the same view. Oil from the berries of the lentisk, (*Pistacia Lent.*,) and labdanum for perfumes, gathered from the *Cistus Creticus*, are articles of domestic use; and the salt-works near the town of Naxià send a few cargoes every year to Constantinople; the gum of the *Atractylis gummifera*, a kind of wild thistle, is also used by the Naxiote women instead of mastic, and would probably find a sale in other parts of the Archipelago. The sheep have short coarse wool, like those of Italy and Provence, and it is therefore worth very little. Their horned cattle form a more considerable part of the farming stock; and as their pastures are well watered, milk, butter, and cheese are more abundant in this than in other islands of the Archipelago. The latter is exported to Constantinople, Smyrna, and Salonica, to the yearly amount of about £350. But the richest productions in Naxos are beneath the surface of the

Wine. Fruits. Other prod.

CY-ADES. es. ground; its mines would be an inexhaustible source of wealth under any other Government than that of the Grand Signior; veins of gold and silver are said to exist near the town; and emery is found in considerable quantities. The central ridge, and the basis of the whole Island, is a mass of primitive gneiss, consisting of mica and felspar, in some places with a fine foliaceous grain, like that found near *Marathon*. On the western side of the Island, near the village of Potamià, this alternates with beds of large grained primary white marble, varying in thickness from six to ten feet. This alternation extends quite across the Island; but to the east of Mount Dià, and the village called Aperathi, the beds of marble have a greater breadth, sometimes exceeding those of the micaceous ery. rock. The best emery is found at Triangatho (*Triacanthus*) a deep narrow vale, about five miles to the east of Aperathi, and three from the shore. "It occurs," says Mr. Hawkins, whose valuable observations on the Geology of *Naxos* are given in Dr. Clarke's *Travels*, (vi. 114,) "in scattered fragments, over the whole surface of this district, but more abundantly in the bed of the winter torrent, which runs through the vale of Triangatho, (*Triacanthos*.) The fragments are fewest where they are largest, on the upper slopes of the hills, and diminish in size as they augment in number, lower down. The proximity of these fragments to the micaceous strata, their lamellated form and granulated mass, together with the frequent admixture of mica, indicate their native bed to have been originally in that rock. No search, however, has been made by digging; a sufficient quantity for the annual consumption of Europe being collected, without difficulty, on the surface. Three *cdics*, or Greek barks, load here annually for Smyrna; whence, in the year 1797, 107 tons of emery stones were exported to England. Emery of an inferior kind is found at Agaso, about twelve miles to the south of the town of bles. Naxià, and at Leona, on the north-east." On that side of the Island, the rocks consist of alternate strata of schistus and limestone, in some places surmounted by a layer of soft cipolino marble, striped blue and white. (Clarke, vi. 89.) A species of breccia called *Ophites*, (Dioscorid. v. 162,) was said by the Ancients to be found here. (Meletii *Geogr.* lii. 22.) It is described as being green, sprinkled with spots, and is likely to be found where beds of schistus and marble meet; especially if the schistus have a green hue, or alternate, (as is the case at a few miles to the south-west of Seïdí-koí, near Smyrna,) with beds of green serpentine. If gold ores really exist in *Naxos*, they are carefully concealed by the inhabitants, through the dread of their Turkish masters. As the matrix of emery is still a desideratum in Mineralogy, a more complete examination of the country near Aperathi, (the Perato of Tournefort, i. 221, ed. Paris, 1717,) is deserving of the attention of a scientific traveller, and would, perhaps, as Dr. Clarke thinks, (vi. 93, 8vo.) lead to the discovery of telesia, or perfect corundum.

amerce. Enjoying a delightful climate, for the rigours of winter are never felt even in islands to the north of *Naxos*, and possessing such a variety of resources, its commerce ought to be far more considerable than it is, or has been for many centuries. Five hundred years before our era, the Naxians possessed a powerful fleet, (Herod. v. 30,) and this was the richest of all the islands, (*Id.* 28,) which are sufficient evidences of its commercial prosperity; and as the Naxiotes had made themselves masters of *Paros* and *Andros*, they did not suffer from the want of good ports. The coast of *Naxos*, generally bold and precipitous, has frequent, but not deep, indentations, and therefore none sufficient to form a harbour, (Hawkins, in Clarke, vi. 112,) capable of sheltering vessels of any size. (Clarke, vi. 86; Sonnini, ii. ch. 35, p. 283.) With respect to internal Government it is now more happily circumstanced than most of its neighbours; but it was long a prey to every piratical marauder, neglected by the Court of Constantinople, and at last conquered, rather than peaceably obtained, in A. D. 1207, by Marco Sanudo, first Duke of the Archipelago. Under his successors it enjoyed a settled form of Government, and more ample means of self defence for three centuries and a half; but these feudal Chieftains were more likely to consult their own indulgence than the good of their subjects; and such was the case in *Naxos*, for under Giacomo Crispo, the last Duke, the government had become so oppressive, that the Greek inhabitants sent a deputation to Soleïman the Magnificent, in A. D. 1566, petitioning him to take them under his protection. His son, Selím II., who succeeded to the throne in the same year, expelled Crispo, gave the principality to a Jew, and left the people in undisturbed possession of their own laws and usages. After the lapse of a few years, a Vaïvód, or Superintendant, was substituted for the nominal Prince, and deputed to regulate the collection of the revenue, while the civil government was intrusted to six *Epítropi*, or Commissioners, chosen by the people; so that each of the islands belonging to the Duchy of the Archipelago* has since that period formed a separate Republic, though subject and tributary to the Court of Constantinople.

CY-CLADES. History.

The amount of the *Kharáj*, or capitation-tax, paid Revenue. to the Othmán Government, was in 1795 nearly forty purses, and the additional charges for presents to the Capúdan Páshá and officers of his fleet, amounted to about five purses more, making in the whole forty-five purses, or 22,500 piastres, which in our money would be only £750., according to the present value of the piastre, (1825,) while it is estimated by M. Olivier at 45,000 francs, or more than £1800.; such has been the depreciation of the Turkish coin in the last thirty years! In 1700, the whole sum paid to the Turks was 10,500 crowns (£2625.) and the value of money was much greater than it has been since.

The want of a stimulus for their industry, combined Population. with other circumstances presently to be noticed, has prevented the population of *Naxos* from increasing in proportion to the means of subsistence which it affords. When its army amounted to 8000 heavy-armed troops, (Herod. v. 30,) its population could scarcely be less than 30,000 souls; but it then possessed *Andros* and *Paros*; the inhabitants of which doubtless formed a part of the Naxian force. Riedesil counted 5000 souls in 1768; the Γεωγραφία Νεωτερική 8000 in 1791; Olivier, (ii. 112,) 10,000 in 1795; and Dr. Clarke says, (vi. 190,) the population of *Naxos* has not altered since the time of Tournefort; but he estimates the whole, including women, at 18,000 persons, which is

* *Paros, Antiparos, Siphnos, Polycandros, Anaphé, Nios, (Jos,) Santorine, (Therasia,) Melos, Cimolus,* and *Naxos*, the seat of Government.

more than double the number mentioned by the former writer. About 3000 are Latin in faith and origin, and the rest are Greeks. There are no Turks, Jews, nor schismatics. The citadel, or fortified part of the town, was built by Marco Sanudo, and is occupied by the Latin families; many of whom trace their genealogies up to the age of the Emperors Henry and Baldwin. In no part of the world are the parade and pride of birth carried to a more odious and ridiculous excess. Poverty, arising from the want of a lucrative employment,—for these links in an interminable line of Nobles, would rather die of hunger, than disgrace themselves by entering into any branch of commerce,—combined with the most taunting insolence to all whom they call their inferiors, are but too often the characteristics of the Modenas, Vigorosis, Grimaldis, Sommarivas, &c. who grace the castle of Naxià. There are, however, some very honourable exceptions, and the Conte di Frangópulo, who is mentioned by Dr. Clarke, (viii. 203,) and who held some diplomatic appointment under the Othmán Government, is, if still living, as much esteemed by the humblest as by the highest of his countrymen, and enjoys that respect which a well cultivated mind, and a benevolent character ought always to command.

The causes just mentioned are continually operating to thin the numbers of the Noble and Latin families. The Greeks and Plebeians, on the contrary, become more numerous; and their increase is promoted by the growing disinclination to enter into the Monastic Orders.

Religious establishments.

This small Island has no less then two Archbishops, with a proportionate number of regular Ecclesiastics. The Roman Catholics have three Convents for different branches of the Franciscan Order; two for men, and one for women; as well as a College of Lazarists, the successors of the Jesuits, for the education of boys. The Greeks have several Convents in different parts of the Island. Some of them are well endowed. That called *I Phaneroméni*, (or Τὸ *Μοναστήρι τῆς φανερωμένης*,) fourteen or fifteen miles to the north of the town of Naxià, bears some resemblance to the abode of the Coptic monks in the Desert of Scete, amusingly described by Sonnini, (*Trav. in Egypt*, 347.) It has more the appearance of a fort than of a religious house, being only accessible by a wicket, six or eight feet from the ground, and approached by a movable ladder. Its interior and accommodations are as rude as its outside is gloomy and forbidding, and it is a complete counterpart of some of our own monasteries in the dark ages; but the spirit of monasticism seems to have fled. About ten years ago, a venerable white-bearded *Egúmenos* and a ragged Deacon were the only tenants of this castellated pile, capable of lodging thirty or forty persons; and they complained that all their revenues were absorbed by the heavy impositions laid upon them by the Primate of the Island. Happy will it be for the Greeks, if, in abandoning the superstitions and follies of their forefathers, they replace it by a purer and more efficient form of Christianity, instead of suffering themselves to be lost in the mazes of heartless metaphysical scepticism.

Antiquities.

In point of antiquities, *Naxos* has some objects worthy of attention. The citadel, built by Marco Sanudo, and the abode of himself and his successors, is not without interest, as a monument of past times. The traces of ancient works near a spring, called the Fountain of Ariadne, not far from the town, revive the recollection of the fables respecting the adventures of Bacchus; and the Statue at Apóllona, serves at least to keep alive in the bosoms of the islanders the remembrance of times when their country was a nursery of the Arts. It is the first rough outline of a colossal statue, lying in the quarry whence it was hewn, about a mile from the beach, destined, according to the tradition of the place, to adorn, when finished, the Temple at *Delos*, a tradition which will not fail to remind the reader of the inscription observed by Tournefort, (i. 301,) in the ruins of the Temple in that Island. But the finest monument of antiquity is that which presents itself on the first approach to *Naxos*. It is the portal of a Temple of Bacchus on an insular rock, on the north side of the port. "It has," says Dr. Clarke, (vi. 108,) "been long famous, and an account of it is given in every book of travels where *Naxos* is mentioned." He observes that he could not perceive the traces of an ancient mole connecting this rock with the main land. They are mentioned, however, as visible by Riedesil in 1768, by Olivier in 1795, and in the XVIth century by Tomaso Porcacchi, (who died in 1585,) in *Le Isole famose del mondo*; its existence therefore can hardly be doubted. The portal mentioned above seems as if it had been originally filled up,—a peculiarity which Riedesil says (257,) he never observed elsewhere. There are many blocks of marble and other ruins around it; and Messrs. Clarke and Cripps found "a beautiful Doric capital" just below the surface of the ground, ascertaining the order of architecture employed in the building, and encouraging those who may have more leisure, to make further excavations, which could safely be done in an island where there are no Turks to prevent it. Tournefort, who has given a plate of the portal, (i. 219,) found it to be eighteen feet high, and eleven broad. It is constructed of Naxian marble, which is coarser-grained, more sparry and sparkling than that from the Parian quarries. (Clarke, vi. 106.)

General features of landscape.

Next to the Temple of Bacchus, the most interesting object in the Island in the estimation of some persons, is its highest mountain, called Dià or Zêa, (pronounced Yà, as if written Γιὰ, just as the preposition *διὰ* is commonly pronounced by ignorant Greeks,) in the centre of the Island. The road to it crosses the rich plain or valley of Trimalía, five miles to the north of which is Coronis, another peak nearly as high, named from Coronis, the nurse of Bacchus. The plain of Naxià, extending from the town to the first range of hills, "presents an unusual prospect in one of the Greek Islands, a fine extensive level, all enclosed and well cultivated," to use the words of an English traveller, who visited it about ten years ago. But there is a want of wood, and the distant mountains are not bold enough to give that variety and effect to the landscape, which so often delight and astonish in the interior of Asia Minor. The eastern boundary of this plain is a range of high craggy hills, composed of a species of gneiss, resembling that of *Myconos* and *Delos*. (Hawkins, in Clarke, vii. 112.) The rising grounds are every where covered with myrtles, arbutuses, lentisks, spartiums, cistuses, especially *Cistus Creticus*, passerinas, Daphnes, hypericums, and marjorams; styraxes, lanis, oleanders and agnus castuses, as in Asia Minor, every where mark the

ount
a.

course of the rivulets; and the clefts of the rocks are adorned with the *Dianthus arboreus* and the *Centaurea atropurpurea*, (Olivier, ii. 115,) which is found no where else, except in Hungary. The distance of Mount Diá from the town of Naxiá is not more than ten miles, but the upper part of the road is very steep and rugged. Some of it can only be travelled on foot; but the prospect from the summit of the mountain amply repays the labour of reaching it. The whole Island, the Sicily of the Archipelago, is spread as on a map at the spectator's feet, with all its variety of mountain and valley, naked rocks and green luxuriant plains, intersected by the winding beds of innumerable streamlets, where the dark green of the laurel (bays,) and myrtle is contrasted with the lighter shades of the Plane and the rose-coloured blossoms of the oleanders or paler flowers of the agnus castus. In every direction to which the eye can turn, the bright blue sea is studded with bold, rocky islands, and from this central spot, almost every cluster in the Ægean is visible. On the way up, the ancient inscription mentioned by Tournefort, (i. *Lettre* 5,) ΟΡΟΣΔΙΟΣΜΗΔΩΣΙΟΥ, which accounts for the name given to the mountain, is still shown; and in a deep glen on its flank is the celebrated grotto of beautiful white marble, which is full of stalactites, "almost as beautiful," says M. de Riedesil, (258,) "as those of Antiparos, and far more easily approached." The detached blocks of marble, noticed by Olivier, (ii. 113,) show that this, like the other, was probably an ancient quarry. The side of the mountain, immediately above this grotto, is nearly perpendicular, and the rocks around it are extremely bare, with here and there a few pretty campanulas, (*C. heterophylla*,) figured by Tournefort, (i. 243,) and a little further on clumps of dwarf oaks and the Cretan maple, common in many other islands of the Archipelago.

To the west of *Naxos* lies the Island of Paros, 300 stadia (about thirty-five miles) in circumference, according to Pliny, (iv. 1,) and of an oblong form. It is hilly rather than mountainous, abounds in excellent pastures, and will ever be famous for its harbours, which have been celebrated by the Ancients, (Scylax, *Geogr. Min.* i. 22,) as well as the Moderns, (Sonnini, ii. 267; Clarke, vi. 115.) Its greatest diameter, like that of *Naxos*, is from north-east to south-west, and is about ten geographical miles, and its least may perhaps be seven. A chain of rocky hills crosses the Island in the same direction, and is broken by wide vallies, well covered with vegetable earth, and yielding considerable crops. The hills are probably formed by alternate beds of gneiss, micaceous schistus and marble. Its ancient populousness and opulence are attested by its colonies at *Thasus* and *Parium* in the *Propontis*, (Strabo, x. 5, p. 487, ed. Casaub,) and the important part which it took in the wars between the Greeks and Persians. But prosperity does not appear to have improved the morals of its inhabitants, whose perfidiousness was proverbial. (Eustath. in Dionys. v. 525, *et* Stephan. *de Urb. v. Paros*.) In modern time their women have been accused of libertinism, (Riedesil, 263;) but the hospitality of the men is indisputable, and must have left a favourable impression on the mind of every traveller.

That so small an Island should ever have formed an independent State, is much more extraordinary than that it should have been reduced to vassalage by its more powerful neighbours. Themistocles made the Parians pay severely for their perfidy to Aristides, (Herod. viii. 112,) and it was not long before they formed a part of the insular Empire of Athens. At a much later period they were subdued by Marco Sanudo, and were included in the Duchy of the Archipelago, till their Island was given as a dower to Mary, the wife of Gasper di Sommariva, and only daughter of Florence Sanudo, Duchess of Naxiá. The male line of the Sommarivas having become extinct, *Paros* again passed as the dower of its mistress into the possession of another Venetian noble family, whose grandson, Francesco Venieri, in A. D. 1537, made a most gallant defence in his castle at Kephalo, against the overpowering force of Barba Rossa; nor did he capitulate till every drop of water was exhausted. The excellent harbours of *Paros* have in later times proved the source of its ruin, by attracting the fleets of the contending parties, who, whether friends or foes, left nothing but traces of desolation behind them. Thus, in the war which terminated in the capture of Cyprus by the Turks, in 1571, the olive-groves in this Island were destroyed by the Venetians, regardless of the welfare of their former vassals, and less humane than the Musulmáns, who always spare those invaluable trees.

History.

Though so much smaller than *Naxos*, *Paros* has more ground capable of cultivation; grain of different kinds, wine, cheese, sesamum, and cotton are its staple articles of produce; and its pastures feed excellent mutton, (Γεωγρ. Νεωτ. 291;) pigs also are bred in considerable numbers, as is always the case when their foes the Turks are out of the way. The red-legged partridge and the wild pigeon are not uncommon. With regard to its population, M. Olivier observes, that though it contained 6000 souls in the beginning of the XVIIIth century, there were scarcely 2000 when he visited it in 1795; he seems, however, to quote Tournefort from memory, for that writer, (i. 203,) reckons 1500 families, (about 9000 souls,) as the number inhabiting this Island in 1700. But when it is recollected that the harbours of Trio and Agusa are the ordinary stations of the Capúdán Páshá's fleet, during its annual cruise in the Archipelago, this decrease in the numbers and prosperity of the Parians is immediately accounted for. The indentations of the coast are not less frequent, but far deeper than those in *Naxos*; in some places the sea is completely land-locked, forming spacious and secure harbours. On the eastern side there are three: Porto di Santa Maria, towards the north point, is preferable, according to Tournefort, (ii. 204,) to Agusa; it is sheltered from the south by some small islands, but exposed to the north-east; Marmora, midway between the other two, formerly protected by Fort Sant' Antoniò at Kephalos, so nobly defended by Venieri against Khaïru' ddín Páshá; and Trios (Τριών) near the southern extremity of the Island, sheltered by some islets from the north and east, but open to the south. This is the usual station of the Turkish fleet, being conveniently placed just opposite to *Naxos*. The only port on the western side is that of *Paros*, or Parækhía, (Παροιχία,) the principal town on the Island. It is immediately opposite to *Antiparos*, and has a difficult entrance, with a concealed rock nearly in its centre; so that it cannot be compared with the port of Agusa, (Ἄγουσα,) called Nausa in our maps. That harbour, which is capable of receiving

Revenue.

Population.

Ports.

CY-CLADES.

the whole of the British navy, has a narrow out very secure entrance, with eighteen or twenty fathoms depth of water, and is traversed by no wind except the north-west. It lies in 37° 10′ north, and 24° 45′ east. Nearly in the centre of the harbour there is a small rocky island well calculated for a fort, as are also the bluff points of land on each side of the entrance. This was the rendezvous of the Russian navy, in the war which was signalized by their destruction of the Turkish fleet at Cheshmeh; and the remains of the forts, barracks, &c. erected by them, were, in 1814, sufficiently entire to have been made serviceable again by a few days labour. Yet M. Sonnini, who saw the place (if he ever saw it) in 1779 or 1780, very gravely tells his readers (ii. 267, *Eng. Trans.*) that "the empire of destruction has in such a manner established itself in these beautiful parts of the East, that these works are at present quite razed and demolished, and that if it were wished to make of the fine road of Nauzsa a naval and military establishment, every thing there must be reconstructed."

Abundance of wine and excellent oil, says Dr. Clarke, (vi. 121,) are produced in *Paros*. The latter would be as plentiful as the former, but for the merciless destruction by the Venetians before mentioned. Its butcher's meat is good, and game is very plentiful. Its circumference is about thirty-five miles. In 1700 it paid about 11,000 crowns for the *Khardj*, and other dues to the Turkish Government. (Tournefort, i. 203.) The charge in 1795, for *Paros* and Antiparos, was rather above 8000 piastres, about £1000. (Oliv. ii. 121.) Almost all the inhabitants are of the Greek rite, under the ecclesiastical jurisdiction of a Metropolitan, and there are no less than sixteen Monasteries in the Island.

Parakía.

Parakía, or Parækhía, "is a wretched rélic of the ancient and famous *Paros*;" but "every building in the place," and especially "the castle, bears some evidence of its pristine splendour, and of the havoc that has ensued." (Clarke, vi. 116.) The walls of that building are entirely composed of fragments of ancient sculptures and inscriptions; some of which are still legible, and only serve to make the lover of Grecian literature lament more bitterly the barbarism of those who, though close to the finest quarries, patched up their walls with such materials.

Quarries.

These quarries are only five or six miles to the east of the town, but nearly as high above the sea as the Grotto of Antiparos, on the side of Mount Kapressos, the *Marpessus* or *Marpessa* of the Ancients. (Clarke, vi. 34; Tournef. i. 200.) The highest of these two quarries is the largest, and they have both been long undisturbed, because there are no wheel carriages to convey the blocks to the shore. The neatness and exactness with which they were worked, is truly astonishing. The dip of the vein of marble has been so carefully followed, that the cavities, whence the blocks were taken, resemble the seats in an Amphitheatre. The smaller and lower quarry is that which contains the ancient bas-relief described by Tournefort, (i. 200.) It represents a Festival of Silenus, has twenty-nine figures, and bears the inscription ΑΔΑΜΑΣ ΟΔΡΥΣΗΣ ΝΥΜΦΑΙΣ, Adamas Odryses to the Nymphs. Pliny has mentioned (xxxvi. 5,) the accidental discovery of a figure of Silenus, naturally formed in the rock; and Dr. Clarke supposes this to be the very figure so discovered, surrounded by others subsequently added and consecrated to the Guardian Nymphs. The plate of it in the *Voyage Pittoresque de la Grèce* (i. 68,) is not, he says, faithful in its details. "On breaking some of the many fragments found in the mouth of the quarry, we instantly recognised," he adds, (vi. 134,) "the beautiful marble generally named, by way of distinction, the Parian, although the same kind of marble be also found in *Thasos*, the inhabitants of which were a Parian colony. (Strabo, x. 5, p. 487.) It was highly extolled and valued by the Ancients, particularly the Romans; for in the age of Pericles, that of Mount *Pentelicus*, which is whiter, was preferred by the Athenian sculptors. But the Parian stone has the property of hardening on exposure to the atmosphere, and is therefore peculiarly fitted to resist the effect of time. It is less mixed with extraneous substances than the Pentelican, and therefore less likely to exfoliate; it is also closer grained, though whiter, and almost as brilliant as the marble of *Naxos*."

CY-CLADES.

A strait about five miles wide in its broadest and two in its narrowest part, separates *Paros* from Antiparos, a small almost deserted Island, supposed to be the *Oliaros* of the Ancients. There are a few islets called *Panteronisia* in the mid-channel, and two near its south-western extremity, named *Despoticon* and *Strongylon*. A chain of hills, probably a continuation of those in *Paros*, runs across this Island from north-east to south-west; and on their eastern side there is a level of some extent, covered with a rich and productive soil. The only village in the Island, which is about seven miles long and two broad, and sixteen in circuit, is near its northern extremity, and is in 37° 0′ north and 25° 5′ east. It is the abode of misery and wretchedness; for its inhabitants, not 400 in Tournefort's time, (i. 185,) are alike the prey of the pirates who infest these seas, and the *gallióndjís* of the Turkish fleet, who ought to protect them. The Grotto, which, in modern times, has given such celebrity to the Island, and which we have already described, (Antiparos,) is near its southern extremity, six or seven miles from the town, and about two from the sea. The road leading to it crosses two vallies of some width, and then gradually ascends, skirting along the western side of the Island, nearly to the summit of the hills, whence a short but rugged descent leads to the area before the opening, coarsely represented in Tournefort's plate, (i. 187.) A paltry Greek chapel, on the right hand of the entrance, is the only addition since his time. The face of nature is exactly the same, for the very weeds and bushes grow where they did 120 years since, and there are tufts of the thornless caper (*Capparis rupestris*) in the spot where his draftsman found them.

At the distance of about fifteen miles nearly due north of *Paros*, lies the Isle of Myconos, separated from *Delos* on the west by a strait scarcely three miles across, its centre being nearly in latitude 37° 27′ north and longitude 25° 24′ east. It is a knot of rocky hills about thirty miles in circumference. The rock near the town is entirely of granite, (Olivier, ii. 105,) or more properly gneiss. It is much lower than *Naxos* or *Tenos*, and from a want of springs is less productive than the neighbouring isles; but its sunny declivities are peculiarly favourable to the fig-tree and the vine, and a favourite haunt of game and birds of passage.

CY-CLADES.

by the Governor of Constantinople at two párahs, so that a rate of twenty aspers amounted to one piastre, (2*s.* 1*d.*) To this rate a small addition is made for presents, fees, &c. to the Capúdán Páshá and his officers. The total amounts annually to 36,234 piastres, (about £3620.) a large sum compared with the revenue of the other islands. The whole is collected by officers appointed by the people themselves, whose punctuality has been such, that the Páshá has consented to receive from these agents the sums due, instead of sending a Chohahdár (*Chókahdár*) to collect it, as is done elsewhere, to the great injury and annoyance of the islanders.

History.

The Teniotes do not appear to so much advantage in ancient as in modern history; and are scarcely noticed by the ancient writers. They formed an independant Republic before the Persian invasion of Greece, and subsequently became tributary to Athens; but when Venice, after the subversion of the Greek Emperors, in 1204, offered the islands as fiefs to such of her Captains as should make the conquest of them, Tino, as it was called by the Venetians, together with Miconi, Schiro, and Scopelo were seized by Andrea Gizi; it subsequently reverted to the Republic, and was governed by a Proveditore sent from Venice. The prudence and fidelity of the inhabitants secured to them a degree of freedom enjoyed by no other State subject to that Republic; and they made a grateful return for such indulgence, by the firmness with which they resisted the arms of Barba Rossa in 1537, and of Alí Páshá in 1570. Subsequent attacks of the Turkish fleet were equally fruitless, and Venice would perhaps have continued to possess Tino as long as she maintained her independence, but for the dastardly conduct of Bernardo Balbi, the last Proveditore, who capitulated when he might have made a stand against Jánum Khójah, the Capúdán Páshá, under Ahmed III. who attacked the Island in 1714, with a force much inferior to that which the Teniotes had defeated at a time when the Turks were the terror of the most powerful States in Europe.

Andros Anderah.

A very narrow channel, only twelve stadia, or a mile and a half, (Scylax, *Geogr. Min.* i. p. 55; Tournefort, i. 355,) separates *Tenos* from the larger and more productive Island of Andros. Its bold and craggy mountains broken by rich vallies, and sometimes widening towards the shore into plains, present a finer object to the eye than any of the islands except *Lesbos* and *Chios*; but the want of any remarkable objects of antiquity, and still more the bad reputation of its inhabitants, have prevented it from being visited so much as some places which possess fewer natural resources. It is elliptical in form, stretching from north-west to south-east, and is a part of the chain which connects *Eubœa* with *Myconos* and *Naxos*. Its greatest length is about twenty-six miles, and its width between eight and nine. According to Pliny, (iv. 12,) it is only ninety-three miles in circumference, but 100, the number assigned by Meletius, (iii. 181,) is probably nearer to the truth. From *Geræstus* (confounded by Tournefort with *Carystos*, on the opposite side of *Eubœa*) to the nearest point in *Andros*, the distance is ten miles. (Pliny, iv. 12.) This forms, what is termed by modern navigators, the *Capo d'Oro* passage, one of the only two wide enough to allow a passage, when it is necessary to tack. The other is the channel between *Tenos* and *Myconos*. The principal ports in *Andros*, are that of the Lower Castle (*Apano Castro*) on the south-western side of the Island, not very far from its northern extremity, and Gavrio (the ancient *Gaurium*, Diod. Sic. xiii. 69,) on the south-east. There is also a roadstead near the western headland, sheltered by some rocks and cliffs from all winds, except the south-west. (Dapper, 133.) Near the first is placed the principal town or rather village, called Cato Castro, the Lower Castle, to distinguish it from the Upper Castle, and former residence of the Court, (thence named Ἀνάπω κάστρον and κούρτ.) It is in 37° 50′ north and 24° 48′ east, ten miles from the sea. A point of land which divides the harbour into two parts, is the site of a castle built probably by the Lords of *Andros*, when it was held as a Knight's fee under the Republic of Venice; the fragments of sculpture and inscriptions contained in its walls, show that it was constructed from the remains of some ancient city. The port is only fit for small vessels; and the castle served, in Tournefort's time, merely as a protection to the wealthier islanders against the attack of pirates. The meadows (λιβάδια) to the left of the town, are full of well-watered gardens planted with oranges, lemons, citrons, mulberries, jujubes, pomegranates, and figs. On the opposite side of the island is the Albanian village of Arna, the residence of the Greek Archbishop, and the largest town in *Andros*; the road to it from Cato Castro crosses the highest mountain in the Island. The houses are scattered in large masses, amidst groves of plane-trees, half way down the hill, which overlooks a rich valley, full of brooks and springs. About two miles south-southwest of Arna, beyond the port of Gavrio, there are the ruins of *Paleopolis*, the ancient Capital of *Andros*, advantageously placed on an eminence commanding the whole coast. An inscription, not entirely effaced in the time of Tournefort, (i. 351,) seemed to indicate this as the site of the famous Temple of Bacchus, near the sacred spring which on the Nones of January every year sent forth streams of wine. (Pliny, *Nat. Hist.* ii. 103.) There were in these ruins many beautiful fragments of Grecian sculpture, and the expense and labour of excavations, would probably be repaid by some valuable discoveries.

Religion.

The Greek Church is almost exclusively predominant; for in 1700 there was but one Roman Catholic family in the Island; notwithstanding which it had its Latin as well as its Greek Bishop. The latter, formerly under the jurisdiction of Athens, was afterwards raised to the archiepiscopal dignity. There are many Monks, and some richly endowed Monasteries; of which the principal are Chrusopegè, (Χρυσοπηγή,) Panákhrado, (Παναχραντος,) and San Nicolò Sorás. The Monks were, however, even in Tournefort's days, too ignorant to be able to instruct the children of the inhabitants, and had abandoned the hospitality for which they were praised a few years before by Thevenot.

History.

On the invasion of Greece by the Persians, the Andrians were among the first who submitted to the Great King, in consequence of their eagerness to shake off the yoke of *Naxos*. They were afterwards subjected to Athens, and suffered severely from the oppressive conduct of that Republic to all her dependant States. During the wars between the rival successors of Alexander, this Island was often taken and retaken by the contending parties; nor did it

CY-CLADES.

enjoy any permanent tranquillity, till all the independant States of Greece and Asia had been absorbed in the Roman Empire. From that period, till the establishment of the Franks and Venetians on the Throne of Constantinople in 1203, *Andros* formed a part of the Eastern Empire; but in 1207 it was seized by Marino Dandolo, and afterwards held by him as a fief under the Doge of Venice, till Barba Rossa dispossessed Corsino the IIId in 1538. That Chief, however, was restored to his dignity soon afterwards by the intercession of the French Ambassador; but his son, Giovan Francesco di Sommariva was driven out by his subjects of the Greek rite, says Father Sauger, a Jesuit, who wrote a history of the Dukes of the Archipelago, because they preferred the government of a Turk to that of a Christian. The extent to which the Latin ecclesiastics lorded it over the laity, is sufficiently manifested by a custom mentioned by Tournefort, (i. 351;) who says, *Ce que M. Thevenot rapporte de la procession du jour de la Fête Dieu dans Andros, s'y pratique encore; savoir que l'Evêque Latin qui porte le corps de Notre Seigneur, foule aux pièds les Chrétiens prosternés dans les rues, de quelque rite qu'ils soient.*

Population and revenue.

The population of the Island is, according to Olivier, (ii. 105,) about 12,000 souls, (just three times the number mentioned to Tournefort in 1700,) who inhabit forty or fifty villages, and pay 30,000 piastres, (then=£3000.) for all dues either to the Sultánah, for whose maintenance the Island is assigned, or to the Capúdán Páshá. In 1700, the sum paid to the Po.. was 15,000 crowns, and therefore nearly double that stated by Olivier. A *Vaïvód*, or Governor, and in Tournefort's time, a *Cází*, or Judge, were the only Turkish officers on the Island.

Syros, Syra.

About nine miles south-west of *Tenos* lies the little Island of Syros, called Syra by the modern Greeks. It is nearly triangular in form, and consists of alternate beds of marble and green steatites or serpentine containing garnet. (Clarke, xi. 157.) Though there are no mountains, its hills are steep and rugged, and the principal town (in 37° 28′ north and 24° 58′ east) is perched like an eagle's nest on the summit of a conical eminence, (as is often the case in the islands of the Archipelago,) commanding every approach, and so steep as to be both difficult of access and easily defended. Tournefort's Plate, (i. 321,) gives a tolerable notion of its position and appearance. "It may be compared," as Dr. Clarke very justly remarks, (vi. 149,) "to a vast sugar-loaf covered with houses." This is the only town in the Island, the circumference of which is not more than twenty-five miles. The nakedness of the hills, for the only trees to be seen are a few figs and olives, gives the country a very

Produce.

dreary aspect, except in the Spring when the corn-fields are green; but the vallies are productive, and supply the inhabitants with a sufficient quantity of wine, figs, cotton, and barley, for their own consumption, and with some wheat. To a Botanist it furnishes a few rarities which repay him for the labour of his excursions; one of them is the *Salvia pomifera*, which is often laden with excrescences, called Sage apples, formed by a kind of *cynips*, and is preserved in syrup by the Greeks; the *Hedysarum Alhágí* and *Dianthus arboreus*, or tree pink, are also found in this Island.

At the very summit of the hill on which the town is built, stand the Cathedral and the Episcopal Palace; for every rock in the Archipelago has its Bishop, and the Prelate of Syra enjoys, says Tournefort, (i. 321,) *la consolation d'avoir le plus beau clergé du Levant, composé de 40 Prêtres.* They are all Latins (i. e. Roman Catholics,) for there are not a dozen members of the Greek Church upon the Island. The number of its inhabitants does not exceed 4000. (Clarke, vi. 152.) One-third less than when Tournefort visited it, (i. 320;) and there is not a single Turk.

CY-CLADES.

Religion.

Population.

The ancient Capital of the Island was near the Port, where there are still some ruins above, and more beneath the surface of the ground. In digging for the foundation of a mill, in 1804 or 1805, two inscriptions were found; one of the time of Nerva much mutilated, the other of the best age, and as perfect as when it came from the hand of the sculptor, recording the hospitality of some natives of Syra to certain citizens of Athens. Another found nearly in the same spot, had been placed in a corner of one of the walls of the church, and was legible when Tournefort was there, (i. 321.) There are also fragments of fine sculpture in the walls of several houses, some of which have been copied by that traveller.

Antiquities

The spring near the town, which is an object of great veneration among the inhabitants, was doubtless a consecrated spot in the days of Paganism, as the inscription near it, which Dr. Clarke could not discover, and Riedesil pronounces (265) to be illegible, would probably show. This spring, a favourite rendezvous of lovers, is the scene of a singular and mystic ceremony, practised in most of the Greek islands on the eve of St. John's day. It bears some resemblance to the twirling of a key, practised by our own peasantry in order to find out a thief or a backbiter. After sun-set on that hallowed eve, the unmarried women all go in procession to some sacred spring, carrying a jar to be filled with water, and brought back to the town; after which each throws in a marked apple, and the jar is carefully covered up. On the following morning, after the service of the church is over, they again assemble; the jar is opened, each draws up some water and an apple in a smaller vessel, and two, standing opposite to each other, place their hands together, knitting their fingers, but holding up their thumbs so as to support the cup containing the prophetic fluid. The enamoured virgin then utters a prayer to the Saint, intreating him to turn the cup to the right, if her wishes are to be granted; to the left, if the object of her affections is to be the husband of another. The vessel is sure ere long to swerve one way or other, and the event of many a Grecian courtship has been thus decided by the turn of a cup.

Curious superstition.

Syros is supposed by Strabo (x. 5, p. 487) and Stephanus Byzantinus (*De Urb.*) to be "the Syrian Island" of Homer, (*Od.* xv. 405,) and is celebrated as the birth-place of Pherecydes, the disciple of Pittacus and master of Pythagoras.

Twelve miles north and by west of *Syros* is the rugged little Island of Gyaros, (in 37° 39′ north and 24° 47′ east,) famous as the abode of Roman convicts. Its modern name is Gyura, (pronounced Hyura, or Jura;) and it is inhabited by shepherds from Syra. Like the other islands in its vicinity, it consists of alternate beds of schistus and marble, the former containing masses of quartz. (Clarke, vi. 160.) It is barely twelve miles in circumference; and is represented by Tournefort, (i. 344,) as one of the most barren spots which he saw in his whole journey.

Gyaros, Gyura.

CY-CLADES.

Ceos. Tzia or Kia, Murdar, or Yumurtah Ada-si.

The most considerable of the western Cyclades is Ceos, sometimes contracted into *Cós*, and thence confounded by some compilers with the island of that name near Halicarnassus. (Lempriere's *Class. Dict.*) In Ptolemy it is spelled *Cia*; in Ælian, *Cios*; and in Pomponius Mela, *Cianos*; probably from mis-transcription. The Romans commonly called it *Cea* (Κέα) or *Cia*, (Κεία,) whence its modern name arose; for the Greeks in the western islands of the Archipelago learned to pronounce the letters *k* and *g* like the Venetians, who were so long their masters: hence we have *Cherigo* (perhaps from κυριακὸς) Τζερίγο; *tívochi*, τίβοτζι, (a corruption of τιποτέσου for τίποτέσοι, any thing for you,) and a multitude of words, in which τζ are used to express the sound of *ch*, as pronounced by the populace at Venice. Thus *Cia* was spelt *Tzia*, and pronounced *Chia*; *che* was substituted for *ke*, and (καὶ) Panajía for Panayhía, (παναγία.)

An ancient tradition preserved by Pliny, (*Nat. Hist.* ii. 92; iv. 12,) declares that *Ceos* was separated from *Eubœa* by a violent convulsion of the earth, in which the sea swept away the coasts of *Bœotia*. Tournefort (i. 330) seems to think this probable; but the maps show the fallacy of this report. The charts of the Archipelago were in the highest degree inaccurate, long after that traveller's time. Scarcely a single island was tolerably laid down; and the outline, even of some of the larger, was wholly unlike the truth: he was not, therefore, aware of the true bearing of Zia, Thermia, Serfo, and Sifanto, with respect to each other and the coast of Attica. If *Ceos* were ever rent from the continent, it must have been joined to the promontory of *Sunium*, not to *Eubœa* or *Bœotia*. The channel by which it is separated from the Island of Helen, (*Macronisi*,) close to the Attic coast, is barely seven miles across; and the Geologist will probably find a continuation of the same strata on both sides.

The shape of Tzia is nearly oval, (whence the Turkish sailors call it *Yurmurtah adá-si*, or Egg Island,) and its greatest diameter from north-north-east to south-south-west, measures about twelve miles, while its breadth is barely eight; its circuit therefore cannot be much more than forty miles, or half the distance mentioned by Meletius, (iii. 27.) "Its mountains are all," says Dr. Clarke, (vi. 175,) "of limestone; there are no vestiges of volcanic origin." This observation is the more valuable, as it comes from one well acquainted with mineralogy, and is directly at variance with the account of Riedesil, who says, (268,) "I saw at Zia also many pieces of lava," and finds the traces of volcanoes every where. Near the monastery of St. Marinas, about nine miles from the town of Tzia, there is great abundance of a variety of talc, which Tournefort says (ii. 336) is very like the Briançon chalk. Lead ore is also found in the same neighbourhood. The rich pastures of *Ceos* are celeby Virgil (*G.* i. 14,) and the fertility of its soil is such as strikes even an inattentive observer. It appeared also to Dr. Clarke (174) the best cultivated of any of the Grecian Isles; but the want of wood, and especially olives, is a great deficiency; and the nakedness of its hills give it, when seen from the sea, that dreariness of aspect which is so common in the Archipelago. A little wheat, much barley, abundance of figs, a good deal of wine, some cotton, and a moderate quantity of silk are its products in common with the other islands; but that peculiarly furnished by *Ceos*, is *Velani*, (βαλάνια,) or the acorn-cup of a peculiar kind of oak, (*Quercus Ægilops*,) much used by our dyers.* Five thousand *cantárs* (= 281 tons 4 cwt.) are exported; which, at £15. per quintal, (*cantár*,) the current price in 1801, is worth £75,000. The greatest part of this is paid by England, for the French dyers are not in the habit of using this substance, (Olivier, i. 44,) which is called *Valonéa* by the English established in the Levant.

Produce.

Cea.

The present population of Tzia cannot exceed 7000 or 8000, including children, which allows only seventy or eighty to a square mile, and shows that it is not now in danger of being over-stocked with inhabitants, nor in any need of enforcing the singular law cited by Menander, (Strabo, x. 5, p. 486,) which condemned every one to take a dose of hemlock (κωνειάζεσθαι,) as soon as he had completed his sixtieth year.

Population.

The former populousness and wealth of *Ceos* are sufficiently manifested by the number and splendour of its cities. They were no less than four; whence it is called *Tetrápolis* by Strabo, though two only were remaining in his days; *Julis* and *Carthæa*, which had absorbed the population of the others; *Coressia* and *Pœëssa*. On the site of the latter the present town of Tzia is built, on a gentle elevation, three miles from an excellent harbour, (in 37° 40′ north and 24° 20′ east,) the houses rising like the seats in a Theatre, one above another, so that the flat roofs of one street form the causeway of that above it. The ruins of a citadel, gallantly defended against the Venetians by only sixty Turks, are seen on the left. *Carthæa* occupied the whole of the valley between the present town and the shore, as is evident from fragments still existing, though much was wantonly destroyed by those *soi-disant* allies of the Greeks, the Russians, in 1770. (Clarke, vi. 165.) At the distance of twelve miles south-southeast of *Carthæa*, and in a more agreeable situation (Riedesil, 268) are the mountains of *Julis*, called "The City," (Ἡ Πόλις,) by the Tziotes. It was placed on the side of a mountain, three miles from the sea, in the time of Strabo, but now immediately overhangs it. Near to it was a Temple of the Sminthian Apollo, many of the columns of which were seen by Tournefort, (i. 332,) and a fine staircase, hewn out of the marble rock, led from thence down to the shore, where there was a fragment of a statue, supposed to represent Nemesis. The fountain of *Julis*, whence the city derived its name, (Steph. *de Urb.*,) flowed through the valley into which also the ruins extend. The ancient road from one of these cities to the other still exists, and is, perhaps, says Tournefort, the finest thing of the kind which can be found in all Greece.

Ancient cities.

---

* Tournefort (i. 334) describes this tree as having the appearance and height of the common oak; but Dr. Clarke (vi. 163) observes, that those seen by Mr. Cripps and himself were only shrubs. He probably overlooked it in the Troad, where Mr. Browne, the African traveller, noticed it as a tree of some size. In Ionia and Caria, it has the size of a low stunted oak. The acorns, which have little of the acrid bitter, so predominant in those of the common oak, are used as an article of diet by the peasantry about Mount Ida. They are almost as good as chestnuts, and perhaps equal to those of the *Quercus Ballota*, so much eaten in Spain. (Townsend's *Travels*.) The best account of this oak is given by Olivier, (i. 44;) but his Greek is incorrect. Velani or Valani (τὸ βαλάνιον,) is the acorn; Velanidhi (τὸ βαλανίδιον,) its cup, and Velaniá or Velanidhiá, (ἡ βαλανιά, &c.) the tree which bears it.

CY-CLADES.

Julis, as Strabo informs us, (x. 5, p. 486,) was the birth-place of the Physician Erasistratus, the Peripatetic Philosopher Aristo, and in earlier times, of Bacchylides and his cousin the Poet Simonides, whose *Art of Memory* is honourably mentioned in the *Parian Chronicle*; a remarkable circumstance, when combined with the tradition current in Tzia, that the celebrated inscription bearing that name, was in reality found at *Julis*. (Clarke, vi. 167—8.)

story. In the ancient periods of its history, the fate of *Ceos* was like that of the neighbouring islands; and in 1207 it was seized by Pietro Giustiniani and Domenico Michieli, and held as a fief under Venice. In the war between the Venetians and Genoese, in 1353, it was taken by Filippo Doria, Governor of Scio, from Nicolò Carcerio, ninth Duke of the Archipelago; but was afterwards restored to the Naxiote Princes, and given as a dowry with the sister of Giácomo Crispo, twenty-first and last Duke of *Naros*, to Giovan Francesco di Sommariva eighth and last Lord of *Andros*, who was deposed by the Porte, as already mentioned, on the petition of his discontented subjects. It does not appear to have been much oppressed by the Turks; and

renue. the *Kharáj* (capitation-tax) levied on it, is estimated by Dapper (130) at 1700 piastres, (probably Spanish dollars, and then nearly = £420.;) Dr. Clarke states it as varying from ten to fifteen Turkish piastres, for each family, which would amount to nearly £1300.

ligion. There are only five or six Roman Catholic families on the Island; the remainder are Greeks, under the spiritual guidance of an Archbishop, whom Tournefort saw reposing upon the roof of his palace, and spinning silk. This venerable Prelate, when informed who the strangers were, and what was their object, sent them word that it was a pity that they should have nothing better to do, than to wander about in search of weeds and rubbish, (i. 137.)

hnos, rmià. Cythnos, now called Thermià, about seven miles south-southeast from the nearest point in *Ceos*, has almost the form of a lozenge, and is neither so high, nor so rugged as the neighbouring islands. (Tournefort, i. 326.) On the nature or inclination of its strata no observations have been made; except what can be gleaned from a remark of Tournefort (i. 329,) that "the stone of the Island is a bad kind of granite, very liable to decomposition;" and another of Riedesil (265,) that he found on the sea shore "fine specimens of lava, impregnated with sulphur and matrices of stones (gems) as rich and fine as those met with on Vesuvius." This, if there be no error, indicates volcanic agency, and the hot springs, (*Thermæ*,) whence the modern name of the Island is derived, may be supposed to favour such a supposition; but "fragments of red porphyry, much resembling lava," (Clarke, vi. 100,) may easily be mistaken by superficial observers, and boiling springs do not necessarily imply the presence of subterraneous fires.

m s. The warm baths in this Island are near the shore to the north-east, on the right hand of the entrance of the harbour, (in 37° 27′ north and 24° 26′ east,) at the foot of a low hill; the principal of these is in a house, which forms a sort of vapour bath, and the others, a few paces from it, soon unite in a small stream, which falls into the sea. They are extremely salt, and much cooler than the springs of Protothálassa in *Melos*. The water from them discharges the colour of oil of tartar, but produces no change in a solution of corrosive sublimate, (Tournefort, i. 328;) it has lost its reputation, says Tournefort, because none but incurable patients come to try its virtues. There are the remains of ancient baths in the middle of the valley. These and the ruins called *Evræo Castro*, (Εβραῖον κάστρον,) near a Port on the south-western side of the Island, show that it was anciently a place of some note. It is therefore extraordinary that it should have been scarcely noticed by any writers except Dicæarchus, (*De statu Græci. Geograph. Minores*, i.) There is another town in ruins, called Palæo Castro, in a different part of the Island, but it appears to date only from the middle ages. It must have been very populous, as, according to vulgar report, it contains the vestiges of no less than 101 Churches.

CY-CLADES.

The soil of Thermià is productive, and its silk was much valued in the time of Tournefort; it then (in 1700,) sold at from one to two crowns per pound, and yielded an income of about £450., as upwards of 1200 lbs. were raised annually. Veils of yellow gauze, much used in the Levant, are manufactured by the Thermians; and it abounds in the tree-medic, (*Medicago arborea*,) of which the Turks fabricate their sword and knife handles. Produce.

That Thermià is the ancient *Cythnos* can scarcely be doubted, as Dicæarchus, (*Geog. Min.* i.) places that Island between *Ceos* and *Seriphus*, next to which it also comes in Ovid's description of the passage of Minerva from it to Mount *Helicon*, (*Metamorph.* v. 252.) Meletius (iii. 26) gives as its ancient name Theramnia, borrowed, perhaps, from the Ecclesiastical catalogues, for this Island, together with the Tzia, forms an Archbishopric under the Patriarch of Constantinople. It has only two villages, Thermià and Silaca, and about 6000 inhabitants, who paid nearly £3000. in taxes to the Turkish Government, in 1700. The harbours of St Irene, near Thermià, and St. Stephen, near Silaca, have a good anchorage for merchantships. *Cythnos* was celebrated among the Ancients for its cheeses, (Steph. Byz.,) and for a Painter, named Cydias, who flourished in the 114th Olympiad, (B. C. 320.) It is about twelve miles long, five broad, and thirty in circumference. Population and revenue.

Seriphus, Sériphos, Serfanto. Seriphus, the most rugged of all the Cyclades, in the opinion of the Ancients, and "therefore alledged by the Dramatists," says Strabo, (x. 5, p. 487,) "to have been petrified by the sight of the Gorgon," possesses no monuments of antiquity to gratify the traveller's curiosity, but some natural productions peculiar to itself. It is only six geographical miles from the nearest point in Thermià, and thirty-six in circumference, according to Tournefort, (i. 179;) but he was probably misinformed, as it is not more than twenty-five miles in circuit, according to our best maps. With respect to its shape there is much uncertainty, some making it almost circular; others, an oblong, having its diameter from north to south nearly double of that from east to west. It abounds in common and magnetic iron ore, often radiated like native antimony, and found immediately below the surface of the ground; but it does not appear to have been examined by any modern geologist. Onions, as mild and ponderous as the largest from Portugal, are the only remaining productions of which this Island can boast; for its soil is barren, and its inhabitants are as lazy and contemptible as they were in the days of Origen, who instances them as the most despicable of

CY-CLADES. CYCLAS.

mortals, (*Contra Celsum.*) The wretched hamlet of San Nicolò, in 37° 10′ north and 24° 29′ east, the only village on the Island, is built on the declivity of an almost perpendicular rock, at the distance of three miles from the harbour, which is one of the finest in the Archipelago. A little barley and wine are produced; so that in 1700, 800 crowns was the amount of all the taxes levied upon it by the Porte. The inhabitants, about 1000 souls, are all members of the Greek Church, under the spiritual jurisdiction of the Archbishop of *Seriphus*.

Revenue and population.

Seriphus was first peopled, says Herodotus, (viii. 48,) by the ancient Athenians, called Ionians, and had the merit of refusing to join the fleet of Xerxes, and of assisting its parent State after the battle of *Artemisium*. It was used by the Romans as a place of banishment, and was considered by them as so detestable an abode, that "Stratonicus, one of the Exiles," says Plutarch, (*De Exilio,*) "having been told by his host that forgery was the crime for which they banished the people, immediately cried out, Why then do you not make some daring forgery, that you may be removed from this wretched hole." The frogs of *Seriphus* now croak as loud as their neighbours, in spite of the Proverb, (Tournefort, i. 183;) and the splendid *Dianthus arboreus* is still the ornament of its rifted rocks, as it was when first noticed by Tournefort.

Siphnos, Sífanto, or Sífano.

Siphnos, called Sífanto by the Italians, is about ten miles to the south-east of *Seriphus*. *Merope*, *Merapia*, and *Acis*, (Pliny, *Nat. Hist.* iv. 12,) were its most ancient names, for which that of *Siphnus*, son of Sunion, was afterwards substituted. (Steph. Byz.) "It is covered," says Tournefort, (i. 172,) "with granite and marble; geologically considered, therefore, it can differ little from *Paros* and *Naxos*, and it is only separated from *Strongylon*, one of the islets close to Antiparos, by a channel seven miles in width. It is extremely fertile, has a healthy atmosphere, and long-lived industrious inhabitants, who are very good kind of people, and the reverse of their forefathers, celebrated for their want of integrity. (Hesych. Suidas. v. Σιφνιάζειν, and Steph. Byzant.) The wine of *Siphnos* is coarse, but its oil and capers are excellent. Its scamities, dimities, and straw hats were used all over the Levant, at the beginning of the last century.

Population

This Island is about eight miles long, three and a half broad, and twenty-five in circumference, and at the period above mentioned contained more than 5000 inhabitants who paid 4000 crowns for the capitation and land-tax. Six Convents and 500 Chapels in an Island which has only five villages, will be thought by some rather disproportionate; but most of these chapels are little better than pent-houses. Some of the Monasteries are well endowed, and that of I Vrisi, (Ἡ βρύσις,) possesses the best estate in Antiparos. (Tournefort, i. 186.)

CY-CLAD CYCL

Siphnos has five harbours, Pharos, (Ὁ φάρος,) Vathy, (βαθὺ,) Kitriani, Khæroniso, and that of the town (Ἡ χώρα.) The gate of a castle, built on a rock near the sea, bears the date of 1365, and the name of Yan, doli di Corogna, its founder; and in the neighbourhood there were, in 1700, some sarcophagi, and the remains of a Temple, and in the town several fragments of sculpture. This Island formed a part of the Duchy of *Naxos*; and was probably given as a dowry with some Naxiote Princess to Yandoli di Corogna, with whose grand-daughter *Siphnos* passed into the hands of the Gozadinis, Lords of Sífanto and Thermiæ, who were finally dispossessed by Barba Rossa in 1537.

History.

Siphnos was once the richest of the islands, through its mines of gold and silver; overwhelmed, as was believed, by the sea, in consequence of the vengeance of Apollo, from whom they had withheld the tenth annually sent to *Delphi*. (Pausanias, x. c. ii. p. 823; Herod, iii: 57.) The entrance of one of the mines was shown to Tournefort, on the sea-shore near Ayía Sosti. The Island abounds in lead, and pieces of the ore are found almost every where after rain. It is smooth and greyish, approaching to the colour of pewter, and vitrifying readily. It is therefore much used in glazing earthenware, for which this Island is famous throughout the Levant. The soft stone, whence the ancient Siphnians used to cut pots and cauldrons, (Pliny, *Nat. Hist.* xxxvi. 22,) has been either exhausted or forgotten by the islanders.

Mines.

About the middle of the XVIIth century, the Turks sent some Jews to examine the ores found in *Siphnos*, and carry some samples of them to Thessalonica. The islanders, alarmed at the prospect of being condemned to work in the mines, bribed the Turkish Captain in one instance, and some French privateers in another, to sink the ships, Jews and all, and thus, effectually stayed further proceedings. The islanders may be allowed to have had plausible grounds for adopting such a mode of self-defence; but some surprise is surely allowable on our finding so intelligent and benevolent a man as Tournefort, justifying this and other acts of the said privateers, (i. 176,) merely, it seems, because they were Frenchmen, had served in the navy of the *Grand Monarque*, and made themselves judge and jury over Unbelievers!

Lond. 1801, 4to.; Tournefort, *Voyage au Levant*, Par. 1717, 2 vols. 4to.

CYCLAMEN, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Lysimachiæ*. Generic character: corolla wheel-shaped, reflexed, tube very short, orifice prominent; berry superior, enclosed in a case.

Five species, elegant plants, easily cultivated. *C. Europeum* is a native of England.

CYCLAS, ἡ περὶ τὴν χλαῖναν πορφύρα κύκλῳ, a bordered mantle, worn by the Roman ladies, (Juv. vi. 259,) without imputation on their modesty, and only disgraced when Caligula adopted it. (Suet. *Cal.* 52.) From the time of Gallienus to the fall of the Empire, it became the common dress of men. It was forbidden by Valentinianus and Valens. *Cod. Theod. de ves. hol.*

In the middle ages the Cyclas was worn by men

CLAS. CLOPS. over their armour, it was blazoned with their heraldic bearings, and differed little from the Sarcoat. The French named it *Sigleton* or *Singleton*.

Meyrick, *Dict. on Anc. Armour*, ii. 178, 198.

CYCLAS, in *Zoology*, a genus of bivalve shells of the family *Conchæ* of Lamarck, belonging to the Fluviatile division. Generic character: shell ovato-globular, transverse, equivalve, beaks prominent; cardinal teeth very small, sometimes scarcely any; occasionally two on each valve, one of them folded into a double tooth; sometimes only one folded or lobed tooth on one valve, and two on the other; lateral teeth transversely elongated, compressed, lamellar; ligament external.

Type, *C. rivicola*, a common English species. The *Cyclades* are thin small shells; the beaks, unlike the fresh water shells in general, are rarely or never eroded. The above generic character given by Lamarck, fully justifies Dr. Leach's division of the *Cyclades* in two or more genera.

CYCLE, Lat. *cyclus*; Gr. κύκλος, a circle, an orbit.

——— How they will wield
The mightie frame, how build, unbuild, contrive.
To save appearances, how gird the sphear
With centric and excentric scribl'd o'er,
Cycle and epicycle, orb in orb.
Milton. Paradise Lost, book viii. l. 84.

The greatest difficulty in chronology has been to accommodate the two methods of computing time by the course of the moon and that of the sun to each other; the nearest division of the year by months being twelve, and yet twelve lunar months falling eleven days short of a complete year. This gave birth to many *cycles* in use among the ancients, the principal of which I shall explain.

Priestley. Lectures on History, vol. i. part iii. lect. 14.

Wages have been twice raised in my time, and they bear a full proportion, or even a greater than formerly, to the medium of provision during the last bad *cycle* of twenty years.

Burke. Thoughts and details on scarcity.

CYCLIDIUM, in *Zoology*, a genus of *Infusory Animalcula*, the body of which is very simple, transparent, flattened, orbicular or ovate, and extremely minute.

CYCLOLITES, in *Zoology*, a genus of the *Polypi Vaginati* of Lamarck, hitherto found only in a fossil state. Generic character: polypary stony, free, orbicular or elliptical, convex and lamellated above, flattened below, with circular concentric lines; a single lamellated star occupying the upper surface; laminæ very slender, entire, smooth.

Four species are mentioned by Lamarck as existing in his cabinet.

CYCLOPEDE, used by Warton for *cyclopædia*; compounded of κύκλος, a circle, and παίδεια, discipline, instruction, learning.

Heavy penalties were imposed on those academies, who relinquished the sacred text, to explain the tedious and unedifying commentaries on Peter Lombard's scholastic *cyclopede* of divinity, called the sentences, which alone were sufficient to constitute a moderate library.

Warton. History of English Poetry, vol. ii. sec. 18.

CY'CLOPS, Cy'clopean, *adj.* Cy'clopic, *adj.* Cy'clop-like. Lat. *cyclops*; Gr. κύκλωψ, compounded of κύκλος, a circle, and ὤψ, an eye. Vossius. Ἀπὸ τῆ κύκλω τῆς ὄψεως, from the roundness of the eye.

All then aboord, we beate the sea with ores;
And still with sad hearts sail'd by out-way shores;
Till th' out-law'd *Cyclops'* land we fetcht.
Chapman. Homer. Odyssey, book ix. fol. 130.

CYCLOPS

Thence, o'er the deep proceeding sad, we reach'd
The land at length, where, giant-six'd and free
From all constraint of law, the *Cyclops* dwell.
Cowper. Homer. Odyssey, book ix.

But the *cyclopean* furnace of all wicked fashions, the heart, calls my speech to it.

Hall. The Fashions of the World, vol. ii. fol. 388.

Sending a bill of defiance to all physicians, chirurgeons, and apothecaries as so many bold giants, or *cyclopick* monsters who daily seek to fight against heaven by their rebellious drugs and doses. *Bishop Taylor. Artificial Handsomeness*, p. 53.

Then *cyclop-like* in human flesh to deal,
Chop up a minister at every meal.
Dryden. The Medal.

Cælum and *Terra*, according to Hesiod, were the parents of the CYCLOPES, who were 100 in number. Nevertheless Polyphemus, their chief, is described by Euripides in his Satyric drama, (16, 262, 286, 412,) to be the offspring of Neptune, and in this he is supported by Apollonius Rhodius, (*Arg.* 1,) who adds that Europa the daughter of Tityus was his mother. Homer again assigns Polyphemus to Neptune and the Nymph Thoosa. (*Od.* A. 71.) Apollodorus, (I) who agrees with Hesiod in his genealogy, thinks that Terra bore four of the *Cyclopes* to *Cælum*, whose names were *Polphemus*, *Harpe*, *Sterope*, and *Bronte*; and Natalis Comes, (ix. 8,) by mistaking a passage of Euripides,

ἤδη δὲ ΠΑΙΔΑΣ προσνέμοντας ἰσορρῶ
ποίμνας. 36.

attributes the generation of the whole tribe to Polyphemus; now it will be plain to any one who regards the context of this passage, that παίδας refers not to the *Cyclopes*, but to the Chorus of Satyrs who enter immediately afterwards, and who are the children of Silenus, by whom these words are spoken.

We need not state that Polyphemus and his comrades, be they whose children they may, pastured their sheep and lived in caverns in Sicily; but besides feeding on milk and mutton,

γάλακτι καὶ τυροῖσι καὶ μήλων βορᾷ,

they indulged in a diet not very usual with other shepherds,

γλυκύτατα φασὶ τὰ κρέα τοὺς ξένους φορεῖν.

Theocritus (xi.) recounts the unsuccessful amour of Polyphemus with Galatea; yet Bacchylides would have us believe that he was in the end a favoured lover, and the father of Galatus. Celtus, Illyrius, Henetus, Paphlagona, and Hylas, are counted also among his children. His adventure with Ulysses need not be related here. If it is told with greater dignity in the IXth Book of the *Odyssey*, the details, we think, are brought before the eye more graphically in the *Cyclops* of Euripides; a play which has been too much undervalued, which is particularly curious as a solitary specimen of the style to which it belongs, and which exclusive of this recommendation, is conducted with a very considerable breadth of comic humour.

The legend told by Apollodorus (*loc. cit.*) is, that the *Cyclopes* were thrown into Tartarus at the moment of their birth; that *Tellus* on the accession of Jupiter interceded for them, and obtained their release, having first put to death their sentinel *Campe*. On quitting the infernal regions they presented Jupiter with thunderbolts, Neptune with his trident, and Pluto with a helmet, which made the wearer invisible. Hence

CYCLOPS. Virgil (*Æn.* viii.) has employed them as the manufacturers of Jove's lightnings. And hence also on the death of Æsculapius by thunder, they did not escape the vengeance of his father Apollo. (Eurip. *Alc. ad init.*)

To the *Cyclopes* are attributed those massive remains of irregular, but enduring architecture, which are found scattered over Greece, and which still bear their name, as in other countries according to the prevailing superstition, Genii, Giants, or Devils, have been the earliest builders. On this point the Scholiast on the *Orestes* of Euripides, (955,) gives some information. Strabo (viii.) expressly says, that the Cyclopean architects were seven in number; and he gives them the expressive but untranslateable epithet χειρογάστερες, (handy-belly-workmen.) Ferocious and brutalized as they are every where represented to be, nevertheless they found worshippers, and Pausanias mentions an altar which had been erected to them at Corinth. Though Hesiod has vouched for their monopticism, (*Theog.* 142,) and according to his account their very name depends upon the truth of his assertion, a *bas-relief* exists in the *Villa Albani*, representing a *Cyclops* with a central eye in the middle of the forehead, accompanied by two others in their ordinary position. Pliny (vi. 35) places a nation beyond the deserts of Libya on the west towards Nigræ, whose King was a *Cyclops* of the common order; *Quorum Rex unum oculum habeat in fronte.*

It is not ours to expound the deep mysteries of the habits and offices which have been assigned to this terrific race; nor to determine whether or no the *Cyclopes* are personifications of the volcanic regions of Sicily and its neighbourhood. We had much rather intrench ourselves behind the authority of Thucydides, who as he lived nearer their country, and closer to their times, ought to be better acquainted with them than we can pretend to be, notwithstanding the contrary assertion of Bryant, whose learned chapter (*Anc. Myth.* ii. 121, 8vo. ed.) may be referred to by those who think we know more of the Greeks than the Greeks knew of themselves. With the words of the Historian, therefore, when he speaks of the Aborigines of Sicily we shall conclude this notice. Παλαιότατοι μὲν λέγονται ἐν μέρει τινὶ τῆς χώρας ΚΥΚΛΩΠΕΣ καὶ Λαιστρυγόνες οἰκῆσαι· ὧν ἐγὼ οὔτε γένος ἔχω εἰπεῖν, οὔτε ὁπόθεν εἰσῆλθον, ἢ ὅποι ἀπεχώρησαν. ἀρκείτω δὲ ὡς Ποιηταῖς τε εἴρηται, καὶ ὡς ἕκαστος πη γιγνώσκει περὶ αὐτῶν. (vi. 2.)

CYCLOPS, in *Zoology*, a genus of the class *Crustacea*, order *Entomostraca*, family *Gymnota*. Generic character: eye single, sessile, placed on the thorax; antennæ four, simple; legs eight; body ovate-conic, elongate.

Type, *Monoculus quadricornis*, Lin.

The natural history of the minute animals composing this genus, is sufficiently interesting to have occupied the close attention of many Zoologists, particularly Leuwenhoeck, Backer, Roësel, and De Geer; and their investigations have shown that they possess many peculiarities of habit and of structure. The body of the *Cyclopes* is oval but elongated; diminishing insensibly to the tail. It is composed of rings or joints, varying in number from four to eight, covered with crustaceous plates, which are convex, curved towards the sides, and of which the first is by far the largest. The under part of the body is concave, so that the feet and other external organs can in some measure be folded under it. The transparency of the crust of these animals renders visible a long vessel, nearly straight, which appears to possess a distinct *systole* and *diastole*. It is supposed to perform the office of the heart. Beneath this are seen two other irregular vessels, which are the intestines.

The head is continuous with the first ring of the body, which may be considered as analogous to the thoracic segment in other *Crustacea*. On the upper and anterior part of this segment is placed the single eye, which is of considerable size. In front are four antennæ, of which the inferior are shorter, and palpiform. The antennæ are capable of being moved in every direction, but they are generally turned back close to the sides. The organization of the mouth is not at present known. The tail is long, straight, forked at the extremity; it is continuous with the body, flexible at its insertion, and furnished with setæ, which in the male assume a plumose appearance. The feet are large at their origin, and divide at about half their length into two branches, which are furnished at the sides with numerous filaments articulated at the base, and which serve as fins. These organs are directed forwards in a state of repose, but when the animal swims they are strongly and quickly turned backwards, propelling the animal on the principle of oars. This motion is assisted by the alternate curvature and straightening of the body, and even by the movement of the antennæ and head.

At all periods of the year, females are to be found carrying beneath the body, near the origin of the tail, two large oval masses of eggs, in shape resembling bunches of grapes. The eggs are spherical, and enclosed in a membranous sac, suspended from the body by a slight fragile thread. The organs of impregnation in the males are situated on the antennæ, which are enlarged at that part. The sexual organs of the females are placed beneath the body, at the origin of the tail. A striking analogy is thus observed between the generative system of these animals and the *Arachnides*. The *Cyclopes* inhabit fresh water, especially where aquatic plants are growing, and are excessively numerous in many places.

Latr. *Hist. Nat. des Crust.*, &c. iv. p. 256, tab. 33, fig. 5—8.

CYCLOPTERUS, from the Greek κύκλος, a circle, and πτέρυξ, a wing, Lin.; *Lump-sucker*, Pen. In *Zoology*, a genus of animals belonging to the family *Discoboli*, order *Malacopterygii Subrachiales*, class *Pisces*.

Generic character. Ventral fins united and forming a disc round the pelvis; pectoral fins large and broad, almost uniting at their base, and just above the ventral; mouth wide and provided with little pointed teeth both in the jaws and pharynx; opercules small; gills closed below, and provided with six rays; skin very slippery, and unprovided with scales.

The fishes in this genus are remarkable for the peculiar organ produced by the junction of their ventral fins, in form of a concave oval disc, by means of which they attach themselves firmly to the rocks, &c.; it is edged with a number of small thread-like processes which assist it in giving great hold; from this peculiar structure the genus has derived its English name *Lump-sucker*; and their power of prehension is so great, that according to Pennant, one of them (*C. Lumpus*) when thrown into a pail of water, attached itself so firmly to the bottom, that the pail was lifted up by taking hold of the fish. They live upon the

CYCLOPTERUS. CYGNUS.

Medusæ and other gelatinous animals, and again in their turn become a prey to Seals.

Cuvier has divided them into two subgenera: 1. the *Lumpi*, which have a first dorsal fin more or less distinct, provided with single rays, and a second in which the rays are more numerous, and opposite the anal fin. 2. The *Lipares*, which have but one dorsal fin, and that opposite the anal; the body smooth, lengthened, and flattened behind.

For a further account see Linnæi *Systema Naturæ* à Gmelin; Lacepede, *Histoire des Poissons*; Blochii *Ichthyologia* à Schneider; Pennant's *British Zoology*.

CYCLOSTOMA, in *Zoology*, a genus of univalve shells, class *Gasteropoda*, order *Pectinibranchia*. Generic character: shell of variable form, either subdiscoidal, conical, turrited, or subcylindrical; whorls of the spire cylindrical; aperture round, regular; margins circularly united and continuous; peritreme often reflected.

Type, *C. volvulus*, Lam.

Our beautiful, though common, native land-shell, *Turbo elegans*, Auct., is a species of this genus, of which all the species are terrestrial.

CYCLOSTOMES, from the Greek κύκλος, a circle, and στομα, a mouth. In *Zoology*, one of the families of the *Cartilaginous* fishes.

CYDONIA, in *Botany*, a genus of the class *Icosandria*, order *Pentagynia*, natural order *Pomaceæ*. Generic character: fruit tomentose; cells of the seed-vessel viscous, many-seeded; calyx spreading, serrated; petals five.

This genus, divided from *Pyrus*, contains two species, *C. Japonica*, known in gardens by the name of *Pyrus Japonica*, is a hardy ornamental shrub, producing an abundance of scarlet flowers early in the spring.

CYGNET, Gr. κύκνος; Lat. *cygnus*, a Swan. A young Swan.

> Delicious beds of *cygnets'* softest downe,
> Cushions of roses, lilies, violets,
> Bathes of perfumed oiles, footpathes thick strown
> With budding Summer's undeflower'd sweets.
> *Beaumont. Psyche*, can. 4. st. 159.

> ——— 'Tis strange yᵗ death shold sing:
> I am the *symet* [*Cygnet*] to this pale faint swan,
> Who chaunts a dolefull hymne to his owne death,
> And from the organ-pipe of frailty sings
> His soule and body to their lasting rest.
> *Shakspeare. King John*, fol. 21.

> ——— O that her hand,
> In whose comparison, all whites are inke,
> Writing their owne reproach; to whose soft seizure,
> The *cygnet's* downe is harsh, and spirit of sense
> Hard as the palme of ploughman.
> *Id. Troylus and Cressida*, fol. 78.

> So doe some birds; as *cygnets*, from gray turn white.
> *Bacon. Natural History, Cent.* 9. sec. 851.

> A golden chariot in the midst is set,
> And silver *cygnets* seem to feel its weight.
> *Prior. Solomon. Pleasure*, book ii.

> Else vainly sweet yon woodbine shade,
> With clouds of fragrance fills the glade;
> Vainly, the *cygnet* spread her downy plume,
> The vine gush nectar, and the virgin bloom.
> *Mason. To Memory. Ode* 3.

CYGNUS, a *Swan*, Ray, Pen. In *Zoology*, a genus of animals belonging to the family *Lamellirostres*, order *Palmipedes*, class *Aves*.

Generic character. Beak of the same breadth throughout, but of greater height than width at its base, and sometimes tuberculated; the edges of the mandibles denticulated, the upper mandible rounded, its point curved and obtuse; the lower shorter and flat; nostrils in the middle of the beak; space between the beak and eyes naked; neck very long; feet webbed, and placed behind the centre of gravity of the body; the middle toe the longest.

Ray originally made this a distinct genus, as may be seen in his *Synopsis*, wherein also the genera *Anser* and *Anas* are described separately; but Linnæus arranged all three under the one great genus *Anas*, making, however, some subgenera. They were again divided by Brisson into Ray's three genera. The *Cygni* differ from the *Anates* in having the beak very long, its tip curved, and the legs placed behind the centre of equilibrium of the body, whilst the *Anates* have the beak very short, and the legs placed near to the centre of the body. From the *Anseres* they are distinguished by the equal breadth, and the greater height at the root of the beak, and the length of the neck; whereas the *Anseres* have the beak flat and broader at the point, and the neck very short.

Swans live almost entirely on the water, the position of their feet making them bad walkers and comparatively defenceless on land, whilst on their own element they are very powerful. They live principally upon grain and aquatic plants; the little tooth-like plaits in their mandibles enabling them to crop the latter substances, and at the same time allowing the water to escape; but they also eat frogs, leeches, and small fishes.

They are monogamous, living with a single female, and build their nests on the ground by the water side; the *Cygnets*, or young Swans, swim as soon as they are hatched, and find their own food. Swans are very long lived, frequently, it is said, attaining the age of a hundred years. They afford us the article called Swans-down, which is much esteemed for its fineness, and employed in the manufacture of tippets and muffs.

C. Mansuetus, Ray; *C. Olor*, Cuv.; *le Cygne*, Briss.; *Tame Swan*, Pen. The Tame Swan is the largest of our English birds; it is about four feet and a half in length from the tip of the beak to that of the tail; over the root of the upper mandible is a black callous protuberance, whence Bechstein has called it the Tuberculated Swan, (*C. Gibbus*,) the bill itself red, the tip and sides black, the skin between it and the eyes also red; the plumage of a snowy whiteness. The young birds in the first year are blackish, in the second ash-coloured, but in the third they become white, and so continue afterwards. The legs are nearly black; but Dr. Plott mentions a variety on the Trent, near Rugeley, in which they are of a vermillion red. The female is not quite so large, and has the frontal protuberance less than the male. This Swan is found wild on the great inland seas of the eastern part of Europe; those about the Provinces of Ghilan and Masenderan near the Caspian Sea, growing to a great size; but in most of these countries they have become domesticated, and in our own are commonly seen in private grounds where there is much water, to which they are great ornaments, no bird having command of such beautiful attitudes.

> "The *Swan* with arched neck
> Between her white wings mantling, proudly rows
> Her state with oary feet."

CYGNUS. Formerly they were highly esteemed in England, and it was ordered by an Act of Edward IV. c. 6, that no one who possessed a freehold of less clear yearly value than five marks, should be permitted to keep any, *other than the son of our Sovereign Lord the King*. And subsequently by an Act of the 11th of Henry VIII. c. 17, the taking of Swans' eggs was punished by imprisonment for a year and a day, and a fine at the King's pleasure. It is still felony to steal the eggs, but it is necessary in order to make the felony, that the bird should have been marked on the beak with a red-hot iron; these marks, (of which in an old manuscript at Oxford, as many as 304 are enumerated belonging to various families,) are different, that of the King consisting in three vertical nicks. From this circumstance originated the custom of *Swan-hopping*, or *Swan-upping* as it is called, according to the Rev. Mr. Weston, in the *Archæologia*, xvi. 163, from the City of London Companies going up the river Thames to brand their Swans. Mr. Weston's opinion of the sign of the Swan with two necks, having originally been that of "the Swan with two nicks," may be noticed, *en passant*, as explaining one of the numerous popular misnomers which have produced so many curious and absurd sign paintings. The largest Swannery in England is that belonging to the Earl of Ilchester near Abbotsbury in Dorsetshire, in the open part of the Fleet, where may still be seen six or seven hundred of these birds, and formerly twice that number.

The Swan though inoffensive when not meddled with, is very pugnacious when disturbed; striking so violently with its wings, as to do material mischief to any one who is so foolish as to provoke it when in the water. Amongst their own species, two males will frequently fight for a female, and the contest does not terminate without the destruction of one of them.

The nests of Swans are built upon the ground, on the retired banks of lakes or rivers, and are formed of dried leaves or rushes. The birds begin to lay in February, and continue to do so every other day till they have laid six or seven eggs: the time of sitting is about six weeks, the female alone remaining on the nest, and when she leaves it carefully covering up the eggs with feathers and rushes; during this time the male constantly tends and protects her from injury. During the season of incubation they are extremely dangerous, and very courageous. Dr. Latham mentions an interesting anecdote on this subject; "At Pewsy in Buckinghamshire, whilst a Swan was on the nest she observed a Fox swimming towards her from the opposite shore, when she darted into the water, and having kept the Fox at bay for a considerable time with her wings, at last succeeded in drowning him in the sight of several spectators." The *Cygnets* are able to walk in the next November; and when they begin to swim, it is said that the male parent holds them up by the head, and the female by the tail; but when they have acquired this accomplishment, the parents desert them, and they find mates amongst themselves.

Cygnets are fattened at this day at Norwich, about Christmas time, and sell for a guinea and upwards; this proceeding occupies a couple of months, and during that period each will eat two coombs of oats; often, however, the Cygnet gets sulky, and will not eat at all unless it have a companion. When fattened they weigh about twenty-five pounds, and the flesh is said to resemble that of a Pigeon. In Edward III.'s time a proclamation forbad the sale of Swans for more than four shillings a piece. CYG

C. Ferus, Ray; *Anas Cygnus*, Lin.; *le Cygne Sauvage*, Buff.; *Wild Swan*, Pen. This bird, which was formerly called the Elk, Hooper, or Whistling Swan, is larger according to Latham, and smaller by Ray's account than the Tame Swan; it differs from it in having the beak black, with the edges and root and the skin between the eyes and the irides yellow; the neck straight; the plumage white with a yellowish tinge, and the bastard wing armed with a curved horny spur, which, however, is not seen till the feathers are plucked; legs black. But the great distinction consists in the windpipe, in this bird coiled up in the keel of the breast bone, which is very deep, whilst that of the Tame Swan is straight, and the keel of the breast bone narrow. Ray and Willughby divided them as above into two species, from this circumstance, the former enumerating amongst the characters of the *C. Ferus*, *Aspera arteria mirabili modo sternum ingreditur inibique reflectitur*; but Buffon, without any good reason, included both under one.

It is to this species that the ancients imputed the melodious note, which has become proverbial: Aristotle, in his *History of Animals*, mentions it, but only on hearsay; Pliny, however, gave no credence to it; and even Virgil, whilst he speaks of the Swan figuratively as discoursing most eloquent music,

> *Cum sese è pastu referunt, et longa* canoros
> *Dant per colla modos.* *Æneid.* vii. 700.

gives further on a very just description of their note,

> ——— *Piscosove amne Padusæ*
> *Dant sonitum* rauci *per stagna loquacia Cygni.*
> *Æneid.* xi. 457.

This story, like many others, is a poetical fiction, originating in the Swan having been sacred to Apollo and the Muses, and thence supposed to be musical.

The Abbé Arnaud and M. Mongez, paid particular attention to the notes of two Swans belonging to this species, which lived in the basin of Chantilly; the former observed that there was some modulation in the note, very different however from singing; it is loud and shrill, similar to the noise produced by a person blowing a clarionet, who does not understand how to manage it: he tried if the birds would answer artificial cries, but never could succeed in getting them to take the least notice; and he further mentions with respect to the noise made by both male and female during a contest with a Goose, that it was very fortunate that both did not scream at once, as horrible discord would have been the consequence. The song, such as it is, of the Swan, may be noted, according to M. Mongez, by *mi fa* and *re mi*, upon the latter of which they rest for a long time; these cries are uttered morning and evening, and whenever the bird is particularly excited.

Swans are very good swimmers, and move so fast in the water, that a person walking at a smart pace, cannot keep up with them; and they have equal powers of flight, during which the motion of their wings produces a loud sonorous noise, which may be heard at a great distance, and which is considered by Sonnini to have given origin to the notion that Swans sing.

GNUS. It was from this belief in the Swan's power of song, that Poets after their death were fancifully supposed to assume the form of these birds. It was believed also, that Swans foresaw their own death, and previously sang their own elegy;

Carmina jam moriens canit exequialia Cygnus.
Ovid. *Metam.* xiv. 430.

This fiction is beautifully adverted to by Plato in his *Phædo*, who attributes their melodious dirge to the same kind of prescience which enables good men to look forward with delight to that time, "when this mortal shall put on immortality."

Ἐπειδὰν αἴσθονται (οἱ κύκνοι) ὅτι δεῖ αὐτοὺς ἀποθανεῖν, ᾄδοντες καὶ ἐν τῷ πρόσθεν χρόνῳ, τότε δὴ πλεῖστα καὶ μάλιστα ᾄδουσι, γεγηθότες ὅτι μέλλουσι παρὰ τὸν θεὸν ἀπιέναι οὗπερ εἰσὶ θεράποντες ..... ἅτε, οἶμαι, τοῦ Ἀπόλλωνος ὄντες, μαντικοί τε εἰσὶ, καὶ προειδότες τὰ ἐν Ἅιδου ἀγαθὰ, ᾄδουσί τε καὶ τέρπονται ἐκείνην τὴν ἡμέραν διαφερόντως ἢ ἐν τῷ πρόσθεν χρόνῳ: ἐγὼ δὲ καὶ αὐτὸς ἡγοῦμαι ὁμόδουλός τε εἶναι τῶν κύκνων, καὶ ἱερὸς τοῦ αὐτοῦ θεοῦ, καὶ οὐ χεῖρον ἐκείνων τὴν μαντικὴν ἔχειν παρὰ τοῦ δεσπότου, οὐδὲ δυσθυμότερον αὐτῶν τοῦ βίου ἀπαλλάττεσθαι.

The Wild Swan frequents our coasts in hard winters, but spends its summer in higher latitudes: it is very common in Lapland and Kamtschatka, where the natives hunt it with Dogs during August, at which time the bird moults; but when the winter sets in, it comes into warmer climates. The feathers are used for the same purpose as those of the Tame Swan; besides which, the Venetians and Neapolitans dye the belly-feathers to make artificial flowers; the skin of the legs is occasionally made into purses.

C. Atratus, Viell.; *le Cygne noir*, Dumer.; *Black Swan*, Lath. Is not quite so large as the European species; the bill large, the upper mandible red, its tip marked with a white band, and the protuberance on its base bifid; the lower mandible white, with red edges; the plumage is black, with the exception of the six primary quills of the wings, which are white; the legs of a deep brown. The female differs in having the rostral protuberance very small. The Black Swan is a native of New Holland, where it is extremely common; it is called by the natives *Mulgo*: it carries its head in a curious manner, making a sharp angle with the neck, as if resting upon it.

C. Melanocephala, Gmel.; *le Cygne à tête noire*, Dum.; *Black-headed Swan*. About the size of the European Swan: the head and the upper part of the neck black, with a white band extending from the eyelids round the occiput; the rest of the plumage white; beak, half blackish, and the other half of a blood-red colour; the quills of the wing feathers are so small as not to exceed two lines in breadth. Native of Chili, and common in the neighbourhood of Buenos Ayres and the Rio de la Plata; living in flocks.

C. Canadensis, Cuv.; *Anas Canadensis*, Lin.; *Canada Goose*, Pen.; *Canada Swan*. Head, neck, primaries, and tail black; from the throat on each cheek towards the back of the head is a triangular white spot; neck, vent feathers, lower part of the belly and tail coverts white; the other parts dusky; legs of a deep lead colour. Native of North America, but preferring the islands to the continent, as further from the haunts of men. They form an important article of provision at Hudson's Bay, being pickled and barrelled; and for this purpose, the English send out their servants with the Indians to shoot them. They appear at that settlement early in April, and are anxiously looked for as harbingers of Spring; and the Indians call the month the Goose Moon, from that circumstance. As it is impossible to pursue them, rows of huts are built across the marshes, at musquet-shot distance, and in each hut or *Stand*, as it is called, is placed a single person, who attends to the birds flight, and imitates their note so exactly, that they approach, answering at the same time to the call; the sportsman never fires till he has seen the birds' eyes, as they are going from him; on a fortunate day, a single Indian will kill 200 birds.

Cuvier considers the *Anas Cygnoides*, Lin.; *Chinese Goose*, Pen.; and the *Anas Gambensis*, Lin.; *Gambian Goose*, as belonging to this genus, from the form of the protuberance on the upper mandible; but Dumeril doubts it, as their manners are very different from those of the Swan, and as they will not pair with them.

See Linnæi *Systema Naturæ* à Gmelin; Cuvier, *Règne Animal*; Latham's *General Synopsis of Birds*; Pennant's *British and Arctic Zoology*.

CYLAS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Curculionites*. Generic character: antennæ ten-jointed, terminating in a club formed only of the last joint; penultimate joint of the tarsi bilobate.

Type, *Brentus brunneus*, Fab. A genus more nearly allied to *Attelabus* than to *Brentus*, with which Fabricius confounded it.

CY'LINDER, CYLI'NDRICK, CYLI'NDRICAL. } Fr. *cylindre*; It. and Sp. *cilindro*; Lat. *cylindrus*; Gr. *κύλινδρος, ἀπὸ τῦ κυλίνδειν, ob volubilitatem*; because easily rolled: *Ita dixere, quidquid oblongum esset, et teres, instar columnæ.* Vossius.

For he [Archimedes] prayed his kinsman and friends, that after his death they would put a *cylinder* upon his tomb, containing a massie sphere, with an inscription of the proportion, whereof the continent exceedeth the thing contained.
Sir Thomas North. Plutarch, fol. 263. *Marcellus.*

He that looks upon a picture made up of scattered and deformed pieces, beholding them united into one face, by a *cylindrical* looking-glass aptly placed, discerns the skill of the artist that drew it, better than he that looks only on the single parts of the picture, or upon the whole picture, without the uniting *cylinder*.
Boyle. The Usefulness of Natural Philosophy, part i. ess. 5.

We saw their machine for clearing cotton of its seeds, which is made upon the same principles as those in Europe, but is so small that it might be taken for a model, or a toy; it consists of two *cylinders*, like our round rulers somewhat less than an inch in diameter. *Cook. Voyage, &c.* vol. ii. book iii. ch. ix.

In this experiment, the strength of the *cylinder*, estimated by the horizontal range, is to that of the best sort of other powder, as 100 is to 63.
Anecdotes of the Life of Bishop Watson, vol. i. p. 241.

The tongue is long and *cylindric*, for the same use as that of the woodpecker.
Pennant. British Zoology. The Wry-neck.

CYLINDRIA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx four-cleft, inferior; corolla tubular, four-cleft; berry one-seeded.

One species, *C. rubra*, native of the woods of Cochinchina. Lour. *Flor. Coch.*

CYLISTA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx four-cleft; corolla large, upper petals two-cleft, lower petals large, corolla permanent; pod usually two-seeded.

CYLISTA. — CYMBAL.

One species, *C. scariosa*, native of the mountains of Coromandel. Roxb. *Cor.*

CYLLENIA, in *Zoology*, a genus of insects of the order *Diptera*, family *Bombyliarii*. Generic character: antennæ shorter than the head; first joint not very large, but longer than the others; the second of the same thickness as the first; the last ovoid-conic; proboscis not longer than the head; abdomen straight and elongated.

Type, *C. maculata*, Latr.

CYMAR, *n.* See CHIMERE, and SIMAR. Fr. *chamarre*; a loose and light gown, (and less properly, a cloak,) that may be worn scarf-wise.

> Her comely limbs compos'd with decent care,
> Her body shaded with a slight *cymarr*.
> *Dryden. Cymon and Iphigenia.*

CYMBACHNE, in *Botany*, a genus of the class *Polygamia*, order *Monoecia*, natural order *Gramineæ*. Generic character: hermaphrodite flower, calyx two-glumed, one-flowered, outer valve linear, inner valve cymbiformed: female flower, calyx one-glumed, ovate.

One species, *C. ciliata*, native of the East Indies.

CYMBAL, *n.* Fr. *cymbale*; It. *cembalo*; Sp. *cimbalo*; Lat. *cymbalum*; Gr. κύμβαλον, from κύμβη, *cymba*, κύμβος, hollowness.

> If I speke with tungis of men and of aungels and I haue not charitie, I am maad as bras sownynge, or a *cymbal* tynklynge.
> *Wiclif.* 1 *Corynthians*, ch. xiii.

> Thoughe I spake w^t^ the tonges of men and angels, & yet had no loue, I were euen as soundinge brasse; or as a tikelynge *cymball*.
> *Bible*, 1551.

> A little windy opinionative goodness distempers the empty brain, 'tis charity must ballast the heart; and that's the grace, according to holy Maximus his opinion, that all this while we have required but not found in the Pharisee, and that's the reason that the brass sounds so shrill, and the *cymbal* tinkles so merily. *Hammond. Works. Sermon* 8. vol. iv.

> It has often been observed by witty essay writers, that the deepest waters are always the most silent; that empty vessels make the greatest sound, and tinkling *cymbals* the worst musick.
> *Tatler*, No. 268.

> ——————— But e'en amidst
> The thickest war, let but the tuneful rod,
> On brazen *cymbal* strike, the lenient strains
> Quick undulating thro' the silent air,
> Recal harmonious love and gentle peace
> Back to their ancient seats.
> *Cowper. The Power of Harmony*, book i.

Two kinds of CYMBALS (as the word has been interpreted) are mentioned in Scripture, צלצלי־שמע and צלצלי־תרועה, κυμβάλοις εὐηχοις,—*benesonantibus*,—*sonantibus*, and κυμβάλοις ἀλαλαγμοῦ,—*jubilationis*,—*tinnientibus*, (*Ps.* cl. 5.) Calmet calls them *loud sounding* and *high sounding*, and thinks that the difference depended upon their size, (*Fragment.* 231.) In the utter obscurity which affects the subject of Jewish music, it is impossible to pronounce how nearly the translators and commentators have approached to the truth, in this instance.

Neither, again, in the Pagan Mythology, is it by any means clear, that a very precise distinction was drawn between Cymbals, in their modern acceptation, and *crotala*, (castagnets,) or *tympana*, (tabours.) Be this as it may, the *Curetes* have the reputation of being the first who employed Cymbals, for the double purpose of drowning the cries of their nursling Jupiter, which might otherwise have reached the cannibal ears of Saturn, and of attracting to his cradle bees with their supplies of honey. The Cymbals stricken by the *Curetes* therefore were doubtless of brass. (*Georg.* iv. 151.) Hence these instruments were afterwards used in the celebration of the rites of Cybele, (Lucret. iv. 618; Ov. Fast. 180, &c.;) and we have the testimony of Livy, (xxix. 8,) for the adoption of them in those abominations of equal or still greater horror, the *Bacchanalia*, which had crept into Rome from Etruria, the fruitful mother of unnatural superstitions, rather less than two centuries before the Christian era. *Multa dolo, pleraque per vim audebantur. Occulebat vim quod, præ ululatibus, tympanorumque et* cymbalorum *strepitu, nulla vox quiritantium inter stupra et cædes exaudiri poterat.*

The reader who has patience to endure a profusion of learning wantonly and uselessly lavished on an uninteresting subject, may find his taste gratified in two works on Cymbals. One, *De Cymbalis Veterum Libri tres*, 1700, by Lampe, a German Professor, who like others refers the invention to the *Idæi Dactyli* or *Curetes*, personages who he is convinced were more ancient than Bacchus, Joshua, and Minos; a strange triad to be so united by a Protestant Divine. Cymbals passed from Phrygia to Phœnicia, and thence (if not from Egypt) to the Jews. Erato, he says, is always represented with them; and Erato, for ought antiquity has related to the contrary, was a lady of purer reputation, or who at least kept better company, than the Mother of the Gods.

Cymbals, according to the same authority, were sometimes prophetic. Their sound was heard in the air before Egypt was reduced into a Province, (Dio, li.;) again they clashed from a Temple of Bacchus in Pergamus on the morning of the battle of Pharsalia. (id. xlii.) Clemens Alexandrinus (*Strom.* vi.) mentions a cave in Britain, in which during high winds Cymbals are distinctly heard. Pomponius Mela (i. 13) attributes the same sound to the Corycian Cave; and Aristotle (*de Mirab.*) to the Cyclopean workshops in Lipari. Of the fact recorded by these grave authorities few will doubt, and most persons, now-a-days, probably can assign a natural cause for its occurrence. Pomponius moreover says, that Pan and his train of Satyrs amuse themselves with Cymbals in the deserts of Ethiopia, (iii. 9,) a superstition which Lucretius has turned to a most splendid use, (iv. 583.) Arrian, in his *Indica*, assures us that he himself has seen elephants dancing with two Cymbals affixed to their knees, and one to their trunks, which they clashed in correct time.

The second work is a *Commentarius de Cymbalis*, appended to the *Fortuita Sacra*, 1728, of Sir Richard Ellys; a gentleman who unfortunately had never heard of Lampe's dissertation, till he had finished his own. From him, among other matters, we learn that from the explanation of Hesychius, κυμβάλον, εἶδος ὀργάνε, and from an expression in the *Atys* of Catullus,—*ubi Cymbalorum sonat vox*,—there have been some erudite writers who have determined that the Cymbals were wind instruments.

It must not be forgotten, that Gregorius Nyssenus (in *Psalmos* l. 9) has discovered from the cl. Psalm a great mystery respecting Cymbals. One Cymbal he observes is the Angelic, the other the Human Nature; these are now separated by Sin, but when God permits them to be reunited like Cymbals, then Cymbals shall clash their ἐπινίκιον.

CYMBARIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx ten-toothed, superior lip of the corolla two-cleft, inferior three-cleft; capsule heart-shaped, two-celled.

CYMBARIA. CYMOTHOA.

One species, *C. Daurica*, native of Mount Dauria. Persoon.

CYMBIDIUM, in *Botany*, a genus of the class *Gynandria*, order *Diandria*, natural order *Orchideæ*. Generic character: calyx four and five cleft, erect or spreading, base of the lip concave without a spur, lamina spreading; mouth of the anthers deciduous; pollen globose.

This genus contains sixty-one species, natives of Tropical countries, forty are parasitic. Persoon, *Syn.*

CYMBULIA, in *Zoology*, a genus of the class *Pteropoda*, Cuv., (class *Mollusca*, order *Pteropoda*, Lam.) family *Hyalæana*. Generic character: body oblong, gelatinous, transparent, enclosed in a shell; head sessile; eyes two; tentacula two, retractile; mouth furnished with a retractile trunk; two opposite, rather large, oval, branchiferous wings, connected at the posterior by an intermediate lobe-shaped appendix; shell gelatino-cartilaginous, very transparent, oblong, shoe-shaped, truncated at the summit; aperture lateral, anterior.

One species, *C. Peronii*, discovered by W. Peron in the Mediterranean near Nice.

CYMBURUS, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Vitices*. Generic character: calyx compressed, inserted into the hollow of the peduncle; anthers long, one lobe placed perpendicularly over the other.

Four species, natives of the Tropical climates.

CYMINOSMA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Rutaceæ*. Generic character: petals four, lanceolate; calyx four-cleft, segments orbicular; stamens placed alternately on the receptacle and the base of the petals; berry four-celled, one-seeded.

Three species, natives of Ceylon and Cochin-China. Decandolle, Prod.

CYMINDIS, in *Zoology*, a genus of insects of the order *Coleoptera*, family *Carabici*. Generic character: thorax sub-cordiform; head not contracted posteriorly; no obvious neck; external maxillary palpi filiform; labial terminated by a large securiform joint; lip rounded, coriaceous in the middle, membranous at the sides; body flat, elytra truncated.

Type, *Carabus numeralis*, Fab.

CYMODOCEA, in *Botany*, a genus of the class *Dioecia*, order *Tetrandria*, natural order *Naiades*. Generic character: male flower, calyx and corolla none; four sessile anthers, erect, connivent, fixed to the peduncle: female flowers, germens two; styles filiform; stigmas awl-shaped; capsules two, two-valved, valves united by a ring.

One species, *C. æquorea*, native of the Bay of Naples, totally immersed. *Ann. Bot.*

CYMOTHOA, in *Zoology*, a genus of the class *Arachnides*, order *Tetracera*, family *Asellota*. Generic character: the four antennæ very distinct; tail formed of many segments; the foliaceous appendages of the tail small, lateral, each formed of two little leaflets, on a common peduncle; body not capable of being rolled into a ball; feet terminating in a strong hook.

Type, *C. Asilus*, Fab.; *Oniscus Asilus*, Lin.

A marine parasitical genus, placed by Linnæus amongst the *Onisci*. They are formed on the soft parts of fish, to which they adhere with so much force, that Bosc asserts it was necessary to employ a knife to take off some specimens from the lip of a fish without injuring the stem.

CYMOTHOA. CYNIPSERA.

CYNANCHUM, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Apocineæ*. Generic character: corolla twisted, wheel-shaped; nectary cylindrical, five-toothed.

Thirty species, natives of the northern hemisphere.

CYNARA, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*, natural order *Compositæ*. Generic character: calyx imbricated, scales fleshy, pointed; receptacle bristly, down sessile, feathery.

Eight species, *C. scolymus* is the common Artichoke, more generally cultivated in the southern parts of Europe than in England, where it is liable to be destroyed by severe frosts if not covered with litter. *C. cardunculus* produces the Cardoon.

CY'NICK, *n.*
Cy'NICK, *adj.*
Cy'NICAL,
Cy'NARCTOMACHY,
CYNEGE'TICK.

Fr. *cynic*; It. and Sp. *cinico*; Lat. *cynicus*; Gr. κυνικος, from κύων, *canis*, a dog.

Of this *cynical* sect, it seems was he, who would needs make *orcus* to be the anagram of *uxor*, by contracting *c s* into an *x*, *uxor et orcus*,—*idem*. *Howell. Letter* 7. book iv.

There are extant of his in Greek, four books of *Cynegeticks* or Venation, five of Halieuticks or Piscation, commented and published by Ritterhusius; wherein describing beasts of venery and fishes, he hath indeed but sparingly inserted the vulgar conceptions thereof. *Sir Thomas Brown*, book i. ch. viii.

19. Whether the bulk of our Irish natives are not kept from thriving, by that *cynical* content in dirt and beggary, which they possess to a degree beyond any other people.
Berkeley. Works. The Querist, vol. iv. p. 121.

The same occult design doth lie
In bloody *cynarctomachy*,
Is plain enough to him that knows,
How saints led brothers by the nose.
Butler. Hudibras, part i. can. 1.

Cynarctomachy signifies nothing in the world, but a fight between dogs and bears, though both the learned and ignorant agree, that in such words very great knowledge is contained: and our knight, as one, or both of these, was of the same opinion.
Id. Ib. Notes.

He was a man of a more morose and *cynical* temper, just in his administration, but vicious under the appearance of virtue.
Burnet. Own Times. Charles II. Anno 1660.

Blame, *cynic*, if you can, quadrille or ball,
The snug close party, or the splendid hall,
Where night, down-stooping from her ebon throne,
Views constellations brighter than her own.
Cowper. Progress of Errour.

I hope it is no very *cynical* asperity not to confess obligations, where no benefit has been received; or to be unwilling that the publick should consider me as owing that to a patron, which Providence has enabled me to do for myself.
Johnson. Letter to Lord Chesterfield.

CYNIPS, in *Zoology*, a genus of insects of the order *Hymenoptera*, family *Cynipsera*. Generic character: antennæ with cylindrical joints; anterior segments of the thorax large, transversely squared; hinder legs with the thighs straight.

Type, *C. Capreæ*, Fab.

CYNIPSERA, in *Zoology*, a family of insects of the order *Hymenoptera*, consisting of the following genera, *Leucoposis*, *Chalcis*, *Eurytoma*, *Cynips*, *Eulophus*, *Cleonymus*, *Spalangia*, *Perilampus*, *Pteromalus*, *Encyrtus*, *Platygasta*, *Scelio*, *Teleas*.

The insects composing this family are extremely small, but their colours are for the most part highly brilliant, and their habits interesting. Most of them differ from the majority of Hymenopterous insects

CYNIPSERA. — CYNOCEPHALI.

in effecting their movements, not by flying, but by leaping; for which purpose many of them have such a construction of the hinder legs, as is fitted for this species of loco-motion, though apparently less so than many leaping insects. Another peculiarity is the extraordinary length of the *ovipositor*, and the singular application of this organ. The larvæ are carnivorous, feeding on the larvæ of other insects, like many of this order. De Geer mentions having watched an individual of this group at the moment when it was introducing the ovipositor into a gall, in which a larva of a *Diplolepis* existed. It placed the tube on the surface of the gall, in a position perpendicular to its own body, and by degrees inserted it further and further into the substance of the gall, until the whole of it was concealed. It then moved the tube to and fro, as if searching for the larva within the cell of the gall, in order to lay its egg in contact with it. It made three different perforations, but as one larva only could have been within the gall, it is probable the insect laid but one egg. The larvæ of *Coccinellæ*, of aphidivorous flies, of *Syrphiæ*, &c. also become the prey of these little predaceous larvæ; which possess another peculiarity, in the form of the body, which, contrary to those of other *Hymenoptera*, are large at the head, diminishing in a conical form towards the posterior extremity of the body. They differ from those of the *Ichneumons* in not forming a cone of silk for the pupa.

CYNOCEPHALI, a community of Monsters, (having, as their name (*κυνος κεφαλὴ*) implies, the head of a dog, but in all other respects resembling man,) who are described at some length by Ctesias, (*ap.* Photium, 72, *de Indicis*.) This author says that the *Cynocephali* bark a language which is understood by each other; that their teeth are longer, and their nails both longer and rounder than those of dogs; that their complexions are black, and that they occupy a tract of country in the mountains as far as the Indus. In their general dealings and institutes they are eminently just, (*δίκαιοι πάνυ*.) They comprehend, but do not speak the language of the Indians, by whom they are called *Calystici*; their population is about 120,000. Manufactures are unknown to them, and they live chiefly by hunting, though their flocks and herds are very numerous. The dried fruit of the *Sipachora* is one of their commonest articles of food. A quantity of this fruit, together with a flower called *Purpura*, (much used in dyeing,) which they carefully pick, about 360 talents of amber, and as much of a drug used in scarlet dyeing, (cochineal?) form the burden of each of their rafts, many of which they construct and employ in commerce. Moreover they present to the King of India annually 1000 talents of amber, in return for which they receive bread, meat, and cotton garments. Swords, bows, and darts are their offensive weapons; and from the inaccessible fastnesses which they inhabit, they are considered to be unconquerable. Every fifth year their King distributes among them 300,000 bows and as many darts, 120,000 shields, and 50,000 swords. The females bathe once a month; the males never wash more than their hands, but they anoint themselves thrice a month with oil made from milk, and curry themselves with hides, so that they are by no means particularly unclean. The very rich among them (but these are very few) wear linen. All of them of either sex have tails on their rumps, like those of dogs but longer and more hairy; they live to a greater age than any other race of human kind, since many of them attain 170 or even 200 years. CYNOCEPHALI

This detailed account of the habits, manners, and political economy of the *Cynocephali* is corroborated with few variations by many other writers. Herodotus does not enlarge upon them, he only enumerates them among other queer creatures in the Lybian deserts, (iv. 191.) Ælian, however, (*Hist. An.* x. 25,) suspects that they have more to do with beasts than with men. He places them in a desert country beyond the Egyptian Oases towards Ethiopia, and says also that they have beards like those of Dragons. In another place (*ibid.* vi. 10) he recounts that one of the Ptolemies caught and tamed some of them. They learned music, dancing, and letters; and so grateful were they for kindness, that, being much in the habit of begging, they put by in a bag all the money which they had gained in that way, in order to present it to their masters. Pliny (vi. 35) terms them *Cynamolgi*, with the heads of dogs. The name is borrowed from Agatharcides, (*de rubro Mari* 29 *apud* Photium, 250) who says nothing of their heads, but explains that they are so called because they suck the milk of bitches. In two other passages (vii. 2; viii. 80) Pliny appears to hold that they are animals; and in a third (xxxvii. 42) he describes a powerful talisman against the baneful effects of witchcraft, which consists of an amethyst inscribed with the name of the Sun or Moon, and hung round the neck by the hair of a *Cynocephalus*. Cicero once, while at Laodicea, met a rogue named Vedius, who was travelling with a large retinue and somewhat of a menagerie; among his beasts were some wild asses, and in one caravan was a *Cynocephalus*, which Cicero however does not describe. (*Ad Attic.* vi. 1, *ad fin.*)

Horapollo (be this writer who he may) introduces us to new particulars concerning the *Cynocephali*. The Egyptians, he says, not only paid great veneration to dogs, but in many Temples they kept dog-headed baboons, (*κυνοκεφάλοι*) which were wonderfully endowed. These did not die, like other animals, altogether at once, but a part of them dying every day, (till seventy-two days were completed, when they died entirely,) was buried by the Priests. Whenever one of them was introduced for his noviciate into the sacred apartment, the Priest offered him a tablet, a pen, and ink, (*δέλτον καὶ σχοινίον καὶ μέλαν*,) and by his writing the holy examiner soon found out whether he was of the right intelligent breed, (i. 14.) Moreover he was employed as a Clepsydra, *Δωδέκατις τῆς ἡμέρας καθ' ἑκάστην ὥραν οὐρει, τόδε ἀυτὸ καὶ ταῖς δυσὶ νύξι ποιεῖ*. (*id. ib.* 16.) From an observation of this useful property, Trismegistus thought of dividing the day into twelve equal parts, and the *Cynocephalus* was also frequently borne as an emblem on a water clock. Bryant (*Anc. Myth.* ii. 26) is quite certain from this account, that the *Cynocephali* were persons of great learning, and members of a sacred college; he explains the legend of their piecemeal death, by stating that the Institution was in a state of perpetual flux and succession; and as to their daily and Equinoctial *ὐρήσιες*, he considers it "a surmise almost too trifling to be discussed."

The French, in the time of Charlemagne, used in contempt to term the Danes and Normans, *Cynocephali*, because their skulls were flat, (Monachus Sanctigallensis, *de gestis Caroli Magni*, ii. 21,) and this we

CYNOCEPHALI. — CYNOMORE.

believe is the last occasion on which any degree of humanity has been accorded to this breed. Aristotle, indeed, long before, with his accustomed shrewdness, had determined that they held a middle nature between man and beast. Dr. Tyson, in whose words we shall conclude, goes yet farther; "Now what sort of Monkies these *Cynocephali* were, I shall not at present inquire. That they are of the monkey kind is evident, because they have tails; and Aristotle tells us that they are bigger and stronger: and therefore I make them of the baboon kind. But not having seen any of them myself, I shall refer my readers to the Authors who write about them. 'Tis sufficient to my present purpose, that they are a set of Monkies, and not Men, as formerly represented." Tyson's *Philological Essay concerning Cynocephali ad fin.* appended to *Ourang Outang, sive Homo Silvestris*, 1699. Solinus (iv.) and Isidorus, (*de Portentis*, ix.) mention a race of people called *Cynodontes* or Dog-teethed.

CYNODON, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Gramineæ*. Generic character: calyx two-valved, spreading, lanceolate; corolla larger than the calyx, two-valved, the exterior valve large and oval; nectary truncated.

Of this genus of Grasses there are ten species, natives of warm countries.

CYNOGLOSSUM, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Boragineæ*. Generic character: corolla funnel-shaped, orifice closed with arched valves; seeds depressed, fixed to the style by their inner margin only.

Thirty-three species, widely spread through both hemispheres. *C. officinale*, and *C. sylvaticum*, are natives of England. *Eng. Bot.*

CYNOMETRA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx four-leaved; anthers two-cleft; pod fleshy, crescent-shaped, one-seeded.

Two species, *C. cauliflora*, and *C. ramiflora*, natives of the East Indies. Persoon.

CYNOMORIUM, in *Botany*, a genus of the class *Monoecia*, order *Monandria*. Generic character: catkin imbricated · male flower, calyx four-leaved; corolla none: female flower, calyx four-leaved, superior; corolla none; style one, seed one, round.

Four species, parasitic plants, natives of warm countries.

CYNOPHONTIS, (*κύων φονεύω*,) a festival celebrated at Argos in the dog-days, in which dogs were killed from a dread of Hydrophobia. Athen. iii. 21.

CYNOSURE, Fr. *cynosure*; It. and Sp. *cynosura*; Lat. *cynosura*; Gr. *κυνόσουρα*, i. e. *κυνός, οὐρά, cauda canis*, the tail of a dog. Martinius. The name given by the Greeks to *Ursa Minor*. Cynosura was a Nymph of Ida, one of the Nurses of Jupiter, and afterwards translated by him to the Heavens. (Hygin. *Poet. Astro.* ii. 2.) Newton has the following note on Milton's expression; "*Star of Arcady*, or *Tyrian Cynosure*." Our greater or lesser bear star. Calisto, the daughter of Lycaon, King of *Arcadia*, was changed into the greater bear, called also Helice, and her son *Arcas* into the lesser, called also *Cynosura*, by observing of which, the Tyrians and Sidonians steered their course, as the Grecian mariners did by the other. See Ovid, *Fast.* iii. 107, and Val. Flaccus, *Argon.* i. 17.

> Towers and battlements it sees
> Bosom'd high in tufted trees,
> Where perhaps some beauty lies,
> The *cynosure* of neighb'ring eyes.
> *Milton. L'Allegro*, l. 80.

> Though a rush-candle, from the wicker-hole
> Of some clay habitation visit us
> With thy long-levell'd rule of streaming light;
> And thou shalt be our star of Arcady,
> Or Tyrian *cynosure*. *Id. Comus*, l. 342.

CYNOSURUS, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx of two valves, containing several florets, partial receptacle unilateral, leafy.

Fifteen species of Grasses, natives of both hemispheres. *C. cristatus*, and *C. echinatus*, are natives of England. *Eng. Bot.*

CY'ON, or Ci'on. } More properly written *Scion*. "Fr. *scion*; a *scien*, a young and tender plant, a shoot, sprig, or twig." Cotgrave. Minsheu derives it, *a scindendo; quia* scinditur *ab arbore*; or it is rather, adds Skinner, contracted from *situm* for *insitum*, planted; any thing set or planted. Applied metaphorically.

> It may be that oft regrafting of the same *cions* may likewise make fruit greater; as if you take a *cion* and graft it upon another stock the first year; and then cut it off, and graft it upon another stock the second year; and so for a third or fourth year; and then let it rest, it will yield afterward, when it beareth, the greater fruit. *Bacon. Natural History, Cent.* 5. sec. 454.
>
> Cleanse trees of moss, &c. the weather moist,—gather *cyons* for graffs before the buds sprout; and about the latter end graff them in the stock.
> *Evelyn. Kalendarium Hortense. January.*
>

> And ouer-looke their grafters?
> *Id. Henry V.* fol. 79.

CYPERUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Gramineæ*. Generic character: glumes chaffy, imbricated in two ranks; corolla none; seed one, beardless.

Of this genus of elegant Grasses, more than two hundred and sixty species have been discovered, natives of the warmer parts of both hemispheres. The celebrated *C. papyrus* is a native of Ethiopia; the inner bark of the stalk was formed into paper, by the Ancients.

C. longus is a native of England, but is rare.

CYPHIA, in *Botany*, a genus of the class *Monadelphia*, order *Pentandria*, natural order *Campanulaceæ*. Generic character: calyx five-cleft; corolla of five linear petals; superior, filaments pilose, cohering, anthers free

This genus, allied to *Lobelia*, from which it differs in the number of petals, contains five species, natives of the south of Africa. Persoon.

CYPHONISM, (Gr. *κυφωνισμὸς*, a torture by the *κύφων*, Aristot. *Pol.* v.; Aristoph. *in Plut.*) The Scholiast on Aristophanes describes the *κύφων* to be a wooden cage, a sort of *Little-ease*, in which the Criminal could not sit upright. Suspended in this, or fastened to a stake, or stretched along the ground

CYNOSURE. — CYPHONISM.

CYPHONISM. — CYPRICARDIA.

with his hands fastened behind him, (for such was Cyphonism,) he was smeared with honey, and exposed to the attacks of insects. Hesychius explains κύφων generally as a wooden instrument of torture; and in Suidas is a fragment of an ancient edict, condemning those who treated the laws with disrespect, to endure Cyphonism for twenty days, and then to be thrown from a rock in women's clothes.

CYPRÆA, in *Zoology*, a genus of the class *Gasteropoda*, order *Pectinibranchia*, family *Cyprædæ* of Gray. Generic character: shell oval or ovato-oblong, convex, the margins involute; aperture longitudinal, straight, dentate on each side, effused at both extremities; spire very small, scarcely apparent.

Of this very beautiful and most extensive genus, so well known to Collectors under the name of *Cowries*, a very complete Monograph has been given in the first and second volumes of the *Zoological Journal*, by Mr. J. E. Gray; in which the intricacies in which the species had hitherto been involved are cleared up, and many very interesting new ones described.

CY'PRESS, *n.* } Lat. *cupressus*; Gr. κυπάρισσος,
CY'PRESS, *adj.* } supposed to be παρὰ τὸ κύειν παρίσους τοὺς ἀκρέμονας; because it bears or produces equal branches. See Vossius, and Martinius.

> Binde you my browes with mourning *cyparisse*
> And palish twigs of deadlie poplar tree,
> Or if some sadder shades ye can divise,
> Those sadder shades vaile my light-loathing eie.
> *Hall. Elegy on Dr. Whitaker.*

> Within the navel of this hideous wood,
> Immur'd in *cypress* shades a sorcerer dwells.
> *Milton. Comus*, l. 521.

> Meanwhile the lawn beneath the scatter'd shade
> Spread its serene extent; a stately file
> Of circling *cypress* mark'd the distant bound.
> *Mason. The English Garden*, book ii.

> And every myrtle bower and *cypress* grove
> And every solemn temple teems with love
> *Dodsley. Melpomene.*

CYPRESS-LAWN, says Skinner, either from Fr. *crespe*, (v. Crape,) or from the Island of Cyprus, where this article was first manufactured.

> On their heades bonettes of Turkay fashion, of cloth of golde of Tyssue, and clothe of siluer rolled in *cypres*, kercheffes after the Panyns fashion.
> *Hall. Henry VIII. The twelfth Yere.*

> ——— To one of your receiuing
> Enough is shewne, a *cipresse*, not a bosome,
> Hides my heart.
> *Shakspeare. Twelfth Night*, fol. 265.

> *Enter Autolicus singing,*
> Lawne as white as driuen snow,
> *Cypresse* blacke as ere was crow.
> *Id. Winter's Tale*, fol. 293.

> Item, a charme surrounding fearefully,
> Your partie-per-pale picture, one halfe drawne
> In solemne *cypres*, the other cobweb-lawne.
> *Ben Jonson. Epigramme* 73.

CYPRICARDIA, in *Zoology*, a genus of bivalve shells, (*Acephala testacea*,) of the family *Cardiaceæ*. Generic character: shell free, equivalve, inequilateral, obliquely or transversely elongate; hinge with three teeth beneath the nates, and one lateral tooth beneath the vulva.

The *Cypricardiæ* resemble the genus *Cardita* in their general form, and were placed with them by Bruguiere; but they differ essentially in the number of cardinal teeth, in which they are related to *Venus*, having, however, the elongate lateral tooth of *Cardita*. The whole of them are foreign.

CYPRINA, in *Zoology*, a family of bivalve shells, (*Acephala testacea*,) of the family *Conchæ*. Generic character: shell equivalve, inequilateral, obliquely cordate; the nates obliquely curved; cardinal teeth three, unequal, approximating at the base, somewhat diverging at the apices; a lateral tooth at a distance from the hinge, posterior, sometimes obsolete; ligament external, often partially imbedded beneath the nates.

Allied to *Venus*, from which genus they were removed by Lamarck. The large English species, *V. Islandica*, Auct., belongs to this genus.

CYPRINODON, from the Greek κυπρῖνος, a Carp, and ὀδὼν, a tooth, Lacep. In *Zoology*, a genus of animals belonging to the family *Cyprinöides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Head, body, and tail, ovoid; three rays to the branchial membrane; teeth in the pharynx like the Carp, and others along the jaws.

One species, *C. Variegatus*.

See Lacepede, *Histoire des Poissons*; Cuvier, *Règne Animal*.

CYPRINUS, from the Greek κυπρῖνος, Lin.; *Carp*, Will. In *Zoology*, a genus of animals belonging to the family *Cyprinöides*, order *Malacopterygii Abdominales*, class *Pisces*.

Generic character. Mouth small, jaws without teeth; three flat rays to each gill; large teeth on the pharynx; one dorsal fin; body covered with scales.

The Carps form a large, but not very interesting genus, and have been divided by Cuvier into several subgenera; they live in fresh water; and, as the structure of their teeth would prove, principally upon vegetable substances.

a Carps.

Dorsal fin long, having, as well as the anal fin, its third ray serrated; in some the angles of the upper jaw are bearded, and in others not.

C. Carpio, Lin.; *le Cyprin Carpe*, Lacep.; *Carp*, Willugh. This fish is of a thick shape; it is of an olive green colour above, and golden beneath; the lips thick; the angles of the upper jaw are furnished with two beards on each side, of which the lower are the shorter; the dorsal fin extends far towards the tail, which is slightly bifurcated; the scales are very large. The Carp sometimes weighs as much as twenty pounds, and reaches from four to five feet in length. It is extremely tenacious of life, even when taken from the water, and Derham, in his *Physico-Theology*, book i. ch. i. mentions this circumstance in a note, as follows:

"But Carps will live out of the water, only in air; as is manifest by the experiment of their way of fatting them in Holland, and which hath been practised here in England, viz. they hang them up in a cellar, or some cool place, in wet moss, in a small net, with their head out, and feed them with white bread soaked in milk, for many days."

Pennant also observes, that Carp thus treated have lived above a fortnight, and become finer tasted than those taken directly from the pond.

The Carp is found in almost all parts of the world, in ponds, lakes, or gently flowing streams. It

spawns about April or May, and deposits its eggs in the most retired places; for which purpose those Carp which live in streams leave their usual habitation, and if they meet with any obstruction, will, like the Salmon, leap over it, by rising to the top of the water, and bringing the head and tail together, so as to form a circle, and then taking a spring by suddenly unfolding themselves. The Carp is an immense breeder; and, in proof of this, it has been ascertained, that the weight of the roe is sometimes greater than that of the fish itself. *Caviar* is made by the Jews from the roe of the Carp. This fish is apt to mix its melt with that of others, and hence we have a spurious breed sometimes produced.

It is said that the Carp was not originally indigenous to this country, but that it was introduced here by Leonard Mascal, about 1514, and hence arose the old rhyme,

> Turkies, Carps, hops, pickerel, and beer,
> Came into *England* all in one year.

It is certain, however, that it was known in England before; as the *Boke of St. Albans*, printed at Westminster by Wynkyn de Worde, states that "The Carpe is a dayntous fisshe, but there ben but fewe in Englonde, and therfore I wryte the lasse of him. For he is too stronge enarmyd in the mouthe, that there may be noo weke harnays hold hym. And as touchyne his baytes, I have but lytyll knoolege of it, and we were loth to wryte more than I know and have prouyd. But well I wot that the Redde Worm and the Menow ben good baytyn for him at all tymes, as I have herd saye of persones credyble, and also founde wryten in bokes of credence." See, on this point, Beckmann's *History of Inventions*, (ii. 133—150.)

With regard to

The Breeding and Management of Carp,

Lacepede has given a very good account. He states that it is necessary to have three ponds; one for breeding, a second for growth, and a third for fattening. The *breeding pond* should not be above a couple of acres in extent; and as it is necessary that it should be exposed to the heat of the sun, it is right to remove the trees, and lay it open to the east or south; the banks should slope gradually, and be well furnished with reeds and other water plants, to retain the spawn at a proper distance from the surface of the water. It should be carefully guarded from frogs and aquatic birds, which destroy the spawn. The Carp preferred for breeding are those of six years old, though they are used as old as twelve; they should be large, with the back almost black, and the belly firm, and resisting the finger. Into a piece of water of this size, they usually put six or eight females and sixteen or seventeen males; but this ought not to be done till the season be so far advanced, that the water may have been well warmed by the sun. The young Carp remain in the pond for their growth, about two years, and after that time are removed to the *Fattening pond*, where they are fed upon insects, worms, the remains of dried plants, rotten roots, young aquatic plants, horse and cow dung mixed with clay, peas, potatoes cut in slices, &c. and after three years of such management they are fit for the table. This pond should after some years be left dry for ten or twelve months, at which time the number of rushes may be diminished, and the bottom sown with oats, radishes, vetches, &c. for the nourishment of the fish when they are restored to their old quarters.

During the cold season, Carps scoop holes in the bottom of the pond, in which they herd together, and become torpid; and it has been observed, that during their long fast they do not lose above a twelfth part of their weight. It is necessary to make some holes in the ice to allow the escape of the deleterious air, when the pond is frozen over; and these must be guarded in such way as to prevent the Carp leaping out of them. When, as is sometimes the case, from some accidental cause, the Carp bred in ponds are not of good flavour, it is best to place them for a month in a well, which should be sunk in a running stream of clear water. Those Carp are considered best which are found in lakes, through which there is a constant and rapid flow of fresh water. Carp are subject to two kinds of disease, in consequence either of their pond being frozen over, and the confinement of the foul air, or the admission of foul or snow water; in the one, the skin is covered by numerous little excrescences like sores, and in the other with pustules beneath the scales, which appearance has been called the small-pox. They are also destroyed by ulcers in the liver, and intestinal worms.

C. Specularis, Lacep.; *la Reine des Carpes*, Bl.; *Large-scaled Carp*, Shaw. This species is covered with remarkably large scales, arranged in two or three longitudinal rows on the sides, which although striated, are so bright as to resemble small mirrors; these scales are of a yellow colour, edged with brown. They are met with in most of the countries of Europe, but particularly in Anhalt, Saxony, and Franconia.

C. Nudus, Bl.; *le Cyprin à cuir*, Lacep.; *Leather-skinned Carp*. This fish would resemble the last, if the scales were taken off; but it differs in having the skin brown, while the *C. Specularis* has it black.

C. Auratus, Lin.; *le Cyprin Dorè*, Lacep.; *Gold Fish*, Edw. The Gold Fish was first introduced into England in the year 1691, but was not generally known till thirty years after, when Sir Matthew Dekker, to whom a great number were given, circulated them in the neighbourhood of London. They nearly resemble the Carp in the shape of their body, and have been known in this country to attain the length of eight inches, but very rarely more than six; in their native country they are said to grow to the size of our largest Herring. Their nostrils are tubular, and the upper jaw has no beard; the tail, naturally bifid, is sometimes trifid, even quadrifid; whilst the anal fins, instead of being placed behind each other, are opposite to one another like the ventral. Their colours vary much, some being marked with blue, or brown, or silver, but the most general colour is very bright gold. The young fish are black, and acquire their proper colour by degrees. The most beautiful Gold Fish are taken in a lake in the province of Che Kyang, in China.

β Barbels.

Dorsal and anal fins short, the former only having its third ray spined; two beards on the tip, and two at the corners of the upper jaw.

C. Barbus, Lin.; *le Cyprin Barbeau*, Lacep.; *Barbel*, Will. The Barbel sometimes acquires the weight of twenty-five or thirty pounds, though it is commonly not above half that weight; it is of a long rounded form;

CYPRINUS.

the head smooth and oblong, with the mouth below; the pectoral fins of a pale reddish brown; the ventral and anal tipped with yellow; tail slightly bifurcated and purple; the scales, which are not very large, are pale gold, and the belly white. This is a very coarse fish; and its roe when eaten occasionally produces the unpleasant irritations on the skin so frequently seen after eating stale shell-fish. The Barbel frequents the still and deep parts of rivers, rooting up the soft banks with its nose like swine. Though little valued as food, on account of their coarseness, yet they are much sought after by Anglers for the sport which they afford.

C. Capoeta, Guldenstedt.

C. Mursa, Guldenstedt.

C. Bulatmai, Pall.

C. Binny, Forskal. May all be referred to this subgenus.

η Gudgeons.

Dorsal and anal fins short, and without spines; only the corners of the mouth furnished with beards.

C. Gobio, Lin.; *le Cyprin Goujon*, Lacep.; *Gudgeon*, Will. Is one of the finest flavoured fresh-water fish; it rarely exceeds four or six inches in length; but Pennant states, that he knew of one caught at Uxbridge, weighing half a pound. The body is thick and round; the back olive, spotted with black, the sides silvery, and the belly white; gill covers green and silver; lower jaw the shorter, a single beard at each corner of the mouth; irides reddish; tail forked, and spotted with black, as is also the dorsal fin. They are found in swarms in flowing water.

θ Tench.

Have the same characters as the Gudgeons, but their scales and barbs are very small.

C. Tinca, Lin.; *le Cyprin Tanche*, Lacep.; *Tench*, Will. The Tench is thick and short, and rarely exceeds four or five pounds in weight; the scales covered with slime; colour of the back, dorsal and ventral fins dusky; the head, sides, and belly, greenish mixed with gold; tail even and broad; its slime is said to be healing, and it has been therefore called by some the Physician of the Fish. Mr. Diaper, in his *Piscatory Eclogues*, states, that the Pike pays due respect to the healing powers of the Tench.

> The *Tench* he spares, a medicinal kind:
> For when by wounds distrest, or sore disease,
> He courts the salutary fish for ease;
> Close to his scales the kind physician glides,
> And sweats a healing balsam from his sides.
>
> *Eclogue 2.*

The truth of this statement, however, is by no means certain. The flesh of the Tench is much esteemed at present, though formerly it was only considered fit food for the vulgar. The Tench is found in stagnant ponds, and but rarely in rivers. The *C. Tinca Auratus* of Bloch, is probably only the common Tench in high season.

ε Cirrhines.

Dorsal fin larger than that of the Gudgeon, and the two cirrhi or beards upon the middle of the upper lip.

C. Cirrhosus, Bl.; *le Cyprin Vonconder*, Lacep.; *Cirrhine*. The body compressed, and of a silvery colour; the dorsal before the ventral fins. Native of the rivers of Tranquebar.

ζ Breams.

No beards; no spines to the fins; the dorsal short and placed behind the ventral, and the anal fin long.

C. Brama, Lin.; *le Cyprin Brème*, Lacep.; *Bream*, Will. Very deep, but thin in proportion to its size; the scales very large, sides thin and flat; the back and fins dusky; sides yellowish; tail crescent-shaped and large.

C. Latus, Gmel.; *le Cyprin Large*, Lacep.; *Bordelière*, Shaw.

C. Ballerus, Gmel.; *le Cyprin Sope*, Lacep.; *Sope*, Shaw.

C. Vimba, Gmel.; *le Cyprin Vimbe*, Lacep.; *Vimbe*, Shaw. Belong to this subdivision.

η Labeons.

Have the lips remarkably thick, and the dorsal fin long. Of this division are the

C. Niloticus, Geoff., and *C. Fimbriatus*, Bl.

θ White Fish.

Neither beards, nor spines; the dorsal and anal fins short.

This subdivision is very numerous, it includes the *Roach*, Pen., *C. Rutilus*, Lin.; *Dace*, Pen., *C. Leuciscus*, Lin.; *Bleak*, Pen., *C. Alburnus*, Lin.; the *Minow*, Pen., *C. Phoxinus*, Lin., which is the smallest species in the whole genus; and many others. The *White Bait*, Pen., which is certainly a *Cyprinus*, is probably a distinct species, though it very nearly resembles the *Bleak*; it is, however, believed not to be a Bleak, because it is not found in other streams where Bleak are plentiful, but only in the Thames near Blackwall.

ι Gonorhynques.

Body and head taper, and covered, as well as the opercules and the membranes of the gills, with small scales; the muzzle projects beyond the mouth, which has neither teeth nor beard.

One species, *C. Gonorhynchus*, Gmel., from the Cape of Good Hope.

See Linnæi *Systema Naturæ* à Gmelin; Willughbeii *Ichthyologia*; Blochii *Systema Ichthyologia* à Schneider; Lacepede, *Histoire des Poissons*; Cuvier, *Règne Animal*; Pennant, *British Zoology*.

CYPRIPEDIUM, in *Botany*, a genus of the class *Gynandria*, order *Diandria*, natural order *Orchideæ*. Generic character: nectary large, inflated, hollow.

Ten species, all beautiful, and much sought for by the Botanists. *C. calceolus*, the Ladies' Slipper, is an elegant but rare English plant; it is occasionally found in the mountainous countries of the North of England, especially about Ingleborough, in Yorkshire. *Eng. Bot.*

CYPRIS, in *Zoology*, a genus of the class *Crustacea*, order *Entomostraca*, family *Ostracoda*. Generic character: body covered with a bivalve shell; head concealed; antennæ two, superior, terminating in a brush; feet four.

Type, *C. conchacea*, Müll.

These minute, but interesting animals, are enclosed within a transverse bivalve shell, which opens and shuts by means of a ligament, at the will of the animal, thus possessing an *analogous* relation to the testaceous *Acephala*. The shell is generally of an oval elongated form, equilateral, and equivalve. The animal swims swiftly, by means of two little antenniform

fins, which are exserted at one end of the shell, and which move with great quickness. From the rapidity of its movements, and its very minute size, it is not easy to distinguish its different organs. A careful examination, however, will detect the antennæ, feet, and tail, the pointed head, and minute single eye. A very interesting account of these little fluviatile animals is given by Latreille in his *Histoire Naturelle des Crustacées, &c.* tome iv. p. 232.

CYPRUS.

CYPRUS, in point of magnitude the second Island in the eastern part of the Mediterranean, lies between the 32d and 35th meridians east of Greenwich, and the 34th and 36th parallels of north latitude. It was known to the Ancients by many different names; *Acamantis, Cerastis, Amathusia, Aspelia, Cryptos*, and *Colinia*, are mentioned by Pliny, (v. 31;) *Sphecia*, from a people called *Sphecoes*, who inhabited a part of it, is quoted by Eustathius from Lycophron; and *Ærosa*, an epithet given to it by Festus, is derived from the copper in which it abounds. This indeed furnishes a more probable derivation of the name Cyprus, (in Greek, Κύπρος, i. e. copper,) than that which refers it to Cyprus, the daughter of Cinyras, one of the first Kings of the Island, according to the Grecian Mythology. But that given by Pliny is perhaps the true one. In speaking of a plant called Cyprus by the Greeks, he says, (xii. 24,) *Neque vero est absimile inde vocari Cyprum insulam, cum rara alioqui planta et eximia, ibi plurima proveniat.* This plant, of which the most fragrant sort is brought, as he adds, from Cyprus, is the *Hinnà* of the Arabs, and the thornless *Lawsonia* of Linnæus. It is a tall shrub, much esteemed by the Asiatics for the odour of its flowers, and the scarlet dye yielded by its leaves, and is still much cultivated in Cyprus and in Egypt. (Sonnini's *Egypt*, p. 172, Plate 3. Greece, i. 40. Eng. Transl.) The *Song of Solomon*, wherein it is mentioned, (i. 14, iv. 13,) gives its Hebrew name *Cófer*, from which the Greek word Κύπρος, appears to be derived. Virgil (*Æn.* i. 622,) calls Cyprus *opima*, and Horace (*Od.* iii. 26, 9,) *beata*, both with reference to its fertility; and the latter continually (as in *Od.* i. 19, 10, 30, 2, &c.) alludes to its peculiar consecration to Venus. In the age of Justinian it was also named *Justiniana*. (Meletius, iii. 231.)

Its shape is nearly elliptical; its greatest diameter, from east to west, measuring about 114 geographical miles, its least, from north to south, fifty-four geographical miles; and its circumference 450 geographical miles. It is separated from *Cilicia* on the north by a narrow sea, called the Cilician Strait (*Aulon Cilicius*) by the Ancients; the width of which from Cape *Crommyon* to the promontory of *Animurium* is thirty-nine and a half geographical miles, (350 stadia, according to Strabo (xiv. 6,) or forty-three and three-quarters Greek miles.) "The distance by land," says Strabo (xiv. 6,) "from the Islands called The Keys (*Clides*) to *Acamas*, travelling from east to west, is 1400 stadia. *Acamas* is the north-western promontory, distant 1000 stadia (= 125 miles) from *Selinus* in the Rough Cilicia (*Aspera*,) 1600 (= 200 miles) from *Sidé* in *Pamphylia*, and 1900 (= 237½) from *Chelidonia*." "The circumference of Cyprus," says the same Geographer, "following all the sinuosities of the coast, measures 3420 stadia, or 427½ Grecian miles. From Cape *Crommyon* to the *Clides* or Keys," he adds, "a little further on is a straight course to north and east, 700 stadia in length," that is 80¼ statute miles; and it appears from Captain Beaufort's Map of the South Coast of Asia Minor, that the exact distance is eighty-eight geographical miles, which shows the accuracy of Strabo's measurement.

Travelling eastwards from Cape *Crommyon*, now called Kormakiti, the following are the most remarkable places on the coast: *Lapathus*, a Lacedæmonian colony, which had a port and dock-yard. The name of this Town, spelt *Lapethus* by Stephanus Byzantinus, *Lepethos* by Scylax, and *Lapithus* by Ptolemy, was still preserved by a village near its ancient site, in the time of Porcacchi. It was then celebrated for its citrous and earthenware, a manufacture carried on there in the heroic ages, according to the fabulous history of the Greeks. *Ceraunia*, or *Ceronia*, (Ptolemy and Diodorus Siculus,) called Kerìniyyah (misprinted Kerebniyyah) in the Geography of Idrísí, (Arab. Text, 224; *Geographia Nubiensis*, 194.) Kerìneh or Gerìneh, (pronounced Gerné by the Turks, and Cerina, or Cerignes, by the Italians,) whence the Tzerina of the Modern Greeks, is the only fortress on the northern side of Cyprus, which is in most places sufficiently protected by the boldness of its shores. (Dapper's *Archipel.* 42.) This Town (in 35° 23′ north, 33° 27′ east) is little better than a village; but its fortress, built upon a cliff by one of the Kings of Portugal, (Dapper, l. c.) was formerly considered as impregnable. It has no remains of antiquity, except some catacombs in the quarries to the west; and its harbour, which is small and bad, is almost the only one on this side of the Island. The plain between the mountains behind the town and the sea, "is one of the most beautiful and best cultivated districts," says Colonel Leake, (Walpole's *Memoirs on Turkey*, ii. 244,) "which I have seen in Turkey." *Aphrodisium*, near the Punta d'Afrodisio, or del Casale Acatù, was at one extremity of an isthmus, being distant from *Salamis* on the southern coast only seventy stadia, (rather more than seven miles.) *Carpasia*, now Carpaso, a Town and harbour opposite Cape *Sarpedon*, on the coast of Asia Minor. This was anciently the See of a Bishop, (Dapper, 46.) Near to it was the promontory called *Olympus*, on which was placed the Temple of *Venus Acræa*. Opposite to which are some islets, called the Carpasian Islands. The *Clides* (Keys) are two others lying off the eastern extremity of the Island. Cape *Dinaretum*, (Pliny, v. 31,) now Capo di Sant' Andrea, (in 35° 36′ 30″ north and 34° 38′ 45″ east.)

Lapathus. Ceronia. Cerignes, Gherné. Carpasia. Dinaretum

The first place of note on the south-eastern coast is *Salamis*, celebrated in the fabulous History of Greece as having been founded by Teucer, the son of Telamon, immediately after the end of the Trojan War, (B. C. 1270.) He named his new abode after his native island, *Salamis*, in the Saronic Gulf, opposite to *Eleusis*. (Her. *Od.* i. 7, 29.) His descendants reigned

Salamis. Constantia.

CYPRUS. over the little Kingdom which he founded, more than 900 years. (Isocrat. *in Nicocle*, i. 98.) It is said by Diodorus Siculus, (i. xvi. 42,) to be the largest and most powerful city in the Island. In the thirty-seventh year of Constantine the Great, it was entirely ruined by an earthquake. In the times of Paganism, a Temple of Jupiter, founded by Teucer, (Ammianus Marcellinus, l. 14,) gave it a peculiar sanctity, which after the establishment of Christianity it retained, as being the Bishopric once held by St. Epiphanius. It is also memorable on account of the human sacrifices offered up in one of its Temples to Agraulos, son of Cecrops, and afterwards to Diomed. (Porphyr. *de Abstinentia*, l. 2.) When rebuilt, after its subversion in the IVth century, it was named, in honour of the reigning Emperor, *Constantia*; and it was still the Metropolis of the Island in the time of Constantine Porphyrogenetes. (*De Adminstr. Imp.* i. 15.)

Famagosta. Arsinoe. On, or near, the site of *Salamis*, Henry, King of Cyprus, in 1290, founded the present Town of Famagosta, (or Hamecostum,) called Maghúsah by the Turks. It was a strong and nearly quadrangular fortress, and long the key of Cyprus. On a hill, about four miles and a half from the present Town, there are the ruins of old Famagosta, which was destroyed by command of Richard Cœur de Lion. The harbour though small is secure, and in fact is the only safe haven in the Island; it has not, however, a sufficient depth of water for large ships. The Town was fortified by the Genoese, who took it about 1372, and possessed it for nearly a century; its works were also much improved by the Venetians, to whom it was given up by the widow of Giacomo di Lusignano, the last King of Cyprus, in 1475. In 1570 it was besieged by Mustafà Páshà, Beglerbeg of Marâsh; and on the first of August, 1571, its garrison was compelled to surrender, after the most gallant and resolute defence perhaps ever made. The Churches, one of which contained the Tombs of the Kings of Cyprus, were converted into Mosques, and the Christian inhabitants were expelled from the Town. "It is now," says Dr. Sibthorp, in 1787, (Walpole's *Memoirs*, ii. 16,) "almost depopulated. The lines of fortification, which are very considerable, are still sufficient to show the extent and former strength of this place; they are now suffered by the Turks to moulder away in ruins. Some cannon, with the arms of Venice, were lying dismounted on the ramparts; the Lieutenant of the fortress pointed to them with an air of triumph. Leaving the fortress," he continues, "we passed through the streets now deserted, a melancholy picture of Turkish desolation; the gateway by which we returned to the convent was paved with cannon-balls." Famagosta is eight hours journey or about thirty geographical miles from Lárneca, and is 35° 9′ north and 34° 7′ 15″ east. According to Meletius, (iii. 230,) it is built on the site of *Arsinoe*, an ancient sea-port, mentioned by Strabo, (xiv. 6,) a little to the west of *Salamis*; and both of them are near the mouth of the river *Pedæus*.

To the south-west of Famagosta, there is a small neck of land, terminating in a cape, called *Ammochostos* by Ptolemy, and Capo della Grea, or Grega, by the Venetians. This headland is at one extremity of a bay, near the shore of which is the village of Armidia, probably built from the ruins of *Leucolla*, and the other extremity is formed by the Capo della Pila, the *Pedalium* of the Ancients. "Above which there is a lofty, rugged table-mountain," says Strabo, (l. c.) "sacred to Venus, and distant from the *Clides* 680 stadia, or very near sixty-eight geographical miles." From *Pedalium* to *Citium*, (or the Promontory called *Dades*,) the coast is full of bays and sinuosities, (Strabo;) and at the head of this gulf are the salt-works, (*Saline*,) and the Town of Lárneca near them, which has been for nearly a century the principal commercial port in Cyprus. Its name of doubtful origin, and variously spelt, (Arnica, Arneca, Arnacho,) is properly L'Arnaco della Saline, from the salterns on the west of the Town. They are scarcely a mile distant; and in the XVIth century produced a considerable revenue to the Venetians, as may be seen in the detailed account given by Dapper, (*Archipel.* 32,) from John Lokke, an English Traveller. It is now a small Town, but still contains a Mosque, Church, Baths, Coffee-houses, and well-filled shops. Lárneca itself is situated about a mile to the east of the Marina, or village, near the Saline (Ἁλυκὲς) on the sea-shore; it is a handsome village, but owes all its beauty to the gardens with which it is surrounded, full of over-hanging jasmines and oleanders. The Church of St. Lazarus, at the Marina, much venerated on account of the Shrine of the Saint, who was Bishop of the place, according to the Monkish legends, is a large heavy building, decorated internally with much clumsy carving and gilding in the common Greek style. The reliques of the Saint are believed by the vulgar still to possess a resuscitative power; but it does not appear that their virtue is ever put to the test. (Dr. Hume, in Walpole's *Memoirs*, ii. 246.) The numerous antiquities found at this place, leave little doubt that *Citium* stood on this spot. (Ibid.)

Citium. "From *Pedalium* to *Citium*," says Strabo, (l. c.) "the greater part of the coast is rugged and sinuous. Zeno, the founder of the Stoic sect, and Apollonius, the Physician, were natives of that place. It has a closed port." A headland (in 34° 47′ north and 33° 38′ east) called Kiti, (*Capo Chiti*,) supposed by D'Anville to be the Promontory *Dades* of Ptolemy, led him to place the ancient *Citium* at Kiti, a village near it on the river Titius; but the extensive ruins, busts, inscriptions, coins, &c. continually found between Lárneca and the salterns, (*Saline*,) make it more probable that *Citium* stood on that site. (Clarke's *Travels*, iv. 37—43.) This opinion is strengthened by the many Phœnician inscriptions, gems, seals, &c. found in or near Lárneca. The village Citti, however, supposed to be the ancient *Citium*, is not more than six or seven miles from that place, and has some ruins. (Sibthorp, in Walpole, ii. 21.)

Amathus. *Amathus*, the next Town mentioned by Strabo, and the most ancient in the Island, was named (Steph. Byz.) after Amathusa, the mother of Cinyras. It contained a Temple of Venus and Adonis, as well as another of Jupiter Xenius, and was the scene of many important events in fabulous History. Its inhabitants worshipped Hercules and Malica, the Queen of Heaven or Astarte; whence it may be inferred, that this, like *Citium*, was a Phœnician settlement; as likewise from the testimony of Theopompus, (l. xii.) and the human sacrifices offered by its inhabitants to Venus. (Ovid, *Met.* x.) It was once so celebrated on account of its Temples and mines, that the whole Island was called from it *Amathusia*, (Ptolemy, v. 17;) and its jurisdiction extended, under the Romans, as far as Mount

 Olympus. It was an Episcopal see, after the establishment of Christianity. The name of Limasol seems to be derived from *Amathus*; and there can be little doubt that the ruins about six miles to the east of the harbour, are, as D'Anville supposed, (*Geogr. Anc.* ii. 152,) the remains of *Amathus*. In the Ecclesiastical catalogues of the Greek Bishoprics subject to the Archbishop of Cyprus, Lemessù has been substituted for *Amathus*; and old Limissò was mentioned as the site of *Amathus* by Porcacchi and Kootwyk (*Cotovich*) nearly 300 years ago. At the distance of three hours journey (about twelve miles) from the present town, says M. de Hammer, (*Topogr. Ansichten*, p. 125,) through rich corn-fields and shady lanes, with continual peeps of the sea, which is never more than a few hundred paces off, stands old Limasol, in the most remote antiquity, the city of *Amathus*, the darling abode of Aphrodite. In ancient times the sea here formed a bay, now choked up with sand; and the mountains form a large curve, the cord of which, that is the sea-shore, is about an hour (four miles) in length. In the midst of this large basin there rises a steep isolated hill, entirely divided from the circular range of mountains, the extremities of which run out into the sea. On the western side of this bay, near the sea, there are two large grottoes hewn in the rock; one of which has a subterranean passage, now filled up with rubbish. According to the current traditions of the country, this passage is continued under ground, and communicates with grottoes and arched chambers on both sides. On the opposite, that is, on the eastern side of the bay, there are the walls of a Christian Church, adorned with pictures of the Saints still (in 1801) almost entire. Single columns and fragments of walls, the work of later ages, are the only ruins which appear. The isolated hill, mentioned above, is difficult of ascent, but well worth examination. Its sides have every where been planed and formed by the hand of man; sometimes into perpendicular walls of a great height, at others, into grottoes and caverns. On the west side, there is an inscription on a tablet sunken in the rock, which records Lucius Vitellius Callinicus as the author of these excavations. This was, probably, the person of whom Tacitus says, (*Annal.* vi. 32,) *Cunctis quæ apud Orientem parabantur, L. Vitellium præfecit, (Tiberius,) qui regendis provinciis prisca virtute egit;* but as the stone is soft and friable, it has suffered much from exposure to the atmosphere. On the summit of the hill, which is a level platform, there are two vast reservoirs, one sunk into the earth and broken, the other still entire. It has four auricles, on the outside of which some animal, apparently a horse, is sculptured in mezzo-rilievo. This urn, basin, or laver, is about six feet high; and the voice of a person standing within it is reverberated with a continued echo. No remains of any building round these lavers can be traced; but a column of colossal size lies dislodged from its basis, near the road to the neighbouring village of Ayios Tychonos, and shows that there was once some splendid edifice on the spot. That village, which is not two miles from the sea, contains other memorials of a similar kind: inscribed tablets, some of which are illegible; and *cippi*, or columnar gravestones, with the names of the persons to whose memory they were erected. One of the inscriptions declares, that "The trees from the *Heræum* (Temple of Juno) to the paved road, were planted by a certain Œsimus, who also erected the Temple in honour of the Gods." The *cippi*, which M. de Hammer mistook for altars, appear to be more modern than the Augustan age. The walls of an ancient building of excellent masonry may be also traced within the village. This was, according to the same traveller, most undoubtedly the Temple of Venus; but, by his description, these remains are, more probably, the wreck of some ancient Church; and must bear a strong resemblance to the massive walls formed of vast blocks of Parian marble still seen at *Sardes*, and called by the Greek peasants *Ayios Yannis*, i. e. St. John's. This village of Ayios Tychonos is in a very picturesque situation, and the ruin just mentioned stands on an eminence commanding a view of the sea.

Limasol, or Limesol.

Limasol, called *Elímasún*, (misprinted *Elinmasún* in Idrísí, Arab. 224, Lat. 194,) *Lemessù* by the Greeks, *Ulímús* by the Turks, and *Limissò* by the Italians, is a long straggling Town, in 34° 39′ north and 33° 30′ east, (Dr. Hume, in Walpole's *Mem.* ii. 247,) on a bay deeper than that of Lárneca, from which it is about sixty English miles distant, (fifteen hours.) It is situated in a very fertile plain, covered with olives, kharobs, (*Ceratonia siliqua*,) vines, and cypresses; and has one Mosque and one Greek Church. None of its houses are above one story high, on account of the earthquakes, which are frequent. "Their door-ways," says Dapper, (*Archipel.* p. 46,) "are so low, that a man cannot enter without stooping; and this is done to prevent the *Sipáhís* (Turkish cavalry) from *riding* in and demanding free quarters;" but this author forgot to say why they could not as well *walk* in, and make the same demand. Such are the absurdities respecting the Turks which have been circulated by the Greeks, (*Græcia mendax*,) and gravely repeated by the western Europeans. The climate of this place is cooler, and more healthy than that of Lárneca; and it is frequented on account of its corn, and the wine from the vineyards of La Commanderia in the neighbourhood. (Sibthorp, in Walpole, ii. 21.) There was formerly a garrison of Janissaries in its castle, and the town swarmed with Jews.

Capo de' Gatti. Curias.

About eight miles to the south of Limasol is Capo della Gatta, del Gatto, or de' Gatti, (Cat's Cape,) or Gavata; the peninsula and promontory of *Curias* of the Ancients, and the southern extremity of the Island in 34° 32′ north and 33° 22′ 24″ east. From that point the coast bends to the north-west, and forms a bay; at the head of which was the town and road-stead of *Curium*, a colony from *Argos*, called *Curias* by Pliny, (v. 31;) its site is now occupied either by Episcopia, or Kermia. The western extremity of this bay is formed by a neck of land called *Phrurium*, now Cabo Bianco; beyond which were *Treta*, *Noosura*, and *Palæa Paphos*, or *Palæpaphos*, which had a road-stead, though the town itself was about ten stadia (rather more than a mile) from the sea. (Strabo, xiv. 6, p. 1002, ed. Almeloveen.) "Then comes the Promontory *Zephyria*, and the second *Arsinoe*, each having an anchorage, the latter a sacred Grove and Temple; and then the *Hierocepia* at a small distance from the sea. Then *Paphos*, founded by Agapenor, having a port and well-built Temples, distant, by land, sixty stadia (about seven miles) from *Palæpaphos*: to which place both men and women, assembling from the other cities, go in procession by this road, at the celebration of the annual festivals." (Strabo, l. c.) This, in many respects the

Curium. Piscopia.

Paphos.

CYPRUS.

most interesting site in the whole Island, has been excellently illustrated by M. de Hammer, of Vienna, who was there with Sir Sidney Smith, in 1801.

New Paphos. Bapho, or Baf.

New *Paphos*, still called Papho or Bapho by the Greeks, not Vapha, as it is written by M. de Hammer, (*Topogr. Ansichten*, 134,) and Báf by the Turks, (*Jehán-numà*, p. 613,) is nearly in 34° 56′ north and 32° 29′ east. "The town," says Dr. Sibthorp, (Walpole ii. 25,) "now presents a melancholy ruin; few of the houses being inhabited. In walking through it, we entered the enclosure of a modern Greek Church, where we discovered three pillars of the most beautiful Egyptian granite; at four feet from the ground, they measured ten feet four inches in circumference; and from the present surface, which evidently had been much raised, fifteen feet in height. At the distance of about forty yards, were two smaller pillars; one of them was fluted. This was, probably, the site of an ancient Temple of Venus; near it stood the ruins of a small Gothic chapel, probably Venetian." The principal remains extend for about a mile and a half along the shore. There are three artificial elevations, apparently the sites of as many Temples; the first, and largest, is immediately behind a small castle washed by the sea. Foundations of walls and arches with the broken shafts of twenty-one pillars of granite, show that some fine building formerly occupied this area. It was also outside of the city walls, at least of those which were erected in the middle ages; though surrounded, as the blocks of stone strewed about show, with other buildings. The second Temple is that already noticed, and the third is about six furlongs further on, upon a mound opposite to the remains of a Gothic chapel; where, amidst the fragments of many prostrate columns, two were yet standing, in 1801, which were eighteen feet in height, and a yard in diameter. On a hill behind these ruins there are the walls and arches of a large building, apparently a *Gerusia*, or Senate-house, distinguished by the size and smoothness of the blocks of stone of which it is constructed. Near to it are also the excavations mentioned by Pococke, which were either quarries or catacombs; and a mile and a half more to the north, close to the sea-shore, the rocks have been so nicely levelled and hewn into chambers, that they have, at a distance, the appearance of the ruins of a town, and are called by the peasantry τὸ παλαιὸν κάστρον χαλασμένον. They were, manifestly, as M. de Hammer and Dr. Sibthorp have remarked, catacombs; and are almost as regularly laid out as the Necropolis at Alexandria. The stone being easily decomposed, the cornices and pedestals of the pillars have been much injured by the atmosphere; but it is evident that they were of the Doric order, a circumstance sufficient, it might be thought, to prove that these catacombs are not, as M. de Hammer supposes, (*Topog. Ans.* 140,) of Phœnician origin.

Baf. or Papho.

The present town of Báf, or Papho, stands on a height about a mile and a half from the sea, in 34° 53′ north and 32° 20′ east; and is called by its inhabitants Ctima, (Κτῆμα,) or Metropolis. The first of these words has been changed by the Turks into *Ikhtimà*, pronounced by the peasantry *Iftimà*. "For," says Dr. Sibthorp, (Walp. ii. 25,) "from Bafo we passed over some fields to a beautiful village called Iftinia, (*Iftimà*,) where the Governor of the district resided;" and, according to M. de Hammer, (p. 141,) the place is called Ctima, "because it is the residence of the Turkish and Greek Superiors, the Aghà and the Dhespótis, (Δεσπότης, i. e. Bishop,) or Metropolitan." Hájí Khalífah also observes, (*Jehán-numà*, p. 613,) that "above a large village in the district of Báf, named Ikhtimà, there is a hill of soft spongy earth, the skirt of which comes down near to the village; and in that mountain there is a quarry of red chalcedony, (*sëilán surkh*,) and the stone called Cyprus Diamond," (*Kibrís elmá-sà*.) "From Iftinia," (*Iftimà*,) continues Dr. Sibthorp, "we walked to what our guide called 'the Diamond Hill;' the Ikhtimà of the one is therefore, probably, the Iftinia of the other. These diamonds we found to be nothing more than common quartz-crystals." It is to be regretted that no remarks have been made respecting the neighbouring soil and rocks, with regard to which the celebrated Pallas (Clarke's *Travels*, iv. 44) "particularly wished for information."

There are no buildings in this village more than two or three hundred years old; but at Ayiostivi, a mile and a half to the south-east, the Church of St. Parasceué is built on the site of an ancient Temple, the columns and cornices of which are scattered round it. Some grottoes hewn out of the adjoining rock, and a subterranean water-course, appear to have communicated anciently with the Temple; but there are vast clefts and chasms in the rocks, evidently the effects of earthquakes. A small chamber at the top of a cliff to the north of the village, is called τὸ σπήλαιον τῶν ἁγίων πέντε, and much venerated as the abode of the five Saints; though the wonder is how five persons could be crammed into a hole in which there is hardly room for two. Pollona, (*Apollina?*) a mile and a half further, is remarkable for the ruins of a Gothic Church, and a large stone basin or laver.

Half-way from Ctima to Cúclá, and a mile and a half from Ayiostivi, is the torrent and pretty village of Arkhelia, surrounded by cotton-fields and pomegranate groves, watered by copious springs. The Gothic arches of an aqueduct, some walls of a large building appended to the rock, and a single column of white marble in the church, are the only remains of antiquity in this village, which is placed upon the promontory of *Zephyrium*; and St. Mariné, further inland, is, perhaps, the *Hierocepia* of Strabo and Pliny. Near Time, six miles from Ctima, is the Mandra, or common sheepfold of the neighbourhood; and near Aïya Argona, a ruined Greek church on the beach, a mile and a half from the fold; besides the ruins of several houses, there are some grottoes filled with coarse and extraordinary stalactites. Beyond this, there is a second cape, supposed by Pococke to be *Arsinoe*; but Strabo seems to place that headland to the west of *Zephyrium*. On the eastern side of this little cape is the roadstead of *Palæpaphos*. The sea, in M. de Hammer's opinion, has made great incroachments, and covered a part of the ancient town; but its site is marked by two large piles of masonry, with oblong quadrangular openings like windows close to the water's edge, and a pit full of fragments of cornices, shafts of columns, &c. weighed down by a marble altar of vast dimensions.

Palæpaphos.

The road from the Mandra to Cúclá is shaded by hedges of bayes, (the laurel of the Greeks,) roses, myrtles, oleanders, agnus castuses, and styrax, which are watered by brooks hurrying over their stony beds towards a little stream called *Barbaros* by the Ancients, and Dyórrhizo, (Δυόῤῥιζος,) or Keropótano, Κερο-

Cocla. Palæpaphos, or old Paphe

 πόταμος,) by the Moderns. It derives the first name from its double source, and the last from its being full only for a season. On the eastern side of this stream the ground rises suddenly, and on the summit of the bank there is an area of more than a mile in circuit, covered with the ruins of a magnificent city, in the midst of which are scattered the wretched huts of Cúclá. On the highest part of this area an oblong quadrangular space measuring 750 feet in length, and 500 in width, is enclosed by walls formed of blocks of stone from twelve to eighteen feet long, more than six feet high, and three feet thick; and the whole area is filled with fragments of sculpture and inscriptions. Two large openings lined with stone, nearly in the middle of the building, but now filled with rubbish, appear to have been wells. The sanctuary was on the eastern side, where the ground rises still higher; and much of the wall enclosing it, has fallen into the valley below. That this was the celebrated Temple of Venus is placed beyond a doubt by several inscriptions; one of which, brought to England by Sir Sidney Smith, is on the base of a statue erected "by the City of the Paphians, in honour of Callippus, son of Callippus, twice Clerk to the Paphian Senate and People, High-Priest of the City, Clerk to the Guild of Musicians, (employed) in the service of Dionysius and the Gods, Benefactors, (the Ptolemies?) who had excellently performed the duties of Gymnasiarch to the City, &c. consecrated to the Paphian Venus;" or it may possibly mean, that the City of the Paphians allowed Callippus to erect a statue of the Paphian Venus, for the latter part of the inscription is wanting in M. de Hammer's copy. Another, in a ruined church hard by, is on the basis of a statue of Marcia, the niece of Augustus. A third, worked into the wall of another church, is curious, as settling the orthography of a name which occurs in Tacitus, (*Ann.* xii. 45, 54; xiii. 9; xiv. 26;) for it is the base of a statue in honour of C. Humidius Quadratus Pantauchianus, High-priest; a relation, no doubt, of the Humidius Quadratus who is mentioned by that Historian as Præfect of Syria. Four of the entrances to the Temple are still manifest, and are remarkable on account of some circular perforations in the stone-work on each side, which pass in a crooked line through the whole thickness of the wall, and therefore allowed of a secret communication between persons inside and outside of the temple, when its doors were closed. On clearing away the rubbish which covers the floor of the enclosed area, a fine Mosaic pavement is discovered; the edge of which, the only part examined, consists of various rows of coloured circles and lozenges, between straight and serpentine lines. It may be observed, that all the inscriptions copied, as well as this pavement, are evidently Roman works; and it is not improbable, that this is the Temple rebuilt or repaired by order of Augustus, when the town had been nearly ruined by earthquakes. (Dion Cassius, l. xlv.)

The ruins of Englistro, (Ἐγκλειστρον,) and some caverns in the rocks hard by, are the only remaining objects worth examining near Cúclá. The former, about three miles from this village, are the remains of a fine Church and Convent in a secluded dell, the picturesque beauties of which are more striking than the monuments of human art which it contains. The latter, scarcely a mile off, are a suite of catacombs exactly similar to those already described, with the exception of a very legible Phœnician inscription still extant in the wall of the largest chamber. In these, as well as in the others, there is a sort of vestibule adorned with pillars of the Doric order, which was, therefore, as M. de Hammer rather hastily infers, of Phœnician origin; but the existence of a very ancient Tyrian colony at *Paphos*, the peculiar, and, probably, the earliest seat of the worship of Venus, their favourite Deity, (for, as Suidas observes, the Astartí of the Phœnicians was the Aphrodite of the Greeks,) affords an easy and satisfactory explanation of the fable which represents her as springing from the sea, and wafted to the shores of Cyprus by the winds; though the Zephyrs, who are said to have officiated on that occasion, do not blow from exactly the right quarter. *Palæpaphos* is in 34° 52′ north and 32° 27′ east.

A small cape, still called Drápano, the *Drepanum* (the Scythe) of Ptolemy, unnoticed by Strabo, is in 35° north and 32° 9′ east nearly. This headland, the western extremity of the Island, has been laid down on such uncertain data, that even in our best maps there is a difference of more than twenty geographical miles, between the meridian of this and that of the most northern points, Cape *Crommyon* or Cormakiti.

Acamas, mentioned by Strabo immediately after *Paphos*, can be no other than Capo di S. Epifanio of the Greeks and Italians, called *Arnáut Burnù* by the Turks, according to Arrowsmith; because the Greek Geographer says, that the course from thence to *Arsinoe* and the Grove of Jupiter, is to the east. Its position seems never to have been determined accurately, but is probably near 34° 12′ north and 32° 9′ east.

Near this promontory was the city of *Acamas*, once the See of a Christian Bishop; and on its site, according to Porcacchi, stands the village of Khrusoco, (perhaps from Chrysocolla, *i. e.* Borax, said to be found there.) Near that place, and about ten or twelve miles from Poli, is the celebrated *Fontana Amorosa*, a small spring close to the shore, in a mountainous and rugged district, now almost deserted. (Sibthorp, in Walpole, ii. 26.) The bay on which *Arsinoe* stood is bounded to the east by Cape Limniti, (Λιμνήτης, or Λιμνῆτις,) perhaps the *Callinusa* of Ptolemy; on the west side of which was *Alexandria*, now called Alessandretta.

Acamas. Khrusoco. Fontana Amorosa. Cape Limniti.

Between *Callinusa* and *Crommyon*, Strabo mentions no place but *Soli*, or *Solæ*. *Æpea*, founded by Demophoon, son of Theseus, on the western side of the river Clarius, more than 1300 years before the Christian era, was many centuries afterwards replaced by *Soli*; for, as it was built on a hill surrounded by a barren district, and therefore ill supplied with water, Solon (B. C. 593) advised Philocyprus, one of the Kings of the Island, to remove it near to the river in the neighbouring plain. (Plutarch, in Solone, p. 92.) He did so, and named his new city *Soli*, after the friend at whose suggestion it was founded. It had a Port and a Temple of Venus and Isis; its name is also still preserved in that of the village of Solea, situated in one of "the most beautiful vallies in the Island, well watered and richly cultivated." (Sibthorp, 23.) To the east of *Soli* was the promontory of *Crommyon*; so that Solea is either wrongly placed in Sonnini's Map, or on a different site from that of the ancient City.

Soli, or Solæ. Crommyon

The only town of any note in the interior is Nicosia, called Leucosia, as early as the XIIth century; as is

Nicosia, or Leucosia.

CYPRUS. Lefcoshah.

evident from its Arabian name Lefcosiyyah, (Idrísí, *Geogr. Nubiens.* 194,) changed by the Turks into Lefcóshah. Its history is obscure; but it was, probably, built on the site of *Leucotheon*, *Leuteon*, or *Ledrum*, an Episcopal See mentioned by St. Jerome and Nicephorus; and has been now for several centuries, the residence of the Archbishop, and Metropolitan of the Island, who enjoys an almost unlimited authority over his flock. It stands in 35° 18′ north and 33° 38′ east, almost in the centre of the Island, though only half as far from the northern as from the southern side; and, having been the seat of government under the Kings of the house of Lusignan, has since continued to be so. A traveller who approaches from the south sees it bursting suddenly upon his view at the distance of only 500 or 600 yards; and is struck with its splendid appearance, which bears a strong "resemblance to Shíráz in Persia," says Mr. Macdonnald Kinneir, (187,) "when that beautiful city is first seen, on issuing from the gorges of the mountains behind the Tomb of Háfiz. Like the capital of Fárs, it is situated in a noble plain (called Messaria) bounded by lofty mountains tipped with snow, while its numerous spires and minarets are seen to rise in the same manner above the branches of the trees; but the fine Cathedral of Sta. Sophia, towering over the heads of all the other buildings, combined with the extent and solidity of the walls and bastions, gives an air of grandeur to Nicosia which Shíráz cannot emulate." The moat, which is half a mile wide, now yields a considerable quantity of corn; the ramparts are also in some parts cultivated, and of great breadth. Their whole circuit is about three miles; and they are built, or only faced, with hewn stone, flanked with large oblong bastions. Four small pieces of artillery, without carriages, and completely honey-combed, were all the guns which Mr. Kinneir saw; "it is, however," he adds, "a matter of no consequence, as the place is entirely commanded by the heights to the south of it. Beneath the walls the bed of the moat abruptly terminates in a deep and wide fosse. There are three gates, viz. those of Cerina, Lárneca, and Papho; the latter being the most deserving of notice. The finest building in the place, is, undoubtedly, the great Mosque of Santa Sophia; the place in which the Kings of the Lusignan race were crowned, and wherein the tombs of many of them, and several Cypriote and Venetian Nobles, may still be seen. A fine sarcophagus of jasper, six feet broad and seven high, all of one block, is mentioned by Dapper, (*Archipel.* 31, 32,) as having been found buried in the earth, and afterwards used as a monument in this church. In his time the Greeks had four Churches, and the Latins only two; that of the *Capuchines*, or French; and that of the *Zoccolanti*, or Italian Missionaries. The Armenians have also a handsome Church, which was a Convent of Carthusian Nuns in the time of the Venetians. The Stream, or Torrent Pedés, flows through the Town, and in winter time often overflows its banks. There is also a spring, from which the gardens are supplied with water, once in eight days, at the rate of one bezant for each tree. The farmer of this branch of revenue paid 1500 crowns per annum to St. Mark. Nicosia was taken by the Turks in 1570. Its population, according to the Archbishop, was, in 1814, about 15,000; two-thirds Mohammedans, and one-third Greeks, with about 200 Armenians and about fifty Roman Catholic Maronites from Syria. The usual charge for the *Khárâj* (Capitation-tax) is forty or fifty piastres (£2. to £2. 10*s.*) a head, (Sibthorp, ii. 20;) but here, as elsewhere in Turkey, *avanias* (arbitrary assessments) are continually imposed.

The Town is governed by a *Musellem*, (Commissioner,) who receives and exacts all dues to the Turkish Government, and regulates the local Police; and by the Archbishop, the head of the Christian community, and the channel through whom the Rayàs have communication with the Porte.

There were anciently several other large towns, the site of which is now very doubtful. Nearly in the centre was *Tamassus*, *Tamaseos*, or *Tamesia*; called *Tamesia* by Constantine Porphyrogennetus. It is placed by D'Anville on the northern branch of the *Pedius*, and is therefore far from the Borgo di Timasso, near Famagosta, supposed by some Italian writers to occupy its site. Near to it were the principal copper mines of the Island. On the southern branch of the same river, that Geographer has placed *Idalium*, (now Dali,) at the foot of a forest on Mount *Idalus*, the site of which was immortalized by the death of Adonis. Not far to the south, and north-west of the promontory *Ammochostos*, was *Trimethus*, (Τριμηθοῦη,) under the Christian Emperors an Episcopal see. It appears to have been called Tremigé in more modern times. Khytri, near the north-eastern coast, still marks the place of *Khytros*, another early Bishopric; and *Cythera*, nearly half way between Cerina and Constrantiso, appears in the Ecclesiastical catalogues as a Suffragan to the See of Constantia. Conoca, or Conuclia, to the west of Famagosta, seems to have been once called *Cythera*; though there is no mention in the ancient writers of any town in Cyprus bearing that name. The passages cited in Dapper (*Archipel.* 42) relate to the Island of *Cythera*, (now Cerigo,) near the coast of *Laconia*.

Idali

Trime

Cythera

It has been observed, that the principal chain of hills in an island is usually parallel with its coasts; and that observation is verified in the case of Cyprus. From Cape Sant' Epifanio on the west, to Cape Sant Andrea on the east, the Island is crossed by a serpentine line of mountains, approaching, beyond Cerma, close to the northern shore, and leaving a fine table land, called Messaria, about sixty-five miles broad and twenty-five long, between its southern declivity and the sea. The heights gradually rise to the west, and the highest ridges are called Santa Croce and Troados; the latter of which bears north-west of Lárneca, and south-west by west of Nicosia, (Kinneir, 181, 191;) for by Santa Croix, Mr. Kinneir evidently means the Peak of Troados. They are parts of the same chain, not more than eight or ten miles asunder; and therefore often confounded under the same name. The ascent begins about six miles from Limasol; and, about ten miles further, the country is broken into a number of well-watered and fertile vallies, bounded on the north and west by the mountains of Troas, (Troados, Trobados, and Trogodos, in the language of the peasants; Troodi, in Sonnini's Map,) covered with the *Pinus Pinea*; and just below the steeper ascent is the Convent of the Holy Cross, (*Santa Croce*,) founded by Helena, and gifted with a relic of the true cross,) the second Monastery in the Island, surrounded by a Greek village; "where we observed," says Dr. Sibthorp, (Walpole's *Mem.* ii. 22,)

Mountain

CYPRUS. "an appearance of greater affluence than in most of those we had yet seen:" a remark which shows the injustice of the indiscriminate censures usually lavished upon Monastic societies, as if Monks were distinguished only by sloth and ignorance, and were as oppressive landlords as they are in another sense unproductive members of the community.

A steep tract of country, covered (as is almost universally the case in Asia Minor) with forests of the *Pinus Pinea* above, and thickets of *Ilex, Andrachne, Arbutus, Philyrea, Alaternus, Paliurus,* Cretan maple, black poplar, white willow, and alder below, leads to the wretched Convent of Troados; and after two hours journey from this, over steep and dangerous precipices, brings the traveller to the summit of the Cyprian Olympus, the north-eastern side of which still had some patches of snow when Dr. Sibthorp saw it on the 1st May, 1787. (Walp. ii. 22.) "The mountain is composed of *Grünstein*, (green-stone,) with large pieces of horn-blende, and but slightly covered with earth." Rocks of serpentine, veined with amianth, form its north-eastern declivity.

ers. Most of the streams descending from these hills to the sea are little better than torrents, (Meletius, iii. 231,) nearly or entirely dry in autumn. The Lycus and Podæus, the two largest rivers in the Island, rise at no great distance from each other, and from Santa Croce; the one running nearly due south, and joining the sea at Limasol; the other following a south-easterly course to the coasts in the neighbourhood of Famagosta.

nerals. The mineral wealth is probably great, though now entirely overlooked. Copper, the name of which appears connected with that of the Island, *chalcanthes*, (copperas?) and "the flower of brass, useful on account of its medical virtues, are mentioned by Strabo, as found in abundance at Temassus, not towards the Paphian extremity, (Clarke, iv. 44,) but in the centre of the Island." Emeralds, opals, sapphires, lazulites, (*Lapis Cyaneus,*) mica, or Muscovy glass, alum, nitre, gypsum, and beautiful crystals of quartz, vulgarly called Bapho diamonds, are among its mineral productions mentioned by the Ancients; many of which seem not to have been found in modern times. Ætites, or eagle-stone, was also valued for its supposed medical virtues; and amianthus is found in several places. A very superior kind occurs near Papho; it is as flexible as silk, perfectly white, and of a peculiarly delicate texture. The Cypriotes call it "cotton stone," (Drummond's *Travels*, 157;) and at a village still named Amiantho, there was anciently a manufacture of incombustible cloth from this asbestos, or fibrous stone, mixed with flax. (Dioscorides, v. 46.) The Cyprian jasper is highly extolled by Pliny, (*N. H.* xxxvii. 4.) Borax has been already mentioned as found near Khrusoco; veins of gold and Cadmia, called Botryitis, are stated by Porcacchi to have been discovered in that part of the Island, and close to Nicosia. Pompholyx, or Spodos, as well as Chalcitis, are mentioned by Pliny and Dioscorides, whose writings might be much elucidated by a more accurate study of the Geology and Botany of this Island.

il. A white marly clay often occurs, and in general the soil of the plains and vallies is highly productive; but such is the effect of misgovernment, that this fine Island is now almost deserted. Its whole population is said not to exceed 70,000 souls, (Kinneir, 181;) its cotton, once the finest in the world, is reduced almost to nothing in quantity, as well as quality; its sugar plantations have been long abandoned, and even the flavour of its wines is injured by the pitch smeared over the jars in which it is kept. The best is called *Vino della Commanderia*, because it is produced in the districts between Troados, Limasol, and Papho, formerly belonging to the Knights Commanders of St. John of Jerusalem. CYPRUS.

Trade. Where agriculture languishes, it is impossible that commerce should flourish; two thousand bales of cotton, 15 or 18,000 of silk, some wool, wine, and salt, a few packages of cotton cloths and Turkey leather, form nearly the whole of the present exports from Cyprus; for which European manufactures and colonial produce are received in return.

Climate. The oppression which this Island has suffered more than many other parts of Turkey, has not only ruined its agriculture, but vitiated its climate; for its obstinate intermittents so prevalent, and so often fatal to strangers, are occasioned chiefly by the want of drainage which has reduced its plains to pestilential swamps. The mountainous districts are not unhealthy; and would, under any other Government, be frequented as one of the most delightful places of residence on the face of the earth

The ancient history of Cyprus is well summed up by Strabo, (xiv. 4,) who observes that it was divided into petty sovereignties till the reign of the Ptolemies in Egypt, who became its liege Lords if not its Monarchs. He might have added, that at an earlier period it had been in the same state of dependancy on the Persian Monarchy. (Diod. Sic. xvi. 42.) It was taken (B. C. 58) from the last of the Ptolemies but one, by Marcus Cato Uticensis; and the treasure removed from it to Rome amounted to 7000 talents, or about £1,400,000. It was immediately afterwards made a Proconsular Province. On the division of the Empire, Cyprus remained subject to the Court of Byzantium; and after the conquest of the Arabs, it was alternately seized by one or other of the rival powers, from the middle of the VIIth till the close of the XIIth century. At that period Richard Cœur de Lion, in his way to the Holy Land, was driven by storms into one of its harbours; and in revenge for the plunder to which its tyrant, Isaac Comnenus, exposed him, he seized the Island. He afterwards sold it to the Knights Templars; but having by some means soon again become master of it, he ultimately gave it up A. D. 1191, to Guy de Lusignan, the last King of Jerusalem, in whose family it continued till it was given to the Republic of Venice by Caterina, daughter of Marco Cornaro, and widow of Giacomo the last Sovereign of the house of Lusignan. In 1571 the Turks got possession of the whole Island, after several of the fortresses, and especially Famagosta, had made a most resolute defence; and since that period it has formed one of the Páshálics or Vice-royalties of the Ottoman Empire.

At a very early period it was subdivided into four nearly equal portions; *Salaminia, Amathusia, Paphia,* and *Lapithia*. About three centuries and a half before the Christian era it contained nine separate States subject to the King of Persia. The Venetians divided it into eleven *Contrades* or districts, named after their chief towns: 1. Bafo; 2. Avdino; 3. Limosò; 4. Masotò; 5. Le Saline; 6. Messaria, on the southern;

CYPRUS. — CYRTANTHUS.

7. Crusocò; 8. Pendaja, or Pendalia; 9. Cerignes; 10. Carpasso, on the northern coast; and 11. the Viscontado, in the centre of the Island. The Turks have made it a Páshálic containing seven *Sanjács*, (districts,) four of which are on the opposite coast: viz. Báf, Lefcóshah, and Kerínah in the Island, and Aláyeh, Tarsús, Sís, and I'ch-il on the coast of Asia Minor. They have also retained the Venetian divisions: viz. 1. Báf; 2. Avdínó; 3. Límósah; 4. Másótó; 5. Mumliháh, (i. e. the Salterns,) 6. Avlímús; 7. Khursovì; 8. Bendáliyà; 9. Kerínеh; 10. Carípásó; 11. Vícheh-cómítà and have appointed fourteen *Cází-lics*, (*Jehán-numà*, 612,) or jurisdictions.

The present inhabitants of Cyprus are evidently a mixed race; they, however, still possess the beauty, dexterity, and prepossessing manners for which their forefathers, in better times, were renowned. Gay, lively, and devoted to pleasure, they delight in splendour and amusements, and endeavour to forget the oppression under which they groan in the indulgence of the passing hour. But their mirth is soon embittered by the recurrence of the evils to which they are exposed. The *Musellim* or Commissioner of the Island purchases his appointment of the *Cápúdán Páshá*, to whose office this Páshálic is attached, and a new bargain is made every year. The Greek Archbishop is indebted for his See to similar means; so that each, like the *Hospodárs* of Moldavia and Vallakhia before the interference of Russia at the close of the last war, is obliged to repay himself and his creditors, by all the various modes of extortion afforded by his power and remoteness from the seat of Government. It may, therefore, be readily believed, that the population is daily diminished by emigrations, while the soil formed by nature for a paradise, is allowed by neglect to become a pestilential wilderness.

The ancient authorities are Herod. iii. v.; Diod. Sic. xi. xii. xv. xvi. xx.; Strabo, xvi.; Ptol. v. 14; Plin. xii. 24; xxxiii. 5; xxxvi. 26; Mela. ii. 7; *Anc. Univ. Hist.* iii. 772.

CYRENA, in *Zoology*, a genus of bivalve shells (*Acephala testacea*) of the family *Conchæ*, and of the fluviatile division. Generic character: shell rounded, trigonous, turgid or ventricose, solid, inequilateral, covered with an epidermis; the nates eroded or decorticated; hinge teeth three in each valve; lateral teeth almost always two, of which one is placed near the hinge; ligament external.

The *Cyrenæ*, of which the species are rather numerous, have been confounded with *Cyclas*, but are easily distinguished from the latter by the three hinge teeth in each valve. The species are all foreign.

CYRILLA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Ericæ*. Generic character: calyx minute, somewhat top-shaped, five-parted, superior; petals five, star-formed, spreading; style two-cleft; berry two-celled, seeds solitary.

Two species, natives of America.

CYRTA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*. Generic character: calyx five-toothed, inferior; corolla, one petal, bell-shaped, tube short; filaments dilated at the base; drupe oblong, curved, hairy, one-seeded; nut sulcated.

One species, *C. agrestis*, native of Cochin-China. Louriero.

CYRTANDRA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx five-cleft, two-lipped; corolla five-cleft, irregular, stamens four or five, of which two or three are sterile; berry two-celled.

Two species, natives of the Indian Isles. Pers.

CYRTANTHUS, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*, natural order *Amaryllidæ*. Generic character: corolla superior, incurved, tubular, club-shaped, six-cleft, segments ovate, oblong; filaments inserted into the tube.

Four species, fine bulbous plants, natives of the Cape of Good Hope. *Hort. Kew.*

CYRTOPODIUM, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. Generic character: lip of the corolla with a bent claw, laminæ three-parted; petals five, distinct; masses of pollen two, the hinder part two-lobed.

One species, *C. Andersonii*, native of the West Indies. *Hort. Kew.*

CYRTUS, in *Zoology*, a genus of insects of the order *Diptera*, family *Inflata*. Generic character: antennæ very small, placed on the vertex, formed of two subequal joints, the first cylindrical, the second ovate, terminating in a long setæ.

Type, *C. acephalus*, Latr.

CYTHEREA, in *Zoology*, a genus of bivalve shells, (*Acephala Testacea*) of the family *Conchæ*. Generic character: shell equivalve, inequilateral, suborbicular, subtrigonous, or transverse; cardinal teeth four in the left valve, three of them diverging, and one isolated; three cardinal teeth in the other valve, divergent, a cavity a little distant, parallel with the margin; lateral teeth none.

These shells are sufficiently distinct from *Venus*, from which they have been removed, although in their general conformation the affinities are obvious. Several species are natives of Britain, as *C. Chione*, *Lineta*, *Exoleta*.

CYTHERINA, in *Zoology*, a genus of the class *Crustacea*, order *Entomostraca*, family *Ostracoda*. Generic character: body enclosed in a bivalve shell; eye single; head concealed; antennæ two, superior, hairy; feet eight.

Type, *C. viridis*, Müll.

Except in the characters essentially distinguishing the genus, these animals are very closely allied to the

THE-INA. — DAB.

genus *Cypris*. Latreille gave to this genus the appellation *Cythere*; but as *Cytherea* had already been assigned to a genus of bivalve shells, Lamarck changed the termination of the word to the present name.

CYTINUS, in *Botany*, a genus of the class *Monoecia*, order *Monadelphia*, natural order *Aristolochiæ*. Generic character: male flower, calyx none; corolla bell-shaped, four-cleft; anthers eight, two-celled; female flower, as the male, the head of the stigma sulcated; berry eight-celled.

One species, *C. Hypocistis*, native of the south of Europe.

CYTISUS, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx two-lipped, superior, lip two-toothed; keel erect; base of the pod attenuated, compressed.

Forty species, small trees, natives of both hemispheres. *C. laburnum*, the common Laburnum tree, is a native of the south of France.

CYZICUS, now *Artaki*, originally an Island, afterwards a Peninsula on the coast of *Mysia*, on the south of the *Propontis*, the chief Town of which bore the same name. In its insular state Alexander joined it to the continent by two bridges. (Plin. v. 32.) It was more than ninety leagues in circuit. The Town was built near the bridges, and was among the most considerable and beautiful of *Asia Minor*, so that Florus (iii. 5) does not hesitate to call it *quasi alteram Romam*. It had two excellent ports, *Panormus* and *Chytus*. In history it is chiefly celebrated for its siege by Mithridates, from which it was relieved by Lucullus. After the establishment of Christianity, it was a Metropolitan See under the Patriarch of Constantinople, and in the end perished in an earthquake, after which its most valuable materials were conveyed to Constantinople. Artaki is a mean place, but its neighbourhood is celebrated for the excellence of its wines.

CYZICUS. — DAB.

CZAR, CZARISH, CZARINA. } Serenius says, S. *Ryss-Keisare*, Emperor of the Muscovites; and Ihre has, *Keisare, Imperator*. Wachter. *Kaiser*, A word acknowledged and used by all ancient Dialects.

> But each have separate interests of their own,
> Two *czars* are one too many for a throne.
> *Dryden. The Hind and the Panther.*

> His *czarish* majesty dispatch'd an express to General Goltz with an account of these particulars. *Tatler*, No. 55.

> In the mean time the *czar* resented this affront [the arrest of his ambassador] very highly, and demanded that the sheriff of Middlesex and all others concerned in the arrest should be punished with instant death.
> *Blackstone. Commentaries*, book i. ch. vii. vol. i. p. 255.

> Assemblies were quite unknown to them, [the Russians;] the *zarina* was satisfied with introducing them, for she found it impossible to render them polite. *Goldsmith. Essay* 22.

In the Sclavonic language CZAR signifies *King*, and Vassili Ivanovitch appears to be the first Grand Duke of Russia who assumed this title, in the beginning of the XVIth century. The desire of Peter the Great to be recognised as Emperor, occasioned much discussion in the principal European Courts, and it was not till after many delays and objections that he was addressed by that style, about the year 1722.

D.

THE letter *D* is classed by Wilkins among semi-spiritous or half-breathed consonants; meaning such as are accompanied with some kind of vocal murmur. *D* and *T*, he adds, are commonly framed by an appulse or collision of the top of the tongue against the teeth or upper gums; the first being more soft and gentle, with some kind of murmure, the other wholly mute, i. e. pronounced with a strong emission of the breath, without any vocal sound. *On Real Character*, P. 3. c. 12.

Tooke observes, that *B* differs from *P* by no variation whatever of articulation, but singly by a certain unnoticed and almost imperceptible motion or compression of or near the larynx; which causes what Wilkins calls "some kind of murmure." *Diversions of Purley*, vol. ii. p. 93.

DAB, *v.* DAB, *n.* DA'BBING, DA'BBLE, DA'BBLER, DA'BBLING. } *Dab, dib* or *dob*; *dap, depe, dip* or *dop*, are the same word variously written or applied, from the Goth. *daup-jan*; A. S. *dipp-an, mergere, immergere*, to dip; Dutch, *doop-en*. Why the *dab*-chick or *dob*-chick is so called, is well told by Drayton; see the quotation from him.

Dabble is merely the diminutive; to *dip* a little below the surface; met. to look or search, to examine or inquire shallowly, superficially.

The A. S. *dipp-an*, and Dutch, *doop-en*, are also consequentially *tingere, intingere, imbuere, inficere*, i. e. to die or *dipp* cloth. Somner.—To die, to tinge, to stain, to daub; and thus we have, a *dab* of dirt.

To *dab*, to move with the short, quick action of *dipping*.

A *dab*-wash; a *dip*-wash. A *dab*, a slight blow.

Dab, as applied to a person who is handy or clever at any thing, may be a corruption of Adept, q. v.; and Dr. Pegge, under the signature T. Row, in the *Gent. Mag.* for 1767, vol. xxxvii.

Dabbing, in Norfolk, is setting plants with a *dibber*.

> And Saint Paule himself confesseth, that for a medicine preseruatiue against pride, there was giuē hym the aungell of Sathan the pricke of the fleshe to *dabbe* him in the necke and make him stowpe and beate hym.
> *Sir Thomas More. Workes*, fol. 551. *The second part of the Confutation of Tyndall.*

> I creping held with crokid hands the mountaynes toppe,
> Encombrid in my clothes that *dabbing* down from me did droppe.
> *Phaer. Æneidos*, book vi. fol. 145.

DAB. — DACIA.

Spa. His tongue trouls like a mill-clack; he towzes the ladies' sisters, as a tumbling dog does young rabbits. Hay here, *dab* that. *Ford. Fancies Chaste and Noble*, act iii. sc. 3.

And this way of fishing we call *daping*, *dabbing*, or *dibbing*, wherein you are always to haue your line flying before you—up, or down the river, as the wind serves—and to angle as near as you can to the bank of the same side whereon you stand.
Walton. Angler, part ii. ch. v.

Fac. ——————— Fore God;
She is a delicate *dab-chick!* I must have her.
Ben Jonson. The Alchemist, act iv. sc. 2.

The diving *dobchick*, here among the rest you see,
Now up, now down again, that hard it is to prove,
Whether under water most it liveth, or above.
Drayton. Poly-olbion, song 25.

And under them again (that water never take,
But by some ditches' side, or little shallow lake
Lie *dabbling* night and day) the palate-pleasing snite.
Id. Ib.

Neither will a soul that dwells with stars, *dabble* in this impurer mud; or stoop to be a play-fellow and copartner in delights with the creatures, that have nought but animal.
Glanville. Vanity of Dogmatizing.

I will tell you nothing I have not made myself as certain of, as any man can be in thirty years experience; for so long I have been a *dabbler* in that art.
Walton. The Angler, part ii. ch. i.

'Tis but to dye, dogs do it, ducks with *dabbling*.
Beaumont and Fletcher. The Mad Lover, act ii. sc. 1.

As when a *dabchick* waddles through the copse
On feet and wings, and flies, and wades, and hops;
So labouring on, with shoulders, hands, and head,
Wide as a windmill all his fingers spread,
With arms expanded Bernard rows his state,
And left legged Jacob seems to emulate.
Pope. Dunciad, book ii. l. 63.

But being a virtuoso, able
To smatter, quack, and cant, and *dabble*,
He held his talent most adroit,
For any mystical exploit.
Butler. Hudibras, part iii. can. 1.

I saw a young child *dabbling* in a bucket of water, and standing in a very bleak and sharply freezing wind. I bid the child go in to the fire; she answered, that the water was warm, and she stayed there to keep her hands warm.
Boyle. Letters from several Persons, vol. vi. p. 421.

On the old frame remain these lines, probably written by the painter himself, who, we have seen, *dabbled* in poetry too.
Walpole. Anecdotes of Painting, vi. p. 227.

Wherefore your *dabblers* in metaphysics are the most dangerous creatures breathing: they have just abstraction enough to raise doubts that never would have entred into another's head, but not enough to resolve them.
Search. Light of Nature. Introduction, vol. i.

One writer for instance, excels at a plan, or a title page, another works away the body of the book, and a third is a *dab* at an index. *Goldsmith. Miscellaneous Works. The Bee*, No. 1.

Boundaries and names.

DACIA, or the Country of the *Daci*, comprehended the whole tract between the *Mons Carpates* (Krapat or Carpathian Mountains) and the *Ister*, one way, and the *Tibiscus* (Theisse or Teisse) and mouths of that River the other; it therefore contained the Bannat of Temeshvár in Hungary, Transylvania, Moldavia, Vallachia, and Bessarabia, for its north-eastern boundary was the *Tyras*, (Dnestr.) That portion of Hungary which lies between the *Ister* and the *Tibiscus*, is also frequently mentioned as a part of *Dacia*, though not properly belonging to it.

This Province was annexed to the Roman Empire by Trajan, after its inhabitants had obstinately resisted his arms, for five years successively. He united it with *Mœsia* (Bulgaria) by a splendid bridge, of which the remains are still admired. DACIA

Under Aurelian a part of *Mœsia* and *Illyricum*, to the south of the *Ister*, was added to *Dacia*, (Eutrop. ix. 9,) and the two divisions of the Province were thence called *Dacia Trajani* and *Dacia Aureliani*. Excepting where a branch or offset of *Mons Carpates*, descends nearly to the Danube, and forms a natural boundary between Transylvania and Vallachia, the country is usually a dead flat, or gently undulated level. To the north and east of that range it is more hilly, but it sinks into a sandy plain on the north-eastern shore of the Euxine.

Rivers.

Numerous streams, descending from the mountains, and joining the Danube on the west and south, and the Euxine on the east, furnish an abundant supply of water. Few of these rivers are named by the Ancients, by whom this fine country was considered merely as an outpost, occupied by troops stationed to repress the fierce barbarians, who were its native inhabitants. The *Tibiscus*, its western boundary, rises nearly in 47° north and 25° east of Greenwich, and after taking a wide sweep, first nearly due west, flows from north to south, and pours into the Danube, not very far to the north-west of Belgrade, the united waters of upwards of fifty streams. The largest of those which augment its streams is the *Maros*, (Marosh,) probably the *Rhabo* of Ptolemy, (iii. 8,) and the *Marisus* of Strabo, (vii. p. 211,) though both erroneously make it run into the Danube. It rises near the southern fork of the Carpathian hills, and runs almost due west across the whole width of Hungary. The third river of the Province, in point of magnitude, is the *Aluta*, (a name still preserved in the word Alt or Olt,) flowing from the south-eastern branch of the same hills, and joining the Danube between the bridge of Trajan and *Nicopolis*, nearly opposite to the latter From the northern side of those mountains, nearly in 49° north and 25° east, rises the Prut, which can be no other than the *Hierasus* of Ptolemy. It flows into the Danube through the alluvial land, full of lagunes and morasses, which extends so far inwards from the mouths of that vast river. The *Tyras*, or Dnestr, separated *Dacia* from *Sarmatia*, which comprehended many of the southern Provinces of the Russian Empire.

Rhabo or Marisus. Maros. Aluta. Alt. Hierasus. Pruth. Tyras. Dnestr.

Native tribes.

The cities in *Dacia* all arose after it became a Roman Province, for it was inhabited at the time of its conquest by barbarous hordes, wholly ignorant of the arts of civilized life. The *Jázyges Metanestæ*, similar in manners though a different race from the *Daci*, occupied the country between the *Tibiscus* and *Ister*, already mentioned as being often considered as part of *Dacia*. The inhabitants of *Dacia* Proper were various tribes of *Daci*, probably having a common origin, and apparently little known to the Ancients themselves. On the northern confines they appear to have been more considerable; and the *Anartii* or *Anartes* are mentioned by Cæsar (*Comm.* vi. 24) as well as by Ptolemy, (iii. 8.) The name of the *Jassii*, who lived on the banks of the Upper *Hierasus*, (Prút,) is still preserved in that of Jassy, (Yassy,) the Capital of Moldavia. So the Crapats or Carpathian Mountains retain the name of the *Carpi* or *Carpiani*, who were placed between the *Peucini* and the *Basternæ*, and had descended from the hills into the southern plains near the *Ister*. These turbulent savages were all removed into *Pannonia*

Jazyges. Anartes. Jassii. Carpiani. Peucini. Basternæ.

DACIA. (South-western Hungary) by Diocletian, (Ammian. Marcellin. xxviii. 11.) The *Jázyges*, who were bounded on the west by the *Tibiscus*, were the last people in that direction known to Ptolemy; so limited was the geographical knowledge of the Ancients in the beginning of the IId century.

The Capital of Dacia, called *Zarmigethusa* or *Zarmisogethusa*, or *Sarmizegethusa*, was placed upon the river *Sargetia*, a small stream running into the *Marisus* or *Rhabo*, (45° 32′ north and 22° 9′ east from Greenwich according to D'Anville.) After the Roman conquest its name was changed to *Ulphia Trajana* and *Augusta Dacia*, as is evident from coins and inscriptions. Its ruins near the village of Varhel, (Vallcapa?) in the county of Kraszna, show that it was one of the most flourishing of the Roman colonies. On the right bank of the *Rhabo* was the *Colonia Apulensis*, just above *Alba Julia*, now Weissenburg, (46° 16′ north and 24° 9′ east.) The origin and age of the name *Alba Julia*, (of which Weissenburg is a translation,) is extremely obscure. It does not appear on ancient coins or inscriptions. The modern town is also called Carolina and Carlsburg. The other colonies were those of the *Zemenses*, *Petovicenses*, and *Napocenses*; the position of the two first we have no data to determine; but the last was at *Napuca*, (Ptolemy, iii. 8) now Clausenburg or Koloshvár, (36° 51′ north and 23° 58′ east.) Several other towns are mentioned by Ptolemy, but the position of most of them is extremely doubtful. It may be remarked with respect to their names, that eleven out of sixteen end in *dava*; and *tába*, which signifying a *hill* in the Lydian language, as *tepeh* does in the Turkish, will probably account for this peculiarity.

. This Province, like all the larger ones, especially with those at the extremities of the Empire, was governed by a Consular or Imperial Legate.

The *Dacia* of Aurelian was a part of the Upper *Mœsia* and *Illyricum*, separated by the *Ister* from *Dacia* here described, and inhabited by a different race of people.

The *Daci* were believed by Strabo (vii. 3) to be the same people as the *Dai*, (*Davi*,) for the slaves in Attica were almost all called *Geta* or *Daus*, (*Davus*,) and the Athenians used to name their slaves from the nation to which they belonged; a Syrian was called *Syrus*, and a Lydian, *Lydus*, or by names common in those countries; so a Phrygian was called *Manes* or *Midas*; a Paphlagonian, *Tibius*. Strabo considers the *Getæ*, who inhabited the eastern part of the country, to be the same people as the *Daci*; and he adds, that "thinned as their numbers had been by internal dissensions and the Roman invasions, they could still bring 40,000 men into the field; but before the reduction of their power they could send out an army of 200,000. He adds that the *Daci* and *Getæ* used the same language, that is the Thracian, (*ut supra*,) and it cannot fail to be observed, that when the Grecian terminations have been rejected, the syllables *Thrac*, *Dac*, and *Get* appear to be radically the same; *Get* consisting of the same elements as *Dac*, in an inverted order, and with such a change of letters as is usual in different dialects of the same language. They had no affinity with the Goths, who afterwards became the masters of their country. (Adelung's *Mithrid.* ii. 357.) Gatterer has endeavoured, in a dissertation published in the *Memoirs of the Royal Society of Gottingen*, to prove that the Thracians were a people of Sclavonian origin; Adelung (*Mithrid.* ii. 344) thinks, with more reason, that the only wrecks of their language now existing, are to be found in the Vallachian and Albanian, but so intermingled with other dialects as to be no longer distinguishable. Indeed, as he justly observes, (726, 7) not only were these countries overrun by a continual succession of barbarous nations, some of whom remained there for a considerable time, but at one period large tracts in this part of Europe were entirely depopulated, so that there is little probability of their present inhabitants having retained more than some very indistinct vestiges of the languages spoken there before the commencement of our era.

DACIA — DACNE.

. See Herod. iv. 93; Ptolemy, lib. iii.; Malte-Brun, *Précis de la Géographie*, i. iii.; Cellarii *Notitia Orbis Antiqui*, ii. 8, p. 376, 377.

DACILLUS, in *Zoology*, a genus of Coleopterous insects, established by Latreille; appertaining to the family *Telephoridæ*.

Generic character: maxillary palpi filiform, with the last joint somewhat cylindrical; labial palpi not two-forked; body ovate; feet all simple.

The type of this genus has been placed in several genera, it was considered as *Chrysomelæ* by Linnæus, as a *Crioceris* by Marsham, and as a *Cistella* by Olivier; but Paykull formed it into a genus under the name of *Atopa*, which has been adopted by most modern Naturalists, on account of its being prior to that named by Latreille.

The only species of the genus at present described is *D. cervinus*: back covered with grey down; antennæ, feet, and elytra pale yellow. *Chrysomela cervina*, Lin. *Sys. Nat.*; *Atopa Cervina*, Paykull; Latreille, *Gen. of Insects*, j. t. vii. f. 11.

This species is not uncommon in many parts of Great Britain, and is found in most parts of the continent of Europe.

DACNE, in *Zoology*, a genus of Coleopterous insects, established by Latreille; it is referable to the family *Nitidulidæ*, and closely allied to the *Cryptophagus* and *Caloticus* of the same author.

Generic character: body depressed; back flattish; antennæ short, ending in an orbicular or ovoid perfoliated club, formed of three joints, the third joint of the anther longer than the second; maxillary palpi filiform; labial palpi club-shaped; tarsi formed of cylindrical joints, bald or only slightly hairy.

These insects live under the bark of trees, and are therefore often called *Bark insects* by the collectors, and under stones, and are exceedingly partial to putrid fungi. In the generic catalogue of insects, eleven species of this genus have been mentioned, several of which are undescribed, and inhabit Brazil and various parts of South America. Two species are found in Europe.

D. humeralis, elliptic, black, shining, punctate; antennæ, head, thorax, humeral spot on the elytra and feet red. *Engis humeralis*, Paykull. Not uncommon in England, especially in Hyde Park; it is very nearly allied to *Nitidula rufifrons* of Marsham.

This genus differs from the *Nitidulæ* by the form of the tarsi, and from *Thymalus*, *Colobicus*, and *Micropeplus* in the form of its body. The *Dacne* was confounded by Herbst with the genus called by him *Ips*. It corresponds with the genus long before established by Paykull under the name of *Engis*; and most of the

DACNE. — DACTYLOPHORA

modern Entomologists have used the latter name, on account of its priority.

DACRYDIUM, in *Botany*, a genus of the class *Dioecia*, order *Monadelphia*, natural order *Coniferæ*. Generic character: male flower, calyx, the scale of the catkin heart-shaped, bearing two sessile anthers; corolla none; female flower, solitary, terminal; nut ovate, encompassed by a cup-shaped receptacle.

Two species, *D. cupressinum*, and *D. taxifolium*, valuable timber trees, natives of New Zealand. Lambert's *Pinus*.

DA'CTYLE, DA'CTYLICK, DA'CTYLIST, DA'CTYLOGY. } Gr. δάκτυλος, a finger. The name of a foot in poetry, and so called because like the finger, *tribus constat artubus, uno longiori, ac duobus brevibus.* Vossius. Fr. *dactylogie*; It. Sp. and Lat. *dactylogia.* Dactylogy, finger talk.

> The nimble *dactyl* striving to outgo,
> The drawling spondees pacing it below.
> The lingring spondees, labouring to delay,
> The breathless *dactyls* with a sudden stay.
> *Hall. Satire* 6. book i.

> Whosoever saw a colt wonton and wild,
> Yok'd with a slow-foot ox on fallow field,
> Can right areed how handsomely besets
> Dull spondees with the English *dactylets.* *Id. Ib.*

Cheirology, or *dactylogy*, as the words import, is interpretation by the transient motions of the fingers; which of all other wayes of intepretation, comes nearest to that of the tongue.
Dalgarno. Deaf and Dumb Man's Tutor. (1680.) *Introduction.*

The learned languages have certainly a great advantage of us, in not being tied to the slavery of any rhyme; and were less constrained in the quantity of every syllable, which they might vary with spondees or *dactyls.*
Dryden. A Letter to Sir R. Howard.

It was requisite, for instance, that the hexameter verse should have the quantity of its syllables so disposed, that it could be scanned or measured by six metrical feet, which might be either *dactyles* or spondees, (as the musical time of both these is the same) with this restriction only, that the fifth foot was regularly to be a *dactyle*, and the last a spondee.
Blair. Lecture 38. vol. ii.

This at least was the power of the spondaic and *dactylick* harmony, but our language can reach no eminent diversities of sound.
Johnson. Rambler, No. 94.

Various Dactylogical Alphabets have been framed, and few appear better calculated to fulfil their purpose, than that with which most English young ladies from fifteen upwards are probably well acquainted. Two, somewhat more complicated, are given in the *Enc. Mét.* (*Gramm. ad voc.*;) the one taken from the *Cours élémentaire d'éducation des sourds et muets par* M. l'Abbé Deschamps, is adapted to close talking; the other is more fitted for distant communication: and as it is executed rather with the whole hands than with the fingers only, it is termed *Chirolatie* by M. l'Abbé de l'Epée.

DACTYLIS, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx, glume two-valved, containing one or more florets; corolla, glume two-valved, the lower valve largest, awned, the upper valve cloven, lanceolate; seeds with a furrow on one side.

A genus of Grasses, mostly natives of the northern Hemisphere.

DACTYLOPHORA, in *Zoology*, a genus of fossil Corals established by Lamarck.

Generic character: coral stony, free, cylindrical, club-shaped, the narrowest end perforated, outer surface reticulate; scales rhomboidal; net porous on the outside; pores very small.

The *Dactylopores*, by their periforous net and distinct cellular scales, have very great affinity to the genus *Retepora*, but they differ from it in being free, simple without any lobes or branches, and by their peculiar form. DACLOPH — DÆD

Lamarck only describes one species, *D. cylindracea.* Bosc, in the year 1806, had described this Coral under the name of *Rèteporite;* and Lamaroux, who is exceedingly desirous of changing all of Lamarck's genera, adopts that name as a general one without the slightest reason.

DADE, a word peculiar to Drayton, and which Johnson says, is to hold up by a leading string; and Mr. Nares, to flow; and Dr. Jamieson, to suck. *Daddle*, Mr. Grose explains, to walk unsteadily like a child, to waddle. To *daddle, diddle* or *doddle*, are no doubt the diminutives of *dade*, whatever may be the origin of this latter word. Perhaps the word *dawdle*, diminutive of *daw* (q. v.) may be a cognate term, if not the same, differently applied. To *dade*, seems to be equivalent to

To move or cause to move cautiously, slowly.

> Which, nourished and bred up at her most plenteous pap,
> No sooner taught to *dade*, but from their mother trip,
> And in their speedy course strive others to oustrip.
> *Drayton. Poly-olbion*, song 1.

> Th' Egyptian horrours yet 'twas I did see,
> And through those strange calamities did wade,
> And Israel's charge imposed was on me,
> When they (but then) had scarcely learn'd to *dade.*
> *Id. Moses his Birth and Miracles*, book iii.

> The little children when they learn to go,
> By painful mothers *daded* to and fro,
> And taught by sugar'd numbers to rehearse,
> And have their sweet lips season'd with my verse.
> *Id. England's Heroical Epistles. Earl of Surry to Lady Geraldine.*

DADD, DADDY. } i. e. *da da*, a word, like *pa pa, ma ma*, formed from the sound.

> Buss, buss, uncle, and there's a pum for *daddy.*
> *Ford. The Lover's Melancholy*, act iii. sc. 3.

> Zounds, I was neuer so bethumpt with words,
> Since I first call'd my brother's father *dad.*
> *Shakspeare. King John*, act ii. sc. 2.

> And where's that valiant crook-back prodigie,
> Dickie, your boy, that with his grumbling voyce
> Was wont to cheare his *dad* in mutinies?
> *Id. Henry VI. Third Part*, act i. sc. 4.

> Come, bless'em, bless'em, honest *daddy;* kneel down, children.
> *Dryden. Love Triumphant*, act v. sc. 1.

DÆDAL, Gr. δαίδαλλ-ειν, to make or form artfully, skilfully. Dædalum *vocatur, quicquid est artificiosè varium et affabrè factum.* Vossius.

Artful, skilful, fruitful in invention.

> But liuing art may not least part expresse,
> Nor life-resembling pencill it can paint,
> All were it Zeuxis or Praxitiles,
> His *dædale* hand would faile, and greatly faint,
> And her perfections with his error taint.
> *Spenser. Faerie Queene. Introduction*, book iii.

> Then doth the *dædale* earth throw forth to thee
> Out of her fruitful lap aboundant flowres,
> And then all liuing wights, soon as they see
> The spring breake forth out of his lusty bowres,
> They all do learne to play the paramours.
> *Id. Ib*, book iv. can. 10.

> ——— Nor hath
> The *dædal* hand of nature only pour'd
> Her gifts of outward grace. *J. Philips. Cider*, book i.

> Here ancient art her *dædal* fancies play'd
> In the quaint mazes of the crisped roof;
> In mellow glooms the speaking pane array'd,
> And rang'd the cluster'd column, massy proof.
> *Warton. Ode* 3.

DÆMOGORGON, one of the most ancient of the Deities, whom under this name we cannot trace in the Greek or Latin classical writers; and of whom we have been unable to find any earlier notice, than that which Boccaccio gives at some length in the opening of his Tract *de Genealogid Deorum*. On the authority of Theodontius, whom he mentions with familiar acquaintance, as *non novus homo, sed talium investigator præcipuus*, Boccaccio represents Dæmogorgon as *Veternosus ille Deorum omnium gentilium proavus, undique stipatus nebulis et caligine——nomine ipso horribilis*; for the Arcadians, by whom he was first worshipped, made the pronunciation of his name criminal, so that it was as ineffable as the *Adonai* of the Hebrews. In person he was *pallore quodam muscoso et neglectâ humiditate amictus, terrestrem, tetrum, fœtidumque evaporans odorem*. In pity to his loneliness he had assigned to him two agreeable helpmates. *Huic præterea, ne tedio solitudinis angeretur, liberalis et circumspecta vetustas, ut ait Theodontius, dedit Æternitatem atque Chaos et inde filiorum agmen egregium*. These hopeful children were nine in number, *Litigium*, the first born, but accompanied at the same birth by *Pan, Clotho, Lachesis*, and *Atropos; Polus; Phython; Terra;* and *Erebus*. To each of these some marvellous legend attaches, from which we shall select that of the nativity of *Litigium*, as a just tribute to the obstetric skill of his father. *Dicit enim (Theodontius) a Pronapide Poetâ in Protocosmo scribi, quod semel residente Dæmogorgone ut quiesceret in Æternitatis antro, sensit in utero Chaos tumultuari; quamobrem commotus, extensâ manu, Chaos ventrem aperuit, et evulso Litigio, tumultum faciente eo, quòd turpem et inhonestam haberet faciem, abjecit in auras*. Chaos after this, *fessa labore, cum non haberet quam invocaret Lucinam, madens tota in sudorem videbatur resolvi debere, ignita exhalans infinita suspiria;* until *insistente forti manu Dæmogorgone*, &c. &c. she is in the end delivered of the mighty Pan and the Three Fates. To this account we must add the etymology of Dæmogorgon given by Boccaccio, which of itself proves the barbarism of the title. *Dæmogorgon*, he says, *Græcè; Terræ Deus Latinè*, for *Gorgon* is *Terra aut Sapientia Terræ*. Heyne, in one of his *Prolusiones*, (*Opusc. Acad.* iii. xvii.) has explained some obscurities in the above narrative. From another passage in the same Tract of Boccaccio, (xv. 6,) he shows that Theodontius is a feigned name employed as an interlocutor by Paulus Perusinus, a contemporary writer of the XIVth century, in his *Collectiones*, a book lost after his death by the fault of his wife. Pronapides also is supposed to have been an Athenian Lyric Poet, the Master of Homer, (Diod. Sic. iii. 6.)

The Commentators have referred to Dæmogorgon the following lines in Lucan's incantation of Erechtho:

> *An ille*
> *Compellandus erit, quo nunquam Terra vocato*
> *Non concussa tremit, qui Gorgona cernit apertam,*
> *Verberibusque suis trepidam castigat Erinnym,*
> *Indespecta tenet vobis qui Tartara; cujus*
> *Vos estis superi; Stygias qui pejerat undas.*
>
> *Phars.* vi. 744.

So also has been applied a passage of Statius, in which Teiresias becoming impatient at the lingering effect of his spells, indignantly cumulates charm upon charm:

> *Scimus enim et quicquid dici, nosciique timetis,*
> *Et turbare Hecaten, ni te, Thymbræe, vererer.*
> *Et triplicis mundi Summum, quem scire nefastum est.*
> *Illum sed taceo: prohibet tranquilla senectus.*
>
> *Theb.* iv. 514.

Lactantius, the Grammarian, in a long note on these lines, claims them for Dæmogorgon; and Bishop Newton remarks on *Par. Lost*, ii. 965,

> By them stood
> Orcus and Ades, and the dreaded name
> Of Demogorgon,

that "the learned Dr. Jortin observes, that the name (Dæmogorgon) is to be found in Lactantius, and in the Scholiast on Statius;" had Bishop Newton forgotten that Lactantius himself was the Scholiast on Statius? or was he misled by an awkward punctuation in the passage of Jortin to which he refers, which might indeed induce him to suppose that Jortin intended two different persons under the same name Lactantius, and that the first was the Latin Father? "Dæmogorgon is a name which perhaps was unknown in the time of Lucan and Statius. However, it is to be found in Lactantius. The Scholiast of Statius, on *Theb.* iv. 516, *Dicit deum Dæmogorgona summum.*" (*Rem. on Spenser. Tracts*, i. 66.) Here the full point after Lactantius should plainly be supplied by a comma. Jortin refers also to Hyginus, (*ed.* Munckeri, p. 11,) by whom, in an interpolated passage, Dæmogorgon and Terra are stated to be the parents of *Python, draco divinus;* and to Natalis Comes, (v. 6,) who names Pronapides as his authority (like Boccaccio, and probably *from* Boccaccio) for the descent of Pan from Dæmogorgon. Chartarius, the last compiler on Mythology whom we shall mention, throws out a strange conjecture concerning this obscure Deity, *Sed tamen apud veteres mirum de eo silentium, nisi forte eum Demiurgum appellemus.* (*Imag. Deor. de Æternitatis imagine,*) in which he is supported by a note on the passage quoted above from the Pharsalia in Schrevelius's *Variorum* Edition; and also by Heyne, who thinks that the Gnostics first corrupted the word and then transferred it to an Evil Genius. What a fall is here! from the Creator of the World to the Beadle of hell.

In the *Orlando Innamorato*, (ii. 13, 27,) when Orlando has seized the forelock of the *Fata Morgana*, in which her virtue resided, he refuses to let her go till she has sworn by Dæmogorgon that she will not harm him after the recovery of her liberty.

> *Dissele il Conte, Io mai non ti lascio ire,*
> *Se tu non mi prometti, et non mi giuri*
> *Per quel Demogorgon, ch' è sopra voi,*
> *Ch' io sia sicuro dagli oltraggi suoi.*
>
> *Sopra le Fate è quel Demogorgone,*
> *Non so se mai l' udiste nominare,*
> *E giudica fra loro e tien ragione,*
> *E ciò che piace a lui, può d' esse fare:*
> *La notte scura cavalca un montone,*
> *Travalca le montagne, e passa 'l mare,*
> *Con un flagel di serpe fatto, batte*
> *Le Fate, e Streghe, che diventan gatte.*
>
> *Se la mattina le trova pel mondo,*
> *Perchè il giorno non posson comparire,*
> *Le batte con un certo cotal tondo*
> *Che le vorrebben volontier morire:*
> *Or nel mar l' incatena, e ben nel fondo,*
> *Or sopra 'l vento scalzè le fa ire*
> *Ed or pel foco dietro a se le mena,*
> *A chi da questa, a chi quell' altra pena.*

There can be no doubt that Dryden had this fine passage in his mind, when he introduced Dæmogorgon so much more briefly, though perhaps with superior

DÆMOGORGON. DÆMON.

effect, in *The Flower and the Leaf*. He had no groundwork for it in Chaucer:

But when the morn arises, none are found,
For cruel Dæmogorgon walks the round,
And if he finds a Fairy lag in light,
He drives the wretch before, and lashes into light.

Lloyd, in his *Dictionarium Historicum*, &c. (and his words are copied by Hoffmann in his *Lexicon*,) has *invented* (as it appears to us, for we do not find his statement corroborated elsewhere) a separate personage who suits these two passages. After noticing *Dæ*-mogorgon in the usual manner, he gives a second *De*-mogorgon. *Magus tam excellens ut præesse larvis diceretur, et illas pro nutu cogere, et si errarent acerrimè plectere.*

Tasso dwells on the ineffability of the name. With him it sums up the incantation of Ismeno, as it does those of Teiresias and Erechtho in the Latin Poets.

So con lingua anch' io di sangue lorda
Quel nome proferre grande e temuto,
A cui, nè Dite mai retrosa o sorda,
Nè trascurato in ubbidir fu Pluto. *Ger. Lib.* xiii. 10.

and lastly Spenser, mixes his own imagery with the received Mythology. Thus Archimago is described to be

A bold bad man, that dar'd to call by name
Great Gorgon, Prince of darkness and dead night
At which Cocytus quakes, and Styx is put to flight.
Faerie Queene, i. i. 37.

Duessa addresses Night,

O thou most ancient grandmother of all
* * * *
* * * *
Which wast begot in Dæmogorgon's hall,
And saw'st the secrets of the world unmade.
i. 5. 22.

And the Fay, the mother of Priamond, Diamond, and Triamond, visits the house of the "three Fatal Sisters" in a fearful neighbourhood.

Farre under ground from tract of living went,
Downe in the bottome of the deepe abyss,
Where Dæmogorgon in dull darknesse pent
Farre from the view of God's and heaven's blis,
The hideous chaos keepes, their dreadful dwelling is.
iv. 2. 47.

DÆ'MON, or DE'MON, *n.* DE'MONARCH, DE'MONESS, DEMONI'ACAL, DEMO'NIACK, *adj.* DEMO'NIACK, *n.* DEMO'NIAL, DEMO'NIAN, DE'MONIST, DEMO'NIFUGE, DEMONO'LATRY, DEMONO'LOGY, DEMO'NOMY, DEMO'NOMIST, DE'MONSHIP, DE'MON-GOD, DE'MON-KIND, DE'MON-WORSHIP.

Gr. δαίμων; Lat. *dæmon*; Fr. *demon*; It. *demone, demonio*; Sp. *demonio*; Gr. δαήμων, *sciens, gnarus*, from δαί-ειν, *scire*, to know. Vossius. And Plato, in *Cratylus*, (xxiii.) "On this account, therefore, it appears to me (Socrates) more than other, he calls them Dæmons, because they were prudent and learned. (δαήμονες.)" Taylor's Translation.

Touching the cherl, they sayden subtiltee
And highe wit made him speken as he spake;
He n'is no fool, ne no *demoniake*.
Chaucer. The Sompnoures Tale, v. 7874.

As he came foorth they offered vnto hym a maruaylouse noumbre that were vexed with diuers diseases, and also *demoniakes* whyche were possessed with deuyelles. *Udall. Matthew* ch. viii.

Is there any one, O Melitus, who acknowledging that there are humane things, can yet deny that there are any men? or confessing that there are equine things can nevertheless deny that there are any horses? if this cannot be, then no man who acknowledges *demonial* things can deny *demons*.
Cudworth. Intellectual System, fol. 264.

Here therefore have we an unquestionable instance of a *demoniack* in these latter times of ours, such a one who at first for two moneths together, had no manner of madness or mania at all upon him, though afterward the *demon* possessing his whole body.
Id. Ib.

Wherefore I have oft exhorted you, that not one of those who come hither, and enioy the divine doctrine, and are likewise partakers of the dreadfull and mysticall sacrament, should go unto these stage-players, nor yet entermixt these divine mysteries with *demoniacall*. *Prynne. Histrio-Mastix*, part i. act vi. sc. 4.

It is agreeable to the sense of the ancient fathers, that the *demoniack* or angelick kind of beings, is not altogether incorporeal or bodiless, but that they are conjoyned with bodies, or have cognate bodies belonging to them.
Cudworth. Intellectual System, fol. 813.

Princes, heaven's antient sons, æthereal thrones,
Demonean spirits now, from the element
Each of his reign allotted, rightlier call'd,
Powers of fire, air, water, and earth beneath.
Milton. Paradise Regained, book ii. l. 122.

These [Platonists] did doubtless therein designedly lay a foundation for their Polytheism and creature-worship, (now vulgarly called Idolatry,) that is, for their Cosmo-latry, Astro-latry, and *Demono-latry*. *Cudworth. Intellectual System*, fol. 593.

I return you the manuscript you lent me of *dæmonology*, but the author thereof and I are two in point of opinion that way; for he seems to be on the negative part, and truly he writes as much as can be produc'd for his purpose.
Howell. Letter 23. book iii.

These Javans are drunk in *demonomy*, and the more earnestly embrace it by how much their corrupt natures abhor honesty; whence it happens, that they trade in murder, adultery, theft, rapine, deceit, and all other wickedness.
Sir Thomas Herbert. Travels, p. 365.

Celebes—well peopled, but with bad people, no place engendering greater *demonomists*, or till of late worse savages.
Id. Ib. p. 368.

Plutarch doth acquaint us with this pretty conceit—that the souls of men took degrees after death; first they commenced heroes, who were as probationers to a *demonship*; then after a time sufficient, *demons!* *Mede. Apost. of latter times*, p. 18.

However, whether Aristotle believed these lower *demon-gods* or no, it is certain that he acknowledged a higher kind of gods, namely, the intelligences of all the several spheres, if not also the souls of them and the stars.
Cudworth. Intellectual System, fol. 410.

Agreeable to which is the original of *dæmon-worship*, set down by Daiphantus, a Lacedemonian, in his *Books of Antiquities*, out of a story of Syrophanes, an Ægyptian, as Fulgentius tells us, *Mythol.* l. i. and not far from it is that of *Wisd.* xiv. 15.
Hammond. Works, vol. i. fol. 242.

Darkling the *demon* [Morpheus] glides for flight prepar'd,
So soft that scarce his fanning wings are heard.
Dryden. Ovid. Metamorphoses, book x.

Religion, no doubt, is much indebted to those men of prodigy; who in such a discerning age, wou'd set her on the foot of popular tradition; and venture her on the same bottom with parish tales, and gossiping stories of imps, goblins, and *demoniacal* pranks, invented to fright children, or make practice for common exorcists, and cunning men.
Shaftesbury, vol. i. p. 148. *Essay on the Freedom of Wit and Humour.*

He is possessed with a legion of impure lusts, and as the *demoniac* in the Gospel was sometimes cast into the fire, and sometimes into the water; so is he hurried by the fury of contrary passions.
Bates. The Harmony of the Divine Attributes, ch. ix.

Perfect *dæmonists* undoubtedly there are in religion; because we know whole nations who worship a Devil or fiend, to whom they sacrifice and offer prayers and supplications, in reality on no other account than because they fear him.
Shaftesbury, vol. ii. p. 12. *An Enquiry concerning Virtue.*

When in the grave this race of men was laid,
Soon was a world of holy *demons* made
Aërial spirits, by great Jove design'd
To be on earth the guardians of mankind;
Invisible to mortal eyes they go,
And mark our actions, good or bad, below.
Cooke. Hesiod. Works and Days, book i.

How very inconclusive then must all these reasonings be, which are built on the false supposition, that the Jews held only one prince of *demons*; and that *demonarch* was a term never applied by them to any but to the Devil.
Farmer. Letters to Worthington, let. 2.

Hence he too hastily, yet with his usual modesty, insinuated that the possessions recorded in the Gospel, and called *demoniacal*, might be of that imaginary sort, and no other in reality than occult diseases. *Warburton. The Divine Legation*, book ix.

The learned Doctor, in his turn, will allow that the teachers of the Gospel in the fullness of their inspiration, must needs be secure from an error, which so dreadfully affected the religion they were entrusted to propagate, as *demonianism* did, if it were an error.
Warburton. The Divine Legation, book ix.

Of these, Isabella, whom Gray so strongly stigmatizes,
She-Wolf of France, with unrelenting fangs,
That tear'st the bowels of thy mangled mate,

I hope was wrapped in the friar's garment, for few stood in more need of a *dæmonifuge*. *Pennant. London*, fol. 271.

The established theology of the heathen world from its first rise to its final overthrow, rested upon the basis of *demonism*. Scarce was there a single oracle delivered but by a person said to be possessed.
Farmer. On the Demoniacs of the New Testament, ch. i. sec. 7.

Understand the Septuagint as speaking of new *demon-gods*, of men newly deified, or newly worshipped by the Israelites, of Gods that were wholly idols, mere ghosts and images, and you make them speak consistently with themselves, and with the original Hebrew.
Johnson. Observations on Macbeth. ch. i. sec. 10.

The king, [James] who was much celebrated for his knowledge, had, before his arrival in England, not only examined in person a woman accused of witchcraft, but had given a very formal account of the practices and illusions of evil spirits, the compacts of witches, the ceremonies used by them, the manner of detecting them, and the justice of punishing them, in his dialogues of *Dæmonologie*, written in the Scottish dialect, and published at Edinburgh. *Id. Ib.*

The *dæmon-kind* is of an intermediate nature between the divine and human. What is the power and virtue, said I, of this intermediate kind of being? To transmit and to interpret to the Gods, said she, what comes from men; and to men, in like manner, what comes from the Gods; from men their petitions and their sacrifices; from the Gods in return, the revelation of their will.
Sydenham. Plato. The Banquet.

In the language from which the word DÆMON has been borrowed, it was applied in general to signify any intelligence superior to man: and on this account we find it in Greek authors in a great variety of significations; sometimes, but more rarely, it signifies, by way of eminence, the Supreme mind; frequently it implies Fortune or Fate; but most especially it designates a peculiar order of intelligences, superior to mankind, but inferior to the first cause.

No civilized nation, except in the very lowest classes of society, appears to have been without at least a suspicion of the existence of a supreme God. *Zeus* among the Greeks, and *Jupiter* among the Latins, are occasionally spoken of in a spirit of pure monotheism. Even those who considered Jupiter as of the same class with the other Gods, maintained the existence of a still more exalted essence, which was emphatically termed τὸ Θεῖον, and of which every other intelligent nature was only an emanation. All existences occupying the intermediate space between this being and man, were called Dæmons; which, through tradition or imagination, were divided into several kinds or orders, to which were assigned several stations and offices.

The principal Dæmons were those whom the Romans called *Dii Majorum Gentium*; who, if not originally the same, were, in time, identified with the personages of whom Homer and Hesiod were probably the creators, at least as regards many of them. These Dæmons, generally dignified by the name of Θεοὶ or *Dii*, Gods, exercised for the most part a supreme, but local power; they had all a regular generation, being originally sprung from Heaven and Earth, but nevertheless they were immortal. Below these, again, was a race of beings, properly, and in distinction, called Dæmons; some of whom were altogether of superhuman origin, while others were only exalted spirits, who had once worn the trammels of mortality. Thus Æschines, in his Oration against Ctesiphon, exclaims ὦ Γῆ καὶ Θεοὶ καὶ Δαίμονες.

The Dæmons of antiquity, properly so called, appear to have much resembled in office the Roman Catholic Angels and Saints; being intercessors between God and man. Plutarch (*de Iside et Osiride*) observes, that Plato, Pythagoras, Xenocritus, and Chrysippus, *following the opinions of the ancient Theologians*, hold that Dæmons are superior to men, but are not pure Deity, since they are capable of pain no less than pleasure. This expression, "the ancient Theologians," (οἱ παλαὶ θεολόγοι,) is remarkable, since it must refer to sources anterior to all the Philosophers; and as these can scarcely be Homer and Hesiod, nothing remains but that the authors alluded to were of Egypt or Asia. The account which Hesiod (*Op. et Dies*, i. 120, *seq.*) gives of the Dæmons is, that they are the Spirits of the worthies who flourished in the Golden Age; that they are propitious to mankind, and watch over mortal affairs; that they walk the earth in disguise, take cognizance of human actions, and confer wealth and fortune. Plato (*ap. Plut. de Iside et Osiride,*) considers them as Interpreters and Ministers of the divine counsels, transmitting to Heaven the prayers and wishes of mankind, and bringing thence in return revelations and blessings. Socrates not only believed in their agency, but affirmed himself to be under the especial protection of one of them. The doctrine of peculiar or familiar Dæmons is very prevalent in all nations, nor is it easy to trace it to any other source than a tradition concerning those mysterious beings who, as we learn from divine revelation, are employed by the Almighty in the conduct of his providence, and for that reason are called the Angels of men. (*Matt.* xviii. 10; *Acts* xii. 15.) This doctrine is expressly and concisely stated in the following fragment of Menander:

Ἅπαντι δαίμων ἀνδρὶ συμπαραστατεῖ
Εὐθὺς γενομένῳ, μυστάγωγος τῆς βίου
Ἀγαθός.

The *Genius* or *Lar* of the Romans, was a being precisely of the same description.

Beside these Dæmons, called sometimes by way of contradistinction ἀγαθοδαίμονες, the Ancients had another class called κακοδαίμονες, a belief in whom was, most probably, derived from tradition. Empedocles believed that the rebellious Dæmons were punished for their crimes by expulsion from Heaven, and that they vainly endeavoured to obtain a settlement in

DÆMON. other parts of the Universe, which severally rejected them:

DAFFADIL.

Αἰθέριον μὲν γάρ σφὲ μένος πόντονδε διώκει,
Πόντος δ', ες χθονὸς ἅδας ἀπέπτυσε· γαῖα δ' ἐσανθις
Ἠελίῳ ἀκαμαντος, ὁ δ' αἰθέρος ἔμβαλε δίναις·
Ἄλλος δ' ἐξ ἄλλου δέχεται· στυγέουσι τε πάντες.
Apud Plut. de Isid. et Osirid.

Thus, hated by every element, the fallen Dæmon found his only pleasure in revenge and injury. Xenocritus therefore believed that penance and self-mortification were not agreeable to the Gods, and ἀγαθοδαίμονες, but were useful in averting the malice of the κακοδαίμονες, who retired satisfied with the molestation which the victim had inflicted on himself. From these two kinds of Dæmons, the word δαίμονιος receives its double sense of excellent and wretched.

The leader of the κακοδαιμονες had different names in different countries. Diogenes Laertius (*in proœm. ad vit. Philosoph.*) says, that he was called by the Greeks *Hades*, by the Egyptians *Typhon*, and by the Persians and Chaldæans *Arimanes*.

On the belief of the Ancients in Dæmons, see most of the Dialogues of Plato, particularly the *Phædo*, the *Defence of Socrates*, the *Timæus*, and the *Cratylus*; also Plutarch, *de Iside et Osiride*; Cudworth's *Intellectual System*; Apuleius, *de Deo Socratis*; and Cicero, *de Naturâ Deorum*.

DAFF, *n.* Mr. Tyrwhitt says is Saxon, and means a fool. The A. S. is *deaf-ian, adeaf-ian, surdescere*, to grow *deaf*. Wachter, (in v. *Taub*,) and Junius agree, that that is said to be *deaf*, which has lost any of its natural strength. *Deaf* corn is barren corn, *sterile frumentum*. See Dr. Jamieson, who considers it connected with the Swe. *dofwa, stupere, sensu privare*. And see DAW.

Thow dotede *daffe* quaþ hue. dolle aren þy wittes.
Piers Ploughman. Vision, p. 19.

And whan this jape is tald another day,
I shall be halden a *daffe* or a cokenay.
Chaucer. The Reves Tale, v. 4206.

DAFF, to doff, to do off, throw off, put aside.

PRINCE. I would shee had bestowed this dotage on mee, I would haue *daft* all other respects, and made her halfe myselfe.
Shakspeare. Much Adoe about Nothing, fol. 108.

Where is his sonne,
The nimble footed mad-cap, Prince of Wales,
And his cumrades, that *daft* the world aside,
And bid it passe?
Id. Henry IV. First Part, fol. 66.

For lo! his passion, but an art of craft,
Even there resolv'd my reason into tears;
There my white stole of chastity I *daft*,
Shook off my sober guards, and civil fears.
Id. A Louer's Complaint.

DA'FFADIL, or DA'FFODIL, DAFFADI'LLY, DAFFADOWNDI'LLY. Fr. *aspodille*; It. *asphodelo*; Gr. ἀσφοδέλος. From French *des asphodilles*. Holla ndrenders *Narcissus, daffodill*. Plinie, l. xviii. c. 26. The Fr. *asphodill*, Cotgrave calls the *daffadill, affodill* or *asphodill* flower.

Bid aramanthus all his beauty shed,
And *daffadillies* fill their cups with tears,
To strow the laureat herse where Lycid lies.
Milton. Lycidas, l. 150.

——— Whereas she play'd
Amongst her watry sisters by a pond,
Gathering sweet *daffadillies*, to haue made
Gay girlonds, from the sun their forheads faire to shade.
Spenser. Faerie Queene, book iii. can. 4.

Strowe me the ground with *daffadowndillies*,
And cowslips, and kingcups, and loued lillies.
Spenser. Shepheard's Calendar. Aprill.

Haymakers, rakers, reapers, and mowers,
Wait on your summer-queen;
Dress up with musk-rose her eglantine bowers,
Daffodils strew the green.
Ford. The Sun's Darling, act iii. sc. 2.

By whose pure moving glass the milk-white lilies
Do dress their tresses and the *daffodilies*.
Drummond, part i. song 13.

The joyous spring draws nigh! ambrosial showers
Unbind the earth, the earth unbinds the flowers,
The flowers blow sweet, the *daffodils* unfold
The spreading glories of their blooming gold.
Broome. Daphnis and Lycidas.

On his lovely body shower
Leaves of roses, virgin lilies,
Cowslips, violets, *daffodillies*,
And with garlands dress the bower
Hughes. A Pastoral Masque.

DAG, DAG-MAKER. A pistol; perhaps, says Minsheu, because brought into use by the *Daci*, a people of Germany; and that they were a new fashion of German horsemen appears from the quotation from Knolles (produced by Mr. Nares.)

The earl lying upon his back on the left side of his bed, took the *dagge* charged in the left hand (by all likelihood,) laid the mouth of the *dagge* upon his left pap, (having first put aside his waistcoat,) and his shirt being only between the *dagge* and his body, which was burned away the breadth of a large hand, discharged the same.
State Trials. Inquisition upon the Death of the Earl of Northumberland.

Neither was any thing taken from them but these *dags*, which the German horsemen, after a new fashion, carried at their saddle bows; these the Turks greatly desired, delighted with the noveltie of the invention, to see them shoot off with a firelock without a match. *Knolles. History of the Turks*, p. 742.

If you shall understande that some be appoynted to fynde horses for demylaunces, and shall not have mete horses for that purpose for lacke of stature; rather than to hynder the servyce you shall geve commaundement that if they can sett forthe a good, stronge, and well-set geldinge, (though he be not very hiegh,) and a man on his back mete to weare a corselett, and shote a *dagge*, yᵗ shall suffice; and if the party appoynted have not, nor cannot suddenly provyde a corselett, ye shall, neverthelesse, give warning that he staye not theruppon; but send him to Newcastell, where he shall have a good corselett for xxxˢ the pece, and a cace of *daggs* upon reasonable terms.
Lodge. Illustration of British History, &c. Lords of the Council to Lord Talbot, No. 4. *Queen Elizabeth.*

The prince yet alwayes bare hym selfe so wisely, that he could not without some sturre be thrust downe openly: and ridyng on his iourney, he was once shot with a *dagge* secretly.
Ascham. Works. A Report and Discourse.

They were wont to vse bowes and launces in the fielde, but nowe they vse *dagges* as our horsemen doe.
Fox. Martyrs, fol. 681. *Amurathes ouercome by Scanderbeius.*

The *dagge* was bought not many days before, of one Adrian Mulan, a *dagge-maker*, dwelling in East Smithfield, as by the said Mulan was testified *viva voce* upon his oath.
State Trials. Ut supra.

DAG, *v.* DAG, *n.* DA'GGING, DA'GON, DA'GSWAINE, DAG-TAILED. "*Dagge*, a slip or shread. *Dagged*, cut into slips. *Dagging*, slitting, cutting into slips. *Dagon*, a slip or piece." Tyrwhitt. A. S. *dag. Sparsum pendens seu dependens.* Skinner. Any thing that is loose, and hanging abroad, dagling, dagging or dangling. Somner.

Dagswaine, a rough or coarse mantle to cast on a bed. *Schiauina*. Minsheu. And *Schiauina*, a long robe of coarse cloth worn by Slaves, (*Schiaui.*) Menage.

DAG. — AGGER.

If so be that they wolden yeve swiche pounsoned and *dagged* clothing to the poure peple, it is not convenient to were for hir estate, ne suffisant to bote her necessitee, to kepe hem fro the distemperance of the firmament.

Chaucer. The Persones Tale, vol. ii. p. 315.

And high shoes knopped with *dagges*.

Id. The Romant of the Rose, l. 7211.

So moche *dagging* of sheres, with the superfluitee in length of the foresaide gounes.

Id. The Persones Tale, vol. ii. p. 314.

A *dagon* of your blanket, leve dame,
Our suster dere.

Id. The Sompnoures Tale, l. 7333.

Suche a doulty *dagswayne*
Sende him to Fraunce agayne.

Skelton. Duke of Albany and the Scottes.

The second is the great (although not generall) amendment of lodging, for (said they) our fathers (yea and we our selues also) haue lien full oft vpon straw pallets, on rough mats covered onelie with a sheet, vnder couerlets made of *dagswain* or hop-harlots (I vse their owne termes) and a good round log vnder their heads in steed of a bolster or pillow.

Holinshed. Description of England, book ii. ch. xii.

Would it not vex thee, where thy sires did keep,
To see the dunged folds of *dag-tayl'd* sheep.

Hall. Satire 1. book v.

DA'GGER, DA'GGERED, DA'GGERS-DRAWING, DA'GGER-POINTED, DA'GGER-MAN. } Fr. *dague*; Sp. and It. *daga*; Dutch, *dagghe*; Ger. *degen*; Sw. *daggert*; Low Lat. *dagga, daggerius*. This word, as well as *Dagge*, q.v. Du Cange says, some derive *a Dacis*, as a weapon peculiar to them. Wachter quotes authorities to show that *gladius* was called *degin, quod ejus ministerio in defensione utamur*, and hence inclines to think it an application of *degen, vir fortis, miles*; remarking that men and their arms are often designated by the same name.

And I shal rive him thurgh the sides tway,
While that thou stroglest with him as in game,
And with thy *dagger* loke thou do the same.

Chaucer. The Pardoneres Tale, v. 12764.

And there with alle thei ben so proude, that thei knowen not how to ben clothed; now long, now schort, now streyt, now large, now swerded, now *daggered*, and in alle manere gyses.

Sir J. Maundeville. Travaile, ch. xii.

And Ahud put forthe his lefte hand & toke the *dagger* frome his right thighe, and thrust it into his bely, so that the hafte wente in after the blade. *Bible, Anno* 1551. *Judges*, ch. iii.

Sack makes men from words
Fall to drawing of swords,
And quarrelling endeth their quaffing;
Whilst *dagger-ale* barrels
Beare off many quarrels
And often turne chiding to laughing.

F. Beaumont. The answer of Ale to the challenge of Sack.

Ful. Bless us! a monster, patch'd of *dagger-bombast*,
His eyes like copper-basons; a' has chang'd
Hair with a shag dog.

Ford. The Lady's Trial, act iii. sc. 1.

Then haue vvee heere, yong Dizie, and yong Mr. Deepevow, and Mr. Copperspurre, and Mr. Starue-Lackey the rapier and *dagger-man*. *Shakspeare. Measure for Measure*, fol. 77.

How many gallants have drunk healths to me,
Out of their *dagger'd*-arms, and thought them blest,
Enjoying but mine eyes at prodigal feasts.

Dekker. The Honest Whore, sc. 6.

Las! say it were, I need not fear him now:
For all his braves, his contumelious breath;
His frowns, though *dagger-pointed*. *Id. Ib.* sc. 10.

Mar. O my unfortunate sister!
I would my *dagger-point* had cleft Ler heart
When she first saw Brachano.

Webster. The White Devil, act ii.

DAGGER. — DAGHISTAN.

I remember three in my life and observation, who were as downright killed with vomits, as they could have been with *daggers*. *Sir William Temple. On Health and Long Life.*

——— The inward man
And outward, like a clan and clan,
Have always been at *daggers-drawing*,
And one another clapper-clawing.

Butler. Hudibras, part ii. can. 2.

For shame! for shame! As you have spoke *daggers* to him, you may justly dread the use of them against your own breast, did a want of courage, or of noble sentiments, stimulate him to such mean revenge. *Junius. Letter* 26.

Yet still the question returns, "Why so cool in the entrance of this friendly debate? Where had been the hurt of a little amicable parlying before *daggers-drawing*."

Hurd. On the Delicacy of Friendship.

Full directions for the use of the single Rapier, and Rapier and Dagger, are given by Vincentio Saviolo in *His Practice*, 1595. Perhaps, after all, the amateur of Duelling will be little inclined to study this master; for, in "the thyrde dayes discourse," the Scholar advances as an objection against the art, "that although a man learne perfectly the *dritta, riversa*, the *stoccata*, the *imbroccata*, the *punta riversa*, with eche severall motion of the body, yet when they happen to come to single fight, where the triall of true valour must ende the quarrel, they utterly forget all their former practice." Quinctilian had made the same remark before Saviolo, *Ut acies a securis otiosisque compositæ ipsâ pugnæ necessitate turbentur*. v. 18.

DAGHISTAN, (i.e. the Mountainous Region,) is the name of a large tract of country on the north-western coast of the Caspian Sea. Its western boundaries are ill-defined; but it is separated from the Cumanian Steppe by the mouths of the Terek on the north, it has the sea on the east, and Shírván on the south. The confines of these two Provinces have varied much at different periods, according as one or other of the predatory tribes on the borders have prevailed; but since both have been added to the Russian Empire, their limits have been permanently fixed, by a line drawn from the mountains, and running parallel with the upper coast of the Peninsula of Apsherán, and reaching the sea about twenty miles below Bákú. The principal divisions of this Province are: 1. the country of the Cumúcs, between the rivers Terek and Koï-sú, comprehending the Bay and Peninsula of Agrakhán; 2. the territory of the Shamkhál or Khán of Tárkú; 3. that of Khaïtac, (or Caïdak,) subject to the Usmeï; 4. Cubáshah; 5. Acúshah; 6. Derbend; 7. Cúrah; and 8. Cúbah. These petty States on the north-eastern declivity of Caucasus are all inhabited by tribes of Turkish origin, and form separate Principalities; but all acknowledge the supremacy of Russia, and since they were subdued by that power, their inhabitants have enjoyed a period of tranquillity, to which their intestine broils had long made them strangers. Boundaries. Divisions.

The Cumúcs, who are descended from the Khozars, or Chazares, of the Arabian and Greek writers, occupy not only the district which bears their name, but those on its southern borders. They are, notwithstanding the similarity of their names, of a very different race from the Cází-Cumúcs, on the opposite side of the mountains; being a tribe of Tátár descent, speaking another dialect of the same language as the Turkmáns, their southern neighbours. The north of Derbend, (Dághistán,) consists of a strip of level ground between the sea and the foot of the mountains, which Cumúcs.

DAGHISTAN. gradually approach to the shore, till they come close to it at the narrow pass near that town. This defile is the ancient and natural barrier between the northern and southern sides of Caucasus, and was till lately the boundary of Dághistán and Shírván. From that point the mountains recede again to the west, and leave the fertile plains of Derbend, Cúrah, and Cúbah, exposed to the warm southern sun, and shaded to the north and west by the heights of Caucasus. These districts were said, in the time of Strabo, (xi. 4,) to yield abundant harvests twice or thrice in a year, and still export large quantities of grain, cotton, fruit, and saffron, to the different ports of the Caspian. Cúbah is called the Rose-garden by the Persians.

Rivers. This country, like most mountainous regions, is watered by numerous streams. Besides the many mouths of the Terek, the Ac-cháï, Ac-tásh, and the Coï-sú, flow into the Gulf of Agrakhán; and the Samúr, (*Albanus* of the Ancients,) enters the Caspian by a variety of channels, just below Derbend. "Its current," says Hájí Khalífah, "is rapid, and its bed contains clay like soap, and stones like swords." (*Jehán-numà*, p. 397.) Many less considerable rivers descend also from the mountains, which separate the waters running to the east from those which join the Kur or *Cyrus*.

Endery. Enderáï, or Endery, in the country of the Cumúcs, is the great mart to which the Lezgís bring the produce of their plundering expeditions. Tárkhú on the sea-shore is the Capital of the Tátár Chief, called the Shamkhál, and has about 10,000 inhabitants. Boïnác and Barshlú are also on the coast, and the last is the residence of the Usmeï; but Derbend and Bákú are the most remarkable places in this country.

Derbend. The first, also called Demir-capú by the Turks, and Bábu'l-hadíd by the Arabs, names each signifying "the Iron Gate," was best known by the title of Bábu'l-ebwáb, "the Gate of Gates," (or *La Porte par excellence.*) It stands, according to the *Jehán-numà*, (p. 394,) in latitude 41° 30′ and in longitude 81° 30°, but should be placed, as appears from the best Russian Maps, in 42° 5′ 45″ north and 47° 39′ 15″ east. This pass is the celebrated *Portæ Caspiæ* (Caspian Gates) of the Ancients, and the fortress at its entrance was long considered as impregnable. Its massive and lofty walls, the works of Yájúj and Májúj (Gog and Magog) according to Eastern fable, are still an object of curiosity to the traveller, and enclose about 600 houses; but as its harbour is no longer secure, its trade is in a declining state.

Bacoo. Bákú, which is at one extremity of the Peninsula of Apsherán or Okessa (or Okoressa,) is celebrated on account of its springs of naphtha. The whole of this neck of land consists of clay, strongly impregnated with salt; and one part of it, about three-quarters of a mile square, is called "the Field of Fire," from the inflammable vapours which it continually emits.

"The whole neighbourhood of Bákú," says the *Jehán-numà*, (p. 395,) "for nearly ten farsangs, (about twenty-five miles,) is a stony soil, on which there is no trace of vegetation; but if a hole is dug to the depth of a palm, (= three inches,) the ground takes fire; and some of the stones found there are burnt instead of wood. At Ameliyán, one of the dependencies of this City, there are nearly 500 wells, wherein the black and white oil of naphtha flows from the ground; and when pots and caldrons are set over places in which they have dug to any depth, the heat of the soil is sufficient to dress the victuals in them." Balaghán is the name of the place where the most productive springs are now found, one of which yields 500 lbs. weight per diem. The Gebrs, or followers of Zoroaster, and the Hindûs, who also worship fire, hold the *jwálá-muk'his* (flaming mouths) in the greatest veneration. They have many Temples containing jets of the sacred element; and pilgrims from the remotest parts of India repair to this holy spot. The white naphtha, considered as a cordial and restorative by the Russians, is only found in small quantities. Near the naphtha wells there are also some warm and medicinal springs, which are much esteemed. The roadstead of Bákú, though insecure, is one of the best on this coast.

Tabáserán, a Town belonging to the Usmeï, with a district of about twenty-five miles in extent, is a place of some importance, and a depot for the trade between the interior and the coast. Reineggs rates its population at 10,000 souls; and Bekr Efendí, quoted in the *Jehán-numà*, (p. 403,) says that it has a castle and village containing 40,000 houses; but both these accounts are manifest exaggerations. The last author also mentions its lake, near which there is the shrine of a Mohammedan Saint; and a cavern containing the wonder-working sword of Moslemah, the first Musulmán conqueror of this country. Tabaserane.

The latest and best accounts of this county are to be found in J. A. Güldenstädt, *Reisen im Kaukasischen Gebürge, herausgegeben von* P. S. Pallas, St. Petersburg, 1787, 4to; S. G. Gmelin, *Reisen*, St. Petersburg, 1770—74, 4 vols. 4to, (vol. iv.;) Lerch, *Travels* (in 1745—6) in Büsching's *Magazin für die neue Historie und Geographie*, vol. iii. 1769, and vol. x. 1776; P. S. Pallas, *Reise*, (*ältere*,) St. Petersburg, 1771—76, 3 vols. 4to, (*neue*) Leipzig, 1799—1801, 2 vols. 4to; Ellis's *Memoir of a Map of the Countries between the Black Sea and the Caspian*, London, 1788, 4to; and most particularly F. A. Marschall von Bieberstein *Beschreibung der Länder zwischen den Flüssen Terek und Kur am Kaukasischen Meer*, Frankfurt am Mayn, 1800, 8vo,—of which a French Translation, made under the author's own eye, was printed at St. Petersburg in 1798, in 4to, and at Paris in 8vo, in the same year; its title is *Tableau des Provinces situées sur la côte occidentale de la mer Caspienne entre les fleuves Terek et Kur*.

DAGON, an Idol of the Philistines, mentioned in three different passages of the Old Testament. It was during the festival of this God, when his votaries were assembled "to offer a great sacrifice," that Samson's final triumph was achieved. (*Judges*, xvi. 23.) When the Philistines, after two great victories over Israel, won the ark, and brought it to Ashdod, "they brought it into the house of Dagon, and set it by Dagon." The catastrophe need not be detailed, by which the headless and handless image bore testimony to the superior power of Jehovah, (1 *Samuel*, v. 2, 3, 4, 7;) lastly, the head of Saul after his defeat and death was affixed as a trophy in the Temple of Dagon. In the Apocrypha is yet one more notice of this Idol, which proves that his worship was continued as low at least as to a century and a half before the birth of our Saviour. When Jonathan had defeated the army of Apollonius, a General of Demetrius, the vanquished took refuge in the Temple of Dagon at Ashdod, which,

together with those who had fled to it, was burnt by the victors. (1 *Maccabees*, x. 83.)

In none of these passages is any allusion made to the shape and lineaments of Dagon, save that the head and hands most probably were human, yet the learned have been very busy in fashioning a precise portraiture of him; and the received belief is, that his lower extremities terminated in a fish, which is the interpretation of the Hebrew דָּג, the first half of the name דָּגוֹן. Berosus (*apud Eusebium*, cited by Michaelis in his 12th Note on Gaffarelli's *Curiositates inauditæ*,) holds that Dagon had the body of a fish, a human head below the fish's head, human feet growing out of the tail, and a human voice. Chilmead in his translation of the same work, (l. sec. 5,) says, "I am not ignorant that there are that are of opinion it was in figure like a young damsell covered all over with eares of corne, which they conceive to have been meant for the Goddess Ceres." This opinion is derived from Philo Byblius Δαγὼν ὅς ἐστι Σιτὼν. His identifications with other Heathen Deities have been manifold. Besides Ceres, he has been supposed by different writers to be Saturn, Jupiter, and Venus; by others, again, he has been called by the more Oriental titles of Derceto and Atergatis. Salmasius has made him the monster to which Andromeda was exposed; and Bryant, who saw the Deluge and the Ark in every thing, after displaying his extraordinary stores of learning, by recounting almost all that others have fancied, determines that Dagon can be nothing else but a hieroglyphic of the Patriarch Noah. *Anc. Myth.* iii. 133, &c. 8vo. ed.) Hoffman (*ad vocem*) refers to many of the same authorities as Bryant, (Berosus, Apollodorus, &c.,) and from the tale of *Oannes*, (which they both tell,) the half-man and half-fish, who came out of the Red Sea every day to Babylon, and after teaching the inhabitants letters, agriculture, architecture, and politics, returned at sunset to his watery bed, he thinks it most *probable* that Satan himself assumed this shape, in order that by exhibiting profound erudition, he might be supposed to be a Deity; and, that hence arose the worship of Dagon, or Adardag, the *Magnificus Dag*.

Selden, *de Diis Syris*, (*Syntagma*, i. 4,) may be consulted for more full particulars respecting Dagon; also Gaffarelli, *Curiositez inouyes*, or still more the Latin translation of that work, with the notes of Michaelis.

DAHLIA, in *Botany*, a genus of the class *Syngenesia*, order *Superflua*, natural order *Corymbiferæ*. Generic character: calyx double, the outer one many-leaved; corolla radiant, petals equal in number to the scales of the inner calyx, ovate, three-toothed; receptacle chaffy; stigmas downy; seed down none.

The three species known of this fine genus are natives of Mexico. Their numerous varieties are now becoming common in the gardens of Europe. Although a late flowering plant it may be made to produce its fine flowers for several months. The roots should be taken up when the first frosts begin, and then placed in a dry cellar, and if started in spring by being placed in pots in the green-house, the plant will flower from July till October; the plants should have a trench round each, that they may be plentifully supplied with water in dry weather; for an account of the genus and mode of culture, see *Hort. Trans.* vol. i.

DAHOMY.

DAHOMY, also spelt *Dahomey* and *Dahomè*, which according to Dalzel, (p. 2,) is compounded of *Dà* and *hómé*, and signifies Da's belly, is the name of the Negro States above the Coast of Guinea, the Chief of which, in the former part of the last century, subjugated most of the petty Kingdoms near the sea, and thus became an object of alarm and interest to the European traders in that part of Africa. It was at first mistaken by Geographers for the *Dauma* of Leo Africanus, (p. 12,) a country probably to be sought for on the borders of Abyssinia; of which the southern provinces, Gojano and Bagamidri were, together with the sources of the Nile, brought down to the confines of Angola and Monomotopa. Even at the present day, little is known with any certainty respecting this country; for a want of harbours, and a dangerous surf continually beating upon its shores, are such impediments to commercial intercourse, that it is less frequented by navigators than most of the neighbouring Kingdoms; and few of the traders who were resident there for any length of time, had leisure or ability to draw up a just account of what they saw; while those who did so, were tempted, it may be feared, to exaggerate the worst features in the portrait, in order to promote, as they supposed, the interests of their employers. The great object of Dalzel's quarto volume is manifestly to convince his readers, that the Slave trade is the only check on the ferocity of the Negro warriors, by making it more profitable to sell than to murder and eat their prisoners; his statements, therefore, must be received with great caution; and it will appear in the sequel, that in one instance, at least, he has attributed to this people a most inhuman system, which on further inquiry does not seem to have been ever established.

Not even the boundaries or extent of Dà-hómé have been determined with any precision by the writers already named, some of whom lived more than thirty years in that country. The neighbouring States, as far as can be collected from uncertain and jarring accounts, are Krepé on the west; Takpama and Mahí on the north-west and north; Ayo, or Ayú, on the north-east; and Aladà, or Aradà, (*Ardrah*,) now dependant on the Ayús, on the east. It has been supposed to stretch 150 or 200 miles into the interior; but this calculation is founded merely on vague conjectures, and doubtless far exceeds the truth. Abóme, or rather Agbóme, the Capital, is placed by Norris, (*Hist. of Dah.* ii,) 7° 59′ north and 3° 20′ east, about 95 geographical miles from the coast. Along the shore it extends only for about forty miles, and comprehends nothing but the conquered State of Wídáh. The proper and original name of this Kingdom is Fúng, (or, without the nasal termination, Fúí,) derived from a small territory on the west, of which the Capital was Dáhí, south-east of Agbóme; Tacúdonú, the Chief

DAHOMY. resident there in the former part of the XVIIth century, treacherously seized on Calmina, a neighbouring town, and soon afterwards conquered Agbóme, till then the metropolis of a more powerful Sovereign, named Dà. He made a vow, which he literally accomplished, that he would lay the foundation of his palace on his rival's belly; and thence his new residence received the name of Dà-hómé, i. e. Da's belly.

Soil, &c. It appears from Norris's Map, that all the line of coast between the Lagos, (Rio de Lágora, or Swamp River,) and the Rio Formosa, is a strip of alluvial land; and a large tract also beyond the former of those streams, may be traced to a similar origin; for, except in a few places where there is a thin coating of sand or gravel on the surface, the soil is a rich loam of a reddish colour, not containing a single stone as large as an egg; forming a vast plain, uninterrupted even by a hillock, and rising with an almost imperceptible ascent from the sea, for the distance of forty or fifty miles, (Smith, 194; Dalzel, ii.;) but to the north the country is not so flat, for Aladà or Aradà "abounds," says Mr. Norris, (*History of Dahomy*, p. 5,) "in hill and dale." The extreme fertility of the soil, under the influence of an almost vertical sun (for the northernmost point of the coast is not higher than about 6° 20′ north,) would render this country a terrestrial Paradise, for such as can bear a tropical climate, had not man here, as too often elsewhere, abused and set at nought the bounty of his Creator. The neighbourhood of the British fort at Wídáh, when seen by Mr. Smith, in April 1727, (*Voyage to Guinea*, p. 194,) appeared to him "to be one of the most delightful in the world. The great number and variety of tall, beautiful, and shady trees, which seem as if planted in fine groves for ornament, are without any underwood or weeds, as in other parts of Guinea; also the verdant fields are every where cultivated, and no otherwise divided than by those groves, and in some places by a small footpath; together with a great number of pretty villages, encompassed by a low mud wall, and regularly placed over the face of the whole country." But this smiling and luxuriant scene was in the following year reduced to a complete desert, by an invasion from Dà-hómé. (Snelgrave's *Account of Guinea*, p. 2.)

The rapidity with which vegetation recovers itself under a vertical sun soon obliterates every trace of desolation; and it is remarked by another writer, (Robertson, *Notes on Africa*,) who saw this same country only a few years ago, that few districts on this coast have so promising an appearance; "the farming of the natives," he says, (p. 265,) "is very superior to that of most places in south-west Africa. Some of the lands are kept as clean and otherwise managed as well as can be desired. They are usually well laid out; the tasteful manner in which the rows of Indian corn, yams, calavances, and other leguminous plants are disposed, gives them quite a hortulan appearance."

Vegetables. The esculent vegetables are the same as those of the rest of this coast, and the indigenous plants probably differ little from those observed about Cape Coast, (Cabo Corso,) in Benin, and on the Zaïre. (Tuckey, Congo, Appendix.) The most remarkable is a small reddish fruit, having the size and consistence of an olive, and possessing the singular property of making every thing appear sweet to persons who have been chewing its pulp, so as to give "a lime the flavour of a ripe orange." (Dalzel, p. 4.) It is produced by a tall shrub, and is called *Assabah* by the natives of Cape Coast. (Ib. 8.) The periodical rains fall soon after the vernal and autumnal equinoxes; the seasons therefore immediately preceding them, are those in which the seed is sown and plantations are made; and as soon as the blade appears in the fields of maize and millet, (*Sorghum*, the grain commonly grown,) calavances, (from the Portugese word *Garvanzo*,) *Cicer arietinum*, or chick-pea, are planted in intermediate rows, which give a neat and varied appearance to the country, when the young shoots have sprung up. DAH

Animals. The animals, wild and domestic, are the same as in other parts of Africa; and the climate is not fatal to the horse, as it is near Cape Coast, and at some seasons near the Cape of Good Hope. The twítúr, mentioned by Mr. Macleod, (p. 30, 31,) as "an animal of the hyæna tribe," is evidently from his description of its habits and cry a jackall, as he might also have learnt from Dalzel's book, (113, 114,) to which he is indebted for the best part of his own. An animal closely resembling the Brazilian agúti, (*Cavia aguti*,) and mistaken for it by the Portuguese, is common, and is a favourite article of diet among the natives. It is worthy of a further inquiry, as all the other cavis are peculiar to America.

Charact. of the natives. The natives appear in point of character to differ little from other Negroes; they are indolent, self-indulgent, hospitable, and generous; but irritable and revengeful. An opinion has prevailed, that they are peculiarly blood-thirsty and ferocious; but the cruel waste of human life, which has been witnessed in this and some of the neighbouring countries, may be ascribed to the influence of superstition, a thirst for revenge, and the unrestrained habits of indulgence to be expected in an untutored despot, without implying any peculiar defect in the national character of his people. The fidelity with which these Negroes keep a secret intrusted to them, their kind-heartedness when their passions are not inflamed by enmity or intoxication, their devotion to the Gods whom they are taught to revere, their personal cleanliness and abstinence, where they believe it to be a duty, (Smith, 233, 256,) are so many valuable elements, the harbingers of great moral improvements, when they shall be released from the thraldom by which they are now debased.

Dress. The wants of a people placed under an almost vertical sun are few; and those which are most imperious cannot be gratified, lest the cupidity of their rulers should be awakened. Dress, in such a country, is required only for decency or ornament; a pair of short trowsers, or a cloth round the waist, are all that the poor can afford; but the great and wealthy, (that is, the servants and families of the Chief,) trick themselves out in all the finery and gewgaws which they can collect, and often faint under the cumbrous splendour imported from Rag-fair and Monmouth-street; the price of their captives. But it is not to Europe alone, that they owe their envied distinctions of ornament, for their tiger skins and ostrich feathers, their tatooing and scarifications are all their own. Some content themselves with a perpendicular incision between the eye-brows; but the *beau monde* of Wídáh granulate their cheeks and foreheads into the appearance of a confluent small pox.

The Aladàs make a deep incision in each cheek; and the Mahís three oblique gashes on one, and a horizontal gash on the other. Have these fashions arisen from any national or religious distinctions? Are they class-marks, like the forks and crescents on the forehead of a Hindû? These are questions which may be fairly put, as hereditary classes are said to be established among them. Circumcision is universally practised, but not it should seem as a religious rite. (Dalzel, xviii.)

ufac-

Their arts and implements are of the rudest and simplest kinds; yet they are more advanced in this respect than many of the tribes further south. With a spiked cannon, or a large stone for an anvil, and a short bar of iron for a hammer, they contrive to forge such tools and weapons as are sufficient for their carpentering, husbandry, and warfare. They can also cast rings and trinkets of brass and iron, and form coarse earthenware; but in dyeing and weaving they excell. Their cotton cloths are not only durable, but such as Europeans think worth purchasing at a high price, (Dalzel, p. 24;) and their blue and yellow dyes resist both acids and light. (Robertson, 264.) Another kind of cloth, called Grass-cloth by the traders on the coast, is manufactured from the outer integument of palm-leaves, split into thin shreds, and woven into a very pliant delicate kind of matting, which supplies them with an article of clothing much cooler and lighter than the coarse calicoes worn by the populace.

ion.

The superstitions of this and the neighbouring tribes are ill understood, because the habits and inclinations, as well as acquirements, of those who had opportunities of making inquiries, were not calculated to encourage any communications on the part of the Priests, the only persons deeply versed in such mysteries. The utmost knowledge of the language also which Europeans usually attain, must be very insufficient for the explanation of the abstract ideas almost inseparable from Religious speculations. Other grounds might also be alleged, to account for the obscurity in which the Religious opinions of the Negroes are involved. The worship of the heavenly bodies, and any natural object distinguished by its power or magnitude, with a belief in the invisible agency of spirits supposed to reside in such bodies, and the use of charms as a protection against human or spiritual enemies, seem to form the basis of the Negro creed throughout Africa. Particular trees, rocks, beasts, &c. are considered as the representative or abode of a Deity, and are therefore supposed to possess his power. Charms, or amulets, obtained from Mohammmedan traders from Málí,* are also considered as highly potent. These objects of veneration have been confounded by Europeans under the name of the *fetish*, a corruption of the Portuguese word *feitiço*, "a charm," not an idol, as has been sometimes supposed.

The Tiger is said to be the principal object of veneration in Dà-hómè, as the Boa Constrictor, called by them *Daboa*, (Isert's *Reise nach Guinea*, p. 150,) is in Wídáh. Rude, misshapen idols of wood or stone, are seen in their houses, and anointed with palm oil, or the yolk of an egg, as is usual among the people on the banks of the Zaïre; perhaps for the purpose of attaching feathers, rags, or other decorations to these images of a divinity. Libations of unctuous matter upon sacred stones, form a conspicuous part of the Hindû worship; and the suspending of votive offerings on the shrines of beatified Saints, is a daily practice in Italy and Greece, even in the present times. The Mohammedans have also kept pace with the Christians; and their Sheïkhs and Morábits are honoured by votive rags and tatters, if not by wax eyes and noses decked with bows of pink riband. The worship of a Tiger seems to imply something ferocious; and, accordingly, we find the religion of Dà-hómé polluted by human sacrifices.

At their annual Festivals, called *Customs* in the meagre dialect of the traders on this coast, hundreds are said to be immolated; and the atrocities committed at Agbóme on those occasions, bear a strong resemblance to the scenes described by Mr. Bowdich, as occurring at Kumásí.

Festivals.

Those rites, which are usually celebrated soon after the winter solstice, appear to have originated in a desire to soothe the manes of departed ancestors by "watering their tombs" with the blood of their enemies. Every fourth day of the month during which the Festival continues, is marked by some public exhibition; one for singing and dancing; another for a banquet in the market-place, at which all the grandees and "Ambassadors from foreign States," says Mr. Dalzel, (p. 22,) "are feasted by the King, whose women, dressed in their best clothes, come in procession, bringing abundance of savoury dishes, and plenty of *pitto*, (a kind of beer,) for the guests and the populace." At the close of these festivities, the more distinguished among the spectators repair to a stage, 100 feet by forty, and about ten feet high, where strings of coral and kauries, pieces of silk, broad cloth and cotton, pipes, tobacco, spirituous liquors, and other luxuries are piled up. The floor is spread with cloths, and the rails round the stage are adorned with flags, streamers, and parasols of various colours, some of gold and silver tissue; and, placed under this splendid canopy, the Monarch enjoys the satisfaction of his courtiers, who each, according to his rank, chooses some object from the tempting heap before him. Kauries and other articles are then thrown over to the multitude, who scramble for them; and, to close the whole with something peculiarly brilliant, various animals, of which one, at least, is a human being, are hoisted over, tied and bound ready for the executioner. (Dalzel, p. 23.) To judge from Norris's report, (Dalzel, p. 147,) these victims are literally torn in pieces by the multitude; but it is evident that he speaks only from hearsay; and it is worthy of remark, that not any of the accounts of the excessive numbers of the human beings massacred on these occasions, seem to rest on better authority: the largest number murdered at one time, of which we have any credible account, was only sixty-five. (Macleod, p. 60.) The heads of the victims are cut off and preserved as trophies; and their bodies, as some of our authorities believed, are torn to pieces and devoured by the populace: but the cannibalism of the Dà-hómeans is a very dubious point.

Human sacrifices.

* Márí or Málí, as Ibn Batútah spells the word, is evidently the Melli of Idrísí and Leo Africanus, who, as a native of Barbary, pronounced *a* like *e*. The adjective derived from it is Malâwa, which rapidly uttered sounds like Malawwa; hence the *Mallowa* of Mr. Bowdich, and the *Malays* of the older writers on Guinea. The vocabulary given in the account of Ashantee belongs to the language of Kashnah, Haüsah, &c. and shows where Málí or Melli should be placed in the map.

DAHOMY. Government.

The superstitions of this people are, as is usually the case, subservient to the interests of the despotism under which they groan. They appear to have a body of Priests who regulate and conduct their religious rites, and are venerated and consulted by the King, whose authority they uphold. But nothing like any precise or distinct information on these matters, can be gathered from the loose hints scattered through the narrations hitherto published. The life and property of every subject, be his station what it may, is at the disposal of the Sovereign. The most degrading postures and ceremonies are used in his presence, to mark the entire devotion of his servants. His ministers crawl on hands and knees, when they approach his throne; and, rubbing their heads in the dust, receive his Royal fiat. But, absolute as this Monarch is, his power seems in one instance to be limited. He cannot cut off his Tamegan, or Prime Minister's head, as soon as the whim seizes him. By what process that great personage is brought to condign punishment when guilty of any delinquency, our informers have forgotten to inquire or mention; but it is clear that his Majesty may use him with personal violence, as often as he pleases. This privileged Officer, together with the Méhú, or Master of the Ceremonies, possesses another important prerogative, that of selecting one of the King's sons at his decease as his successor; a privilege which might be turned to the best account, if any Europeans, resident in the country, had influence enough with those Chiefs to suggest their binding the Prince, whom they choose by a compact which would require him to consult the good of his subjects. The Mehu, or third person in the State, is the Grand Chamberlain of the Court of Dà-hómé; the *Arbiter elegantiarum*, and Head of the Foreign-office; for all Ambassadors are placed under his protection. He and the Tamegan are also the Chief Justices and Arch-informers of the land, sitting in judgment in all criminal cases, and conveying daily reports of every thing that passes to the Royal ears. The Agáú is the Commander-in-chief; the Jahú, or Master of the Horse, is Executioner-general, who has it particularly in charge to inflict due chastisement on such women as neglect their work in the plantations; for here, as elsewhere, among other savages, field labour devolves upon the weaker sex. The Viceroy of Hwídáh is entitled the Yavú gah, or Captain of the White Men, from his superintendance over the traders frequenting that place.

Officers of State.

Classes.

The people are said to be divided into three hereditary classes, a remarkable distinction, deserving of accurate investigation, and, if clearly established, affording another point of coincidence between these Negroes and the ancient Egyptians, in addition to those already pointed out by Howdich, in a Tract on that subject. The merchants are the first, the military the second, and the mechanics the third class. In time of war, the soldiers receive a regular pay; as do their Officers also in time of peace. Taxes, in kind, are paid on almost every thing, especially on merchandise, and levied by Officers expressly appointed for [illegible], but the largest sums are received in the form of voluntary gifts from foreign merchants, and the presents of the court.

Revenue.

Children.

[illegible] extraordinary tax, however, and the most [illegible] laid by the King to all the children [illegible] says Norris, (Dalzel, 122,) "have no sort of property in their children in the Dà-hómean territories; they belong entirely to the King, are taken from their mothers at an early age, and distributed in villages remote from the places of their nativity, where they remain subject to his future approbation of them, with but little chance of their being ever seen, or at least recognised by their parents afterwards." What is meant by their "remaining subject to the King's approbation of them;" what becomes of them, if not approved, and how they are maintained, before and after the sentence of approbation or disapprobation is passed, we nowhere learn. This practice is, even in idea, so repugnant to the most powerful feelings common to all mankind, and implies so much more of an anticipating calculating policy than is usually found among savages, that it must, at first sight, startle every cautious reader; and when we find that another person who resided for several months at or near Wídáh, (Macleod, *Voyage to Africa*, p. 52,) "never saw or heard of any case of it, we may safely agree with him in "thinking that Mr. Norris must have been mistaken." The same may be said of the many voluntary and involuntary immolations of human beings at the Royal obsequies; when, according to one account, (Norris, in Dalzel, p. 151,) the wives and concubines of the deceased Monarch murder each other; and, according to another, (Labarthe, *Voy. à la Côte de Guinée*,) twenty-four of them are buried alive with the Royal corpse, while the men who dug the grave are beheaded, and their carcases are thrown to the dogs and vultures.

States connected with Dahomy

The following States have been all more or less connected with Dà-hómé at different periods: 1. Kità, (*Cotò*, *Quittà*, and *Keeta* of some maps,) near the mouth of the Volta; probably a part of Krepé, or Kerapé, on the western frontier of Dà-hómé. "This town is held by the Daws," says Robertson, (p. 232,) "in very abject subjection; thewhole trade being monopolized by the Governor, who absorbs all the profits. The natives appear to have an excellent character." 2. Agunáh, or Aúnáh, further from the sea, but near the lagune called Amù, is said to be a large and populous town, the inhabitants of which are principally employed in their salt-works. 3. Crepé, the Capital of the Kingdom, to which these towns probably belong, is ten days journey (150 to 200 miles) from the shore. The territory round it appears to be well cultivated, and its people industrious. They are remarkable for their gentleness and reserve; the latter, a quality foreign it may be thought to the Negro character. 4. The Mahís seem to come next to Crepé on the north, and beyond them are (5.) the Tappahs, or Takpamahs, a powerful people, Lords paramount even of the Ayos, to whom the King of Dà-hómé is tributary. (Dalzel, p. 229.) To the north of Dà-hómé, a town named (6.) Bogadò is marked in Norris's Map; and further to the east (7.) Ketu, a town well fortified and celebrated for its manufacture of red cotton cloths. (Dalzel, p. 201.) On the north and east, are (8.) the Ayos, (Eyeoes or Ioes, as the same sounds are variously expressed,) the Masters of the Dà-hómeans, and apparently in a much higher state of civilisation. Proceeding along the shore, from the Rio da Volta to the Rio dos Lagos, we have, forty miles to the east of Kità, (9.) Amíhó, or Little Papà, (Popo,) on the narrow strip of land between the lagune and the sea. Its inhabitants, about 4000, are industrious, and have

attended more to agriculture since the suppression of the Slave trade. Gold, fine cloths of native manufacture, and articles worked in iron and brass, brought from Takpamah and Mahí, may be procured there. (Roberts. 235.) Grighi, Waché, the abode of a Fetish-man, or Priest, and Zado, are towns belonging to this State, but three or four days journey (ten to fifteen miles) from the sea. 10. Great Papà, or Ifia, on an island near the entrance of the Músuï, or Monù, is little frequented by Europeans. 11. Wídáh, (or Fídáh,) once the most powerful of these States, is now only a small town dependant for protection on Gríhwí, (Grigwee.) Its Capital was formerly Sabí (the *Xavier* of the French,) seven miles from the beach. The Evú-gáh, or Superintendant of the Whites, is stationed at Gríhwí; and there are three European forts there, two of which have been for several years abandoned. Thirty miles to the east of that town is Porto Novo, a Portuguese slave factory, and the port of Aladà (Ardrah) on the Rio de Lagos, the second town in size and importance near this part of the coast. It is about fifteen miles from the coast, is tolerably regular, has wide streets, and a population of 10,000 or 15,000 souls, under the particular protection of the Ayos. It is the great mart for slaves, and is much frequented by the Ayos, whose country is seven days journey (120 to 140 miles) distant across the great River Azewoa, (probably a branch of the Benin River,) and possibly the outlet of the Niger running to the south-east. 12. Badághí (Badagree) is twenty miles to the eastward of Porto Novo, on the banks of the Lagos River, seven or eight miles from the shore. It is not much resorted to by Europeans. (Roberts. 283.)

;uage.

The origin and affinities of these Negroes can only be imperfectly conjectured. Their language, an unerring guide in such cases when cautiously used, has been scarcely mentioned by those who were best acquainted with it. Dalzel (*Introduction*, p. 5) says that "the language of Dà-hómé is that which the Portuguese call *Lingoa geral*, or general tongue, and is spoken not only in Dà-hómé Proper, but in Wídáh, and the other dependent States; and likewise in Mahee and several neighbouring places. But this leaves his readers entirely uncertain, whether this *lingoa geral* is a sort of *lingua franca*, current in these countries, or the mother tongue of the natives. Norris (*Reign of Bossa Ahadee*) comes a little nearer to the point when he tells us, that "the language commonly spoken in the Kingdom of Dà-hómé is that of Ajirrah, or the proper dialect of the Kingdom of Ardrah, the territories of which once extended from the River Volta to the Lagos. It is still spoken, with, occasionally, some provincial peculiarities, throughout all that tract of country. Ajirrah was, before the conquest of Ardrah by the Dà-hómeans in 1724, a large and populous town, and is still not inconsiderable. It is about seven hours (twenty-five or twenty-eight British miles) from Gríhwí, or Grigwee, (*Gri-whi*,) the Capital of Whydah, or Wídáh." It may be inferred, therefore, that Crepé, Fúng, Mahí, and Wídáh are all different branches of the same people. Dialogues in this language may be found in Des Marchais, (iv. 670;) and the numerals, with a short Vocabulary, are given by Oldendorp, (Adelung's *Mithrid.* iii. 206,) and Roberts. (275.) In the Crepé and Badághí dialects, the former are also furnished by Bowdich, (*Appendix*, No. vi. 11, and 27.) It is soft and harmonious; most of its words end in vowels, (Roberts. 283,) and it is free from the nasals and gutturals so prevalent in the dialects used to the westward of Acra, (Macleod, 95;) that is, the languages belonging to the Fántí family.

DAHOMY.

History.

The history of a tribe of ferocious savages can seldom be traced beyond one or two centuries, and is marked by nothing but a series of wars and massacres. Trudo Audati, the fourth King of Dà-hómé, and the first of whom we have any account, began to reign in 1708, and constantly followed up a system of conquest and aggrandizement which made him the terror of his neighbours, and, in less than twenty years, master of several petty Kingdoms on the coast. He was a man of talents, as well as resolution; and knew how to avail himself of the weakness and divisions of the adjoining States. He seems to have had a mind superior to that of a mere freebooter; and might, perhaps, have derived solid advantages from his intercourse with the White Men, whom he treated with the greatest attention, (Snelgrave, *passim*,) had it not been their interest to foster his love of war and conquest, in order to keep up a constant supply for the traffic in which they were engaged. This warlike, restless Chief appears to have died a natural death in 1732. He was succeeded by one of his younger sons, Bossa Ahadí, a merciless tyrant, who possessed all the vigilance, but few of the other good qualities of his father. The people on a part of the coast, under the command of a veteran leader, for several years maintained their independence, and would, probably, have succeeded in cutting off all communication between Ahadí and the shore, but for the assistance of the English fort at Wídáh; the guns of which gave his enemies "a very warm reception; for, however exceptionable the King's treatment of his own people might be," says Mr. Norris, (Dalzel, 103,) "the Whites had nothing to reproach him with in his conduct towards them; to whom he had ever been respectful and generous to a degree of profusion. In all disputes between them and his subjects, if they had but *the colour* of justice on their side, he determined in their favour." This worthy coadjutor of the slave-dealers in the service of the African Company, died on the 17th May, 1774, after having reigned forty-two years. Much as he was dreaded by his southern neighbours, Ahadí could never successively resist the Ayos, who drove him into a lurking place in the woods, and overran his whole Kingdom in 1738; continuing these destructive invasions annually; till, at length, in 1747, they consented to such terms as he could fulfil; for the arrears of tribute, previously demanded, had exceeded all bounds; such was the magnitude of the treasures which they supposed him to derive from his trade with the Europeans on the coast. (Dalzel, 74.) Adahúnzù, his successor, one of the most cruel and treacherous fiends who ever sat upon a throne, incessantly laboured to increase his territory near the sea; actually made himself master of some towns to the east of Wídáh, and would, perhaps, have succeeded completely in his designs, had not the Ayos interfered. This monster died of the small-pox, on the 17th April, 1789, and was succeeded by Hwí-nú-hiù, who, on ascending the throne, assumed the title of *Se-do-zau*, signifying, "*Wherever I rub I leave my scent*," one of the *strong names*, as a writer in the *Quarterly Review* has justly observed, (Dalzel, 190,) so much admired in the Dà-hómean Court. This Chief began his reign

DAHOMY. DAINT.

by declaring his intention of governing with the strictest impartiality; wisely listening to the advice of an aged and faithful minister, and removing most of the grievances by which his subjects had so long been oppressed.

Popo and Arder (Ardra) are the only places on this coast known in the time of that laborious compiler Dapper, (*Beschryvinge van Africa*, t'Amsterdam, 1676.) See also Labat's *Voyage du Chevalier des Marchais en Guinée*, Paris, 1730, 4 vols. 12mo; Snelgrave's *Account of Guinea*, Lond. 1734, 8vo; Smith's *Voyage to Guinea*, (in 1726-7,) Lond. 1745, 8vo; Atkins's *Voyage to Guinea*; Bosman's *Beschryving van Guinese Kust*, t'Utrecht, 1704, 4to, (he knows scarcely any thing of Dà-hómé;) *Relation des Côtes d'Afrique appelées Guinée, par* Villault, Paris, 1699, 12mo; Norris's *Memoirs of Bossa Ahadee*, Lond. 1788, 8vo; an abstract of it is contained in Dalzel's *History of Dà-hómé*, Lond. 1793, 4to, only a small portion of this work was written by Dalzel, (the Introduction, i.—xxvi. and the Conclusion, 224—230.) From p. 1—155, was written by Norris; from 156—224 by Abson; and the Preface by Captain Joseph Fayrer. They had all been on the spot engaged in the African Company's service. *Voyage à la Côte de Guinée, par* P. Labarthe, Paris, 1803, 8vo; *A Voyage to Africa*, by J. Macleod, M. D. Lond. 1820,—a paltry compilation, of which even the plates are copied from Dalzel. Macleod had been at Widáh in 1803, but had evidently kept no notes, nor made any worth keeping.

DAINT, *adj.*
DAINT, *n.*
DA'INTY, *adj.*
DA'INTY, *n.*
DA'INTEOUS,
DA'INTEOUSLY,
DA'INTIFUL,
DA'INTILY,
DA'INTINESS,
DA'INTREL,
DA'INTY-MOUTHED.

Dain, m.; *daine*, f. *Dainty*, fine, quaint, curious; (an old word.) Cotgrave. Skinner suggests the French *dain*; *Daim*, a deer; because its flesh has at all times, and in all nations been esteemed among the grandest delicacies or *dainties*. Minsheu,—*a dente*, a tooth; because *dainties* or delicacies are grateful to the teeth and palate. Casaubon,—from the Gr. *δαίν-υσθαι*, to feast, to banquet: but the Fr. derive from the Gr. through the medium of the Latin. The Goth. *dauht*, *epulum*, *convivium*, occurs Luke, c. 5, v. 29, and c. 14, v. 15; but no means of tracing the connection of the words have occurred. Mr. Tyrwhitt says, "*Deintee*, *n.* Fr., value, a thing of value. *Deinteous*, choice, valuable." *Dainty* is now used as equivalent to Delicate of taste, exquisite, elegant, nice, choice; and, emphatically, over-nice.

Of Dowel ne of Dobet. *daynte* me þouhte.
Piers Ploukman. Vision, p. 200.

Thenne was þis folk feyne. and fedde hunger *daynteous-liche*.
Id. Ib. p. 145.

Ful many a *dainte* hors hadde he in stable.
Chaucer. Prologue, v. 168.

They loved me so well by God above
That I ne tolde no *deintee* of hir love. [Set no value. Tyr.]
Id. Wif of Bathes Prologue, v. 5790.

Walter hir doth so faithfully plesance
That it was *deintee* for to see the chere [It was a valuable thing. Tyr.]
Betwix hem two, ain they ben met in fere.
Id. Clerkes Tale, v. 8988.

For trewlich, I hold it great *deinte*,
A king's sonne in armes wel to do.
Id. Troilus, book ii. v. 164.

And then to the souper al and some
Whan time was, ful soft they hem set
God wot there was no *deinte* ferre to fet.
Id. Ib. book iii.

Al ful of joye and blisse is the paleis,
And ful of instruments, and of vitaille,
The most *dainteous* of all Itaille.
Id. The Marchantes Tale, v. 9588.

But plainly for to speke of that
I not how thilke bodye fat,
Whiche thei with *deintie* meates kepe,
And laien it softe for to slepe,
Whan it hath elles of his will
With chastitee shall stonde still.
Gower. Conf. Am. Prologue, fol. 3.

There is no lust so *deintefull*,
Of whiche a man shulde not be full,
Of that the stomake vnderfongeth:
But euer in one myn herte longeth.
Gower. Conf. Am. book vi. fol. 133.

I haue seen very few men come to great proofe of either learning, wit, or virtue, that had bin *daintilily* brought vp.
Vives. Instruction of a Christian Woman, Z 2.

How iustly may this barbarous and rude Russe condemne the *daintinesse* and nicenesse of our captaines, who liuing in a soile & aire much more temperate, yet commonly vse furred bootes, and clokes.
Hakluyt. Voyage, &c. Richard Chanceler.

Perhappes some *daintie* nose, no batchelors button lykes
And some at pimpernell and pinkes, a slender quarell pykes.
A. W., In Commendation of Gascoigne's Posies.

And you, fair troop, if Thirsil you disdain not,
Vouchsafe with me to take some short refection,
Excesse, or *daints*, my lowly roof maintain not;
Peares, apples, plummes; no sugred made confection.
P. Fletcher. The Prize. Eclogue 7. st. 37.

Therefore to cherish him with diets *daint*,
She cast to bring him, where he chearen might
Till he recovered had his late decayed plight.
Spenser. Faerie Queene, book i. can. 10.

At mine own breast with care I fed thee still,
Letting thee suck thy fill;
And *daintily* I nourish'd thee
With idle thoughts and poetry!
Cowley. Love's Ingratitude.

DIC. Haile, fellow Hodge, and well to fare with thy meat, if you have any:
But by thy words, as I them smelled, thy *daintrels* be not manie. *Gammer Gurton's Needle*, act ii. sc. 1.

Why should you be so cruel to yourself,
And to those *dainty* limbs which Nature lent,
For gentle usage and soft delicacy?
Milton. Comus, l. 680.

True wisdom bids vs to this banquet haste,
That precious nectar may renew the taste
Of Eden's *dainties*, by our parents lost
For one poore apple.
Beaumont. In Spiritual Comfort.

But what befell these *dainty-mouthed* murmurers? Many they had their wish, they had flesh of the best, the flesh of quails sent them; but while the meat was in their mouths, the wrath of the Lord came upon them, and they died.
Mede. Works. On Texts of Scripture. Discourse 50. book i.

Your *dainty* speakers have the curse,
To plead bad causes down to worse;
As dames, who native beauty want,
Still uglier look, the more they paint.
Prior. Alma, can. 2.

Now rise, and haste to yonder woodbine bowers,
A soft retreat from sudden vernal showers;
The turf with rural *dainties* shall be crown'd,
While opening blooms diffuse their sweets around.
Pope. Pastoral 1.

And if we list to fare more *daintily*, we must either hunt for it, using craft and toil to catch it out of the woods, the water, the air; or we must carefully wait on those creatures, of which we would serve ourselves, feeding them that they may feed us.
Barrow. Sermon 18. vol. iii.

To paint thy grisly face, to dance, to dress,
And all those awkward follies that express
Thy loathsome love, and filthy *daintiness*.
Rochester. To Sir Car Scrope.

But nicer cates, her dairy's boasted fare,
The jelly'd cream or custard, *daintiest* food,
Or cheesecake, or the cooling syllabub,
For Thyrsis she prepares.
Dodsley. Agriculture, can. 3.

And now a maiden charg'd with golden ew'r
And with an ardent laver, pouring first
Pure water on their hands, supplied them next
With a bright table, which the maiden, chief
In office, furnish'd plenteously with bread
And *dainties*, remnants of the last regale.
Cowper. Homer. Odyssey, book iv. l. 63.

DA'IRY, DA'IRY-LOCK, DA'IRY-MAID, DA'IRY-WORK. } Sw. *dia, lactere. Radicem servat* L. Anglica, dug, *mamma.* Ihre. Goth. *daddjandei, mulier lactans, infanti lac præbens.* Junius. A. S. *diende, lactantes.* Lye, and Benson. The Sw. *deja, nutrix*, Dr. Jamieson says, has precisely the sense of *dey*, a dairy-maid, and is evidently allied to a variety of terms in the northern languages, which have a similar meaning. Isl. *dia, dy*; Sw. *di*, to suck; Sw. Goth. *degg-ia, daegg-ia*, to give milk, to suckle; Moes. G. *dadd-jan*, both to milk, and to suck.

Dey, in Chaucer, and *Day-woman*, Shakspeare, A *dairy-woman.*

Dairy (Low Lat. *daeria, dayeria,*) a place for preserving milk, churning it into butter, and making cheese.

For she was as it were a maner *dey*.
Chaucer. The Nonnes Preestes Tale, v. 14851.

That serchen every land and every streme,
As thikke as motes in the sonne-beme,
Blissing halles, chambres, kitchenes, and bowres,
Citees and burghes, castles high and towres,
Thorpes and bernes, shepenes and *dairies*,
This maketh that ther ben no faeries.
Id. The Wif of Bathes Tale, v. 6553.

As one who long in populous city pent,
Where houses thick and sewers annoy the aire,
Forth issuing on a summer's morn to breathe
Among the pleasant villages and farms
Adjoined, from each thing met conceaves delight,
The smell of grain, or tedded grass, or kine,
Or *dairie*, each rural sight, each rural sound.
Milton. Paradise Lost, book ix. l. 451.

But woe betide the silly *dairy-maids*,
For I shall fleet their cream-bowls night by night,
And slice the bacon flitches as they hang.
Grim. The Collier of Croydon, act iv. sc. 1.

The men there, leaving their wives and younger children below, do not without some difficulty, clamber up the acclivities, dragging their kine with them, where they feed them, and milk them, and make butter and cheese, and do the *dairy-work.*
Ray. On the Creation, part ii.

Few cows were bred up for the *dairy*, more than served consumption within.
Sir William Temple. On Adv. of Trade in Ireland.

When we had sate up all night at ombre in the country, and we were hungry towards morning, he plucks me out, I vow to Gad I tell you no lie, four ten-penny nails from the *dairy-lock* with his teeth, fetches me out a mess of milk; and knocks me'um in again with his head, upon reputation.
Dryden. The Wild Gallant, act iii.

If the *dairy-maid* does not make her butter come so soon as she would have it, Moll White is at the bottom of the churne.
Spectator, No. 117.

The compartments between the avenues are railed off, and laid down in pasture and meadow, for the supply of the large *dairy* of cows established here by the present king.
Swinburne. Spain, Letter 38.

The cook sold it with some kitchen fat to the postillion for a groat; who truck'd with the *dairy-maid* for something of about the same value.
Sterne. Tristram Shandy.

DAIS, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Thymeleæ*. Generic character: involucre four and five-cleft; corolla four and five-cleft; stigma capitate; berry one-seeded; stamens sometimes eight.

This genus (allied to *Gnidia*) contains six species, natives of the East Indies.

DAIS, or DEIS,—*Dasium*, a word concerning the Etymology of which Du Cange is doubtful. Meursius derives it from *Dagus, ἑτισέλλιον, subsellium.* Dais, however, as Du Cange shows from a passage in Matt. Paris, (*de vitis Abbatum S. Albani*, 92,) has a widely different meaning. The newly elected Abbot, says the Historian, *Solus in Refectorio prandebit supremus, habens vastellum, Priore prandente ad magnam mensam, quam Dais vulgariter appellamus*; for the Dais, continues Du Cange, is the name given by the French to a Canopy suspended over a banqueting table.

Tyrwhitt, again, derives it from the French *ais, assis tabula*; and thinks it was at first written *d'ais, ex assibus*; but the old spelling *Dois* will not permit this Etymology. Menage brings it from *Dossium* or *Dossum* for *Dorsum.* Be this as it may, Dais is commonly used for the upper table raised on a platform more elevated than the others, which probably at first was placed under a Canopy. Pinkerton considers it to be the *elevated floor* only. Ritson (*Met. Rom. ad voc. Deys*) holds it to be indifferently the *floor* and the *Canopy.*

DA'ISY, DA'ISIED, DA'ISY-MEAD, DA'ISY-PAINTED. } A. S. *dæyes-eage*, i. e. *days-eye.* And Chaucer in Prologue to *Legend of Good Women.*

That well by reason men it call may
The *deisie*, or els the *eye* of the *day.*

This Etymology was suggested to Skinner by Dr. Thomas H(enshaw;) but Skinner himself adopts Fr. *dais*, a canopy. (See DAIS, above.) *Propter aliquam in flore talis umbellæ similitudinem,*

B. Jonson writes *dayes-eyes.* See under DAY.

Now haue I than eke this condicion,
That of all the floures in the mede,
Than loue I most these floures white & rede,
Such that men callen *daisies* in our toun.
Chaucer. The Prologue.

Amongst the roses in a row,
Next place I pinks in plenty,
These double *daisies* then for show,
And will not this be dainty?
Drayton. The fifth Nymphal.

And therefore went unto these homely townes,
Sweetly environ'd with the *dazied* downes.
Brown. Britannia's Pastorals, song 4. book i.

The silent heart, which grief assails,
Treads soft and lonesome o'er the vales,
Sees *daisies* open, rivers run,
And seeks (as I have vainly done)
Amusing thought.
Parnell. Hymn to Contentment.

DAISY. — DALE.

The gentle pair that in these lonely shades,
Wand'ring, at eve or morn, I oft haue seen,
Now, all in vain, I seek at eve or morn,
With drooping wing, forlorn,
Along the grove, along the *daisied* green.
Langhorne. Monody sung by a Redbreast.

For him the rustic hind, and village maid,
Stripp'd the gay spring of half its bloom and shade,
With annual dances grac'd the *daisy-mead*,
And sang his triumphs on the oaten reed.
Cawthorn. Nobility.

Why lives thy soft divinity where woe
Heaves the pale sigh, and anguish loves to glow?
Fly to the mead, the *daisy-painted* vale,
Breathe in its sweets, and melt along the gale.
Id. Abelard to Eloisa.

DALACIA, in *Zoology*, a genus of bivalve shells belonging to the family *Mytilidæ*, established by Mr. Gray in the *Annals of Philosophy*, for a species of shell which had hitherto been confounded with *Crenatula*.

Generic character: shell bivalve, valves equal, flat, foliaceous, gloss-like, umbones placed toward the anterior edge; the hinge linear, marginal, crenulated, cells serial, containing the elastic ligament; ligament marginal, external.

One species only is described, *D. polium*.

This shell was very prettily figured in the *Journal of Sciences and Arts*, vol. xxv. tom. 2, fol. 81, under the name of *Crenatula*.

The only specimen at present known of this interesting shell, is in the collection which the Rev. Mr. Cracherode presented to the British Museum.

This genus differs from *Crenatula* in the same manner as *Modiola* does from *Mytilus*, that is, by the position of the umbones; it is also very distinct in its texture, colour, and form, from any of the species of that genus.

DALBERGIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosa*. Generic character: calyx obsoletely five-toothed; pod oblong, leafy, flat, not bursting; seeds one or two.

Eight species, native of tropical climates. Persoon, *Syn.*

DALE, Goth. *dalei*; A. S. *dal*; Dutch, *dal*; Ger. *thal, tahl*. *Locus declivis*. The Dutch have the verb *dal-en, descendere, demittere se*; to descend. Junius seems to suspect some connection with A. S. *dæl-an*, to deal, to divide, to distribute. *Dal*, he observes, is used for the infernal pit; but it does not seem easy to trace this supposed connection.

The low ground between ground ascending around or on various sides of it.

Neuer bifor in Wales was don so grete greue,
Bi downes & bi *dales*, þar folk at suilk mischeue.
R. Brunne, p. 91.

Forthe she flewe the gentil nightingale
To all the birds that were in the *dale*.
Chaucer. The Cuckow and the Nightingale.

Thus (er he wiste) into a *dale*
He came, wher was a litell plaine,
All rounde aboute, well beseyne
With bushes greene, and cedres hie.
Gower. Conf. Am. book i. fol. 10.

For the bottome of the sea holding like shape and forme as the land, being full of hils and *dales*, and ragged rocks, suffereth you not by your soundings to know and keepe a true gesse of the depth. *Hakluyt. Voyage, &c. M. Frobisher*, vol. iii. fol. 87.

A litle lowly hermitage it was,
Downe in a *dale*, hard by a forrest's side,
Farre from resort of people, that did pass
In trauell to and froe.
Spenser. Faerie Queene, book i. can. 1.

With easy pace some climb promotion's hill, DA
Some in the *dale*, do what they can, stick still.
Howell. Letters. A Poem to his Majesty. DA

And in the first place, as to the business of ornament, beauty, CAR
and pleasure, I may appeal to all men's senses, whether the grateful variety of hills and *dales*, be not more pleasing than the largest continued plains.
Derham. Physico-Theology, book iii. ch. iv.

Hark! how the airy echoes talk along
With undulating answer, soft or loud,
The mocking semblance of the imag'd voice,
Babling itinerant from wood to hill,
From hill to *dale*, and wake their sisters round,
To multiply delight upon the ear.
Thompson. Sickness, book v.

DALEA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: flowers in a spike; calyx glandular, obsoletely five-cleft, wings and keel joned to the undivided column of stamens; pod one-seeded, included in the calyx.

Thirteen species, natives of North and South America. Persoon.

DALECARLIA, an extensive Province of Sweden, bordering on the mountains of Norway, and bounded on the north by Herjedalia, on the east by Helsingland, and on the south by Westmania or Westmannland. The Province has also been known by the names of *Dalland, Thalland*, and *Dalarne*; and since the recent division of the Swedish Monarchy, it has been called Stora-Kopparberg, or the Government of Fahlun. It is 340 English miles in length, and from 40 to 50 in breadth; and its extent is stated, in the table drawn up a few years since by the Swedish Topographer, M. Akrell, at 12,727 square English miles, and the surface of the water at 398. The population a few years since was stated at 124,800, which is nearly ten persons to each square mile, or about a twenty-second part of the average for the whole of England. Situat extent popul

That part of this Province which borders upon Norway rises into mountains, but the other districts are variegated with hills and vallies; and from this circumstance its appellation of Dalarne, which in Swedish signifies "The Vallies," was derived. It is not so much covered with wood as several other parts of the country; and as it lies on the eastern side of the Norwegian mountains, from which the waters descend into the Baltic and the Gulf of Bothnia, it is watered by several streams; the two principal of which are the Dal and the Ljusne, besides several lakes. The chief of these, the Dal, rises near the borders of Norway, about the sixty-second degree of latitude, and after flowing in the south-east and east directions through a course of about 250 miles, it falls into the Gulf of Bothnia. Before it reaches the sea, it presents a cataract little inferior to that of Schaffhausen, the breadth of the river being about a quarter of a mile, and the heighth of the fall forty feet. The surrounding scenery is also well adapted to increase the effect of the dashing torrent. The estuary of the Dal is full of islands, and so much incumbered with rocks, that it cannot be rendered subservient to the purposes of navigation. The Ljusne is also a large river; the waters collected in its course from the Norwegian Alps, form a vast torrent, impetuously rolling into the Bothnian Gulf. It also expands into several beautiful lakes in its course. The climate of Dalecarlia is comparatively mild, and allows some of the common Surface Rivers Dal Ljusn Clima

ALE-RLIA. agricultural crops of the more southern districts of Europe to ripen. Fine fields of barley and rye are plentiful in the southern parts, and the potato is cultivated with great success. Lime trees, elms, and maples, also flourish in the sixty-second degree of latitude. Agriculture, however, has not made great progress; but this is rather to be ascribed to other impediments than to atmospheric influence; the unsettled state of property, the want of roads, the habits of the people, have all been checks upon the advancement of agriculture. Mines and pasturage constitute the chief wealth of the Province, particularly copper, which is worked to a great extent near Fahlun and Afvestad, which have long been considered as the great Swedish depôts of this metal. The mine near Fahlun has been worked for several centuries, but now yields less than formerly. The metal is not found in veins, as in most other places, but in large masses; and the whole of the ore seems originally to have formed a vast cone, with its apex downwards. It was a long time worked with so little care, that the upper part ultimately fell in. The rubbish, however, has long since been removed, and the mouth now presents an opening of about three quarters of a mile in circuit, and 200 fathoms in depth. The descent into this yawning gulf is by an easy winding flight of steps. The galleries are spacious, some of them being thirty feet high. According to the statement of Dr. Thomson, the number of miners employed in 1813 was only 600, though it has previously been much greater. Dalecarlia also contains several other mines of iron, copper, and lead; and to these last, the Swedes generally gave the name of Silver mines, as it is chiefly for the sake of this latter metal, which is contained in the ore of the former, that they are worked. The whole of the copper obtained in Dalecarlia may be estimated at one-tenth of that which is produced by England. The only place in Sweden wherein tin has been found is in this Province, in the vicinity of Fahlun. A few years since there were likewise a great number of iron mines, smelting-houses, and forges in Dalecarlia, and the annual produce was estimated at about 56,000 tons.

The whole of this extensive Province, which is about half as large again as Wales, contains no more than three towns, the united population of which is stated by Swedish authors at less than 6000 individuals. These are Fahlun, Hedemora, and Soter. Fahlun, the Capital of the Province, and the chief town in the mining district, is situated about 160 English miles north of Stockholm; and, with the exception of the churches and a few houses built of brick, and roofed with sheets of copper, the buildings in general are constructed of wood. Most of the inhabitants are connected either with the mines or the forges, the latter of which gave the town itself a very sombre appearance. Fahlun is chiefly surrounded with mountains, clothed with pines, and contains nearly 5000 inhabitants. Hedemora is a small town about fifty miles north-west of Fahlun, but contains nothing remarkable. Soter is also a small place, near one of the most productive iron mines in the Province.

The Dalecarlians are a tall, well-made, and robust race of men, equally distinguished by their bravery and their independence. They first rose into distinction during the struggles of Gustavus Vasa, who by their assistance was enabled to free his country from a foreign yoke. In consequence of the fidelity which they then exhibited, and of the concealment of Gustavus amongst them, the Dalecarlians still retain a personal privilege of which they are very naturally most proud. Whenever they meet the reigning Monarch they are permitted to take him by the hand. They have also afforded essential services to their Monarch in emergences since that period; and constitute a set of men very different in habits and appearance from the rest of the Swedes. Considerable numbers in Stockholm undertake the office of porters and labourers, as the Highlanders do in Edinburgh, and the Irish in London. They always retain the peculiar dress of their country, which it is said, has undergone no change since the time of Gustavus Vasa. The men wear long, whitish grey, coarse coats, with buttons seemingly of horn or leather, and in shape somewhat similar to the English jockey coat, but more clumsily made. A thong of leather serves them by way of girdle. Their hats have somewhat the appearance of those which our Quakers wear.

DALECHAMPIA, in *Botany*, a genus of the class *Monœcia*, order *Monodelphia*, natural order *Euphorbiæ*. Generic character: male flower, umbell one-flowered; involucre two-leaved; proper calyx five-leaved; filaments many: female flower, florets three; involucre five-leaved; style filiform; capsule three-celled.

Eleven species, natives of tropical climates. Persoon.

DALIBARDA, in *Botany*, a genus of the class *Icosandria*, order *Polygynia*. Generic character: calyx inferior, five-cleft, spreading; petals five; styles five to eight, long, deciduous, seeds dry.

Three species of herbaceous plants, natives of America.

DA'LLY, DA'LLIANCE, DA'LLIER, DA'LLYING, DA'LLYINGLY. Skinner thinks from the A. S. *dole*, foolish, dull: and this Tooke considers to be the regular past tense and past participle of *dwel-ian*, *dwolian*, *hebere*, *hebetare*, to be or cause to be *dull*; and hence, to *dally* will be

To act like one *dull* or foolish; like a *dolt* or simpleton; to waste or idle away time; to spend time in wanton or idle amusements, to trifle, to sport, to frolick.

> And ouer this, in her *daliaunce*,
> Lowly she is, discrete and wise
> And goodly gladde, by attemperaunce.
> *Chaucer. The Floure of Curtesie.*

Here if I shuld brynge i the dyuerse metynges of the sayd pryncys, and the curyouse seruycys y^t eyther causyd other to be fed and seruyd w^t, within eyther of theyr tentys, or of theyr *dalyaunce* or passe tymes cõtynuyng the season of theyr metynges, &c. it wolde aske a longe tracte of time.
Fabyan. Anno 1396.

> ——— And (all too late) I see
> That lingring life doth *dally* but in vaine
> For Atropos will cut the twist in twaine.
> *Gascoigne. Hearbes.*

Wher as he doth but *dalliengly* perswade, they may enforce & compel. *Bale. Image*, part 2. G. 1.

> And who (as let in lease) do farm the crown,
> And joy the use of majesty and might;
> Whilst we hold but the shadow of our own,
> Pleas'd with vain shows, and *dallied* with delight.
> *Daniel. The History of the Civil War*, book ii.

> For so to interpose a little ease,
> Let our frail thoughts *dally* with false surmise.
> *Milton. Lycidas*, l. 153.

> ——— Know, most unworthy man,
> So much we hate the baseness of thy lust,

DALLY. — DALMATIA.

As, were none living of thy sex but thee,
We had much rather prostitute our blood
To some envenom'd serpent, than admit
Thy beastial *dalliance*.
Ford. Love's Sacrifice, act ii. sc. 3.

And yet they be the greatest makers of love, the daylie *dalliers* with such pleasant wordes, with such smiling and secret countenances, with such signs, tokens, wagers, purposed to be lost before they were purposed to be made.
Ascham. The Schole Master.

These great men's dissensions awakened Nero, fearing lest the Britaines, thereby would be more forward to advantage, with whom experience had shewed there was no *dallying*.
Speed. The Romans, book vi. ch. viii.

[A soul] guiltless of hate, and proof against desire;
That all things weighs, and nothing can admire:
That dares prefer the toils of Hercules
To *dalliance*, banquets, and ignoble ease.
Dryden. Juvenal. Satire 10.

Is there now any *dallying* in such a matter as this?
Sharp. Sermon 13. vol. vii.

Let me not *dally* with my queen's distress.
What were it, but to lift incumbent woe,
That it might fall more grievous.
Smollett. The Regicide, act iii. sc. 2.

From pleasing *dalliance* with the charms of night,
[Urania] my wandering thought recalls, to what excites
Far other beat of heart! Narcissa's tomb!
Young. The Complaint. Night 5.

Situation, extent, and population.

DALMATIA, a Province of the Austrian Empire, with the title of Kingdom, stretching through about three degrees of latitude, along the eastern side of the Adriatic Sea. This region formerly belonged to the Venetians, and is therefore frequently called Venetian Dalmatia. This tract contained, in 1816, a surface of about 5850 English square miles, and a population of 295,089 individuals, according to the statement of Blumenbach. Besides the country to which the name of Dalmatia is now generally applied, it has sometimes been understood, as including a much wider space, embracing the territories of Ragusa and Cattaro, with a part of Bosnia and Albania, which was also called Lower, or Turkish Dalmatia, with the Littorale, or Hungarian Dalmatia. The term Dalmatia appears to have been derived from the ancient Capital, *Delmium*, or *Delminium*; and the country still exhibits many vestiges of antiquity, which indicate a more flourishing period than recent ages have witnessed. During the latter part of the Roman power it suffered greatly from the inroads of barbarians, and after a series of vicissitudes, was in the XIIth century incorporated with the Kingdom of Hungary. Even at that period the Venetians occupied a part of the sea-coast; and during the XVth century they conquered the interior, which remained in their possession till the events occurred which erased their name from the list of European States. By the treaty of Campo Formio, in 1797, the whole of Dalmatia was placed under the dominion of Austria; but after the fortune of war had declared against that power, in 1805, this new accession was transferred to Buonaparte, who first incorporated it with the Kingdom of Italy, and subsequently united it with the Illyrian Provinces. The southern part, especially Cattaro, during the following year, was seized by the Russians, who retained it till the peace of Tilsit, in July 1807. In this state Dalmatia continued till the overthrow of the French power, and the subsequent meeting of the Congress in 1814, when it again reverted to Austria, and now forms an integral part of that Empire.

Application of the term.

Attached to different States.

Besides the continental part, Dalmatia includes several insular portions, the chief of which are Brazza, Lesina, Corzola, and Melada. The continental part is divided into the Circles of Zara, Spalatro, and Macarsca, and is a greatly diversified tract. Much of its surface is hilly, and a considerable part of it unproductive; but still it is interspersed with fertile and beautiful vallies. The whole coast is indented with bays and harbours, and many parts of the interior are adorned with lakes. Several rivers also flow through these vallies, yet but a few are navigable, even for short distances. The principal are the Cettina, the Narenta, and the Cherka; but none of them are sufficiently important to merit a particular description. Dalmatia is capable of yielding all the products of southern Europe; and in many places in great abundance, were the skill and industry employed in their cultivation proportionate to the beauty of the climate and the fertility of the soil. The air is generally temperate and pure in the upland districts, but sometimes misty and insalubrious in the flat tracts near the coast. The mountains are often covered with wood, and from some of the extensive forests timber has been obtained for the supply of the British dock-yards. Maize, wheat, grapes, olives, figs, almonds, and silk, are raised in Dalmatia, though the whole country seldom yields sufficient for its own consumption. Pasturage abounds, and both cattle and sheep are reared in considerable numbers, but the wool is usually coarse. The coast contains several excellent harbours, but the state of society is such as to render them of little practical utility; and it was a maxim of the Venetians to discourage trade with every other country but their own. Metallic products of various kinds are found in several parts, especially iron, marble, and gypsum. Gold and silver were formerly found there, but these are not obtained at present. Most of the rivers, lakes, and bays, abound with fish, which supply a valuable article of food to the inhabitants, and give employment to many of those along the coast, who are chiefly Roman Catholics; and both their language and customs indicate an Italian origin. The upper parts of the country are peopled by a different class, called Morlachians. They seem to have descended from the same Northern race to which the Walachians owe their origin, and are chiefly of the Greek Church. Though scarcely above the level of half civilized barbarians, they speak a language interspersed with Latin words. They are chiefly occupied with pasturage, pay little attention to agriculture, and leave the most laborious tasks to be performed by the females. Another class of inhabitants, called Haiducks, occupy a still lower place in the scale of civilisation, as they are in many instances destitute of fixed dwellings, and pass their time chiefly in the recesses of the mountains; deriving a scanty and precarious subsistence by plundering travellers, or gathering the spontaneous products of these uncultivated regions. In such a region, therefore, but few towns are likely to exist. Zara is the Capital, and stands on the shore of the Adriatic, about eighty miles nearly south of Fiume, covering a point of land projecting into the sea, and forming an excellent harbour. The Town is strongly fortified, and near its walls are the ruins of an ancient aqueduct, ascribed to the time of Trajan. The Cathedral, which is the Metropolitan church of Dalmatia, and some of the other Churches,

DALMATIA. and public buildings are handsome edifices; and those devoted to religious uses are often adorned with good paintings. The Public-offices and the Courts of Appeal for the whole Kingdom, are also at Zara. Italian is the language chiefly spoken; and the number of inhabitants has been stated at nearly 7500. The latitude of Zara is 44° 2′ north and the longitude 15° 9′ east; and it appears to have been the ancient Jadera. The population of the whole Circle of this name is stated at about 104,000.

Spalatro. Spalatro is the chief Town of the Circle of the same name; and, like the former towns, stands on a peninsula of the Gulf of Venice. It is encompassed with walls, but commanded by several neighbouring eminences, which render it incapable of affording much resistance against an invading enemy. The inhabitants of Spalatro are nearly as numerous as those of Zara, and are chiefly engaged in the manufacture of woollen, silk, and leather, and the fishery of the adjacent seas. The Turkish caravans from Bosnia and Servia to Venice, usually deposit their merchandise here. It also contains some magnificent ruins of a palace which once belonged to the Emperor Diocletian, who was born at Salona, in its immediate neighbourhood. The Church which is now dedicated to Christian worship, was in Pagan times a Temple, occupying the centre of the Palace. The walls of the Palace are nearly entire, and they form a square which embraces nearly two-thirds of the Town. For a more detailed account of these splendid remains, the reader may be referred to *The Ruins of the Palace of the Emperor Diocletian at Spalatro*, by Robert Adams. Spalatro stands about forty miles nearly south-east of Zara; and the population of the whole Circle of that name is

Macarsca. estimated at more than 80,000. Macarsca, the chief Town of the other Circle, stands about thirty-six miles nearly south-east of Spalatro, on the site of the ancient *Rataneum*, or *Retinum*; but does not contain more than a fourth part of the population of either of those towns above described.

Islands. Out of the numerous Islands which diversify the north-eastern part of the Adriatic Sea, and are considered as belonging to Dalmatia, the following merit

Brazza. a brief notice. Brazza, the ancient *Brattia*, is situated nearly opposite the town of Spalatro, and is about thirty miles long, and nine in its greatest breadth. It contains about twenty Villages, with a population of nearly 14,000 individuals. A great part of the surface is stony, and but little adapted for cultivation; yet the industry of the inhabitants renders it productive of a considerable quantity of wine, which is reckoned the best in Dalmatia. Much of the Island is covered with pasturage, and the sheep and kids have long been held in high estimation for the excellent flavour the flesh acquires from the nature of their food. Brazza also yields oil, figs, almonds, silk, saffron, and a little corn; but it is very scantily supplied with fresh water.

Lesina, the ancient *Pharos*, or *Pharia*, is also a considerable Island off the coast of Dalmatia, situated in latitude 43° north. Its extreme length is about forty-eight miles, its breadth eight miles. In population it is not quite equal to Brazza, though its surface is far more extensive. The more elevated parts of Lesina are rocky and barren, but abound with a variety of excellent marbles. The lower tracts afford pasturage for large flocks of sheep, besides yielding wine, oil, figs, almonds, and honey, with a few other articles; but salt-fish is the chief export. Lesina is the Capital of the Island, and has a population of nearly 1200 individuals. It is encompassed with walls, is the See of a Bishop, and the seat of a Governor. It has also a large and secure harbour, which is but little frequented. Curzola, or Corzola, the ancient *Corcyna Nigra*, is an Island off the coast of Dalmatia, which the Venetians obtained from the Ragusans toward the close of the XIVth century. The large quantities of timber it contains renders it convenient for ship-building. It also produces good wine. It is nearly thirty miles long, and between seven and eight broad. There is one Town of the same name, near the east end of the Island, which is fortified with towers and walls, and has a good harbour; the inhabitants are about 800. The whole population of the Island is between 6000 and 7000. Curzola is situated in the forty-third degree of latitude, near the extremity of the peninsula of Sabioncello, to which it appears to have been joined at some former period. On the south of this peninsula, a narrow channel divides it from the Island of Meleda, (the ancient *Melite*, *Melitene*, and *Melitassa*.) This Island is about thirty miles long, but its breadth is very unequal, being indented by deep bays, which afford good harbours for fishermen. Grapes, oranges, and lemons, are among its products, but not in sufficient quantities to form an export. The whole population is about 2000, who occupy several villages. Father Giorgi, a Benedictine Monk of this Island, published a dissertation to prove that this was the Island of *Melite*, on which St. Paul was shipwrecked; Mr. Bryant, who also bestowed much labour on the subject, was of the same opinion; and it has often been remarked, that the bite of the viper is here very malignant. Augusta and Lissa are more distant from the shore. Smaller islands. Salla is near the north-west extremity of Brazza, and Bua in a bay on the north of it. A numerous group lies opposite Zara, of which Grossa is the principal. These appear as only the rocky summits of a tract, which has once been joined to the continent, and from which they have been separated, as well as from each other, by the sea filling up the intervening vallies.

DALMATIC, a part of Clerical dress first generally used by the Dalmatian Priests. (Isidore, *Orig.* xix. 22; Durand, *Rat.* iii. 1.) Alcuinus (*de Divin. Off.*) describes it as *vestimentum in modum Crucis, habens sinistrâ sui parte fimbrias, dextrâ iis carens, inconsutile et cum largis manicis*; he speaks of it also as having *lineas coccineas*, or *purpureos tramites*, or *clavos purpureos ut tunicæ Senatorum*. It was worn as early as the time of Cyprian, (*juxta* A. D. 240; Pontius, *in vit. Cypr.*) and Pope Eutychianus (A. D. 275) ordered that no Martyrs should be buried without a Dalmatic. It was not, however, introduced as a part of Priestly attire, in lieu of the *Colobium*, which had not any sleeves, till the Papacy of Silvester, (A. D. 314.) Gregory the Great (A. D. 590) found that its adoption in funerals had been so far abused to superstitious purposes, that he forbade its employment even in the burial of Popes themselves. (Binnius, and Baronius, *Concil.* i. p. 216.) Bishops at first were not permitted to wear it, but at last it descended even to Deacons on high solemnities.

A robe of the same name, (although the Dalmatic, as we have seen above, in after times was esteemed a grave habit becoming to Priesthood,) was worn by some of the most detestable of the Roman Emperors, not without great scandal; because the concealment of the

DALMATIC. — DAM.

arms was considered to be effeminate. Lampridius has recorded of Commodus, that *Dalmaticatus in publico processit, atque ita signum quadrigis emitiendi dedit,* (8;) and on the sale of his wardrobe by Pertinax, Julius Capitolinus mentions *lacernas et chirodotas* (*chiridotas*) *Dalmatarum,* (8.) Heliogabalus was guilty of the same indecency; and Lampridius in relating it, alludes to an occurrence of which we do not possess the key: *Dalmaticatus in publico post cœnam sæpe visus est, Gurgitem Fabium et Scipionem se appellans, quod cum eâ veste esset cum quâ Fabius et Cornelius a parentibus, ad corrigendos mores, adolescentes in publicum essent producti,* (25.) Among the costly presents which Gallienus sent to Claudius, *Singilliones Dalmatenses* x. are enumerated by Trebellius Pollio, (*Claud.* 17.) The word *singilliones* here is ἅπαξ λεγόμενον, and *Salmasius* (*ad loc.*) inclines to believe, that it is spoken *de vestibus Dalmatarum* sigillatis *vel clavatis. Sigilla* and *Clavi* differed; but as we know that the Dalmatic was *clavatus,* it might also be *sigillatus.*

Hence the Dalmatic continued in use among the Emperors of the East, and in the Xth century it was adopted by Charles the Bald of France, as part of the Regal dress. Edward the Confessor introduced it among the English Regalia. Walsingham, in his account of the Coronation of Richard II., says, that he was invested *primo tunicâ Sancti Edvardi et postea Dalmaticâ.* In a Manuscript (W. Y.) preserved in the College of Arms, Henry VI. is said to have been arrayed at his Coronation "as a Bishop that should sing mass, in a Dalmatic like a Tunic." When the tomb of Edward I., in Westminster Abbey, was opened in 1774, next to the fine linen cerecloth, which enwrapped the body, was found a Dalmatic of red silk damask.

DAM, or DAME, DAME-BREEDING. } Fr. *dame*; It. *dama*; Sp. *dama*; by contraction from the Lat. *domina,* mistress. Somner thinks that *dam, pro brutorum matre, procreatrice,* may be from the A. S. *team,* issue, offspring, from the A. S. *tym-an, parere, parturire,* to bear, to bring forth; but *dame,* as well as *dam,* was applied to mother by our old writers and there seems not sufficient reason to suppose them different words.

"Mid how moný knyztes ys he come?" þe oþer aȝeyn seyde,
"Ma *dame*, bute mid o mon." *R. Gloucester*, p. 35.

——————— And fýkel tonge hure sýre,
Amendes was hure *dame.*
Piers Plouhman. Vision, p. 30.

Ac rýs up ragamoffýn. and reche me all þe barres.
That Belial þe beel syre. beot with þý *damme.*
Id. Ib. p. 354.

And so befell, that the excellent renoun
Of the emperoures doughter *dame* Custance
Reportid was, with every circumstance,
Unto these Surrien marchants, in swiche wise
Fro day to day, as I shal you devise.
Chaucer. The Man of Lawes Tale.

Then shall the priest be as the people, the master as the servant, y^e^ *dame* like the mayde, the seller like the byer.
Bible, Anno 1551. *Esaye*, ch. xxiv.

Faithlesse, forsworn, ne goddesse was thy *dam*
Nor Dardanus beginner of thy race;
But of hard rockes mount Caucase monstruous
Bred thee, and teats of tyger gaue thee suck.
Surrey. Æneis, book iv.

——————— No fair to thine
Equivalent or second, which compel'd
Mee thus, though importune perhaps to come
And gaze, and worship thee of right declar'd
Sovran of creatures, universal *dame.*
Milton. Paradise Lost, book ix. l. 612.

——————— And he is gone as farre
As sacred Pylos; and the singular
Dame-breeding Sparta.
Chapman. Homer. Odyssey, book v. fol. 72.

When the young is brought forth, who comes all the nourishment then to be transfer'd from the womb to the breasts or paps, leaving its former channel, the *dam* at such time being for the most part lean and ill-favour'd?
Ray. On the Creation, part i.

Silence in times of suffering is the best,
'Tis dangerous to disturb an hornet's nest.
In other authors you may find enough,
But all they say of *dames* is idle stuff.
Dryden. The Cock and the Fox.

That seraphic *dame,* Mrs. Rowe, also painted. A gentleman from whom I received these notices has a bust of the above-mentioned Mr. Hughes, done by her in Indian ink.
Walpole. Anecdotes of Painting, vol. iii. p. 121.

The attraction of the calf or lamb to the teat of the *dam,* is not explained by simply referring it to the sense of smell. What made the scent of milk so agreeable to the lamb, that it should follow it up with its nose, or seek with its mouth the place from which it proceeded?
Paley. Natural Theology, ch. xviii.

DAM, *v.* DAM, *n.* DA'MING, DAM-HEAD. } A. S. *daman*; Dutch and Ger. *dammen*; Sw. *dæmma, obturare, obstruere*; to stop up, to obstruct. See DUMB. To stop or shut up, block up or confine, to obstruct.

If al the earth were parchment scribable
Spedie for the hand, and all maner wood
Were hewed & proporcioned to pennes able
All water ynke, in *damme* or in flood
Euery man being a perfite scribe and good
The cursednesse yet and descipt of women
Coud not be shewed by the meane of penne.
Chaucer. The Remedie of Loue.

But with certain windes that come from the sea of Ponte, the sande in the plaines is blowen together in heapes, whyche seeme a farre of like greate hylles, whereby the accustomed wayes bee so *damned,* that no signe of them can appeare.
Brende. Quintus Curtius, book viii. p. 184.

——————— And then a rocke
He lift aloft, that *damd* vp to his flocke,
The doore they entred.
Chapman. Homer. Odyssey, book ix. fol. 134.

Abortive tears from their fair eyes out-flow'd,
And *damm'd* the lovely splendour of their sight,
Which seem'd like Titan, whilst some watry cloud
O'erspreads his face, and his bright beams doth shroud.
Cowley. Pyramus and Thisbe.

CAL. No more *dams* I'll make for fish,
Nor fetch in firing, at requiring.
Shakspeare. Tempest, fol. 10.

In that of Thorpe, as to those five persons, it was not an absolute denial of justice; it was not a *damming* up, but a strengthening only, of the channel.
State Trials. The King against John Hampden, Esq.

Small exhortation needs; your powers employ:
And this bad world (so Jove decrees) destroy.
Let loose the reins to all your watery store.
Bear down the *dams,* and open every door.
Dryden. Ovid. Metamorphoses, book i.

When you *dam* up a stream of water, as soon as the *dam* is full, as much water must run over the *dam-head* as if there was no *dam* at all.
Smith. Wealth of Nations, book iv. ch. v

MAGE. — MAGES

DA'MAGE, *v.* DA'MAGE, *n.* DA'MAGEABLE, DA'MAGE-FULL. } Fr. *dam, dommage;* It. *danno, dannagio;* Sp. *dano;* from the Lat. *damnum;* from *damnare,* to doom, to deem. See to CONDEMN, and to DAMN.

The *damnum,* is the doom, the judgment, the loss, the punishment, to which any one is judged, sentenced, doomed or damned; and then, generally,

Any loss, injury, hurt, harm or detriment.

It is so full of wildnesse
So oft it doeth shame and *domage*
To him or to his linage.
Chaucer. The Romant of the Rose.

When bothe the armyes were approachyng to the other, the audinaunce shot so terribly and with suche a violence, that it sore *dammaged* and encombred bothe the parties.
Hall. Henry VII. The third Yere.

Being perswaded that hee having entrid into so many perils, your maiestie wil not dislike the same, especially, if it may appeare that it be not *damageable* vnto your royall maiestie, and that to your people it will bring some profite.
Hakluyt. Voyage, &c. The Queen's Letter to the King of China.

But Calidore, that was well skild in fight,
Him long forbore, and still his spirit spar'd,
Lying in wait how him he *damage* might.
Spenser. Faerie Queene, book vi. can. 1.

He discharged one single gun from his poop, and hung out a red flag; and came up to the English admiral, and gave him a broadside; with which he killed many of his men, and *damaged* the ship.
Clarendon. History of the Rebellion, &c. vol. iii. part ii. book xiii. p. 459.

Who have offended in such a point as his majesty can extend no favour to me without the *damage* of his own honour, which being dearer to him than his life, it must needs be more tendered than twenty thousand such lives as mine.
State Trials. Trial of Lord Balmerinoth.

The other denied it, because it would be *damageable* and prejudicial to the Spaniard (who had been at the charge of maintaining a strong army for now full six months) in case peace should not be agreed upon.
Camden. Elizabeth. Anno 1588.

His warre in Ireland was more *dammagefull,* than fishing with an hooke of gold, for here the baite and hooke was not onely lost, but the line, rod and himselfe were drawn altogether into the depthes of irrecouerable ruine.
Speed. Richard II. book ix. ch. xiii. sec. 107.

Soon after the English fleet had refitted themselves (for they had generally been much *damaged* by the engagement in Solbay,) they appeared in sight of Scheveling, making up to the shore.
Burnet. Own Times. Anno 1672.

The engagement began at about four in the afternoon, and lasted till nine at night with great loss to the enemy, and little *damage* on our side though their fleet was double our number.
Ludlow. Memoirs, vol. i. p. 349.

In the library of St. John's college, Cambridge, is an original of their foundress Margaret of Richmond, the king's mother, much *damaged,* and the painter not known.
Walpole. Anecdotes of Painting, vol. i. p. 88.

That to the utmost of our ability we ought to repair any *damage* we have done to others is self-evident, and it is no less evident, that we must not promote our own interest to the detriment of another, or if any necessity force us to this, that we ought to make good his loss, as soon as it is in our power.
Beattie. Moral Science, part iii. ch. i.

DAMAGES, in *Law,* the compensation given by a Jury for any injury a Plaintiff may have sustained. In personal actions where the Plaintiff recovers no Damages, he will not be entitled to any Costs; and he can recover Damages only up to the time of the commencement of his action; and unless the Damages amount to 40*s.* the Plaintiff will not be entitled to Costs, (except in actions of trespass, where the smallest Damages carry Costs.) In actions of debt, where a sum certain is demanded, the Damages being nearly nominal, are very small, and after the Master has taxed the Costs, this nominal sum is added, and the whole is denominated Damages. Where excessive Damages are given by a Jury, the Court will grant relief by a new writ of inquiry, or a new trial. If an action of trespass be brought against several Defendants, who severally plead Not Guilty, the Damages must be assessed jointly.

DAMAGES — DAMASCENE.

In actions upon Bills of Exchange, the different charges of exchange, interest, postage, protest, and reexchange, are included in the Damages, and also the interest from the time when the bill would have been regularly payable, down to the time when the Plaintiff would have been entitled to final judgment. In actions upon Bond, or other deed for non-performance of Covenants, the Jury shall assess Damages upon those Covenants only which the Plaintiff proves to have been broken, and the Plaintiff may assign as many breaches as he thinks fit. In some instances, double and treble Damages are given by different Acts of Parliament, as for not setting out tithes, distresses wrongfully taken, &c.; but if no Damages were recoverable previously in the cases mentioned by these Acts of Parliament, the Plaintiff shall recover the double or treble Damages only, and no Costs.

Damage Cleer, Damna Clericorum, a Fee assessed out of all Damages exceeding five marks, and recovered to the amount of a tenth in the Court of Common Pleas, a twentieth in the King's Bench and Exchequer. This the Plaintiff was obliged to pay, as a gratuity to the Prothonotaries and his Clerks, for drawing special writs and pleadings. It was abolished by 17 Charles II. ch. 6.

Damage Feasant, or *Faisant,* is when a stranger's beasts are doing hurt or spoiling the grass, corn, woods, &c. of another man, without his leave or licence.

DAMALIS, in *Zoology,* a genus of Dipterous insects, established by Fabricius. It is referable to the family *Conopsidæ.*

Generic character: antennæ shorter than the head, inserted between the eyes, the third or last joint round, with a bristle at the end.

Fabricius describes four species of this genus, all of which are inhabitants of the East Indies or South America, and are so rare on the Continent, that Latreille never had an opportunity of seeing a single specimen of the genus.

DA'MASCENE, DA'MASCENE-PLUM. } Fr. *damaisine. Prunum Damascenum;* Plum of Damascus. Also written *Damson* or *Damsin,* q. v.

And if you come heather,
When *damsins* I gather,
I will part them all you among.
Spenser. Shepheard's Calendar. April.

And therefore all your dainty plummes, are a little drie and come from the stone, as the muskle-plumme, the *damasine-plumme,* the peach, the apricot, &c.
Bacon. Natural History, Cent. 6. sec. 509.

A third bore a kind of purple apple; which, after it had been kept a few days, became eatable, and tasted somewhat like a *damascene.* *Cook. First Voyage,* book iii. ch. vi.

DAMASCENES. DAMASCUS.

The excellence of DAMASCENES, κοκκύμηλα Δαμασκηνὰ, the fertility with which Damascus produces them, and their local peculiarity, are vouched for by Athenæus, (ii. 10.) Pliny, (xiii. 10,) and more particularly in his chapter on Plums (xv. 13) joins in their praises, and candidly admits that they degenerate when cultivated in Italy; *grandiore quanquam ligno et exiliore carne, nec unquam in rugas siccatâ, quoniam Soles sui desunt.*

DAMASCUS.

Names.

DAMASCUS was known to the Hebrews by the name of *Dammeshec* as early as the time of Abraham, (*Genesis*, xv. 2,) nearly 2000 years before our era; there are few cities, therefore, of which the antiquity is so well ascertained, or which became of great note at so early a period. Its original name appears to have been *Darmashec*, (1 *Chronicles*, xviii. 5,) softened down into *Dammeshec* by the Jews, but preserved with little alteration (*Darmasúc*) by the Syrians. The time of its foundation, ascribed by some traditions to Uz, the son of Aram, is quite uncertain. In the earlier period of the Jewish State, the different tribes of that people were too much engaged in warfare with the Canaanites, whom they had but partially expelled, to hold any intercourse with distant nations; no further mention, therefore, of Damascus is made in the Scriptures, till the Syrians of that city, having come to support their countrymen of Zobah, in the contest with David, (2 *Samuel*, viii. 5; 1 *Chronicles*, xviii. 5,) were subdued by him, and obliged to receive his garrison within their walls. They recovered their independence under the command of Rezin, son of Eliada, in the reign of Solomon, (about 980 B. C.) but lost it again, (about 825 B. C.) by the successes of Jeroboam II. (2 *Kings*, xiv. 28.) It was, however, regained, probably in the reign of his worthless successor; but was incorporated in the Assyrian Empire by Tiglath-Pileser, in the reign of Ahaz, about 740 B. C. (2 *Kings*, xvi. 9.) Thus for upwards of 300 years it had been the Metropolis of an independent Kingdom; we must not, however, on that account, picture it to ourselves as a great and splendid City. When Syria, and even Palestine, was divided into a number of separate States, and almost every Township formed a distinct Kingdom; society and civilisation must have been nearly in the same state as they are now among the Malays in the Indian Archipelago; nor can it be reasonably doubted, that even in Babylon and Memphis, the Arts and Sciences were yet in an infant state.

Ancient History.

The history of Damascus is obscure, till it was taken by the armies of Alexander, (B. C. 332.) Under his successors it was the Capital of Syria, till Seleucus Nicator removed the seat of Government to Antioch, (B. C. 304.) Damascus was surprised by a detachment from Pompey's army, under Metellus and Lælius, in the war against Tigranes, (B. C. 65,) and from that time it continued to form a part of the Roman or Eastern Empire, till it was taken by the Saracens A. D. 634, (A. H. 13.) It was, under the Romans, the seat of a tributary Prince, the Sovereign of *Arabia Petræa*; who was usually named Háreth, (Aretas;) and one bearing that name was reigning at the time of St. Paul's conversion. (2 *Cor.* xi. 32.) Under the Arabians, by whom Damascus was venerated on account of its connection with their own and the Patriarchal history, it again became the Capital of Syria, was more frequently called by the name of that country, Shám, or El-Shám, than by its proper appellation, and soon acquired a degree of wealth and magnificence which it had never before attained; and when Syria was at length annexed to the Othmán Empire, Damascus was made the Capital of one of the five Páshálics into which this accession of territory was divided.

Site.

Damascus is situated in a valley, called El Ghútah by the Arabs, and considered by them as one of the four terrestrial Paradises. (D'Herbelot, v. *Gauthah*, ii. 65; *Demshak*, i. 577; *Scham*, iii. 238.) The valley is bounded by Jebel Sálihiyyeh on the north, by Jebel-el-sheikh on the west, by Jebel-el-kesweh on the south, and by a plain, called El Merj, (the Meadow,) on the east; it contains upwards of eighty villages, and is one of the most fertile districts in Syria. (Burckhardt, *Travels in Syria*, 285.)

The City and country round it have ever been held in veneration by the Arabs. One of their traditions ascribes its foundation to Dimshác, son of Canaan, son of Ham; and another alleges that it was built by Abraham, and named after his faithful slave and steward Dimshác, who was given to him by Nimrod. Mówáwiyyah, and the other Khálifs of the House of Ommayyah, made it their place of residence; and Walíd, son of Abdu"l Melic, (A. D. 705—714,) for several years expended the whole revenue of Syria on its embellishment. The mountains on the north and west approach near to the City, and pour a number of streams into the valley, which keep up a perpetual verdure. The principal of these is called Baradà, a name which may possibly have been derived from Pharphar, though it is properly Bardà, and is a common epithet, signifying *cold*. It rises in the western mountains, and running nearly due east, waters the whole of the Ghútah; being distributed through a vast number of channels, and itself divided into three arms, which reunite at a small distance to the east of the City. The meadow on the east and south-east (El Merj) sinks almost imperceptibly into the Desert, where the soil is impregnated with salt, and the weeds contain abundance of soda; here the river discharges its waters into a lake, called Bohaïreh el Merj, according to Volney; Bahr el Ateïbeh, (from a neighbouring village,) according to Seetzen, (Map in Von Zach's *Monatl. Corresp.* xxii.;) and Bohaïrehi Dimeshe, (the Lake of Damascus,) or Bahr el Merj, according to Hájí Khalífah, (*Jehánumà*, 555,) who says that it abounds in fish, is frequented by large flocks of birds, and contains a forest of bull-rushes. Volney (ii. 151) speaks of it as a mere lagune, but Seetzen delineates it as a lake, nearly half as large as that of Tiberias.

The soil of the Ghútah is gravelly, and of a reddish hue, which, combined with the notion of its belonging to the terrestrial Paradise, has given rise to the tradition current among the Christians of the East,

DAMASCUS.

(D'Herb. *Scham*, iii. 238,) that Adam was created near Damascus. But Paradisaical as this valley may appear in the eyes of a Syrian, it is in reality very undeserving of such splendid titles; for the soil is unfavourable to the culture of grain, and were it not for the trees with which the gardens are filled, not a particle of verdure would be seen for three-fourths of the year. To fruit-trees, however, it is very congenial; and in a climate under which the summers are long and scorching, it is not wonderful that cool and shady orchards should be a perpetual theme of admiration; more especially as the plains of Syria and Palestine are generally very bare of wood. *Dopo aver caminato quasi tutto il giorno per una gran pianura spogliata di alberi*, says Pietro della Valle, (i. 334,) *arivammo finalmente a Damasco: la qual città, quasi come Roma a punto, è talmente circondata di giardini, che prima d' arrivare alle mura, caminammo un miglio, ò due, per mezzo di quelli.* By a sort of fatality, refreshing brooks and umbrageous groves are almost always haunted by agues in the East; and so it is at Damascus; its inhabitants have a sickly complexion, and ascribe their want of health to the water of the Baradà; but perhaps an excessive indulgence of their appetite in the excellent fruits from its gardens, is the real cause of the mischief, for there are neither marshes nor stagnant water in the neighbourhood.

m and nlation.

This City has an irregular, but nearly elliptical form, and is about three miles and a half in circumference, according to Niebuhr's Plan, (*Reisebesch.* tab. li. vol. ii.) Volney supposes, (ii. 152,) its population to amount to 80,000 souls, and it has increased since he wrote, nearly forty years ago; not that the population in Turkey has on the whole been augmented within that period, but because the mal-administration of the Provinces is continually driving the populace into the towns, at the expense of the surrounding country. Burckhardt, who was a very temperate and cautious observer, says (in a letter, dated May 3, 1811,) that notwithstanding "wealth and population are decreasing," in consequence of the interruption of the intercourse with Mekkah by the Wahábíes, and "the frequent change of the Páshàs, occasioned by the Porte's increasing wants and rapacity;" yet "Damascus and its neighbourhood, especially the beautiful Rgoutha, (Ghútah,) may be said to be in a flourishing state, in comparison with the other parts of Syria. The wealth of its inhabitants, whose number I estimate at between 180,000 to 200,000 souls, withstands the rapid influence of the times; and the fertility of its soil the destroying hands of the Arabs, and the country-governors." "Damascus," he says, in another letter written about the same time, "is a third larger than Aleppo; but the houses are ill-built, and their outsides, especially, look very bad. The inner apartments, however, are generally expensively furnished, ornamented with marble floors, and contain cisterns filled with water, in order to cool the air.

ate.

The climate of Damascus is a good deal warmer than that of Aleppo, and not so wholesome. The Town is situated in the middle of a district, called Ghouta, which is about fifteen miles long, and from five to seven broad. This district is covered with fruit trees, and watered by six brooks. It is damp, and as the Salihié mountains prevent the westerly winds, so salutary in other parts of Syria, from touching Damascus, this dampness becomes very unwholesome. Damascus is more interesting to Travellers than Aleppo, as it is visited by a great variety of strangers from Arabia, Egypt, and the Mountains of the Druses, who come there to buy silk and cotton goods manufactured in the Town. Besides these there are more than 150 different tribes of Bedwins, who repair regularly every spring to Damascus, in order to buy clothes for their women, and coffee for their guests."

DAMASCUS.

Báb-el Kábah. The Pilgrimage.

The pilgrimage had been interrupted for five years at the date of this letter, and that circumstance had, perhaps, humbled and humanized the Musulmans of Damascus a little; for Burckhardt says nothing of their fanaticism and intolerance, which are almost proverbial. Their City is the rendezvous of all the pilgrims from the north and west. From it a straight road through the Desert leads directly to Mekkah, and it is thence called the Gate of the Holy Shrine, (*Báb 'l kábah.*) Before the Fast of Ramadhán, and during its continuance, crowds are daily pouring into Damascus by every avenue, and the City is filled with beasts of burden of all descriptions, laden with valuable merchandise from every part of the world. After a few days rest, the whole of this mixed multitude, amounting sometimes to no less than 50,000, commences its march under the Páshà and the escort of some powerful Arab Sheïkhs, who provide camels for the pilgrims. The greater part of whom, as is well known, consider the pilgrimage more in the light of a commercial speculation, than as the performance of a religious duty.

Antiquities.

If the Christian Priests and Monks are right, Damascus has been little altered since the days of the Apostles; for they still show the house of Ananias, (*Acts*, ix. 11,) the place where St. Paul was let down from the walls, and the house wherein Jude lodged, in a very long street, which certainly deserves the name of "the Straight Street," whatever may be thought of the traditions connected with it.

"This City," says Hájí Khalífah, who expatiates through six or eight folio pages on its various excellences, (*Jehán-numà*, 571,) "is celebrated not only for its site, which may be compared to Paradise, but because in and about it there are the sepulchres of not less than 70,000 Prophets. It is the Capital of Syria, several places of which are mentioned in the Corán and the Traditions, (*Hadís*,) and it contains the illustrious Mosque of the House of Ommayyah, in which there are the monuments of many of the family and followers of the Prophet." Its longitude is 70° and its latitude 33° 30′, (54° 22′ 9″ east of Ferro, 36° 12′ 24″ east of Greenwich, and 33° 38′ north, according to the best maps.) It had originally seven gates; Gates.
1. *Báb Sharkí*, the Eastern gate; 2. *Báb Túmá*, (St. Thomas's Gate;) 3. *Jembúc*; 4. *Ferádís*, (Paradise Gate;) 5. *Jábiyah*, (Well Gate;) 6. *Saïghar*, (the Little Gate;) [*Saghír?*] 7. *Keïsán*; and each of these, according to the Eastern traditions, was dedicated to one of the seven Planets. *Jembúc* was afterwards walled up, and *Seldmeh* and *Ferejí* were opened by Núru 'd-dín the Confessor, (*El Shehíd*,) (when he rebuilt the walls, after the dreadful earthquake which desolated all the northern part of Syria in A. D. 1157, (A. H. 552,) see Abú 'l Fedà, *Ann.* iii. 547.) The Castle is within Castle.
the walls; it was built by Ocsor ibn Avác, by order of Melic Ashraf Khalíl, (Ibn Calâún, the eighth Prince of the first Mamlùk Dynasty,) in A. H. 690, (A. D. 1291.) The river of Búniyàs running through it turns a mill, and supplies the baths (*hammàm.*) It contains

DAMASCUS.

also a Mint and the Tomb of Abú 'l Derdá. It is surrounded by a ditch more than 100 cubits deep, filled with fruit trees, with here and there pools of stagnant water. The Holy Banner, (the *Oriflamma* of the Musulmans,) is deposited in this Castle on its arrival from Mekkah; and every week during the months of Regeb, Shábán, and Ramadhán, it is carried about in procession, and displayed during divine service in one of the great windows of the principal Mosque. In the second week of Shawwal, it is solemnly delivered up by the Páshà of Syria to the Mír Háj, (Conductor of the Pilgrims,) and on the first day of Dhú 'l kádah the pilgrimage commences. The Páshà's Palace, called Dáru's sádet, (the Abode of Felicity,) is near the Castle; it was built by Núru 'ddín the Confessor.

Jami Beni Ummayyah The Great Mosque.

In the middle of the City is the Jámí (or principal Mosque,) which with respect to its beauty, income, and revenues, is superior to any other in the land of Islám. Its dome (*cubbah*) over the sanctuary (*mihrâb*) was the work of the Sabians, who performed their worship there for a long time, till the Greeks (*Yúndniyún*) came and made it a place of worship; it afterwards became a Temple of Idolaters, then a Jewish Synagogue, at the time when Jahyà, (John the Baptist,) son of Zekeriyá, (The peace of God rest on them both!) was appointed Guardian of the door of the Mosque, called Jeïrún. The Christians having afterwards made themselves the masters, took possession of this Temple and enlarged it. At length, when the chosen faith of Mohammed was made manifest, and Islám had been published throughout the world, it was converted into a Mosque (*Mesjid*) of the Musulmans. Abdu 'l Melic wished to purchase it of the Christians, to whom it had been secured by the terms of their capitulation, but they refused, and that upright Prince would not consent to take it from them by force. (D'Herbelot, *v. Add. al Melec.* i. 15.) His son and successor Walíd succeeded by purchase or stratagem in dispossessing the Christians, "those worshippers of idols," as his Musulman subjects called them, and immediately began to adorn it with various coloured marbles, and a profusion of gilding, adding to it a magnificent dome, called Cúbbat-eb-nesr, raised on arcades and rows of marble pillars, diminishing in size above. "The two great columns supporting this dome were purchased of Khálid ibn Yezíd for 1500 pieces of gold; and for two slabs of green (*fistikí*) marble brought from Alexandria, 100 pieces of gold were paid." "The venerated head of John (the Baptist) which had before been in a despised place, was now deposited there." This relic was, indeed, the origin of the extraordinary reverence in which the Church was held, both by Christians and Mohammedans. The Church was, in reality, built or rebuilt in the beginning of the VIIth century, by the Emperor Heraclius, and dedicated, according to the Greeks, to Zacharias, father of John the Baptist; though the other Christians call it the Church of St John. With regard to the relic, it should be observed, that it is claimed by a great variety of churches; but cannot, as a Roman Catholic Divine has gravely observed, be found entire in more than one. Du Cange, who was usually engaged on better subjects, took the pains to investigate the question with his usual diligence, and determined (in his *Histoire du Chef de S. Jean,*) that it was certainly possessed by the Cathedral of Amiens. The two columns outside of the Bábu 'l berid," (the western door of the Mosque,) "are of such excessive height and thickness," says Hájí Khalífah, (573,) "that they are some of the wonders of the world." Copies of the Corán in the hand-writing of Othmán and Alí are preserved in the Sanctuary, (Id. 574,) and the people make pilgrimages to see and express their reverence for these. The river of Bániyás flows by this building, and issues by the door of Jeïrún, (the eastern door of the Mosque.) The length of the Mosque from east to west is 548 feet, and its width 151. It is said that 5,070,000 pieces of gold have been expended upon it.

DA C

The Jámíu 'l caltánin is the largest Mosque next to this; and the smaller, both within and without the walls, are almost innumerable. A Hospital was built and richly endowed by Núru 'ddín Zingí, who though seated on the Throne led the life of a hermit; denying himself the common indulgences of life, and devoting his vast revenues to works of public utility. "The City is spread out over a level plain, having Mount Cásiyún at the distance of two hours (about seven miles) to the north, and a boundless plain to the south-east; one extremity of the vineyards round the City reaches as far as the declivity of Mount Cásiyún, with which it is united, and Damascus and Sálihiyyeh thus form as it were one town. The City, with its houses and buildings, surrounded by gardens, looks like a fine carpet spread out before the spectator when seen from the dome called Cúbbat-eb-nesr on one of the peaks of Mount Cásiyún." Hájí Khalífah expatiates largely on the excellent markets of Damascus; "one of them," he says, "is a rich mine of silk," and "the *gók mëddání*," (the heavenly expanse,) he adds, (579,) "on the west side of the City is spread out like a carpet of emeralds, adorned on all sides with every variety of fruits and flowers. The cooks, pastry-cooks and confectioners, are so skilful and expeditious, that in an hour or two they will dress and deliver at the appointed place the most exquisite and sumptuous banquets."

Manufacture.

Beside the silks and cottons already mentioned, soap of an excellent quality is manufactured at Damascus; and its dried fruits and sweetmeats are exported in considerable quantities. The incomparable sword blades are now no longer to be procured, and the other manufactures in steel, in which the Damascenes were once unrivalled, are either wholly lost, or reduced to a very low ebb. "The art of founding the metal of which the Persian blades is made is lost," says Mr. Barker of Aleppo in a valuable paper on this subject, (*Mines d'Orient*, v. 42;) and it is manifest from the names of the different kinds of Damascus blades which he gives just above, that this manufacture must have been introduced from Persia and India. "Their swords," says La Brocquière, "are so highly polished, that they are never in want of a mirror."

Concourse of strangers

A curious passage in Hájí Khalífah, (*Jehán-numà*, 561,) clearly shows what a confluence of strangers from every part of the world was to be found in Syria, and especially in Damascus. "Various languages," he says, "are used in this Province of Syria: the Arabic, Turkish, Kúrdí, Persian, Hindí, Afghání, and Suleïmání, are spoken in Damascus, so that these Indians have convents peculiar to themselves; likewise the *Moghrebí*, Syriac, and Hebrew, in Scandarún, and (*Tripoli,*) Tarábulús, as well as in Saïdah, (*Sidon,*) and Cudo, (*Jerusalem,*) Greek, Latin, Italian, French,

Spanish, English, German, Polish, Muscovite, Russian, Abyssinian, and Armenian, which are the tongues of the different Christian nations, are also found." It may be remarked, that even when this was printed, more than half a century after it was written, the Afghâns were not known by name in Europe.

DA'MASK, *v.*
DA'MASK, *n.*
DA'MASK, *adj.*
DA'MASKIN,
DA'MASKING,
DA'MASK-COLOURED.

Damask garment, *damask* rose. *Vestis, aut rosa* Damascena. Fr. *de damas;* It. *di damasco;* Sp. *de damasko;* Dutch and Ger. *damask.* So called (says Skinner) from the most ancient and celebrated city of *Damascus*, whence they were introduced into Europe.

He yaue to lords juels manifold
Clothes of velues, *damaske* and of gold
To get him hearts. *Lidgate. The Story of Thebes.*

And yet did she [Saint Mary Magdeleyn] it but to do him pleasure with, as men dyd thē vnto gestes to make them chere withal, as folke do now cast *damaske* water & burne pleasāt perfumes.
Sir Thomas More Workes. The second Part of the Confutation of Tindall.

And in time of memory things have been brought in that were not here before, as the *damaske-rose*, by Doctour Linaker, King Henry the Seuenth, and King Henrie the Eight's physician.
Hakluyt. Voyage, &c. M. Ric. Hakluyt.

There daisies *damask* every place,
Nor once their beauties lose,
That when proud Phœbus hides his face,
Themselves they scorn to close.
Drayton. The Description of Elysium.

The last reason of such their going naked sometimes, was out of an opinion that no clothing so adorned them, as their painting and *damasking* of their bodies.
Speed. Ancient Britaines, book v. ch. vii. sec. 7.

On a large gentle hill crown'd with tall wood,
Near where the regal Gabaah proudly stood,
A tent was pitch'd, of green wrought *damask* made,
And seem'd but the fresh forest's natural shade.
Cowley. The Davideis, book iii.

The *damaske* meddowes, and the crawlinge streames,
Sweeten, and make soft thy dreams.
Corbet. The Country Life.

No old Toledo blades, or *damaskins.*
Howell. The Vote, or a Poem Royal.

——— Why hast thou rent
Those curled locks, where I have often hung
Riband and *damask-roses*, and have flung
Waters distill'd to make thee fresh and gay
Sweeter than nosegayes on a bridal day?
Beaumont and Fletcher. The Faithful Shepherdess, act iv. sc. 1.

But as the raven late, he next sends out
The *damask-colour'd* dove, his nimble scout
Which thrills the thin air, and his pinions plies.
Drayton. Noah's Flood.

——— When solar beams
Parch thirsty human veins, the *damask'd* meads
Unforc'd, display ten thousand painted flowers
Useful in potables. *J. Philips. Cider*, book ii.

Now Turnus arms for fight! his back and breast,
Well temper'd steel, and scaly brass invest:
The cuishes, which his brawny thighs infold,
Are mingled metal *damask'd* o'er with gold.
Dryden. Virgil. Æneid, book xi. l. 733.

He dies, and his son succeeds, a fashionable young gentleman, that cannot dine without Champane and Burgundy, nor sleep but in a *damask-bed;* whose wife must spread a long train of brocard, and his children be always in the newest French cut and stuff.
Locke. Considerations on Lowering Interest.

As soon as th' unskilful fool that's blind enough,
To call rich Indian *damask* Norwich stuff,
Shall become rich by trade.
Somervile. Horace. Epistle 10.

For as kind nature through the globe inspires
Her parent warmths, and elemental fires,
Forms the bright gem in earth's unfathom'd caves,
Bids the rich coral blush beneath the waves,
And with the same prolific virtue glows
In the rough bramble as the *damask-rose.*
Cawthorn. Why life is Unhappy.

A silken stuff, with figures raised above the ground, is known as DAMASK, and so also is the cloth with interwoven patterns generally used for table linen. The Etymologists invariably ascribe the origin to Damascus, but both the silk and the linen are now chiefly made in Flanders, and in the British Isles.

DAMASKEENING, or DAMASKING, κόλλησις, *ferrumination, cælatio, stellatio*, the inlaying of iron or steel with other metals, especially gold or silver, is an art of great antiquity. Herodotus, (i. 25,) mentions a saucer so ornamented ὑποκρητηρίδιον σιδήρεον κολλητὸν among the offerings of Alyattes at *Delphi*, and he attributes the invention to Glaucus of *Chios*. See Larcher's learned note on the passage. Such also were the shields of the *Samnites* in two of the choicest battalions which they levied against Rome, *Duo exercitus erant, scuta alterius auro, alterius argento cælaverunt*, (Liv. ix. 40.) It was a favourite manufacture among the Ancients, but we know not at what date it so much flourished in Damascus as to have derived its modern name from that City.

DAMASONIUM, in *Botany*, a genus of the class *Hexandria*, order *Polygynia*, natural order *Alismaceæ*. Generic character: spathe one-leaved, five-winged; calyx superior, three-parted; corolla of three petals; berry, ten-celled, many-seeded.

DAMASONIUM. One species, *D. Indicum*, native of watery places of the East Indies. Willd.

DAMN.

DAMN, *v.*
DA'MNABLE,
DA'MNABLENESS,
DAMNABI'LITY,
DA'MNABLY,
DAMNA'TION,
DA'MNATORY,
DA'MNED,
DA'MNEDLY,
DA'MNIFY,
DA'MNING,
DA'MNINGNESS.

Fr. *damner*; It. *dannare*; Lat. *damnare*. See CONDEMN. Tooke thinks the root is the A. S. *dem-an*, to deem, (*dem-a*, *judex*, or doomer, *demm*, *judicium*, *damnatio*, doom.) In Matthew, v. 21, the Gr. κρίσις; Lat. *judicium*; A. S. and English *dome* or *doom*; M. V. *judgment*; are used emphatically, or with a subaudition of the punishment *doomed* or adjudged, "Ος δ' ὃν φονεύσῃ, ἔνοχος ἔσται τῇ κρίσει. Thou shalt not kill, and whoever shall kill shall be in danger of the *judgment*. And Dr. Hammond observes of the Gr. κρῖμα, that according to its origination, it signifies Censure, *judgment*; and in its making hath no intimation, either of the quality of the offence to which that judgment belongs, or of the judge who inflicts it;—he might have added, or of the punishment inflicted. *Works*, i. 314.

To *damn* or to *condemn*,—is to deem, think or judge, *subaud.* any one to be guilty, to be criminal;—to give judgment or sentence, or doom, of guilt; to adjudge or declare the penalty or punishment.

——— Mȳtigacion ich bȳ seche
Dampne me nouht at domȳs-day. for þat ich dude so ille.
Piers Ploukman. Vision, p. 103.

For wel thou wost thyselven verily,
That thou and I be *damned* to prison
Perpetuel, us gaineth no raunson.
Chaucer. The Knightes Tale, v. 1177.

Hir othes ben so gret and so *damnable*
That it is grisly for to here hem swore.
Id. The Pardoneres Tale, v. 12406.

I cannot sayn, but that they do cursedly and *damnably* ayenst Crist, and all the feith of holy chirche.
Id. The Persones Tale, vol. ii. p. 334.

He eateth his owne *dampning*
But if he lie, that made all thing.
Id. The Romant of the Rose.

And Jhesus reiside himsilf, and seide to hir, womman where ben thei that accusiden thee? no man hath *dampned* thee? Sche seide, no man, Lord. Jhesus seide to hir, neither I schal *dampne* thee: go thou, and now aftirward nvle thou synne more.
Wiclif. Jon, ch. viii.

That deuouring the housis of widowis: and feynen longe preyinge, these schulen take the more *dampnacioun*.
Id. Luk, ch. xx.

Lay them to the touchstone, and trye them with God's word. If they be found false and counterfaite, then *damn* them, and I shall also reuoke them with all myne hart.
Frith. Workes, fol. 3. *To the Christian Reader.*

For what better allectiue coulde Lucyfer deuyse, to allure and bringe men pleasantly into *damnable* seruitude, than to pourpose to them in fourme of a playe, his principall treasury.
Sir Thomas Elyot. Governour, book i. ch. xxvi.

Lest that suche short forgeuenes, as wel of al the payne as of the displeasure of God, and of the deadlynesse, or as men might say, of the *damnabilitie* belōging to the mortall offence myght make men waxe the worse, & sette much the lesse by sinne.
Sir Thomas More. Workes. The second Part of the Confutation of Tyndall.

I must put vp my supplication to the queen's maiesty and her honourable councell to grant me leaue to stay here so much of their goods as they haue *damnified* mee, or else that I may take of them in Newfoundland, as much fish as shall be worth 600 li.
Hakluyt. Voyage, &c. M. Ant. Parkhurst.

——— Wert thou so void of feare or shame
As offer them to me the Son of God,
To me my own, on such abhorred pact,
That I fall down and worship thee as God?
Get thee behind me; plain thou now appear'st
That evil one, Satan for ever *damn'd*.
Milton. Paradise Regained, book iv. l. 194.

Doubtlesse, as the *damnableness* of this most execrable impietie, (which is next of kinne to that unpardonable sinne and blasphemy against the Holy Ghost, the author of the Scriptures,) transcends my narrow expressions; so the eternal torments allotted to it, doe surpasse men's highest thoughts.
Prynne. Histrio-Mastix, part i. act iii. sc. 5.

When lawes are made against God and his word: then I ought more to obey God than man. Then I may refuse to obey with a good conscience; yet for all that I may not rise up against the magistrates, nor make any uprore: for if I doe so, I sinne *damnably*.
Latimer. The fourth Sermon upon the Lord's Prayer.

FALS. If I be not asham'd of my souldiers, I am a sowe't-gurnet: I haue mis-vs'd the king's presse *damnably*.
Shakspeare. Henry IV. First Part. fol. 67.

But if the words be of the present or past time, and yet not immediately *damnatory*, they do imply the sentence to be made afterward; as *decernimus*, *definivimus*, *declaramus*, and the like.
Taylor. Rule of Conscience, book iii. ch. ii.

And stīng of conscience is a punishment
On earth, they say, the greatest, and some tell
It is moreo'er the only one in hell,
The worm that never dies, being alone
The thing they call endless *damnation*.
Cotton. Epistle to John Bradshaw, Esq.

SUPER. Fell it out so accursedly?
AMBI. So *damnedly*.
Tourneur. The Revenger's Tragedy, act iii. sc. 1.

Harrow now out, and weal-away, he cryde,
What dismall day hath lent this cursed light,
To see my Lord so deadly *damnifyde*.
Spenser. Faerie Queene, book ii. can. 6.

When on one day, the same hands that would have sacrificed to him [Paul] as a God, did sacrifice him to their own evill spirits; he tore his clothes with more emotion of spirit when he was vainly to be Deified, then he suffered the tearing of his flesh when he was thus unjustly *damnifi'd*.
Mountague. Devoute Essayes, Treat. 9. sec. 2.

He may vow never to return to those sins which he hath had such experience of, for the emptiness and *damningness* of them, and so think himself a compleat penitent.
Hammond. Works, vol. i. fol. 20. *A Practical Catechism.*

However it may be said by way of answer to that part of the argument, that Christ suffered and satisfied for sin, or else God could not pardon any, (not to dispute the truth of that, whether he could or no,) it still remains that the *damningness* of sin is then taken from sin, by what means it now matters not.
Id. Ib. fol. 187. *A Copy of some Papers past at Oxford.*

As to the state of the *damned*, that that likewise is immutable the Scripture does seem plainly enough to assert, when it calls it an everlasting destruction from the presence of the Lord, and uses such expressions to set forth the continuance of their misery, as signify the longest and most interminable duration, expressions of as great an extent as those which are used to signify the eternal happiness of the blessed; and as large and unlimited as any are to be had in those languages wherein the Scriptures are written.
Tillotson. Sermon 73. vol. ii.

They acknowledge the power of the Englishman's God, as they call him, because they could never yet have power by their conjurations to *damnify* the English either in body or goods.
Boyle. Comical Suspicions.

Wiclif. Matthew, ch. xxvi.

——— Thammuz came next behind,
Whose annual wound in Lebanon allur'd
The Syrian *damsels* to lament his fate
In amorous dittyes all a summer's day.

Milton. Paradise Lost, book i. l. 144.

An amber scent of odorous perfume
Her harbinger, a *damsel* train behind;
Some rich Philistian matron she may seem,
And now at nearer view, no other certain
Than Dalila thy wife.

Id. Samson Agonistes, p. 101.

I pass one chamber; strangled on the floor
Two *damsel-ministers* of Juno lie.

Glover. The Athenaid, book xii.

Then to the skies her flight Minerva bends,
And to the queen the *damsel-train* descends;
Wak'd at their steps, her flowing eyes unclose;
The tear she wipes, and thus renews her woes.

Pope. Homer. Odyssey, book xviii.

And therefore when St. Luke speaks of the *damsel* at Philippi as possessed with a spirit of divination, or of Apollo, he meant only to describe her pretensions, and the common belief concerning her. *Farmer. On Miracles*, ch. iii. sec. 3.

DAMSON, see DAMASCENE.

Full of goodly trees, euen as in France, as in okes, elmes, ashes, walnut-trees, cydrons, uines, and white thornes, that bring foorth fruit as bigge as any *damsons*.

Hakluyt. Voyage, &c. Jaques Cartier.

Aboute thyse welles were also sette dyuerse tryes with floryshynge lewys and fruytes, as oranges, almandes, &c. *damseyns*, and plummes, and other fruytes longe to reherse.

Fabyan. Henry VI. Anno 1532.

Nor there the *damson* wants, nor dainty apricock.

Drayton. Poly-olbion, song 18.

DAN, Archdeacon Nares (*Gloss. ad voc.*) says, is a corruption of *Don*, for *Dominus*, originally applied to Monks, afterwards to persons of all respectable conditions. When it began to grow obsolete, it was applied jocularly. Dr. Jamieson cites as a proof that *Dan* was used by Scottish writers,

The ancient Nun of *Dan* Phebus
Thir wourdes end it.

Gawaine Douglas. Æn. 186, 48.

And also *Dasz* from R. Brunne,

With them went *Dasz* Merlyn
For the stones to mak engyn.

Appendix to Preface, cxcii.

DANÆA, in *Botany*, a genus of the class *Cryptogamia*, natural order *Filices*. Generic character: capsules in a double row along the veins of the leaf, one-celled, perforated with a pore at the summit. DANÆA.

DANÆA. — DANCE.

Four species of Ferns, natives of the West Indies. Swartz. *Fil.*

DANAIS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx five-toothed; corolla funnel-shaped, throat hairy; style two-cleft, capsule globose, umbilicated, two-celled; apex two-valved, many-seeded, margin of the seed membranaceous.

Two species, natives of the East Indian Islands. Persoon.

DANAUS, in *Zoology*, a genus of *Lepidopterous Insects*, established by Latreille. It belongs to the tribe *Heliconina*, of the natural family *Papilionidæ*; and to the section *Danai festivi*, of the Linnæan genus *Papilio*.

Generic character: the two anterior pair of feet much smaller than the rest, folded under the body, and compressed in both the sexes; the spur of the tarsi simple; the wings triangular, broader than long, the lower pair not embarrassing the abdomen; the lower palpi distant from one another, thin, cylindrical and elevated over the head like a hood; the second joint rather longer than the first; antenna with the end of the club curved.

DAN — DAI

The species of this genus are nearly confined to the warm climates of the Old World, as Africa and the Indies. Latreille considers the following species the type:

Danaus Midamus, the *Papilio Midamus* of Linnæus, East Indies; and the *Papilio Chrysippus*, *P. plexippus*, and *P. similis* of Fabricius, are all referable to this genus, as are also several New Holland species.

One of the sexes always has a slit and a sort of little pocket placed on the lower surface of the disk of the wing, the use of which is quite unknown.

This genus differs essentially from the genera *Nyphalis* and *Cethosia*, by the form of the lower palpi; and from the *Heliconii* by the triangular, and not ovate shape of their wings, and by the hooked end of the antenna.

Fabricius separated the species here placed together by Latreille, into two genera, under the name of *Euplocea* and *Idea*, which distinction ought to be adopted.

That turned is to quaking all my *daunce*.
Id. Of Queene Annelida, fol. 256.

There was reuell, there was *dauncinge*
And euery life, whiche couth singe
Of lusty women in the route,
A fresshe caroll hath songe about.
Gower. Conf. Am. book v.

And ye seruauntes of Achis sayde of hem: is not this Dauid the kinge of the lande? did they not singe vnto this felow in *daunses*, sayinge: Saul hathe slayne his thousand and Dauid his ten thousand. *Bible, Anno* 1551. *Kings*, ch. xxii.

Whiche prestes, for as moch as certayne times they *daūsed* about the citie with targates, that they imagined to fal from heuen, were called in Latine *Salij*, whiche in to Englyshe may be translated *daūsers*.
Sir Thomas Elyot. Governour, book i. ch. xx.

I am not of that opinion, that all *daunsing* generally is repugnant vnto vertue, all thoughe some persones excellently lerned, speciall diuines, so do affirme it.
Id. Ib. book i. ch. xix.

Some of the mariners thinking we were in Bristow Channell, and other in Silly Channell: so that through variety of iudgements, and euill marinership we were faine to *dance* the hay foure dayes together, sometimes running to the north-east, sometimes to the south-east, and againe to the east and east-northeast.
Hakluyt. Voyage, &c. Mr. Charles Leigh.

WILL. Dick, since we cannot *dance*, come, let a cheerful voice
Shew, that we do not grudge at all when others do rejoice.
Sir Philip Sidney. Life, p. 10.

——————— Methought it was a sound
Of riot and ill-manag'd merriment,
Such as the jocund flute, or gamesome pipe
Stirs up among the loose unletter'd hinds,
When for their teeming flocks, and granges full,
In wanton *dance*, they praise the bounteous Pan,
And thank the Gods amis.
Milton. Comus, l. 176.

What eye doth see the Heav'n but doth admire
When it the movings of the Heav'ns doth see?
Myself, if I to Heav'n may once aspire,
If that be *dancing*, will a *dancer* be.
Davies. On Dancing.

For what doth this *danceresse?* She most impudently uncovers her head, which Paul hath commanded to be alwayes covered: she turns about her necke the wrong way; she througheth about her haire hither and thither.
Prynne. Histrio-Mastix, act vi. sc. 12.

This sung the sacred Muse, whose notes and words
The *dancers* feete kept; as his hands his cords.
Vlysses, much was pleased, and all the crew:
This would the king haue varied with a new

And pleasing measure; and performed by
Two, with whom none would strive in *dancerie*,
And those, his sonnes were; that must therefore *dance*
Alone; and onely to the harp aduance,
Without the words.
Chapman. Homer. Odyssey, book viii. fol. 120.

Dancing-masters, or those who make any *dancing-meetings* after they have been often admonished to desist, ought to be excommunicated for their pertinacy and rebellion.
Prynne. Histrio-Mastix, part i. act vii. sc. 3. p. 636.

Whence the French Protestants (as I am informed by those who have lived among them) doe wholly abandon stage-playes and *dancing*, as unchristian & sinfull pastimes: neither will they suffer their sonnes or daughters to *dance*, or to resort unto a *dancing-schoole*, as the French Papists doe. *Id. Ib.*

Being never well pleased or contented, but when they are wandring abroad to playes, or playhouses, *dancing-matches*, masques, and publike shewes. *Id. Ib.* part ii. act v. p. 993.

All lusts else are the Devil's snares; and in a word, in all these cobwebs there inhabit spiders, and every stragling love of inordinate affection that goes out, and is fastened to any thing in the world, is the spider's *dancing-rope*, to go in and out of his house upon.
Goodwin. Works. Of Evangelical Obedience, vol. v. part ii. fol. 111.

At this time the court fell into much extravagance in masquerading; both king and queen and all the court, went about masked, and came into houses unknown, and *danced* there with a great deal of wild frolic.
Burnet. Own Times. Anno 1668.

James, before he beheld Betty was vain of his strength, a rough wrestler, and a quarrelsome cudgel-player; Betty, a public *dancer* at maypoles, a romp at stool-ball.
Spectator, No. 71.

Remove your benches, you apostate pit,
And take, above, twelve pennyworth of wit;
Go back to your dear *dancing* on the rope,
Or see what's worse the Devil and the Pope.
Dryden. A Prologue.

I had my education in a lac'd coat, and a French *dancing-school*. *Tatler*, No. 128.

Thee the voice, the *dance*, obey,
Temper'd to thy warbled lay,
O'er Idalia's velvet-green
The rosy-crowned Loves are seen,
On Cytherea's day,
With antic sports and blue-ey'd pleasures,
Frisking light in frolic measures;
Now pursuing, now retreating,
Now in circling troops they meet;
To brisk notes in cadence beating
Glance their many-twinkling feet.
Gray. The Progress of Poesy.

The Genii named Cinnaras are the male *dancers* in Swerga, or the Heaven of Indra; and the Asparas are his *dancing-girls*, answering to the fairies of the Persians, and to the damsels called in the Koran *phúru' lûglin*, or with antelopes' eyes.
Sir W. Jones. A Hymn to Indra. The Argument.

We must court, flatter, and fee them; not to mention the trouble of *dancing* attendance, and paying our most obsequious respects to them. *V. Knox. Antipolemus.*

The pert vivacity of assured ignorance has often persuaded the fond mother to discard the tutor for the *dancing-master*.
Id. Essays, No. 3.

DANCING of some kind appears to have been cultivated at all times, and in all countries—*Cantatur ac saltatur per omnes gentes aliquo modo*, (Quinct. ii. 17)—and in none more than by the most barbarous nations. The antiquity of the Art is so great, that it lies beyond all testimony. Theophrastus, according to Athenæus, (i. 19,) refers the honour of its invention to Andron, a native of Catana in Sicily; and thence derives the verb σικελίζειν, which was used synonymously with ὀρχίζειν. Eumelus (Ath. ibid,) carries the Art still higher, and ascribes it to Jupiter himself. The whole passage may be consulted as illustrative of the early stages of Grecian Dancing. The word βάλλισμος, whence the French, apparently, have their *Bal* and *Ballet*, and we our *Ball*, is of Sicilian origin; which, while it proves the partiality of that nation for Dancing, is, certainly, no proof (as Athenæus, after Epicharmus, would have it supposed) that it is of Sicilian discovery. On the contrary, we know, that it had been discovered long before the civilisation of Greece, much less the colonization of Sicily; for not only have we the general opinion recorded by Lucian, that it was invented by the Goddess Rhea, and by her communicated to her Priests in Phrygia and Crete; a tradition which is quite enough to show that its origin lay far beyond the boundaries of authentic Greek History; but we have the actual testimony of Scripture, that it was, at a very early period, not only known, but even applied to sacred purposes. In *Exod.* xv. 20, we read, that on the occasion of singing the triumphal ode which Moses composed on the defeat and destruction of the Egyptians, "Miriam, the Prophetess, the sister of Aaron, took a timbrel in her hand, and all the women went out after her with timbrels and with *Dances*." The words מחלת, rendered by our Translators *Dances*, is by some translated flutes, from חלל, *hiavit, foraminibus patuit*; but the LXX., whose authority in a matter of this kind cannot be suspected, render the word in this place by χοροὶ; and, what is of more importance, there are several other passages where it cannot be otherwise translated. From this passage, then, we collect, that regular Dancing, on festive occasions, was at that time in general use, as nothing is said on the subject of its novelty. These Dances, probably, were neither very artificial, nor even premeditated, but resembling those still in use among the females of Arabia, where one leads and the others observe and carefully copy her movements; and where, with little design, intricacy or variety, an agreeable and rythmical motion is produced. Very shortly after this, (*Exod.* xxii. 19,) we find the Israelites Dancing at the inauguration of the golden calf; and, as it is generally agreed, that this representation of the Deity was borrowed from the mysteries of Apis, it is probable that the Dancing was also copied from that of the Egyptians on those occasions. The daughter of Jepthah came out to meet her father with a triumphal Dance, resembling, apparently, that of Miriam, (see *Judges*, xi. 34;) and before this time we find that an annual Dance was celebrated in Shiloh, on the occasion of a sacred festival, (*Judges*, xxi. 21.)

That, however, which in an earlier stage of society was considered to be decorous in a Prophetess and a Princess, became, in process of time, derogatory to the dignity of a King among the Jews; for in this light we find Michal regarding the conduct of David, in Dancing on occasion of the solemn deposition of the Ark, (2 *Sam.* vi. 16.)

Similar was the history of Dancing among the Greeks and Romans. In the *Iliad*, (xvi. 617,) Merion is styled ὀρχηστὴς, a Dancer, by Æneas; and from the context, we should have supposed that the term was applied to him, only on account of the agility with

DANCING which he had avoided the spear of his enemy. The Scholiast, however, observes, that the art of Dancing was then considered a valuable accomplishment; and that it was the πυῤῥίχη, or warlike Dance, so called after Pyrrhus or Neoptolemus the Son of Achilles, (Lucian;) or, as some derive it, after Pyrrichus a Cretan or Lacedæmonian, in which Merion excelled. Whatever was Merion's ὄρχησις, there can be no doubt that Dancing, at least of the serious kind, (for the fate of Hippoclides, who, by exhibiting the light ἐμμέλεια, Danced away his rich bride, must be fresh in the recollection of every reader of Herodotus, (vi. 129,) was highly esteemed in the early ages of Greece. Helen Danced publicly in the Temple of Diana; the stern Lycurgus enjoined Dancing to the Lacedæmonians, who in particular celebrated the Deities Apollo and Bacchus in a Dance called γυμνοπαιδία; and so popular was the Art, that the chief Magistrates of Thessaly had the honourable appellation of προορχηστῆρες.

Didymus, on the passage of the *Iliad* referred to above, adds two other divisions of Grecian Dancing to the πυῤῥίχη; the σίκιννις, which was religious, and the κορδακισμός, practised by buffoons. Cleophantus of Thebes improved the Art of Dancing; but it was to Æschylus that the invention owed its best improvement among the Greeks, when he regulated, or rather founded the Grecian Stage. Yet was it this Poet who sowed the first seeds of its decline. The attention of the people, before occupied with the χόρος as a mere Dance, was now turned to the same χόρος, as the instrument of higher gratifications: intellectual pleasures gradually supplanted corporeal elegance and activity; and Dancing, the former pride of Monarchs and warriors, in the end was cultivated, in the height of its perfection, by hired artists only.

The Romans, as they advanced in civilisation, underwent a similar change of opinion. Furius Albinus (in Macrobius, who wrote during the IVth century,) asks, Whether any one had ever witnessed professional Dancing at any entertainment in a private assembly, even in that luxurious and licentious period? "And yet," subjoins he, "formerly our gravest ancestors were desirous of acquiring the art of Dancing. To begin from the interval between the two Punick wars, a period of the austerest morality, the children of Gentlemen, nay, of Senators, attended the Dancing-school, and learned the use of the castanets." Nothing can be more curious than the fact, that such should have been the practice among the sternest and coldest race of men that the world ever saw; and that when the same nation became gradually plunged in the excesses of voluptuousness and vice, it should as gradually have become disgraceful for persons of any consideration to Dance. Yet earlier, Sempronia is reproved by Sallust for "Dancing better than a modest woman ought to do:" "*saltare elegantiùs quàm necesse est probæ.*" And Cicero, in advocating the causes of Muræna and of King Dejotarus, both of whom were accused among other crimes of having Danced, repels the charge with the strongest indignation. In the first instance, indeed, he uses this remarkable expression, "*Nemo ferè saltat sobrius, nisi fortè insanit;*" which words, allowing for the rhetorical flourish, sufficiently evince the change which had taken place in public opinion between the rigid age of Cato and the refined epoch of the falling Commonwealth. The sacred Dances, however, as the Salian, Lupercalian, &c. still continued in practice and honour at Rome, as is observed by Quinctilian. DAN

Ammonius, in Plutarch, (*Sympos.* lib. viii. *Prob.* xv.) gives a very minute classification of the ancient Dancing. He divides it into φορὰ, σχῆμα, and δεῖξις, which he thus severally defines. "Dancing," says he, "consists of motions and positions, as Music does of sounds and intervals. The motions are called φοραὶ. The positions and attitudes which conclude the Dance, when Apollo, or Pan, or some *Baccha* is to be delineated, are called σχήματα. The third part, δεῖξις, is not imitative, but indicative of the subject in hand. For as the poets employ Proper names demonstratively, naming Achilles and Ulysses, and the Earth and the Heaven, as they are properly called; but, for the sake of emphasis and imitation, employ sometimes a figurative language, making the brooks murmur and gurgle, and the darts thirst for blood: ——— So, in Dancing, the σχῆμα is imitative of form and appearance; the φορὰ is an emphatic mode of expressing emotion, action, or faculty; while with the δεῖξις the Dancer indicates the things themselves, as the earth, the sky, the bystanders." This description, in some respects, relates to that branch of the Art which we have treated under CHIRONOMIA; but it may be said to embrace the whole mechanism of Dancing also, as far as an individual is concerned; both ancient and modern. The σχήματα answer to the positions to be assumed by the Dancer when at rest, the rapid transitions which are necessary to a graceful execution of the Dance; the φοραὶ correspond to the various movements, as *allemande, swing-corners,* &c.; but the δεῖξις properly belongs to the χειρονομία only, an Art, properly speaking, distinct from Dancing.

Those who wish for minute information on the Dancing of the Ancients may be referred to Lucian, Περὶ ὀρχήσεως: Plato, *de Legibus,* vii.; Meursius, *de Saltationibus Veterum;* Eyndius, *de Saltationibus Veterum;* Scaliger, *Poet.* lib. i. c. 18; and the Dissertation of Burette, in the *Mémoires de l'Académie des Inscriptions.*

The propriety of Dancing has been much controverted by Theologians. Among the Fathers, St. Chrysostom (*Hom.* xlix.) assures us that feet were not given for Dancing, but to walk modestly, not to leap impudently like Camels. St. Basil declaims against the practice in his Homily *contra Ebrios.* St. Augustin in his work *contra Petilian,* from which a pithy sentence has often been quoted, *Melius est fodere quam saltare,* (on the Sabbath;) and St. Ambrose in his Treatise *de Virginibus,* (iii.) are equally hostile. Dancing has more than once been expressly forbidden by Councils, as by that of Laodicea, A. D. 364, that of Agatha in 430, and that of Ilerda in 515. In many others the prohibition extended to Ecclesiastics only. St. Francis de Sales bitterly inveighed against this recreation; but among foreign Divines we have scarcely met with longer or stronger arguments against this Art, than such as are contained in a little work, entitled *Traité de danse, auquel est amplement resolue la question asavoir s'il est permis aux Chrestiens de danser.* 2de. *Ed.* 1580, dedicated to the King of Navarre, (Henry IV. of France.) Prefixed to this are three vituperative Sonnets; in the first of which the Book itself is warned that it will be despised by Dancers:

Mais souuien toy que leurs vagues esprits,
Ne sont logez qu'es pieds et en la panse.

DANCING The second characterises the Dance, as

de la vie ennemie,
Un plaisant mal, une pure folie:

and the third, still more impetuously affirms, that the

Causes des maux qui la terre et les cieux
Vont vilenans, et qui l'ire effroyable
Du Tout-puissant attirent ici bas:
Sont des Danseurs les malheureux esbats
Et les beaux fruits de la Danse execrable.

In the prose reasoning which follows we are assured, that Dancing springs from no other sources than *idolatrie*, *yvronesse*, and *paillardise*; that in every kind of Dance *ce sont tousjours mouuemens et agitations au corps, et gesticulations contre l'ordinaire de Nature: ce sont sauts, gãbades, reprises, tourdiõs, virevoltes, desmarches, tantost simples, tantost doubles; l'on recule, l'on s'avãce, puis deça, puis dela, l'un se guinde en l'air, l'autre fait la rouë, l'autre des pieds bat la terre; c'est merveilles des inventions.* The charitable sum of all is *que nos exhortõs nos Eglises de chasser et releguer ces vilaines coustumes aux enfers.*

But the Church of the Vandois was the most determined of all enemies to Dancing. In Sampson Lennard's Translation of Perin's *History of the Waldenses*, the following unmeasured *tirade* is given from one of their Ordinances: "A Dance is the Devil's procession, and he that entreth into a Dance entreth into his possession. The Devil is the guide to the middle and to the end of the Dance. As many paces as a Man maketh in Dancing, so many paces doth he make to Hell." It then goes on to assert, that we break our Baptismal vow in Dancing, "for Dancing is the pomp of the Devil, and he that Danceth maintaineth His pomp and singeth His Mass. For the Woman that singeth in the Dance is the Prioress of the Devil, and those that answer are his Clerks, and the Beholders are the Parishioners, and the Musick are the Bells, and the Fiddlers the Ministers of the Devil. For as when Hogs are strayed, if the Hogherd call one, all assemble together, so the Devil causeth one Woman to sing in the Dance, or to play on some instrument, and presently all the Dancers gather together." In the same strain it is proved that in the act of Dancing, a man breaks all the ten Commandments. (Part iii. book ii. ch. ix.)

Among the English, Barclay in his Translation of the *Navis Stultifera*, probably led the attacks against an amusement, which heretofore had never met with ill words. The passage is long and dull, and we shall content ourselves with the citation of three lines only:

What els is Daunsing but even a nurcery
Or els a bayte to purchase and mayntayne
In yonge hearts the vile sinne of ribawdry.

The later Puritans, of course, were open-mouthed against this abomination and iniquity; and the sum of their arguments may be found arrayed with unusual moderation in a little volume entitled ΧΟΡΟΘΕΟΛΟΓΟΝ, containing two Tracts, of which the second discusses *the Nature and Accidents of mixt Dancing, by* Joseph Bentham, *sometime Rector of the Church of Broughton in Northamptonshire, now Pastor of Neather Winchingdon in the County of Bucks*, 1657. The latter Parish it seems was most grievously beset with a sinful inclination to this wicked exercise, and the good pastor framed a dialogue explanatory of the evils resulting from it. Among these, as is natural to imagine, one of the chief is the familiarity which it permits between young persons of different sexes. This innocent and agreeable intercourse, however, had long since found an advocate in the learned Sir Thomas Elyot. The nineteenth Chapter of the first Book of his *Governour* contains much to this purpose, which will probably find assent from most readers, with the exception perhaps of the odd *dictum* with which the Knight concludes. "In every Daunce of a most ancient custome there daunced together a man and a woman, holding each other by the hand or by the arme, which betokeneth Concord. *Now it behoveth the Dauncers and also the beholders of them to know al qualities incident to a man, and also al qualities to a woman likewise appertaining.*" DANCING

The great authority of Locke is highly in favour of this Art. "Since nothing appears to me to give children so much becoming confidence and behaviour, and so to raise them to the conversation of those above their age as Dancing, I think they should be taught to Dance as soon as they are capable of learning it. For though this consists only in outward gracefulness of motion, yet, I know not, how it gives children manly thoughts and carriage more than any thing." (*Of Education*, sec. 67,) and again to the same effect, sec. 196.

The History of modern Dancing is not any where accurately laid down, and we must content ourselves with gleaning such scanty explanations as we can find, of some of the chief measures which were known to our ancestors, from the time of Queen Elizabeth downward. The figures may be learned from the *Orchesographia* of Thoinot Arbeau, (Jean Tabourot, Canon and Official of the Cathedral of Langres, who thus anagrammatized his name in 1589,) or in the *Coregraphie* of Feuillot; and for much that follows on other points we are indebted to Sir J. Hawkins in his *Hist. of Music.*

On the Brawl, the Canary, and the Coranto, we have already delivered all the little we know.

The *Pavan* from *Pavo*, a Peacock, was a grave and majestic Dance; the method of Dancing was anciently by gentlemen dressed with a cap and sword, by those of the long robe in their gowns, by Princes in their mantles, and by ladies in gowns with long trains, the motion whereof in the Dance resembled that of a Peacock's tail. Every Pavan had its Galliard, a lighter kind of air made of the former. The *Galliard* is supposed by Brosseur to be the same as the Italian *Romanesca*; and is explained by Sir John Davies, a venerable personage, who as was usual in the days of the Virgin Queen when "the grave Lord Keeper led the Brawls," united a profound knowledge of Dancing with much learning in the Law. How requisite this union was considered, may be learned once for all from Dugdale, who assures us that in the Inns of Court, in order that "nothing might be wanting for their encouragement in this excellent study, (the Law) they have very anciently had Dancing for their recreation and delight."—"Nor were the exercises of Dancing merely permitted, but thought very necessary, as it seems, and much conducing to the making of gentlemen more fit for their books at other times; for by an order made 6th of February, 7 James, it appears that the under Barristers were by decimation put out of commons, for example's sake, because the whole Bar offended by not Dancing on Candlemas-day preceding, according to the ancient order of the Society, when the Judges were present; with this, that if the like ever were committed after-

DANCING wards they should be fined or disbarred." (ch. 64.) Sir John Davies had been Attorney General in Ireland, and on being recalled to England he was appointed Lord Chief Justice of the King's Bench, but he died before his installation. In his unfinished Poem, *Orchestra, expressing the Antiquities and Excellencies of Dancing in a Dialogue between Penelope and one of her wooers,* we find the *Galliard* thus described :

> But for more diverse and more pleasing show
> A swift and wandering Dance she (Venus) did invent,
> With passages uncertain to and fro,
> Yet with a certain answer and consent,
> To the quick music of the instrument,
> Five was the number of the music's feet,
> Which still the dance did with five paces meet.
>
> A gallant dance that lively doth bewray,
> A spirit and a virtue masculine,
> Impatient that her house on earth should stay,
> Since she herself is fiery and divine :
> Oft does she make her body upward flie :
> With lofty turns and caprioles in the air,
> Which with the lusty tunes accordeth fair. st. 67, 68.

The *Passamezzo* (*passare*, to walk, *mezzo*, half,) was a slow Dance little different from walking. The *Allemand*, as the name implies, was of German origin; grave but spirited, the measure duple time of four crotchets in a bar, the air of two strains with a repetition of each. The *Gavot* (from *Gavots* the inhabitants of the mountainous district of *Gap* in France) was in duple time of two strains. The *Minuet*, from *menu*, small, was a small pace, originating in Poictou. The *Paspy*, (*passe-pied*) was a sort of quick Minuet from Bretagne, in three strains, the first of eight bars. The *Hornpipe* was English; Dance to the Pib corn, i. e. the hornpipe, a rustic instrument still known in Wales and described by Mr. Daines Barrington, (*Arch.* iii. 33;) Chaucer (*Rom. of the Rose,*) speaks also of "Hornpipes in Cornwaile." The *Trenchmore* was probably a lively Dance, from the mention made of it by Selden in his *Table Talk*, (*King of England.*) "The Court of England is much altered. At a solemn Dancing first you had the grave measure, then the *Corantoe* and the *Galliard*, and this kept up with ceremony, and at length the *Trenchmore* and the *Cushion Dance*. Then all the company Dances, lord and groom, lady and kitchen maid, no distinction. So in our Court in Queen Elizabeth's time gravity of state were kept up. In King James's time things were pretty well. But in King Charles's time there has been nothing but *Trenchmore* and the *Cushion Dance, omnium gatherum, tolly polly, hoite cum toite.*" Besides this the *Trenchmore* is the tune to which the Duke of Buckingham has made the Earth, Sun, and Moon Dance the Hey in the *Rehearsal*; an exquisite conceit, which perhaps, however, might be first suggested by the gravity of Sir John Davies, who informs us that

> the brave Sun the father of the Day,
> Doth love the Earth the mother of the Night,
> And like a reveller in rich array,
> Doth Dance his galliard in his leman's sight. st. 39.

We do not believe that the Poet makes the Earth Dance at all, but the Moon, according to the same authority, is a desperate *figurante*.

> Who doth not see the measures of the Moon,
> Whick thirteen times she Dances every year,
> And ends her pavan thirteen times as soon
> As doth her brother. st. 41.

Taylor, the Water Poet, does not assign this Dance to the best company : he says DANC

> All Hell danc'd Trenchmore in a string.

The *Cushion Dance* is described as below in *The Dancing Master*, 1698, cited in Ellis's note on Brand's *Pop. Ant.* ii. 84. "Joan Sanderson, or the Cushion Dance, an old round Dance; this Dance is begun by a single person, (either man or woman) who, taking a cushion in his hand, Dances about the room, and at the end of the tune he stops and sings, *This Dance it will no farther go.* The musician answers, *I pray you, good sir, why say you so?* Man. *Because Joan Saunderson will not come to.* Musick. *She must come to, and she shall come to, and she must come to whether she will or no.* Then he lays down the cushion before a woman, on which she kneels, and he kisses her singing, *Welcom, Joan Saunderson, welcom, welcom.* Then she rises, takes up the cushion, and both Dance, singing *Prinkum prankum is a fine dance and shall we go dance it once again?* Then making a stop, the woman sings as before, *This Dance it will no farther go.* Musick. *I pray you, madam, why say you so?* Woman. *Because John Saunderson will not come to.* Musick. *He must come to, &c.* (as before.) And so she lays down the cushion before a man, who kneeling upon it salutes her, she singing, *Welcom, John Saunderson, &c.* Then he taking up the cushion, they take hands and Dance round, singing as before, and thus they do till the whole company are taken into the ring. Then the cushion is laid before the first man, the woman singing *This Dance, &c.* (as before) only instead of *Come to*, they sing *Go fro;* and instead of *Welcom, John Saunderson, &c.* they sing, *Farewell, John Saunderson, farewell, farewell*, and so they go out, one by one, as they came in. *Note.* The woman is kissed by all the men in the ring at her coming in and going out, and likewise the man by all the women."

The *Jig* is English, (Teut. *Ghiighe*, a fiddle,) of duple time, two strains, bars indeterminate. For the *Lavolta* we must again apply to Sir John Davies.

> Yet is there one the most delightful kind,
> A lofty jumping or a leaping round,
> Where arm in arm two Dancers are intwin'd,
> And where themselves with strict embracements bound,
> And still their feet an anapest do sound.
> An anapest is all their music's song
> Whose first two feet are short and third is long.

This bears a strong resemblance to the modern Waltz. The *Roundel* or *Country Dance* seems to be purely English. Sir Thomas Elyot (*loc. cit.*) mentions some other Dances, as *Bargenettes*, (Skinner gives *Bargaret*, *Tripudium Pastoritium*, from Fr. *Berger*,) *Pauyons*, (*Pavans?*) *Turgyons* and *Roundes*, concerning which he says, "That as for the special names they were taken as they be now, either of the names of the first inventours, or of the measure and number that they do containe, or of the first words of the dittie which the song comprehendeth, wheroff the Daunce was made. In every of the said Daunces there was a continuity of mouing the foote and body, expressing some pleasaunt or profitable affect or motion of the mind."

On the *Morris Dance* large collections have been made, but to no very satisfactory end; for both its origin and the subjects which it intends to represent still continue equally obscure. The Etymologists for the most part derive the name from the Spanish,

Morisco, a Moor; and in this notion, although it is rejected by Strutt, (*Sports and Pastimes*, iii. 5,) Mr. Douce coincides. He supports his opinion by the account which Thoinot Arbeau has left of the Morris Dance, as practised in France in the early part of the XVIth century. This writer says it was then customary, in good society, for a boy to come into the hall, after supper, *with his face blackened*, his forehead covered with red or yellow taffety, and with bells tied to his legs; he then Danced the *Morisco*. We only perceive from this account that the *Morisco*, as Danced in France, was probably an imitation of a Moorish Dance: but there is no farther resemblance between the French *Morisco* and the English Morris, than that the performers in each danced with bells.

Strutt (*loc. cit.*) does not give any etymology, but he thinks the Morris is derived from the *Fool's Dance*, in which the performers were equipped in the costume of fools, with bells, from twenty to forty in number, fastened to their clothes. Of the Dance itself he gives a representation in his XVIth plate, copied from a MS. (*Bodl.* 964,) of the time of Edward III. These bells in the Morris were of unequal sizes and tones. The principal Dancer or *foreman* was distinguished by a richer dress than his companions, the number of whom appears to have varied. The Morris Dances latterly became accompaniments of the May games of Robin Hood, of which a detailed account may be found in the *Dissertation on the Ancient English Morris Dance*, appended to the second volume of Mr. Douce's *Ill. of Shakspeare*. The usual characters of which this rustic sport consisted, were Robin Hood, Little John, Friar Tuck, Maid Marian, the Queen or Lady of May, a Fool, a Piper, and variously habited Morris Dancers. To these were afterwards added a Hobby Horse and a Dragon. The Hobby Horse was represented by a man riding on a pasteboard head and tail of a horse, the middle being concealed by drapery. Mr. Tollett, of Betley in Staffordshire, possesses an ancient painted glass window representing a Morris Dance. Mr. Douce mentions three very modern instances of Morris Dancing, one at Richmond, in Surry, by a troop from Abingdon, in 1783, another at Pendleton, in Lancashire, in 1792, and a third still later at Usk, in Monmouthshire.

Strutt (*loc. cit.*) speaks of other grotesque Dances: the *Sword Dance*, which is probably one of the earliest Dances performed by all nations; the Greeks practised it in their Pyrrhic Dance; it was known to the Germans, (Tacitus, *de Mor. Germ.* 24;) and it is still found among most modern savages. The *Egg Dance*, in which a man blindfolded Dances a hornpipe in and about a number of eggs placed on the floor; and the *Ladder Dance*, in which the artist balances himself while in motion on the rounds of a ladder. All these we believe may still be seen at country fairs.

Rope Dancers, *νευροβάται*, *σχοινοβάται*, *Funambuli*, were well known to the Ancients, and their History and Science may be traced in Professor Grodeck's learned Dissertation *de Funambulis*. Strutt has recorded some extraordinary modern feats of these adventurous gentry. Most of them, however, belong more to tumbling and balancing than to Dancing; such as descents, head foremost, from Church steeples, &c. Jacob Hall in the time of Charles II., Signora Violante still later, and Madam Sacchi in our own days, have, perhaps, equalled any preceding exploits, and more legitimately belong to Dancers. In all these exhibitions, however, we feel that the pleasure arising from the conquest of difficulty, is more than compensated by perpetual apprehension of extreme danger to the performer.

Animals also have been taught a kind of Dancing. Rope Dancing Elephants were exhibited by Galba when Prætor during the *Floralia*, (Suet. 6;) and Seneca, (*Epist.* ii.) speaks of a similar spectacle under Nero; Pliny (viii. 2) also mentions this as no uncommon sight. Busbequius, at Constantinople, saw an Elephant Dance: *Cum saltare juberetur, movebat ita alternos pedes, toto corpore coruscans, ut non obscurè tripudiare velle videretur.* (*Epist.* i.) Cocks have Danced on stilts. Bears, Dogs, and Monkies have from time to time contested the palm with *le Dieu de la Danse* of his day; and few can have forgotten the Cotillons which have very recently been performed by the Horses at one of our Minor Theatres.

DANDELION, Fr. *dent de lion*; It. *dente di lione*; Sp. *diente di leon*; from I know not what similitude to the *tooth* of a Lion. Skinner. Because, says Minsheu, its juice renders the *teeth* strong and firm. The common name of the *Leontodon officinale*.

Now when things are set in this clear light, it appears how ridiculous it would be for two persons to contend, whether *dandelion* be an herb or a weed; whether it be a pot-herb or a sallad; when by the custom or fancy of different families, this one plant obtains all these names according to the several uses of it, and the value that is put upon it. *Watts. Logic*, part i. ch. vi.

DANDIPRAT, with us (says Skinner) a dwarf, a little man: of uncertain origin. The Dutch, *danden*; Fr. *dandiner*, *ineptire*, *garrire*; Scotch, *dandile*, to saunter, to go about idly; Ger. *denteln*, *ludere*, *ludicrè agere*, seem to be allied. But what is *Prat?* Skinner thinks it may be Fr. *prest*, prompt, apt, fit; and thus it may be,—One apt to play the fool. See DANDY, below.

The smug *dandiprat* smells us out, whatsoever we are doing. *Massinger. The Virgin Martyr*, act ii. sc. 1.

The vile *dandiprat* will overlook the proudest of his acquaintance. *Brewer. Lingua*, act iii. sc. 3.

K. Henry the Seauenth stamped a small coin called *dandyprats*. *Camden. Remains. Chapter on Money.*

DANDLE, of uncertain origin. The Ger. *denteln*; Fr. *dandiner*, (see DANDIPRAT, above,) seems to have an affinity. Wachter complains that Menage has not explained the origin of the French word.

Minsheu says, To *dandle*, is to lull, cocker, hugge fondly, to *dandle* in the lap or armes, as a nurse doth to please an infant. Junius interprets the Dutch, *dandelen*, to the same effect. Wachter gives *cunctari*, as one of the usages of *denteln*; and *dandle* seems so used by Spenser. In Speed, it appears equivalent to "amused, deluded."

But there is one very foul abuse, which by the way I may not omit, and that is in captaines, who notwithstanding that they are specially imployed to make peace through strong execution of warre, yet they doe so *dandle* their doings, and dallie in the ser-

DANDLE. — DANEGELD.

vice to them committed, as if they would not have the enemy subdued, or utterly beaten downe, for feare afterwards they should need employment, and so be discharged of pay.

Spenser. On the State of Ireland.

Dare you not cherish those sins in your souls that possibly you dare not commit in your practices? Do you not *dandle* them in your thoughts, and hover and flutter over them in your affections?

Hopkins. Sermons, fol. 509.

King Henries ambassadors into France hauing beene *dandled* by the French during these delusive practises, returned without other fruite of their labours.

Speed. Henrie VII. book ix. ch. xx. sec. 28.

Sporting the lion ramp'd, and in his paw
Dandl'd the kid.

Milton. Paradise Lost, book iv. l. 344.

Then *dandles* him with many a mutter'd pray'r
That heaven would make him some rich miser's heir.

Dryden. Persius. Satire 2.

Thou happy wretch! by blindness thou art blest;
By dotage *dandled* to perpetual smiles.

Young. The Complaint. Night 1.

DANDRUFF is sufficiently explained by Holland. Skinner says, from A. S. *tan*, i. e. "A foul tetter, scab or other like disease, especially in the chin, causing the haire to fall." And *drof*, "filthie, dirtie, draffie." Somner.

The roots of the black [beet] sodden after the same manner in water, rid away the *dandruffe* or unseemely skales within the haire of the head or beard.

Holland. Plinie, vol. ii. fol. 27.

A paste of composition rare,
Sweat, *dandriff*, powder, lead, and hair.

Swift. Lady's Dressing Room.

Mask. There's the *dandriff-comb* you lent me.

Dryden. Mock Astrologer, act iv.

How little would thy mass of money waste,
Did you on better oil and cabbage feast,
Or on thy clotted hair, and *dandruff-head*,
A sweeter, more expensive, essence shed!

Francis. Horace. Satire 3. book ii.

DANDY, which has become part of our modern *Slang* Vocabulary, is a genuine Scotch word, thus explained by Jamieson, "a principal person or thing; what is *nice, fine*, or possessing supereminence in whatever way." This is referred to *dandi*, Isl., and *daenue*, Sw. G. liberal; while *dandily*, "one who is spoiled or rendered foolish by being too much made of," is derived, and, as we think, more readily and with greater propriety, from It. *dondola*, a puppet, *dondolo*, a ninny.

DANEGELD, A. S. *dane-geld*; Mid. Lat. *danegeldum*; compounded of *Dane*, and *gelt*, a debt or fine. The Examples sufficiently explain the usage of the word. And see Spelman, *Gloss. Archæol.*

Which yerely, during his lyfe, and after, to the cummynge of Seynt Edwarde was leuyed of his subiectes, and named, for the continuaunce thereof, *Danegelt*: whiche is, or was to meane money payde to y^e^ Danys or shortly Dane money.

Fabyan, vol. i. ch. 198.

After the Conquest, *danegelt* is supposed to be released by the Conqueror, because he dreamed he saw the Devil dancing upon the *danegelt*; but the Black Book saith it was paid in the Conqueror's time.

State Trials. The King against John Hampden.

At first, £10,000. was given to the Danes, who retired with this money and the rest of their plunder. The English were now for the first time, taxed to supply this payment. The imposition was called *Danegelt*, not more burthensome in the thing, than scandalous in the name.

Burke. Abridgement of English History, book ii. ch. ii.

An elaborate Paper on Danegeld, compiled by Philip Carteret Webb, was published in 1758, by desire of the Society of Antiquaries, before which it had been previously read. In this Paper the learned author considers *Danegeld, Heregeld, Hidegeld, Hidage, Carucage*, and *Carkaje*, all to mean the same thing; namely, the first land tax imposed in England to buy off the Danes; afterwards occasionally to obtain auxiliaries from them against other invaders, and continuing to retain the same name when levied for widely different purposes. It is not traced beyond the reign of Ethelred, who imposed two shillings upon each hide of arable land, in 991, *ob pacandos Danos*; and according to authorities quoted by Camden, (*Britt.* 226,) and Spelman, (292,) obtained the large sum (for those days) of £24,360. Cities and Towns which had no arable land contributed in proportion to their size and population; thus, Salisbury was assessed for fifty hides, Exeter for five. In the year 1010, it was paid to obtain mercenaries. Ingulphus (897) affirms that Ethelred, in levying it, was influenced by the bad advice of Archbishop Siricius. Be this as it may, it is certain that the Laws of Edward the Confessor exempted from contribution the *demesne* lands of the Church, as well as those which were held by Barons on the tenure of military service, those of Barons of the Exchequer, Sheriffs of Counties, Assessors and Collectors of the Tax. But this pious Monarch was not content with such trifling remissions. One day when the produce was brought into the Royal presence by his Chamberlain, the King solemnly affirmed that he saw the Devil dauncing upon the unhallowed coffer, and ordered the whole sum to be paid back forthwith to his subjects. (Ælfredius, *Vita S. Edv.* vii. 23; Bromptonius, 942.) William the Conqueror, as is easily to be believed, reimposed it, and raised the contribution to six shillings a hide; Rufus, strange to say, reduced it again to four; Henry I. to three, which he levied for the dower of his daughter Maude, when she was married to the Emperor. Beyond the 21st of Henry II. we hear no more of this shameful tribute, originating in the disgrace, and continued to the oppression of those from whom it was raised.

Selden in his *Marq Clausum*, has a chapter on Danegeld, but it is no where so fully investigated as by Webb.

DA'NGER, *v.*
DA'NGER, *n.*
DA'NGERFULL,
DA'NGERFULLY,
DA'NGERLESS,
DA'NGEROUS,
DA'NGEROUSLY,
DA'NGEROUSNESS.

Fr. *danger*; Low Lat. *dangerium, domigerium.*

Mr. Tyrwhitt says, "*Danger*, *n.* Fr. A dangerous situation. In *danger*, 665.—In *danger* hadde he, i. e. within the reach, or controul of his office. and R. 1470.—Coyness, sparingness, R. 1147. Tr. ii. 384.—With *danger*, 6103, sparingly.—*Dangerous, adj.* difficult, sparing, 519. 5733."

The passages referred to by Mr. Tyrwhitt are quoted below. Dr. Jamieson says, "*In his dawnger, under his dawnger*, in his power as a captive. But (i. e. Be-out) *dawngere*, without hesitation or apprehension. The O. French *danger* frequently occurs as signifying power, dominion." The authors, he adds, of the *Dict. Trev.* thinks that the word in this sense is corrupted from the Lat. *dominari.*

With respect to the Etymology of this word, Menage says, they are deceived who derive it from *damnum gerere*. It comes from *damniarium. Damnum, damni, damniarium, damjarium, danger.* Du Cange prefers Fr. *dommager*, i. e. *damnosus.*

NGER. In Fr. and Old English Law, *danger* seems equivalent to *penalty*, damages, *commissi pœna*. And thus, "Narcissus love had caught in his *daungere*;" i. e. within the action or agency of pain or penalty, of hurt, ill or mischief; within the reach of penal, hurtful, mischievous power. Thus also, "In *danger* had he all the yonge girles." And in R. Brunne, "All was in the erle's *dangere*." And again, "He was never wedded to woman's *danger*," i. e. woman's dangerous power. From this application to the *risk* or *chance* of *pain* or mischief, the word seems to have been extended to the *fear* of *pain* or mischief; and, consequently, as Mr. Tyrwhitt explains, to sparingness, to coyness. Thus, With *danger* uttren we our chaffare; with fearfulness, with fear of loss, of harm, and, therefore, cautiously, thriftily, sparingly.

Daungerous, in Gower and Chaucer; appears equivalent to—fearful to hurt, fearful to lose, and therefore cautious to guard or to preserve; or, as Mr. Tyrwhitt says, Sparing; *sc.* in the use.

To *danger* or to *endanger*, is, to be or cause to be within the action or agency of pain or penalty, of hurt, ill or mischief; within the reach of penal, hurtful, mischievous power.

—— yef heo abowe to hym, and to here kyng hym nome,
þat he wole al out hem bryage of þe *daunger* of Rome.
R. Gloucester, p. 78.

Kyng was Kyawolf sex and tuenty zere
He was neuer wedded to woman's *daungere*.
R. Brunne, p. 9.

Aboute with Sir Symoun þe king went þat zere
Cite, castelle and toun alle was in þe erle's *dangere*.
Id. p. 219.

For hee þat ys ones a þeef. is evere more in *daunger*
And as þe lawe lykeþ. to lyve oþr to deye.
Piers Ploughman. Vision, p. 236.

In *danger* hadde he at his owen gise
The yonge girles of the diocise,
And knew hir conseil, and was of hir rede.
Chaucer. The Prologue, v. 665.

With *danger* uttren we all our chaffare:
Gret prees at market maketh dere ware,
And to gret chepe is holden at litel prise;
This knoweth every women that is wise.
Id. The Wif of Bathes Prologue, v. 6103.

Narcissus was a bachelere
That loue had caught in his *daungere*,
And in his nette gan him so straine.
Id. The Romant of the Rose, fol. 123.

For all his purpose, as I gesse,
Was for to make great dispence
Withouten warning or defence;
And richesse might it well sustaine,
And her dispences well maintaine,
And him alwaie such plentie sende
Of golde and siluer for to spende,
Without lacking or *daungere*
As it were pourde in a garnere.
Id. Ib. fol. 121.

So let your *daunger*, sugred ben alite
That of his death, ye be not al to wite.
Id. The second Boke of Troilus, fol. 159.

He was to sinful men not dispitous,
Ne of his speche *dangerous* ne digne,
But in his techinge discrete and benigne.
Id. The Prologue, v. 519.

If I be *dangerous* God yeve me sorwe,
Min husband shal it have both even and morwe.
Id. The Wif of Bathes Prologue, v. 5733.

I trow, I love him the bet, for he
Was of his love so *dangerous* to me.
Id. Ib. v. 6696.

He [Agamemnon] toke of hir what hym list
Of thyng, whiche was most precious,
Whereof that she [Chryseis] was *dangerous*.
Gower. Conf. Am. book i. fol. 119.

DANGER.

Yᵉ which the same moste gracious lorde anone as he had rebuked his disciple, restored agayne, and so made him [Malchus] amendes for the hurt of this small & *daungerles* wounde.
Udall. Marke, ch. xiv.

Along the shore also of the Grecian sea we went very *dangerously* vpon the ies in sundry places, & that for many daies together. *Hakluyt. Voyage, &c. The Tartars*, vol. i. p. 65.

It came not of any *daungerousnes* or difficultie on his behalfe, yᵗ they could not touche hym, who grudged not to touche and handle the leper: but the ensaumple of theyr faith highly pleased hym yᵉ whiche his pleasure was to haue set furth and commended to all men. *Udall. Marke*, ch. vi.

And beholde, there were certain Jewes present standing by, whose soules yᵉ spirite of Satan did more *daungerfully* possesse, then that same vncleane spirite had possessed the body of this man. *Id. Luke*, ch. xi.

If they were thriftlesse, mought not we amend,
And with more care our *dangered* fields defend?
Each man can guard what things he deemeth deare.
Hall. Satire 3. book v.

—— Give him then an honest period,
In brave fight, by Patroclus sword, if he be deare to thee,
And grieves thee, for his *danger'd* life.
Chapman. Homer. Iliad, book xvi. fol. 227.

Por. Of a strange nature is the sute you follow,
Yet in such rule, that the Venetian law
Cannot impugne you as you do proceed.
You stand within his *danger*, do you not?
Shakspeare. Merchant of Venice, fol. 179.

Three times a day I holpe him to his horse,
Three times bestrid him: thrice I led him off,
Perswaded him from any further act:
But still where *danger* was, still there I met him.
Id. Henry VI. Second Part, fol. 146.

It is no common labour to
The riuer Ob to sayle,
Howbeit Burrough did therein,
Not *dangerles*, preuaile.
Warner. Albion's England, book xi. ch. lxvii.

If I thought it not in due and true consideration an injurious servise and churlish courtesy, to put the *danger* of so noble a title in the deciding of such a *dangerles* combat, I would make young master Phalantus know, that your eyes can sharpen a blunt launce. *Sidney. Arcadia*, book i. p. 104.

Such men as he, be neuer at heart's ease,
Whilst they behold a greater then themselues,
And therefore are they very *dangerous*.
Shakspeare. Julius Cæsar, fol. 111.

How therefore either *dangerously*
Their labyrinth did passe
Shall not be ouerpassed: thus
Their seuerall fortune was.
Warner. Albion's England, book vii. ch. xxxiv.

And surely if they list but a litle ẽnlder, the *dangerousnes* of the enterprise was very apparent. It was now night, the situation of the towne was vnknowen, within nothing but enemies, and euery corner fit for an ambush.
Savile. Tacitus, fol. 109.

Thee, God, no face of *danger* could affright,
Not huge Typhœus, nor th' vnnumber'd snake
Increas'd with hissing heads, in Lerna's lake.
Dryden. Virgil. Æneid, book viii.

Pathless and *dangerous* wandering ways it [Reason] takes,
Through Errour's fenny bogs, and thorny brakes.
Rochester. A Satire against Mankind.

A sword covered with rust, will wound much more *dangerously* where it does wound, than it could do if it were bright and clean.
South. Sermon 4. vol. viii.

DANGER. — DAN-THONIA.

The third and last thing I proposed to show, was, that from what has been said, there arises a very plain and easy rule, by which we may judge of the malignity and *dangerousness* of any errour in matters of religion. *Clarke. Sermon* 8. vol. ix.

Danger, whose limbs of giant mould
What mortal eye can fixt behold ?
Who stalks his round, a hideous form,
Howling amidst the midnight storm,
Or throws him on the ridgy steep
Of some loose hanging rock to sleep.
Collins. Ode to Fear.

DA'NGLE, DA'NGLER. } *Deflecti potest*, says Skinner, from the A. S. *Dun vel Dunehangen*, i. e. *deorsum pendere*, to hang down. Serenius gives the Sw. *dingla*, which Ihre interprets, *pendulum motitari.*

DORON. The spinners' webs 'twixt spray and spray
The top of every bush make gay,
By filmy cords there *dangling*.
Drayton. The Muses Elysium. The third Nymphal, book iii.

Ours [labour] is not great. the *dangling* boughs to crop,
Whose too luxuriant growth our alleys stop,
And choke the paths.
Dryden. State of Innocence, act iii. sc. 1.

They waste their time, which might be spent in honourable and lucrative employments, solely that they may *dangle* after persons in high life, who often despise their meanness, while, for their own accommodation or amusement, they admit their visits, and accept their attentions.
Knox. Winter Evenings, even. 30.

Instead of their proper, but severe unostentatious duties, they assign [to them] the brilliant part of men of art and pleasure, of gay, young, military sparks, and *danglers* at toilets.
Burke. Letter to a Member of National Assembly.

The slipp'ry seat betray'd the sliding part
That press'd it, and the feet hung *dangling* down,
Anxious in vain to find the distant floor.
Cowper. Task, book i.

DANK, *adj.* DANK, *n.* DA'NKISH. } Half-dry, half-wet, says Skinner, from the Ger. *tunken, intingere, immergere ;* to dip, to immerse. *Tunken*, Wachter says, is a word formed by the Franks from the Gr. τέγγ-ω ; Lat. *tingo.*

Wet, moist, mouldy.

2 CAR. Pease and beans are as *danke* here as a dog, and this is the next way to give poore iades the bottes.
Shakspeare. Henry IV. First Part, fol. 53.

And when the broad backe of the sea, their pleasure was to sit,
The superficies of his waves, they [horses] slid upon; their hoves
Not dipt in *danke* sweate of his browes.
Chapman. Homer. Iliad, book xx. fol. 282.

——————— Me, in my vow'd
Picture, the sacred wall declares t' have hung
My *dank* and dropping weeds
To the stern God of sea.
Milton. The fifth Ode of Horace, lib. i.

Take heede also of mistye and *dankinshe* dayes, which shall hurt a bowe more than anye rayne.
Ascham. The Schole of Shooting.

They fell vpon me, bound me, bore me thence,
And in a dark and *dankish* vault at home
There left me and my man, both bound together,
Till gnawing with my teeth my bonds in sunder,
I gain'd my freedome.
Shakspeare. Comedy of Errors, fol. 98.

——————————The arrow that by night
Cuts the *dank* mist, and fatal wings his flight.
Prior. Solomon. Power, book iii.

DANTHONIA, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: calyx two-valved, many-flowered, very large, equal to or exceeding the included spikelet; exterior valve of the corolla concave, with the points emarginate, awned or unarmed, and then trifid.

A genus of Grasses, natives of both Hemispheres. Nuttall, *Pl. N. Am.*

DANTZIC, DANTZIG, *Gedanum, Gedanski*, a commercial and opulent Town of Polish Prussia, situated on the left bank of the Vistula, about five miles from the southern shore of the Baltic. It is one of the most important Towns in the eastern part of the Prussian dominions, both on account of its population and its commercial transactions. It not only possesses a good harbour, and is open to the Baltic on the north, but the Vistula affords it an extensive inland communication towards the south. Dantzic is a place of considerable antiquity, and was early at the head of the Hanseatic League. It is supposed to have been founded by a Danish colony in the XIIth century, as its original name was *Dans-vick*. In 1454, it came into the possession of Poland ; but the inhabitants were still allowed to have their own Courts of Justice, as well as the privilege of nominating their own Magistrates. They also enjoyed the exclusive navigation of the Vistula, and an exemption from taxes. In the early part of the XVIIIth century, the plague destroyed a great number of its inhabitants; and in 1734 it was besieged and taken by the Russians and Saxons, because it afforded an asylum to Stanislaus, the candidate for the Polish throne. The Prussians next gained possession of it in 1793, but they allowed the internal government to remain nearly the same as it was before their conquest. From that period to 1807, it was suffered to remain in the peaceable prosecution of its commercial concerns ; but in May of that year it was taken by the French, after a protracted siege, and the destruction of most of its suburbs. At the peace of Tilsit it was declared a free City, but was occupied by a French army from that period till Buonaparte's disastrous campaign against Russia ; soon after which it was invested, and subsequently taken after a protracted defence by General Rapp. At the peace of Paris it returned again to the possession of the Prussians. Dantzic reached its most flourishing condition during the first half of the XVIIIth century ; since which it has declined, and now contains a population of not more than 45,000 individuals. The Town consists of separate parts, and possesses but little architectural beauty. Many of the houses are high, generally containing five or six stories. Most of the streets are narrow and crooked, and some of them have rows of chestnut trees on each side. The suburbs of Old and New Scotland, the best built parts of the Town, are so named from having been formerly inhabited by Scotchmen, who settled there on account of privileges granted to them, on account of services once rendered to the City by a Douglas. Dantzic is strongly fortified, and its extent within the fortifications is about four miles; but its most effectual defence is the power of laying the country on one side under water, and of resisting an enemy by means of a series of fortified heights on the other. The harbour is also defended by forts. The road, or what is properly called the Gulf of Dantzic, is an arm of the sea sheltered from the north winds by the tongue of land on which the small town of Hela stands. The principal public buildings are the Cathedral, the Town-hall, the Arsenal, and the edifices which formerly belonged to the Jesuits, the Court-house of the Nobles, and the Church of St. Catherine. Dantzic contains more than

NTZIC. twenty Churches, an Academy, several Schools, and other public establishments. The chief trade is the export of grain and timber from Poland and eastern Prussia, which are brought down the Vistula; flax, hemp, linen, potash, &c. Amber is likewise found in its vicinity, and included among its articles of trade. The total annual value of its exports has been estimated at about a million and a half sterling. A considerable portion of its commercial business is transacted at the great annual Fair of St. Dominic, which begins on the fifth of August, and lasts six weeks, and is frequented by merchants from all parts of Europe. The quantity of grain annually exported, usually amounts to more than 40,000 lasts. Dantzic is situated about 230 miles north-east of Berlin, and nearly seventy west-southwest of Konigsberg; in latitude 54° 21′ north and longitude 18° 28′ east.

The Prussian Government of Dantzic, which takes its name from the preceding Town, contains a surface of about 3100 square miles, with a population of 258,400 individuals, and is divided into the three Circles of Dirschan, Stargard, and Marienburg.

DANUBE, (the ancient *Ister*, and *Danubius*,) the largest River in Europe, whether we consider the length of its course or the quantity of its waters. It originates in three springs in the Black Forest, in the southern part of the Grand Duchy of Baden, one of which is in the court-yard belonging to Prince Furstenburg. Its course is generally towards the east through Suabia, Bavaria, Austria, Hungary, Servia, Bulgaria, Walachia, and Moldavia, till it finally issues into the Black Sea. It is first fed by the waters which descend from the mountains of Brisgau; and becomes navigable at Ulm. The range of mountains which runs nearly parallel to this part of the course of the Danube, and at no great distance from its shores, precludes any extensive accessions from the north. Its chief supplies are therefore from the south; and the Iller, the Lech, the Iser, and the Inn, all descend into it from the north and east sides of the Alps. After passing Vienna, it forms a number of islands in its course, one of which (Lobau) aided the French in their passage in 1809, to the sanguinary conflict at Aspern, which subsequently led to the decisive victory at Wagram. Near Presburg it receives the large River Morava, from the north, and divides into two branches, which unite again at Komorn. Before it reaches Buda it bends towards the south, and pursues that direction till it nearly arrives at the confines of the Turkish dominions in the vicinity of Belgrade. It then constitutes the boundary between the Turkish and Austrian Empires, receives many tributary streams from the mountains of Hungary and Transylvania on the one hand, and from those of European Turkey on the other; and afterwards enters the Black Sea by five separate outlets, in the 40° of east longitude, and between 44° 30′ and 45° 30′ of north latitude. The Danube, therefore, flows through more than 30° of longitude, and completes a course of 1800 miles. Its breadth is subject to great variation; but for a long distance before it reaches the sea, it is not less than between two and three miles across. Its depth is also various, as the openness of its channel is often impeded with shoals and small islands. Though much larger than the Rhine, it is not to be compared to that River in sublimity of scenery. It contains various kinds of fish, but is most noted for the large sturgeons which ascend it from the Black Sea. The magnitude of the Danube is increased by the reception of more than sixty rivers in its course; among which, are the Drave, the Save, the Teisse, and the Pruth, besides those already mentioned. Though it is capable of floating ships of war, at the distance of 600 miles from the sea, the occasional rapidity of its current, the impediments in its bed, the state of the countries through the latter part of its course, and the comparatively unfrequented sea into which it flows, render it of less use in the commercial affairs of Europe, than several other of the large streams of this division of the globe. DANUBE.

DANUBE, *Circles of the Upper and Lower*, two Circles which form part of the Kingdom of Bavaria. The Upper Circle is one of the chief divisions of these Dominions, and borders on the Circles of the Rezat, the Regen, and the Iser, besides being contiguous to Tyrol, the Lake of Constance, and the Kingdom of Wirtemberg. The surface is estimated at 4200 square miles, and the population at about 476,600. The Suabian Alps stretch through this division of the Kingdom; much, therefore, of its surface is composed of hills and vallies; other considerable portions are also occupied by forests and lakes. Besides being watered by the Danube, it is intersected by the Iller, the Lech, and some inferior streams. The lower and more fertile parts of the country yield corn, hemp, and flax; but the majority of the peasants find their employment in rearing cattle. In the hilly districts, mining also forms a source of national industry. The chief products are iron, coal, and copper. In some of the principal Towns, the manufactures of linen, paper, and a few other useful articles are established. The Roman Catholic is the prevailing Religion in both these Circles. Of the chief Towns in the Upper Danube, AUGSBURG has already been described. Eichstadt, which is a See of one of the Bavarian Bishops, stands on the River Altmuhl, and contains a population of about 6000. Neuburg stands on a pleasant eminence near the Danube, is neatly built, and contains some good edifices, with a population of nearly 4000. A good bridge crosses the Danube at Neuburg, and near it is an old Ducal palace, as this was the Capital of a former Duchy of Germany of the same name. There is also a Collegiate Church, a College, a Hospital, and an Orphan-house. Neuburg was formerly fortified, and was frequently besieged in the wars of Germany, but the fortifications were destroyed in the early part of the last century. Nordlingen is an ancient Town, about thirty-six miles west of Augsburg, and about the same distance nearly north of Ulm. It has a beautiful Gothic church belonging to the Lutherans, who constitute the majority of the inhabitants, amounting in all to between 5000 and 6000. In the vicinity of this place, several important engagements between contending armies have taken place. Here the Imperialists were defeated by the Swedes, in 1634; and near it a decisive battle between the French and Austrians took place on the 11th of August, 1796. Nordlingen was united to the Bavarian dominions in 1802. Dillingen is situated about twenty-five miles north of Augsburg, and contains a population of a little more than 3000. Prior to the year 1802, it had a Catholic University, which was then converted into a Lyceum. There is also an Eichstadt. Neuburg. Nordlingen. Dillingen.

DANUBE. ancient castle, formerly the residence of the Bishops of Augsburg. Gunzburg, Hockstadt, and Pappenheim, contain 2000 or 3000 inhabitants each. At Hochstadt the Duke of Marlborough and Prince Eugene signally defeated the French and Bavarians in 1704. Pappenheim was formerly the Capital of a small District of the same name, containing 7000 or 8000 inhabitants; in exchange for which, the Congress of Vienna assigned the Prince a tract on the west side of the Rhine, which he holds under the Government of Prussia. Ingolstadt (*Aureatum*) is considered one of the strongest places in Germany, and is encompassed with a morass. It stands nearly forty miles north of Munich, and contains almost 7000 inhabitants. It had a University, which was founded in 1472, embraced the principles of the Reformation in 1743, and was removed to Landshut in 1800. Ingolstadt is thirty-three miles south-west from Ratisbon, forty-five north from Munich.

Gunzburg. Hockstadt. Pappenheim. Ingolstadt.

The *Circle of the Lower Danube* comprises the greater part of lower Bavaria Proper, and the principality of Passau. It borders on Bohemia and Upper Austria, and touches the Circles of the Iser and the Regen. It includes a space of about 3850 square miles, and a population of 352,200 individuals. The surface is chiefly a succession of hills, vallies, and plains; and besides bordering on the Danube, it is traversed by the Inn, the Ilz, and the Iser. The tracts on the south of the Danube are so fertile, as to be denominated the granary of the Kingdom. They have also a good breed of horses; but on the north of that river, many of the districts are comparatively sterile. The chief productions are corn, hemp, and flax; and several of the larger towns contain manufactures of articles chiefly designed for home consumption. The Danube, the Iser, and the Inn are also used for internal commerce.

Passau. Passau, the ancient *Patavia*, and *Batavia Castra*, the Capital of this Circle, is situated at the confluence of the Inn and the Danube. Passau Proper contains more than 6000 inhabitants, and lies between the Inn and the Danube; but it is sometimes considered as including the towns or suburbs of Innstadt and Ilzstadt, the former of which is situated on the opposite side of the Inn, on the site of the ancient *Bojodurum*, and is connected with Passau by means of a bridge: the latter stands on the opposite bank of the Danube, where it receives the Ilz. The population of the three amounts to about 10,000. Passau is a well-built city and fortress, a Bishop's See, and contains one of the noblest cathedrals in Germany. The Convention, called The Peace of Religion, or the treaty of Passau, was concluded there in 1552, between Charles Vth and the Protestant Princes of Germany. This Act set limits to the authority of that ambitious Monarch, and established the Reformed Religion in the German Empire. Passau is about 80 miles north-

Straubing. east of Munich, and 120 from Vienna. Straubing is a considerable Town, with a population of more than 8000, and is the Capital of a district on the Danube. It stands forty-three miles north-west of Passau, is well built, has a castle, a hospital, and several

Vilshofen. churches, with some trade in corn, cattle, &c. Vilshofen is but a small Town, with 1500 inhabitants, and situated on the bank of the Danube, about

Landau seventy miles from Munich. Landau is an important fortress belonging to the Germanic Confederation, and garrisoned by their troops. It was formerly an Imperial town, and being commanded by eminences in several directions, M. Vauban exercised all his skill in rendering it a strong place. The population is between 4000 and 5000.

DAP, or DAPE. } See DAB.

My friend is one that would fain be a brother of the angle. he hath been an angler but this day, and I have taught him, how to catch a chub, by *daping* with a grashopper.

Walton. Angler, part i. ch. v.

With these—and a short line, I shewed to angle for a chub—you may *dape* or *dap*. *Id. Ib.*

And this way of fishing we call *daping*, dabbling, or dibbling; wherein you are always to have your line flying before you—up, or down the river, as the wind serves—and to angle as near as you can to the bank of the same side whereon you stand.

Id. Ib. part ii. ch. v.

DAPHNE, *in Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Thymeleæ*. Generic character: calyx one-leaved, funnel-shaped, coloured internally; border four-cleft, including the stamens; corolla none; germen ovate, superior; style very short, drupe roundish, one-celled; seeds solitary.

About forty species, mostly natives of the northern hemisphere; elegant shrubs. *D. Mezereum*, the common Mezereon, and *D. laureola*, the Spurge Laurel, are natives of England; the *D. odora* is hardy, but if cultivated in the hothouse produces larger and more fragrant flowers.

DAPHNIA, in *Zoology*, a genus of *Crustacea*, established by Muller, belonging to the family *Monoculidæ*.

Generic character: shell bivalve, head apparent, armed with two antennæ; legs eight or ten; eyes solitary; tail distinct.

The animals of this genus have been studied by many celebrated Naturalists, amongst which may be named Schœffer, Swammerdam, De Geer, Muller, Bosc, and Cuvier; and their manners and habits have lately been very accurately observed and described by Straus, in the *Memoirs of the Natural History Society of Paris*, v. 380;) and by Jurine, in his *History of the Monoculi*, p. 83, where will be found a very detailed and complete history.

The Daphniæ essentially differ from the *Cyprides* by their respiratory system, for they are true *Branchiopodes* of feet breathers, as are also the genera *Lynceæ*, *Apus*, *Lymnadies*, *Cyclops*, *Branchipus*, *Polyphemus*, and two new genera, which Straus has proposed to form from *D. cristallina*, and *D. setifera*, of Muller; and he proposes to separate the genera *Cypris* and *Cytherea*, in a new order under the name of *Ostrapodes*.

The most interesting species, and that which is considered the type of the genus, and of which the history and habits have been most observed, is

D. Pulex of Muller; the *Pulex arboreus* of Swammerdam; and the *Monoculus Pulex* of Linnæus, which is called the *Water Perroquit* by the French Naturalist. It is found very commonly in ditches and stagnant waters.

DAPHNII, *Daphni dermæ*, in *Zoology*, a genus of the bivalve *Mollusca*, established by Poli, in his beautiful work on the shells of the two Sicilies, wherein he separates the bivalve mollusca into genera, from the consideration of the animal alone; he includes under this name the genus *Arca* of Linnæus, and calls the shell *Daphni derma*.

PHNII. — PPLE.

Generic character: feet and syphon none; abdomen with a mass beneath.

Poli considers the animal of *Arca Noæ* as the type of the genus.

Several species of this genus have a byssus, like the Muscles or Mytili, to which the Daphnes are very closely allied, both in the structure of the animal and form and construction of the shell.

DAPPER, Dutch, *dapper*; Ger. *tapfer*; *strenuus, fortis*. A new word, says Wachter, and sprung from Sclavonic, *dobry, bonus*. Skinner explains it,—A small man of stature, but courageous and active.

Small and active, neatly formed.

For who is shee that may endure
The *dapper* tearmes that louers vse;
And painted proems to procure
The modest matron's minde to muse.
Turberville. That Louers ought rather, &c.

The *dapper* ditties that I wont deuise,
To feed youthes fansie, and the flocking fry,
Delightas much.
Spenser. Shepheard's Calendar. October.

Kened King of Scots, then in the court of Edgar, sitting one day at table was heard to say jestingly, among his servants, he wondered how so many provinces could be held in subjection by such a little *dapper* man. *Milton. History of England.*

He's so very little, pert, and *dapper*, the rogue looks as if he could insinuate himself through a key-hole.
Otway. The Atheist.

DA'PPLE, *v.* DA'PPLE, *n.* DA'PPLE-GREY. To variegate with spots, like the *apple*. In the same signification, and for the same reason, this colour is in French called *Pommele*. Skinner. In It. *pommelato*, (*instar* pomi;) in Dutch, *appel grauw*. *Pommele-grey* is used by Chaucer, v. 618.

His stede was all *dapple-gray*.
Chaucer. The Rime of Sire Thopas, v. 13813.

Apoun ane hors of Trace *dappill-gray*.
Douglas. Eneados, book v. fol. 146.

——— And looke, the gentle Day
Before the wheels of Phœbus, round about
Dappled the drowsie East with spots of grey.
Shakspeare. Much Ado about Nothing, fol. 128.

No way is troden, all the verdant grass
The spring shot up, stands yet unbruised here
Of any foot, only the *dapled* deer
Far from the feared sound of crooked horn
Dwells in this fastness.
Beaumont and Fletcher. The Faithful Shepherdess, act ii. sc. 1.

Tell me (so may thou fortune milder try,
And long long sing!) for what thou thus complains,
Since winter's gone, and sun in *dappled* sky
Enamour'd smiles on woods and flow'ry plains?
Drummond. Sonnet 32. part ii.

He had a pair of horns like a bull, his feet cloven; as many eyes upon his body as my gray mare hath *dapples*, and for all the world so placed. *Sidney. Arcadia*, book ii. p. 271.

WARE. Here was
My nephew just now, and one Roseclap, who tells me
She has three children living; one *dapple-grey*,
Half Moor, half English.
Mayne. The City Match, act v. sc. 5.

Ply'd with the scourge he still neglects his haste,
And moves reluctant when he moves at last,
Reverts his eye, regrets the distant mare,
And neighs impatient for the *dappled* fair.
Pitt. Vida. Art of Poetry, book i.

A dreadful serpent, *dappl'd* on the back
With crimson spots, and by Olympian Jove
Himself protruded, from the altar's foot
Slipp'd into light, and glided to the tree.
Cowper. Homer. Iliad, book ii.

DARASIA, in *Zoology*, a genus of *Carallophorus Barnacles*, established by Mr. Gray, belonging to the family *Pyrgomatidæ*. DARASIA. — DARE.

Generic character: body of the shell four-valved, soldered together; valves without any distinct sheath to the operculum; base of the shell concave, shelly operculum convex, two-valved, the ventral and posterior valves of each side being soldered together.

The species of this genus live embedded in Brainstones or Madrepores, and are often overgrown by them, and thus destroyed; for although the animal attempts to prolong its shelly base, and raise the shell to the surface, it is often outrun by the fast growing coral.

One species is described, *Darasia Linnæi*, Esper, *Zooph. Madrep.* 85; Linnæus, in his description of *Madrepora Polygama*, considered these shells as part of the coral, and he appears to have taken his name from the belief that it was inhabited by two kinds of animals. Esper, in the figure above quoted, gives it as a species of Madrepore.

DARE, *v.* DARE, *n.* DA'RER, DA'REFULL, DA'RING, *n.* DA'RINGLY, DA'RINGNESS, DA'RING-HARDY. Dutch, *derren*; Ger. *darfen*. "A. S. *dearran, dyrran, audere, presumere*, to dare, to presume, to adventure, to make or be bold." Somner. Goth. *ca-daursta*; A. S. *dorste, audebat. Mar.* xii. 34; whence the pret. *durst*. To have boldness, bravery or courage; to face danger, to defy it, to challenge or provoke it; and thus, to daunt or dismay; to appal, to terrify, to cower or cause to cower. And this seems to account for *Dare*

In Chaucer's *Shipmannes Tale*, v. 13033, which Mr. Tyrwhitt says, is Saxon, and means *Stare*.

Thise wedded men, that lie and *dare*,
As in a fourme setteth a wery hare.

And Minsheu, "to *dare*, an old English word, for to *stare*; because they which behold a man stedfastly, with a wide, open, *staring* eye, are said to be bold or *daring*." With respect to *daring* larks, Mr. Steevens, on *Henry VIII.* says, "It is well known that the hat of a Cardinal is scarlet, and that one of the methods of *daring* larks, was by small mirrors fastened on scarlet cloth, which engaged the attention of these birds, while the fowler threw his net over them."

And heo schulle be such, þat no prince *dorre* hem for sake.
R. Gloucester, p. 112.

"Sir kyng," said Merlyn, "certis nay,
"To opyn my mouthe I *dar* ne nay."
R. Brunne. Appen. to Pref. cxc.

Save Mede þat myde. no mo *dorst* a byde.
Piers Ploughman. Vision, p. 37.

Do þy neyhebore non harme ne þe selve noþer
þanne dost þow wel and wisliche. ich *dar* hit wel a vouwe.
Id. Ib. p. 248.

The folke wol wene, that thou for cowardise
Thee fainest sick, and that thou *darst* not rise.
Chaucer. Troilus, book v.

But such diuersity of sects ayenst the rightfull bileue of loue, these errours beene foorth spredde, that loues seruauntes in the trew rule and stedfast faith, in no place *darne* appeare.
Id. The Testament of Loue, fol. 295.

And the feare of God fell vpon that cyties that were rounde about them, that they *durst* not followe after the sonnes of Jacob.
Bible. Anno 1551. *Genesis*, ch. xxxv.

DARE.

——————— What, is Brutus sicke ?
And will he steal out of his wholsome bed
To *dare* the vile contagion of the night ?
And tempt the rhewmy, and vnpurged ayre,
To add vnto his sicknesse ?
Shakspeare. Julius Cæsar, fol. 116.

Hots. You strayne too farre—
I rather of his absence make this vse :
It lends a lustre, and a more great opinion,
A larger *dare* to your great enterprize.
Id. Henry IV. First Part.

They doe so insult over, and restrain them, never Hoby so *dared* a larke. *Burton. Anatomy of Melancholy*, p. 654.

And running straight whereas she heard his voyce,
Inclos'd the bush about, and there him tooke
Like *darred* larke ; not *daring* vp to looke
On her whose sight before so much he sought.
Spenser. Faerie Queene, book vii. can. 7.

——————— If we liue thus tamely,
To be thus jaded by a peece of scarlet,
Farewell nobilitie : let his grace go forward,
And *dare* vs with his cap, like larkes.
Shakspeare. Henry VIII. fol. 222.

There is not in the compass of the light
A more unhappy creature ; sure I am monstrous,
For I have done those follies, those mad mischiefs,
Would *dare* a woman.
Beaumont and Fletcher. The Maid's Tragedy, act iv.

Now from his bodie and his shield, the violent lance he drew
That princely Socus had infixt : which drawne, a crimson dew
Fell from his bosome on the earth : the wound did *dare* him sore.
Chapman. Homer. Iliad, book ii. fol. 151.

Leon. That's she, sir, that pretty lady,
If you would speak with her.
Juan. Don Michael, Leon, another *darer* come.
Beaumont and Fletcher. Rule a Wife and have a Wife, act iii. sc. 1

Were they not forc'd with those that should be ours,
We might have met them, *darefull*, beard to beard,
And beate them backward home.
Shakspeare. Macbeth, fol. 150.

Courage may be virtue, where the *daring* is extreme, if the cause be good ; and extreme fear no vice, when the danger is extreme. *Hobbes. De Corpore Politico*, ch. iv.

Mar. On paine of death, no person be so bold,
Or *daring* hardie as to touch the listes,
Except the marshall and such officers
Appointed to direct these faire designes.
Shakspeare. Richard II. fol. 25.

——————— For I intend to prove
Which thrives the best, the mean or lofty love :
Whether fit wedlock, vowed, 'twixt like and like,
Or prouder hopes which *daringly* o'erstrike
Their place and means.
Eastward Hoe, act i. sc. 1.

O let us be sure then, our confidence, our claims to heaven, improve not above their proportion, that we preserve this symmetry of the parts of grace ; that our hope be but commensurate to our sincerity, our *daringness* to our duty.
Hammond. Works, vol. iv. *The Poor Man's Tithing.*

This Midas knew : and *durst* communicate
To none but to his wife his ears of state :
One must be trusted, and he thought her fit,
As passing prudent, and a parlous wit.
Dryden. The Wife of Bath's Tale.

The sea beneath 'em sinks ; their labouring sides
Are swell'd, and sweat runs gutt'ring down in tides,
Chance aids their *daring* with unhop'd success.
Id. Virgil. Æneid, book v.

Where, when your brother, fired with success,
Too *daringly* upon the foe did press,
And was a captive made, then you alone
Did with your single arm support the throne.
Halifax. On the Prince of Denmark's Marriage.

The charms of vice, (how tempting soever they may seem to be,) are by no means equivalent to the inward remorse and trouble, and the tormenting reflections which attend it ; which always keep pace with our guilt, and are proportioned to the greatness and *daringness* of our crimes.
Atterbury. Sermon 4. vol. iv.

Ye curious hands, that, hid from vulgar eyes,
By search profane shall find this hallow'd cake,
With virtue's awe forbear the sacred prize,
Nor *dare* a theft for love and pity's sake.
Collins. Verses with a Piece of Bride Cake.

For in those poems at least, in which something of uncommon grandeur and sublimity is aimed at, there predominates a perpetual, I had almost said, a continued use of the metaphor, sometimes *daringly* introduced, sometimes rushing in with imminent hazard of propriety.
Lowth. On the Sac. Poet. of Heb. Lecture 6.

DARICK, a coin so called for the reason given in the Example.

He repaired at the length unto Cimon, and brought him home to his own door two bowls, the one full of *daricks* of gold, and the other full of *daricks* of silver, which be pieces of money so called, because that the name of *Darius* was written upon them.
Sir Thomas North. Plutarch, fol. 415. *Cimon.*

It is on the authority of Herodotus, (iv. 166,) that the coinage of Daricks of pure gold was attributed to Darius Hystaspes, from a wish to leave behind him as a memorial of his reign, something as yet unattempted by former Kings ; and so jealous was this Monarch of all encroachments upon his Mint, that he put to death Aryandes, the Governor of Egypt, for a presumptuous imitation of his Daricks. This unhappy officer issued some Coins of pure silver, which he termed *Aryandics*. The historian informs us, that they were much valued, even in his own time ; but they cost their inventor his life. He was executed on a charge of rebellion.

Harpocration, Suidas, and the Scholiast on Aristophanes (Ἐκκλησ 589,) ascribe the Daricks to an elder Darius ; but these compilers and commentators can scarcely be allowed to weigh against the assertion of Herodotus, (Prideaux's *Conn.* l. ii. p. 128.) Its value, according to Gronovius, (*de pec. vet.* iii. 7,) was two drachms of silver. Dr. Bernard, (*de pond. et mens. ant.* 171,) states that it weighed two grains more than an English guinea ; and from its greater purity, he estimates its value at twenty-five shillings of our money. In those parts of Scripture which were written after the Babylonish captivity, (1 *Chron.* xxix. 7 ;) *Ezra*, viii. 27,) Daricks are termed *Adarconim*, and by the Talmudists *Darkonoths*. Latterly, all pieces of gold coined of the same weight and value, either by the Persian or Macedonian Princes, bore the name of Daricks. Plutarch (*in Apotheg.*) informs us, that the

RICK. Darick bore on one side the image of Darius, and on the other that of an archer, in a long robe, with a RIEN. spiked Crown, holding a bow in his left hand and an arrow in his right. This impress explains the *bon mot* of Agesilaus, recorded by the same author, (*in Ages.*) When he was summoned home, in consequence of the war which the bribes of the Persian Court had induced the Orators of Athens and Thebes to excite their countrymen to wage against Sparta, he remarked that "he was driven out of Asia by ten thousand of the King's Archers." DARICK. — DARIEN.

DARIEN.

ndaries DARIEN, a Province of Colombia, is bounded on the north by the Caribbean Sea, on the east by Carthagena, on the west by Panama, and on the south by the Pacific and the Province of Choco; and is one of the largest divisions of *Tierra Firme*, as this coast was originally called, in consequence, perhaps, of the disappointment of the discoverers in not finding a strait or communication between the oceans.

Hall and Mollien, in their recent statistical accounts of Colombia, do not include either Darien or Choco in their lists of its Provinces; into which omission they, perhaps, have been misled, owing to the Pacific shores not having yet been divided into great departments, as nt. those of the Atlantic have been. Darien is about 200 miles in length, by eighty in medial breadth, but is very thinly inhabited, and that almost wholly by the Aborigines; the general unhealthiness of its climate, and the extent of its immense forests, preventing the formation of agricultural settlements. The vallies are also very humid and marshy, in consequence of the overflowing of its numerous rivers.

rs. Of these rivers, the Atrato, called also Rio Darien, or Rio Choco, which divides the country of Darien from that of Carthagena, is the only one of any size, as the others flow either into the Atlantic or Pacific, from the ridge of the Andes which runs through the Isthmus; but though their course is consequently short and rapid, in many instances their expanse is considerable, interrupted however, in general, by shoals, bars, or rapids.

The Gulf of Darien, a large arm of the sea, receiving the waters of the Atrato, is the most important part of the northern coast of Colombia, and contains several to. islands of considerable size. The Atrato is very wide, and, according to Spanish accounts, rises in about 5° 50′ north longitude in the mountains of Choco; and running with a straight course from south to north, empties itself by a very broad but shoaly estuary into the Gulf of Darien, in latitude 8° 2′ north and longitude 77° 6′ west. Almost all the rivers bring down gold from the interior, and the mouth of the Atrato is noted as a smuggling station, whereat European goods are exchanged for the gold of Choco. We propose at the conclusion of this notice of Darien, to examine the facilities presented by this river, and by the other points of the American continent from Mexico to Peru, for the establishment of communications between the Atlantic and Pacific Oceans.

ral arance e try. The face of the country is mountainous and rugged, but it has fine plains interspersed throughout its extent, which are extremely fertile; and it was probably the luxuriance of its vegetable kingdom, as well as the desire for gold, that induced the Spaniards to form their first settlement on its shores. Columbus was delighted with the adjoining coasts of Panama, or, according to Peter Martyr, "bothe he hym selfe writeth, and all his coompanyons of that vyage confesse, that the trees, herbes, and frutes, are floryshing and greene all the hole yeare, and the ayer so temperate and holesome, that of all his coompany there neuer fell one man sycke, nor yet were vexed eyther with extreme coulde or heate for the space of fyftie leagues from the greate hauen of Cerabaro to the ryuers of Hiebra and Beragua."

First operations of the Spaniards. It was during the voyage of Alphonso Ojeda, that gold was first gathered on the sands of Uraba (Darien) by Juan de la Cossa, a very eminent Cosmographer and seaman, who was slain by the natives at the same time that Ojeda was wounded. Pizarro was then left in charge of a fort which Ojeda built; but was soon compelled to abandon his charge, on account of a scarcity of provisions and the opposition of the Indians. Losing one of his vessels by stress of weather, he met with Enciso, who having conducted him to the Gulf of Uraba, was also cast away in again entering the place which Pizarro had quitted, where the savages were found as determined to resist invasion as ever, having burned the fort and thirty houses which the Spaniards had left standing. Driven to great despair from the loss of their provision-ships, and learning that the west side of the Gulf of Uraba was more fertile and habitable than its eastern shore, Enciso and his companions divided, one half going on board the only brigantine which was left, and the other remaining on shore. On their arrival on the western coast they found the barbarians there equally ready to fight as those whom they had quitted, and a battle ensued, in which the Spaniards were victorious.

San Sebastian. Santa Maria. The settlement Ojeda had intended to make on the east side of the Gulf of Darien was named San Sebastian; Santa Maria was that on the west, and soon became a place of importance. It has, however, long been abandoned, and there are but few places, if any, of note, remaining in Darien. Cana was lately a fort on the confines of Choco, to protect the gold mines of the same name; and under the designation of Santa Cruz de Cana, is considered as the Capital of the Province, having been formerly a considerable place. There were nine other towns, with many villages; but these are said all to have been abandoned, on account of the ferocity of the Indians. A Company was chartered at Edinburgh in 1695, under the name of the *Scotch Darien Company*, to form a permanent settlement therein. In 1698 it fitted out an expedition, and erected a colony in a fine port on the north-west shore of the Isthmus, in longitude 9° 30′ north and latitude 77° 36′ west, to which the name New Caledonia was given; a Governor was appointed, and the project was attended with so much success, that the British Court was referred to by Spain, and on its disavowal of any participation in the act, a force was sent against the colonists, who were finally ejected in 1700. A variety of controversial

Santa Cruz de Cana.

Scotch Darien Company.

Tracts were published on this project, the most interesting of which is entitled *The First Letter from the Council of Caledonia*, dated from New Edinburgh, in Caledonia, December 28, 1698.

For detailed and very curious information on Darien and the adjacent Provinces, the following works may be consulted with most advantage, viz. *De Orbe Novo* of Peter Martyr, of which one of the best editions is that in Italics, *Labore et industrid* Richardi Haklvyti, Paris, *Apud* Gvillelmvm Avvray, 1588, from which Elzevir reprinted his edition of the Decades; *The Decades of the New World or West India*, in black letter, a translation with marginal notes of Martyr's work, by Richard Eden, London, Guilhelmi Powell, 1555, in which is a part of the Work of Oviedo, on the *History of the West Indies*, containing a great deal of matter concerning Darien, the voyage of Magellan, and many other curious extracts from books of voyages and travels; Wafer's *New Voyage and Description of the Isthmus of America, with a Natural History of those parts, by a* Fellow of the Royal Society; and Davis's *Expedition to the Gold Mines in* 1702, London 1704; Oexmelin's *History of the Bucaniers of America*, London, 1699; or the French edition, which is the best, 1686; Laet, *Orbis Novus*, 1633; Herrera, *Descripcion de las Indias Ocidentales*, Madrid, 1730; Dampier's *Voyages*, London, 1729.

Having given this very brief sketch of Darien, we shall now attempt to elucidate some of the different schemes to which the approximation of the two great Oceans, at the Isthmus bearing its name, has given rise, from the earliest times down to the present. The possibility of a junction between those great masses of water first suggested itself to the active and extraordinary mind of Columbus. In his fourth voyage his design was, as his son Ferdinand says, in his *Life of the Admiral*, "to have gone directly upon the coast of Paria, to keep along that shore, till he came upon the strait, which he certainly concluded was about Veragua or Nombre de Dios;" and to prove that this was the intention of his noble father, he devotes the ninetieth chapter of his Work, which the reader may consult in English, in Churchill's *Collection of Voyages*. "Notwithstanding the Admiral hadheard so much from those in the canoe concerning the great wealth, politeness, and ingenuity of the people westward towards New Spain; yet, since he thought that those countries lying to the leeward, he could sail thither whenever he thought fit, from Cuba, he would not go that way at this time, but held on his design of discovering the strait in the continent, to clear a way into the South Sea, which was what he aimed at in order to come at the countries that produce spice." "Colonus, the Admirall," Peter Martyr asserts, "the fyrste fynder of these regions, affirmeth that the toppes of the montaynes of Beragua are more than fyftie myles in heyghth. He sayth furthermore, that in the same region at the rotes of the montaynes the way is open to the South Sea, and compareth it as it were betwene Venice and Genua, or Janua as the Genues wyll haue it called. He affirmeth also that this lande reacheth foorthe towarde the south; and that from thense it taketh the begynnynge of breadth. The Admirall supposethe that on the lefte hande in saylinge towarde the weste, this lande is joyned to India beyonde the ryuer of Ganges; and that to the ryght hande towarde the north, it bee extended to the Frosen Sea, beyonde the Hyperboreans and the North Pole; so that both the seas shulde joyne and meet in the corners of that land; and that the waters of these seas doo not onely inclose and compasse the same withoute diuision, as Europe is inclosed with the seas of Hellespontus and Tanais, with the Frosen Ocean and oure sea of Tyrrhenum, with the Spanysshe seas." Well might Eden remark in the margin, "By this coniecture, the way shuld be open to Cathay by the Hyperboreās." In fact, the mind of Columbus appears to have had a foreknowledge, (if such a notion can be allowed,) of the actual form of the New World; and this conjecture, which he imparted to his friend and historian, we trust will be fully verified by Parry and his associates.

Opinion of Columbus.

The sixth Book of the third Decade, *De Orbe Novo*, is highly interesting; it contains some very philosophical reasonings on the nature of the then undiscovered continent of North America, and shows clearly that Columbus and his followers were led into the error of supposing that there must be a strait, by the accounts which they received from the natives of the great Southern Ocean, and from the rapid flow of the waters in the West Indian Gulf towards the west. It likewise points out the just reflection of Columbus, when he found that the supposed strait was a narrow neck of land; and describes the attempt of Sebastian Cabot to penetrate the continent in a higher latitude with great fidelity. Peter Martyr appears to have been a man of talent and of singularly liberal notions, who was as fortunate in having Columbus, the Pinzons, and Cabot to consult, as they were to meet with so able a narrator of their exploits. "Cabot is my very frende, whom I vse famyliarly, and delyte to haue hym sumtymes keepe me companye in myne owne house," he observes, in treating of the Venetian's exploits; and soon afterwards declares, that Oviedo the traveller and historian was also his friend, and assured him that the waters of the West Indian Gulf did not penetrate the continent there, as he had observed them to run as swiftly to the east in the northern part as they did to the west in the southern.

Magel

Munoz, in his learned *Dissertation on the Achievements of Columbus*, also vindicates the claim of that great man to the discovery that no communication existed there between the two Oceans. The voyage of Magellan was undertaken with the same views as those of Columbus and Cabot, though we can scarcely believe that his adventurous attempt to find the wished for strait, was made in consequence of the inspection of a chart of Martin Behaim's, as Pigafetta assures us in the following words; *Il capitano generale che sapeva de dover fare la sua navigazione per uno streto molto ascoso, como vite ne la thesoraria del Re de Portugal in una carta fatta per quello excellentissimo huomo Martin de Boemia.* But Juan de Solis must not be forgotten in the list of those great men who endeavoured to find a natural junction between the Oceans; he sailed from Spain in 1515, four years previous to Magellan, and fancied on reaching the immense estuary of the Great La Plata, that he had discovered the mystery. The French translator of Pigafetta's *Voyage round the World* very naturally conjectures, that the knowledge that De Solis had penetrated so far into the American continent, was one inducement for Magellan's pursuit of the strait in that low latitude, particularly as we find that the river forms a most prominent feature,

Juan de Solis.

and almost cuts through the continent in a copy of the ancient illuminated Chart of Magellan's Strait, given in the French edition by Amoretti.

Balboa's discovery of the South Sea we have not particularly adverted to; it, however, was the great stimulus to the exertions afterwards employed, to find out a better connection between the Oceans than that which Magellan explored. The attempts of Baffin and his followers are also too well known to need repetition.

posals an artial junction.

Various schemes were proposed to form an artificial junction, as soon as it was clearly known that a natural one did not exist, in any latitude wherein it could prove serviceable to shorten the voyage from Europe to India or China; but all the early notions of cutting a canal from Nombre de Dios to Panama, were given up; because, as Acosta states, *Sur quoy toutes fois quelques vns ont voulu dire que ce servit pour noyer la terre, disans qu'une mer est plus basse, que l'autre;*" and also, as he believed with most other persons of the age, *quil n'y a puissance humaine, qui fust suffisante pour rompre et abbatre ces tres-fortes et impenetrables montaignes, que Dieu a mises entre les deux mers;* and if human labour could effect such a junction, those men who undertook the task, *deburoit craindre le chastiement du Ciel, en voulant corriger les œuures que le Createur par sa grande prouidence a ordonnées, et disposées en la fabrique de cet vnivers:*" a superstitious belief similar to that which prevented the Cnidians from profiting by their peninsular situation, (Herod. i. 174,) and the Council of Castile from allowing the Dutch to make the Tagus navigable to Lisbon, and the Manzanares also from the point at which it joins the Tagus as far as Madrid, (Clarke's *Letters concerning the Spanish Nation*, xv.)

abts on sup- ed dif- nces of l be- en the seas.

Humboldt coincides in the first part of the opinion thus delivered, and states that the Atlantic is six or seven metres, or nearly twenty feet higher in level than the opposite waters of the Mexican Pacific Ocean; this is, however, with all proper deference to his judgment, a question so very difficult to decide, even with the best instruments, of which neither Humboldt nor the Spanish Engineers who preceded him were possessed, that the assertion is still very problematical. We are aware that the flux of waters towards the west, on the southern and eastern shores of the Mexican basin, is the great argument made use of by the supporters of this notion; but it should be recollected, that these waters find as quick, and even a much quicker exit* eastward along the northern shores of the same gulf, and produce such an impression on the Atlantic by their impetuous course, that the gulf stream is sensibly different in warmth and appearance from the rest of that ocean, even in tolerably high latitudes. If the Mexican basin had not this rapid outlet for those superabundant waters, which we believe are greatly added to by the indraught of the immense southern rivers, the Orinoco and the Amazons, it is more than possible that almost all the eastern coast of Mexico and Tierra Firme would be now covered by them, as there is every reason to believe it formerly was, when Cuba was conjoined with the continent of America. A good and sufficient example of this kind occurs to us, from observing the extraordinary effect of the want of such an exit for the waters of the Atlantic in the enclosed Gulf of Fundy and basin of Minas, in British America. The tide in the latter comes in with that surprising phenomenon called a *Bore;* and in the former, at its extreme end, mounts to the unheard-of altitude of from seventy to ninety feet; whilst in the Gulf of St. Lawrence, only fifteen miles distant, across a low isthmus, it never rises more than five or six feet; because, although the gulf is as much enclosed as that of Fundy, it has the overwhelming rush of the great River St. Lawrence, to sweep down the natural tendency of its waters to accumulate in a similar manner; the reflux in the upper portion of the Bay of Fundy being unable, owing to its great distance from the main ocean or entrance, to carry away all the waters of the preceding flux; so that, of course, each successive tide brings with it to the upper parts of the gulf a portion of the ebb water to the inner shores, in proportion to their distance from the mouth. But the laws by which the tides are governed, may afford the best reasons for the Atlantic waters of Mexico being the highest; the Pacific coasts of the continent having a comparatively unvaried and unbroken outline, whilst the immense sweep cut out of the land on the eastern side, by the Caribbean Sea and Gulf of Mexico, and filled by such a mass of ocean, must necessarily be acted on by the influence of the forces in some degree; but that this is very little, and not so great as to render impracticable the operation of cutting a canal without submerging the adjacent country, we can scarcely believe, as it is well known that the Pacific and Atlantic have been joined by a small channel dug through the ravine of the Raspadura in Colombia since the year 1788; so that during the rains, canoes loaded with chocolate nuts, constantly pass from one ocean to the other, and that, probably, without going over any rapids with so perishable a cargo. In Mexico also, in the ravine of Tarifa, without any other canal than that formed by the floods during the rainy season, canoes are said to pass from Tehuantepeque to Guasacoalco, with only the interruption of seven small *raudales* or rapids. Both which cases make much against the hypothesis of Acosta.

Cortez appears to have been the first of the Spanish conquerors who turned his mind to the attempt of uniting the Oceans, and this he did from the inspection of a map of the isthmus about Oaxaca, which he procured from the Mexicans. Since his time the same attempt has been renewed by some of the Viceroys who succeeded him, an accurate survey of the Isthmus of Tehuantepeque having been completed by Spanish Engineers.

The points which modern Geographers have at length decided on, as affording the most probable opportunities of carrying this grand and useful design into execution, with any prospect of success, are the Isthmus of Tehuantepeque, the Isthmus of Nicaragua, the portion of the continent from the mouth of the Atrato to the Bay of Cupica, and that from the same estuary to the mouth of the river San Juan in the Pacific Ocean.

*Isthmus of Tehuantepeque or Guasacoalco.** Nature has here done a great part of the labour, the river Passo

* Humboldt observed it in the Gulf of Florida, in latitude 26° and 27° north, to run at the rate of eighty miles in twenty-four hours, or five feet a second, though the north wind blew violently.

* A good description of Tehuantepeque is given in p. 143 *et seq.* of *The Freebooter's Voyage into the South Sea in* 1687.

DARIEN. rises in the mountains of Oaxaca, and turning to the east presents itself to the valley or alluvial bed of a breach in the Cordillera of Anahuac, known by the name of the Valley of the Forests of Tarifa; after which it pursues its course to the Gulf of Mexico, into which it enters by a broad estuary near the Island of Barilla. This river has seven rapids, and is perhaps more than seventy miles in length, but is represented as being navigable as far as the Embarcadero de la Cruz, or for more than two-thirds of its course. On the west of the Cordillera, and at the distance of seven leagues only from the Passo, is the Rio Chimalapa, a small navigable stream, which flows after a very short course into the Bay or Gulf of Tehuantepeque.* The town of Tehuantepeque is in latitude 16° 20′ north and longitude 95° 1′ west, or, according to some writers, in 16° 16′ and 94° 58′; and excepting the disruption of the chain above mentioned, all around it between the two rivers is very high land, from which, at Senpualtepeque, a few miles in the interior, the two Oceans are distinctly visible. The port of Tehuantepeque has a difficult bar, and is subject to hurricanes, which bear the name of the Gulf, during the months of July and August; but, to counterbalance this evil, it is the only good harbour from Panama along the coast to Acapulco; and here vessels from Peru bound for Acapulco take shelter in preference to Trinidad and Realexo in Guatimala, besides which it is so well supplied with provision, that Gage says it is the "chief for fishing in all that country; we met here in the wayes sometimes with fifty, sometimes with a hundred mules together laden with nothing but salt fish for Guaxaca, the city of Angels, and Mexico. There are some very rich merchants who dwell in it, who trade with Mexico, Peru, and Phillipinas;" and he also observes, that the surrounding country is extremely fertile and full of rich and handsome towns, but of this part of Mexico we as yet know very little. Here a canal of upwards of twenty miles must be cut, and seven rapids must be destroyed, besides that it is probable that the descent of these rivers is considerable.

Isthmus of Nicaragua. The proposed communication here, is by means of the great River San Juan, the estuary of which with the Atlantic is in about latitude 10° 30′ north and longitude 83° 20′ west. This river flows by a nearly straight course from Lake Nicaragua for about 100 miles, and is navigable excepting in four places, where the boats must be carried over land; and at these carrying-places the Spaniards had batteries and a large fort, so apprehensive were they of any attempt on this key to their possessions. Lake Nicaragua is above 180 miles long, and according to generally received opinion of immense depth,† and communicates naturally with Lake Leon by a river or channel which is very much obstructed, and is stated to have a descent of upwards of thirty feet, in a very short course; Lake Leon or Managua is about ninety miles long; and from this to the Pacific a short canal of ten or twelve miles would alone, it is said, be necessary, after removing the obstructions in the two rivers, to complete the junction with the Pacific. This would occur near Realexo, DAR which port is in latitude 12° 45′ north and longitude 87° 30′ west, and has a fine harbour called Cardon or Realexo, capable of containing 200 sail of vessels in the river of the same name, which has large docks for building and repairing. But the extent of the navigation through the land is here much more than double that of Tehuantepeque, with the immense disadvantage of the River San Juan being subject to almost perpetual rains, which render its climate exceedingly unhealthy, as is also the case with Realexo. It remains also to be proved, whether a part of the Andean Cordillera does not strike across the narrow belt between Lake Leon and the Pacific; and, therefore, whether the level of this lake is not so great above that ocean as to render a multiplicity of locks requisite for the actual canal. Juarros, in his *History of Guatimala* and description of these lakes, does not allude to the practicability of uniting the Oceans at this point, which, from his zeal for his native country, and the eagerness displayed in enforcing the necessity of making several internal river communications navigable, would not have escaped him, if it had been thought possible by the inhabitants. It is singular that he mentions the union of Lakes Leon and Nicaragua, by simply saying they are connected by a canal;* but we have been informed by those who have seen correct maps of the country, that it is a natural channel of some extent, and of great declivity; Lake Leon or Managua appearing in fact to have been the origin whence Nicaragua derived its existence, probably from some convulsion of nature having either overcharged the basin of the former with fluid, which forced its way through every impediment into the lower valley and constituted Lake Nicaragua, or otherwise that the passage for the upper waters was formed by a disruption of the chain between the upper lake and the lower basin. The fall of this channel is probably stated with correctness at about ninety feet; it must be considerable, as the adjacent land is very high, the village of Masaya near the falls being overlooked by an enormous volcano, whence it derives it name. This, at the conquest, was in such activity, that within the crater was constantly seen a substance like melted lead red hot, boiling up sometimes to a considerable height, with great violence and noise, and emitting a light so brilliant, that it was possible to read in the dark nights by it, at a league off, whilst its splendour might be seen distinctly at sea for twenty-five leagues. The Spaniards called it *Infierno de Masaya.* At a very small distance from it is another volcano, named Nindiri, which so late as in 1775 discharged a torrent of lava that rolled into the small Lake of Masaya, and heated the contiguous lands to such a degree, that all the cattle on them perished. These volcanoes are on the Pacific side of the channel uniting Lake Leon with that of Nicaragua, whence it is but reasonable to suppose that they are portions of a chain pervading the coast. By an inspection of the best maps there appears a much better place than Realexo for forming this canal. At the south-western end of Lake Nicaragua, near the inhabited Island of Ometepet, and on the belt whereon the town of Nicaragua is built, the Isthmus is very narrow, and a large

* For one account of the communication by these rivers in the commencement of the XVIIth century, see *Freebooter's Voyage*, p. 146.

† Don Domingo Juarros, in his *History of Guatimala*, says it is only a medium depth of ten fathoms, with a muddy bottom, except along the shore, which is sandy; it has no increase or diminution, and is subject to violent tempests and extraordinary agitations.

* We rather think (not having the Spanish original before us) that the Translator, who has otherwise executed his task well, has mistaken the idiomatic expression "*un canal*," which may mean a river, a channel, or a canal, according to circumstances.

 river is laid down called the Rio Partido, flowing into the Pacific at a point named Brito Creek, in the Gulf of Papagayo. Here if the ridge of the Cordillera presents any breaks, a communication may be made by locks, or tunnelling might be resorted to. The Port of Brito is not, however, at present a very good one, or very commodious, but might be rendered so. The Gulf of Papagayo, with all the coast in its vicinity, is subject to severe storms.

The Atrato and Bay of Cupica. On the coast of the Pacific in longitude 77° 15′ west, there is an excellent port formed by the estuary of the little River Cupica running from the interior, and passing the Rio Naipi or Napipi, a navigable stream, which after a short course to the eastward flows into the great River Atrato in latitude 6° 33′ north, and disembogues itself into the Atlantic in latitude 8° 2′ north. Here a canal, of a few miles only, it is supposed, would complete an union of the most facile description between the Oceans; but of the country too little is known to speak decidedly, excepting that it is dreadfully unhealthy.

The Atrato and San Juan. The Atrato's principal mouth is Barbacoas, in latitude 8° 2′ north, in the great Bay of Candelaria, which has excellent anchorage, and is capable of containing any fleet, sheltered against every wind, and having a depth of from eighteen to thirty fathoms. The bar of this river has five feet water in the dry seasons, and in the high tides and rains six and a half, with a hard sandy bottom, and an extent of about 200 yards. The Atrato is then navigable for vessels drawing seven feet water as far as the Citara, on which the Capital of Choco stands; and it has no obstacles, running two miles an hour in the dry, and five in the rainy season.

Opposite Citara, the River Quito joins the stream of the Zitara, which meets the Atrato at a distance of some miles to the north, and by it there is a good communication for boats to the ravine of San Pablo or the Raspadura, where a canal is established practicable for canoes during the rains from the Quito to the San Juan, which after a long course to the south-west falls into the Pacific at Point Chirambira, in latitude 4° 10′ north. The voyage, Mollien says, may now be performed in fifteen days from one Ocean to the other, and he states it at upwards of 500 miles, in which he is corroborated by the notes of an English traveller given in the appendix to his work. The Quito is shallow, and so most probably is the San Juan for several miles, so that much labour and many locks would be required. But the greatest drawback will ever be found in the unhealthy nature of the country, which is flat, intersected by rivers, full of marshes, and covered with such thick forests that ages would elapse ere it could be cleared. "The continual humidity," Mollien observes, "which prevails in Choco renders the climate very unhealthy; the heat is tempered in this marshy country, but on the other hand as nothing can become dry there, the strongest constitution is undermined; all Europeans fall ill."

Nature seems in fact to have set bounds to man's ambition. She appears to have willed that for ages no great enterprise of the kind should be undertaken with very good prospects, either in Choco, in Darien, in Nicaragua, or in Mexico. If it be practicable any where on the Isthmus of America, Mexico will most likely present the long wished for spectacle of the sails of Europe passing over its bosom on their way to the East. Though hot, it is not in so unhealthy a situation as the other points, and with the exception of the Cupica, the distance is much less on the Tehuantepeque than on any of the other rivers; but here the hurricanes of the Gulf are to be contended with, both at the exit and the entrance. Our information, however, on all these points is still too limited to offer a decided opinion. The topography of each of them is comparatively unknown. A Company has lately been formed in London to examine the country from the Atlantic to the Pacific in Nicaragua, and the Government of the Central States of America has given its sanction to their proceedings.

A good account, from some experienced nautical man, of the tides on the shores of the Carribbean Sea and Mexican Gulf, and of those on the Pacific shores of Guatimala and Mexico, is still a desideratum, as we are very ill informed concerning their height and variations; but the great argument of drowning the lands, from the circumstance of one Ocean being supposed to be of higher level than the other, cannot operate as a check to enterprise; for even if Humboldt's corroboration of Acosta's idea be well founded, it will not, of course, prove an obstacle, as the canal in such case, if in the interior and formed to join two opposite rivers, may be fed independently, as the present canal of the Raspadura is, by the rains; and as these rivers flow towards their respective Oceans, the main difficulty will be to keep the canal full, rather than to counteract the danger from an overcharge of fluid; and it will be seen, that all the points are thus situated except Nicaragua, of which the levels are not sufficiently known to enable us to form a judgment. Nature has, in fact, placed insurmountable barriers to any scheme which would have for its main object the union of the great Oceans by a simple canal. Rivers with considerable volume and velocity must be the principal objects. These must be rendered navigable, and canals only can be employed along such parts of their courses as present obstacles not to be otherwise overcome by human labour. The idea of crossing any portion of the Colombian, Guatimalan, or Mexican belt, which every where presents a high central chain, by a canal with systems of locks, is too absurd to be discussed; and on this account the Isthmus of Darien or Panama is the most difficult point of all; for such is the height of the Cordillera there, that it requires five days very hard labour to go up the River Chagres from the sea to the Portage, a distance of only forty-three miles; the canoes employed on it requiring twenty strong rowers to make way against the current at all.

We shall conclude this account (the limited information contained in which, though derived from very recent and authentic sources, is much to be regretted,) by stating that the original and long cherished idea of cutting a canal across the Isthmus of Darien, the narrowest point of division between the Oceans, appears for the present to be abandoned, to make way for a similar trial on the more favourable, though infinitely more extensive tracts of Tehuantepeque or Guasacoalco and Nicaragua. The levels of the Mexican Isthmus called by the first two names, have been accurately ascertained by Spanish engineers many years ago; and Humboldt has recently declared, that a navigable communication is there, in all probability, practicable. Nicaragua is now undergoing a strict

DARIEN. examination, and it is by no means unlikely that the Isthmus of Darien itself will soon be crossed by a rail road, which when established will at least obviate the necessity for transmitting goods by the tedious and uncertain navigation of the Chagres, and will so open the now unpenetrated forests of that belt of land, that a favourable cleft in the Cordillera, a volcanic valley, or some other facility may be discovered, which will alter the uncertain aspect now presenting itself to damp the sanguine hopes of Geographers; and this most desirable of all the points, may one day be intersected by a navigable canal.*

DARK.

A Company from England has, according to Mollien, already undertaken to open a road from Panama to Cruces, the place where goods are embarked on the Chagres, which river, even should a rail road not be executed, is itself capable of being rendered much more navigable than it is at present. This Company is to have the exclusive privilege of transporting the merchandise on the road; a privilege for which it has offered to pay the Colombian Government a tenth part of the profits; and it can scarcely be questioned but that a Company formed for so important a purpose as that of facilitating the transit of merchandise from the Pacific to the Atlantic, will employ every means in its power to obtain an accurate knowledge of a narrow belt of land, which is so much unknown that Wafer's interesting but unscientific narrative of his captivity under Lacerta, the principal Cacique of that part of Panama, nearly a century and a half ago, is with Dampier's unsatisfactory account of it in 1697, the chief source whence modern Geographers derive their very limited accounts of a country which is now of the highest interest to Science and to Commerce.*

DARK, *v.*
DARK, *n.*
DARK, *adj.*
DA'RKEN,
DA'RKENER,
DA'RKFULL,
DA'RKISH,
DA'RKLING,
DA'RKLY,
DA'RKNESS,
DA'RKSOME,
DA'RKSOMENESS.

A. S. *adeorc-ian, obscurare*, to obscure, to make *darke* or dimme, to darken, to hide. Somner.

To be or cause to be obscure, gloomy, dim, dusky, clouded, hidden, secret; to involve in obscurity or secrecy; to deprive of clearness, brightness, purity.

Dark is much used in *Composition*.

For it is so *derk* to symple men, bute me were þe bet in lore
R. Gloucester, p. 133.

And the unwise herte of hem was *derkid*.
Wiclif. Romayns, ch. i.

And the sunne was *derkid*. *Id. Apocalips*, ch. ix.

The lanterne of thi bodi is thin yghe, if thin yghe be symple: al thi body schal be lighty, but if it be weyward, al thi body schal be *derkful*. *Id. Luk*, ch. xi.

I will wipe his eyen a little, that be *darked* by the cloud of mortall things. *Chaucer. Boecius*, book i.

But youth, alas, by counsaile wil not werke
For which ful oft, he stumbleth in the *derke*.
Id. The Story of Thebes, part iii.

Lo badde is nothing els, but absẽce or negatiue of good, as *darknes* is absence or negatiue of light.
Id. The Testament of Loue, fol. 310.

For where there is no purueiance
Of light, men erren in the *darke*.
Gower. Conf. Am. book v. fol. 94.

The spirituall pleasure is of trouth so swete, that yᵉ swetenes therof many times *darketh* and minisheth yᵉ felyng of bodily payne.
Sir Thomas More. Workes, fol. 74. *A Treatise vpõ wordes of Scripture.*

The air is so *darkened* with continuall mists and fogs so nere the Pole, that no man can well see, either to guide his ship, or direct his course.
Hakluyt. Voyage, &c. North-west Passage, vol. iii. fol. 19.

Such as for pouertie be not able to go to that charges, are in the night *darkelong* without all pompe and ceremonies buried in a dunghill.
Id. Ib. Reports of Japan, vol. ii. part ii. fol. 86.

For albeit yᵗ he is so wauering in hys wordes he woteth not where to holde him, and therefore speaketh so *darckly* yᵗ he would be loth to be vnderstanden.
Sir Thomas More. Workes, fol. 543. *The second Part of the Confutation of Tyndall.*

Come nye and heare this: Haue I spoken anye thinge *darckelye* sence the beginninge? when a thinge beginneth, I am there.
Bible, Anno 1551. *Isaye*, ch. xlviii.

Adioyninge hilles, except they be
with *darkenum* dale vndun:
But so that on the right side still
doth shine thy rysing sonne.
Drant. Horace. Epistle to Quintius.

The dreadfull night with *darkesomeness*,
Had ouerspread the light,
And sluggish sleepe with drowsynesse,
Had ouer prest our might.
Gascoigne. Good Morrow.

Th' erth cumber'd, and the wing'd air *dark't* with plumes.
Milton. Comus, l. 730.

Or count them happy, that enioyes the sunne?
No: *darke* shall be my light, and night my day.
Shakspeare. Henry VI. Second Part, fol. 129.

The victories for which those trophies were begun,
From *dark* oblivion thou, O Time, shouldst have protected.
Drayton. Poly-olbion, song 30.

In the time of this incredible storm, the 15 of September (1578) the Moon was eclipsed in Aries, and *darkned* about three points, for the space of two glasses.
Sir Francis Drake. The World Encompassed, fol. 39.

But what cloud soeuer hath *darkened* my present lot, yet haue the heauens and nature giuen mee [Caractacus] that in birth and minde, which none can vanquish, or deprive mee of.
Speed. The Romans, book vi. ch. vi. sec. 15.

* Mollien, who treats English enterprise and Englishmen with childish querulousness, asserts that it is possible to form a canal across the Isthmus of Darien; but, without giving any scientific reasons why it is so, says that it will not be done, owing to the danger such a measure would entail on the States of Colombia and Guatimala from an enemy; and also that the English will never permit a canal to be opened which would hurt their vast Indian possessions. His arguments are curious enough, considering the very great ignorance displayed in his work on the policy of Britain; but he was an agent sent out by the French Government, possibly very ill received, and naturally jealous of the success of the rival nation.

* Since the account which we have given above went to the press, (August, 1825,) we understand from good authority that a survey of the Isthmus of Darien is likely to be undertaken next year by a very competent English civil Engineer.

RK. CLO. Ha? I should know their shapes
Though it be *darkish*; there are both our brothers,
What should they make thus late here?
Beaumont and Fletcher. The Captain, act ii. sc. 2.

He that hath scorned or wasted his inheritance, cannot complain, if he dies a bankrupt; nor he that has spent his candle at play, count it hard usage, that he is fain to go to bed *darkling*.
Hammond. Works. Sermon 6. vol. iv.

Then fed on thoughts, that voluntarie move
Harmonious numbers, as the wakeful bird
Sings *darkling*, and in shadiest covert hid
Tunes her nocturnal note.
Milton. Paradise Lost, book iii. l. 39.

CLA. How *darkly*, and how deadly dost thou speake?
Your eyes do menace me: why looke you pale?
Who sent you hither? Wherefore do you come?
BOTH MURD. To, to, to ———
CLA. To murther me?
Shakspeare. Richard III. fol. 181.

A dungeon horrible, on all sides round
As one great furnace flam'd, yet from those flames
No light, but rather *darknes* visible
Serv'd onely to discover sights of woe.
Milton. Paradise Lost, book i. l. 65.

——————————— Thy soul
(Which men enjoying sight oft without cause complain,)
Imprison'd now indeed,
In real *darkness* of the body dwells,
Shut up from outward light
T' incorporate with gloomy night;
For inward light alas
Puts forth no visual beam.
Id. Samson Agonistes, p. 85.

The wise Creator from our knowledge hides
The end of future times in *darksom* night;
False thoughts of mortals he derides,
When them vaine toyes affright.
Beaumont. Horat. Carm. lib. iii. od. 29.

Yet shall this sacred lamp in prison burn
And through the *darksome* ages hence invade
The wondering world, like that in Tully's urn
Which, tho' by time conceal'd, was not decay'd.
Sir William Davenant. To Mr. Cotton.

What hopes delude thee, miserable man?
Think'st thou thus unintomb'd to cross the floods,
To view the Furies, and infernal Gods,
And visit, without leave, these *dark* abodes.
Dryden. Virgil. Æneid, book vi.

For as that which sees does not cease to exist, when, in the *dark*, all objects are removed; so, that which perceives, does not necessarily cease to exist, when, by death, all objects of perception are removed. *Clark. On the Attributes*, p. 81.

Each British heart Maria still does wound,
And tears burst out unbidden at the sound;
Maria still our rising mirth destroys
Darkens our triumphs and forbids our joys.
Addison. To the King.

On the opposite side, if the least portion of the *darkened* part of the moon, extends beyond the enlightened part, mountains may very manifestly be discerned, exactly resembling ours on the earth.
Derham. Ast. Theology, note to book v. ch. ii.

I observed, that (though it were then winter) the colour of their hair and skin was far less whitish than the Danes, who inhabit a milder region, is wont to be, but rather for the most part of a *darkish* brown.
Boyle. On Colours, part ii. exp. 11.

Darkling he watch'd the planetary orbs,
In their obscure sojourn o'er heaven's high cope.
J. Philips. Cerealia.

And if we admire those discourses of the Heathen philosophers, wherein they speak more *darkly* and obscurely concerning those things, what admiration doth the Gospel deserve, which hath brought life and immortality to light?
Stillingfleet. Sermon 4. vol. i.

Yea, 'tis our duty, not to be contented onely, but to be delighted, to be transported, to be ravished with the emanations of his love: to entertain them with such a disposition of mind, as the chill and *darksome* air admits the divine influence of heavenly light. *Barrow. Sermon* 8. vol. i. DARK.

Their complexion is rather *darker* than that of the Otaheiteans, and they are not altogether so handsome a people.
Cook. Third Voyage, book v. ch. iii.

It is *darkish*, inclining to yellow, and very fragrant; it is brought from Hindustán and its medicinal virtue lasts three years.
Sir W. Jones. On the Spikenard of the Ancients.

But when this grand cause of terrour makes its appearance, what is it? is it not wrapt up in the shades of its own incomprehensible *darkness*, more awful, more striking, more terrible, than the liveliest description, than the clearest painting, could possibly represent it?
Burke. On the Sublime and Beautiful, part ii. sec. 4.

How, O my son! still living, hast thou reached
This *darksome* region? Arduous is the task,
For living man to mingle with the dead.
Cowper. Homer. Odyssey, book ii.

DARK, in *Composition.*

By th' aged Theban soule Tiresias;
The *dark-brow'd* prophet: whose soule yet can see
Clearely and firmely.
Chapman. Homer. Odyssey, book x. fol. 156.

But the artificial fly, which is only in use amongst our anglers, is made of a *dark-brown* shining camlet.
Walton. Angler, part ii. ch. viii.

By my troth Isabell I lou'd thy brother; if the old fantastical duke of *darke-corners* had been at home, he had lined.
Shakspeare. Measure for Measure, fol. 78.

Thy search shall finde him, set aside his beard,
That are with tast-delighting acornes rear'd:
And drink the *darke-deepe* water of the spring
Bright Arethusa.
Chapman. Homer. Odyssey, book xiii. fol. 208.

COR. You know not why we came to visit you?
REG. Thus out of season, thredding *darke-ey'd* night,
Occasions noble Gloster of some prize,
Wherein we must haue vse of your aduise.
Shakspeare. Lear, fol. 291.

Your fly is to be ribbed with yellow silk; and the wings long, and very large, of the *dark-grey* feather of a mallard.
Walton. Angler, part ii. ch. v.

Now in these cases where there is no obligation to tell the truth, any man may use the covers of truth; especially when in this case it is not a lie: for an equivocation is like a *dark-lanthorn*; if I have just reason to hold the *dark* side to you, you are to look to it, not I.
Taylor. Rule of Conscience, book iii. ch. ii.

——————————— All the way
Through which, my cross-hou'd cows hee did conuale,
Had dust so *darklie-hard* to serch; and he
So past all measure, wrapt in subtiltie.
Chapman. A Hymne to Hermes, part iii. fol. 73.

Their musicke, frightfull as the serpent's hisse,
And boding screech-owls, make the consort full.
All the foule terrors in *darke-seated* hell——
Q. Enough sweet Suffolke, thou torment'st thy selfe.
Shakspeare. Henry VI. Second Part, fol. 136.

Old Isaac was *dark-sighted* when he gave the blessing (contrary to his own intentions) to his sonne Jacob, yet it seems he lived forty years after, and could be pleased then to have good chear made him with wine and venison; our life doth not lie in our eyes. *Hall. The Balst of Gilead*, sec. 6. vol. iii. fol. 565.

Hail, goddess of nocturnal sport,
Dark-vail'd Cotytto! t' whom the secret flame
Of midnight torches burns; mysterious dame,
That ne'er art call'd, but when the dragon woom
Of Stygian *darkness* spetts her thickest gloom,
And makes one blot of all the air.
Milton. Comus, l. 128.

DARK. — DARLING.

They say this towne is full of cosenage:
As nimble juglers that deceiue the eie,
Darke-working sorcerers that change the minde.
Shakspeare. Comedy of Errors, fol. 78.

——————— Now is the time,
While yet the *dark-brown* water aids the guile,
To tempt the trout.
Thomson. Seasons. Spring.

And I found too, that the matter even of *dark-coloured* jugs of the better sort, and well baked, would with a steel afford sparks of fire. *Boyle. On the Prod. of Earth*, part vi.

AMAL. Thus she reveals herself, and knows it not:
Like lov's *dark-lanthorn* I direct his steps,
And yet he sees not that which gives him light.
Dryden. Marriage a la Mode, act iv. sc. 2.

Nought can his firmness shake, nothing seduce
His zeal still active for the common-weal;
Nor stormy tyrants, nor corruption's tools,
Foul ministers, *dark-working* by the force
Of secret sapping gold.
Thomson. Liberty, part iv.

Then from the wing a short liv'd spearman flies,
Unsafely bold, and see! he dies, he dies!
The *dark-brow'd* hero, with one vengeful blow
Of life and place deprives his ivory foe.
Sir W. Jones. The Game of Chess.

To whom *dark-frowning*, Diomede replied!
Speak not of flight, or speak in vain to me.
Cowper. Homer. Iliad, book v.

Sudden, unnatural debates arise,
Doubt, mutual jealousy, and dumb disgust,
Dark-hinted mutterings, and avow'd distrust.
Savage. The Wanderer, can. 5.

To whom, *dark-lowering*, Hector thus replied;
Polydamas! thy words now please me not.
Cowper. Homer. Iliad, book xii.

To wait an answer he disdain'd, but march'd;
While arrogance in secret gnash'd the teeth
Of this *dark-minded* Spartan.
Glover. The Athenaid, book xxx.

——————— So shooting from the sulph'rous lap,
Of some *dark-vested* cloud, a globe of fire
Through winds and rain precipitates a blaze
Terrific down the raven pall of night.
Id. Ib.

The streets are narrow and gloomy, the houses being built of a very *dark-coloured* stone. *Swinburne. Spain*, let. 44.

DA'RLING, or DE'ARLING, *n.* DA'RLING, *adj.* A. S. *dyrling, amasius*, a sweet-heart, a *darling* or *dearling*. Somner. Diminutive of *Dear*, q. v. One very dear; very dearly, affectionately, tenderly, passionately beloved.

Knoute lufed him best, he was his *derlyng*.
R. Brunne, p. 50.

Yet than her loke into his mind he brought
The swete visage, and amorous blenking
Of faire Creseide, somtime his own *derling*.
Chaucer. The Complaint of Creseide.

Lo my child whom I have chosen: my *derling* in whom it hath wel plesid to my soul, I schal putte my spirit on hym.
Wiclif. Matthew, ch. xii.

And in my slomber, had I such a sight,
As yet to think theron doth glad my mind,
Methought I sawe a *derling* of delight,
A stately nymph, a dame of heauenly kinde.
Gascoigne. The Complaint of Philomene.

Shall I compare thee to a summer's day?
Thou art more lovely and more temperate
Rough winds do shake the *darling* buds of May,
And summer's lease hath all to short a date.
Shakspeare. Sonnet 18.

Let the world's *darlings* examine what they confide in for the security of their joyes, and they will finde, it is the father of lies, they trust for the truth of their felicity. *Mountague. Devoute Essayes, Treat.* 7. sec. 3.

Ev'n in his sleep he starts, and fears the knife;
And, trembling, in his arms, takes his accomplice wife:
Down, down, he goes; and from his *darling-friend*,
Conceals the woes his guilty dreams portend.
Dryden. Persius. Satire 3.

Meaning, that so long as they continue in the practice of any one vice unreformed, and are not able to prevail with themselves to forsake a *darling* sin, their endeavours to obtain the kingdom of God cannot but be ineffectual.
Clarke. Sermon 10. vol. x.

Such men as they are the especially good men, the godly saints, the flower of mankind, the choice ones, the *darlings* of God, and favourites of heaven; the special objects of divine love and care. *Barrow. Sermon* 29. vol. iii.

Hath he not won the vulgar tribes,
By scorning menaces and bribes,
And proving, that his *darling* cause
Is of their liberties and laws
To stand the champion?
Churchill. The Duellist, book iii.

DARLINGTON, an ancient Borough in the County of Durham, on the river Skern, formerly called the *Dar*, from which, compounded with the Saxon *Inge*, a meadow bordering on a river, and *Ton*, a town, the name of the place has been derived. The Church was erected by Bishop Hugh Pudsey, in the year 1160. It was an opulent foundation, endowed for a Dean and three Prebendaries, and is now a perpetual Curacy, in the gift of the Earl to whom the Town gives title. The manufactures are worsted stuffs, linen, and cotton. There are mills also for spinning wool, hemp, and for grinding optical glasses. Darlington returns two Members to Parliament. Population in 1821, 5750. Distance from London 247 miles north, from Durham eighteen south.

DARN, DA'RNING. May be the A. S. *dyrnan, occultare*, to hide, to conceal. Somner says, *Dyrn, occultus*, secret, privie. Chaucer, *Derne*.

To hide, to conceal, to cover over; *sc.* a hole, a rent.

Democritus sheweth and proveth, that we ourselves have been apprentices and scholars to them in the principall things of this life, namely, to the spider, for spinning, weaving, *derning* and drawing up a rent. *Holland. Plutarch*, fol. 783.

They have of late, 'tis true, reform'd in some measure the gouty joints and *darning-work* of whereunto's, whereby's, thereof's, therewith's, and the rest of this kind.
Shaftesbury. Miscellaneous Reflections, mis. 5. ch. i.

Sir John Cutler had a pair of black worsted stockings, which his maid *darned* so often with silk, that they became at last a pair of silk stockings. Now supposing those stockings of Sir John's endued with some degree of consciousness at every particular *darning*, they would have been sensible, that they were the same individual pair of stockings both before and after the *darning*; and this sensation would have continued in them through all the succession of *darnings*; and yet after the last of all, there was not perhaps one thread left of the first pair of stockings, but they were grown to be silk stockings, as was said before. *Pope. Memoirs of Martinus Scriblerus.*

DARNEL, from the A. S. *derian*; Dutch, *deyren* or *deren, nocere*, to hurt or injure; because it is hurtful or injurious to more useful plants. Skinner and Minsheu.

So it is no doute but y^t^ the sower of dissenciō & king of rebelliō y^e^ prince of pride, the greate Deuil himself hath gathered thys flock to him, & sēt alway now & then such *darnell* seede and cocle to feede thē.
Sir Thomas More. Workes, fol. 686. *The second Part of the Confutation of Tyndall.*

NEL. The crimson *darnel* flower, the blue-bottle and gold,
— Which though esteem'd but weeds, yet for their dainty hues
RAIN And for their scent not ill, they for this purpose chuse.
Drayton. Poly-olbion, song 15.

PUCELL. Good morrow gallants, want ye corn for bread?
I thinke the Duke of Burgonie will fast,
Before hee'le buy again at such a rate,
Twas full of *darnell*: doe you like the taste?
Shakspeare. Henry IV. First Part, fol. 107.

No fruitful crop the sickly fields return;
But oats and *darnel* choak the rising corn.
Dryden. Virgil. Pastoral 5.

DARNEX, certain cloths introduced from Belgium, and so called from the celebrated city, *Doornick*. Fr. *Tournay*. Skinner.

But I have got them painted with your arms,
With a fair *darnex* carpet of my own
Laid cross for the more state.
Beaumont and Fletcher. The Noble Gentleman, act iv. sc. 1.

DARNIS, in *Zoology*, a genus of Homopterous insects, established by Fabricius, belonging to the family *Cercopidæ*.

Generic character: sheath three-pointed, inserted in the throat; lip short, involving the base of the horny beak; antennæ very thin, inserted under the clypeus; scutellum very large, as long as the body and involving it.

The species of this genus are confined to South America and the warm parts of the New World. Latreille in his works has not considered it as distinct from the genus *Membracis*. Fabricius describes twenty-three species of this genus, and divides it into two sections, according to the sides of the thorax being armed or armless.

The type of this genus is

D. cimicoides, the *Membracis cimicoides*. Coycleb: *Illus.* 9. t. 18. f. 6.

DARRAIN. In Shakspeare, quoted below, the Quartos read, "*Prepare* your battel," and Johnson and Steevens interpret, "Range your host, put your host in order." Junius (in *v. Dare*) ascribes *dare* as the origin of *daren, darraine, darreigne* battle, which, he observes, frequently occur in Chaucer; unless, he adds, we suppose it to be from the Norman, *desrener*, and to have been transferred from forensic litigation to contest in arms. Cotgrave has, *desrener*, to *dereine*, to justifie or make good the denial of an act or fact. Spelman thinks *desrener* contracted for *deraisner* or *deraisoner*; Low Lat. *disrationare*, to assert or maintain the contrary by *reasoning*; to destroy by *reasoning* what has been asserted. *Gloss. Archæol.* in *v. Disrationare*. And Mr. Tyrwhitt, *desrener*; Lat. *derationare*, to contest.

Arcite is ridden anon unto the toun,
And on the morwe, or it were day light,
Ful prively two harneis hath he dight,
Both suffisant and mete to *darreine*
The bataille in the feld betwix hem tweine.
Chaucer. The Knightes Tale, v. 1633.

And this day fifty wekes ferre ne nere,
Everich of you shal bring an hundred knightes,
Armed for listes up at alle rightes
Alle redy to *darrein* hire by bataille.
Id. Ib. v. 1865.

The next day folowynge, the kynge deuyded hys whole nombre into three battailes and after in good arraye approached nigh to the toune of Stoke, where was an equall and playne place for both parties to *darreigne* the battaile.
Hall. Henry VII. The eleventh Yere.

DARRAIN — DART.

Strange sort of sight, three valiant knightes to see
Three combats ioyne in one, and to *darraine*
A triple warre with triple enmitee,
All for their ladies froward love to gaine,
Which gotten, was but hate.
Spenser. Faerie Queene, book ii. can. 2.

But faire before the gate a spatious plaine,
Mantled with greene, itself did spredden wide,
On which she saw sixe knights, that did *darraine*
Fierce battaille against one, with cruel might and maine.
Id. Ib. book iii. can. 1.

And in the townes as they do march along,
Proclames him King, and many flye to him,
Darraigne your battell, for they are at hand.
Shakspeare. Henry VI. First Part, fol. 154.

For battell was design'd a plot of ground
Within a little isle, which Olney hight,
Whom Seuerne with his armes incircleth round,
Where we as combatants in single fight
Should *d'araine* battell in both armies sight,
While they assigned were by our command,
On th' other side of Seuern's streame to stand.
Mirrour for Magistrates, fol. 599.

DART, *v.*, DART, *n.*, DA'RTER, DA'RT-CASTERS, DA'RT-DEAR, DA'RT-HOLDING, DA'RT-PLEASED. "Fr. *darder*, to *dart*, to fling, hurl, cast or throw a *dart*; also to hit, wound, pierce or hurt with a *dart*." Cotgrave. Fr. *dard*; It. and Sp. *dardo*; Ger. *dard*; Mid Lat. *dardus, jaculum, telum missile*.—Martinius, in *v. Sagitta*, derives *dart* from the Greek δοράτιον, the dim. of δόρυ, *hasta*, a spear; and this Etymology, says Wachter, snatches the palm from all that I have seen: he thinks, however, the Greek and German had a Celtick origin. Junius also prefers δοράτιον.

Oft tille our Inglismen was schewed a marvaile grete,
A *darte* was schot to þem, bot non wist who it schete.
R. Brunne, p. 178.

In alle thingis take ghe scheeld of feith in which ghe moun quenche all the fyry *dartis* of the worst.
Wiclif. Effesies, ch. vi.

Right with her loke, through shotten & *darted*.
Chaucer. Troilus, book i. fol. 143.

——— She the castel nil not assaile
Ne smite a stroke in this battaile
With *dart*, ne mace, speare, ne knife.
Id. The Romant of the Rose, fol. 143.

And anone after, the Bœotians caused a certaine nomber of slingers and *dart-casters* to comme from Malic wyth two thousande good souldiars on fote.
Nicoll. Thucydides, fol. 118.

Sussex, the next that was to come aboard,
Bore a black lion rampant, sore that bled
With a field-arrow *darted* through the head.
Drayton. The Battle of Agincourt.

Dire was the tossing, deep the groans, Dispair
Tended the sick, busiest from couch to couch;
And over them triumphant Death his *dart*
Shook, but delai'd to strike, though oft invok't
With vows, as their chief good, and final hope.
Milton. Paradise Lost, book ii. l. 491.

Himself taking a torch-light in his hand shewed them the way what they should go, appointing his archers and *darters* to hurl and bestow their *darts* and other fiery instruments, to the tops of the houses.
Sir Thomas North. Plutarch, fol. 391. *Sylla.*

Dart-deare Diana, (euen with Phœbus bred,)
Danc't likewise there; and Mars a march did tred,
With that brave beuie.
Chapman. Homer. A Hymne to Apollo.

DASYPODA. DASYOUS.

may be instantly known by the excessive hairiness of their legs, from whence the name of the genus.

The insects of this genus fly like the rest of the *Andrænidæ* with exceeding rapidity, and are constantly found near flowers. They burrow in the sandy ground, throwing up a small heap of sand on the outside of their holes. In the holes they place their eggs, and on the side of them a sufficient quantity of pollen to nourish the larva.

The type of the genus is,

1. *Dasypoda hirtipes;* Panzer, *Faun. Ins. Germ.* 55, t. 14. The *D. hirta* is the female of this species, which is also figured by Panzer 7, t. 10, and 49, t. 16. They are exceedingly fond of the strap-shaped compound flower of *Chichoracea.*

2. *Dasypoda Plumipes,* Panzer; *Melitta Swammerdamella,* Kirby. This insect was first found by the industrious Swammerdam, which induced Mr. Kirby to name it after him, in his excellent work on English Bees.

Mr. Kirby formed a section in his genus *Melitta,* exactly agreeing with this genus. Jurine called the genus *Trachusa.*

DASYPOGON, in *Zoology,* a genus of *Dipterous insects,* established by Meigen, in his *History of the Diptera of Europe;* nearly related to *Asilus,* and belonging to the family *Asilidæ.*

Generic character: antennæ with three joints, separate at their base, the two basal nearly equal, the last nearly cylindrical, with a little style in the form of a joint; tarsi ending in two claws and suckers.

The *Dasypogons* differ from the genus *Conypes* by their having the two suckers and claws to their feet; in which characters they agree with the genera *Dioctria, Saphria,* and *Asilus;* but the joint of the antennæ being separate just at their base, and the equality of the two first, and form of the last joint, at once separates them from those insects.

These insects fly with very great rapidity, and live on other smaller insects, which they carry alive between their legs to some fit place to eat them. Meigen, in his *Description of the Diptera of Europe,* describes forty-four species of this genus; of which the following is the type,

Dasypogon Teutonus; Asilus Teutonus, Linnæus, and Fabricius. This insect is not uncommon about London.

Fabricius describes several of the species of this genus under the name of *Dioctria.*

DASYPUS, from the Greek δασὺς, hairy, and πῦς, a foot, Lin.; *Armadillo,* Pen. In *Zoology,* a genus of animals belonging to the family *Cingulata* order *Edentata,* class *Mammalia.*

Generic character. Body covered with a hard scaly coat, consisting of small compartments, and sometimes extending over the head and tail; the parts not defended by scales slightly covered with hairs; snout long; no incisor or cuspidate teeth; the molar teeth cylindrical, at a distance from each other, and numerous; claws very long, always five to the hind feet, and four or five to the fore feet.

This curious genus, found only in South America, is remarkable for the strong crust or shell which covers the body. This armour is disposed in form of a close skull-cap on the head, and upon the shoulders and rump it appears like a very convex buckler; between the two latter portions, a number of parallel movable bands cover the body, and, according to the number of these, is the specific name given; the tail is sometimes covered with rings, and at other times with tubercles, like the legs. They are known to the inhabitants of Guiana, by the name *Tattu;* they live in holes in the earth, which they are very expert in burrowing, and for which purpose their large claws are very advantageous; these burrows may be seen in great numbers in the sand hills distant from the sea, according to Dr. Bancroft's account. The Armadillos are hunted with small Dogs trained on purpose. The animal, if surprised, either runs to his hole, or attempts to make a new one, which it effects very quickly with its strong claws; and with these it holds so fast in the earth, that if taken by the tail, its struggles are so violent as frequently to leave the tail behind; but the hunter overcomes this by tickling the Armadillo with a stick, which then leaves go its hold, and is easily taken. Sometimes it rolls itself up into a ball, and makes its escape by tumbling down a precipice, at the bottom of which it usually arrives unhurt. Illiger has divided them into two genera, of which he has formed his family *Cingulata;* but there seems hardly sufficient reason for the division.

D. Tricinctus, Lin.; *Le Tatou à Trois Bandes,* Buff.; *Three-banded Armadillo,* Pen. Its shell is about twelve inches long, and divided into a number of pentagonal tubercular plates; three bands are placed between the plates, on the shoulders and rump; the tail is very short; it has five toes on each foot. It has the power of rolling itself up like the Hedge-hog, enclosing its head and feet within its armour, so as to form a complete ball. It is a native of Paraguay and the Brazils.

D. Sexcinctus, Lin.; *le Tatou à Six Bandes,* Buff.; *Six-banded Armadillo,* Pen. The scales smooth, large, and angular, forming the shield on the shoulders, separated by six or seven bands from that on the rump, which has the scales serrated; tail very thick at the base, and at that part covered with rings; short and tapering to a point; the parts not covered with scales are furnished with hairs, which are longer and more numerous than in the other species.

D. Novemcinctus, Lin.; *le Cachicame,* Buff.; *Nine-banded Armadillo,* Pen. The crusts on the shoulders and rump marked with small hexagonal plates; nine intermediate bands; colour black; breast and belly covered with long hairs; tail long, and covered with rings throughout nearly its whole extent; four toes on the fore feet, and five behind; the length of the animal is about three feet. This is the most common species in Guiana and the Brazils. Sometimes this animal has but seven, and at other times eight bands; and is called, accordingly, *Septemcinctus* or *Octocinctus.*

D. Unicinctus, Lin.; *le Cabassou,* Buff.; *Twelve-banded Armadillo,* Pen. Twelve intermediate bands, the compartments upon which, and on the crusts are broader than their length; the tail long and tubercular; five toes to each foot, of which the anterior have very large sharp claws.

D. Gigas, Cuv.; *le Deuxième Cabassou,* Buff.; *Great Armadillo.* Twelve or thirteen intermediate bands; tail long, and covered with imbricated scales, which, like those on the crusts, are oblong; it is the largest of the genus, and sometimes arrives at three feet in length without the tail.

See Linnæi *Systema Naturæ curâ* Gmelin; Cuvier, *Règne Animal;* Pennant's *History of Quadrupeds.*

YTES. — ASY-RUS.

DASYTES, in *Zoology*, a genus of *Coleopterous insects*, established by Paykull, belonging to the family *Melyridæ*.

Generic character: head somewhat transverse, retracted within the thorax, even to the eyes; tarsi with nails, apparently bifid; antennæ with short top-shaped joints, nearly as broad as long; lip deeply notched at the apex, almost bifid; body without pupilla on the sides.

The jaws of the Dasytes have a filiform internal lobe, with a thread-shaped palpi; the head is retractile, and the last joint of the tarsi is conical. These characters separate them from the genus *Drilus;* but they are also found in the genera *Melyris* and *Malachius*, but the former have their tarsi more developed, and the latter is furnished with a red dilatible lateral bladder on each side.

These insects inhabit flowers, living on Thrips, plant Lice, &c. Several species are found in England: in the latest catalogue about forty species has been noticed, many of which are exotic. The following is the type of the genus,

Dasytes Ater, oblong, black, widely punctate, hairy, head with two impressions in front. Found on flowers and grass; not uncommon near London.

Olivier placed the species of this genus in his genus *Melyris*.

DASYURUS, from the Greek δασὺς, hairy, and οὐρὰ, a tail, Geoff., *Dasyure*. In *Zoology*, a genus of animals belonging to the family *Pedimana*, order *Marsupialia*, class *Mammalia*.

Generic character. Eight incisor teeth in the upper, and six in the lower jaw, small and regular; two long canine and twelve molar teeth in each jaw; the two anterior molar thin and cutting, and the four posterior crowned with points; body slender; head conical, snout pointed, and the mouth very wide; eyes small and sharp; anterior extremities having five toes armed with claws, the posterior having but four, which are without claws, and a thumb which is so short as to appear like a tubercle; the tail long, and covered with long hairs, but not prehensile.

The animals composing this genus are natives of New Holland, and several of them were formerly included in the genus *Didelphis*, from which they were separated by Geoffroy, on account of having fewer teeth than that genus, and having the tail covered with long hairs. Like the Opossums they live upon flesh and insects, but cannot climb like them, as the strong thumbs of the hind feet and the prehensile tail are wanting. They live much in the same way as the Weasels among the *Carnivora*, and occupy the same station among the *Marsupialia*. During the day they remain in the holes of rocks and trees, and do not sally out in search of prey till night-fall.

D. Cynocephalus, Geoff.; *Didelphis Cynocephala*, Harris; *Dog-headed Dasyure*. About the size of a Dog, three feet and a half in length; the fur of the skin short, of a deep grey on the back, and yellowish brown beneath; the rump is marked with sixteen jet black transverse stripes, of which the two lowest extend on the thighs; tail about two feet long, flattened at its root, covered above with short soft fur, but naked beneath. M. Geoffroy imagines, from the flatness of the tail, that the animal is a good swimmer. Native of Van Dieman's Land, living on the shore among the rocks.

D. Ursinus, Geoff.; *Didelphis Ursina*, Harris; *Ursine Dasyure*. Not above half the length of the preceding. The fur consists of long black hair irregularly spotted with white, sometimes on the shoulders, sometimes on the rump and throat. Native of Van Dieman's Land, living on the shore, and feeding itself with its paws.

DASY-URUS. — DATE.

D. Macrourus, Geoff.; *Spotted Martin*, Phill.; *Long-tailed Dasyure*. About the size of a Martin; snout very sharp; whiskers long; ears short; fur short and roughish, of a reddish brown colour, spotted irregularly with white above; belly, dirty white; head, bright chestnut red; tail about the length of the body, and like it spotted with white. Native of New Holland, near Port Jackson.

D. Maugei, Geoff.; *Maugean Dasyure*. Not so large as the long-tailed Dasyure, but having the snout more pointed; the ears longer, and the feet more deeply cleft; the fur longer and softer, olive above, the base of the hairs grey, and the points olive, and grey beneath, spotted regularly with white over the whole of the body, these hairs white from base to tip; tail olive, but not spotted. Native of New Holland.

D. Viverrinus, Geoff.; *Didelphis Viverrina*, Shaw; *Viverrine Dasyure*. The body about a foot in length, spotted like the last, but the roots of the hair forming the white spots black, and their tips only white; the tail is smaller at its root than the last, but its extremity more bushy. Native of New Holland, near Port Jackson.

D. Tafa, Geoff.; *Tapoa Tafa* or *Tapha*. White, similar to the last, but without spots.

D. Penicillatus, Geoff.; *Didelphis Penicillata*, Shaw; *Brush-tailed Dasyure*. Fur greyish, and not spotted; head more rounded than in the other species; ears, larger and less covered with hair; tail very bushy and covered with black hair.

D. Minimus, Geoff.; *Yellow Dasyure*. Is the smallest animal in the genus, its body not being more than four inches long; its snout conical; ears short, broad, and rounded; tail about two-thirds of the length of the body; fur very thick and reddish; the thumb of the hind foot longer than in the other species. Native of the south of Van Dieman's Land.

See Geoffroy, *Annales du Musée d'Histoire Naturelle;* John White's *Voyage to New South Wales;* Phillips's *Voyage to New South Wales;* and Cuvier, *Règne Animal.*

DATE, *v.*
DATE, *n.*
DATER,
DATE'LESS,
DA'TARY,
DATE-BROKEN.

Fr. *date;* It. *data;* Sp. *data;* the past participle of *datum*, from *dare*, to give, which was written by the Romans at the bottom of their epistles; denoting the time at which they were written.—As, *Datum pridie idus Junii. Accepi literas datas*, &c. And thus *date*, generally, is

Any fixed or settled time; and to *date*, Sp. *datar;* Fr. *dater;* to mark, note or fix the time.

Datum, pl. *data;* any thing or things, any fact or facts, given or granted.

Cotgrave has, "*Dataire*, a *dater* of writings; and (more particularly) the *dater* or despatcher of the Pope's Bulls."

> Þe *date* of Jhesu Criste was written in þis lyue
> Auht hundreth wynter sexti & fyue.
> *R. Brunne*, p. 21.

> As for the *date* ye shall know verely
> That ye may haue a space in your comming.
> *Chaucer. The Assemblie of Ladies*, fol. 263.

DATE.

Completit was this werk of Virgiliane,
Apoun the feist of Marye Magdalene,
Fra Cristis birth, the *date* quha list to here,
Ane thousand fyue hundreth and threttene zere.
Douglas. The space, tyme, and date of the translatioun of this buke.

And the king by his ordinance, *dated* the Munday after Midlent, *Anno* 1302, (set doune in the register of ancient orders of parliament, fol. 45) willed, that for the commodity of his subjects there should be every yeare two parliaments at Paris, and in other provinces.
Prynne. Treachery and Disloyalty of the Papists, &c. part i. fol. 15.

But yet, in common acceptation, it's an enemy to verity, which can plead the antiquity of above six thousand: and bears *date* before the chaos.
Glanville. The Spirit of Dogmatizing, ch. xv.

Then can I drown an eye unus'd to flow,
For precious friends hid in death's *dateless* night,
And weep afresh love's long-since cancel'd woe,
And moan the expense of many a vanish'd sight.
Shakspeare. Sonnet 30.

——— Come hither: pray you
How goes the world, that I am thus encountred
With clamorous demands of *date-broken* bonds,
And the detention of long-since due debts
Against my honour? *Id. Timon of Athens*, fol. 83.

Pius V. sent a greater aid to Charles IX. and for riches, besides the temporal dominions, he hath in all the countries before named the *datary* or dispatching of Bulls.
Howell. Letter 38. book i. sec. 1.

From the blessings they bestow,
Our times are *dated* and our eras move:
They govern and enlighten all below,
As thou dost all above.
Prior. Hymn to the Sun.

——— He at once,
Down the long series of eventful time,
So fixed the *dates* of being, so dispos'd
To every living soul of every kind
The field of motion and the hour of rest,
That all conspir'd to his supreme design,
To universal good.
Akenside. Pleasures of Imagination, book ii.

Any writer, therefore, who mentions the rising or setting of any star, at any particular time of the year, with respect to the sun, furnishes us with *data* sufficient to determine the time in which he wrote. *Priestley. On History. Lecture* 12. part xii.

DATE, DATE-COLOUR, DATE-GRAPE, DATE-PLUM, DATE-STONE, DATE-TREE. Fr. *datte, dacte, dactil, dactyle*; Sp. *datel*; It. *dattero*; Lat. *dactylus*, a species of palm tree, so called from some resemblance in the fruit, or the husk of the fruit to the *finger*. The Fr. *dactyle*, Cotgrave calls the *Date* or *finger*-grape. And see the example, Holland's *Pliny, Date-grapes*.

And there ben 72 trees of palme that beren *dates*, the whiche Moyses fond with the children of Israel.
Sir John Maundevile. Travaile, ch. v.

There were cherubins and *date* trees made also, so that the *date* tree stode euer betwixte two cherubyns.
Bible, Anno 1551. *Ezekiel*, ch. xli.

Date-trees love a light and sandie ground, and specially (for the most part) if it stand much upon a veine of nitre besides.
Holland. Plinie, vol. i. fol. 385.

And in the first place commeth the *date-wine*, which the Parthians, Indians, and all nations of the East in generall doe ordinarily use. *Id. Ib.* fol. 420.

The *date-grapes*, *dactyli*, are long, both grape and kernill, fashioned in manner of fingers. *Id. Ib.* vol. i. fol. 405.

But in the *date-stone* the first sprout is neither root nor leaf distinctly, but both together.
Sir Thomas Brown. Cyrus Garden, ch. iii.

Pizarre having got the victory, came near to Atabalipa, and laying his hand on his shoulders in token of friendship, he had many loving discourses with him; which being ended, the captive king privately drew out of his bosom two round fine pearls, as great as a *date-plumb*, joyned together with two emeralds.
The Life of Atabalipa, annexed to North's Plutarch.

His breeches were likewise of blue linnen, and he wore a bonnet of the same colour, a pair of *date-colour* buskins, and a Turkish scymitar hanging at his neck in a scarf.
Shelton. Don Quixote, vol. ii. ch. x.

The fig and *date*, why love they to remain
In middle station, and an even plain.
Prior. Solomon. Knowledge, book i.

DATISCA, in *Botany*, a genus of the class *Dioecia*, order *Polyandria*. Generic character: male flower, calyx five-leaved; corolla none; anthers about fifteen, sessile, oblong: female flower, calyx two-toothed; corolla none; styles three, two-cleft; capsule triangular, three-horned, one-celled, inferior, many-seeded.

Two species, herbaceous plants, *C. cannabina*, native of Crete, and *C. hirta*, native of North America. Nuttall.

DATURA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Luridæ*. Generic character: calyx one-leaved, inferior, tubular, five-angled, five-toothed; corolla of one-petal, funnel-shaped, tube cylindrical, border expanded, five-angled, five-toothed; capsule superior, two-celled, four-valved.

D. stramonium, the common Stramonium, is a native of North America, but has become naturalized in England and other parts of Europe. *D. fastuosa* is a fine species, with large purple flowers, sometimes double and triple, one within the other. *Datura arborea* is a magnificent green-house plant, producing sometimes sixty large pendant flowers, which are highly fragrant.

DAVALLIA, in *Botany*, a genus of the class *Cryptogamia*, natural order *Filices*. Generic character: capsules in round spots near the margin of the frond; cover scaly, separating outwards, terminating a vein.

There are more than thirty species of this genus, natives of both hemispheres. *D. Canariense* is the most remarkable; it is a native of the Canary Islands, and is frequently cultivated in Europe on account of its singular roots, which reach over the sides of the pots in which it grows. They resemble a hare's foot, whence it is called the Hare's-foot Fern. Swartz. *Fil.*

DAUB, *v.* DAUB, *n.* DA'UBER, DA'UBING, DA'UBRY, DA'UBY. Junius thinks *daub* is of the same origin as *Dabble*, (q. v.) i. e. from *dab*; to *dab* or dip; *sc.* in the dirt; *tingere*, *inficere*; and thus, consequentially, To stain or smear, to dirty; to cover with, to lay on any thing thickly, coarsely; and thus, metaphorically, to disguise, and also to flatter.

Tho was Peers ful proude. and putte hem al to werke
In *daubyng* and in delvyng.
Piers Ploukman. Vision, p. 138.

Thus wyll I perfourme my wrathe vpon this wall, and vpon them that haue *dawbed* it with vntempered morter, and then wyll I say vnto you: The wal is gone, and the *dawbers* are awaye.
Bible, Anno 1551. *Ezechiel*, ch. xiii.

Her forehead faire is like a brazen hill
Whose wrinkled furrows, which her age doth breed,
Are *daubed* full of Venice chalk for need.
Hall. Satire 1. book vi.

UB. — ICUS.

I am a younger brother, basely borne, of mean parentage, a durt *dauber's* sonne, am I therefore to be blamed ?
Burton. Anatomy of Melancholy, fol. 320.

So smooth he *dawb'd* his vice with show of virtue,
That his apparent open guilt omitted,
I meane, his conuersation with Shore's wife,
He liu'd from all attainder of suspects.
Shakspeare. Richard III. fol. 190.

For her mother hath said to her syth (since) that ye ridden hence, that she hath no fantacy therein, but that it shall come to a jape (come to nothing ;) and saith to her that there is good craft in *daubing*. *Penn. Original Letters*, vol. iii. p. 173.

She workes by charmes, by spels, by th' figure, and such *dawbry* as this is beyond our element : we know nothing.
Shakspeare. Merry Wives of Windsor, fol. 55.

It is built from top to bottom with brick, all over *daub'd* thick with mud and dirt. *Dampier. Voyage, Anno* 1688.

For, when we find ye're still more taken
With false attracts of our own making,
Swear that's a rose, and that's a stone,
Like sots, to us that laid it on,
And, what we did but slightly prime,
Most ignorantly *daub* in rhyme,
You force us, in our own defences,
To copy beams, and influences.
Butler. The Lady's Answer to Hudibras.

She duely, once a month, renews her face ;
Mean time, it lies in *daub*, and hid in grease.
Dryden. Juvenal. Satire 6.

But how should any sign-post *dauber* know
The worth of Titian or of Angelo ?
Id. Epistle 4. *To Mr. Lee.*

But this was false *daubery* and within a day or two I was constrained to make satisfaction.
Boyle. Letters from several Persons, vol. vi. p. 345.

Yet some stricter persons censured this work much, as being a political *daubing*, in which, they said, there was more pains taken to gratify persons, and serve particular ends, than to assert truth in a free and unbiassed way, such as became divines.
Burnet. History of Reformation, Anno 1536.

And therefore, not in vain, th' industrious kind,
With *dawby* wax and flow'rs the chinks have lin'd.
Dryden. Virgil. Georgic 4.

No passions to plague him, no cause to torment,
His constant companions are Health and Content,
Their lordships in lace may remark, if they will,
He's honest, though *daub'd* with the dust of the mill.
Cunningham. The Miller.

His observation that the lights and shades in the different parts of the picture came from opposite sides, is unanswerable, and demonstrate it no genuine picture of Holbein, unless that master had been a most ignorant *dauber*, as he might sometimes be a careless painter.
Walpole. Anecdote of Painting, vol. i. p. 148.

In truth the age demanded nothing correct, nothing compleat, capable of tasting the power of Dryden's numbers, and the majesty of Kneller's heads, it overlooked doggrel and *daubing*.
Id. Ib. vol. iii. p. 200.

And did you step in, to take a look at the grand picture in your way back ?—'Tis a melancholy *daub*, my lord ? not one principle of the pyramid in any one group.
Sterne. Tristram Shandy, ch. xii.

DAUCUS, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferæ*. Generic character : umbell compound ; involucre pinnatifid ; corolla, petals five, inversely heart-shaped, inflexed ; outer petals radiant ; fruit ovate, hispid ; the central flowers in each umbell abortive.

D. carota, the Carrot, is a native of England and other parts of Europe ; there are several other species natives of the south of Europe.

DA'UGHTER, DA'UGHTERLY, DA'UGHTERLINESS, DA'UGHTERLESS. } Goth. *dauhtar* ; A. S. *dohtor* ; Dutch, *dochter* ; Ger. *tochter*. Junius, from the Gr. θυγάτηρ. Skinner, from the Lat. *dos* ; *puella enim sine* dote *vix elocari potest*. (In Scotch, *tocher* is *dowry*.) Wachter, from Low Sax. *tygen, gignere, parere, procreare* ; to beget, to bring forth.

DAUGHTER. — DAVID'S, ST.

The *daughter* of a man or woman is his or her *female* child ; the son, the male child.

þre *dozтren* þis kyng hadde, þe eldest Gornorille,
þe mydmost hatte Regan, þe zongest Cordeille.
R. Gloucester, p. 29.

Offa, kyng of Lyndsay, a fayre *doughter* had,
Brittrik hir wedded, & quene home her lad.
R. Brunne, p. 10.

And he that lovith son or *douhtir* over me is not worthie of me. *Wiclif. Matthew*, ch. x.

And certes if I of him faile,
I wol right welle withoute faile,
Ye shall for me be *doughterles*.
Gower. Conf. Am. book viii. fol. 179.

For Christian charitie, and naturall loue, & youre very *daughterlye* dealing, *funiculo triplici, qui* (*vt ait Scriptura*) *difficile rumpitur*, both bynde me and straine me thereto.
Sir Thomas More. Workes. Letter to Mrs. Roper, fol. 1449.

Boy. They will not answer to that epythite,
You had best call it *daughter-beamed* eyes.
Shakspeare. Love's Labour Lost, fol. 138.

The great plenty of fruitful vines upon the sides of these mountains, was the occasion that Jacob in the spirit of prophesy, *Gen.* xlix. 22, compared Joseph's two branches, Ephraim and Manasseh, to the branches of a fruitful vine planted by the well side, and spread her *daughter-branches* along the wall.
Ralegh. History of the World, book ii. ch. ix. sec. 1.

Cecil cared not to go along with the purposes of the ambitious Duke of Northumberland, to advance his *daughter-in-law*, married to Guildford Dudley his son, to the crown, and so to bring on the kingly dignity into his blood.
Strype. Life of Cheke, Anno 1553.

My *daughter*, my only *daughter*, from whose tenderness I expected all the comforts of my age, died last night of a fever. My views, my purposes, my hopes are at an end : I am now a lonely being disunited from society. *Johnson. Rasselas*, ch. xviii.

DAVID'S, ST., Mynyw, Menevia, a City of Pembrokeshire in South Wales, and the See of a Bishop, at present a poor and miserable village, (*plus nominis habens quàm ominis*, as Giraldus observes even in the XIIth century,) the four hamlets composing which contained 2440 inhabitants in the year 1821. Distant sixteen miles west from Haverford West, and 273 from London.

St David's was once a place of considerable importance. The founder of the See was David son of Sandde, or Xantus, as his name is Latinized, Prince of Cardiganshire, who flourished in the Vth and VIth centuries. David was a favourite theme of monkish legends, and has latterly been elevated to the rank of Patron Saint of Wales. His birth, however, was by no means free from stain ; for Prince Sandde was not only guilty of force against the chastity of his mother, the Princess Non, but in order to obtain her favours he sacrilegiously violated the privileges of a cloister. David studied first at Henmeneu or Old Menevia, and afterwards, (having received ordination,) for ten years under Paulinus, a celebrated Theologist in the Isle of Wight. Paulinus, having been warned by an Angel, despatched David to preach in Britain ; a following which he exercised with great diligence and success,

DAVID'S, ST.

till he determined to fix his residence in a sequestered spot, called the *Vale of Roses*, and there lay the foundation of a Monastic Society. Many men eminent for sanctity were soon assembled round him, and submitted themselves to a most rigid discipline, which not only demanded labour, abstinence, penance, and other austerities common to the ascetic life, but reduced them to such a state of servitude to their Superior, that as we are informed in the *Acta Sanctorum*, (Martii, i. 46,) *Patris licentiam etiam ad secreta Naturæ requirebant.*

The Pelagian heresy had at this time spread widely over Wales, and in 519 a Synod was convened at Llandewi Brefi in Cardiganshire, in order to check its progress. Hither David was summoned among others, and a distinguished miracle marked his preaching, which we shall give as it will be found in Cresey's *Church History of Britany or England*, (xi. 11,) from Giraldus Cambrensis. "When all the Fathers assembled enjoyned St. David to preach, he commanded a child which attended him, and which had lately been restored to life by him, to spread a napkin under his feet, and standing upon it he began to expound the Gospell and the Law to the auditory. All the while that he continued a snow-white Dove descending from Heaven sate upon his shoulder, and moreover the earth on which he stood rais'd itself under him till it became a hill, from whence his voice, like a trumpet, was clearly heard and understood by all, both near and far off. On the top of which hill a Church was afterwards built, which remains to this day." A stone even now stands in the Church-yard of Llandewi Brefi, about eight feet in height and a foot in circumference, called by the villagers *St. David's Staff*, and supposed to have been used by him during this sermon.

At the conclusion of this Synod, Dubrecius, Archbishop of Caerleon, being desirous of spending the remainder of his days in retirement, proposed to resign his office in favour of David. The offer met with unanimous approbation, and was agreed to by David, on condition that the See might be transferred to Mynyw. David afterwards summoned a second Synod called the *Synod of Victory*, and having committed to writing the decrees of both assemblies, and obtained for them the approval of the Court of Rome, he distributed them as the rule and directory in Ecclesiastical matters among the Welsh Churches, which received and observed them for many centuries.

The time of David's death is uncertain. It is dated by different authors from 544 to 609, and his age is variously stated from 97 to 147.

The miracles ascribed to the agency of St. David are very numerous, and among the wonders attendant upon him must be numbered the prediction of his birth, thirty years before it occurred. Giraldus informs us of his many spiritual virtues, he was *audientibus doctrina, religiosis forma, egentibus vita, orphanis munimen, viduis fulcimen, pupillis pater, monachis regula, sæcularibus via*; he was moreover goodly to the eye in the outer man, for another author (cited by Sir R. C. Hoare, Baldwin's *Itin.* ii. 13,) styles him, *amabilis valdè, vultu venustus, formâ præclarus, facundus, eloquens et quatuor cubitorum staturâ erectus.* He was canonized in the XIIth century by Callixtus II., who annexed extraordinary privileges to a pilgrimage to his Shrine.

Menevium pete bis, Romam adire si vis;
Merces æqua tibi redditur hic et ibi.

Thus rendered by a Welsh Bard, Williams, not much according to the intention of the Monkish original:

DAV S.

Would haughty Popes your senses bubble
And once to Rome your steps entice,
'Tis quite as well and saves some trouble,
To visit old St. Taffy twice.

And again there is another line to the same purpose,

Roma semel quantum bis dat Menevia tantum.

Twenty-five Archbishops succeeded David. Sampson, the last, migrated to Tours. Here, during the prevalence of a contagious fever in Mynyw, he became Bishop of Douay; and the Archiepiscopal Pall which he carried with him was thus lost to his original See; nevertheless, till the conquest of Wales by Henry I. the Welsh Bishops were always consecrated by the Bishop of St. David's, and he by his Suffragans, without submission to any other Church, although Eugenius III., fifteen years before, had subjected them to the See of Canterbury.

Morgeneu was the first Bishop of St. David's who ventured to eat flesh. He was on this account killed by Pirates, and on the night of his death he showed his wounds to an Irish Bishop, saying, *Quia carnes comedi caro factus sum.* Nathan Jevan, who succeeded him, was Bishop for a single night only. Among the distinguished names belonging to the See in more recent times, may be numbered Bishops Bull, 1705; Lowth, 1766; and Horsley, 1788.

The Cathedral at Mynyw was originally dedicated to St. Andrew, and St. David who has now superseded the original Patron, was probably annexed soon after his canonization. The earliest part of the building existing at present was erected by Bishop Peter de Leia, in 1180; yet before this time, so celebrated was the Shrine of St. David, that William the Conqueror and Henry II. had made pilgrimages to it. Edward I. and his Queen Eleanor visited it in 1284, and the resort of sea-faring men to numerous little Chapels on the shore, together with the offerings at the Cathedral itself, brought great riches to the Clergy.

The western front of the Cathedral has been spoiled by the motley manufacture of a fashionable modern builder; but a view of the fine Saxon workmanship which preceded these repairs, may be found in Grose's *Antiquities.* The columns and arches in the nave are Saxon, richly decorated and accurately proportioned. In the chancel is the tomb of Edward, Earl of Richmond, father of Henry VII. 1456. On the south side of the choir is that of Bishop Anselm, with a very communicative epitaph,

Petra, precor, dic sic: Anselmus Episcopus est hic:

To the south of the altar is that of Rhys, Prince of South Wales, 1196. Giraldus Cambrensis is interred in the south aisle. Beyond the chancel to the east is a beautiful florid Gothic Chapel, built by Bishop Vaughan in the time of Henry VIII. The Mary Chapel and the north aisle are roofless; but yet the Cathedral, though partially ruined, contains some remains of antiquity not often met with, a Penitentiary, a Rood-loft, and the Shrine of the Saint. The interior dimensions of the Church are as follows: length from east to west 290 feet, from north to south 120; breadth of nave and aisles seventy-six; height forty-six; height of central tower 127.

The ruins of St. Mary's College, founded in 1388.

D'S, stand to the north. The Chapel, which sufficiently
. evinces the magnificence of this structure, is the only
NT. part now remaining. To the south-west are the ruins of the Episcopal Palace, once a very superb pile, erected by Bishop Gower in 1328, and iniquitously dilapidated by the avarice of Bishop Barlow in 1536. The See is endowed for a Bishop, Precentor, (with the power of Dean,) Chancellor, Treasurer, four Archdeacons, nineteen Prebendaries, and eight Vicars Choral. The Diocese comprehends the Counties of Pembroke, Caermarthen, and Brecknock, and parts of Radnor, Monmouth, Hereford, Montgomery, and Glamorgan.

Brown Willis, *Survey of St. David's*; Hoare, *Giraldus Cambrensis, Itinerary of Archbishop Baldwin*; Norris, *Architectural Antiquities of St. David's*; Manby, *History and Antiquities of St. David's*; Wotton, *Memoirs of the Cathedral Church of St. David's*; Bishop Burgess, *Bishops and Benefactors of St. David's.*

DAVIESIA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx bell-shaped, angular, five-cleft; corolla pea-flowered; style awl-shaped; germen superior; stigma acute; seed pod compressed, solitary.

Ten species, elegant shrubs, natives of New South Wales.

DAUNT, *v.* } "Fr. *dompter* or *donter*, to tame, to
DA'UNTER, } reclame, to break, *daunt*; vanquish,
DA'UNTING, } overcome, subdue, bring under."
DA'UNTLESS. } Cotgrave. *Daunt*, says Skinner, is to terrify, to confound, to reduce to silence by great daring or threatening: perhaps from Fr. *domter*, *domare*, and this immediately from Lat. *domitare*.

G. Douglas calls a *breaker* of horses or a horse-breaker, a *danter* of horses.

> þe Gywes and Herodes (þat here king was)
> He a *dauntede* harde ynow, and non harme yt nas.'
> *R. Gloucester*, p. 61.

> And David that be diademyd. and *daunten* alle oure enemyes.
> *Piers Plouhman. Vision*, p. 60.

> Thy foly more fro day to day
> Shall grow, but thou it put away
> Take with thy teeth the bridell fast
> To *daunt* thy hart.
> *Chaucer. The Romant of the Rose*, fol. 131.

And furthermore, for as moche as reson of man wol not *daunt* sensualitiee whan it may, therefore is a man worthy to have shame: and thus suffered our Lord Jesu Crist for man whan they spitten in his visage.
Id. The Persones Tale, vol. ii. p. 298.

> Thus haue I herd oft in saiying
> That man may for no *daunting*
> Make a sperhauke of a bosard.
> *Id. The Romant of the Rose*, fol. 135.

> But for all that, this he him graunteth
> That which of hem, that other *daunteth*,
> In armes, hym she shulde take,
> And that the kynge hath vndertake.
> *Gower. Conf. Am.* book iv. fol. 76.

> For the *danter* of monstouris, our defence,
> The maist redoutit Hercules, come at hand
> Be auenture vnto this ilk land.
> *Douglas. Eneados*, book viii. fol. 248.

> And on the tothir half Prince Messapus,
> That of grete horsis the *danter* clepit was.
> *Id. Ib.* book xii. fol. 430.

> When drie of teares; and tir'd with tumbling there;
> Th' old tel truth thus my *danted* spirits did cheare.
> *Chapman. Homer. Odyssey*, book iv. fol. 61.

DAUNT. — DAUPHIN.

> ——— Impudence!
> Thou goddess of the palace, mistress of mistresses,
> To whom the costly perfumed people pray,
> Strike thou my forehead into *dauntless* marble,
> Mine eyes to steady sapphires.
> *Tourneur. The Revenger's Tragedy*, act i. sc. 1.

> ——— Will God incense his ire
> For such a petty trespass, and not praise
> Rather your *dauntless* vertue, whom the pain
> Of death denounc't, whatever thing death be,
> Deterr'd not from achieving what might leade
> To happier life, knowledge of good and evil.
> *Milton. Paradise Lost*, book ix. l. 694.

> The *danter* then of trespassers
> Perceauing Theseus drie
> His grieuous wounds, and at his feete
> Pirithous dead to lie,
> Desirous to reuenge them both,
> Laies lustie lode about.
> *Warner. Albion's England*, book i. ch. vi.

A doctor of Jesuits, that is, a doctor of five D D's as dissimulation, deposing of kingdoms, *daunting* and deterring of subjects, and destruction. *State Trials. Trial of Henry Garnett.*

About the middle of August, the prince, exposing himself upon all occasions, received a musket shot in his arm; at which perceiving those about him were *daunted*, he immediately pulled off his hat with the arm that was hurt, and waved it about his head, to show the wound was but in the flesh, and the bone safe.
Sir W. Temple. Memoirs, part ii.

> Let this suffice: nor thou, great saint, refuse
> This humble tribute of no vulgar muse:
> Who, not by cares, or wants, or age deprest,
> Stems a wild deluge with a *dauntless* breast;
> And dares to sing thy praises in a clime,
> Where vice triumphs, and virtue is a crime.
> *Dryden. Eleonora.*

> ——— In idle argument
> Let us not now consume the precious hour:
> The middle stream is pass'd; and the safe shore,
> Invites our *dauntless* footsteps.
> *Smollett. The Regicide*, act i. sc. 6.

DA'UPHIN, } Skinner, *a delphino*, from the
DA'UPHINESS, } *dolphin*, which these Princes wore
DA'UPHINRY. } for their family arms. But the adoption of these insignia or arms appears to have been subsequent to the name. Cotgrave says, "*Daulphin de France.* The *Dolphin*, or eldest son of France, called so, of *Dauphiné*, a Province given, or (as some report it) sold in the year 1349, by Humbert, Earl thereof, to Philippe de Valois; partly on condition that for ever the French King's eldest son, should hold it (during his father's life) of the Empire."

Wherefore the whole nobilitie and sage fathers made humble request, to Kyng Edward to help and ayde the yonge ladye and Prynces of Burgoyne, allegynge that as farre as they could perceyue the maryage of his doughter with the *Dolphine*, was but dissimuled and fayned.
Hall. Edward IV. The eighteenth Yere.

Wherof John, then Duke of Burgoyn, beynge warned, suspectyd the quene that she with ayde of the duke wold cõvey the *Daulphin* into Germanye, and there to hold hym at theyre pleasure.
Fabyan, vol. ii. p. 560. *Caroli VII. The twenty-sixth Yere.*

Euery daye almost talkyng with the quene his wife, of the mariage of his daughter, whom he caused to be called *Dolphinesse*, thynkyng nothyng surer then that mariage to take effect, according to the treatie. *Hall. Edward IV. The fourteenth Yere.*

And [they] passed the ryuer, and so entred into the *Dolphynny* of Vyen, and lodged abrode in the vyllages.
Lord Berners. Froissart. Cronycle, vol. ii. ch. 177.

And in yᵗ season vnder the kyng there ruled in the *Dolphynny* the Lorde Engueram Dardyn. *Id. Ib.*

DAUPHIN. — DAW.

Phillip of Valois the nine and fortyeth kinge of France in the yeare of our Lorde and Sauiour Jesus Christ one thousand three hundred forty and nine, bought the prouince of *Dawphine* of Imburtus *Dawphin*, for a small summe of money: uppon condition that for euer after the eldest sonnes of the Kinge of Fraunce, should be called the Prince *Dawphin*: which our English Chronicles call Prince *Dolphin*, and the French Chronicles call our Prince, the Prince of Wales, Prince of Gaules.

Stow. King James. Anno 1609.

The best of Ovid's expositors is he that wrote for the *Dauphin's* use, who has very well shown the meaning of the author, but seldom reflects on his beauties or imperfections.

Addison. Ovid. Metamorphoses, book ii. notes.

It is now sixteen or seventeen years since I saw the Queen of France, then the *Dauphiness*, at Versailles; and surely never lighted on this orb, which she hardly seemed to touch, a more delightful vision. *Burke. On the Revolution in France.*

DAUPHINE, or DAUPHINY, an extensive Province in the south-east of France, on the confines of Swisserland, which includes a surface of 6700 square miles, and contains a population of nearly 850,000. It formerly constituted a part of the Kingdom of Burgundy, but afterwards became an appendage to the French Crown. Much of this region is either covered or intersected by the Alps, which renders it in many parts rugged and barren; but others, especially the vallies near the banks of the Rhone, are fertile and agreeable. The lower grounds alone are adapted for tillage, the sides of the hills are generally covered with vines, and their higher parts with forests. The rivers Isere, Durance, and Drome, all flow through Dauphiné, and terminate in the Rhone, which washes its western borders. In the vicinity of the mountains the air is cold and sharp, but in the vallies and lower tracts it is warm and pleasant. Corn, flax, and olives, are the chief produces of the lower districts; wine and cattle, of the hills; and the culture of silk is attended to in a few of the vallies. Mines of iron, copper, and lead, are also worked in some of the mountainous districts. Olives, silk, and cheese, are among its principal exports; for the manufactures of the Province are little more than adequate to its own supply. Since the Revolution, Dauphiné has been divided into the three Departments of Isere, Drome, and the Upper Alps, the chief Towns of which are Grenoble, Valence, and Gap. Each of these Towns is the See of a Bishop.

DAW, DA'WISH, DA'WCOCK. } Skinner thinks it is so called from the sound it utters. Junius strongly suspects that it was originally written *dawl*: and that through the Ger. *tul, vel tule*, it is, perhaps from the Gr. *θύελλα*, a sudden and heavy storm; which these birds usually presage.

And make here of a sickel or a saw
For though ye live a hundred yere ye shall dye a *daw*.
Skelton. Ware the Hawke.

Complaine or do what you will,
Of your complaint it shal not skill;
This is the tenor of my bil,
A *daucocke* ye be, and so shalbe still.
Id. Why come ye not to Court.

I see women can find in their hearts to tumble and lie with vicious and filthy men, & drunkards and braulers, and *dawish*, and brainelesse, cruel, and murderers.

Vives. Instruction of Christian Women, ch. xvi.

Pompey being overthrown, one Nonius said, that there was yet good hope left, because they had taken seven eagles within Pompey's camp. Thy perswasion were not ill, quoth Cicero, so we were to fight but with pies and *daws*.

Sir Thomas North. Plutarch. Cicero, fol. 725.

But for a *daw-divine*, not only to foul his own nest in England, but to pull in pieces the nests of those beyond sea, it is that which I think undecent and of very ill example.

Marvell. Works. The Rehearsal transposed, vol. ii. p. 34.

——— Endless as to sound each grating note
With which the rooks, and chattering *daws*, and grave
Unwieldy inmates of the village pond,
The changing seasons of the sky proclaim.
Akenside. Pleasures of Imagination, book ii.

DAW, *v.* To *daw* or *adaw* seems equivalent to, to *daunt*. And so Mr. Gifford interprets the word in B. Jonson. To *dauer, daiver*, Dr. Jamieson says, is to stun, to stupefy, also to become stupid; Su. G. *dwr-a, infatuare, dofw-a, stupere*. To the same import is the Ger. *teuben*. The Ger. *daver-en, tremere, treniscere*, he considers to be cognate. Ihre says, that *dofw-a*, properly denotes, *sensu privare*; to deprive of sense or sensation. In the Quotation from Uncertain Authors it is, to *tame*, to mitigate.

For he that sendeth grisely stormes,
With whisking windes and bitter blastes,
And fowith with haile the winter's face,
And frotes the soile with hory frostes;
Euen he *adawth* the force of cold,
The springe in sendes with somer hote
The same full oft to stormy hartes
In cause of bale, of ioy the roote.
Vncertaine Auctors. The Meane Estate best.

WIT. He then had no barren head.
You *daw* him too much, in troth, sir,
Ben Jonson. The Divell is an Asse, act iv. sc. 4.

DAW, *v.* } A. S. *dag-ian, lucescere*, to *daw*.—
DAWN, *v.* } *Dawn*, p. participle, *daw-en*; and
DAWN, *n.* } hence the verb, *to dawn*, to be or
DA'WNING, *n.* } become day.
DAWN, *adj.* }

To bring out of *daw* is not an uncommon expression in R. Gloucester. Jamieson says, to do out of *dawys*, to bring of *daw*, is, to kill. *Daw*, he observes, is often used to denote *life*,—and thus *out of daw* denotes *death*; and on *daw*, (q. on *days*,) may denote *in life*.

To show or exhibit, or cause to show or exhibit, the appearances of light; and met. of any brilliant quality; any talent or virtue; and consequently, to awaken, to arouse.

þoru ssedynge of þy broþer blod, þat þus ys brogt of *dawe*.
R. Gloucester, p. 291.

"Ver, [for] gode syre kyng," quaþ þys þef, "vor þy loue ych hym slow.
Here ys þat knyf al blody, þat ych brogte hym wyþ of *dawe*."
Id. p. 311.

Vor þe heye blod, of wam hii come, þe kyng hym by þogte,
An adde reuþe of hem gret, & ys wille gan wyþ drawe,
An ne mygte, vor reuþe, vor non þyng bring hym of lyf *dawe*.
Id. p. 315.

So þat hii come to her felawes in *dawynge*.
Id. p. 298.

To Keningwurþe hii come in þe *dawninge*.
Id. p. 557.

——— To haf þo lawes,
þat Samuel þe gode kyng gaf bi olde *dawes*.
R. Brunne, p. 168.

——— Joye by gynneþ to *dawen*.
Piers Ploukman. Vision, p. 349.

Tyl þe day *dawede*. these damseles daunsede.
Id. Fr. p. 364.

To hem haue I so great affection
As I saied erst, comen is the Maie
That in my bedde there *daweth* me no daie.
That I nam vp, and walking in the mede.
Chaucer. Prologue to the Legend of Good Women.

W. DLE.

I would it *dawed*, and were now day
And that the night were went away.
Chaucer. The Romant of the Rose.

The *dawning* uprist, out of the see.
Id. Of Dido, Queen of Carthage.

Amongst the Turks was one thrust thorow, who (let vs not say it was ill fortune) fell off from the toppe of the prison wall, and made such a lowing, that the inhabitants thereabout (as here and there scattering stoode a house or two) came and *dawed* him, so that they vnderstood the case how that the prisoners were paying their ransoms.
Hakluyt. Voyage, &c. John Foxe, vol. ii. part i. fol. 134.

Tyll with good rappes,
And heuy clappes
He *dawde* hym vp agayne.
Sir Thomas More. Workes. These fowre thinges.

As when with crowned cups unto the Elian god
Those priests high orgies held; or when the old world saw
Full Phœbes face eclips'd, and thinking her to *daw*,
Whom they supposed falln in some enchanted swoun'd,
Of beaten tinkling brass still play'd her with the sound.
Drayton. Poly-olbion, song 6.

Watch therefore for ye know not when the master of the house wyll come, whether at euen or at midnight, whether at the cocke crowing or in the *daunynge*: least yf he come sodenlye he should find you slepyng. *Bible, Anno* 1551. *Mark*, ch. xiii

The *dawning* day this while, y^e^ ocean sea had cleerely cleft.
Phaer. Æneidos, p. 25.

Now when as sacred light began to *dawn*
In Eden on the humid flours, that breath'd
Their morning incense, when all things that breath,
From th' earth's great altar send up silent praise
To the Creator, and his nostrils fill
With grateful smell, forth came the human pair
And joyn'd their vocal worship to the quire
Of creatures wanting voyce.
Milton. Paradise Lost, book ix. l. 192.

But now at last the sacred influence
Of light appears, and from the walls of heav'n
Shoots far into the bosom of dim night
A glimmering *dawn*. *Id. Ib.* book ii. l. 1037.

Const. Would it were day? Alas poore Harry of England: hee longs not for the *dawning*, as wee doe.
Shakspeare. Henry V. fol. 82.

There by th' vncertaine glimse of starry night,
And by the twinkling of their sacred fire
He mote perceiue a little *dawning* sight,
Of all which there was doing in that quire.
Spenser. Faerie Queene, book vi. can. 8.

Heare we no bird of day, or *dawning* morne,
To greet the sun, or glad the waking eare:
Sing oute, ye scrich-owles, lowder then aforne,
And ravens blacke of night.
Hall. Elegy on Dr. Whitaker.

The painted birds, that haunt the golden tide,
And flutter round the banks on every side,
Along the grove in pleasing triumph play,
And with soft music hail the *dawning* day.
Pitt. Virgil. Æneid, book vii.

And oft thy voice in dreadful thunder speaks;
And oft at *dawn*, deep noon, or falling eve,
By brooks, and groves, in hollow-whispering gales.
Thomson. A Hymn.

The darkness and shadows of death pass away as soon as the Sun of Righteousness *dawns* upon the soul.
V. Knox. Sermon 4. vol. vi.

In such an anxious state of things, if *dawnings* of success serve to animate our diligence, they are good; if they tend to increase our presumption, they are worse than defeats.
Burke. On the Œconomical Reform.

DAWDLE, *v. to daw*, in Scotch, (see to Daw or Adaw,) is, consequentially, a sluggard, one who is lazy and idle. Jamieson. And *dawdle*, in English, seems to be a diminutive. DAWDLE.

To move sluggishly, lazily, idly; to loiter or idle away time. DAY.

Be quick—why sure the gipsy sleeps!
Look how the drawling *daudle* creeps.
Lloyd. Chit-Chat.

DAY, Dai'ly, *adj.* Dai'ly, *adv.* } A. S. *dæg*, from *dæg-ian*, *lucescere*, to grow or become light. Dutch, *dagh*; Ger. *tag*.
Day is much used in *Composition*.

Þe Kyng Cassibel anon for ioye made ys haste,
Þat alle þe knyȝtes of hys lond com to ys feste,
To London at a certeyn *day*, and here wynes al so.
Here sacrifice to here Godes, as ryȝt was, to do.
R. Gloucester, p. 59.

——— A countes to ȝelde
Howe we ladde oure lyf here. and hus lawes kepte
And hou we dude *day by day*. þe dome wol reherce.
Piers Ploughman. Vision, p. 165.

Techinge hem to kepe alle thingis whatever thingis I have comaundid to you and lo I am with you in alle *daies* unto the endyng of the world. *Wiclif. Matthew*, ch. xxviii.

And anoon the man was maad hool & took up his bed, and wente forth: and it was Saboth in that *day*.
Id. John, ch. v.

His sone succedeth in his heritage;
In rest and pees, after his fadres *day*.
Chaucer. The Clerkes Tale, v. 9012.

Thus passeth yere by yere, and *day by day*,
Till it felle ones in a morwe of May
That Emelie, that fayrer was to sene
Than is the lilie upon his stalke grene.
Id. The Knightes Tale, v. 1010.

Wherefore was all their *daily* labour,
Who coud approch next in her fauour.
Id. The Remedie of Loue, fol. 323

All this was moued at councel thrise
And concluded *daily* twice. *Id. Dreame*, fol. 363.

For do not their *daily* practices and cruel burthens imposed on all sorts of people, high and low, rich and poor, witness that their descent is from the Beast, part of his state and kingdom.
State Trials. Trial of Lilburne.

——— Other creatures all *day* long
Rove idle unemploid, and less need rest;
Man hath his *daily* work of body or mind
Appointed, which declares his dignitie,
And the regard of heav'n on all his waies.
Milton. Paradise Lost, book iv. l. 618.

Redouble then this miracle, and say,
How cam'st thou speakable of mute, and how
To me so friendly grown above the rest
Of brutal kind, that *daily* are in sight?
Id. Ib. book ix. l. 565.

That and the rest are in my *daily* care;
But should I shun the dangers of the war,
With scorn the Trojans would reward my pains,
And their proud ladies with their sweeping trains.
Dryden. Homer. Iliad, book vi.

A patient, useful creature, born to bear
The warm and woolly fleece, that clothed her murderer,
And *daily* to give down the milk she bred,
A tribute for the grass on which she fed.
Id. Ovid. Metamorphoses. book xv.

At the close of the *day*, when the hamlet is still,
And mortals the sweets of forgetfulness prove,
When nought but the torrent is heard on the hill,
And nought but the nightingale's song in the grove.
Beattie. The Hermit.

DAY. DAY, in *Composition.*

The cuckowe and I fast haue chide
Euer sithen it was *day-light.*
Chaucer. The Cuckow and the Nightingale.

Whan the sunne is risen, the *daye-sterre* waxeth pale and leseth her light.
Id. The second Boke of Boecius, fol. 217.

Til the *dai* bigynne to gyue light, and the *dai-sterre* springe in your hertis. *Wiclif. 2 Peter*, ch. i.

Hauing trauailed to the mountaines the space of three miles, and arriuing there somewhat before the *day-breake*, we arrested our selues to see *day* before vs which appearing, we found the inhabitants to be fled.
Hakluyt. Voyage, &c. Sir Francis Drake, vol. iii. fol. 731.

In so muche that I am fully persuaded and cannot but beleue that God hath shewed Moses the secrets of Christ, and the very maner of his death before hande, and commaunded hym to ordaine them for the confirmation of our faythe, whiche are now in the clear *day-light.*
Tyndall. Workes, fol. 12. *A Preface before the five Bookes of Moses.*

They haue all their lyfe after [war] an vnsauery smack thereof, and smell still toward *day-sleepers*, pursepickers, highwayrobbers, quarrelmakers, ye and bloudsheders to.
Sir John Cheeke. The Hurte of Sedition.

Nowe is this the *daie-spring* of the third *daie*, which third *daie*, himself arysing together with the same, hath willed to be gladsome and prosperous to all the wholle world.
Udall. Luke, ch. xxiv.

But well I do remember, it was declared, that all the *day-time* the earl had the liberty of five large chambers and too long entries, within the utter door of the prison.
State Trials. Inquisition upon the death of the Duke of Northumberland.

ESTIF. This place will fit our talk, 'tis fitter far, sir,
Above there are *day-beds.*
Beaumont and Fletcher. Rule a Wife and have a Wife, act i. sc. 1.

As if by their precise philosophicall rules, they would controul our *day-books* and journals of our ordinary expences, they cut off all the cost bestowed upon our table in things needless and superfluous. *Holland. Plutarch*, fol. 476.

The seventeenth day of January they made a general assault upon five seueral quarters of the town, somewhat before *day-break*, but were with equal courage opposed from within, and near three hundred men lost, or wounded in the service.
Clarendon. History of the Rebellion, vol. ii. part i. p. 457.

The next day, which was Friday, they came about *day-breaking* with all their forces to assault the said castle.
State Trials. Trial of Colonel Fiennes.

That which on Flora's breast,
All fresh and flourishing,
Aurora, newly dress'd,
Saw in her dawning spring;
Quite dry and languishing,
Depriv'd of honour quite,
Day-closing Hesperus beholds at night.
Daniel. Description of Beauty.

(Especially old Scatchlocke) thought it ominous!
Swore it was mother Maudlin whom he met,
At the *day-dawne.*
Ben Jonson. The Sad Shepherd, act i. sc. 6.

Yet hereof no important reckoning makes
But as a dream that vanish'd with the light:
The *day-designs*, and what he had in hand
Left it to his diverted thoughts unscann'd.
Daniel. History of Civil War, book i.

Cease, dreams, the images of *day-desires*,
To model forth the passion of the morrow;
Never let rising sun approve you liars
To add more grief to aggravate my sorrow.
Id. Sonnet 51.

Saint Cyril tells us of some idolaters that would have only a *day-God*, because the night was a time for revelling, and to have a God then, would destroy their game, and therefore they pitch upon the sun, ἵνα κατὰ τὴν νυκτὸς καίριον ἄθεοι μένωσι, that they might be atheists all night, and then they take it out to purpose, ἀμυνόμενοι τὴν ἡμέραν, (as St. Basil saith of the glutton's feasts,) revenging themselves on their *day-devotions* by their night-revels, never acknowledge a God, when a lust is to be lost by it. DA
Hammond. Works. Sermon 8. vol. iv.

Let him have time to gorge your hook, for he does not usually forsake it, as he oft will in the *day-fishing.*
Walton. Angler, part i. ch. v.

Look how the *day-hater*, Minerva's bird,
Whilst privileg'd with darkness and the night,
Doth live secure t' himself, of others fear'd.
Daniel. History of Civil War, book ii.

" Doth God exact *day-labour*, light deny'd,
I fondly ask?" But Patience, to prevent
That murmur, soon replies, " God doth not need
Either man's work, or his own gifts; who best
Bear his mild yoke, they serve him best."
Milton. Sonnet 19. *On his Blindness.*

Neptune, for gain, builds up the walls of Troy,
As a *day-labourer.*
Massinger. The Virgin Martyr, act iii. sc. 1.

——— He whose turne doth keepe
The night obseruance, hath his double hire;
Since day and night, in equall length expire,
About that region; and the nights watch weigh'd
At twice the *daies* ward; since the charge that's laid
Vpon the nights-man (besides breach of sleepe)
Exceeds the *daies-mans*: for one, oxen keepe,
The other sheepe.
Chapman. Homer. Odyssey, book x. fol. 147.

There in another place beares downe the bankes
Of some *day-labouring* wretch.
Browne. Britannia's Pastorals, book i. song 2.

Now by the time we were thus ranged in a very brave order, *daylight* began to appeare, and being advanced hard to the wall we saw the enemye to resist.
Sir Francis Drake. West India Voyage, fol. 11.

A long and *daily-dying* life, which breaths
A respiration of reviving deaths.
Crashaw. A Religious House.

CYP. Madam, I would not have you with the lark
Play yourself into *day-net.*
Machin. The Dumb Night, act ii. sc. 1.

——— Thou that before has been
More watchful than the *day-proclaining* cock,
As sportive as a kid, as frank and merry,
As mirth herself.
Anonymous. The Merry Devil of Edmonton.

Strew, strew, the glad and smiling ground
With every flower, yet not confound:
The primrose drop, the Spring's own spouse,
Bright *dayes-eyes*, and the lips of cowes.
Ben Jonson. Masques. Pun's Anniversarie.

Nilus head, enclosed with shining rock,
A whole *day's-journy* high.
Milton. Paradise Lost, book iv. l. 284.

Generally, night-showers are better than *day-showers*, for that the sunne followeth not so fast upon them.
Bacon. Natural History, Cent. vii. sec. 664.

Such were the Romans in this island, whose deputies at the *day-spring* almost of Christianitie were conuerted.
Speede. The first planting of Christian Religion in Britaine, book vi. ch. ix. sec. 16.

I meant to make her faire, and free and wise,
Of greatest blood, and yet more good than great,
I meant the *day-starre* should not higher rise,
Nor lend like influence from his lucent seat.
Ben Jonson. Epigrammes. On Lucy, Countess of Bedford, Ep. 76.

DAY.

Yet farther, another art of charity he had, the selling of corn to his poor neighbours at a rate below the market price: which though, as he said, he had reason to do, gaining thereby the charge of portage; was a great benefit to them, who besides the abatement of price, and possibly forbearance, saved thereby a *day's-work*. *Fell. Life of Hammond*, A. 2.

See how the Sun in *day-time* clouds his face,
And lagging Vesper, loosing his late team,
Forgets in heaven to run his nightly race.
G. Fletcher. Christ's Triumph over Death.

Hire other labourers for *day-wages*.
Holland. Plutarch, fol. 174.

But euen this night, whose blacke contagious breath
Already smoakes about the burning crest
Of the old, feeble, and *day-wearied* sunne
Euen this ill night, your breathing shall expire.
Shakspeare. King John, fol. 20.

ODM. But from her birth my soul has been her slave,
My heart receiv'd the first wounds which she gave:
I watch'd the early glorious [glories] of her eyes,
As men for *day-break* watch the eastern skies.
Dryden. The Conquest of Mexico, act i. sc. 2.

These are the gay phantoms that dance before my waking eyes, and compose my *day-dreams*. *Spectator*, No. 167.

Dig, says the unjust steward, I cannot; but why? Did either his legs or his arms fail him? No; but *day-labour* was but an hard, and a dry kind of livelihood to a man, that could get an estate with two or three strokes of his pen.
South, vol. i. p. 426.

Shall a poor countryman be eternally happy for having the chance to be born in Italy; or a *day-labourer* be unavoidably lost, because he had the ill luck to be born in England.
Locke. Of Human Understanding, book iv. ch. xx. sec. 3.

Seldom do armies invade poor *day-labouring* countries; they are not the thin weather-beaten cottages, but the opulent trading cities, which invite the plunderer. *South*, vol. iv. p. 488.

A skilful fowler, according to the differing natures of his game, so contrives and appropriates his stratagems, that some he catches with light, (as larks with *day-nets*,) some with baits, (as pigeons with peas, &c.) *Boyle. On the Style of the Holy Scriptures.*

Blind Bayard rather, worn with work, and years,
Shall roll the unwieldy stone; with sober pace
He'll tread the circling path till dewy eve,
From early *day-spring*, pleas'd to find his age
Declining not unuseful to his lord.
J. Philips. Cider, book ii.

This is called both properly and elegantly by S. Peter, 2 *Ep.* i. 19, the *day-star's* arising in our hearts: that is, by the secret, silent workings of his spirit he illuminates the judgment, bends the will and the affections, and at last changes the whole man.
South. Sermons, vol. iii. p. 291.

There was a pigeon-house not far from thence: pigeons and birds would have eaten their corn, if they [the ants] had brought it out in the *day-time*: 'tis highly probable they knew it by experience. *Guardian*, No. 156.

She is continually asking me a thousand frivolous questions about every customer that comes in and goes out; and all the while I am entering any thing in my *day-book*, she is lolling over the counter, and staring at it, as if I was only scribbling or drawing figures for her amusement. *Johnson. The Idler*, No. 15.

In the present times, through the great part of Europe, a creditable *day-labourer* would be ashamed to appear in public without a linen shirt, the want of which would be supposed to denote that disgraceful degree of poverty, which, it is presumed, nobody can well fall into without extreme bad conduct.
Smith. Wealth of Nations, book v. ch. ii.

Since these dark, cheerless, solitary caves,
Death-breathing woods, and *daily-opening* graves,
Conspire in vain with all the aids of art,
To blot thy dear idea from my heart.
Cawthorne. Abelard to Eloise.

Most of them are so well known, that I should almost as soon think of pointing out the lustre of the *day-star* in the heavens, as of displaying in detail their splendid and acknowledged merits.
V. Knox. Christian Philosophy, sec. 8.

DAY. — DAZE.

DAYESMAN, an Arbiter, as it were, bestowing a *day*, to decide a matter. Minsheu. In Ger. *tag* is *day*, and emphatically *the* day, the fixed or appointed day; and *tagen*, is *condicere diem*, to appoint *a day*. In Dutch, *dagh* is *day*; and *dagh vaerden, diem dicere, constituere, præfinire alicui*; to fix, appoint or determine *a day* for any one. And *daghen, citare*, to cite or summon. And thus, *Dayesman*, he who fixes *the day*, who is present or sits as Judge, Arbiter or Umpire on *the day* fixed or appointed. In Paul to the 1 *Cor.* iv. 3, Wiclif's translation "of *manny's dai*," is literal from the Lat. Vulgate, "*ab humano die*." In Gr. ἀπὸ ἀνθρωπίνης ἡμέρας; and this Mr. Parkhurst observes, is spoken in opposition to *the coming* of the Lord, in v. 5, and also to ἡ ἡμέρα, *the day*, i. e. the *day* of the Lord, in the preceding chapter v. 13; where the Vulgate renders ἡ ἡμέρα, *Dies Domini*.
